	Demand Function - nature of demand curve under different markets Meaning, significance, types and measurement of elasticity of demand (Price, income cross and promotional)- relationship between elasticity of demand and revenue concepts **Demand estimation and forecasting:** Meaning and significance - methods of demand estimation : survey and statistical methods *(numerical illustrations on trend analysis and simple linear regression)*
3	**Supply and Production Decisions and Cost of Production**
	Production function: short run analysis with Law of Variable Proportions- Production function with two variable inputs- isoquants, ridge lines and least cost combination of inputs- Long run production function and Laws of Returns to Scale - expansion path - Economies and diseconomies of Scale. **Cost concepts:** Accounting cost and economic cost, implicit and explicit cost, fixed and variable cost - total, average and marginal cost - Cost Output Relationship in the Short Run and Long Run *(hypothetical numerical problems to be discussed)*, LAC and Learning curve - Break even analysis *(with business applications)*
4	**Market structure: Perfect competition and Monopoly and Pricing and Output Decisions under Imperfect Competition**
	Short run and long run equilibrium of a competitive firm and of industry - monopoly - short run and long- run equilibrium of a firm under Monopoly **Monopolistic competition:**Equilibrium of a firm under monopolistic competition, debate over role of advertising *(topics to be taught using case studies from real life examples)* **Oligopolistic markets:** key attributes of oligopoly - Collusive and non collusive oligopoly market - Price rigidity - Cartels and price leadership models *(with practical examples)*
5	**Pricing Practices**
	Cost oriented pricing methods: cost – plus (full cost) pricing, marginal cost pricing, Mark up pricing, discriminating pricing, multiple – product pricing - transfer pricing *(case studies on how pricing methods are used in business world)*

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester II with Effect from the Academic Year 2016-2017

Elective Courses(EC)

1. Principles of Marketing

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Marketing	15
2	Marketing Environment, Research and Consumer Behaviour	15
3	Marketing Mix	15
4	Segmentation, Targeting and Positioning and Trends In Marketing	15
	Total	**60**

Sr. No.	Modules / Units
1	**Introduction to Marketing**
	• **Introduction to Marketing:**Definition, features, advantages and scope of marketing. The 4P's and 4C's of marketing. Marketing v/s Selling. Marketing as an activity and function • **Concepts of Marketing:** Needs, wants and demands, transactions, transfer and exchanges. • **Orientations of a firm:** Production concept; Product concept; selling concept and marketing concept, social relationship, Holistic marketing.
2	**Marketing Environment, Research and Consumer Behaviour**
	• **The micro environment of business:** Management structure; Marketing Channels; Markets in which a firm operates; competitors and stakeholders. • **Macro environment:** Political Factors; Economic Factors; Socio Cultural Factors , Technological Factors (PEST Analysis) • **Marketing research:** Meaning, features, Importance of marketing research. Types of marketing research: Product research; Sales research; consumer/customer research; production research • **MIS:**Meaning, features and Importance • **Consumer Behaviour:** Meaning, feature, importance, factors affecting Consumer Behaviour
3	**Marketing Mix**
	• **Marketing mix:** Meaning –elements of Marketing Mix. • Product-product mix-product line lifecycle-product planning – New product development- failure of new product-levels of product. • Branding –Packing and packaging – role and importance • Pricing – objectives- factors influencing pricing policy and Pricing strategy. • Physical distribution – meaning – factor affecting channel selection-types of marketing channels • Promotion – meaning and significance of promotion. Promotion • tools (brief)
4	**Segmentation, Targeting and Positioning and Trends In Marketing**
	• Segmentation – meaning , importance , basis • Targeting – meaning , types • Positioning – meaning – strategies • New trends in marketing – E-marketing , Internet marketing and marketing using Social network • Social marketing/ Relationship marketing

Elective Courses (EC)

2.Industrial Law

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Laws Related to Industrial Relations and Industrial Disputes	15
2	Laws Related to Health, Safety and Welfare	15
3	Social Legislation	15
4	Laws Related to Compensation Management	15
	Total	60

Sr. No.	Modules / Units
1	**Laws Related to Industrial Relations and Industrial Disputes**
	• Industrial Disputes Act, 1947: Definition, Authorities, Awards, Settlements, Strikes Lockouts, Lay Offs, Retrenchment and Closure • The Trade Union Act, 1926
2	**Laws Related to Health, Safety and Welfare**
	• The Factory Act 1948: (Provisions related to Health, Safety and Welfare) • The Workmen's Compensation Act, 1923 Provisions: ▪ Introduction: The doctrine of assumed risk, The doctrine of Common Employment, The doctrine of Contributory Negligence ▪ Definitions ▪ Employers liability for compensation (S-3 to 13) ▪ Rules as to Compensation (Sec 4 to Sec 9) (14 A & 17)
3	**Social Legislation**
	• Employee State Insurance Act 1948: Definition and Employees Provident Fund • Miscellaneous Provision Act 1948: Schemes, Administration and determination of dues
4	**Laws Related To Compensation Management**
	• The payment of Wages Act 1948: Objectives, Definition, Authorised Deductions • Payment of Bonus Act, 1965 • The Payment Of Gratuity Act, 1972

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester II with Effect from the Academic Year 2016-2017

Elective Courses (EC)

3.Business Mathematics

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Elementary Financial Mathematics	15
2	Matrices and Determinants	15
3	Derivatives and Applications of Derivatives	15
4	Numerical Analysis [Interpolation]	15
	Total	60

Sr. No.	Modules / Units
1	**Elementary Financial Mathematics**
	• **Simple and Compound Interest**: Interest compounded once a year, more than once a year, continuous, nominal and effective rate of interest • Annuity-Present and future value-sinking funds • **Depreciation of Assets:** Equated Monthly Installments (EMI)- using flat interest rate and reducing balance method. • **Functions:**Algebraic functions and the functions used in business and economics, Break Even and Equilibrium point. • **Permutation and Combination:** (Simple problems to be solved with the calculator only)
2	**Matrices and Determinants**
	• **Matrices:** Some important definitions and some important results. Matrix operation (Addition, scalar multiplication , matrix multiplication, transpose of a matrix) • **Determinants of a matrix of order two or three**: properties and results of Determinants • Solving a system of linear equations using Cramer's rule • Inverse of a Matrix (up to order three) using ad-joint of a matrix and matrix inversion method • **Case study:** Input Output Analysis
3	**Derivatives and Applications of Derivatives**
	• **Introduction and Concept:** Derivatives of constant function, logarithmic functions, polynomial and exponential function • **Rules of derivatives:** addition, multiplication, quotient • Second order derivatives • **Application of Derivatives:** Maxima, Minima, Average Cost and Marginal Cost. Total revenue, Marginal revenue, Average revenue. Average and Marginal profit. Price elasticity of demand
4	**Numerical Analysis [Interpolation]**
	• **Introduction and concept**: Finite differences – forward difference operator – Newton's forward difference formula with simple examples • Backward Difference Operator. Newton's backward interpolation formula with simple examples

Ability Enhancement Courses (AEC)

4. Business Communication - II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Presentation Skills	15
2	Group Communication	15
3	Business Correspondence	15
4	Language and Writing Skills	15
	Total	60

Sr. No.	Modules / Units
1	**Presentation Skills**
	Presentations: (to be tested in tutorials only) 4 Principles of Effective Presentation Effective use of OHP Effective use of Transparencies How to make a Power-Point Presentation
2	**Group Communication**
	Interviews: Group Discussion Preparing for an Interview, Types of Interviews – Selection, Appraisal, Grievance, Exit **Meetings:**Need and Importance of Meetings, Conduct of Meeting and Group Dynamics Role of the Chairperson, Role of the Participants, Drafting of Notice, Agenda and Resolutions **Conference:**Meaning and Importance of Conference Organizing a Conference Modern Methods: Video and Tele – Conferencing **Public Relations:** Meaning, Functions of PR Department, External and Internal Measures of PR
3	**Business Correspondence**
	Trade Letters: Order, Credit and Status Enquiry, Collection (just a brief introduction to be given) **Only following to be taught in detail:-** Letters of Inquiry, Letters of Complaints, Claims, Adjustments Sales Letters, promotional leaflets and fliers Consumer Grievance Letters, Letters under Right to Information (RTI) Act [Teachers must provide the students with theoretical constructs wherever necessary in order to create awareness. However students should not be tested on the theory.]
4	**Language and Writing Skills**
	Reports: Parts, Types, Feasibility Reports, Investigative Reports **Summarisation:** Identification of main and supporting/sub points Presenting these in a cohesive manner

Skill Enhancement Courses (SEC)

5. Foundation Course – II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Globalisation and Indian Society	07
2	Human Rights	10
3	Ecology	10
4	Understanding Stress and Conflict	10
5	Managing Stress and Conflict in Contemporary Society	08
	Total	45

Sr. No	Modules /Units
1	**Globalisation and Indian Society**
	Understanding the concepts of liberalization, privatization and globalization;Growth of information technology and communication and its impact manifested in everyday life; Impact of globalization on industry: changes in employment and increasing migration; Changes in agrarian sector due to globalization; rise in corporate farming and increase in farmers' suicides.
2	**Human Rights**
	Concept of Human Rights; origin and evolution of the concept; The Universal Declaration of Human Rights;Human Rights constituents with special reference to Fundamental Rights stated in the Constitution
3	**Ecology**
	Importance of Environment Studies in the current developmental context; Understanding concepts of Environment, Ecology and their interconnectedness; Environment as natural capital and connection to quality of human life; Environmental Degradation- causes and impact on human life;Sustainable development- concept and components; poverty and environment
4	**Understanding Stress and Conflict**
	Causes of stress and conflict in individuals and society; Agents of socialization and the role played by them in developing the individual; Significance of values, ethics and prejudices in developing the individual; Stereotyping and prejudice as significant factors in causing conflicts in society. Aggression and violence as the public expression of conflict
5	**Managing Stress and Conflict in Contemporary Society**
	Types of conflicts and use of coping mechanisms for managing individual stress; Maslow's theory of self-actualisation;Different methods of responding to conflicts in society; Conflict-resolution and efforts towards building peace and harmony in society

Core Courses (CC)

6.Business Environment

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Business Environment	15
2	Political and Legal environment	15
3	Social and Cultural Environment, Technological environment and Competitive Environment	15
4	International Environment	15
	Total	60

Sr. No.	Modules / Units
1	**Introduction to Business Environment**
	• **Business:** Meaning, Definition, Nature & Scope, Types of Business Organizations • **Business Environment**: Meaning, Characteristics, Scope and Significance, Components of Business Environment • **Micro and Macro Environment:** Definition, Differentiation, Analysis of Business Environment, SWOT Analysis. • **Introduction to Micro-Environment**: ▪ **Internal Environment:** Value system, Mission, Objectives, Organizational Structure, Organizational Resources, Company Image, Brand Equity ▪ **External Environment:** Firm, customers, suppliers, distributors, Competitors, Society • **Introduction to Macro Components**: Demographic, Natural, Political, Social, Cultural, Economic, Technological, International and Legal)
2	**Political and Legal environment**
	• **Political Institutions:** Legislature, Executive, Judiciary, Role of government in Business, Legal framework in India. • **Economic environment:** economic system and economic policies. Concept of Capitalism, Socialism and Mixed Economy • Impact of business on Private sector, Public sector and Joint sector • Sun-rise sectors of India Economy. Challenges of Indian economy.
3	**Social and Cultural Environment, Technological environment and Competitive Environment**
	• **Social and Cultural Environment:** Nature, Impact of foreign culture on Business, Traditional Values and its Impact, Social Audit - Meaning and Importance of Corporate Governance and Social Responsibility of Business • **Technological environment:** Features, impact of technology on Business • **Competitive Environment:** Meaning, Michael Porter's Five Forces Analysis, Competitive Strategies
4	**International Environment**
	• **International Environment –** ▪ **GATT/ WTO:** Objective and Evolution of GATT, Uruguay round, GATT v/s WTO, Functions of WTO, Pros and Cons of WTO. ▪ **Globalization:** Meaning, Nature and stages of Globalization, features of Globalization, Foreign Market entry strategies, LPG model. ▪ **MNCs:** Definition, meaning, merits, demerits, MNCs in India ▪ **FDI:** Meaning, FDI concepts and functions, Need for FDI in developing countries, Factors influencing FDI, FDI operations in India, • **Challenges faced by International Business and Investment Opportunities for Indian Industry.**

Core Courses (CC)

7. Principles of Management

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Nature of Management	15
2	Planning and Decision Making	15
3	Organising	15
4	Directing, Leadership, Co-ordination and Controlling	15
	Total	60

Sr. No.	Modules / Units
1	**Nature of Management**
	• **Management:** Concept, Significance, Role & Skills, Levels of Management, Concepts of PODSCORB, Managerial Grid. • Evolution of Management thoughts, Contribution of F.W Taylor, Henri Fayol and Contingency Approach.
2	**Planning and Decision Making**
	• **Planning:** Meaning, Importance, Elements, Process, Limitations and MBO. • **Decision Making**: Meaning, Importance, Process, Techniques of Decision Making.
3	**Organizing**
	• **Organizing:** Concepts, Structure (Formal & Informal, Line & Staff and Matrix), Meaning, Advantages and Limitations • **Departmentation:** Meaning, Basis and Significance • **Span of Control:** Meaning, Graicunas Theory, Factors affecting span of ControlCentralization vs Decentralization • **Delegation:** Authority & Responsibility relationship
4	**Directing, Leadership, Co-ordination and Controlling**
	• **Directing:** Meaning and Process • **Leadership:** Meaning, Styles and Qualities of Good Leader • **Co-ordination** as an Essence of Management • **Controlling:** Meaning, Process and Techniques • **Recent Trends:** Green Management & CSR

USBT405	Core Subject	Biostatistics and Bioinformatics	2	3
USBT406	Skill enhancement elective	Molecular Diagnostics	2	3
USBT407	General Elective	Entrepreneurship Development	2	3
USBTP401	Core subject Practicals	Practicals of USBT401 and USBT402	2	6
USBTP402	Core subject Practicals	Practicals of USBT403 and USBT404	2	6
USBTP403	Core Subject and Skill enhancement elective Practicals	Practicals of USBT405 and USBT406	2	6

SEMESTER III

Course Code	Title	Credits	No. of Lectures	Notional hours
USBT301	**BIOPHYSICS**	**2**		
Course objectives:- The objective of this course is to have a firm foundation in the fundamentals and applications of current biophysical theories. **Learning outcomes:-** By the end of the course the student will: • develop an understanding of the different aspects of classical physics. • be able to relate principles of physics to applications and techniques in the field of biology such as microscopy, spectroscopy and electrophoresis.				
UNIT I **Optics and Electromagnetic Radiations**	**Introduction to Optics and Lasers:** ***Optics* :** Properties of Light - Reflection, Refraction, Dispersion, Interference. ***Lasers* :** Properties of Lasers, Stimulated Emissions, Laser Action; Applications of Laser. **Electromagnetic Radiations:** Introduction to Electromagnetic Radiation. **Spectroscopy :** Types and Properties of Spectra; Basic Laws of Light Absorption. Spectrophotometer:-Principle, Instrumentation and Applications; UV-Vis Spectrophotometer, Single and Dual Beam Spectrophotometer. **Microscopy:** Types of Microscopy; Electron Optics; Electron Microscopy- Preparation of Specimen, SEM, TEM and Immuno-Electron Microscopy. Fluorescence Microscopy.		15	
UNIT II **Heat, Sound, Magnetism and Fluid Dynamics**	**Heat:** Concept of Temperature; Modes of Heat Transfer; Measuring Temperature; Platinum Resistance Thermometer; Thermocouple and Thermistors. **Sound:** Types of Sound Waves - Audible, Ultrasonic and Infrasonic Waves; Doppler Effect; Applications of Ultrasonic Waves. **Magnetism:** Magnetic Field; Magnetism of Earth; Para-magnetism, Diamagnetism, Ferromagnetism. Nuclear Magnetism and Biomagnetism.		15	

	Fluid Dynamics : ***Viscosity*:** Definition Flow of Liquids through Capillaries; Stokes' Law; Terminal Velocity. Determination of 'η' by Falling Sphere Method; Viscosity Estimation by Oswald's Viscometer. ***Surface Tension*:** Definition - Surface Tension and Surface Energy; Capillary Action; Angle of Contact; Wettability; Temperature Dependence of Surface Tension. Applications in Biology.			
UNIT III **Electrophoretic Techniques**	**Electrophoresis:** Migration of Ions in an applied electric field; Factors affecting Electrophoretic Mobility; Moving Boundary Electrophoresis; Principle of Electrophoresis; Supporting Matrix; Paper electrophoresis; AGE; Native and SDS PAGE (reducing and non-reducing, continuous and discontinuous);IEF and 2D PAGE. Staining and Detection methods; Gel-Documentation. Applications in Biology.		15	

Course Code	Title	Credits	No. of Lectures	Notional hours
USBT302	**APPLIED CHEMISTRY –I**	**2**		
Course objectives:- The objective of this course is to have a firm foundation in the fundamentals and applications of organic and green chemistry. **Learning outcomes:-** By the end of the course the student will be able to: • develop an understanding of the different aspects of organic and green chemistry. • discuss role of organic compounds in biology and synthesis of organic compounds. • discuss role of green chemistry and its application in industry.				
UNIT I **Organic Chemistry**	**Introduction to Types of Organic Reactions :** Addition, Elimination and Substitution Reactions. Essential and Non-essential Elements in Biological Systems. Role of Metal Ions in Biological Systems. **Metal Coordination in Biological Systems :** Enzymes, Apoenzymes and Coenzymes. Biological Role of Metalloenzymes wrt Myoglobins, Haemoglobin. Biological Role of Carboxypeptidases, Catalases and Peroxidases.		15	

	Structure and Function : Dioxygen Binding, Transfer and Utilization; Metal Complexes in Medicines.			
UNIT II Synthesis of Organic Compounds	**Synthesis of Organic Compounds :** Criteria for Ideal Synthesis; Selectivity and Yield. Linear and Convergent Synthesis and Multicomponent Reactions. Microwave Assisted Organic Synthesis, Ultrasound in Synthesis and Polymer supported Synthesis. Retrosynthesis.		15	
UNIT III Green Chemistry and Synthesis	**Green Chemistry and Synthesis:** Introduction to Green Chemistry; Need and Relevance of Green Chemistry; Principles of Green Chemistry. Green Synthesis in Industry: Green Materials, Green Reagents, Green Solvents and Green Catalysts.		15	

Course Code	**Title**	**Credits**	**No. of lectures**	**Notional hours**
USBT303	**IMMUNOLOGY**	**2**		
Course objectives:- The objective of this course is to familiarize students with the immune effector mechanisms and various immunotechniques. **Learning outcomes:-** By the end of the course the student will be able to: • understand the role of different types of cells, effector molecules and effector mechanisms in immunology. • understand the principles underlying various immunotechniques.				
UNIT I **Effectors of Immune Response**	Haematopoiesis; Cells of the Immune System; Primary and Secondary Lymphoid Organs. Complement System- Classical, Alternate and Lectin; Regulation and Biological Effects of Complement System; Deficiencies of Complement System		15	
UNIT II **Cell Receptors**	**T-cell Receptor Complex :** Structure and Activation. MHC Classes - General Organization and Inheritance; Structures and Peptide Interactions; Class I and II Diversity and Polymorphism; Antigen Presentation - Endocytic and Exocytic Pathways; MHC Restriction. **B-cell Receptor :** Structure, Maturation and Activation **B-T cell interaction (B-T cell cooperation).**		15	

UNIT III **Immuno-Techniques**	**Precipitation Reactions :** Immunoprecipitation, Immunoelectrophoresis, CIEP, Rocket Electrophoresis and 2-D Immunoelectrophoresis. **Agglutination Reactions :** Passive, Reverse Passive, Agglutination Inhibition. Coomb's Test; Complement Fixation Tests, RIA, ELISA, ELISPOT, Chemiluminescence, Western Blot, Immunofluorescence, Flow Cytometry. **Alternatives to Antigen-Antibody Reactions.**		15	

Course Code	Title	Credits	No. of lectures	Notional hours
USBT304	**CELL BIOLOGY AND CYTOGENETICS**	**2**		

Course objectives:-

The objective of this course is to have a firm foundation in the fundamentals of cell biology and cytogenetics.

Learning outcomes:- By the end of the course the student will be able to:

- develop an understanding of the cytoskeleton and cell membrane.
- discuss the structure of chromosomes and types of chromosomal aberrations.
- discuss the principles underlying sex determination, linkage and mapping.

UNIT I **Cytoskeleton**	**Cytoskeleton :** Overview of the Major Functions of Cytoskeleton. Microtubules: Structure and Composition. MAPs: Functions- Role in Mitosis, Structural Support and Cytoskeleton Intracellular Motility. Motor Proteins: Kinesins, Dynein; MTOCs. Dynamic Properties of Microtubules. Microtubules in Cilia and Flagella. Microfilaments: Structure, Composition, Assembly and Disassembly. Motor Protein: Myosin. Muscle Contractility: Sliding Filament Model. Actin Binding Proteins : Examples of Non-Muscle Motility. Intermediate Filaments :Structure and Composition; Assembly and Disassembly; Types and Functions.		**15**	
UNIT II **Cell Membrane**	**Cell Membrane :** Uptake of Nutrients by Prokaryotic Cells; Cell Permeability. Principles of Membrane Transport-Transporters and Channels; Active Transport,		**15**	

	Passive Transport; Types of Transporters; Types of ATP Driven Pumps - Na+ K+ Pump. Cell Junctions; Cell Adhesion and Extracellular Material Microvilli; Tight Junctions, Gap Junctions; Cell Coat and Cell Recognition. Cellular Interactions.			
UNIT III **Cytogenetics**	**Cytogenetics :** Structure of Chromosome - Heterochromatin, Euchromatin, Polytene Chromosomes. **Variation in Chromosomal Structure and Number :** Deletion, Duplication, Inversion, Translocation, Aneuploidy, Euploidy and Polyploidy and Syndromes- Klinefelter, Turner, Cri-du-Chat, Trisomy -21, Trisomy 18 and Trisomy 13. **Sex Determination and Sex Linkage :** Mechanisms of Sex Determination (XX-XY, ZZ-ZW, XX-XO) Dosage Compensation and Barr Body. **Genetic Linkage, Crossing Over and Chromosomal Mapping :** Tetrad Analysis; Two-point Cross; Three-point Cross; Pedigree Analysis.		**15**	

Course Code	Title	Credits	No. of Lectures	Notional hours
USBT305	**MOLECULAR BIOLOGY**	**2**		

Course objectives:-

The objective of this course is to have an insight into mechanism of gene expression and regulation.

Learning outcomes:- By the end of the course the student will be able to:

- discuss the mechanisms associated with gene expression at the level of transcription and translation.
- discuss the mechanisms associated with regulation of gene expression in prokaryotes and eukaryotes

UNIT I **Gene Expression-Transcription**	**Gene Expression- an Overview.** **Transcription Process in Prokaryotes :** RNA Synthesis; Promoters and Enhancers; Initiation of Transcription at Promoters; Elongation and Termination of an RNA Chain. **Transcription in Eukaryotes :** Eukaryotic RNA Polymerases; Eukaryotic Promoters; Transcription of Protein Coding Genes by RNA Polymerase; Eukaryotic mRNA's; Transcription of other genes;		15	

	Spliceosomes; RNA editing.			
UNIT II **Gene Expression-Translation**	**Nature of Genetic Code.** **Wobble Hypothesis.** **Translation :** Process of Protein Synthesis (Initiation, Elongation, Translocation, Termination); **Post Translation Modifications.** **Protein sorting.**		15	
UNIT III **Regulation of Gene Expression**	**In Prokaryotes:** ***In Bacteria* :** *lac* Operon of *E.coli*; *trp* Operon of *E.coli*. ***In Viruses* :** Lytic / Lysogenic Regulation **In Eukaryotes :** Operons in Eukaryotes; Control of Transcriptional Initiation; Gene Silencing and Genomic Imprinting; Post-Transcriptional Control; RNA Interference.		15	

Course Code	Title	Credits	No. of Lectures	Notional hours
USBT306	**BIOPROCESS TECHNOLOGY**	**2**		

Course objectives:-

The objective of this course is to understand the basics skills applied in fermentation technology and build a foundation for more advanced studies in bioprocess technology.

Learning outcomes:- By the end of the course the student will be able to:

- develop an understanding of the various aspects of bioprocess technology.
- develop skills associated with screening of industrially important strains.
- understand principles underlying design of fermentor and fermentation process.

UNIT I **Microorganisms in Industrial Processes**	**Types of Microorganisms used in Industrial Processes :** Bacteria, Actinomycetes, Fungi and Algae. **Screening and maintenance of strains:** Primary Screening and Secondary Screening; Cultivation; Preservation of Industrially Important Microbial Strains.		15	
UNIT II **Fermentor and Fermentation Processes**	**Design of a fermentor :** Stirred Tank Fermentor- Basic Design; Parts of a Typical Industrial Fermentor. **Fermentation Media :** Components; Design and Optimization. **Sterilization :** Sterilization of Fermentor and Fermentation Media.		15	

	Process Parameters : pH, Temperature, Aeration, Agitation, Foam, etc. **Types of Fermentation :** Surface and Submerged; Batch and Continuous, Aerobic and Anaerobic. **Product Isolation and Purification.** **Study of representative fermentation processes :** Outline of Penicillin and Ethanol Production by fermentation along with a flow-diagram.			
UNIT III ***In-vivo* and I*n-vitro* Assay of Industrial Products**	**Assay of Industrial Products:** Chemical and Biological; Types and Subtypes; Kinetics. Advantages and Disadvantages. Half-Life Determination of Pharmacological Products. Bioavailability and Bioequivalence Studies		15	

Course Code	Title	Credits	No. of Lectures	Notional hours
USBT307	**RESEARCH METHODLOGY**	**2**		
Course objectives:- The objective of this course is to develop research aptitude, logical thinking and reasoning. **Learning outcomes:-** By the end of the course the student will be able to: • understand basic principles of research methodology and identify a research problem. • understand a general definition of research design. • identify the overall process of designing a research study from its inception to its report.				
UNIT I **Introduction to Research Methodology and Research Problem**	Meaning of Research; Objectives of Research; Motivation in Research; Types of Research; Research Approaches; Significance of Research; Research Methods versus Methodology; Research Process; Criteria of Good Research; Problems Encountered by Researchers in India; What is a Research Problem? Selecting the Problem; Necessity of Defining the Problem; Technique Involved in Defining a Problem		15	
UNIT II **Research Design and Data Collection**	Meaning of Research Design; Need for Research Design; Features of a Good Design; Important Concepts Relating to Research Design; Different Research Designs; Basic Principles of Experimental Designs; Developing a Research Plan- Collection of Primary Data; Observation Method; Interview Method; Collection of Data through Questionnaires; Collection of Data through Schedules; Other Methods of Data Collection, Collection of Secondary Data,		15	

	Selection of Appropriate Method for Data Collection, Case Study Method			
UNIT III Interpretation and Report Writing	Meaning of Interpretation, Why Interpretation?, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.		15	
Internal Evaluation	Submission of Research Report/ Project/ Case Study/ Assignment			

PRACTICALS

	SEMESTER III	
Course code	**Title**	**Credits**
USBTP301 (PRACTICALS based on USBT301 and USBT302)	1. Study of Absorption Spectra of Coloured Compounds ($CuSO_4$, $CoCl_2$, $KMnO_4$). 2. Verification of Beer-Lambert's Law. 3. Extraction of Plasmid DNA and Separation by Agarose Gel Electrophoresis. 4. Determination of Purity of Plasmid DNA using UV Spectrophotometry. 5. Study of the Structure and Function of an Electron Microscope (Visit / Video Demonstration - including Sample Preparation and Staining). 6. Demonstration of Structure and Working of a Fluorescence Microscope (Stained Preparation). 7. Electrophoresis of Proteins by PAGE and SDS-PAGE. 8. Purification of any TWO Organic Compounds by Recrystallization Selecting Suitable Solvent. 9. Organic Estimations: Acetone, Amide, Benzoic Acid. 10. Organic Preparations : a) Acetylation of Primary Amine (Preparation of Acetanilide). b) Base Catalysed Aldol Condensation (Synthesis of Dibenzalpropanone).	**2**
Course code	**Title**	**Credits**
USBTP302 (PRACTICALS based on USBT303 and USBT304)	1. Complement Fixation Test (CFT). 2. Passive Agglutination- RA Factor Test. 3. Immunoelectrophoresis. 4. ELISA (Kit-based) - HEPALISA. 5. DOT-ELISA. 6. Western Blotting - Demonstration. 7. Flow Cytometry - Lab Visit. 8. Study of Chromosomal Aberrations- Deletion, Duplication, Inversion, Translocation and Syndromes- Trisomy 21 Trisomy 13 Trisomy 18, Klinefelter and Turner, Cri-du-Chat.	**2**

	9. Induction of Polyploidy by PDB Treatment using Suitable Plant Material. 10. Study of Polytene Chromosomes. 11. Mapping based on Tetrad Analysis and Three Point Cross. 12. Pedigree Analysis- Autosomal and Sex-Linked.	
Course code	**Title**	**Credits**
USBTP303 (PRACTICALS based on USBT305 and USBT306)	1. Study of *E.coli* Diauxic Growth Curve- (Lactose and Glucose). 2. Study of *lac* Gene Expression using Blue-White Selection. 3. Expression of β-galactosidase and Measurement of Activity. 4. Screening for an Antibiotic Producing Strain of Microorganism. 5. Screening for an Alcohol Producing Strain of Microorganism. 6. Lab Scale Production of Penicillin (Static and shaker). 7. Purification of Penicillin from Broth Culture of *Penicillium spp*. by Solvent Extraction. 8. Lab Scale Production of Ethanol. 9. Purification of Ethanol from Broth Culture of *Saccharomyces spp*. by Distillation. 10. Estimation of Penicillin from Recovered Broth by Chemical (Iodometric) Method. 11. Estimation of Penicillin from Recovered Broth by Biological (Bioassay) Method. 12. Estimation of Alcohol from Recovered Broth by Dichromate Method.	**2**

SEMESTER-IV

Course Code	Title	Credits	No. of Lectures	Notional hours
USBT401	**BIOCHEMISTRY**	**2**		

Course objectives:-

The objective of this course is to gain an insight into the metabolic processes associated with catabolism of carbohydrates, amino acids, lipids and nucleotides.

Learning outcomes:- By the end of the course the student will be able to

- discuss the metabolic pathways of carbohydrates, amino acids, lipids and nucleotides.
- explain the role of energy rich molecules in metabolism.

UNIT I **Carbohydrate Metabolism, ETS and Energy Rich Compounds**	**Carbohydrate Metabolism :** Glycolytic Pathway and its Regulation, Homolactic Fermentation; Alcoholic Fermentation; Energetics of Fermentation; Citric Acid Cycle and its Regulation; Gluconeogenesis; Pentose Phosphate Pathway; Glyoxalate Pathway; Reductive TCA . (Sequence of Reactions, Regulation, Energy Yield and Metabolic Disorders of the above pathways) **Electron Transport System :** Electron Transport and Oxidative Phosphorylation. Inhibitors of ETS. **Energy Rich Compounds :** ATP as Energy Currency, Structure of ATP, Hydrolysis, Other Energy Rich Compounds other than ATP like PEP, Creatine Phosphate, etc.	15	15	
UNIT II **Amino Acid Metabolism**	**Amino Acid Breakdown :** Deamination, Transamination, Urea Cycle, Breakdown of Glucogenic and Ketogenic Amino Acids. **Amino Acids as Biosynthetic Precursors :** Biosynthesis of Epinephrine, Dopamine, Serotonin, GABA, Histamine, Glutathione. (Sequence of Reactions, Regulation and Metabolic Disorders of the above pathways)	15	15	
UNIT III **Lipid and Nucleotide Metabolism**	**Lipid Metabolism :** Mobilization, Transport of Fatty Acids. Beta, Alpha and Omega Oxidation of Saturated Fatty Acids; Oxidation of Unsaturated Fatty Acids; Oxidation of Odd Chain Fatty Acids. Energy Yield, Ketone Body Breakdown to Yield Energy. (Sequence of Reactions, Regulation, Energy Yield and Metabolic Disorders of the above pathways)	15	15	

	Nucleotide Metabolism : Degradation of Purines and Pyrimidines.			

Course Code	Title	Credits	No. of Lectures	Notional hours
USBT402	**APPLIED CHEMISTRY –II**	**2**		
Course objectives:- The objective of this course is to have a firm foundation in the fundamentals and applications of current chemical theories for the physical world. **Learning outcomes:-** By the end of the course the student will: • develop an understanding of the different aspects of analytical chemistry. • gain knowledge of natural product chemistry and related acquired skills. • gain an understanding of basic concepts in polymer chemistry and Nanomaterials.				
UNIT I **Sampling and Separation Techniques**	**Sampling :** Importance of Sampling and Sampling Techniques Types of Sampling - Random and Non-Random Sampling of Solids, Liquids and Gases. **Separation Techniques :** Types of Separation Techniques - Filtration, Zone refining, Distillation, Vacuum Distillation. Solvent Extraction - Partition Coefficient and Distribution Ratio, Extraction Efficiency, Separation Factor, Role of Complexing Agents, Chelation, Ion pair Formation, Solvation, and Soxhlation. Centrifugation - Basic principles of sedimentation.	15	15	
UNIT II **Natural Product Chemistry**	**Natural Product Chemistry :** Primary and Secondary Metabolites. Classification of Natural Products based on Bio-Synthesis. Classification of Natural Products based on Structure- Alkaloids, Phenolics, Essential oils and Steroids. Structure Determination of Natural Products. Commercial Synthesis of Natural Products. **Chromatographic Separation of Natural Products :** Gas Chromatography and its Applications. Liquid Chromatography : HPLC and its Applications. HPTLC for separation and analysis of Natural products.	15	15	

UNIT III Polymers and Nanomaterials	**Polymers :** Introduction to Polymers. Types of Polymers - Monomer, Polymer, Homopolymer, Copolymer, Thermoplastics and Thermosets, Addition and Condensation Polymers (Examples and Uses) Stereochemistry of Polymers. Biodegradable Polymers. **Nanomaterials :** Introduction to Nanomaterials. Forms of Nanomaterials : Nanoparticles, Nanofilms and Nanotubes Synthesis and Characterization of Nanomaterials. Applications of Nanomaterials.	15	15	

Course Code	Title	Credits	No. of lectures	Notional hours
USBT403	**MEDICAL MICROBIOLOGY**	**2**		

Course objectives:-

The objective of this course is to gain insight into disease factors and processes and diseases caused by microorganisms.

Learning outcomes:- By the end of the course the student will be able to:

- list the factors playing a role in causing a disease gain.
- discuss the various aspects of systemic infections including causative agents, symptoms and prophylaxis.
- gain the technical capability of handling, isolating and identifying various bacteria.

UNIT I Infectious Diseases	**Host Parasite Relationship:** Normal Flora; Factors Affecting the Course of Infection and Disease; Mechanisms of Infection and Virulence Factors. **Infection:** Patterns of Infection; Types of Infections; Signs and Symptoms; Epidemiology and Epidemiological Markers. **Diseases:** Origin of Pathogens; Vectors; Acquisition of Infection; Koch's Postulates.		15	
UNIT II Medical microbiology- Causative Organisms- I	**Skin :** *S. aureus*, *S. pyogenes*. **Respiratory Tract Infections :** *M. tuberculosis*, *S. pneumoniae*(Characteristics Transmission, Course of Infection, Lab Diagnosis, Management of TB, Prevention and Control, Immuno and Chemoprophylaxis, DOTS and MDR).		15	

	Urinary Tract Infections : *E.coli* : Characteristics, Virulence, Clinical disease, and *E.coli* Infections. *Proteus*.			
UNIT III Medical microbiology - Causative Organisms- II	**GI Tract Infections :** *Salmonella and Shigella spps*. *(*Characteristics, Virulence- Pathogenesis and Immunity, Clinical Disease, Carriers Lab Diagnosis, Phage Typing Prophylaxis and Treatment). **Sexually Transmitted Diseases :** Syphilis and Gonorrhoea. **Nosocomial Infections :** *Ps*. *aeruginosa*		15	

Course Code	Title	Credits	No. of Lectures	Notional hours
USBT404	**ENVIRONMENTAL BIOTECHNOLOGY**	**2**		

Course objectives:-

The objective of this course is to gain awareness about different types of environmental pollution and related issues.

Learning outcomes:- By the end of the course the student will be able to:

- gain an understanding of the causes, types and control methods for environmental pollution.
- application of different life forms in environmental remediation.

UNIT I **Environmental Pollution**	**Sources of Pollution.** **Air Pollution :** Types; Sources; Classification of Air Pollutants; Air Pollution Monitoring and Control. **Water Pollution :** Causes, Types and Classification; Eutrophication; Assessment of Water Quality-Pollutant Monitoring and Control; **Soil and Solid Waste Pollution :** Characteristics of Wastes, Impacts of Solid waste on Health, Occupational Hazards and Control. **Soil Erosion :** Concept, Causes and Effects.		15	
UNIT II **Global Environmental Problems and Issues**	**Green House Effect :** Factors Responsible for Green House Effect; Green House Gases. Global Warming; Ozone Depletion; Kyoto Protocol; UV Radiation; Acid Rain.		15	

UNIT III **Bioremediation**	Concept of bioremediation. Microorganisms in Bioremediation, Myco-remediation and Phytoremediation. Bioremediation Technologies. Measuring Bioremediation in the Field. Bioaugmentation and Biostimulation. Monitoring the Efficacy of Bioremediation.		15	

Course Code	Title	Credits	No. of Lectures	Notional hours
USBT405	**BIOINFORMATICS and BIOSTATISTICS**	**2**		

Course objectives:-

The objective of this course is learning and understanding basic concepts of Bioinformatics and Biostatistics.

Learning outcomes:- By the end of the course the student will be able to:

- gain an understanding of the basic concepts of Bioinformatics and Biostatistics.
- understand the tools used in bioinformatics.
- apply the various statistical tools for analysis of biological data.

UNIT I **Introduction to Computers and Biological Databases**	**Computer Basics :** Organization of a Computer; I/O Units; Computer Memory; Processor; Binary Arithmetic; Logic Circuit; Architecture; Operating System. **Internet Basics :** Connecting to the Internet, E-mail, FTP, www, Difference between www and Internet. **Biological Databases :** Classification of Databases - Raw and Processed databases; Primary (NCBI), Secondary (PIR) and Tertiary or Composite (KEGG) databases; Structure and Sequence databases. Specialized Databases - Protein Pattern Databases; Protein Structure and Classification Databases (CATH/SCOP). **Genome Information Resources:** DNA Sequence Databases specialized Genomic Resources. Protein Databases based on Composition, Motifs and Patterns. **Protein Structure Visualization Software.**		15	
UNIT II **BLAST and Sequence Alignment**	**BLAST and Sequence Alignment :** BLAST and its Types; Retrieving Sequence using BLAST. **Pairwise Alignment :** Identity and Similarity; Global and Local Alignment; Pairwise Database Searching.		15	

	Multiple Sequence Alignment: Goal of Multiple Sequence Alignment; Computational Complexity; Manual Methods; Simultaneous Methods; Progressive Methods; Databases of Multiple Alignment; Secondary Database Searching; Analysis Packages; MSA and phylogenetic trees.			
UNIT III **Biostatistics**	Theory and Problems based on- Coefficient of Correlation and Regression Analysis; Steps in Testing Statistical Hypothesis; Parametric Tests:- Z Test – Single Mean and Two Means, t-Test – Single Mean, Paired and Unpaired; Chi-square Test.		15	

Course Code	**Title**	**Credits**	**No. of Lectures**	**Notional hours**
USBT406	**MOLECULAR DIAGNOSTICS**	**2**		

Course objectives:-

The objective of this course is learning and understanding molecular techniques and utilizing these techniques in diagnosis.

Learning outcomes:- By the end of the course the student will be able to:

- gain an understanding of the basic principles used in molecular diagnosis.
- gain critical thinking and analytical skills to understand new diagnostic methods.
- apply the knowledge and skills gained in the course should be useful in developing new diagnostic kits.

UNIT I **Basics of Molecular Diagnostics**	**Introduction to Molecular Diagnostics :** Overview of Molecular Diagnostics; History of Molecular Diagnostics; Molecular Diagnostics in post genomic era; Areas used in Molecular Diagnostics; Future prospects - Commercialising Molecular Diagnostics, personalized medicine, Theranostics. **Characterisation and analysis of Nucleic – acids and Proteins :** Extraction, Isolation and Detection of DNA, RNA and Proteins; Restriction Endonucleases and restriction enzyme mapping. **Hybridisation techniques :** Southern, Northern, Western and FISH; Markers, probes and its Clinical applications.		15	
UNIT II **Nucleic acid amplification Methods**	**Target amplification :** PCR - General Principle; Components of a Typical PCR reaction; Experimental Design; Primer Designing; Control of PCR Contamination and Mispriming; PCR Product Clean-up and Detection. **PCR Types :** Reverse Transcriptase and Real Time PCR.		15	

	Probe amplification : Ligase Chain Reaction			
UNIT III **Molecular Biology based Diagnostics**	**DNA Polymorphism and Identification:** RFLP and Parentage Testing; RFLP and Sickle-Cell Anaemia. **Molecular Diagnostics for infectious diseases :** Molecular testing for *Neisseria*, Molecular diagnosis for HIV-1; **Genetic Counselling and Molecular Diagnosis** Genetic testing- Need and uses; genetic counselling. Case studies- Diagnostic testing for Cystic fibrosis; Fragile X diagnostic and Carrier testing. **Ethical, Social and legal issues to molecular genetic testing**		15	

Course Code	**Title**	**Credits**	**No. of Lectures**	**Notional hours**
USBT407	**ENTERPRENEURSHIP DEVELOPMENT**	**2**		
Objective: To develop and systematically apply an entrepreneurial way of thinking that will allow identification and creation of business opportunities. **Learning Outcome:** By the end of the course the student will be able to: • develop an understanding of the systematic process and to select and screen a business idea. • design strategies for successful implementation of ideas. • write a business plan.				
UNIT I **Introduction to Entrepreneurship Development**	Concept of Entrepreneur; Entrepreneurship; Need and Importance; Factors Influencing Entrepreneurship; Essentials of a Successful Entrepreneur		15	
UNIT II **Setting-up of an Enterprise and Planning**	Location of Enterprise; Real Estate and Human Resource Planning, Financial Planning; Role of Government and Financial Institutions in Entrepreneurship Development; Raising Money from Venture Capitalists, Government Grants, Product Selection and Ideas; Project Planning and Formulation; Project Feasibility Assessment; Regulatory Affairs, Corporate Laws, Innovation, IPR generation and Protection, Preparation of a Business Plan, Characteristics and Importance of Planning;		15	

UNIT III **Marketing, Sales, Advertising and International Market research**	Marketing Plan for an Entrepreneur; Strategic Alliances, Advertising and Sales Promotion; Market Assessment, Need for International Market Research, Domestic vs. International Market Research, Cost and Methodology of Market Research, Desk and Field Research		15	
Internal Evaluation	Submission and Presentation of Business Proposal for any Biotechnological Product/ Enterprise			

	SEMESTER IV	
Course code	**Title**	**Credits**
USBTP401 (PRACTICALS based on USBT401 and USBT402)	1. Determination of Lactate Dehydrogenase (LDH) Activity in Blood Serum. 2. Determination of Total, LDL and HDL Cholesterol in Serum. 3. Organ Function Tests: Liver (SGPT, SGOT); Kidney (Urea from Serum). 4. Estimation of Uric acid and Creatinine in Urine. 5. Qualitative Detection of Ketone Body in Urine. 6. Isolation of Mitochondria and Demonstration of ETC using a Marker Enzyme. 7. Separation of Binary (Solid-Solid) Mixture (Min 4 Compounds). 8. Identification of Organic Compound of Known Chemical Type (Min 4 Compounds). 9. HPLC analysis and interpretation of any one secondary metabolite from plants 10. Analysis of essential oils from any plant source using GC. 11. HPTLC fingerprint analysis of any one medicinally important plant. 12. Chemical and Biological Synthesis of Silver Nanoparticles and its characterisation by UV- Vis Spectrophotometer.	**2**
Course code	**Title**	**Credits**
USBTP402 (PRACTICALS based on USBT403 and USBT404)	1. Identification of *S.aureus*-Isolation, Catalase, Coagulase Test. 2. Identification of *E.coli*-Isolation, Sugar Fermentations, IMViC. 3. Identification of *Salmonella*- Isolation, Sugar Fermentations, TSI Slant. 4. Identification of *Shigella*- Isolation, Sugar Fermentations, TSI Slant. 5. Identification of *Proteus*- Isolation, Sugar Fermentations, IMViC. 6. Identification of *Pseudomonas* - Isolation, Urease test, Oxidase Test, TSI Slant. 7. RPR Test (Kit Based). 8. Permanent Slide- *Mycobacterium*. 9. Biological Oxygen Demand (BOD). 10. Chemical Oxygen Demand (COD). 11. Isolation of Bacteria from Air by Gravity Sedimentation Method. 12. Most Probable Number (MPN) – Presumptive, Confirmed and Completed tests.	**2**

	13. Bioremediation of metal. 14. Visit to STP / CETP	
Course code	**Title**	**Credits**
USBTP403 (PRACTICALS based on USBT405 and USBT406)	1. Familiarization with NCBI, EMBL, DDBJ, PIR, KEGG Databases. 2. Use of NCBI BLAST Tool. 3. Pairwise and Multiple Sequence Alignment and Phylogeny. 4. Classification of Proteins using CATH/SCOP. 5. Visualization PDB Molecules using Rasmol/Raswin. 6. Handling and Calibration of Micropipette. 7. Isolation, Quantitative Analysis and AGE of Genomic DNA from Bacteria and Yeast. 8. Isolation and Detection of RNA from Bacteria and Yeast. 9. Restriction Enzyme Digestion. 10. RFLP- Kit Based. 11. Primer Designing through Open Online Source NCBI- BLAST. 12. DNA Amplification – PCR.	**2**

Summer Training:

1. This should be taken up in the summer over a period of one month preferably in an immunology / veterinary / virology institute or a laboratory using recombinant DNA methods.
2. The students could also be assigned to assist a clinic (in a hospital), a fermentation plant, brewery or bakery and watch the various stages in brewing and baking and post-fermentation processing. Prior arrangement must be made on the mode of interaction of the educational institute with the clinic and the industry.

EVALUATION PATTERN

The performance of the learner shall be evaluated in TWO parts.
The learner's Performance shall be assessed by internal assessment of 25 Marks and Semester end examination (theory) of 75 marks for each term.
Practical examination will be conducted at end of each semester for 300 marks

Internal Assessment- 25 Marks

SR. No.	Particulars	Marks
1.	**Class test** Objective type questions(10) Concept based questions-Answer in one/two sentences (5) Short notes-answer any two out of three	 **5 Marks** **5 Marks** **10 Marks**
2.	Department activities, Attendance etc.	**5 Marks**
	TOTAL	**25 Marks**

Internal Assessment – 25 Marks (General Elective each semester)
For course code USBT 307 (Research Methodology) and USBT 407 (Entrepreneurship Development)

SR. No.	Particulars	Marks
1.	Submission as per instructed in theory course code USBT 307 and USBT 40	**20 Marks**
2.	Department activities, Attendance etc.	**5 Marks**
	TOTAL	**25 Marks**

Semester end exam- 75 marks

SR. No.	Particulars	Marks
	All questions are compulsory Number questions : 5 (Five) Each question carries 15 Marks	
1.	Q 1 – Objective questions based on unit I, II, III (internal options)	**15 Marks**
2.	Q 2 – Unit I	**15 Marks**
3.	Q 3 – Unit II	**15 Marks**
4.	Q 4 – Unit III	**15 Marks**
5.	Q 5 – Short notes based on Unit I, II, III (any 3 out of 5)	**15 Marks**
	TOTAL	**75 Marks**

Note:-

- All questions are compulsory with internal options within the questions.
- Each question may be sub-divided into sub questions as a, b, c, d, e etc. & the allocation of marks depends on the weightage of the topic.

Practical examination – 300 marks

SEMESTER III

USBTP301	Core subject Practicals	Practicals of USBT301 and USBT302	**100 Marks**
USBTP302	Core subject Practicals	Practicals of USBT303 and USBT304	**100 Marks**
USBTP303	Core Subject and Skill enhancement elective Practicals	Practicals of USBT305 and USBT306	**100 Marks**

SEMESTER IV

USBTP301	Core subject Practicals	Practicals of USBT301 and USBT302	**100 Marks**
USBTP302	Core subject Practicals	Practicals of USBT303 and USBT304	**100 Marks**
USBTP303	Core Subject and Skill enhancement elective Practicals	Practicals of USBT305 and USBT306	**100 Marks**

UNIVERSITY OF MUMBAI

Revised Syllabus for T.Y.B.Sc.
Programme- B.Sc.
Course- Biotechnology (USBT)
(Third Year – Sem. V & VI)

(Credit Based Semester and Grading System with effect from the academic year 2018-2019)

TYBSC Biotechnology Course Structure

Semester V

Course code USBT	Title	Theory /Practical	Marks	Credits	Nos of Lectures & Practical
501	Cell biology	Theory	100	2.5	60
502	Medical Microbiology & Instrumentation	Theory	100	2.5	60
503	Genomes and Molecular Biology	Theory	100	2.5	60
504	Marine Biotechnology	Theory	100	2.5	60
P501+502	Cell biology+ Medical Microbiology & Instrumentation	Practical	100	3.0	72
P503+504	Genomes and Molecular Biology+ Marine Biotechnology	Practical	100	3.0	72
Applied Component	Biosafety	Theory	100	2.0	48
	Biosafety	Practical	100	2.0	48
	TOTAL		**800**	**20**	**480**

Semester VI

Course code USBT	Title	Theory/ Practical	Marks	Credits	Nos of Lectures & Practical
601	Biochemistry	Theory	100	2.5	60
602	Industrial Microbiology	Theory	100	2.5	60
603	Pharmacology and Neurochemistry	Theory	100	2.5	60
604	Environmental Biotechnology	Theory	100	2.5	60
P 601-P 602	Biochemistry& Industrial Microbiology	Practical	100	3	72
P 603-P 604	Pharmacology - Neurochemistry and Environmental Biotechnology (50M)+ Project work (50M)	Practical	100	3	72
Applied component	Agribiotechnology	Theory	100	2.0	48
Applied component	Agribiotechnology	Practical	100	2.0	48
	TOTAL		**800**	20	**480**

Teaching pattern:

One (01) Credit would be of thirty- forty (30-40) learning hours; of this more than fifty percent of the time will be spent on class room instructions including practical as prescribed by the University. Rest of the time spent invested for assignments, projects, journal writing, case studies, library work, industrial visits, attending seminars / workshops, preparations for examinations etc. would be considered as notional hours. The present syllabus considers (60L as class room teaching and 15 lectures as Notional hours/ paper). Each lecture duration would be for 48 min

The names of the reference books provided in the syllabus are for guidance purpose only. Students and faculty are encouraged to explore additional reference books, online lectures, videos, science journals for latest/ additional information.

Examination pattern for:

Theory:

- The question paper for the Term End Exam would be of **100 marks** consisting of 5 Questions (20M each), of which one question would be common for all units in the syllabus.

- The question paper would be set for 150 marks including internal options.

- There shall be no internal exam for any paper.

Practical:

- Would be conducted over a period of 3 days; 50M each paper.

- Each student to perform 2 major and 2 minor practical for Sem V and 2 major and project presentation for Sem VI ,

- Viva would be conducted during the practical during Sem V; Sem VI would have ONLY project presentation

- Journals would be uniform throughout all the centres; matter would be communicated to all the centres by the syllabus committee.

- Distribution of marks for the experiments carried out during the examination:

  Sem V (50M/ paper): Major: 20M; Minor: 10M; Viva: 10M; Journal 10M.
  Sem VI (50M/paper): Major (x2): 40M; Journal: 10M; Project 50M

  The report could be around 25-30 pages with appropriate referencing and formatting.
  Marks distribution for the project would be as follows:
  25M documentation, 15M presentation, 10 M viva and interactions;

- Students would undertake a project for 1-2 months during the last semester for 50 M. The project **should** include **either** of the following:

  1. One/ more major instrumentation OR
  2. One / more major technique/s required in the field of interest OR
  3. Bioinformatics OR
  4. Biostatistics

Semester V

Course code USBT	Title	Unit	Topics	Credit	No of Lectures
501	Cell Biology	I: Cell cycle	Cell cycle Introduction: Prokaryotic and Eukaryotic- **3 Lectures;** The Early Embryonic Cell Cycle and the Role of MPF-**4 Lectures;** Yeasts and the Molecular Genetics of Cell-Cycle Control – **4 Lectures;** Apoptosis, Cell-Division Controls in Multicellular Animals- **4 Lectures**	2.5	15
		II: Cell Signalling	Cell signalling and signal transduction:Introduction General Principles of Cell Signaling - **3 Lectures;** Signaling via G-Protein-linked Cell-Surface Receptors - **3 Lectures;** Signaling via Enzyme-linked Cell-Surface Receptors - **3 Lectures;** Target-Cell Adaptation, The Logic of Intracellular - **3 Lectures;** Signaling: Lessons from Computer-based "Neural Networks"- **3 Lectures**		15
		III: Developmental Biology	Overview of how the modern era of developmental biology emerged through multidisciplinary approaches - **5 Lectures;** Stages of development- zygote, blastula, gastrula, neurula cell fate & commitment – potency- concept of embryonic stem cells, differential gene expression, terminal differentiation ,lineages of three germ layers, fate map - **6 Lectures;** Mechanisms of differentiation- cytoplasmic determinants, embryonic induction, concept of morphogen, mosaic and regulative development Pattern formation-- axis specification, positional identification (regional specification), Morphogenetic movements, Model organisms in Developmental biology - **4 Lectures**		15
		IV: Cancer Biology	Cancer: Introduction, Cancer as a Microevolutionary Process - **4 Lectures**; The Molecular Genetics of Cancer - **6 Lectures**; Cancer and Virus Cancer diagnosis and chemotherapy - **5 Lectures**		15
		Total			60

PRACTICALS

USBT P 501-502 **3 credits** **72hrs**

1. Separation of components from a mixture using Affinity chromatography (Kit may be used)
2. Separation of components from a mixture using ion exchange chromatography (Kit may be used)
3. Separation of components from a mixture using Size exclusion chromatography (Kit may be used)
4. HPLC method validation.
5. MIC and MLC of any one antibiotic
6. Antibiotic sensitivity test using agar cup method
7. Antibiotic sensitivity test using paper disc method
8. Antibiotic sensitivity test using ditch method.
9. Cancer Biology: (Field visit and 2 page report in the journal)
10. Chick embryo candling and inoculation methods Demonstration experiment
11. Book review (Emperor of all Maladies)

Course Code USBT	Title	Unit	Topics	Credit	No of Lectures
503	**Genomics and Molecular Biology**	I: Genetic engineering of plants	Genetic engineering of plants; Methodology. Plant transformation with the Ti plasmid of *A.tumefaciens*, Ti plasmid derived vector system - **4 Lectures;** Transgenic plants: Physical methods of transferring genes to plants : electroporation, microprojectile bombardment, liposome mediated, protoplast fusion- **5 Lectures;** Vectors for plant cells - **4 Lectures;** Improvement of seed quality protein **- 2 Lectures**	2.5	15
		II: Transgenic Animals	Transgenic mice- methodology-retroviral method, DNA microinjection, ES method - **5 Lectures;** genetic manipulation with cre-loxP - **2 Lectures;** Vectors for animal cells - **2 Lectures;** Transgenic animals recombination system - **2 Lectures;** Cloning live stock by nuclear transfer - **2 Lectures;** Green Fluorescent Protein - **1 Lectures;** Transgenic fish – **1 Lectures**		15
		III: Tools in Molecular Biology	Cloning vectors-Plasmids (pUC series), Cosmids, phagemids M13, shuttle vectors, YAC vectors, expression vectors pET - **4 Lectures;** Gene cloning-Isolation and purification of DNA; Isolation of gene of interest: Restriction digestion, electrophoresis, blotting, cutting, and joining DNA, methods of gene transfer in prokaryotes and eukaryotes - **3 Lectures;** Recombinant selection and screening methods: genetic, immunochemical, Southern and Western analysis, nucleic acid hybridization, HART,HRT- **2 Lectures;** Expression of cloned DNA molecules and maximization of expression - **2 Lectures;** Cloning strategies-genomic DNA libraries, cDNA libraries, chromosome walking and jumping - **4 Lectures**		15
		IV: Gene sequencing and editing	Maxam Gilbert's method, Sanger's dideoxy method, Automated DNA sequencing, Pyrosequencing - **6 Lectures;** Human genome mapping and it's implications in health and disease - **3 Lectures**; RNAi, ZNF(Zinc finger nucleases), TALENS(Transcription Activator Like Effector Nucleases), CRISPER/Cas system(Clustered Regularly Interspersed Repeats) - **6 Lectures**		15
		Total			60

PRACTICALS

USBT P 503-504 **3 credits** **72hrs**

1. Transformation in *E.coli.*
2. Genomic DNA Extraction: Animal cells.
3. Restriction enzyme digestion and ligation (Kit may be used).
4. Phage titration: *Demonstration*
5. Polymerase chain reaction. *Demonstration*
6. Gradient plate technique
7. Bacterial gene expression (Kit may be used).
8. Study of any 5 marine bacteria and algae (Macro and micro)
9. DPPH assay for antioxidant extracted from marine algae
10. Extraction of carotenoids from marine algae/Bacteria/Fungi
11. Extraction and estimation of Gelatin / Collagen.
12. Extraction of alkaloids from marine organisms and their separation by TLC.

Course	Title	Unit	Topics	Credits	Lectures
Applied component	**Biosafety**	I: Introduction to biosafety	Introduction - **1 lecture** Biological Risk Assessment, Hazardous Characteristics of an Agent- **2 lectures;** Genetically modified agent hazards - **1 lecture**; Cell cultures - **1 lecture;** Hazardous Characteristics of Laboratory Procedures - **1 lecture;** Potential Hazards Associated with Work Practices – **2 lectures;** Safety Equipment and Facility Safeguards - **2 lectures**; Pathogenic risk and management - **2 lectures**	2.0	15
		II: GLP	Concept of GLP- **1 lectures;** Practicing GLP- **1 lecture**; Guidelines to GLP - **2 lectures;** Documentation of Laboratory work - **1 lectures;** Preparation of SOPs - **2 lectures**; Calibration records - **1 lectures;** Validation of methods - **1 lectures;** Documentation of results - **1 lecture**; Audits & Audit reports - **1 lecture.**		12
		III: Detection and testing of contaminants	Microbial Contamination in food and pharma product - **3 lectures**; Some common microbial contaminants **- 3 lectures;** Microbiological Assays for pharmaceutical products **- 4 lectures**; Regulatory Microbiological testing in pharmaceuticals - **3 lectures.**		12
		IV: Biosafety in Biotechnology	Concepts on biosafety in Biotechnology - **2 lectures;** Regulating rDNA technology -**2 lectures;** Regulating food and food ingredients -**3 lectures;** Genetically engineered crops, livestock Bioethics -**3 lectures;** Contemporary issues in Bioethics **- 2 lectures.**		12

PRACTICALS

Applied Component- Biosafety 2 Credits 48hours

1. Validation of micropipette, measuring cylinders, colorimeters
2. Calibration of pH meter and weighing balance
3. Vitamin B12 bioassay
4. Testing for adulterants in food; ex. Starch in milk
5. Making SOP for any 2 major laboratory instruments
6. Sterility of injectables

Semester VI

Course Code USBT	Title	Unit	Topics	Credits	Lectures
601	**Biochemistry**	I: Protein Biochemistry	Protein structure: Protein Tertiary and Quaternary Structures **-2 Lectures;** Protein Denaturation and Folding – **3 Lectures**; Protein Function: Reversible Binding of a Protein to a Ligand: Oxygen-Binding Proteins – **2 Lectures;** Complementary Interactions between Proteins and Ligands: Immunoglobulins – **1 Lecture**; Protein Interactions Modulated by Chemical Energy: Actin, Myosin, and Molecular Motors **-3 Lectures**; Protein purification – **4 Lectures.**	2.5	15
		II: Metabolism	Carbohydrate biosynthesis and its regulation: Peptidoglycan in Bacteria **-2 Lectures;** Starch and sucrose in Plants **-4 Lectures;** Glycogen in Animals **- 4 Lectures;** Biosynthesis and regulation of Cholesterol, Atherosclerosis – **5 Lectures.**		15
		III: Endocrinology	Mechanism of action of group I and II hormones- **1 Lecture;** Structure, storage, release, transport, biochemical functions and disorders associated with hormones secreted by Hypothalamus **-1 Lecture;** Anterior Pituitary gland - GH, stimulating hormones) **-1 Lecture;** Posterior Pituitary gland – oxcytocin and vasopressin **-1 Lecture;** Thyroid gland – Thyroxine, calcitonin **- 2 Lectures;** Parathyroid gland – PTH **-1 Lecture;** Adrenal medulla – epinephrine and norepinehprine **-1 Lecture;** Adrenal cortex – Glucocortocoids **- 1 Lecture;** Pancreas – insulin and glucagon **- 2 Lectures;** Female Gonads – estrogen and progesterone **- 2 Lectures;** Male gonads – testosterone**- 1 Lecture;** Placenta – hCG **- 1 Lecture.**		15
		IV:	Minerals and Vitamins;		

		Nutrition	Dietary sources, bioactive form, functions and disorders associated with fat soluble (A D E K) and water soluble vitamins- **7 Lectures;** Minerals - physiological and biochemical functions of principal and trace elements. - **7 Lectures;** Malnutrition – Over nutrition (obesity) and PEM (Kwashiorkor and Marasmus)- **1 Lecture.**		15

USBT P 603-604 **2 credits** **48 hrs**

1. RAPD analysis demonstration experiment
2. Isolation of Rhizobium
3. Isolation of Azotobacter
4. Isolation of Phosphate solubilising bacteria
5. Study of effect of abiotic stress on plants.
6. Rapid screening tests for abiotic stress tolerance (drought, - PEG, Mannitol &salinity NaCl)
7. Estimation of antioxidants and antioxidant enzymes - Ascorbate, Catalase, and Peroxidase
8. Visit to green house facility and submission of field visit report.

F.Y.B.A.
Subject: Economics
Microeconomics – I
Semester – I
(Academic Year: 2019 - 20)

Preamble: This course is designed to expose the students to the basic principles of microeconomic theory. The emphasis will be on the development of analytical thinking with the help of statistical tools among the students and develop the skill of application of microeconomics concepts to analyze the real life situations.

Module - I: Introduction to Microeconomics (12 Lectures)

Microeconomics: Meaning, Scope, Nature, Importance and Limitations; Basic Economic Problems; Role of Price Mechanism in a Market Economy; Positive Economics and Normative Economics; Concepts of Equation, Functions, Graphs, Diagrams, Line, Slope and Intercept

Module - II: Ten Principles of Economics (12 Lectures)

Trade-Off Faced by the Individuals; Significance of Opportunity Cost in Decision Making; Thinking at the Margin; Responses to incentives; Benefits from Exchange; Organization of Economic Activities through Markets and its Benefits; Role of Government in improving Market Outcomes; Dependence of Standard of Living on Production; Growth in Quantity of Money; Inflation and Unemployment Trade Off

Module - III: Markets, Demand and Supply (12 Lectures)

What is a Market; What is Competition; Demand Curves: Market Demand versus Individual Demand, Movements along the Demand Curve, Shifts in the Demand Curve; Supply Curves: Market Supply and Individual Supply, Shifts in Supply Curve; Market Equilibrium - Three Steps to Analyze Changes in Equilibrium; Price Elasticity of Demand, Methods of Measuring Price Elasticity of Demand – Total Outlay Method, Percentage Method and Point Method; Concepts of Income Elasticity of Demand, Cross Elasticity of Demand and Promotional Elasticity of Demand

Module IV: Consumer's Behavior (12 Lectures)

Introduction to Cardinal and Ordinal Approaches; Indifference Curve Analysis - Properties of Indifference Curves, Budget Line, and Consumer's Equilibrium; Income, Price and Substitution Effect; Derivation of Demand Curve; Consumer's Surplus: Strong Ordering and Weak Ordering

F.Y.B.A.
Subject: Economics
Microeconomics – II
Semester – II
(Academic Year: 2019 - 20)

Preamble:

As a logical sequence to Microeconomics Paper I, this paper is aimed at giving supply side knowledge of Economics to the learner which will enhance their knowledge about aspects of production, cost and revenue analysis, theories of distribution and understanding about the market structure.

Module I: Production Analysis (12 Lectures)

Production Function: Concept And Types; Concepts of Total, Average and Marginal Product; Law of Variable Proportion and Returns to Scale, Isoquant and Producer's Equilibrium

Module II: Cost & Revenue Analysis (12 lectures)

Concepts of Costs: Money and Real Cost, Social Cost, Private Cost, Explicit and Implicit Cost, Opportunity Cost; Relationship between Average, Marginal and Total Cost; Derivation of Short Run and Long Run Cost Curves; Concepts of Revenue: Types and Interrelationship

Module III: Factor Pricing (12 lectures)

Marginal Productivity Theory of Distribution; Rent: Ricardian Theory of Rent, Modern Theory of Rent, Quasi Rent; Wages: Modern Theory of Wages; Collective Bargaining; Supply Curve of Labour; Interest: Classical Theory of Interest, Loanable Funds Theory of Interest; Profit: Risk and Uncertainty Theory, Innovation Theory

Module IV: Equilibrium in Different Market Structure (12 Lectures)

Concept Of Equilibrium: TR - TC And MR - MC Approach; Features of Perfect Competition; Monopoly and Monopolistic Competition, Short Run and Long Run Equilibrium of Firm and Industry under each Market Condition; Selling Cost and Wastages under Monopolistic Competition

Note: we may include case studies and numerical examples for modules 1, 2 and 4 from examination point of view.

MICROECONOMICS –II

S.Y.B.A. SEMESTER III (Academic Year 2017-18)

&

F.Y. B. Sc. SEMESTER I (Academic Year 2016-17)

Preamble: The Course is designed to develop the student's understanding of basic tools of

microeconomic analysis. It builds on the material covered in semester 1 and is designed to

help the student apply microeconomics to the real world.

Module 1: Utility Analysis: (12 lectures)

Preferences-strong ordering-weak ordering – completeness- transitivity-rational

preferences-utility as representation of preferences-indifference curves and their

properties -budget constraint-utility maximisation and consumer's equilibrium-income

effect-substitution effect- derivation of demand curves.

Module –II: Production Analysis: (12 lectures)

Production function- Cobb-Douglas production function-short run and long run returns to

scale-Isoquants and their properties –MRTS-iso-cost curves-cost minimisation and

producer's equilibrium-derivation of factor demand curves.

Module –III: Costs and revenue: (12 lectures)

Various concepts of costs and their inter-relationship - behaviour of costs in the short run

and the long run -long run average cost curve and its derivation-implicit and explicit coststotal

revenue-marginal revenue-average revenue.

Module IV: Competitive Markets: (12 lectures)

Homogenous goods-no barriers to entry-no collusion among sellers-availability of market

information – price equals marginal cost in competitive markets- supply curve and

derivation in competitive markets- equilibrium of the firm and the industry – consumer's

surplus-producer's surplus - economic efficiency in competitive markets .

MACROECONOMICS –II

S.Y.B.A. SEMESTER IV (Academic Year 2017-18)

&

F.Y. B. Sc. SEMESTER II (Academic Year 2016-17)

Preamble

This paper is designed to build on the understanding of basic macroeconomic identity

introduced in sem II. The various components are detailed here in the context of a closed

economy. The objective is to enable the student to understand how interest rate and income level are determined in a closed economy and how policy may affect these outcomes.

Module 1: Money: (12 lectures)

Concept of money- supply of money- CRR, CDR, high powered money and its components- Money multiplier- current measures of money supply in India – quantity theory of money- velocity of circulation- factors affecting velocity of circulation- Fisher and Cambridge equations.

Module 2: The Money-Market: (12 lectures)

Motives for holding money- transactions motive-precautionary motive-speculative motive- interest rate as cost of holding money- liquidity trap- money-market equilibrium-derivation of LM curve-shifts in the LM curve.

Module 3: The Goods Market: (12 lectures)

Savings function-marginal propensity to save- investment demand function and its

interest elasticity- animal spirits- equilibrium in the goods market- derivation of

the IS curve-shifts in the IS curve.

Module 4: Monetary and Fiscal Policy: (12 lectures)

Simultaneous equilibrium in the goods and money markets (IS-LM equilibrium) –

determination of income and interest rates- monetary policy and its instrumentseffectiveness

of monetary policy- Fiscal policy and its instruments- effectiveness of Fiscal policy.

Semester III: Paper IV: Indian Economy: Contemporary Concerns

This paper will cover the material in the Economic Survey of the Government of India for that academic year. After the publication of the Economic Survey, the Board of Studies on Economics will finalize four topics from the Survey to be taught in that year. The topics for the year 2017-18 will be chapters 3,5,6,9 and 10 to be classified into four modules.

Module 1: Demonetization: To Deify or Demonize?

Objectives of demonetisation and previous instances of demonetisation - India's demonetisation as unprecedented in international economic history - Short term costs and Long term benefits of demonetization - Analytics of demonetization - Future policy measures to maximise benefits and minimise costs of demonetisation

Module 2: Fiscal Framework: The World is Changing, Should India Change Too?

Fiscal Responsibility and Budget Management (FRBM) Act - Why there is a need for counter-cyclical fiscal policy in India? - Debt dynamics with the help of equation for debt sustainability

Fiscal Rules: Lessons from the States

Fiscal Responsibility Legislation (FRL) - Impact of FRL on Budget process - Impact of FRL on Deficits - Lessons for future fiscal rules

Module 3: Universal Basic Income: A Conversation With and Within the Mahatma

The Conceptual/Philosophical case for UBI - The Conceptual Case against UBI - Arguments in Favour and Against UBI - How can UBI overcome the issues of misallocation and leakages of resources? - Can UBI improve financial inclusion? - Will UBI lead to moral hazard and reduce labour supply? - What are the guiding principles for setting up UBI? - What are the prerequisites for introducing UBI? - Is there fiscal space to finance UBI?

Module 4: Income, Health and Fertility: Convergence Puzzles

Income convergence/divergence within India - Consumption convergence/divergence within India - Health Convergence within India with room

for improvement against International standard - Total Fertility rate convergence (India and World) - Interpreting Graphs/Data regarding Income/Life Expectancy/ Infant mortality rate/Total fertility rate (For All Indian States)

Semester IV: PAPER VI

DEVELOPMENT ISSUES OF MAHARASHTRA'S ECONOMY

Module 1

Introduction to Maharashtra's Economy – Backdrop, Demography, Key Indicators of Development, Macroeconomics development of the Regions, Paradigm Shift (10 Lectures)

Module 2

Importance of Tribal Areas

Present Status, Comparison with States, PCI, Poverty, Overview of Nutrition, Health & Education, Causes of Deprivation, Reforms to be undertaken (10 Lectures)

Module 3

Water Resources

Availability of Water resources, government policy, overview of irrigation development (No division – wise discussion), overview of irrigation in Rest of Maharashtra, General Overview of Rural & Urban areas water supply, Recommendation for water distribution/ Balanced development (15 Lectures)

Module 4

Health and connectivity

Health : The Kelkar Committee approach to health, Regional disparities, Health Care Systems, Health outcomes, Recommendation and Strategies

Connectivity – Introduction, General Overview of Roads, Railways, Ports, Airports and Broadband, Resources required

(10 lectures)

Semester IV: PAPER VI

DEVELOPMENT ISSUES OF MAHARASHTRA'S ECONOMY

Module 1

Report of the High Level Committee on Balanced Regional Development Issues in Maharashtra, Planning Department, Government of Maharashtra, 2013, Pp 65-98, pp 119-131

Module 2

Report of the High Level Committee on Balanced Regional Development Issues in Maharashtra, Planning Department, Government of Maharashtra, 2013, pp 357-375

Module 3

Report of the High Level Committee on Balanced Regional Development Issues in Maharashtra, Planning Department, Government of Maharashtra, 2013,

pp 293-307, pp 330-355

Module 4

Report of the High Level Committee on Balanced Regional Development Issues in Maharashtra, Planning Department, Government of Maharashtra, 2013, pp-357-375; pp- 403-413

SEMESTER –V

ECOMIC501 MICROECONOMICS III : PAPER VII

Preamble:

The course is designed to provide sound understanding in microeconomic theory. Since

students have been taught perfect competition, this course focuses on three aspects,

which are the study of imperfect competition, general equilibrium and welfare

economics.

Module 1: Monopoly

Sources of monopoly - Profit maximising monopoly – Calculation of price, output and

profit for a monopoly- Price discrimination: First, Second and Third degree- Public

policy towards monopoly.

Module 2: Basics of Game theory

Prisoner‟s Dilemma – Dominant strategy equilibrium – Battle of sexes game – Nash

equilibrium – Extensive form games – Game tree.

Module 3: Oligopoly

The Cournot model – The Bertrand model – The Edgeworth model – The Chamberlin

model – The Kinked demand curve model – Collusion and Cartels – Price Leadership.

Module 4: General Equilibrium and Welfare Economics

Interdependence in the Economy – General Equilibrium and its Existence -The Pareto

Optimality Condition of Social Welfare, Marginal Conditions for Pareto Optimal

Resource Allocation.

Perfect Competition and Pareto Optimality – Kaldor- Hicks Compensation Criterion -

Arrow"s Impossibility Theorem.

ECODEV502 ECONOMICS OF DEVELOPMENT :PAPER VIII

Preamble:

This course is designed to inculcate diverse concepts related to economic growth and

development by giving special emphasis on structural issues related to the process of

development. In order to create an awareness on policy options, the pressing problems

on the path of development such as inequality, poverty and technological aspects are

dealt in.

Module1:Concepts of Economic Growth and Development:

Meaning of Growth and Development – Distinction between growth & development–

Concept of human development. HDI, GDI, Sustainable development – Green GDP –

Three core values of development – Capability Approach.

Module 2:Structural Issues in Development Process:

Big push theory – Theory of human capital – Role of Education, Health & nutrition in

economic development- Schumpeter‟s theory of development, Dual economy models of

growth, Solow‟s growth model.

Module 3:Inequality, Poverty and Development:

Measures of poverty and inequality – Kuznet‟s inverted U-hypothesis – Policy options

for poverty alleviation – Inclusive growth – Self Help Groups and Micro Finance.

Module 4:Technology and Economic Development:

Role of Infrastructure in economic development –Role of technology in economic

development, Types of technical progress –Schumacher‟s Concept of Intermediate/

Appropriate technology, Green technology.

ECOILEC503 INDUSTIRAL AND LABOUR CONOMICS : PAPER IX

Preamble:

There has been a paradigm shift in the structure of the Indian industrial sector and the

policies governing it ever since the new era of globalisation and liberalisation has

ushered in. This paper intends to equip the students with the knowledge about the

fundamentals of Industrial Economics and also the changing policies related to the

Indian industry in the globalised era.

Module 1: Introduction

Meaning and Scope of Industrial Economics, Industrial Profile : Private sector -

Performance and Problems; Cooperatives - features, types, merits and demerits; Public

Sector - Role, Performance and Problems, Diversification and Industrial Combinations -

Motives for Mergers and Acquisitions.

Module 2: Industrial Location and Problem of Regional Imbalance

Determinants of Industrial Location, Theories of Industrial Location - Weber's and

Sargent Florence's Theories, Dispersion of Industries and the Problem of Regional

Imbalance

Module 3: Industrial Productivity and Industrial Sickness

Concept and Measurement of Industrial Productivity, Factors Affecting Industrial

Productivity, Industrial Sickness - Causes, Effects and Remedial Measures,

Rationalisation - Concept, Aspects and Impact

Module 4: Industrial Development in India

New Industrial Policy, 1991; Disinvestment Policy; FIPB Revamp- Micro, Small and

Medium Enterprises Development Act, 2006; National Manufacturing Policy,

2011,Recent Trends in India's Industrial Growth, Industrial Policy, 2012, Role of MNCs

in the Indian Economy - Merits and Demerits, Issues in Industrial Proliferation and

Environment Preservation; Pollution Control Policies.

ECORMB504 RESEARCH METHODOLOGY : PAPER X

Preamble:

This paper is designed with the view to introduce the concepts, principles and methods

of economic research based on qualitative and quantitative data. The course will

enable the students to get an insight into the applications of modern analytical tools

and techniques related economic decision making. The student gets an opportunity to

learn how to collect and analyze primary and secondary data. Practical sessions will

strengthen the knowledge related to computer applications to research analysis.

Module 1: Introduction to Concept of Research:

Nature, Scope & Purpose of social research - Basic assumptions of research -

Significance and objectivity in social sciences research - Types of research: pure &

applied research; formulative or exploratory research; descriptive research, historical

research, experimental research, survey research - Ethical issues and major difficulties

relating to research .

Module 2: Elements of Research Methodology:

Steps in Research process: Identification, selection and formulation of research problem –

sources of research problem – criteria of a good research problem - Review of literature -

Formulation of hypothesis - Preparing Research Design: Definition, Concepts, and types–

exploratory, descriptive and diagnostic, experimental and Analytical research designs –

Collection and analysis of the data - Interpretation and report writing.

Use of web search in research process- introduction to Internet and WWW - Using search

engine like Google, Yahoo etc. Use of advanced search techniques.

Module 3: Sources of Data for Research:

Types of data sources: Primary and Secondary - Primary data-Meaning and Collection

methods - Observational method - Interview technique - Design of Schedule and

Questionnaire - Survey method and Field Visits - Case Study as a method.

Major Sources of Secondary data: Meaning, advantages, Relevance, limitations and

cautions of secondary data.

Sampling Technique: Census and sample survey- Essentials of a good Sampling -

Advantages and limitations of sampling, Methods of sampling: Random sampling :

Simple or Unrestricted Random Sampling- Mixed or Stratified Random Sampling,

Systematic or Quasi Random sampling – Multistage or Cluster Random Sampling -

Sequential Random Sampling, Non random sampling : Judgement or Purposive

sampling–Convenience sampling accidental sampling – Quota sampling, Selecting an

appropriate sampling technique- Sampling and Non-sampling errors - Sample size.

Module 4: Processing and Analysis of Data

Classification, Tabulation and Graphical presentation of socio-economic data - An

introduction to Statistical Analytical Tools – Measures of Central Tendency – Measures

of Variation: absolute and relative measures – Quartile deviation, standard deviation,

coefficient of variation- Skewness: meaning and Measurement (Karl Pearson‟s and

Bowley‟s methods) - Basics of Computer Applications in Data organization & Data

Processing, Introduction to spreadsheet application, features and functions, Using

formulas and functions, Data storing, Features for Statistical data analysis, Graphical

representation of data, Generating charts/ graph and other features.

ECOENVC505 ENVIRONMENTAL ECONOMICS: PAPER XI

Preamble:

This course focuses on economic causes of environmental problems. In particular,

economic principles are applied to environmental questions and their management.

Economic implications of environmental policy are addressed as well as valuation of

environmental improvements.

Module1: Introduction to Environmental Economics:

Introduction to environmental development and environmental economics, Rio-

Declaration on environmental development, Agenda 21 programme of action for

sustainable development, Social and economic dimensions, Conservation and

management of resources for development.

Module 2: The design and implementation of Environmental Policy:

Overview - Criteria for evaluating environmental policies; Standards, Pigovian taxes and

effluent fees, tradable permits, choice between taxes and quotas, implementation of

environmental policy.

Module 3: Measuring benefits of environmental improvements:

Economic value of Environment- Use and Non-use values-Measurement method:-market

based and non-market based methods, contingent valuation, travel cost method, hedonic

price method, risk assessment and perceptions.

Module 4: Environmental problems:

The global environment- Trans-boundary environmental problems, economics of climate

change, International environmental Agreements - , sustainable development: Concepts

and measures.

ECOHET506 HISTORY OF ECONOMIC THOUGHT: PAPER XII

Preamble:

This course provides basic understanding about the celebrated economists and their

contributions starting from the classical period. It throws light on the contributions of

Nobel Laureates of recent period too.

Module 1: Classical Period

Adam Smith - division of labour, theory of values, capital accumulation, distribution,

David Ricardio- Value, theory of rent, distribution. Karl Marx - dynamics of social

changes, theory of values, surplus value, profit and crisis of capitalism and

Contemporary Relevance.

Module 2: Marginalist : Marshall To Schumpeter

Role of time in price determination , economics methods, ideas of consumer's surplus,

representative firm, external and internal economies, quasi-rent, nature of profit; Pigou :

welfare economics: Schumpeter: role of entrepreneur and innovation.

Module 3: Keynesian Ideas:

Liquidity Preference Theory and Liquidity trap, Consumption Function, MPC,

Multiplier & Accelerator principles and their interaction, wage rigidities,

underemployment equilibrium, role of fiscal policy: deficit spending and public works,

multiplier principles, cyclical behaviour of the economy.

Module 4: Post- Keynesian Developments:

Hayek – Supply side economics: Arthur Laffer, Evans – Monetarism: Milton Friedman‟s

Don Patinkin – An overview of the new classical economics: Robert Lucas.

Nobel Prize Winners in Economics: A. K. Sen (1998), Joseph Stiglitz (2001), Paul

Krugman (2008), Jean Tirole (2014), Angus Deaton (2015), Richard Thaler (2017).

TYBA (SEMESTER –VI)

ECOMA601 MACROECONOMICS III: PAPER XIII 4 100

Preamble:

This course introduces the students to formal modelling of a macroeconomic theory

with analytical tools. It focuses on goods market with fixed exchange rate, the money

market, uncovered interest rate parity and the benefits and costs of fixed and flexible

exchange rates.

Module 1: The Goods Market in the Open Economy:

Trade Balance and its implications for GDP calculations – Export and Import Functions

– The Real Exchange Rate and why it matters –Why equilibrium GDP is consistent with

a trade imbalance? – Fiscal and Exchange Rate Policy with a Fixed Exchange Rate.

Module 2: Money/Financial Markets and Mundell-Fleming Model:

The LM equation for the open economy –Uncovered Interest Parity and its implications

for exchange rate determination – The combined IS/LM/UIP model.

Fiscal and Monetary Policy under Fixed and Flexible Exchange Rates– The Mundell-

Fleming trilemma.

Module 3: Exchange Rate Regimes & Exchange Rate Crises:

The choice of regime – Fixed or Flexible – The spectrum of arrangements from Hard Peg

at one end to Fully Floating at the other; Why the Balance of Payments must always

balance under Floating Exchange Rates but need not balance under a Fixed or Managed

Exchange Rate regime.

Exchange Rate crises – The relation between Exchange Rate crises and other kinds of

crises (banking crises, financial crises, etc.).

Module 4: International Monetary History, 1900-present:

The Gold Standard – The Inter-War Period and the Great Depression – 1944, Bretton

Woods System and its collapse ; Fixing in Europe via ERM, and the Dollar Standard

elsewhere.

The Maastricht Treaty and preparations for the Euro; The Global Financial Crisis and its

consequences for the Euro; The Euro Crisis, Asia Infrastructure Investment Bank (AIIB),

New Development Bank (NDB).

References:

6. Robert C Feenstra & Alan M Taylor , International Trade, Worth Publishers, 2014.

ECOINT602 INTERNATIONAL ECONOMICS: PAPER XIV

Preamble:

This course develops a systematic exposition of models which explain the composition,

direction, and consequences of international trade, and the determinants and effects of

trade policy. It then builds on the models of open economy macroeconomics focussing

on national policies as well as international monetary systems. It concludes with an

analytical account of the causes and consequences of the rapid expansion of

international financial flows in recent years.

Module 1: Introduction

Importance of the study of International Economics - An overview of world trade-

Distinction between domestic & international Trade -Concepts of Cost Difference ,

Adam Smith‟s Theory of International Trade, The Ricardian Theory.

Module 2: Modern Theories of International Trade

Heckshcher- Ohlin Theory of International Trade, Factor Abundance: Two Criteria,

Leontief Paradox, Haberler‟s theory of Opportunity Cost, Law of reciprocal demand and

offer curves, Role of Factor Accumulation, Stolper-Samuelson theorem.

Module 3: Importance of Trade and Recent trends:

Monopolistic competition and trade - firm heterogeneity, FDI: The concept and role, FDI

Inflows- FDI Outflows, and the global supply chain, Business Process Outsourcing.

Module 4: Trade Policy and Regionalism

Instruments of trade policy; Why countries cooperate? -GATT, GATS, Regional Trade

Agreements - controversies in trade policy (labour standards, IPR and environment) -

ASEAN, SAARC, SAFTA, Protectionism.

1994.

ECOILEC603 INDUSTIRAL AND LABOUR ECONOMICS PAPER XV

Preamble:

Issues pertaining to the labour market, wage policy, trade unions and amicable

solutions to industrial disputes have become vital for developing countries, especially

for India, where the bulk of the labour force is employed in the unorganised sector, and

the organized sector is witnessing a phenomenon of ‘jobless’ growth. This paper

intends to provide knowledge of the same and also discusses the importance of labour

welfare and social security measures for the growing labour force in India.

Module 1 : Introduction – Indian Labour Market

Characteristics of the Indian Labour Market - Child Labour and Female Labour –

Problems and Measures- Globalisation and Indian Labour Market -Labour Market

Reforms – Exit Policy and Need for Safety Nets - Second National Commission on

Labour.

Module 2 : Trade Unionism

Definition and Functions of Trade Unions- Historical Evolution of Trade Unions in India

and Their Present Status - Problems of Trade Unions in India - Role of Outside

Leadership

Module 3 : Industrial Relations

Causes of Industrial Disputes and Their Settlement Mechanism - Collective Bargaining –

Concept, Features, Importance and Pre-requisites for Successful Collective Bargaining -

Collective Bargaining in India - Workers‟ Participation in Management –Concept,

objectives and Forms of Workers‟ Participation in India.

Module 4 : Labour Welfare and Social Security

Concept, Theories and Principles of Labour Welfare - Agencies for Labour Welfare -

Role of the Labour Welfare Officer - Social Security – Concept; Social Assistance and

Social Insurance - Social Security Measures in India - International Labour Organization

and Its Impact on Indian Labour Legislations.

Delhi, 2006

5. Ratna Sen, Industrial Relations in India - Shifting Paradigms, Macmillan, New

Delhi, 2005.

ECORMB604 RESEARCH METHODOLOGY :PAPER XVI

Preamble:

This paper is designed with a goal to strengthen the critical thinking and listening

skills in conducting economic research and to device research outcomes in an

impeccable way. The entire course is based on the broad social sciences spectrum.

Module 1: Statistical applications in research:

Methods of studying Correlation- measurement of simple correlation: graphic method:

scatter diagram - coefficient of correlation - Karl Pearson and rank correlation

interpretation of r = ± 1

Linear Regression analysis: meaning, regression lines, regression coefficients, regression

equations, relationship between correlation and regression.

Analysis of Time Series – components –trend analysis- moving averages (3, 4 and 5

yearly)- method of least square.

Module 2: Index numbers:

Meaning – classification – problems encountered while constructing index numbers- uses

and limitation of index numbers, Methods of constructing index numbers: Simple index:

i) aggregate method ii) simple average of relatives method, Weighted index: Laspeyer‟s,

Paache‟s and Fisher‟s index – weighted average of relatives method, Chain based index

– concepts of Base shifting, splicing, and deflating, Consumer price index: meaning,

need and construction – methods: aggregate expenditure method and family budget

method.

Module 3: Hypothesis formulation and Hypothesis Testing:

Definition and functions of hypothesis –Criteria of workable hypothesis – forms and

sources of hypothesis- Concepts in Testing of Hypothesis: Universe / Population,

parameter and statistic, Null and Alternative Hypotheses, Levels of Significance, critical

region, Type I and Type II errors - Point and Interval Estimates.

Module 4: Research Report Writing:

Types of Research Report: Technical, Popular, Interim, Summary, Article- Format of a

Research Report- Principles of writing the Research Report: Organization and Style -

Contents-Styles of reporting- Steps in drafting Reports- Editing the final draft-Evaluating

the final draft -Organization of the Research Report: Preliminaries, Contents of Report,

Structuring the Report: Chapter format- Pagination- Identification- Using quotations-

Presenting footnotes –abbreviations- Presentation of tables and figures- Referencing-

Documentation-Use and format of appendices- Indexing - Bibliography, Appendices.

ECODTEC605 DEVELOPMENT THEORY AND EXPERIENCE : PAPER XVI

Preamble:

This is the second paper of economic development sequence. The course begins with

demographic concepts and their evolution during the process of development. Then it

focuses on the theory migration and discusses the link between migration and development. The structure of markets and contracts is linked to the particular problems of enforcement experienced in poor countries. The course ends with the issues related to environment and development.

Module I: Demography and Development:

Demographic concepts; birth and death rates, age structure, fertility and mortality; demographic transitions during the process of development; gender bias in preferences and outcomes andevidence on unequal treatment within households; connections between income, mortality, fertility choices and human capital accumulation.

Module II: Structural Transformation:

The Lewis model –Clark-Fisher model of structural change , Urbanization: Trends and Projections with reference to India, Urbanization and Development, Causes of urbanization, Urban informal sector, Policies for the urban informal sector, Migration and development, Economic theory of rural-urban migration: Harris-Todaro migration model

Module III: Land, Labor and Credit Markets:

Role of Agriculture in Economic Development, Market Failure and Agriculture, The distribution of land ownership; Land reform and its effects on productivity; contractual

relationships between tenants and landlords; Land Acquisition; Nutrition and Labour

Productivity; Rural Credit Market; Microfinance; Inter-linkages between Rural Factor

Markets.

Module IV: The Environment and Development:

The core of environmental problems- Rural poverty and environmental destructionindustrialization

and environmental pollution - Economic models of environmental

issues: privately owned resources, common property resources, public goods: regional

environmental degradation and the free rider problem, limitations of pubic goods

framework.

Pearson

ECOITPP606 INTERNATIONAL TRADE, POLICY AND PRACTICE : PAPER- XVIII

Preamble:

This course is designed for addressing changing phase of International Trade Policy

and Practice. The main purpose of this course is to expose students to current trends

in International developments.

Module 1 :Introduction

Inter regional and international trade, Role of Dynamic factors i.e. change in Tastes,

Technology and Role of Factor Accumulation.

Foreign Exchange Rate: Concepts - Short and Forward rates - Foreign Exchange rate

determination – Fixed and flexible exchange rate – Interrelationship between exchange

rates and Interest rates.

Exchange Rate system in India, managed floating, Current and Capital Account

Convertibility and their impact, FEMA.

Module 2 : Emerging new International Economic Order

GATT, Uruguay Round, WTO, WTO Agreement, Dispute settlement Mechanism, Impact

of WTO on Emerging Economies and India, Doha Round and implications of its failure-

Emergence of Regional Free Trade agreements (FTA), Bilateral Investment Treaty (BIT), Double

Taxation Avoidance Agreement (DTAA).

Module 3 :International Financial Institutions and International Debt Problem.

IMF, World Bank, Asian Development Bank (ADB) –New Development Bank (NDB),

Asia Infrastructure Investment Bank (AIIB) and their role with special reference to India.

South East Asian Crisis and Lessons for India, Global Economic Crisis, Global Financial

Crisis of 2008, International Debt Problem – Emerging Global Financial Architecture.

Module 4: Role of Foreign Capital Flow

Factors determining Foreign Investment, Foreign Institutional Investment (FII), Qualified

Foreign Investment (QFI), Foreign Portfolio Investment (FPI), Role of FDI in Economic

Development- Factors influencing FDI inflows- Green Field and Brown field FDI in

India, Foreign Investment and Role of MNCs in India.

AC 7/4/2014
Item No. 4.23

Semester I USBO101		**L**	**Cr**
Paper I -- Plant Diversity 1		**45**	**2**
UNIT I		**15**	
ALGAE			
1	Structure, life cycle and systematic position of *Nostoc* and *Spirogyra*.		
2	Economic importance of Algae.		
UNIT II		**15**	
FUNGI			
1	Structure, life cycle and systematic position of *Rhizopus* and *Aspergillus*		
2	Economic importance of Fungi.		
3	Modes of nutrition in Fungi (Saprophytism and Parasitism).		
UNIT III		**15**	
BRYOPHYTA			
1	General characters of Hepaticae		
2	Structure, life cycle and systematic position of *Riccia*.		

University of Mumbai
Board of Studies in Botany
FYBSc Syllabus Credit System 2014-2015 onwards

AC 7/4/2014
Item No. 4.23

Semester I USBO102		**L**	**Cr**
Paper II – Form and Function 1		**45**	**2**
UNIT I		**15**	
CELL BIOLOGY			
1	General structure of plant cell: cell wall Plasma membrane (bilayer lipid structure, fluid mosaic model)		
2	Ultra structure and functions of the following cell organelles: Endoplasmic reticulum and Chloroplast		
UNIT II		**15**	
ECOLOGY			
1	Energy pyramids, energy flow in an ecosystem.		
2	Types of ecosystems: aquatic and terrestrial.		
UNIT III		**15**	
GENETICS			
1	Phenotype/Genotype, Mendelian Genetics- monohybrid, dihybrid; test cross; back cross ratios.		
2	Epistatic and non epistatic interactions; multiple alleles.		

University of Mumbai
Board of Studies in Botany
FYBSc Syllabus Credit System 2014-2015 onwards

AC 7/4/2014
Item No. 4.23

	Semester I USBOP1	**L**	**Cr**
	PRACTICAL Paper I – Plant Diversity 1	30	1
1	Study of stages in the life cycle of *Nostoc* from fresh/ preserved material and permanent slides.		
2	Study of stages in the life cycle of *Spirogyra* from fresh/ preserved material and permanent slides.		
3	Economic importance of algae: *Ulva* (Biofuel), *Spirulina* (Neutraceutical), *Gelidium* (Agar)		
4	Study of stages in the life cycle of *Rhizopus* from fresh/ preserved material and permanent slides.		
5	Study of stages in the life cycle of *Aspergillus* from fresh/ preserved material and permanent slides.		
6	Economic importance of Fungi: Mushroom , Yeast, wood rotting fungi (any bracket fungus).		
7	Study of stages in the life cycle of *Riccia* from fresh/ preserved material.		
8	Study of stages in the life cycle of *Riccia* with the help of permanent slides.		
	PRACTICAL PAPER II- FORM AND FUNCTION 1	30	1
1	Examining various stages of mitosis in root tip cells (*Allium)*		
2	**Cell inclusions:** Starch grains (Potato and Rice); Aleurone Layer (Maize)		
3	Cystolith (*Ficus*); Raphides (*Pistia*); Sphaeraphides (*Opuntia*).		
4	Identification of cell organelles with the help of photomicrograph: Plastids: Chloroplast, Amyloplast, Endoplasmic Reticulum and Nucleus		
4	**Identification of plants adapted to different environmental conditions:** Hydrophytes: Floating: Free floating (*Pistia*/*Eichornia*); Rooted floating (*Nymphaea*); Submerged (*Hydrilla*)		
5	Mesophytes (any common plant); Hygrophytes (*Typha*/*Cyperus*)		

AC 7/4/2014
Item No. 4.23

6	Xerophytes : Succulent (*Opuntia*); Woody Xerophyte (*Nerium*); Halophyte (*Avicennia* pneumatophore) No sections in ecology, only identification and description of specimens. Morphological adaptations only.		
7	Calculation of mean, median and mode.		
8	Calculation of standard deviation.		
9	Frequency distribution, graphical representation of data- frequency polygon, histogram, pie chart.		
10	Study of Karyoptypes: Human: Normal male and female, *Allium cepa* .		

University of Mumbai
Board of Studies in Botany
FYBSc Syllabus Credit System 2014-2015 onwards

AC 7/4/2014
Item No. 4.23

	Semester II USBO201	**Hrs**	**Cr**
	Paper I -- Plant Diversity 1	**45**	**2**
UNIT I		**15**	
PTERIDOPHYTES			
1	Structure life cycle, systematic position and alternation of generations in *Nephrolepis*		
2	Stelar evolution		
UNIT II		**15**	
GYMNOSPERMS			
2	Structure life cycle systematic position and alternation of generations in *Cycas*		
3	Economic importance of Gymnosperms		
Unit III			
ANGIOSPERMS		**15**	
1.	Leaf: simple leaf, types of compound leaves, Incisions of leaf, venation, phyllotaxy, types of stipules, leaf apex, leaf margin, leaf base, leaf shapes. Modifications of leaf: spine, tendril, hooks, phyllode, pitcher, *Drosera* or insectivorous plants.		
2	Inflorescence: Racemose: simple raceme, spike, catkin, spadix, panicle. Cymose: monochasial, dichasial, polychasial. Compound: corymb, umbel, cyathium, capitulum, verticellaster, hypanthodium.		
3	Study of following families: Malvaceae, Amaryllidaceae.		

	Semester II USBO202	**Hrs**	**Cr**
	Paper II – Form and Function 1	**45**	**2**
UNIT I		**15**	
ANATOMY			
1	Simple tissues, complex tissues.		
2	Primary structure of dicot and monocot root, stem and leaf.		
3	Epidermal tissue system: types of hair, monocot and dicot stomata.		

University of Mumbai
Board of Studies in Botany
FYBSc Syllabus Credit System 2014-2015 onwards

AC 7/4/2014
Item No. 4.23

UNIT II		**15**	
PHYSIOLOGY			
1	Photosynthesis: Light reactions, photolysis of water, photophosphorylation (cyclic and non cyclic), carbon fixation phase (C_3, C_4 and CAM pathways).		
UNIT III		**15**	
MEDICINAL BOTANY			
1	Concept of primary and secondary metabolites, difference between primary and secondary metabolites.		
2	Grandma's pouch: Following plants have to be studies with respect to botanical source, part of the plant used, active constituents present and medicinal uses: *Oscimum sanctum, Adathoda vasica, Zinziber officinale, Curcuma longa, Santalum album, Aloe vera*.		

University of Mumbai
Board of Studies in Botany
FYBSc Syllabus Credit System 2014-2015 onwards

AC 7/4/2014
Item No. 4.23

	Semester II USBOP2	**Cr**
	PRACTICAL Paper I – Plant Diversity 1	**1**
1	Study of stages in the life cycle of *Nephrolepis* : Mounting of ramentum, hydathode, T.S. of rachis.	
2	T.S. of pinna of *Nephrolepis* passing through sorus.	
3	Stelar evolution with the help of permanent slides: Protostele: haplostele, actinostele, plectostele, mixed protostele, siphonostele: ectophloic, amphiphloic, dictyostele, eustele and atactostele.	
4	*Cycas:* T.S of leaflet (*Cycas* pinna)	
5	Megasporophyll, microsporophyll, coralloid root, microspore, L.S. of ovule of *Cycas* – all specimens to be shown.	
6	Economic importance of Gymnosperms: *Pinus* (turpentine, wood, seeds)	
7	Leaf morphology : as per theory	
8	Types of inflorescence: as per theory	
9	Malvaceae	
10	Amaryllidaceae	
	PRACTICALPaper II – Form and Function 1	**1**
1	Primary structure of dicot and monocot root.	
2	Primary structure of dicot and monocot stem.	
3	Study of dicot and monocot stomata.	
4	Epidermal outgrowths: with the help of mountings Unicellular: *Gossypium*/Radish Multicellular: *Lantana*/Sunflower Glandular: *Drosera* and Stinging: *Urtica* – only identification with the help of permanent slides. Peltate: *Thespesia* Stellate: *Erythrina*/*Sida acuta*/*Solanum/Helecteris*	

AC 7/4/2014
Item No. 4.23

	T-shaped: *Avicennia*	
5	Separation of chlorophyll pigments by strip paper chromatography.	
6	Separation of amino acids by paper chromatography.	
7	Change in colour because of change in pH: Anthocyanin: black grapes/Purple cabbage	
8	Test for tannins: tea powder/catechu.	
9	Identification of plants or plant parts for grandma's pouch as per theory.	

University of Mumbai
Board of Studies in Botany
FYBSc Syllabus Credit System 2014-2015 onwards

Scheme of Examinations

Internal and External Assessment as per CBSS of University of Mumbai

Note:

- Two short field excursions for habitat studies are compulsory.
  Field work of not less than eight hours duration is equivalent to one period per week for a batch of 15 students.
- A candidate will be allowed to appear for the practical examinations only if he/she submits a certified journal of F.Y.B.Sc. Botany or a certificate from the Head of the department / Institute to the effect that the candidate has completed the practical course of F.Y.B.Sc. Botany as per the minimum requirements. In case of loss of journal a candidate must produce a certificate from the Head of the department /Institute that the practicals for the academic year were completed by the student. However such a candidate will be allowed to appear for the practical examination but the marks allotted for the journal will not be granted.

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges and Directors of the Recognized Institutions in Faculty of Science & Technology is invited to this office circular No. UG/121 of 2017-18 dated 28th July, 2017 relating to the revised syllabus F.Y.B.Sc. (Biochemistry) (Sem. I & II) (CBCS).

They are hereby informed that the recommendations made by the Ad-Hoc Board of Studies in **Biochemistry** at its meeting held on 23rd June, 2022 and subsequently passed in the Faculty and then by the Board of Deans at its meeting held on 05th July, 2022 **vide** item No. 6.14(R) have been accepted by the Academic Council at its meeting held on 11th July, 2022 **vide** item No. 6.14 (R) and that in accordance therewith, the revised syllabus of F.Y.B.Sc (Biochemistry) (Six Units) (Sem. I & II) (CBCS), has been brought into force with effect from the academic year 2022-23. (The circular is available on the University's website www.mu.ac.in).

(Dr. Shailendra Deolankar)

Preamble

Biochemistry is central to all areas of the “biological” and “life” science. It aims to provide an understanding of every aspect of the structure and function of living things at cellular level. Being an interdisciplinary subject it is spanning a wide range of areas from microbiology to plant and animal sciences to pathology of diseases and nutrition.

The impact of studies in biochemistry on modern life is enormous. Therefore, the syllabus is structured to touch upon broad base at the beginning. Unique physical and chemical characteristics of water enable it to function in ways essential to human and other life processes due to its structure and composition. Life on Earth began more than 3 billion years ago, evolving from the most basic of microbes into a dazzling array of complexity over time, which makes it necessary to study the origin of life and evolution of a modern species over span of years. After an in-depth understanding of how the first cells originated, students are introduced to detailed structural organization of basic unit of a living system “The Cell”. Biomolecules are the basic and important constituents of a living system. Hence, it is mandatory to study structure, occurrence and functions of large biomolecules like carbohydrates, lipids and proteins along with nucleic acids. In order to prepare the students for detailed course in Applied Nutrition in the higher education, the syllabus is made to understand human nutrition and its significance. In order to understand the biological processes occurring in the living body, processes as digestion, absorption, respiration and excretion are necessary to be studied. As stated earlier, life evolved from a small microbe, it is our aim to study living microscopic size organisms which includebacteria, fungi, protozoa and special type of microorganisms called extremophiles

Objectives of the first year of the course

- Develop an adequate background to enable the first-year students to study more advanced biochemistry topics.
- Acquaint the learners with the unique properties of the universal solvent - water, essential for life processes.
- Understand the life constituting bio molecules: proteins, carbohydrates, lipids, nucleic acids.
- Familiarize the learners about the origin of life and take them through the process of evolution.
- Focus on Cell as the basic unit of life which is the center for all biochemical processes.
- Familiarize the learners to the world of microorganisms which exist as independent cellular units.
- Develop an interest in the learner in nutrition for sustaining life, and physiology and functioning of life systems.
- Appreciate the importance of the broad spectrum of biochemistry.
- Provide familiarity with basic biochemistry laboratory techniques.
- Develop the practical skills of students to enhance their observational skills and to use these skills for problem solving.

Teaching pattern:

One (01) Credit would be of thirty to forty (30-40) learning hours; of this, more than fifty per cent of the time will be spent on classroom instructions including practical as prescribed by the University. Rest of the time spent invested for assignments, projects, journal writing, case studies, library work, industrial visits, attending seminars/workshops, preparations for examinations etc. would be considered as notional hours. The present syllabus considers (45 Lectures as classroom teaching and 15 lectures as Notional hours/ paper). Each lecture duration would be for 48 min. The names of the reference books provided in the syllabus are for guidance purpose only. Students and faculty are encouraged to explore additional reference books, online lectures, videos, science journals for latest/ additional information.

Scheme of Examination:

The performance of the learners shall be evaluated into TWO Parts.

1. Internal Assessment with 25 marks and

2. Semester End Examinations with 75 marks.

Practical Training will have Practical Examination for 100 marks per practical paper at the end of Semester.

The allocation of marks for the Internal Assessment and Semester End Examinations are as follows: -

Internal Examamination-25 Marks with 2 components of 15 marks and 10 marks respectively.

Semester end assessment: It is defined as the assessment of the learners on the basis of performance in thesemester end theory/ written/ practical examination.

a) Theory paper of 75 marks for duration of 2.5 hours

Q1) Objective questions based on all units with no internal options: 15 marks

a) Define the following / Answer in brief (10 marks) : (each question will carry 2 marks)
b) True or False with reasons (5 marks): (Provide 5 statements, for each the student has to state whether it is true or false and provide reasons.)

Q2) Questions based on Unit I 20 marks

(either answer any 4 out of 5 sub-questions)

Q 3) Questions based on Unit II 20 marks

(either answer any 4 out of 5 sub-questions)

Q4) Questions based on Unit III 20 marks

(either answer any 4 out of 5 sub-questions)

b) Practicals 50 marks

The Course having Practical training will have Practical Examination for 50 marks at the end of Semester, out of which 40 marks for the Practical task assigned at the time of examination. The 10 marks are allotted as Internal Assessment.

Sr. No	Evaluation type	Marks
1	Two best practicals	05
2	Journal	05

Practical External Assessment 40 marks

F. Y. B. Sc. Biochemistry Syllabus

Credit Based Credit System

To be implemented from the academic year 2022 – 2023

Semester I

Course Code	Unit	Topics	Credits	Lectures
Biomolecules and Nutrition-I				
USBCH101	**I**	Water	**2**	15
	II	Amino acids and proteins		15
	III	Carbohydrates		15
Introduction cell biology, Physiology and Microbiology-I				
USBCH102	**I**	Origin of life and Evolution	**2**	15
	II	The cell wall, cell membrane, cell organelles and cell division		15
	III	Microbiology-I		15
USBCHP01		Practicals based on both courses in theory - USBCH101 and USBCH102	**2**	2

Semester II

Course Code	Unit	Topics	Credits	Lectures
Biomolecules and Nutrition-II				
USBCH201	**I**	Lipids	**2**	15
	II	Nucleic acids		15
	III	Nutrition		15
Introduction cell biology, Physiology and Microbiology-II				
USBCH202	**I**	Physiology of digestion and absorption	**2**	15
	II	Physiology of respiration and excretion		15
	III	Microbiology-II		15

F.Y.B.Sc. Biochemistry Syllabus
Restructured for Credit Credit System
to be implemented from the Academic year 2022 – 2023
Semester I
USBCH101 - Bio molecules and Nutrition-I

Course Code	Title	Credits
USBCH101	**Biomolecules and Nutrition-I**	**2 Credits (45 lectures)**
Unit I: Water **1.1** ***Water*****:** Its effect on Biomolecules, hydrogen bonding and structure, properties (surface tension, latent heat, specific heat, viscosity, dielectric constant, colligativeproperties) of water and their biological significance, water as a universal solvent. 1.1.1 Entropy and dissolution of solute 1.1.2 Effect of non-polar compounds on the structure of water 1.1.3 Weak interactions of biomolecules in aqueous solutions ***1.2 Solutions*** 1.2.1 Concepts of mole, molar, molal, molar equivalent and normal, % solution, ppm, Dalton ***1.3 Ionization of water, weak acids and weak bases*** 1.3.1 pH: pH scale, H^+ and OH^- concentrations 1.3.2 Weak acids and bases and their dissociation constants Ka & Kb 1.3.3 Buffers - definition, action, physiological buffers - phosphate and carbonate (No derivations. Numericals on above concept)		**15 Lectures**
Unit II: Amino acids and proteins ***2.1 Amino acids*** 2.1.1 Amino acid structure - D & L forms of all 20 amino acids (structure of D-amino acids and overview of D and L amino acids) 2.1.2 Detailed classification based on polarity, essential and nonessential amino acid 2.1.3 Physical properties: Zwitter ions, pI of amino acids, amino acids as ampholytes,melting point, optical rotation, UV absorption and chemical properties 2.1.4 Chemical reactions of amino acids with Ninhydrin, 2.1.5 Protein sequencing reactions: Sanger's reagent, Edman's reagent and Dansyl chloride ***2.2 Peptides and Proteins*** 2.2.1. ASBC - APS classification on the basis of shape and function 2.2.2 Primary structure - Formation and characterization of the peptide bond 2.2.3 Secondary structure - Alpha helix and beta-sheet structure 2.2.4 Tertiary (myoglobin) and Quaternary(hemoglobin)structures – Comparative overview 2.2.5 Protein denaturation- agents of denaturation 2.2.6 Protein renaturation		**15 Lectures**

Unit III: Carbohydrates. **3.1** Definition, Classification, and functions of carbohydrates (mono, oligo polysaccharides) ***3.2 Monosaccharides*** 3.2.1 Classification in terms of aldoses and ketoses 3.2.2 Occurrence,structures and significance of glucose, fructose, galactose, mannose, and ribose 3.2.3 Properties: a) Physical - isomerism D & L, optical; epimers : anomers b) Chemical reactions - i) oxidation to produce aldonic. aldaric and uronic acids (with respect to glucose); ii) reducing action in boiling alkali, enediol formation (with respect to glucose and fructose) iii) Osazone formation (with respect to glucose and fructose). iv) Orcinol (with respect to ribose) ***3.3 Disaccharides*** 3.3.1 Formation of glycosidic bonds 3.3.2 Occurrence and structure of maltose , lactose and sucrose ***3.4 Polysaccharides*** 3.4.1 Classification based on function. storage and structure a) Composition: homo & hetero. -Starch and hyaluronic acid b) Storage : starch and glycogen - action of amylase on starch c) Structural: cellulose, chitin	**15 Lectures**

USBCH102 - Introduction to Cell biology, Physiology and Microbiology-I

Course Code	Title	Credits
USBCH102	**Introduction to Cell biology, Physiology and Microbiology-I**	**2 Credits (45 lectures)**
Unit I: Origin of Life & Evolution **1.1** Big bang theory, Theories on the origin of life: Abiogenesis, Heterotroph hypothesis, RNA world, protein world, Miller's experiment, Formation of the first cell, endosymbiont theory **1.2** Evolution - Darwinian theory, Modern synthetic theory of evolution and its factors: Gene mutations(recombination), heredity, natural selection and isolation **1.3** Biological evidences: Fossil record, chemical and anatomical similarities of related life forms, geographic distribution of related species, genetic changes in living organisms overgenerations and Mechanism of evolution, Gene flow and genetic drift, Hardy-Weinberg principle		**15 Lectures**
Unit II: The cell- cell wall, cell membrane, cell organelles and cell division ***2.1 Structural organization of cells*** 2.1.1 Prokaryotic, Eukaryotic (plant & animal) and yeast cells - a comparative overview **2.2** Cell wall structure (plant), cell membrane (fluid mosaic model) Cytoskeleton: microtubules & microfilaments **2.3 *Cell organelles*: *Structure and function*** 2.3.1 Mitochondrion*:* Organization of the mitochondria genome 2.3.2 Chloroplast: Organization of the chloroplast genome,other plastids 2.3.3 Ribosome*:* 2.3.4 Endoplasmic reticulum 2.3.5 Golgi apparatus 2.3.6 Peroxisome & Lysosome 2.3.7 Nucleus: nuclear envelope, nuclear pores, nuclear matrix and Nucleolus **2.4 Mitosis and Meiosis-** Different phases and Comparative overview of mitosis and meiosis		**15 Lectures**

Unit III: Microbiology I **3.1** Historical background (contributions of Leeuwenhoek, Pasteur, Koch). **3.2** General characteristics of Bacteria: Major Characteristics, Morphological, Chemical, Cultural, Metabolic, antigenic, pathogenic and Ecological **3.3** ***Microbial Taxonomy*:** Microbial species and strains **3.4** **Classification of bacteria** based on morphology (shape and flagella), staining reaction- Acid fast and differential staining based classification, nutrition and extreme environment **3.5** ***Bacterial cell wall:*** Structure and function, components of peptidoglycan frame work (structures of NAG and NAMA not necessary) **3.6** **Extremophiles:** thermophiles, psychrophiles, halophiles,magnetotactic, radiation resistant - examples with their application **3.7** Staining methods - principles of staining - gram staining,endospore, capsule and lipids, and microscopicidentification of bacteria	**15 Lectures**

SEMESTER I - USBCHP01

PRACTICAL – I **45 Lectures hours**

1. Preparation & Standardisation of laboratory reagents
   Primary standards - 0.1N oxalic acid
   Secondary standards - 0.1N NaOH, 0.1N HCl

2. Preparation and determination of pH of buffers - acetate and phosphate

3. Determination of pKa of acetic acid

4. Qualitative tests for Carbohydrates –
   - Monosaccharides (glucose and fructose),
   - Disaccharides (lactose ,maltose and sucrose)
   - Polysaccharides (starch and dextrin)
   -

5. Qualitative test for amino acids

6. Effect of heat, organic solvents and ammonium sulphate on proteins

DEMONSTRATION EXPERIMENT

pH meter – working of a pH meter

PRACTICAL – II **45 Lectures hours**

1. Effect of isotonic, hypertonic and hypotonic solutions on cells – onion peel / Tradescantia
2. Staining of bacterial yeast cells (negative staining)
3. Staining techniques-
   - gram staining,
   - endospore,
   - capsule and
   - lipids
4. Calibration of glassware

5. Study of stages of mitosis using onion root tips

6. Permanent slides of mitosis and meiosis

DEMONSTRATION EXPERIMENT

1. Microscopy – study of a compound microscope

Semester II
USBCH201- Bio molecules and Nutrition-II

Course Code	Title	Credits
USBCH201	**Biomolecules and Nutrition-II**	**2 Credits (45 lectures)**

Unit I : Lipids — **15 Lectures**

1.1 Definition, classification (Bloor's) and functions of Lipids

1.2 Fatty' acids and Triacylglvcerol

1.2.1 Classification &Chemistry,
Saturated fatty acids - classification of C2 to C20: even carbon: Common and IUPAC names. Unsaturated fatty acids MUFA, PUFA (2.3.4 double bonds)
Omega – 3, 6,9 fatty acids. Triacyl glycerol - simple and mixed - names and structure

1.2.2 Chemical Reactions of fats
Saponification, Iodination, Ozonolysis, Auto-oxidation,
Action of heat on glycerol and choline,
Rancidity Definition & significance - Acid number, Saponification number, Iodine number, Reichert - Meissel number

1.3 Compound Lipids
Functions of glycerophospholipids (PE.PC.PL)
Phosphosphingolipids (ceramide, sphingomyelin), Glycolipids /Cerebrosides (gluco & galactocerebrosides)

1.4 Steroids Cholesterol structure and biochemical significance.

Unit II : Nucleic Acids — **15 Lectures**

2.1 Structure - Purine & Pyrimidine bases, ribose, deoxyribose, nucleosides and nucleotides (ATP, CTP, GTP, TTP, UTP) Formation of polynucleotide strand with its shorthand Representation

2.2 RNAs (various types in prokaryotes and eukaryotes) mRNA & rRNA - general account, tRNA - clover leaf model, Ribozymes

2.3 DNA

2.3.1 Physical evidence of DNA helical structure. Chargaff's rules (chemical evidence), Watson-Crick model of DNA & its features

2.3.2 Physical properties of DNA - Effect of heat on physical properties of DNA (Viscosity, buoyant density, UV absorption), Hypochromism, hyperchromism, denaturation of DNA.

2.3.3 Reactions of nucleic acids (with DPA and Orcinol)

Unit III: Nutrition — **15 Lectures**

3.1 Definition: Calorie, Joule, Food calorimetry - calorific value determination by bomb calorimeter, calorific values of proximate principles, concept of BMI, BV and PER

3.2 BMR – definition, factors affecting BMR, Significance of BMR in clinical diagnosis

3.3 SDA/DIT -General concept and significance, energy requirement of individuals for various activities- sedentary, moderate and heavy

3.4 Nutritional significance of carbohydrates, Protein, lipids, vitamins, minerals and water

3.5 Composition of balanced diet

3.6 Numerical problems based on above concepts

USBCH202 - Introduction to Cell biology, Physiology and Microbiology-II

Course Code	Title	Credits
USBCH202	**Introduction to Cell biology, Physiology and Microbiology-II**	**2 Credits (45 lectures)**
Unit I: Physiology of digestion and absorption **1.1** Parts and Functions of gastro intestinal tract (GIT) **1.2** Organs and Glands associated with GIT Secretions and Juices of GIT (Saliva, Gastric juice, Intestinal juice, pancreatic and Bile juice) **1.3** Digestion and Absorption of carbohydrates **1.4** Digestion and Absorption of Lipids **1.5** Digestion and Absorption of Proteins **1.6** Disorders - Peptic ulcer, Lactose Intolerance		**15 Lectures**
Unit II : Physiology of respiration and excretion **2.1** Respiratory system, **2.2** Breathing - inspiration and expiration, **2.3** Composition of air and partial pressure of gases **2.4** Physical exchange of gases 2.4.1 Transport of oxygen 2.4.2 Transport of carbon dioxide Respiratory disorders – cyanosis, respiratory acidosis and alkalosis ***2.5 Excretion*** 2.5.1 Structure of the nephron: Bowman's capsule & glomerulus - Structure & function, (ultrafiltration, pressures involved, GFR, regulation of GFR); Renal tubule - structure & function (proximal and distal convoluted tubules and Henle's loop) 2.5.2 Urine formation: Reabsorption / Secretion of glucose, Na+, K+. HCO3 Cl^- and H^+ : renal threshold, Excretory disorder: Nephritis		**15 Lectures**
Unit III: Microbiology II **3.1** Microbial Growth - Growth Curve, Mathematical expression, Synchronous growth, Generation time **3.2** Methods for estimation of microbial growth: Cell mass, Cell count and cell activity **3.3** Culture media (N, C, Special requirements), Natural and Synthetic media **3.4** Sterilization and Disinfection techniques **3.5** Physical Agent of sterilization - Temperature- Pressure (Hot Air Oven, Autoclave), Radiations (UV, Gamma) (examples with mechanism) Chemical agents of sterilization - Alcohol, Halogens, Formaldehyde		**15 Lectures**

SEMESTER II – USBCHP02

PRACTICAL – I 45 Lecture hours

1. Qualitative tests for lipids
   a) Miscibility test
   b) Saponification test
   c) Unsaturation test
   d) Sudan black dye test
   e) Salkowski test for cholesterol
2. Determination of SAP value of given oil sample
3. Determination of Acid value of give oil sample
4. Staining of DNA and RNA (methyl green: pyronine) using onion peel
5. Qualitative tests for DNA (DPA) & RNA (Orcinol) (Neumann's test for presence of phosphorus) -
6. Estimation of Calcium by oxalate method
7. Qualitative analysis for Proteins (albumin, peptone , gelatine and casein - any four proteins)

SEMESTER II

PRACTICAL – II 45 Lecture hours

1. Preparation of culture medium
2. Microbial examination of food, water and air
3. Identification of organs / parts of (i) digestive system (ii) respiratory system (iii) excretory system
4. Analysis of the action of salivary α - amylase action on starch- Achromic point
5. Concept of Dialysis using parchment paper –Test with $BaCl_2$ for presence of sulphate in the buffer or water outside
6. Estimation of total acidity of gastric juice
7. Urine analysis:
   - Inorganic constituents: SO_4^{-2} ($BaCl_2$), Cl^- ($AgNO_3$), Na^+, K^+ (Flame test)
   - Organic constituents: Urea, Uric acid, Creatinine
   - Abnormal constituents – glucose by Benedicts method, proteins by Hellers ring test

Suggestion: Artificial samples to be used for physiological experimrents

Bhaskar Waman Thakur College of Science,
Yashvant Keshav Patil College of Commerce,
Vidhya Dayanand Patil College of Arts,
(VIVA College)
(NAAC ACCREDITED-'B' Grade, CGPA 2.69)

All HODs/ coordinators are instructed to fill the following as per the academic year. Each subject's program outcome/ Course outcome has to be filled. The new syllabus of all subjects has it which can be used for reference. Please fill for the following academic years and mention it correctly, even if the same syllabus was followed for subsequent academic year you will have to fill it. Following is the example for your reference:

•	
•	
•	
•	
•	
•	
•	
•	
•

(NAAC ACCREDITED-'B' Grade, CGPA 2.69)

Academic year : 2022-2023

Name of Department: English

Class: FYBA

Program Outcomes:

1. To enhance English language proficiency of students by familiarizing them with the skills of Listening, Speaking, Reading and Writing (LSRW)
2. To introduce learners to different perspectives of looking at a text or passage
3. To equip learners in the functional aspects of English so that they use the acquired language skills correctly and confidently
4. To guide learners in the effective use of the digital medium of communication

• To create interest and develop passion amongst learners towards English Literature

• To familiarize learners with salient characteristics of literary genres like short story, prose, fiction and non-fiction

• To introduce learners to various elements of selected short stories written in English and translated into English

• To acquaint learners with different forms of prose and its importance through close reading of selected works

• To understand that literature is an expression of human values and universal truths

Program Specific Outcomes:

1. The learners will learn to understand and interpret any text they are reading from different perspectives
2. The interest of learners in listening to and watching good quality audio and visual media will be aroused.
3. Learners will acquire proficiency in the skills of listening, speaking, reading and writing that will help them meet the challenges of the world.
4. The learners will develop good oral and written skills of communication in the English language.

To develop passion for reading literary works amongst students

• To make learners at ease in the process of appreciation of literature

• To enable learners to understand and analyze selected stories, prose, fiction and non- fiction masterpieces

• To imbibe the underlying philosophy and values reflected in literature

• To develop sensitivity to nature and understand the relationship between human beings and environment

SEMESTER - I

Course Code: - :UACS101	**Course Title:** Communication Skills in English

Course Outcomes:
1. The learners will learn to understand and interpret any text they are reading from different perspectives
2. The interest of learners in listening to and watching good quality audio and visual media will be aroused.
3. Learners will acquire proficiency in the skills of listening, speaking, reading and writing that will help them meet the challenges of the world.
4. The learners will develop good oral and written skills of communication in the English language.

Course Code: : UAENG 101	**Course Title:** : Introduction to Prose and Fiction Paper – I and II

Course outcomes:
The students would be able :

To develop passion for reading literary works amongst students

• To make learners at ease in the process of appreciation of literature

• To enable learners to understand and analyze selected stories, prose, fiction and non- fiction masterpieces

• To imbibe the underlying philosophy and values reflected in literature

• To develop sensitivity to nature and understand the relationship between human beings and environment

Dr. S. Vishnu Priya (Member)	**:**	Department of ELT, SDE, EFLU, Hyderabad.

Course: Communication Skills in English

(80:20 Marks Examination Pattern)

(Choice Based Credit System with effect from the academic year 2021-22)

1. Syllabus as per Credit Based Semester and Grading System:				
	i)	Name of the Programme	:	B.A.
	ii)	Course Code	:	UACS 101 & UACS 201
	iii)	Course Titles	:	Communication Skills in English
	iv)	Semester-wise Course Content	:	Enclosed the copy of syllabus
	v)	References and Additional References:		Enclosed in the Syllabus
	vi)	Credit Structure	:	No. of Credits per Semester – 02
	vii)	No. of lectures per Unit	:	15
	viii)	No. of lectures per week	:	03 lectures + 01 tutorial
2.	Scheme of Examination		:	Written Exam: 4 Questions of 20 Marks each Internal Assessment: 20 marks
3.	Special notes, if any		:	No
4.	Eligibility, if any		:	No
5.	Fee Structure		:	As per University Structure
6.	Special Ordinances / Resolutions if any		:	No

Revised Syllabus for FYBA Communication Skills in

English Paper I and Paper II

To be implemented from 2021-22 (80:20 Marks Examination Pattern)

Preamble:

The English language is the dominant medium through which one can connect to the global community. It is, therefore, vital that all learners acquire adequate skills in this language. Communication Skills in English is a core course wherein the first year learners are guided to acquire the four skills of communication viz., Listening, Speaking, Reading and Writing.

The focus of the syllabus is on building confidence in the learners in applying these skills while using the English language both academically and socially. Keeping this in mind, the units will have a multi-pronged approach. The course is graded from basic to higher levels of learning so as to help learners gradually acquire the skills. The 80:20 pattern will also help in accomplishing this goal. The tutorial activities are designed to focus on oral skill development, while the lectures are aimed at honing their cognitive, analytical, linguistic and creative skills.

It is hoped that by the end of the academic year, the learners will have developed confidence in using the English language both for oral and written communication as well as develop interest in enhancing these skills later on.

Objectives:

1. To enhance English language proficiency of students by familiarizing them with the skills of Listening, Speaking, Reading and Writing (LSRW)
2. To introduce learners to different perspectives of looking at a text or passage
3. To equip learners in the functional aspects of English so that they use the acquired language skills correctly and confidently
4. To guide learners in the effective use of the digital medium of communication.

Outcomes:

1. The learners will learn to understand and interpret any text they are reading from different perspectives
2. The interest of learners in listening to and watching good quality audio and visual media will be aroused.
3. Learners will acquire proficiency in the skills of listening, speaking, reading and writing that will help them meet the challenges of the world.
4. The learners will develop good oral and written skills of communication in the English language.

Periods: 45 lectures + 15 Tutorials (3 lectures + 1 tutorial per week per batch) per semester

All passages, stories, articles, poems selected should help the learners develop different communication skills. Learning through example and practice with a theoretical base is the intention.

Semester I

Communication Skills in English Paper I

Course Content

Unit 1: Introduction to Communication Skills **No. of lectures: 08**

1. English as an international language and varieties of English
2. Significance and ways of effective communication in English
3. Listening for academic and professional development
4. Formal and informal communication in spoken English
5. Reading for different purposes
6. Features of effective writing skills
7. Study skills in English

This unit shall work as theoretical base for the following units that are practical in nature.

Unit 2: Developing Comprehension Skills in English **No. of lectures: 12**

A. Reading Skills

1. Scanning a text for information
2. Skimming a passage to look for main ideas, understanding text type
3. Guessing meaning of an expression (word/phrase/clause)
4. Building inference skills
5. Understanding language structure (such as subject verb agreement, voice, direct and reported speech)
6. Note making
7. Summarizing

Passages from fables, folk stories, short stories, non-fiction, history, business or environment, of around 250- 300 words, could be chosen in this unit.

B. Listening Skills

1. Listening for main ideas/Gist
2. Listening for detail
3. Listening for text organization features
4. Listening for tone, accent, style and register
5. Predicting content and guessing meaning
6. Making inferences from the audio-visual text
7. Listening for opinion/argument/counter-arguments etc.
8. Taking notes

A variety of relevant audio/visual texts as samples may be drawn from various sources. Listening skills in English should be developed through various activities along with the practice done while teaching in the class.

Unit 3: Speaking Skills in English **No of lectures: 15**

A. Public Speaking in English

1. Introduction
2. Characteristics of an effective speech
3. Analysis of model speeches
4. Drafting and presenting a speech in formal and informal gatherings

B. Conversation in English

1. Opening a conversation
2. Introducing oneself in various contexts
3. Introducing others formally and informally
4. Building a conversation
5. Leaving and closing a conversation
6. Conversation in group in various situations

C. Speaking at an Event

1. Anchoring/compering an event
2. Introducing guests/ speakers/dignitaries
3. Proposing a vote of thanks

A variety of relevant texts as samples may be drawn from print and non-print sources such as books, videos, audio files etc. Speaking skills in English should be developed through various activities along with the practice done while teaching in the class.

Unit 4: Formal Writing Skills **No. of lectures: 10**

A. Letters:

1. Job applications with bio data (solicited and unsolicited)
2. RTI applications
3. Applications for duplicate documents (I-cards / mark sheet, etc.)

B. Emails:

1. Job acceptance and joining
2. Resignation
3. Complaints
4. Requests for references
5. Request for sponsorship

Tutorial Activities:

1. Use of YouTube videos for use of grammar study and practice that may be taken from the list recommended or similar relevant videos.
2. Listening to audio clips/ books to enhance listening skills
3. Reading aloud from newspapers, magazines, stories, non-fiction followed by classroom discussion on these to enhance reading and speaking skills
4. Making short presentations on given topics
5. Official letter writing/ email writing exercises

Semester II

Communication Skills in English Paper II

Course Content

Unit 1: English Usage in Communication **No. of lectures: 08**

1. Distinction between American English and British English
2. Indianism and Indian English
3. Appropriacy in the Use of English
4. Non-verbal Communication
5. Elevator Pitch
6. Information and Communication Technology and Use of English
7. Modes and Types of Interview
8. Principles of Creative Writing

This unit shall work as theoretical base for the following units that are practical in nature.

Unit 2: Enhancing Reading Competencies **No. of lectures: 12**

A variety of passages of 200-250 words may be taken such as extracts from novels, short stories, plays, magazine, newspapers, reports, documents, academic texts. The passages should have complex text type, function and lexis. The learners may be encouraged to gather meaning contextually or by referring to offline and online sources such as dictionary, thesaurus, and encyclopedia.

1. Augmenting active vocabulary
2. Understanding relations between parts of a text
3. Transferring information (Verbal to Non-Verbal)
4. Understanding concepts and arguments,
5. Developing skills in analysis and interpretation
6. Rewriting a passage from a defined perspective
7. Reading critically (presenting a reasoned argument that evaluates and analyses what you have read)

Weightage of questions on texts -

a. On vocabulary, synonyms and antonyms, prefixes and suffixes, collocations, making sentences of their own from the idioms or difficult words in the extract (50%)
b. On writing their opinions, perspectives on the passages in longer, more descriptive ways (50%)

Unit 3: Advanced Oral Communication Skills **No. of lectures: 15**

A. Presentation skills: (Formal presentations and skits)

1. Planning and structuring
2. Opening and closing a presentation
3. Use of body language
4. Use of technology in making a presentation
5. Drafting a skit (Not to be tested in theory exam)
6. Reading of a skit
7. Presenting a skit

Students are advised to prepare their own presentation scripts. Teachers should help them in drafting, reading and presenting those scripts in the class.

B. Group Discussion:

1. Formal and informal discussion
2. Elements of group discussion
3. Using appropriate language: Initiating, seeking and giving opinions, suggesting, responding to a suggestion, agreeing, disagreeing, interrupting, requesting, clarifying, summing up
4. Types of discussion:

   Giving and sharing opinions of a given topic, making decisions, problem solving (case study)

C. Interview Skills

1. Interviewing others
    - Researching the interviewee (writer, social worker, entrepreneur, actor etc.)
    - Preparing questions
    - Conducting interview
2. Attending an Interview (Job/Entrance)
    - Researching the organization
    - Reviewing job-profile and your bio-data/CV
    - Preparing for standard questions
    - Responding to questions
    - Preparing your questions to ask to the interviewer/s
3. Analyzing Interviews

Students can be tested on forming actual interview frameworks including questions. Teachers must form the groups and conduct actual interviews involving full strength of students.

Unit 4: Advanced Writing Skills **No. of lectures: 10**

A. Report Writing:

1. News report
2. Activity/Event report

B. Creative Writing:

1. Personal Essay
2. Memoir
3. Short Speech on the given occasion/ event
4. Story writing

Tutorial Activities:

1. Dialogue-writing exercises
2. Writing skits and presenting them
3. Giving speeches
4. Group discussions
5. Mock Interviews

6. Development of stories, passages from hints given, in about 200-250 words
7. Report writing tasks
8. Statement of Purpose

Evaluation Pattern:

A. Internal Evaluation (20 Marks)

		Marks	**Remarks**
1	Performance in Tutorial activities	10	**Sem I** -- Learners may be asked to make presentations, hold conversation in class, which will be assessed **Sem II** -- Learners may be asked to participate in group discussions or mock interviews in class, which will be assessed
2	Participation in classes (lectures and tutorials)	05	Learners' response to teaching, timely submission of tasks will be assessed
3.	Overall attendance (lectures and tutorials)	05	Percentage of learners' attendance in class to be considered

B. Written Examination: (80 marks)

Semester I: 4 questions carrying 20 marks each

Q. No.	Question details	Marks
1	Short Notes (4 out of 6) from Unit 1	20
2	Unseen Passage (200-250 words) (Unit 2) a. On content, the use of tenses, articles, prepositions, direct-indirect speech and concord, voice, word meanings - (50%) b. On reading sub-skills (pointing out main ideas and supporting details, making inferences) (50%)	10 10

3	Any four to be attempted from given options (based on Unit 3) a. Preparing a speech on a given topic b. Questions on introducing self and others c. Develop a conversation on a given situation d. Introducing speakers/guests in a given event e. Drafting vote of thanks at a given event	20
4	a. Job application with bio-data b. RTI letter c. Email writing (1 out of 2)	08 07 05

Semester II: 4 questions carrying 20 marks each

Q. No.	Question details	Marks
1	Short Notes (4 out of 6) on theory from Unit 1	20
2	Unseen Passage (200-250 words) (Unit 2) a. On content, synonyms and antonyms, prefixes and suffixes, collocations, making sentences of their own from the idioms or difficult words in the passage (50%) b. On other sub-skills (such as writing their opinions, perspectives on the passages in longer, more descriptive ways (50%)	10 10
3	Any Two out of Three to be attempted (based on Unit 3) a. Preparing a draft of presentation on a given topic b. Preparing a draft for a mock interview based on the given instructions c. Preparing a draft of a group discussion on a given topic & instructions	20

4.	a. Report writing (1 out of 2) b. Personal essay/Memoir c. Story Writing/Speech	08 07 05

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Population and Sample	12
2	Measures of Central Tendency	12
3	Measures of Dispersion	12
4	Correlation and regression (for ungrouped data)	12
5	Linear Programming Problems	12
	Total	**60**

Sr. No.	Modules / Units
1	**Population and sample**
	Definition of statistics, scope of statistics in Management and financial markets, Concept of population and sample with illustration Methods of sampling- SRSWR, SRSWOR, stratified, systematic (description of sampling procedures only) Data condensation and graphical methods: Raw data, attributes and variables, classification, frequency distribution, cumulative frequency distribution Graphs- Histogram and frequency polygon Diagrams- Multiple bar, pie, subdivided bar
2	**Measures of Central tendency**
	Criteria for good measures of central tendency, arithmetic mean, median mode for grouped and ungrouped data, combined mean
3	**Measures of Dispersion**
	Concept of dispersion, absolute and relative measures of dispersion, range variance, standard deviation, coefficient of variation, quartile deviation, coefficient of quartile deviation
4	**Correlation and regression (for ungrouped data)**
	Concept of correlation, positive and negative correlation, Karl Pearson's Coefficient of Correlation, meaning of regression, two regression equations, Regression coefficients and properties
5	**Linear Programming Problems**
	Meaning of LPP, Formulation of LPP, solution by graphical methods, problems relating to two variables only

Revised Syllabus of Courses of B.Com. (Financial Markets) Programme at Semester II with Effect from the Academic Year 2016-2017

Ability Enhancement Courses (AEC)

4. Business Communication - II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Presentation Skills	10
2	Group Communication	15
3	Business Correspondence	10
4	Language and Writing Skills	10
	Total	**45**

Sr. No.	Modules / Units
1	**Presentation Skills**
	Presentations: (to be tested in tutorials only) 4 Principles of Effective Presentation Effective use of OHP Effective use of Transparencies How to make a Power-Point Presentation
2	**Group Communication**
	Interviews: Group Discussion Preparing for an Interview, Types of Interviews – Selection, Appraisal, Grievance, Exit **Meetings:**Need and Importance of Meetings, Conduct of Meeting and Group Dynamics Role of the Chairperson, Role of the Participants, Drafting of Notice, Agenda and Resolutions **Conference:**Meaning and Importance of Conference Organizing a Conference Modern Methods: Video and Tele – Conferencing **Public Relations:** Meaning, Functions of PR Department, External and Internal Measures of PR
3	**Business Correspondence**
	Trade Letters: Order, Credit and Status Enquiry, Collection (just a brief introduction to be given) **Only following to be taught in detail:-** Letters of Inquiry, Letters of Complaints, Claims, Adjustments Sales Letters, promotional leaflets and fliers Consumer Grievance Letters, Letters under Right to Information (RTI) Act [Teachers must provide the students with theoretical constructs wherever necessary in order to create awareness. However students should not be tested on the theory.]
4	**Language and Writing Skills**
	Reports: Parts, Types, Feasibility Reports, Investigative Reports **Summarisation:** Identification of main and supporting/sub points Presenting these in a cohesive manner

Revised Syllabus of Courses of B.Com. (Financial Markets) Programme at Semester II with Effect from the Academic Year 2016-2017

Skill Enhancement Courses (SEC)

5. Foundation Course – II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Globalisation and Indian Society	07
2	Human Rights	10
3	Ecology	10
4	Understanding Stress and Conflict	10
5	Managing Stress and Conflict in Contemporary Society	08
	Total	**45**

Sr. No	Modules /Units
1	**Globalisation and Indian Society**
	Understanding the concepts of liberalization, privatization and globalization;Growth of information technology and communication and its impact manifested in everyday life; Impact of globalization on industry: changes in employment and increasing migration; Changes in agrarian sector due to globalization; rise in corporate farming and increase in farmers' suicides.
2	**Human Rights**
	Concept of Human Rights; origin and evolution of the concept; The Universal Declaration of Human Rights;Human Rights constituents with special reference to Fundamental Rights stated in the Constitution

Skill Enhancement Courses (SEC)

5.Foundation Course inNCC- II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Disaster Management, Social Awareness and Community Development	10
2	Health and Hygiene	10
3	Drill with Arms	10
4	Weapon Training	10
5	Specialized Subject: Army Or Navy Or Air	05
	Total	**45**

Sr. No.	Modules / Units
1	**Disaster Management, Social Awareness and Community Development**
	Disaster Management: **Desired outcome:** The student shall gain basic information about civil defence organisation / NDMA & shall provide assistance to civil administration in various types of emergencies during natural / manmade disasters • Civil Defence Organisation and Its Duties/ NDMA • Types of Emergencies/ Natural Disaster • Assistance during Natural / Other Calamities: Flood / Cyclone/ Earth Quake/ Accident etc. • 'Avan' model of NCC **Social Awareness and Community Development:** **Desired outcome:** The student shall have an understanding about social service and its need, about NGOs and shall participate in community action programmes for betterment of the community. • Basics of Social Service, Weaker Sections of Our Society and Their Needs • Social/ Rural Development Project: MNREGA, SGSY, NSAP etc. • Contribution of Youth towards Social Welfare • Civic Responsibilities • Causes & Prevention of HIV/AIDS; Role of Youth
2	**Health and Hygiene**
	Desired outcome: The student shall be fully aware about personal health and hygiene lead a healthy life style and foster habits of restraint and self awareness. • Structure and Functioning of the Human Body • Hygiene and Sanitation (Personal and Food Hygiene) • Infectious & Contagious Diseases & Their Prevention
3	**Drill with Arms**
	Desired outcome: The students will demonstrate the sense of discipline, improve bearing, smartness, turnout, develop the quality of immediate and implicit obedience of orders, with good reflexes. • Attention, Stand at Ease and Stand Easy • Getting on Parade with Rifle and Dressing at the Order • Dismissing and Falling Out • Ground / Take Up Arms • Present From the Order and Vice-versa • General Salute, Salami Shastra
4	**Weapon Training**
	Desired outcome: The student shall have basic knowledge of weapons and their use and handling. • Characteristics of a Rifle / Rifle Ammunition and its Fire Power • Stripping, Assembling, Care and Cleaning and Sight Setting of .22 rifle • Stripping, Assembling, Care and Cleaning of 7.62mm SLR • Loading, Cocking and Unloading • The lying position, Holding and Aiming- I • Trigger control and firing a shot • Range procedure and safety precautions • Short range firing, Aiming- II -Alteration of sight

Sr. No.	Modules / Units
5	**Specialized Subject: Army Or Navy Or Air**
	Army **Desired outcome:** The training shall instill patriotism, commitment and passion to serve the nation motivating the youth to join the defence forces. It will also acquaint, expose & provide basic knowledge about armed, naval and air-force subjects **A. Map reading** • Introduction to types of Maps and Conventional signs • Scales and Grid system • Topographical forms and technical terms • Relief, contours and Gradients • Cardinal points and Types of North • Types of bearings and use of Service Protractor • Prismatic compass and its use and GPS **B. Field Craft and Battle Craft** • Introduction • Judging distance • Description of ground • Recognition, Description and Indication of landmarks and targets ***OR*** **Navy** **A. `Naval Communication** • Introduction to Naval Modern Communication, Purpose and Principles ▪ Introduction of Naval communication ▪ Duties of various communication sub-departments • Semaphore ▪ Introduction of position of letters and prosigns ▪ Reading of messages ▪ Transmission of messages **B. Seamanship** • **Anchor work** ▪ Parts of Anchor and Cable, their identification • **Rigging** ▪ Types of ropes and breaking strength- stowing, maintenance and securing of ropes ▪ Practical Bends and Hitches: Reef Knot, Half hitch, Clove Hitch, Rolling Hitch, Timber Hitch, Bow Line, Round Turn and Two half hitch and Bow line on the Bight and its basic elements and uses. ▪ Introduction to Shackles, Hooks, Blocks and Derricks, Coiling Down and Splicing of rope **C. Boat work** • Parts of Boat and Parts of an Oar • Instruction on boat Pulling- Pulling orders • Steering of boat under oars, Practical instruction on Boat Pulling, Precautions while pulling

Sr. No.	Modules / Units
	OR **Air** **A. Air frames** • Aircraft Controls • Landing Gear **B. Instruments** • Basic Flight Instruments **C. Aircraft Particulars** • Aircraft Particulars (Type specific) **D. Aero modelling** • History of Aero modelling • Materials used in Aero modelling • Type of Aero models • Flying/ Building of Aero models

Revised Syllabus of Courses of B.Com. (Financial Markets) Programme at Semester II with Effect from the Academic Year 2016-2017

Skill Enhancement Courses (SEC)

5.Foundation Course in Physical Education- II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Development of Fitness	10
2	Health, Fitness and Diseases	15
3	Yoga Education	10
4	Daily Schedule of Achieving Quality of Life and Wellness	10
	Total	**45**

Sr. No.	Modules / Units
1	**Development of Fitness**
	• Benefits of physical fitness and exercise and principles of physical fitness • Calculation of fitness index level 1-4 • Waist-hip ratio Target Heart Rate, BMI and types and principles of exercise (FITT) • Methods of training – continues, Interval, circuit, Fartlek and Plyometric
2	**Health, Fitness and Diseases**
	• Definition of obesity and its management • Communicable diseases, their preventive and therapeutic aspectS • Factors responsible for communicable diseases • Preventive and therapeutic aspect of Communicable and non- communicable diseases
3	**Yoga Education**
	• Meaning and history of yoga • Ashtang yoga and types of yoga • Types of Suryanamaskar and Technique of Pranayam • Benefits of Yoga
4	**Daily Schedule of Achieving Quality of Life and Wellness**
	• Daily schedule based upon one's attitude, gender, age &occupation. • Basic – module: - Time split for rest, sleep, diet, activity & recreation. • Principles to achieve quality of life:- positive attitude, daily regular exercise, control over food habits & healthy hygienic practices.

Revised Syllabus of Courses of B.Com.(Financial Markets) Programme at Semester I and II with effect from the Academic Year 2016-2017

Scheme of Evaluation

The performance of the learners will be evaluated in two Components. One component will be the Internal Assessment component carrying 25% marks and the second component will be the Semester-wise End Examination component carrying 75% marks. The allocation of marks for the Internal Assessment and Semester End Examinations will be as shown below:-

A) Internal Assessment: **25 %**

Question Paper Pattern
(Internal Assessment- Courses without Practical Courses)

Sr. No.	Particular	Marks
1	**One class test (20 Marks)**	
	Match the Column/ Fill in the Blanks/ Multiple Choice Questions ***(½ Mark each)***	05 Marks
	Answer in One or Two Lines (Concept based Questions) ***(01 Mark each)***	05 Marks
	Answer in Brief (Attempt Any Two of the Three) ***(05 Marks each)***	10 Marks
2	Active participation in routine class instructional deliveries and overall conduct as a responsible learner, mannerism and articulation and exhibit of leadership qualities in organizing related academic activities	05 Marks

Question Paper Pattern
(Internal Assessment- Courses with Practical Courses)

Sr. No.	Particular	Marks
1	**Semester End Practical Examination (20 Marks)**	
	Journal	05 Marks
	Viva	05 Marks
	Laboratory Work	10 Marks
2	Active participation in routine class instructional deliveries and overall conduct as a responsible learner, mannerism and articulation and exhibit of leadership qualities in organizing related academic activities articulation and exhibit of leadership qualities in organizing related academic activities	05 Marks

B) Semester End Examination: 75 %

i) Duration: The examination shall be of 2 ½ Hours duration

ii) Theory question paper pattern

- There shall be five questions each of 15 marks.
- All questions shall be compulsory with internal choice within the questions.
- Question may be subdivided into sub-questions a, b, c… and the allocation of marks depends on the weightage of the topic.
  (Detail question paper pattern has been given separately)

Passing Standard

The learners to pass a course shall have to obtain a minimum of 40% marks in aggregate for each course where the course consists of Internal Assessment and Semester End Examination. The learners shall obtain minimum of 40% marks (i.e. 10 out of 25) in the Internal Assessment and 40% marks in Semester End Examination (i.e. 30 Out of 75) separately, to pass the course and minimum of Grade E to pass a particular semester A learner will be said to have passed the course if the learner passes the Internal Assessment and Semester End Examination together.

Question Paper Pattern

(Practical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 ½ Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Objective Questions A) Sub Questions to be asked 10 and to be answered any 08 B) Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks
Q-2 Q-2	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-3 Q-3	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-4 Q-4	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-5 Q-5	A) Theory questions B) Theory questions ***OR*** Short Notes To be asked 05 To be answered 03	08 Marks 07 Marks 15 Marks

Note:

Practical question of 15 marks may be divided into two sub questions of 7/8 and 10/5 Marks. If the topic demands, instead of practical questions, appropriate theory question may be asked.

Question Paper Pattern
(Theoretical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 ½ Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Objective Questions A) Sub Questions to be asked 10 and to be answered any 08 B) Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks
Q-2 Q-2	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-3 Q-3	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks

UNIVERSITY OF MUMBAI

Syllabus for Sem I & II
Program: B.Sc.
Course: Physics

(Credit Based Semester and Grading System for Academic year 2016-17)

Syllabusfor B.Sc. Physics(Theory&Practical)
Aspercreditbasedsystem
FirstYearB.Sc.2016–2017.

TherevisedsyllabusinPhysicsasper creditbasedsystemfortheFirstYearB.Sc.Course willbeimplementedfromtheacademicyear**2016–2017.**

Preamble:

The systematic and planned curricula from these courses shall motivate and encourage learners to understand basic concepts of Physics.

Objectives:

- To develop analytical abilities towards real world problems
- To familiarize with current and recent scientific and technological developments
- To enrich knowledge through problem solving, hands on activities, study visits, projects etc.

Course code	Title	Credits
	Semester I	
USPH101	Classical Physics	2
USPH102	Modern Physics	2
USPHP1	Practical I	2
		Total= 06
	Semester II	
USPH201	Mathematical Physics	2
USPH202	Electricity and Electronics	2
USPHP2	Practical II	2
		Total=06

SEMESTER-I

Name of the Programme	Duration	Semester	Subject
B.Sc.inPhysics	Sixsemesters	I	Physics
CourseCode	Title	Credits	
USPH101	**Classical Physics**	2for USPH101	

Learning Outcomes:

On successful completion of this course students will be able to:

1. Understand Newton's laws and apply them in calculations of the motion of simple systems.
2. Use the free body diagrams to analyzetheforces on the object.
3. Understand the concepts of friction and the concepts of elasticity, fluid mechanics and be able to perform calculations using them.
4. Understand the concepts of lens system and interference.
5. Apply the laws of thermodynamics to formulate the relations necessary toanalyze athermodynamic process.
6. Demonstrate quantitative problem solving skills in all the topics covered

Unit:I **15lectures**

1. Newton’s Laws**:**

Newton’s first, second and third laws of motion, interpretation and applications, pseudo forces, Inertial and non-inertial frames of reference.Worked out examples (with friction present)

2. Elasticity:

Review of Elastic constants Y, K, η and σ;Equivalence of shear strain to compression and extension strains. Relations between elastic constants, Couple for twist in cylinder.

3. Fluid Dynamics**:**

Equation of continuity, Bernoulli’s equation, applications of Bernoulli’s equation, streamline and turbulent flow, lines of flow in airfoil, Poiseuille’s equation.

Unit:II **15lectures**

1. Lens Maker's Formula (Review), Newton’s lens equation,magnification-lateral, longitudinal and angular.

2. Equivalent focal length of two thin lenses, thick lens, cardinal points of thick lens, Ramsdenand Huygens eyepiece.
3. Aberration: Spherical Aberration, Reduction of Spherical Aberration, Chromatic aberration and condition for achromatic aberration.
3. Interference: Interference in thin films, Fringes in Wedge shaped films, Newton's Rings (Reflective).

UNIT III **15 lectures**

1. Behavior of real gases and real gas equation, Van der Waal equation
2.Thermodynamic Systems, Zeroth law of thermodynamics, Concept of Heat, The first law, Non Adiabatic process and Heat as a path function, Internal energy, , Heat Capacity and specific heat, Applications of first law to simple processes, general relations from the first law, Indicator diagrams, Work done during isothermal and adiabatic processes, Worked examples, Problems.

Note:Agoodnumberofnumericalexamplesareexpectedtobecoveredduringthe prescribed lectures.

7. Hans and Puri, Mechanics –, 2nd Ed. Tata McGraw Hill

SEMESTER-I

Nameofthe Programme	Duration	Semester	Subject
B.Sc.inPhysics	Sixsemesters	I	Physics
CourseCode	Title	Credits	
USPH102	**Modern Physics**	2for USPH102	

Learning Outcomes:

After successful completion of this course students will be able to

1. Understand nuclear properties and nuclear behavior.
2. Understand the type isotopes and their applications.
3. Demonstrate and understand the quantum mechanical concepts.
4. Demonstrate quantitative problem solving skills in all the topics covered.

Unit I **15lectures**

1. Structure of Nuclei:Basic properties of nuclei, Composition, Charge, Size, Rutherford's expt. for estimation of nuclear size, density of nucleus, Mass defect and Binding energy, Packing fraction, BE/A vs A plot, stability of nuclei (N Vs Z plot) and problems.
2. Radioactivity: Radioactive disintegration concept of natural and artificial radioactivity, Properties of α, β, γ-rays, laws of radioactive decay, half-life, mean life (derivation not required), units of radioactivity, successive disintegration and equilibriums, radioisotopes. Numerical Problems.
3. Carbon dating and other applications of radioactive isotopes (Agricultural, Medical, Industrial, Archaeological -information from net).

Unit II **15 lectures**

Interaction between particles and matter, Ionization chamber, Proportional counter and GM counter, problems

Nuclear Reactions: Types of Reactions and Conservation Laws. Concept of Compound and Direct Reaction, Q value equation and solution of the Q equation, problems.

Fusion and fission definitions and qualitative discussion with examples.

Unit III **15 lectures**

1. Origin of Quantum theory, Black body (definition), Black Body spectrum, Wien's displacement law, Matter waves, wave particle duality, Heisenberg's uncertainty Principle. Davisson-Germer experiment, G. P. Thompson experiment.
2. X-Rays production and properties. Continuous and characteristic X-Ray spectra, X-Ray Diffraction, Bragg's Law, Applications of X-Rays.
3. Compton Effect, Pair production, Photons and Gravity, Gravitational Red Shift.

Note: Agoodnumberofnumericalexamplesareexpectedtobecoveredduringthe prescribed lectures

SEMESTER-I

Name of the Programme	Duration	Semester	Subject
B.Sc.inPhysics	Sixsemesters	I	Physics
CourseCode	Title	Credits	
USPHP1	**Practical I**	2	

Leaning Outcome:

On successful completion of this course students will be able to:

i) To demonstrate their practical skills.
ii) To understand and practice the skills while doing physics practical.
iii) To understand the use of apparatus and their use without fear.
iv) To correlate their physics theory concepts through practical.
v) Understand the concepts of errors and their estimation.

A. <u>Regularexperiments:</u>

1	J by Electrical Method: To determine mechanical equivalent of heat (Radiation correction by graph method)
2	Torsional Oscillation: To determine modulus of rigidity η of a material of wire by torsional oscillations
3	Bifilar Pendulum
4	Spectrometer: To determine of angle of Prism.
5	Y by vibrations: To determine Y Young's Modulus of a wire material by method of vibrations- Flat spiral Spring
6	To determine Coefficient of Viscosity (η) of a given liquid by Poisseuli's Method
7	Surface Tension/ Angle of contact
8	Combination of Lenses To determine equivalent focal length of a lens system by magnification method.
9	Spectrometer: To determine refractive index μ of the material of prism
10	To study Thermistor characteristic Resistance vs Temperature
11	Constant volume/constant pressure
12	Newton's Rings To determine radius of curvature of a given convex lens using Newton's rings.
13	Wedge Shaped Film

B. Skill Experiments:

1.	Use of Verniercalipers, Micrometer Screw Gauge, Travelling Microscope
2.	Graph Plotting : Experimental, Straight Line with intercept, Resonance Curve etc.
3.	Spectrometer: Schuster's Method
4.	Use of DMM
5	Absolute and relative errors calculation.

C) Any one out of following isequivalent to two experiments from section A and/ or B

1. Students should collect the information of at least five Physicists with their work. Report that in journal.
2. Students should carry out mini-project upto the satisfaction of professor In-charge of practical.
3. Study tour. Students participated in study tour must submit a study tour report.

Minimum 8experimentsfrom the listshouldbecompletedinthe first semester. Any four skill experimentsaretobereportedinjournalCertifiedjournalis a must tobeeligibletoappearforthesemesterendpractical.

Theschemeofexaminationfortherevisedcoursein Physicsat theFirstYearB.Sc.Semester endexaminationwillbeasfollows.

SemesterEnd Practical Examination:
Schemeof examination:

There will be no internal assessment for practical.
Acandidatewillbeallowedtoappearforthesemester end practical examinationonlyifthecandidatesubmits aCertified journalatthetimeofpracticalexaminationofthe semester oracertificatefrom theHeadoftheDepartment /Institute totheeffectthathecandidate hascompleted the practicalcourseofthatsemesterofF.Y.B.Sc.Physicsasperthe minimumrequirement. The duration of the practical examination will be two hours per experiment. There will be two experiments through which the candidate will be examined in practical. The questions on slips for the same should be framed in such a way that candidate will be able to complete the task and should be evaluated for its skill and understanding of physics.

SEMESTER II

Nameofthe Programme	Duration	Semester	Subject
B.Sc.inPhysics	Sixsemesters	II	Physics
CourseCode	Title	Credits	
USPH201	**Mathematical Physics**	2for USPH201	

Learning Outcomes:

On successful completion of this course students will be able to:

1. Understand the basic mathematical concepts and applications of them in physical situations.
2. Demonstrate quantitative problem solving skills in all the topics covered.

Unit I **15 lectures**

1. Vector Algebra :

Vectors, Scalars, Vector algebra, Laws of Vector algebra, Unit vector, Rectangular unit vectors, Components of a vector, Scalar fields, Vector fields, Problems based on Vector algebra.

Dot or Scalar product, Cross or Vector product, Commutative and Distributive Laws, Scalar Triple product, Vector Triple product (Omit proofs). Problems and applications based on Dot, Cross and Triple products.

2. Gradient, divergence and curl:

The ∇ operator, Definitions and physical significance of Gradient, Divergence and Curl; Distributive Laws for Gradient, Divergence and Curl (Omit proofs); Problems based on Gradient, Divergence and Curl.

Unit: II **15lectures**

1. Differential equations**:**

Introduction, Ordinary differential equations, First order homogeneous and non- homogeneous equations with variable coefficients, Exact differentials, General first order Linear Differential Equation, Second-order homogeneous equations with constant coefficients. Problems depicting physical situations like LC and LR circuits, Simple Harmonic motion (spring mass system).

2. Transient response of circuits: Series LR, CR, LCR circuits. Growth and decay of currents/charge.

Unit:III **15lectures**

1. Superposition of Collinear Harmonic oscillations: Linearity and Superposition Principle. Superposition of two collinear oscillations having (1) equal frequencies and (2) different frequencies (Beats).

2. Superposition of two perpendicular Harmonic Oscillations: Graphical and Analytical Methods. Lissajous Figures with equal an unequal frequency and their uses
3. Wave Motion: Transverse waves on string, Travelling and standing waves on a string. Normal modes of a string, Group velocity, Phase velocity, Plane waves, Spherical waves, Wave intensity.

Note: Agoodnumberofnumericalexamplesareexpectedtobecoveredduringthe prescribed lectures

SEMESTER II

Nameofthe Programme	Duration	Semester	Subject
B.Sc.inPhysics	Sixsemesters	II	Physics
CourseCode	Title	Credits	
USPH202	**Electricity and Electronics**	2for USPH202	

Unit I : 15 lectures

1. Alternating current theory:(Concept of L, R, and C: Review)

AC circuit containing pure R, pure L and pure C, representation of sinusoids by complex numbers, Series L-R, C-R and LCR circuits. Resonance in LCR circuit (both series and parallel), Power in ac circuit. Q-factor.

2. AC bridges: AC-bridges: General AC bridge, Maxwell,de-Sauty, Wien Bridge , Hay Bridge.

Unit II: Electronics 15 lectures

1.Circuit theorems: (Review: ohm's law, Kirchhoff's laws)
Superposition Theorem, Thevenin's Theorem, Ideal Current Sources, Norton's Theorem, Reciprocity Theorem, Maximum Power Transfer Theorem.
Numericals related to circuit analysis using the above theorems.
2.DC power supply:Half wave rectifier , Full wave rectifier, Bridge rectifier, PIV and Ripple factor of full wave rectifier, Clipper and Clampers(Basic circuits only), Capacitor Filter.
Zener diode as voltage stabilizer.
3.Digital electronics : Logic gates(Review), NAND and NOR as universal building blocks. EXOR gate: logic expression, logic symbol, truth table, Implementation using basic gates and its applications, Boolean algebra, Boolean theorems. De-Morgan theorems, Half adder and Full adder

Unit III : Electrostatics and Magnetostatics 15 lectures

1.The Electric Field : Introduction, Coulomb's Law, The Electric Field, Continuous charge Distribution, Electric Potential, Introduction to Potential, Comments on Potential,
The Potential of a Localized Charge Distribution
2.Work and Energy in Electrostatics**:** The Work Done to Move a charge, The Energy of a Point Charge Distribution
3.Magnetostatics**:** Magnetic Fields
4.TheBiotSavart Law**:** Steady Currents,The Magnetic Field of a Steady Current

Helmholtz coil and solenoid.

Note: Agoodnumberofnumericalexamplesareexpectedtobecoveredduringthe prescribed lectures

SEMESTER II

Name of the Programme	Duration	Semester	Subject
B.Sc.inPhysics	Sixsemesters	II	Physics
CourseCode	Title	Credits	
USPHP2	**Practical II**	2	

Leaning Outcome:

i) To understand and practice the skills while doing physics practical.
ii) To understand the use of apparatus and their use without fear.
iii) To correlate their physics theory concepts through practical.
iv) Understand the concepts of errors and their estimation.

A) Regular experiments:

1	Flywheel
2	To study Zener Diode as Regulator
3	To study load regulation of a Bridge Rectifier
4	LR Circuit: To determine the value of given inductance and phase angle
5	CR Circuit: To determine value of given capacitor and Phase angle
6	Frequency of AC Mains: To determine frequency of AC mains.
7	LCR series Resonance: To determine resonance frequency of LCR series circuit.
8	To study NAND and NOR gates as Universal Building Blocks
9	To study EX-OR Gate, half adder and full adder and verify their truth tables.
10	To verify De Morgan's Theorems
11	Thevenin's Theorem: To verify Thevenin's theorem for DC circuits
12	Norton's Theorem: To verify Norton's Theorem for DC circuits
13	LDR Characteristics: To study the dependence of LDR resistance on intensity of light.

B) List of Demo-experiments: (Min. four)

1.	Angular Momentum conservation (Rotating Platform)
2.	Light dependent switch
3.	Laser beam divergence, Intensity
4.	Use of Oscilloscope
5	Charging and discharging of a capacitor

6	Use of PC for graph plotting
7	Clipper and Clamper circuits.

C) Any one out of following isequivalentto two experiments from section A and/ or B

1. Students should collect the information of at least fourPhysics events and their outcome. Report that in journal.
2. Students should carry out mini-project up to the satisfaction of professor In-charge of practical
3. Study tour. Students participated in study tour must submit a study tour report.

Minimum 8experimentsfrom the listshouldbecompletedinthe first semester. Any four skill experimentsaretobereportedinjournalCertifiedjournalis musttobeeligibletoappearforthe semester endpractical.

Theschemeofexaminationfortherevisedcoursein Physicsat theFirstYearB.Sc.Semester endexaminationwillbeasfollows.

SemesterEnd Practical Examination:
Schemeof examination:

There will be no internal assessment for practical

A candidate will be allowed to appear for the semester end practical examination only if the candidate submits a Certified journal at the time of practical examination of the semester or a certificate from the Head of the Department /Institute to the effect that the candidate has completed the practical course of that semester of F.Y.B.Sc. Physics as per the minimum requirement. The duration of the practical examination will be two hours per experiment. There will be two experiments through which the candidate will be examined in practical. The questions on slips for the same should be framed in such a way that candidate will be able to complete the task and should be evaluated for its skill and understanding of physics

UNIVERSITY OF MUMBAI

Syllabus for sem V & VI
Program: B.Sc.
Course: Horticulture
Applied Component

(Credit Based Semester and Grading System with effect from the academic year 2013–2014)

T.Y.B.Sc. Applied Component Horticulture Syllabus
Credit Based and Grading System
To be implemented from the Academic year 2013-2014

SEMESTER V

Course Code	UNIT	TOPICS	Credits	L / Week
USACHO501	HORTICULTURE & GARDENING -I		2	4
	I	INTRODUCTION TO HORTICULTURE	2	1
	II	PROPAGATION PRACTICES		1
	III	MANURES, FERTILIZERS AND DISEASES		1
	IV	GARDEN OPERATIONS FOR HORTICULTURE		1
USACHO5P1	Practicals based on all courses in theory		2	4

SEMESTER VI

Course Code	UNIT	TOPICS	Credits	L / Week
USACHO601	HORTICULTURE & GARDENING - II		2	4
	I	LANDSCAPE GARDENING	2	1
	II	HORTICULTURE PRODUCE		1
	III	COMMERCIAL PRODUCTION		1
	IV	POST HARVEST TECHNOLOGY & ENTREPRENEURSHIP IN HORTICULTURE		1
USBO6P1	Practicals based on all the courses in theory		2	4

SEMESTER V
THEORY

Course Code	Title	Credits
USACHO501	**HORTICULTURE AND GARDENING –I**	**2 Credits (60 lectures)**
Unit 1 INTRODUCTION TO HORTICULTURE • Definition, importance and objectives of Horticulture, branches of Horticulture, Pomology, Olericulture, Landscape Gardening, Nurseries and development • .Allied branches – Apiculture – Bee box, honey bee life cycle and role of apiculture in pollination, Sericulture – Silkworm life cycle, different types with host plant, Social Forestry, Exhibition: aims and objectives. • Important Horticulture Research Institutes and Government Schemes for strategy plantations o Konkan Krishi Vidyapeeth – Dapoli o National Research Centre for grapes. o Regional Fruit Research centre Pune o Horticulture Training Centre (H.T.C.) – Talegaon. o Central Potato Tuber Research Institute (CPTRI) – Shimla • Horticulture Consultancy • Strategy plantation – Lakhibaug Yojana		**15 L**
Unit 2 PROPAGATION PRACTICES • **By Seeds** Advantages and disadvantages, method of seed propagation Production of seeds, Handling, Collection and Storage Sowing, Transplanting of seedlings and Hardening Seed treatment to control diseases Seedling diseases and their control. • **By specialized Vegetative structures** Bulbs, Tubers, Corms, Rhizomes, Root stock, runners, Offsets and suckers. • **Artificial methods of plant propagation** o Cutting– Root cutting, Stem cuttings, and leaf cuttings. Use of PGR's for rooting. o Layering – Definition, Types: Simple, compound, (Serpentine) Tip, Trench, Mound, Air Layering. o Grafting-Definition, advantages and disadvantages. Types: Splice, Whip/ Tongue, side, veneer, cleft, bark, epicotyls, approach, repair grafting – enarching, bridge and bracing. o Budding – Definition, advantages and disadvantages. Types: T-budding, shield, patch , ring budding. o Developing new varieties: Technique of Emasculation and bagging, role of polyploidy n production of seedless varieties in		**15 L**

plants. • **Application of Tissue Culture in relation to Horticulture.**	
UNIT-3 MAURES, FERTILIZERS AND DISEASES • **Manures**: Definition, importance, important manures FYM(compost), oil cakes, green manure, organic manures and vermicompost. • **Fertilizers**: Definition, Types – Straight, Compound and mixed. Nitrogenous (NH4)2 SO4, Urea, Ca (NO3)2, NH4Cl, Phosphatic (Superphosphate, Bone meal), Potassic (Muriate of potash, K2SO4 • **Biofertilizers**: Bacteria, Cyanobacteria, Mycorrhiza, Sea weeds. • **Diseases:** Horticultural plant diseases and their control. Fungal diseases- Rust, Smut, Powdery mildew.Bacterial – Citrus canker, Bacterial wilt. Viral – TMV, Leaf curl. • **Pests** – common pests on horticultural crops – Aphids, beetle, stem borer, caterpillars and rats. • **Friends of farmers:** Eartworm, snakes and predaceous fungi.	**15 L**
UNIT 4 GARDEN OPERATIONS FOR HORTICULTURE • Selection of site, Preparation of soils for garden • Mulching, top- dressing, blanching • Sowing, transplanting, tree transplanting, • Irrigation, - Overhead, Surface, Underground • Weeding and pruning, - Principles, Objectives and general technique. • Water management and conservation through horticulture, Dry land Horticulture. • **Organic Farming** Definition, Scope, Indian scenario, Future scope	**15 L**

Practicals

	Semester V USACHO5P1	**Cr**
	PRACTICAL	**2**
	Garden implements and their uses .	
	Different types of pots & Potting medium , Potting and repotting	
	Propagation practices by seed, Vegetative propagation , cutting ,layering , budding, grafting .	
	Identification of :	

	Fertilizers – Identification by physical and chemical methods –Urea , Ammonium sulphate , Potassium sulphate, super phosphate . Manures – Identification of plants as green manure – *Glyricidia , Crotolaria, Leucaena* . Biofertilizers – Identification (material as slides) VAM, *Nostoc ,Rhizobium* .	
	Soil pH, Use of soil testing Kit, electrical conductivity, pH of water, liquid fertilizers .	
	Method of preparing bonsai, Bottle Garden / Terrarium, Hanging baskets ,Dish garden .	
	Diseases and pests Fungal – Powdery mildew ,Rust ,Wilt, Blight, Smut, Bacterial – Canker ,Wilt Viral – Leaf curl ,yellow vein Mosaic Insects – Sucking, Biting, Chewing, Borers & Ants . Non Insects pests- Nematodes, Rodents.	
	Preparation of natural insecticides – Neem arka , Dashparni arka, Seetaphal powder, Tobacco extracts .	
	Project – Each student should individually present a project related to any topic related to Horticulture .It should be duly certified presented at practical examination.Project presentation college at level compulsory.	

SEMESTER VI
THEORY

Course Code	Title	Credits
USACHO601	**HORTICULTURE AND GARDENING –II**	**2 Credits (60 lectures)**
Unit 1 LANDSCAPE GARDENING • Principles of landscaping & garden design. • Indoor plants & Indoor gardens- Hydroponics, Terrarium/ Bottle garden,		**15 L**

Dish garden. • Important garden features- Paths & Avenues, Hedges & Edges, Lawn, Flowerbeds, Arches& Pergolas, Fencing, Water bodies, Rock garden & Plants suitable for different locations & climates. • Lawn- Purpose of preparation of lawn, Method of preparation of lawn & management of lawn & lawn plants. • Soil manipulation for plantation of desirable varieties. • Mughal, Buddist, Botanical garden, Vertical wall garden & Theme park • Important Gardens of India—Shalimar (Shrinagar), Vrindavan(Mysore), Veer Jijamata Udyan(Mumbai)	
Unit 2 - HORTICULTURE PRODUCE • **High –tech Horticultural production-** Green house technology- Meaning, types, layout & construction, irrigation systems. Care & attention. Hardening of plants. Space gardens. • **Floriculture** – Scope & importance, soil and climatic requirement and cultivation practices and Economics of green house production of Gerbera, Carnation, Roses, Orchids. Propagation techniques, packing and marketing, enhancing and delaying period of bloom by special methods. Floral decoration, Florist shop management.	**15 L**
UNIT-3 COMMERCIAL PRODUCTION • **Commercial production of the following** – in relation to propagation, post plantation care, harvesting, post harvest management & varieties. o Tubers- potato o Vegetables- Tomato o Fruits- Mango, Grapes & Coconut- products like coco peat/ Coir etc. o Spices/condiments- chilly o Medicinal plants- *Aloe vera, Stevia rebaurdina*(Madura) o Aromatic plant- *Citronella*, Patchouli	**15 L**
UNIT 4 POST HARVEST TECHNOLOGY & ENTREPRENEURSHIP IN HORTICULTURE • **Maturity**- Factors responsible for maturity & ripening methods used for delaying ripening. • **Harvest**- Time of harvest, harvesting and handling of harvested products • **Storage of fresh produce**- Types of storage of fruits & vegetables	**15 L**

• **Fruit & vegetables preservation technology**. • **Marketing**- grading, packing & transportation. Ways of increasing the market value and shelf life of horticultural produce. • **Horticultural business, management and Entrepreneurship development** Horticulture as a business definition and nature, organization, planning and operation of Horticulture farm business.	

Practicals

	Semester VI USACHO6P1	Cr
	PRACTICAL	**2**
	Preparation of garden layout	
	List of plants suitable for garden locations- 2-3 plants for each location .	
	Identification of important horticultural plants 1. Herbs – foliage any 2 and flowering any 2 2. Shrubs – foliage any 2 flowering any 2 3. Trees – foliage any 2 and flowering any 2 4. Climbers – any 2 5. Lianas – any 2 6. Epiphytes – any 2 7. Creepers –any 2 8. Trailers – any 2 9. Aquatic plants – any 3 (preferably various habitat) 10. Succulents – any 2 11. Weeds –any 10	
	Flower arrangements –Indian (Gajara , veni, garland , bouquet - Baskets , hand ,torch type , table floral arrangement), Japanese and western all type	
	Preparation of Jams, Jellies, Squashes/ Syrups, Pickle, sauces	
	Fruit & vegetable carving & Bio-jewelery	
	Green house plants- Information regarding to soil, temperature, irrigation, fertilizer requirements and propagation methods for *Anthurium, Gerbera,* Orchids, Tuberose, Carnation, Roses, *Capsicum*	

	Preparation of garden layout	
	List of plants suitable for garden locations- 2-3 plants for each location .	

Visits : To Garden /Parks / Nurseries/ Exhibition / Horticulture industries / Research Station and record of visits should be duly certified and presented at practical examination.

Modality of Assessment :

Theory Examination Pattern:

A) Internal Assessment - 40% **40 marks.**

Theory **40 marks**

Sr No	Evaluation type	Marks
1	One Assignments/Case study/Project	10
2	One class Test (multiple choice questions / objective)	20
3	Active participation in routine class instructional deliveries(case studies/ seminars//presentation)	05
4	Overall conduct as a responsible student, manners, skill in articulation, leadership qualities demonstrated through organizing co-curricular activities, etc.	05

B) External examination - 60 %

Semester End Theory Assessment - 60% **60 marks**

i. Duration - These examinations shall be of two hours duration.

ii. Theory question paper pattern :-

1. There shall be **five** questions each of **12** marks. On each unit there will be one question & fifth one will be based on all the four units .
2. All questions shall be compulsory with internal choice within the questions. Each question will be of **24** marks with options.
3. Questions may be sub divided into sub questions a, b, c & d only, each carrying **six** marks **OR** a, b, c, d,e & f only each carrying **four** marks and the allocation of marks depends on the weightage of the topic.

Practical Examination Pattern:

(A)Internal Examination:-

There will not be any internal examination/ evaluation for practicals.

(B) External (Semester end practical examination) :-

Sr.No.	Particulars	Marks
1.	Laboratory work	80
2.	Journal	10
3.	Viva	10

Assessment pattern for semester end / External practical examination of 80 marks shall be finalized in the workshop of the subject

Semester end practical examination in applied component shall be conducted by the concerned department of the Institute/ College at the end of each semester and the marks of the candidates are to be sent to the University in the prescribed format.

Semester V:

Practical examination will be held at the college / institution at the end of the semester.

Syllabus for TYBA

Course: Literary Criticism

Course Code: UAENG502 & UAENG602

Objectives of the Course:

1) To introduce the learners to important critical terms

2) To make them aware of the nature and function of literature and criticism

3) To impart the technique of close reading of literary texts

4) To enable them to understand various literary theories and critical approaches

5) To familiarize the learners with the tenets of practical criticism

Outcome of the Course:

After completion of the course, students are expected to be able to:

1) use some important critical terms

2) become aware the nature and function of literature and criticism

3) impart the technique of close reading of literary texts

4) understand the various literary theories and critical approaches

5) be familiar with the tenets of practical criticism

Semester V Paper V: Literary Criticism - I
Course Code: UAENG502 04 Credits Total Lectures: 60

UNIT I: Critical Terms (15 lectures)

(i) Simile, (ii) Imagery, (iii) Symbol, (iv) Paradox, (v) Ambiguity, (vi) Myth

UNIT II: Nature and Function of Literature (15 lectures)

i. Literature as Imitation (Plato-Aristotle debate)
ii. Literature and Imagination (the Romantic Idea of the Imagination)
iii. Literature as an expression of the writer's personality
iv. Function of Literature (aesthetic, moral and cognitive functions)

UNIT III: Nature and function of Literary Criticism (15 lectures)

i. Nature of Literary Criticism
ii. Functions of Literary Criticism (Explication, Analysis, Interpretation, Evaluation, Theorizing)
iii. A survey of the Role of a Critic

UNIT IV: Practical Criticism: Scansion (15 lectures)

Two short passages of poetry (6 to 10 lines each) will be set for scansion. Students should scan the poem, identify the base metre (iamb, trochee), variations (pyrrhic, spondee, anapaest, dactyl, cretic, amphibrach, etc.), rhyme scheme, stanza forms if any, and the metrical peculiarities such as end-stopped lines, run-on lines, elision, caesura and other basic concepts of versification.

(5 marks for scanning and identifying the base metre, 4 marks for identifying modulations and other metrical peculiarities and 1mark for rhyme scheme)

Semester End Examination Pattern 100 Marks 03 Hours

Semester End Examination for 100 marks will have 5 questions (with internal choice) of 20 marks each

Q.1 Short Notes (2 out of 4) – Unit I
Q.2 Essay type Question (1 out of 2) – Unit II
Q.3 Essay type Question (1 out of 2) – Unit III
Q.4 Short Notes: (2 out of 4) – Unit II and III
Q.5 Scansion of two extracts from poetry of about 6-10 lines each

Semester VI Paper V: Literary Criticism - II
Course Code: UAENG602 04 Credits Total Lectures: 60

UNIT I: Literary Movements (15 lectures)

i. Classicism, ii. Romanticism, iii. Realism, iv. Naturalism, v. Symbolism, vi. Aestheticism

UNIT II: Critical Approaches: (15 lectures)

i. New Criticism
ii. Structuralism
iii. Psychoanalytic Criticism
iv. Archetypal Criticism

UNIT III: Critical Approaches (15 lectures)

i. Marxist Criticism
ii. Feminist Criticism
iii. Postcolonial Criticism
iv. Eco Criticism

UNIT IV: Practical Criticism (15 lectures)

Critical Appreciation of an unseen poem: A short poem of about 20 lines will be set for appreciation. The title of the poem will be given. The unit will test the students' responsiveness to the poem and their linguistic ability in analysing the poem. Students are expected to mobilize the techniques of close reading and their understanding of literary devices like imagery, metaphor and other poetic devices while learning this unit.

Semester End Examination Pattern 100 Marks 3 Hours

Semester End Examination for 100 marks will have 5 questions (with internal choice) of 20 marks each
Q.1 Short Notes (2 out of 4) – Unit I
Q.2 Essay type Question (1 out of 2) – Unit II
Q.3 Essay type Question (1 out of 2) – Unit III
Q.4 Essay type Question (2 out of 4) – Unit II & III
Q.5 Critical Appreciation of an unseen poem

Syllabus for TYBA
Course: GRAMMAR AND THE ART OF WRITING
Course Codes: UAENG503A & UAENG603A

Objectives:

1. To develop amongst learners an insight into the process of word formation and transformation
2. To develop amongst them an insight into the sounds, stress patterns and intonations in the English language to improve their speaking skills
3. To develop among them an insight into the structure of the English language and to provide knowledge of the rules of grammar
4. To help them learn grammatical analysis and description and the skills of sentence transformation
5. To introduce the mechanics of writing for effective writing for various domains

Outcome of the Course:

After the completion of the course, students are expected to be able to:

1. Gain a basic understanding of phonetics, morphology and word transformation
2. Have improved speaking skills
3. Have developed adequate knowledge of the rules of grammar, grammatical analysis and sentence transformation
4. Write effectively in various domains.

SEMESTER- V: Paper VI – Grammar and the Art of Writing – I		
Course Code: UAENG503a	**3 Credits**	**Total Lectures: 45**

Phonetics, Morphology, Grammar and the Art of Writing

Unit I: Phonetics and Morphology **15 lectures**

A. Phonetics

- Phoneme and its distinctive features
- English Vowels and Consonants (Difference between BRP and Indian English)
- Diphthongs
- Consonant Clusters
- Transcription using phonetic script

B. Morphology

- Morph, Allomorph and Vowel Mutation
- Free and Bound Morphemes
- Root and stem
- Inflection and Derivation
- Morphological Analysis

Unit 2: Grammar: Words and Phrases **15 lectures**

- Open word classes: nouns, adjectives, verbs, adverbs
- Closed word classes: pronouns, determiners, operator verbs, prepositions, conjunctions, enumerators, interjections
- Noun Phrase, Genitive Phrase, Prepositional Phrase, Adjective Phrase and Adverb Phrase
- Verb Phrase

Unit 3: Art of Writing **15 lectures**

I. Discourse Analysis

- Tenor
- Mode
- Domain

Domain and language change – journalism, advertising and literature, scientific and technical writing

II. Mechanics of Writing

- Understanding paragraph divisions and topic sentences of paragraphs

III. Writing for Print Media

- Print – News Report

Evaluation Pattern:
1) Semester End Examination: 80 Marks - 2 1/2 Hours
2) Project: 20 Marks

1) Semester End Examination (80 marks):

Q.1	a. Phrase analysis	20 marks
Q.2	a. Verb Phrases	06 marks
	b. Morphological analysis	14 marks
Q.3	a. Stress Marking and Intonation	10 marks
	b. Transcription	10 marks
Q. 4.	Writing a news report on the basis of the facts given	20 marks

2) Project work (20 marks):

Students should be tested on –

1. Breaking a passage of about 250-300 words into appropriate paragraphs, picking up the topic statement of each paragraph 10 marks

AND

2. Identifying the register of a passage about 250-300 words 10 marks

SEMESTER- VI: Grammar and the Art of Writing – II		
Course Code: UAENG603A	**3 Credits**	**Total Lectures: 45**

Grammar and the Art of Writing

Unit I: Grammar **20 lectures**

I. Clauses:

- Clause elements and subject –verb concord
- Basic clause patterns
- Types of clauses : finite – non-finite (tensed – tenseless), independent – dependent (Main – Subordinated)
- Kinds of subordinate clause : Noun clause, Prepositional Clause , Relative clause , Adverb Clause, Comparative Clause
- Co-ordinated Clauses

Revised Syllabus for FYBA Communication Skills in

English Paper I and Paper II

To be implemented from 2021-22 (80:20 Marks Examination Pattern)

Preamble:

The English language is the dominant medium through which one can connect to the global community. It is, therefore, vital that all learners acquire adequate skills in this language. Communication Skills in English is a core course wherein the first year learners are guided to acquire the four skills of communication viz., Listening, Speaking, Reading and Writing.

The focus of the syllabus is on building confidence in the learners in applying these skills while using the English language both academically and socially. Keeping this in mind, the units will have a multi-pronged approach. The course is graded from basic to higher levels of learning so as to help learners gradually acquire the skills. The 80:20 pattern will also help in accomplishing this goal. The tutorial activities are designed to focus on oral skill development, while the lectures are aimed at honing their cognitive, analytical, linguistic and creative skills.

It is hoped that by the end of the academic year, the learners will have developed confidence in using the English language both for oral and written communication as well as develop interest in enhancing these skills later on.

Objectives:

1. To enhance English language proficiency of students by familiarizing them with the skills of Listening, Speaking, Reading and Writing (LSRW)
2. To introduce learners to different perspectives of looking at a text or passage
3. To equip learners in the functional aspects of English so that they use the acquired language skills correctly and confidently
4. To guide learners in the effective use of the digital medium of communication.

Outcomes:

1. The learners will learn to understand and interpret any text they are reading from different perspectives
2. The interest of learners in listening to and watching good quality audio and visual media will be aroused.
3. Learners will acquire proficiency in the skills of listening, speaking, reading and writing that will help them meet the challenges of the world.
4. The learners will develop good oral and written skills of communication in the English language.

Periods: 45 lectures + 15 Tutorials (3 lectures + 1 tutorial per week per batch) per semester

All passages, stories, articles, poems selected should help the learners develop different communication skills. Learning through example and practice with a theoretical base is the intention.

Semester I

Communication Skills in English Paper I

Course Content

Unit 1: Introduction to Communication Skills **No. of lectures: 08**

1. English as an international language and varieties of English
2. Significance and ways of effective communication in English
3. Listening for academic and professional development
4. Formal and informal communication in spoken English
5. Reading for different purposes
6. Features of effective writing skills
7. Study skills in English

This unit shall work as theoretical base for the following units that are practical in nature.

Unit 2: Developing Comprehension Skills in English **No. of lectures: 12**

A. Reading Skills

1. Scanning a text for information
2. Skimming a passage to look for main ideas, understanding text type
3. Guessing meaning of an expression (word/phrase/clause)
4. Building inference skills
5. Understanding language structure (such as subject verb agreement, voice, direct and reported speech)
6. Note making
7. Summarizing

Passages from fables, folk stories, short stories, non-fiction, history, business or environment, of around 250- 300 words, could be chosen in this unit.

B. Listening Skills

1. Listening for main ideas/Gist
2. Listening for detail
3. Listening for text organization features
4. Listening for tone, accent, style and register
5. Predicting content and guessing meaning
6. Making inferences from the audio-visual text
7. Listening for opinion/argument/counter-arguments etc.
8. Taking notes

A variety of relevant audio/visual texts as samples may be drawn from various sources. Listening skills in English should be developed through various activities along with the practice done while teaching in the class.

Unit 3: Speaking Skills in English **No of lectures: 15**

A. Public Speaking in English

1. Introduction
2. Characteristics of an effective speech
3. Analysis of model speeches
4. Drafting and presenting a speech in formal and informal gatherings

B. Conversation in English

1. Opening a conversation
2. Introducing oneself in various contexts
3. Introducing others formally and informally
4. Building a conversation
5. Leaving and closing a conversation
6. Conversation in group in various situations

C. Speaking at an Event

1. Anchoring/compering an event
2. Introducing guests/ speakers/dignitaries
3. Proposing a vote of thanks

A variety of relevant texts as samples may be drawn from print and non-print sources such as books, videos, audio files etc. Speaking skills in English should be developed through various activities along with the practice done while teaching in the class.

Unit 4: Formal Writing Skills **No. of lectures: 10**

A. Letters:

1. Job applications with bio data (solicited and unsolicited)
2. RTI applications
3. Applications for duplicate documents (I-cards / mark sheet, etc.)

B. Emails:

1. Job acceptance and joining
2. Resignation
3. Complaints
4. Requests for references
5. Request for sponsorship

Tutorial Activities:

1. Use of YouTube videos for use of grammar study and practice that may be taken from the list recommended or similar relevant videos.
2. Listening to audio clips/ books to enhance listening skills
3. Reading aloud from newspapers, magazines, stories, non-fiction followed by classroom discussion on these to enhance reading and speaking skills
4. Making short presentations on given topics
5. Official letter writing/ email writing exercises

Semester II

Communication Skills in English Paper II

Course Content

Unit 1: English Usage in Communication **No. of lectures: 08**

1. Distinction between American English and British English
2. Indianism and Indian English
3. Appropriacy in the Use of English
4. Non-verbal Communication
5. Elevator Pitch
6. Information and Communication Technology and Use of English
7. Modes and Types of Interview
8. Principles of Creative Writing

This unit shall work as theoretical base for the following units that are practical in nature.

Unit 2: Enhancing Reading Competencies **No. of lectures: 12**

A variety of passages of 200-250 words may be taken such as extracts from novels, short stories, plays, magazine, newspapers, reports, documents, academic texts. The passages should have complex text type, function and lexis. The learners may be encouraged to gather meaning contextually or by referring to offline and online sources such as dictionary, thesaurus, and encyclopedia.

1. Augmenting active vocabulary
2. Understanding relations between parts of a text
3. Transferring information (Verbal to Non-Verbal)
4. Understanding concepts and arguments,
5. Developing skills in analysis and interpretation
6. Rewriting a passage from a defined perspective
7. Reading critically (presenting a reasoned argument that evaluates and analyses what you have read)

Weightage of questions on texts -

a. On vocabulary, synonyms and antonyms, prefixes and suffixes, collocations, making sentences of their own from the idioms or difficult words in the extract (50%)
b. On writing their opinions, perspectives on the passages in longer, more descriptive ways (50%)

Unit 3: Advanced Oral Communication Skills **No. of lectures: 15**

A. Presentation skills: (Formal presentations and skits)

1. Planning and structuring
2. Opening and closing a presentation
3. Use of body language
4. Use of technology in making a presentation
5. Drafting a skit (Not to be tested in theory exam)
6. Reading of a skit
7. Presenting a skit

Students are advised to prepare their own presentation scripts. Teachers should help them in drafting, reading and presenting those scripts in the class.

B. Group Discussion:

1. Formal and informal discussion
2. Elements of group discussion
3. Using appropriate language: Initiating, seeking and giving opinions, suggesting, responding to a suggestion, agreeing, disagreeing, interrupting, requesting, clarifying, summing up
4. Types of discussion:

   Giving and sharing opinions of a given topic, making decisions, problem solving (case study)

C. Interview Skills

1. Interviewing others
    - Researching the interviewee (writer, social worker, entrepreneur, actor etc.)
    - Preparing questions
    - Conducting interview
2. Attending an Interview (Job/Entrance)
    - Researching the organization
    - Reviewing job-profile and your bio-data/CV
    - Preparing for standard questions
    - Responding to questions
    - Preparing your questions to ask to the interviewer/s
3. Analyzing Interviews

Students can be tested on forming actual interview frameworks including questions. Teachers must form the groups and conduct actual interviews involving full strength of students.

Unit 4: Advanced Writing Skills **No. of lectures: 10**

A. Report Writing:

1. News report
2. Activity/Event report

B. Creative Writing:

1. Personal Essay
2. Memoir
3. Short Speech on the given occasion/ event
4. Story writing

Tutorial Activities:

1. Dialogue-writing exercises
2. Writing skits and presenting them
3. Giving speeches
4. Group discussions
5. Mock Interviews

6. Development of stories, passages from hints given, in about 200-250 words
7. Report writing tasks
8. Statement of Purpose

Evaluation Pattern:

A. Internal Evaluation (20 Marks)

		Marks	**Remarks**
1	Performance in Tutorial activities	10	**Sem I** -- Learners may be asked to make presentations, hold conversation in class, which will be assessed **Sem II** -- Learners may be asked to participate in group discussions or mock interviews in class, which will be assessed
2	Participation in classes (lectures and tutorials)	05	Learners' response to teaching, timely submission of tasks will be assessed
3.	Overall attendance (lectures and tutorials)	05	Percentage of learners' attendance in class to be considered

B. Written Examination: (80 marks)

Semester I: 4 questions carrying 20 marks each

Q. No.	Question details	Marks
1	Short Notes (4 out of 6) from Unit 1	20
2	Unseen Passage (200-250 words) (Unit 2) a. On content, the use of tenses, articles, prepositions, direct-indirect speech and concord, voice, word meanings - (50%) b. On reading sub-skills (pointing out main ideas and supporting details, making inferences) (50%)	10 10

3	Any four to be attempted from given options (based on Unit 3) a. Preparing a speech on a given topic b. Questions on introducing self and others c. Develop a conversation on a given situation d. Introducing speakers/guests in a given event e. Drafting vote of thanks at a given event	20
4	a. Job application with bio-data b. RTI letter c. Email writing (1 out of 2)	08 07 05

Semester II: 4 questions carrying 20 marks each

Q. No.	Question details	Marks
1	Short Notes (4 out of 6) on theory from Unit 1	20
2	Unseen Passage (200-250 words) (Unit 2) a. On content, synonyms and antonyms, prefixes and suffixes, collocations, making sentences of their own from the idioms or difficult words in the passage (50%) b. On other sub-skills (such as writing their opinions, perspectives on the passages in longer, more descriptive ways (50%)	10 10
3	Any Two out of Three to be attempted (based on Unit 3) a. Preparing a draft of presentation on a given topic b. Preparing a draft for a mock interview based on the given instructions c. Preparing a draft of a group discussion on a given topic & instructions	20

4.	a. Report writing (1 out of 2) b. Personal essay/Memoir c. Story Writing/Speech	08 07 05

SEMESTER IV	
Course Code: UAENG401	**Course Title: :** Introduction to Drama Paper II Paper II
Course Outcomes: The students would be able : • develop interest and passion for drama (and theatre). • be familiarized with the salient elements and characteristics of drama. • be able to identify the different forms and types of drama. • be capable to identify the varioustrends and characteristics of significant dramatic • movements through the representative dramas. • be equipped with the tools and techniquesto critically appreciate drama. • imbibe human values reflected in the selected plays. • justify that drama is reflection / representation of life. • develop analytical skills and critical thinking through close reading of the represnttative • dramas.	
Course Code: UAENG402	**Course Title:** Introduction to Poetry - Paper III
Course Outcomes: The students would be able : **• Identify different genres and forms of poetry** **• Identify poetic technique, style and rhetorical devices used in poetry** **• Critically appreciate poems by separating various component parts and investigating the relationship of the parts to the whole** **• Demonstrate understanding of wide range of poems from different historical periods, written in a wide range of forms, styles and subject matter** **• Identify the major poets of world literature and define the importance of their works** **• Enhance their cultural sensitivity through reading of representative poems from diverse cultural context**	
Course Code: UAMASSCOM401	**Course Title:** Mass Communication

Course Outcomes:

The students would be able :

- 1. To introduce the students to some major aspects of communication and mass communication. 2. To develop among the students a broad perspective of the past and the present status of Mass Media in India.
- 3. To develop among the students a critical understanding of the Mass Media with regard to their presentation formats, roles and audiences in Indian context.
- 4. To develop among the students a critical understanding of some special roles of different Mass Media in India.
- 5. To help the students to assess the contribution of Indian mass media to national development. 6. To acquaint the students with some issues and laws related to mass media in India.
- 7. To introduce the students to various job and career opportunities in media industry.

Late Shri. Vishnu Waman Thakur Charitable Trust's
Bhaskar Waman Thakur College of Science,
Yashvant Keshav Patil College of Commerce,
Vidhya Dayanand Patil College of Arts,
(VIVA College)
(NAAC ACCREDITED-'B' Grade, CGPA 2.69)

All HODs/ coordinators are instructed to fill the following as per the academic year. Each subject's program outcome/ Course outcome has to be filled. The new syllabus of all subjects has it which can be used for reference. Please fill for the following academic years and mention it correctly, even if the same syllabus was followed for subsequent academic year you will have to fill it. Following is the example for your reference:

Academic year : 2022- 2023

Name of Department: English

Class: TYBA

Program Outcomes:

- To introduce students to English Literature of the 16th, 17th and 18thcenturies.
- To show them how background influences shaped the writer's thinking.
- To present them to the literary masters who dominated the scene
- To familiarize students with different writing styles that each age adopted.
- To introduce the learners to important critical terms
- To make them aware of the nature and function of literature and criticism
- To impart the technique of close reading of literary texts
- To enable them to understand various literary theories and critical approaches
- To familiarize the learners with the tenets of practical criticism
- To develop amongst learners an insight into the process of word formation and transformation
- To develop amongst them an insight into the sounds, stress patterns and intonations in the English language to improve their speaking skills
- To develop among them an insight into the structure of the English language and to provide knowledge of the rules of grammar
- To help them learn grammatical analysis and description and the skills of sentence transformation
- To introduce the mechanics of writing for effective writing for various domains

Program Specific Outcomes:

- To understand the distinctive features of English literature of the 16th, 17th and 18th centuries
- To comprehend how background influences shaped the writer's thinking.
- To recognize and appreciate the literary masters who dominated the scene.
- To grasp the different writing styles that each age adopted.
- use some important critical terms
- become aware the nature and function of literature and criticism
- impart the technique of close reading of literary texts
- understand the various literary theories and critical approaches
- be familiar with the tenets of practical criticism
- Gain a basic understanding of phonetics, morphology and word transformation

- Have improved speaking skills
- Have developed adequate knowledge of the rules of grammar, grammatical analysis and sentence transformation
- Write effectively in various domains.

SEMESTER - V

Course Code: - UAENG501	**Course Title:** Paper IV- 16th to 18 th Century English Literature –I

Course Outcomes:

- The students would be able :
- 1) To understand the distinctive features of English literature of the 16th, 17th and 18th centuries
- 2) To comprehend how background influences shaped the writer's thinking.
- 3) To recognize and appreciate the literary masters who dominated the scene.
  4) To grasp the different writing styles that each age adopted.
-

Course Code: UAENG502	**Course Title:** Paper V- Literary Criticism-I

Course outcomes:
The students would be able :

- 1) use some important critical terms
- 2) become aware the nature and function of literature and criticism
- 3) impart the technique of close reading of literary texts
- 4) understand the various literary theories and critical approaches
- 5) be familiar with the tenets of practical criticism

Course Code: UAENG503A	**Course Title:** Paper VI -- Grammar and the Art of Writing-I

Course outcomes:
The students would be able :

- 1. Gain a basic understanding of phonetics, morphology and word transformation
- 2. Have improved speaking skills
- 3. Have developed adequate knowledge of the rules of grammar, grammatical analysis and sentence transformation
- 4. Write effectively in various domains.

Yashvant Keshav Patil College of Commerce,
Vidhya Dayanand Patil College of Arts,
(VIVA College)
(NAAC ACCREDITED-'B' Grade, CGPA 2.69)

Academic year : 2022-2023

Name of Department: English

Class: FYBA

Program Outcomes:

1. To enhance English language proficiency of students by familiarizing them with the skills of Listening, Speaking, Reading and Writing (LSRW)
2. To introduce learners to different perspectives of looking at a text or passage
3. To equip learners in the functional aspects of English so that they use the acquired language skills correctly and confidently
4. To guide learners in the effective use of the digital medium of communication

• To create interest and develop passion amongst learners towards English Literature

• To familiarize learners with salient characteristics of literary genres like short story, prose, fiction and non-fiction

• To introduce learners to various elements of selected short stories written in English and translated into English

• To acquaint learners with different forms of prose and its importance through close reading of selected works

• To understand that literature is an expression of human values and universal truths

Program Specific Outcomes:

1. The learners will learn to understand and interpret any text they are reading from different perspectives
2. The interest of learners in listening to and watching good quality audio and visual media will be aroused.
3. Learners will acquire proficiency in the skills of listening, speaking, reading and writing that will help them meet the challenges of the world.
4. The learners will develop good oral and written skills of communication in the English language.

To develop passion for reading literary works amongst students

• To make learners at ease in the process of appreciation of literature

• To enable learners to understand and analyze selected stories, prose, fiction and non- fiction masterpieces

• To imbibe the underlying philosophy and values reflected in literature

• To develop sensitivity to nature and understand the relationship between human beings and environment

SEMESTER - I

Course Code: - :UACS101	**Course Title:** Communication Skills in English

Course Outcomes:
1. The learners will learn to understand and interpret any text they are reading from different perspectives
2. The interest of learners in listening to and watching good quality audio and visual media will be aroused.
3. Learners will acquire proficiency in the skills of listening, speaking, reading and writing that will help them meet the challenges of the world.
4. The learners will develop good oral and written skills of communication in the English language.

Course Code: : UAENG 101	**Course Title:** : Introduction to Prose and Fiction Paper – I and II

Course outcomes:
The students would be able :

To develop passion for reading literary works amongst students

• To make learners at ease in the process of appreciation of literature

• To enable learners to understand and analyze selected stories, prose, fiction and non- fiction masterpieces

• To imbibe the underlying philosophy and values reflected in literature

• To develop sensitivity to nature and understand the relationship between human beings and environment

UNIVERSITY OF MUMBAI

Syllabus for F.Y.B.Sc.
Programme: B.Sc.
Subject : Information Technology

Semester – I and II

(CBCS)

(Choice Based Credit System with effect from the academic year 2022-2023)

(To introduce with effect from the academic year 2022-2023)

Annexure I

UNIVERSITY OF MUMBAI

Syllabus for Approval

Sr. No.	Heading	Particulars
1	Title of the Programme	**F.Y.B.Sc. Sem. I & II (Information Technology)**
2	Eligibility for Admission	Ordinance no. O.5051 Circular no. UG/284 of 2007 dated 16th June 2007
3	Passing Marks	40%
4	Ordinances / Regulations (if any)	As applicable for all B.Sc. Courses
5	No. of Years / Semesters	Three years – Six Semesters
6	Level	~~P.G.~~ / U.G./ ~~Diploma~~ / ~~Certificate~~ **(Strike out which is not applicable)**
7	Pattern	~~Yearly~~ / Semester **(Strike out which is not applicable)**
8	Status	Revised / ~~New~~ /~~Amended~~ **(Strike out which is not applicable)**
9	To be implemented from Academic Year	From Academic Year **2022-2023**

Signature
Chairman Name Dr. R. Srivaramangai
BOS Chairman in Information Technology

Dr. Anuradha Majumdar
Dean, Science and Technology

Annexure I

PREAMBLE

The B.Sc. Information Technology programme was started in 2001 with an aim to make the students employable and impart industry oriented training. The main objectives of the course are:

- To think analytically, creatively and critically in developing robust, extensible and highly maintainable technological solutions to simple and complex problems.
- To apply their knowledge and skills to be employed and excel in IT professional careers and/or to continue their education in IT and/or related post graduate programmes.
- To be capable of managing complex IT projects with consideration of the human, financial and environmental factors.
- To work effectively as a part of a team to achieve a common stated goal.
- To adhere to the highest standards of ethics, including relevant industry and organizational codes of conduct.
- To communicate effectively with a range of audiences both technical and non-technical.
- To develop an aptitude to engage in continuing professional development.

The new syllabus is aimed to achieve the objectives. The syllabus spanning three years covers the industry relevant courses. The students will be ready for the jobs available in different fields like:

- Software Development (Programming)
- Website Development
- Mobile app development
- Internet of Things
- Software Testing
- Networking
- Database Administration
- System Administration
- Cyber Law Consultant
- GIS (Geographic Information Systems)
- IT Service Desk
- Security
- Technical communication skills
- Green IT

And many others

Annexure I

Name of Dean (Dean, Faculty of Science and Technology) : Dr. Anuradha Majumdar

Name of Associate Dean (Associate Dean, Faculty of Science and Technology) Prof. Shivram Garje

Name of Chairperson (BoS) : Dr. Mrs. R. Srivaramangai

Member(BoS) : Dr. Hiren Dand

Member(BoS) : Dr. Abhijeet Kale

Member(BoS) : Dr. Santosh Singh

Member(BoS) : Dr. Rajendra Patil

Member(BoS) : Dr. Mandar Bhave

Annexure I

Semester 1			
Course Code	**Course Type**	**Course Title**	**Credits**
USIT101	Core Subject	Programming Principles with C	2

Annexure I

SEMESTER I

Annexure I

B. Sc (Information Technology)		Semester – I	
Course Name: Programming Principles with C		**Course Code: USIT101**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2**	**75**
	Internal	**--**	**25**

Course Objectives: 1. To develop the logical ability of the student.
2. Basic concepts to be cleared using suitable examples.
3. Different approach towards the problem.
4. To handle the errors and find suitable solution.
5. Debugging the code.

Unit	Details	Lectures
I	Introduction: Algorithms, History of C, Structure of C Program. Program Characteristics, Compiler, Linker and preprocessor, pseudo code statements and flowchart symbols, Desirable program characteristics. Program structure. Compilation and Execution of a Program, C Character Set, identifiers and keywords, data types and sizes , constants and its types, variables, Character and character strings, typedef, typecasting	**12**
II	Type of operators: Arithmetic operators, relational and logical operators, Increment and Decrement operators, assignment operators, the conditional operator, Assignment operators and expression, Precedence and order of Evaluation Block Structure, Initialization, C Preprocessor Control Flow: Statements and Blocks, If-Else, Else-If, Switch, Loops- While and For Loops- Do-while, Break and Continue, Goto and Labels	**12**
III	Functions and Program Structure: Basics of functions. User defined and Library functions, Function parameters, Return values, Recursion External variables, Scope Rules, Standard Input and Output, Formatted Output-printf() and Formatted Input- scanf(), Line Input and Output, Error Handling- StdErr and Exit, Header Files	**12**
IV	Pointer and Arrays Pointer and Addresses, Pointer and Function Arguments, Pointer and Arrays, Address Arithmetic, Character Pointers and Functions, Pointer Arrays: Pointers and Functions, Multidimensional Array, Command-line Arguments, Pointers to Functions, Dynamic memory allocation	**12**
V	Structures: Basics of structures, Structures and Functions, Arrays of Structures, Pointers to Structures, Unions, Bit-fields, File management in C: Defining and Opening file, Closing a file, Input / Output operations on file, Error handling in C, Random access to files, Command line arguments.	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Programming Language	Brian W. Kernighan and Denis M. Ritchie.	PHI	2nd	1988
2.	Mastering C	K R Venugopal	Tata McGraw-Hill	6th	2007
3.	Programming with C	Byron Gottfried	Tata McGRAW-Hill	2nd	1996
4.	Let us C	Yashwant P. Kanetkar	BPB publication		
5.	Programming in ANSI C	E.Balagurusamy	Tata McGraw-Hill	7th	1982

Annexure I

Course Outcomes:

Learners will be able to,

1. **Learn the basic principles of programming.**
2. **Develop of logic using algorithm and flowchart.**
3. **Acquire the information about data types.**
4. **Understanding of input and output functions.**
5. **Enhance advanced concepts using program.**

B. Sc (Information Technology)		**Semester – I**	
Course Name: Programming Principles with C Practical		**Course Code: USIT1P1**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

1. **To develop the logic of the student.**
2. **Describe loops and decision making using programs.**
3. **Practical use of operators.**
4. **Illustration of the difficult concepts using programming examples.**
5. **Discussion of the relevant concepts using program.**

List of Practical:	
1.	a. Write an algorithm and draw flowchart for Area of circle. b. Write an algorithm and draw flowchart to print the given no. is even or odd. c. Write an algorithm and draw flowchart to print 1 to 10 numbers. d. Write an algorithm and draw flowchart for sum of 1 to 5 numbers. e. Write an algorithm and draw flowchart to compute the addition of digits of a given number.
2.	a. Write a program using while loop to reverse the digits of a number. b. Write a program to calculate the factorial of a given number. c. Write a program to find the roots of quadratic equation. d. Write a program to print the Fibonacci series.
3.	a. Write a program in C to check entered character vowel or consonant b. Write a program to C program to print day name of week using switch-case. c. Write a program to read three values from keyboard and print out the largest of them without using if statement.
4.	a. Write a program to print the pattern of asterisks as shown below : * * * * * * * * * * b. Write a program to print the pattern of asterisks as shown below : * * * * * * * * * * * * * * * **c. Write a program to print Floyd's Triangle.**
5.	a. Write a program to print area of square using function.

Annexure I

	b. Write a program using recursive function. **c. Write a program to square root, abs() value using function.** **d. Write a program using goto statement.**
6.	a. Write a program to print rollno and names of 10 students using array. b. Write a program to read a matrix of size m*n. **c. Write a program to sort the elements of array** in ascending or descending order.
7.	a. Write a program to extract the portion of a character string and print the extracted part. b. Write a program to find the given string is palindrome or not. **c. Write a program to using strlen(), strcmp() function.**
8.	a. Write a program to display the values using different data types and its address using pointer. b. Write a program to perform addition and subtraction using pointer.
9.	a. Write a program to copy the contents of the file from one file into other. b. Write a program to print the structure using • Title • Author • Subject • Book ID Print the details of two students.
10.	a. Create a mini project on "Bank management system" . The program should be menu driven.

Course Outcomes:

Learners will be able to,

1. **Develop applications.**
2. **Work with textual information, characters and strings.**
3. **Understand of a functional hierarchical code organization**
4. **Debug the program**
5. **Understand the differences between syntax errors, runtime errors, and logic errors.**

Annexure I

B. Sc (Information Technology)		Semester – I	
Course Name: Digital Logic and Applications		Course Code: USIT102	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	2	75
	Internal	--	25

Course Objectives:

1. **To introduce the basics of logic in digital electronics as an entry level course.**
2. **To interpret and assess number systems and the conversions of number systems**
3. **To analyze the boolean expressions and reduce the expression to the minimum.**
4. **To design simple logic circuits using tools such as Boolean Algebra and Karnaugh Mapping.**
5. **To understand the state of a memory cell and its types using flip-flops.**
6. **To create simple digital systems using counters, registers etc.**

Unit	Details	Lectures
I	**Digital Systems and Binary numbers** Introduction to Number systems, Positional Number systems, Conversions (converting between bases), Non positional number systems, Unsigned and Signed binary numbers, Binary Codes, Number representation and storage in computer system. **Logic gates and Logic Circuits** Basic and Universal Gates	**12**
II	**Boolean algebra and Gate level minimization** Introduction, Postulates of Boolean Algebra, Two Valued Boolean Algebra, Principle of Duality, Basic Theorems of Boolean Algebra, Boolean Functions and their Representation, Gate-Level Minimization (Simplification of Boolean Function), Quine-McCluskey Method, Review questions	**12**
III	**Combinational logic** Introduction, Analysis and Design Procedure for Combinational Logic Circuits, Types of Combinational Circuit, Review Questions	**12**
IV	**Sequential circuits** Introduction, Latch, Flip-Flops, Registers, Counters, Review Questions	**12**
V	**Applications** Bit Arithmetic and Logic unit, Carry lookahead generator, Binary Multiplication and Division algorithm, Booth's multiplication algorithm	**12**

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Digital Logic Design	Sonali Singh	BPB publications	1st	2015
2.	Fundamentals of Digital Electronics and Logic Design	Subir Kumar Sarkar, Asish Kumar De, Souvil Sarkar	Pan Stanford Publishing	1st	2014
3.	Digital Electronics Principles, Design and Applications	Anil K Maini	Wiley	1st	2007
4.	Fundamentals of Logic	Charles H Roth, Jr. , Larry L	Cengage	7th	2014

	Design	Kinney	Learning		
5.	Digital Principles and Applications	Donald P Leach Albert Malvino Goutam Saha	TMH	8th	2015

Course Outcomes:

Learners will be able to,

1. **Apply number conversion techniques in real digital systems**
2. **Solve boolean algebra expressions**
3. **Derive and design logic circuits by applying minimization in SOP and POS forms**
4. **Design and develop Combinational and Sequential circuits**
5. **Understand and develop digital applications**

B. Sc (Information Technology)		**Semester – I**	
Course Name: Digital Logic and Applications Practical		**Course Code: USIT1P2**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

1. **To apply and test the gates learnt using various IC's .**
2. **To evaluate the Boolean expression to reduce and minimize the gates used**

1.	**Study of basic gates and Universal gates**
a.	To verify the truth tables of OR, AND, NOR, NAND, EX-OR, EX-NOR gates
b.	To study IC 7400, 7402, 7404, 7408, 7432, 7486, 74266
c.	To implement and verify NAND and NOR as Universal gates
2.	**Study of Boolean expressions**
a.	To verify De Morgan's laws
b.	Implement the given expression using a minimum number of gates.
c.	Implement the given expression using a minimum number of ICs.
3.	**Design of Combinational Circuits using K-maps**
a.	Design and implement combinational circuits for the given problem/problems using minimization techniques of K-maps.
4.	**Design and implement code converters**
a.	Design the circuit and implement Binary to gray code converter
b.	Design the circuit and implement Gray to Binary code converter
c.	Design the circuit and implement Binary to BCD code converter
d.	Design the circuit and implement Binary to XS-3 code converter
5.	**Implement Adder and Subtractor circuits**
a.	Design the circuit and implement Half Adder and Full Adder
b.	Design the circuit and implement BCD Adder, XS-3 Adder , Binary Subtractor

Annexure I

6.	**Design and implement Arithmetic circuits**
a.	Design and implement 2-by-2 bit multiplier
7.	**Implement Encoders and Decoders**
a.	Design and implement 8: 3 encoder
b.	Design and implement 3:8 decoder
8.	**Multiplexers and Demultiplexers**
a.	Design and Implement 4:1 multiplexer
b.	Design and Implement 1:4 demultiplexer
c.	Study IC 74151 8: 1 multiplexer and implement the expression
d.	Study IC 74138 3: 8 decoder and implement the expression
9.	**Study of Flipflops and Counters**
a.	Study of IC's 7473, 7474, and 7476
b.	Design a 3-bit ripple/ synchronous counter using IC 7473 and required gates
10.	**Design of Shift Registers**
a.	Design of Shift registers using IC 7474
b.	Implementation of digits using seven segment displays

Course Outcomes:

Learners will be able to,

1. **Construct basic and universal logic circuits.**
2. **Verify the functionalities of various IC's.**
3. **Design circuits using K-maps minimization technique**
4. **Design and test Encoders, Decoders, Multiplexers and Demultiplexers**
5. **Design and develop logic for Registers, Counters and its applications.**

Annexure I

B. Sc (Information Technology)		Semester – I	
Course Name: Fundamentals of Database Management Systems		Course Code: USIT103	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	2	75
	Internal	--	25

Course Objectives:

The objective of the course is to present an introduction to fundamentals of database management systems, with an emphasis on how to organize, maintain and retrieve - efficiently, and effectively - information from a DBMS.

Unit	Details	Lectures
I	Database system- concept and Architecture, Relational model and Relational database constraints. Relational Algebra.	12
II	Conceptual modelling and database design: Data modelling using the Entity Relationship model (ER).The enhanced entity relationship model. Relational database design by ER and EER model. Practical database design methodology and use of UML diagrams.	12
III	Database Design theory and normalization: Basics of functional dependencies and normalization for relational databases. Relational database design and further dependencies.	12
IV	Introduction to SQL , Complex queries, triggers, views, joining database tables and schema modification. Query Processing and optimization. File structure, hashing and indexing	12
V	Transaction management and concurrency control and recovery: Introduction to transaction processing concepts and theory. Concurrency control technique. Database recovery technique.	12

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	**Fundamentals of Database systems.**	**Ramez Elmasri, Shamkant B Navathe**	Pearson.	**6th Edition**	
2.	**Database Systems: Design implementation and management.**	**Carlos Coronel, Steven Morris, Peter Rob**	Cengage Learning	**9th Edition**	2010

Course Outcomes:

Learners will be able to

Annexure I

1. Define and describe the fundamental elements of relational database management system.
2. To relate the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
3. Design ER-models to represent simple database application scenarios.
4. Transform the ER-model to relational tables, populate relational database and formulate SQL queries on data.
5. Improve the database design by normalization.
6. Understand basic database storage structures and access techniques: file and page organizations, indexing methods and hashing.

B. Sc (Information Technology)		**Semester – I**	
Course Name: Fundamentals of Database Management Systems Practical		**Course Code: USIT1P3**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

- **To introduce ER data model, database design and normalization.**
- **To Learn SQL basics for data definition and data manipulation.**

1.	Draw E-R diagram and convert entities and relationships to relation table for a given scenario
a.	Bank
b.	College
2.	**Write relational algebra queries for a given set of relations**
3.	**Defining data**
a.	Using CREATE statement
b.	Using ALTER statement
c.	Using DROP statement
d.	Using TRUNCATE statement
e.	Using RENAME statement
4.	**Manipulating data**
a.	Using INSERT statement
b.	Using UPDATE statement
c.	Using DELETE statement
d.	Using SELECT statement
5.	**Creating and managing the tables**
a.	Creating table with contraints: NOTNULL, UNIQUE, PRIMARY KEY ,FOREIGN KEY
6.	**Restricting and sorting data**
a.	Using DISTINCT,IN, AS, SORT,LIKE,ISNULL, OR
b.	Using Group By, Having clause, Order By clause
7.	**Aggregate and Mathematical functions:**
a.	AVG,MIN,MAX,SUM,COUNT

Annexure I

b.	ABS,SQRT,ROUND,TRUNCATE,SIGN,POWER,MOD,FLOOR,CEIL
8.	**Views and Joins: For a given set of relation tables perform the following**
a.	Creating view
b.	Dropping view
c.	Selecting from a view
8.	**Database trigger**
a.	Using CREATE OR REPLACE TRIGGER
9.	**Index**
a.	Create index
b.	Drop index

Course Outcomes:

Learners will be able to:

1. **Design database schema for a given application and apply normalization.**
2. **Acquire skills in using SQL Commands for data Definition and data manipulation.**

Annexure I

B. Sc (Information Technology)		Semester – I	
Course Name: Computational Logic and Discrete Structures		**Course Code: USIT104**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2**	**75**
	Internal	**--**	**25**

Course Objectives:

- **Course will provide students with an overview of discrete mathematics.**
- **Students will learn about topics such as logic and proofs, sets and functions, recursion, graph theory, tress and other important discrete math concepts.**

Unit	Details	Lectures
I	**Set Theory** Introduction, Sets and Elements, Subsets, Venn Diagrams, Set Operations, Algebra of Sets, Duality, Finite Sets, Counting Principle, Classes of Sets, Power Sets, Partitions, Mathematical Induction **Relations** Introduction, Product Sets, Relations, Pictorial Representatives of Relations, Composition of Relations, Types of Relations, Closure Properties, Equivalence Relations, Partial Ordering Relations	**12**
II	**Functions and Algorithms** Introduction, Functions, One-to-One, Onto, and Invertible Functions, Mathematical Functions, Exponential and Logarithmic Functions, Sequences, Indexed Classes of Sets, Recursively Defined Functions, Cardinality, Algorithms and Functions, Complexity of Algorithms **Probability** Introduction, Sample Space and Events, Finite Probability Spaces, Conditional Probability, Independent Events, Independent Repeated Trials, Binomial Distribution, Random Variables, Chebyshev's Inequality, Law of Large Numbers	**12**
III	**Techniques of Counting** Introduction, Basic Counting Principles, Mathematical Functions, Permutations, Combinations, the Pigeonhole Principle, The Inclusion–Exclusion Principle, Tree Diagrams **Advanced Counting Techniques, Recursion** Introduction, Combinations with Repetitions, Ordered and Unordered Partitions, Inclusion–Exclusion Principle Revisited, Pigeonhole Principle Revisited, Recurrence Relations, Linear Recurrence Relations with Constant Coefficients, Solving Second-Order Homogeneous Linear Recurrence, Relations, Solving General Homogeneous Linear Recurrence Relations	**12**
IV	**Graph Theory** Introduction, Data Structures,,Graphs and Multigraphs, Subgraphs, Isomorphic and Homeomorphic Graphs, Paths, Connectivity, Traversable and Eulerian Graphs, Bridges of Königsberg, Labeled andWeighted Graphs, Complete, Regular, and Bipartite	**12**

	Graphs, Tree Graphs, Planar Graphs, Graph Colorings, Representing Graphs in Computer Memory, Graph Algorithms, Traveling-Salesman Problem, Solved Problems **Directed Graphs** Introduction, Directed Graphs, Basic Definitions, Rooted Trees, Sequential Representation of Directed Graphs, Warshall's Algorithm, Shortest Paths, Linked Representation of Directed Graphs, Graph Algorithms: Depth-First and Breadth-First Searches, Directed Cycle-Free Graphs, Topological Sort, Pruning Algorithm for Shortest Path	
V	**Binary Trees** Introduction, Binary Trees,, Complete and Extended Binary Trees, Representing Binary Trees in Memory, Traversing Binary Trees, Binary Search Trees, Priority Queues, Heaps, Path Lengths, Huffman's Algorithm, General (Ordered Rooted) Trees Revisited **Ordered Sets and Lattices** Introduction, Ordered Sets, Hasse Diagrams of Partially Ordered Sets, Consistent Enumeration, Supremum and Infimum, Isomorphic (Similar) Ordered Sets, Well-Ordered Sets, Lattices 346 Bounded Lattices, Distributive Lattices, Complements, Complemented Lattices	**12**

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Discrete Mathematics, Schaum's Outlines Series	Seymour Lipschutz, Marc Lipson	Tata MCGraw Hill	3rd	2007
2.	Discrete Mathematics with Applications	Sussana S. Epp	Cengage Learning	5th	2018
3.	Discrete Mathematics and its Applications	Kenneth H. Rosen	Tata MCGraw Hill	8th	2019
4.	Discrete mathematical structures	B Kolman RC Busby, S Ross	PHI		
5.	Discrete structures	Liu	Tata MCGraw Hill		

Course Outcomes:

Learners will be able to:

1. **Use logical notation**
2. **Perform logical proofs**
3. **Apply recursive functions and solve recurrence relations**
4. **Use graphs and trees**
5. **Apply basic and advanced principles of counting**
6. **Define sets and Relations**
7. **Calculate discrete probabilities.**

Annexure I

B. Sc (Information Technology)		Semester – I	
Course Name: Computational Logic and Discrete Structures Practical		**Course Code: USIT1P4**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

Course will make students understand different commands and functions of SCILAB. It will enable student to use these tools to compute solutions of various discrete mathematical structures.

1.	**Set Theory**
a.	Inclusion Exclusion principle.
b.	Power Sets
c.	Mathematical Induction
2.	**Functions and Algorithms**
a.	Recursively defined functions
b.	Cardinality
c.	Polynomial evaluation
d.	Greatest Common Divisor
3.	**Probability Theory 1**
a.	Sample space and events
b.	Finite probability spaces
c.	Equiprobable spaces
d.	Addition Principle
4.	**Probability Theory 2**
a.	Conditional Probability
b.	Multiplication theorem for conditional probability
c.	Independent events
d.	Repeated trials with two outcomes
5.	**Counting 1**
a.	Sum rule principle
b.	Product rule principle
c.	Factorial
d.	Binomial coefficients
6.	**Counting 2**
a.	Permutations
b.	Permutations with repetitions

c.	Combinations
d.	Combinations with repetitions
7.	**Counting 3**
a.	Ordered partitions
b.	Unordered partitions
8.	**Graph Theory**
a.	Paths and connectivity
b.	Minimum spanning tree
c.	Isomorphism
9.	**Directed Graphs**
a.	Adjacency matrix
b.	Path matrix
10	**Recurrence relations**
a.	Linear homogeneous recurrence relations with constant coefficients
b.	Solving linear homogeneous recurrence relations with constant coefficients
c.	Solving general homogeneous linear recurrence relations

Course Outcomes:

Learners will be able to:

1. **To find computational solution to various discrete mathematical structures.**

Annexure I

B. Sc (Information Technology)		Semester – I	
Course Name: Technical Communication Skills		**Course Code: USIT105**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2**	**75**
	Internal	**--**	**25**

Course Objectives:

- **To recognize the importance of various types of communication in technical set up.**
- **To understand the dynamics in different forms of formal communication.**
- **To learn about active listening and the art of giving presentations and interviews.**
- **To learn the art of business writing and ethics in business communication across functional areas.**
- **To evaluate, analyze and interpret technical data.**

Unit	Details	Lectures
I	**Fundamentals of Technical Communication** Introduction, The process of communication, Language as tool of communication, levels of communication, The flow of communication, Communication Networks, The importance of technical communication **Barriers to communication** Definition of Noise, classification of Barriers **Non-verbal Communication** Introduction, Definition, significance of nonverbal, forms of non -verbal communication, types of non-verbal communication	**12**
II	**The Seven Cs of Effective Communication**: Completeness, Conciseness, Consideration, Concreteness, Clarity, Courtesy, Correctness **Conversations** Introduction, Importance of Business conversion, Essential of Business conversion, Conversation Management **Meeting and conferences** Introduction, Purpose of Meeting, planning a meeting, Meeting Process, Leading effective meeting, Evaluating meeting, planning conference, teleconferencing **Group Discussion and team presentation** Introduction, Benefits of GD, Workplace GD guidelines, Functional and non functional roles in GD, Improving group performance, Assessment of group discussion ,Team presentation **Email communication** Introduction, Advantages of email, problems in email communication, Email etiquettes, Techniques of writing Effective Email	**12**
III	**Active Listening** Introduction, Type of listening, Traits of good listener, Active vs Passive listening, Implication of effective listening **Effective presentation Strategies** Introduction, Defining purpose, Analyzing audience and Locale, Organizing contents, preparing outline, Visual Aids, Understanding Nuances of delivery, Kinesics **Interview** Introduction, objectives, types of interview, job interviews	**12**
IV	**Business writing** Introduction, Importance of written Business, Five main strategies of writing business messages	**12**

	Business correspondence Business letter writing, common component of Business letter, Strategies for writing body of a letter, Types of Business letter, writing memos **Business reports and proposal** What is report? Steps in writing routine Business report, parts of report, corporate reports and Business proposals **Careers and Resume** Introduction to career building, resume format, traditional, electronic and video resumes, sending resume, follow up letters and online recruitment process	
V	**Communication across Functional areas** Financial communication, MIS **Ethics in Business Communication** Ethical communication, Values, ethics and communication, ethical dilemmas facing manager, strategic approaches to corporate ethics **Creating and Using Visual Aids** Object, Models, Handouts, Charts and Graphs, Text Visuals , Formatting Computer generated charts, graphs and visuals	**12**

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Technical communication : principles and practices	Meenakshi Raman & Sangeeta Sharma	Oxford Higher Education		
2.	Business Communication	Meenakshi Raman & Prakash Singh	Oxford- Higher Education	2nd edition	2006
3.	Effective Business Communication	Herta Murphy, Herbert Hildebrandt, Jane Thomas	Tata McGraw Hill	7th edition	2008
4.	Professional Communication	Aruna Koneru	McGraw Hill		2008
5.	Business and Professional Communication Plans, Processes and Performance	James R. DiSanza Nancy J..Legge	Pearson Education	4th Edition	
6.	Storytelling with data-a data visualization guide for business professionals	Cole Nussbaumer knaflic	Wiley		

Course Outcome:

Learners will be able to,

1. **Analyze, synthesize and utilize the process and strategies from delivery to solving communication problem.**
2. **Learn the communication methodologies at workplace and learning about importance of team collaboration.**
3. **Learn about different technical communication such as presentations and interviews.**
4. **Understand and apply the art of written communication in writing reports, proposals.**
5. **Ground rules of ethical communication and MIS.**
6. **Understand the functions of graphs, maps, charts.**

Annexure I

B. Sc (Information Technology)		Semester – I	
Course Name: Technical Communication Skills Practical		**Course Code: USIT1P5**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

- **To express thoughts feelings and ideas of learners by using features of MS Word.**
- **To articulate formal and informal reports.**
- **To analyze and interpret data and learn visualization of data.**
- **To learn effective tools of presentation**.

1.	Use of word processing tools for communication.
a.	Use of various tools like spell checker, header, footer etc.
b.	Make formal and informal letters, creating resume.
c.	Designing brochures and flyers using templates in word.
2.	Writing reports, minutes of meeting, action plan.
3.	Use of spreadsheet for data interpretation and data analysis.
4.	Basic use of what if analysis using excel.
5.	Visual Representation of data using excel – pie chart ,line chart, bar chart etc.
6.	Summarization of data using of pivot tables and chart in excel.
7.	Use of presentation tools like PowerPoint for communication and presentation skills.
8.a.	Basic communication covering the following topics:- Meeting people, Asking Questions and Design of questionnaire.
8.b.	Using netiquettes in online mode of communication using Zoom / Google Meet / MS-Teams etc.
9.	Use of Mail etiquette for writing effective mails.
10.a.	Use of Mail merge and its features.
10.b.	Creating profile using Linkedln.

Course Outcome:

Learners will be able to:

1. **Use different forms of digital mediums for effective communication.**
2. **Create technical documents and format existing documents for effective communication.**
3. **Learn to use graphical tools for better visualization.**
4. **Create business presentation effectively.**
5. **Visualize the data from pictorial representations**.

Annexure I

SEMESTER II

Annexure I

B. Sc (Information Technology)		Semester – I	
Course Name: Object Oriented Programming with C++		**Course Code: USIT201**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2**	**75**
	Internal	**--**	**25**

Course Objectives:

Understand object oriented programming and advanced C++ concepts

- **Be able to explain the difference between object oriented programming and procedural programming.**
- **Be able to program using more advanced C++ features such as composition of objects, operator overloads, dynamic memory allocation, inheritance and polymorphism, file I/O, exception handling, etc.**
- **Be able to build C++ classes using appropriate encapsulation and design principles**
- **Be able to apply object oriented or non-object oriented techniques to solve**
- **bigger computing problems**

Unit	Details	Lectures
I	**INTRODUCTION OF OBJECT-ORIENTED DESIGN** : Introduction, Objects, Class and Instance, Polymorphism, Inheritance, Object-Oriented Analysis , Finding the Objects ,Conceptual Modeling Requirements Model , Analysis Model, The Design Model, The Implementation Model , Test Model, Object-Oriented Analysis and Design, The Evolution of Object Model, Object-Oriented Programming, Object-Oriented Design, Object-Oriented Analysis, Elements of Object Model ,The Role of OOAD in the Software Life Cycle, OOAD Methodologies, Grady Booch Approach, **STARTING WITH C++:** C++ Overview, C++ Character Set, C++ Tokens, Variables, Counting Tokens, Data Types, Qualifiers, Range of Data Types, Your First C++ Program, Structure of a C++ Program, Styles of, Writing C++ Programs, Programming Examples **FEATURES OF C++:** Introduction, Operators and Expressions, Declaring Constants, Type Conversion, Decision Making: An Introduction, Unconditional Branching Using Goto , Introduction to Looping **OPERATORS AND REFERENCES IN C++**: Introduction, Scope Resolution Operator, Reference Variables, The Bool Data Type, The Operator New and Delete, Malloc Vs. New ,Pointer Member Operators	**12**
II	**FUNCTION IN C++**: Introduction ,Function Declaration/Prototyping ,,The Main Function in C++,Recursion ,Call by Reference ,Call by Reference Vs Call by Address , Return by Reference ,,Inline Function ,Function Overloading ,Function with Default Arguments **CLASS AND OBJECTS IN C++** : Working with Class, Structure in C++ ,Accessing Private Data Passing and Returning Object ,Array of Object ,Friend Function ,Static Class Members ,Constant Member Function **WORKING WITH CONSTRUCTOR AND DESTRUCTOR:** Introduction, Constructor with Parameters, Implicit and Explicit Call to Constructor, Copy Constructor, Dynamic Initialization of Objects, Dynamic Constructor, Destructor **WORKING WITH OPERATOR OVERLOADING:** Introduction, Operator Overloading with Binary Operator Overloading Assignment (=) Operator, Overloading	**12**

	Unary Operators, Overloading Using Friend Function, Rules of Operator Overloading, Type Conversion	
III	**WORKING WITH INHERITANCE IN C++:** Introduction, Types of Inheritance, Public, Private and Protected Inheritance, Multiple Inheritance, Hierarchical Inheritance, Virtual Base Class, Constructor and Destructor in Inheritance, Containership **POINTERS TO OBJECTS AND VIRTUAL FUNCTIONS:** Pointer to Objects, The This Pointer, What is Binding in C++? , Virtual Functions ,Working of a Virtual Function ,Rules for Virtual Function ,Pure Virtual Function and Abstract Class ,Object Slicing ,Some Facts about Virtual Function ,Virtual Destructor **INPUT-OUTPUT AND MANIPULATORS IN C++:** Introduction, C++ Stream Classes, Unformatted Input/Output, Formatted Input /Output Operations, Manipulators	**12**
IV	**FILE HANDLING IN C++:** Introduction, File Streams, Opening and Closing a File, File Opening Modes Checking End of File, Random Access in File, Command Line Arguments, Working with Binary Mode Error Handling **TEMPLATE PROGRAMMING:** Introduction , Function Template , Class Template **EXCEPTION HANDLING IN C++ :** Introduction , Basics of Exception Handling , Exception Handling Mechanism , Programming Examples ,Exception Handling with Class Catching all Exceptions , Specifying Exception for a Function	**12**
V	**INTRODUCTION TO THE STANDARD TEMPLATE LIBRARY** : Introduction , Components of STL , Containers , Algorithms , Iterators ,Application of Container Classes Function Objects **MANIPULATING STRINGS** :Introduction , Creating (string) Objects , Manipulating String Objects , Relational Operations, String Characteristics , Accessing Characters in Strings , Comparing and Swapping **NEW FEATURES OF ANSI C++ STANDARD** : Introduction ,New Data Types , New Operators , Class Implementation , Namespace Scope , Operator Keywords , New Keywords , New Headers	**12**

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Object-oriented Programming C++ Simplified	Hari Mohan Pandey	University Science Press	1st Edition	2017
2.	Object Oriented Programming in C++	E Balagurusamy	Tata McGraw-Hill	5th Edition	2011
3.	Object-Oriented Programming in C++	Robert Lafore	Sams	4th Edition	2002
4.	Programming with ANSI C++	Bhushan Trivedi	Oxford University Press	2nd Edition	2012
5.	Demystified Object-Oriented Programming with C++	Dorothy R. Kirk	Packt Publishing Lt	1st Edition	2021
6.	C++ Programming: An Object-Oriented Approach	Behrouz A. Forouzan , Richard F. Gilberg	McGraw-Hill Education	1st edition	2020
7.	C++ How to Program	Paul Deitel, Harvey Deitel	Pearson Education	10th Edition	2017

Annexure I

Course Outcomes:

Learners will be able to,

1. **Understand the concept of OOPs, feature of C++ language.**
2. **Understand and apply various types of Datatypes, Operators, Conversions while designing the program.**
3. **Understand and apply the concepts of Classes &Objects, friend function, constructors & destructors in program design.**
4. **Design & implement various forms of inheritance, String class, calling base class constructors.**
5. **Apply & Analyze operator overloading, runtime polymorphism, Generic Programming.**
6. **Analyze and explore various Stream classes, I/O operations and exception handling.**

B. Sc (Information Technology)		**Semester – II**	
Course Name: Object Oriented Programming with C++ Practical		**Course Code: USIT2P1**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

- **The student should be able to explain the important characteristics of the C++ programming language.**
- **The learner must be able to combine components of the C++ programming language to develop structured program.**
- **The student must demonstrate the skills essential to compile, debug, and test C++ programs correctly.**

1.	
a.	Write a C++ program to create a simple calculator.
b.	Write a C++ program to convert seconds into hours, minutes and seconds.
c.	Write a C++ program to find the volume of a square, cone, and rectangle.
2.	
a.	Write a C++ program to find the greatest of three numbers.
b.	Write a C++ program to find the sum of even and odd n natural numbers
c.	Write a C++ program to generate all the prime numbers between 1 and n, where n is a value supplied by the user.
3.	
a.	Write a C++ program using classes and object Student to print name of the student, roll_no. Display the same.
b.	Write a C++ program for Structure bank employee to print name of the employee, account_no. & balance. Display the same also display the balance after withdraw and deposit
c.	Write a C++ Program to design a class having static member function named showcount() which has the property of displaying the number of objects created of the class.

d.	Write a Program to find Maximum out of Two Numbers using friend function. Note: Here one number is a member of one class and the other number is member of some other class.
e.	Write a C++ Program using copy constructor to copy data of an object to another object.
f.	Write a C++ Program to allocate memory dynamically for an object of a given class using class's constructor.
4.	
a.	Write a C++ program to design a class representing complex numbers and having the functionality of performing addition & multiplication of two complex numbers using operator overloading.
b.	Write a C++ program to overload new/delete operators in a class.
c.	Write a C++ program to access members of a STUDENT class using pointer to object members
	Write a C++ Program to generate Fibonacci Series by using Constructor to initialize the Data Members.
d.	Write a C++ Program to generate Fibonacci Series by using Constructor to initialize the Data Members.
e.	Write a C++ Program that illustrate single inheritance.
f.	Write a C++ Program that illustrate multipe inheritance.
g.	Write a C++ Program that illustrate multi level inheritance.
h.	Write a C++ Program that illustrate Hierarchical inheritance.
i.	Write a C++ Program illustrating how the constructors are implemented and the order in which they are called when the classes are inherited. Use three classes named alpha, beta, gamma such that alpha,beta are base class and gamma is derived class inheriting alpha & beta
5.	
a.	Write a C++ Program to design a stuent class representing student roll no. and a test class (derived class of student) representing the scores of the student in various subjects and sports class representing the score in sports. The sports and test class should be inherited by a result class having the functionality to add the scores and display the final result for a student.
6.	
a.	Write a C++ program to maintain the records of person with details (Name and Age) and find the eldest among them. The program must use this pointer to return the result.
7.	
a.	Write a C++ program illustrating the use of virtual functions in class.
b.	Write a C++ program to design a class representing the information regarding digital library (books, tape: book & tape should be separate classes having the base class as media). The class should have the functionality for adding new item, issuing, deposit etc. the program should use the runtime polymorphism.
8.	
a.	Write a C++ program to show conversion from string to int and vice-versa.
b.	Write a C++ program implementing basic operation of class ios i.e. setf, unsetf, precision etc.
c.	Write a C++ program to implement I/O operations on characters. I/O operations includes inputting a string, Calculating length of the string, Storing the String in a file, fetching the stored characters from it, etc.
d.	Write a C++ program to copy the contents of one file to another.

e.	Write a C++ program to perform read/write binary I/O operation on a file (i.e. write the object of a structure/class to file).
9.	
a.	Write a C++ program to implement the exception handling with multiple catch statements.
b.	Write a C++ program to implement the exception handling with rethrowing in Exception.
10.	
a.	Write a C++ Program to create Simple calculator using Class template.
b.	Write a C++ Program to get maximum of two number using Class template.

Course Outcomes:

Leaners will able to,

- **Utilize C++ characteristics in software design and development.**
- **Explain object-oriented techniques and explain how C++ supports them.**
- **Employ C++ to demonstrate practical skill developing object-oriented solutions.**
- **Examine a problem statements and design and develop object-oriented software using good coding practices and procedures.**
- **In object-oriented design, use common software patterns and recognize their relevance in other software development contexts.**

Annexure I

B. Sc (Information Technology)		Semester – II	
Course Name: Fundamentals of Micro Processor and Microcontrollers		Course Code: USIT202	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	2	75
	Internal	--	25

Course Objectives: 1) To understand the basic concept of Micro Computer Systems
2) To develop background knowledge in 8085 Microprocessor
3) To write Assembly language Programs of 8085
4) To understand the peripheral devices and interfacing to 8051 Micro Controller and design aspects of Micro Controller

Unit	Details	Lectures
I	**Microprocessor, microcomputers, and Assembly Language:** Microprocessor,Microprocessor Instruction Set and Computer Languages, From Large Computers to Single-Chip Microcontrollers, Applications. **Microprocessor Architecture and Microcomputer System:** Microprocessor Architecture and its operation's, Memory, I/O Devices, Microcomputer System, Logic Devices and Interfacing, Microprocessor-Based System Application. **8085 Microprocessor Architecture and Memory Interface:** Introduction, 8085 Microprocessor unit, 8085-Based Microcomputer, Memory Interfacing,Interfacing the8085 Memory Segment.	12
II	**Interfacing of I/O Devices** Basic Interfacing concepts, Interfacing Output Displays, Interfacing Input Devices, Memory Mapped I/O, Testing and Troubleshooting I/O Interfacing Circuits. **Introduction to 8085 Assembly Language Programming:** The 8085 Programming Model, Instruction Classification, Instruction, Data and Storage, Writing assembling and Execution of a simple program, Overview of 8085 Instruction Set, Writing and Assembling Program. **Introduction to 8085 Instructions:** Data Transfer Operations, Arithmetic Operations, Logic Operation, Branch Operation, Writing Assembly Languages Programs, Debugging a Program.	12
III	**Programming Techniques With Additional Instructions:** ProgrammingTechniques: Looping, Counting and Indexing, Additional Data Transfer and 16-Bit Arithmetic Instructions, Arithmetic Instruction Related to Memory, Logic Operations: Rotate, Logics Operations: Compare, Dynamic Debugging. **Counters and Time Delays:** Counters and Time Delays, Illustrative Program: Hexadecimal Counter, Illustrative Program: zero-to-nine (Modulo Ten) Counter, Generating Pulse Waveforms, Debugging Counter and Time-Delay Programs. **Stacks and Sub-Routines:** Stack, Subroutine, Restart, Conditional Call, Return Instructions, Advanced Subroutine concepts. **Interrupts:** The 8085 Interrupt, 8085 Vectored and Non vectored Interrupts, Restart as S/W Instructions.	12

IV	**Micro Controllers:** Embedded Systems and general purpose computer systems, history, classifications, applications and purpose of embedded systems. **Embedded Hardware:** Memory map, i/o map, interrupt map, processor family, external peripherals, memory – RAM , ROM, types of RAM and ROM, memory testing, CRC ,Flash memory. **Peripherals:** Control and Status Registers, Device Driver, Timer watch Timer **The 8051 Microcontrollers:** Microcontrollers and Embedded processors, Overview of 8051 family.8051 Microcontroller hardware, Input/output pins, Ports, and Circuits, External Memory. **8051 Programming in C:** Data Types and time delay in 8051 C, I/O Programming, Logic operations, Data conversion Programs.	**12**
V	**Designing Embedded System with 8051 Microcontroller:**Factors to be considered in selecting a controller, why 8051 Microcontroller, Designing with 8051. **Programming embedded systems:** structure of embedded program, infinite loop, compiling, linking and debugging. **Design and Development:** Embedded system, development Environment – IDE, types of file generated on cross compilation, Embedded Product Development cycle and Trends in embedded Industry	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Microprocessors Architecture, Programming and Applications with the 8085.	Ramesh Gaonkar	PENRAM	5th	2012
2.	8080A/8085 Assembly Language Programming	Lance A. Leventhel	Osborne		1978
3	Embedded Systems	Rajkamal	Tata Mcgraw-Hill		
4	Introduction to embedded systems	Shibu K V	Tata Mcgraw-Hill	1st	2012

Course Outcomes:

Learners will be able to,

1. **Understand the basic concepts of Micro Computer Systems**
2. **Understand the architecture and hardware aspects of 8085**
3. **Write assembly language programs in 8085**
4. **Design elementary aspects of Micro Controller based systems**
5. **Interfacing peripherals using Micro Controller**

Annexure I

B. Sc (Information Technology)		Semester – II	
Course Name: Fundamentals of Micro Processor and Microcontrollers Practical		**Course Code: USIT2P2**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives: The course aims to learn

1. **Operations related to single & Multiple memory locations**
2. **Simple assembly language programs**
3. **How to perform register operations, packing and unpacking**
4. **Embedding computer using 8051 microcontrollers**
5. **Interfacing I/O Ports**
6. **Implement flashmagic in microcontrollers**

List of Practical	
1.	**Perform the following Operations related to memory locations.**
a.	Store the data byte 32H into memory location 4000H.
b.	Exchange the contents of memory locations 2000H and 4000H
2.	**Simple assembly language programs.**
a.	Subtract two 8-bit numbers.
b.	Subtract the 16-bit number in memory locations 4002H and 4003H from the 16-bit number in memory locations 4000H and 4001H. The most significant eight bits of the two numbers are in memory locations 4001H and 4003H. Store the result in memory locations 4004H and 4005H with the most significant byte in memory location 4005H.
c.	Find the l's complement of the number stored at memory location 4400H and store the complemented number at memory location 4300H.
d.	Find the 2's complement of the number stored at memory location 4200H and store the complemented number at memory location 4300H.
3.	**Packing and unpacking operations.**
a.	Pack the two unpacked BCD numbers stored in memory locations 4200H and 4201H and store result in memory location 4300H. Assume the least significant digit is stored at 4200H.
b.	Two digit BCD number is stored in memory location 4200H. Unpack the BCD number and store the two digits in memory locations 4300H and 4301H such that memory location 4300H will have lower BCD digit.
4.	**Register Operations.**
a.	Write a program to shift an eight bit data four bits right. Assume that data is in register C.
b.	Program to shift a 16-bit data 1 bit left. Assume data is in the HL register pair

Annexure I

c.	Write a set of instructions to alter the contents of flag register in 8085.
d.	Write a program to count number of l's in the contents of D register and store the count in the B register.
5.	**Multiple memory locations.**
a.	Calculate the sum of series of numbers. The length of the series is in memory location 4200H and the series begins from memory location 4201H. a. Consider the sum to be 8 bit number. So, ignore carries. Store the sum at memory location 4300H. b. Consider the sum to be 16 bit number. Store the sum at memory locations 4300H and 4301H
b.	Multiply two 8-bit numbers stored in memory locations 2200H and 2201H by repetitive addition and store the result in memory locations 2300H and 2301H.
c.	Divide 16 bit number stored in memory locations 2200H and 2201H by the 8 bit number stored at memory location 2202H. Store the quotient in memory locations 2300H and 2301H and remainder in memory locations 2302H and 2303H.
6.	**Calculations with respect to memory locations.**
a.	Write a program to sort given 10 numbers from memory location 2200H in the ascending order.
b.	Calculate the sum of series of even numbers from the list of numbers. The length of the list is in memory location 2200H and the series itself begins from memory location 2201H. Assume the sum to be 8 bit number so you can ignore carries and store the sum at memory location 2Sample problem:
7.	**Assembly programs on memory locations**
a.	A list of 50 numbers is stored in memory, starting at 6000H. Find number of negative, zero and positive numbers from this list and store these results in memory locations 7000H, 7001H, and 7002H respectively
b.	Write an assembly language program to generate fibonacci number.
c.	Program to calculate the factorial of a number between 0 to 8.
8.	Design and develop a reprogrammable embedded computer using 8051 microcontrollers and to show the following aspects. a. Programming b. Execution c. Debugging
9 a	Configure timer control registers of 8051 and develop a program to generate given time delay.
b	Port I / O: Use one of the four ports of 8051 for O/P interfaced to eight LED's. Simulate binary counter (8 bit) on LED's
c	To interface 8 LEDs at Input-output port and create different patterns.
d	To demonstrate timer working in timer mode and blink LED without using any

	loop delay routine.
10.	**Using FlashMagic**
a.	To demonstrate the procedure for flash programming for reprogrammable embedded system board using Flash Magic
b.	To demonstrate the procedure and connections for multiple controllers programming of same type of controller with same source code in one go, using flash magic.

Course Outcomes:

Learners will be able to,

1. **Apply concepts of 8085 to single & Multiple Memory Locations**
2. **Apply concepts of micro-processor register operations**
3. **Can implement assembly language programs**
4. **Use of Shift registers 8 & 16 bits**
5. **Apply the knowledge of Flash Magic in embedded Controllers**
6. **Learns to simulate and configure different timer controls**

Annexure I

B. Sc (Information Technology)		Semester – II	
Course Name: Web Applications Development		**Course Code: USIT203**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2**	**75**
	Internal	**--**	**25**

Course Objectives:

- **Understand basic concepts of Internet and World Wide Web.**
- **Comprehend different HTML elements that can be used to develop static web pages.**
- **Become familiar with concept of stylesheets and various CSS effects.**
- **Peruse JavaScript as a tool to add dynamism to static HTML pages.**
- **Explore how server-side script works on the web.**
- **Learn how PHP can be connected to a database to store and retrieve data.**

Unit	Details	Lectures
I	**Internet and the World Wide Web**: What is Internet? Applications of Internet, E-mail, Telnet, FTP, E-commerce and E-business. Internet Service Providers, Domain Name Server, Internet Address, World Wide Web (WWW): World Wide Web and its Evolution, Uniform Resource Locator (URL), Browsers, Common Features of Browsers, Search Engine, Web Server, HTTP Protocol. **HTML5**: Introduction, Formatting Text by using Tags, Using Lists, Creating Hyperlinks and Bookmarks, Defining Metadata about an HTML Document, Redirecting to another URL. **CSS**: Implementing Styles using CSS – Stylesheets, Formatting Text and Links using CSS, CSS Selectors, Changing Background, Adding Border, Margin and Padding, Setting Dimensions, Using Inline Container to mark up a part of a text.	**12**
II	**HTML Page Layout**: Using Layout Elements, Semantic Elements, Creating, Positioning and Formatting Divisions, Floating Divisions next to each other, Responsive Web Design, Inline Frames. **HTML Media, Tables and Forms**: Embedding Images, Creating Client-side and Server-side Image Map, adding Favicon, Embedding audio and video on web page. Creating Simple Table, Table Dimension, Merging Table Cells, Formatting Tables: Applying Borders, Background and Foreground fills, Changing Cell Padding, Spacing and Alignment Collecting user input with HTML Forms, Additional Input Types in HTML5.	**12**
III	**JavaScript**: Introduction, Difference between Client-side and Server-side Scripting, JavaScript Variables and Constants, Data Types, Statements, Comments, Functions, Variable Scope, Hoisting, Strict Mode, JavaScript Objects, Dialog Boxes, void Keyword	**12**

	Operators: Arithmetic Operators, Assignment Operators, Comparison Operators, Logical Operators, Bitwise Operators **Statements**: Conditional Statements – if else, switch, Loops – while, do while, for, for in, for of, Loop Control – break, continue, labels **JavaScript Objects**: User-defined Objects, with Keyword, Native Objects – Array, String, Date, Math, Number, RegExp **DOM**: Introduction, DOM Properties and Methods. **Browser BOM**: Moving back and forward with History, Cookies **Events and Event Handlers**: HTML Events, DOM Events, DOM Event Listener, onAbort, onBlur, onChange, onClick, onDblClick, onError, onFocus, onKeyDown, onKeyPress, onKeyUp, onLoad, onMouseDown, onMouseMove, onMouseOut, onMouseOver, onMouseUp, onReset, onResize, onSelect, onSubmit, onUnload	
IV	**PHP**: Introduction, Server-side Scripting, PHP Syntax and Comments, Variables and Constants, Data Types, Control Structures, Looping, Loop Termination, Functions, PHP Form Handling, PHP Form Validation, Superglobals, PHP Arrays, PHP Strings, PHP RegEx, PHP Numbers, PHP Math, Basic PHP Errors	**12**
V	**Advanced PHP**: PHP Date and Time, PHP Include, PHP Cookies, PHP Sessions, Validating and Sanitizing Data with PHP Filters **PHP and MySQL** Why PHP and MySQL? Connect to MySQL, Creating Database and Tables, Inserting Single and Multiple Rows, Retrieving Last ID, MySQL Prepared, Selecting Data, Updating Data, Deleting Data, Limiting Data.	**12**

Course Outcomes:

- **Analyze working of Internet.**
- **Gain an insight into designing web pages.**
- **Use different ways of styling web pages using CSS.**
- **Implement basic and complex functionalities of JavaScript in a web page.**
- **Employ PHP Scripts to execute dynamic tasks in a web page.**
- **Perform various database tasks using PHP.**

B. Sc (Information Technology)		**Semester – II**	
Course Name: Web Application Development Practical		**Course Code: USIT2P3**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

- **Understand how to effectively implement HTML.**
- **Write CSS effectively to create well organized, styled web pages.**
- **Add versatility to a web page with client-side scripting.**
- **Deploy a local web server and run a simple web application.**
- **Read and process data in MySQL using PHP.**

List of Practical:	
1.	**Use of Basic Tags**
a.	Design a web page using different text formatting tags.
b.	Design a web page with links to different pages and allow navigation between web pages.
c.	Design a web page that automatically redirects the user to another page.
2.	**Use of CSS**
a.	Design a web page demonstrating different stylesheet types.
b.	Design a web page demonstrating grouping selectors.
3.	**Layout and Media**
a.	Design a web page demonstrating different semantics.
b.	Design a web page embedding image, audio and video.
c.	Design a web page with Imagemaps.
4.	**Tables and Forms**
a.	Design a web page with different tables.
b.	Design a web page with a form that uses all types of controls.

Annexure I

5.	**JavaScript**
a.	Using JavaScript, design a web page to accept a number from the user and print its Factorial.
b.	Using JavaScript, a web page that prints Fibonacci series/any given series.
c.	Write a JavaScript program to display all the prime numbers between 1 and 100.
d.	Write a JavaScript program to accept a number from the user and display the sum of its digits.
6.	**JavaScript Objects**
a.	Using JavaScript, design a web page demonstrating different native objects of JavaScript.
b.	Write a program in JavaScript to accept a sentence from the user and display the number of words in it. (Do not use split () function).
7.	**JavaScript Events**
a.	Write a JavaScript program to design simple calculator.
b.	Design a form and validate all the controls placed on the form using JavaScript.
8.	**Basic PHP**
a.	Write a PHP code to find the greater of 2 numbers. Accept the no. from the user.
b.	Write a PHP Program to accept a number from the user and print it factorial.
c.	Write a PHP program to accept a number from the user and print whether it is prime or not.
d.	Write a PHP program to display the following Binary Pyramid: 1 0 1 1 0 1 0 1 0 1 1 0 1 0 1
e.	Write a PHP program to demonstrate different string functions.
f.	Write a PHP program to demonstrate different array functions.
9.	**Advanced PHP**
a.	Write a PHP program to demonstrate use of sessions and cookies.
b.	Write a PHP program to demonstrate use of filters.
10.	**PHP and MySQL**
a.	Write a PHP program to create: Create a database College

Annexure I

	Create a table Department (Dname, Dno, Number_of_faculty)
b.	Write a PHP program to create a database named "College". Create a table named "Student" with following fields (sno, sname, percentage). Insert 3 records of your choice. Display the names of the students whose percentage is between 35 to 75 in a tabular format.
c.	Write a PHP program to Update rows in a table Delete rows from a table
d.	Design a PHP page for authenticating a user

Course Outcomes:

Learners will be able to,

1. **Design static web pages using Hyper Text Markup Language (HTML).**
2. **Enhance the look of web pages by implementing CSS.**
3. **Collect information from the user with HTML Forms.**
4. **Design interactive webpages using client-side script (JavaScript).**
5. **Implement Document Object Model and events in web pages using JavaScript.**
6. **Write and deploy basic PHP code to simplify web development.**
7. **Store and retrieve data from a server using PHP**.

Annexure I

B. Sc (Information Technology)		Semester – I	
Course Name: Numerical Methods		Course Code: USIT204	
Periods per week (1 Period is 50 minutes)		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	2	75
	Internal	--	25

Course Objectives:
Course will enhance the problem solving skills of students using extremely powerful numerical methods.

Unit	Details	Lectures
I	**Mathematical Modeling and Engineering Problem Solving:** A Simple Mathematical Model, Conservation Laws and Engineering Problems **Approximations and Round-Off Errors:** Significant Figures, Accuracy and Precision, Error Definitions, Round-Off Errors **Truncation Errors and the Taylor Series:** The Taylor Series, Error Propagation, Total Numerical Errors, Formulation Errors and Data Uncertainty	12
II	**Solutions of Algebraic and Transcendental Equations:** The Bisection Method, The Newton-Raphson Method, The Regula-falsi method, The Secant Method. **Interpolation:** Forward Difference, Backward Difference, Newton's Forward Difference Interpolation, Newton's Backward Difference Interpolation, Lagrange's Interpolation	12
III	**Solution of simultaneous algebraic equations (linear) using iterative methods:** Gauss-Jordan Method, Gauss-Seidel Method. **Numerical differentiation and Integration:** Numberical differentiation, Numerical integration using Trapezoidal Rule, Simpson's 1/3rd and 3/8th rules.	12
IV	**Numerical solution of 1st and 2nd order differential equations:** Taylor series, Euler's Method, Modified Euler's Method, Runge-Kutta Method for 1st and 2nd Order Differential Equations. **Least-Squares Regression:** Linear Regression, Polynomial Regression, Multiple Linear Regression, General Linear Least Squares, Nonlinear Regression	12
V	**Linear Programming:** Linear optimization problem, Formulation and Graphical solution, Basic solution and Feasible solution. **Numerical Solutions of Partial Differential Equations:** Classification of Partial Differential Equations of the second order, Difference equation corresponding to Laplace Equation, Liebmann's Iteration Process, Bender-Schmidt's Difference Equation corresponding to the parabolic equation, Crank Nicolson's difference equations corresponding to the parabolic equation, Difference equation corresponding to the Hyperbolic equation..	12

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year

1.	Introductory Methods of Numerical Methods	S. S. Sastry	PHI	5th	2012
2.	Numerical Methods for Engineers	Steven C. Chapra, Raymond P. Canale	Tata Mc Graw Hill	6th	2010
3.	Numerical Analysis	Richard L. Burden, J. Douglas Faires	Cengage Learning	9th	2011
4.	Numerical Methods	T Veerarajan T Ramachandran	Tata Mc Graw Hill	7th	2011

Course Outcomes:

Learners will be able to,

1. **Understand numerical techniques to find the roots of non-linear equations and solution of system of linear equations.**
2. **Understand the difference operators and the use of interpolation.**
3. **Understand numerical differentiation and integration and numerical solutions of ordinary and partial differential equations.**

B. Sc (Information Technology)		**Semester – I**	
Course Name: Numerical Methods Practical		**Course Code: USIT2P4**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

Course will provide different tools to find solutions to various numerical techniques

List of Practical: To be implemented using SCILAB	
1.	**Iterative Calculation**
a.	Program for iterative calculation
b.	Program to calculate the roots of a quadratic equation using the formula
c.	Program to evaluate e^x using infinite series
2.	**Solution of algebraic and transcendental equations:**

Annexure I

a.	Program to solve algebraic and transcendental equation by bisection method.
b.	Program to solve algebraic and transcendental equation by false position method.
c.	Program to solve algebraic and transcendental equation by Secant method.
d.	Program to solve algebraic and transcendental equation by Newton Raphson method.
3.	**Interpolation**
a.	Program for Newton's forward interpolation.
b.	Program for Newton's backward interpolation.
c.	Program for Lagrange's interpolation.
4.	**Solving linear system of equations by iterative methods**
a.	Program for solving linear system of equations using Gauss Jordan method.
b.	Program for solving linear system of equations using Gauss Seidel method.
5.	**Numerical Differentiation**
a.	Program to obtain derivatives numerically.
6.	**Numerical Integration**
a.	Program for numerical integration using Trapezoidal rule.
b.	Program for numerical integration using Simpson's 1/3rd rule.
c.	Program for numerical integration using Simpson's 3/8th rule.
7.	**Solution of differential equations**
a.	Program to solve differential equation using Euler's method.
b.	Program to solve differential equation using modified Euler's method.
c.	Program to solve differential equation using Runge-kutta 2nd order and 4th order methods.
8.	**Regression** 1
a.	Program for Linear regression.
b.	Program for Polynomial Regression.
9.	**Regression** 2

a.	Program for multiple linear regression.
b.	Program for non-linear regression.
10.	Numerical solution of partial differential equations
a.	Program to find solution of Laplace's equation.

Course Outcomes:

Learners will be able to,

1. **Find fast and accurate solution to simple and complex numerical problems using these programs.**

Annexure I

B. Sc (Information Technology)		Semester – II	
Course Name: Green IT		**Course Code: USIT205**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2**	**75**
	Internal	**--**	**25**

Course Objectives:

- **To understand the concept of Green Technology.**
- **To learn Green IT regulating Green IT and different standards.**
- **To understand the concept of minimizing power utilization in technology.**
- **To know about Green PCs, Green notebooks and servers and Green data centers.**
- **To know how the way of work is changing and understand implementation of Paperless work.**
- **To know the concept of Recycling.**
- **To understand Metrics for Green IT.**

Unit	Details	Lectures
I	**Overview to Green IT:** Problems: Toxins, Power Consumption, Equipment Disposal, Company's Carbon Footprint: Measuring, Details, reasons to bother, Plan for the Future, Cost Savings: Hardware, Power. **Regulating Green IT: Laws, Standards and Protocols** Introduction, The Regulatory Environment and IT Manufacturers RoHS, REACh, WEEE, Legislating for GHG Emissions and Energy Use of IT Equipment.Nonregulatory Government Initiatives, Industry Associations and Standards Bodies, Green Building Standards, Green Data Centres , Social Movements and Greenpeace.	**12**
II	**Minimizing Power Usage:** Power Problems, Monitoring Power Usage, Servers, Low-CostOptions, Reducing Power Use, Data De-Duplication, Virtualization, Management, Bigger Drives, Involving the Utility Company, LowPower Computers, PCs, Linux, Components, Servers, ComputerSettings, Storage, Monitors, Power Supplies, Wireless Devices, Software. **Cooling:** Cooling Costs, Power Cost, Causes of Cost, Calculating CoolingNeeds, Reducing Cooling Costs, Economizers, On-Demand Cooling, HP's Solution, Optimizing Airflow, Hot Aisle/Cold Aisle, Raised, Floors, Cable Management, Vapour Seal, Prevent Recirculation of Equipment Exhaust, Supply Air Directly to Heat Sources, Fans, Humidity, Adding Cooling, Fluid Considerations, System Design, Datacentre Design, Centralized Control, Design for Your Needs, Put Everything Together.	**12**
III	**Greening IT:** Green PCs, Notebooks and Servers, Green Data Centres , Green Cloud Computing, Green Data Storage , Green Software, Green Networking and Communications. **Changing the Way of Work:** Old Behaviours, starting at the Top, Process Reengineering with Green in Mind, Analysing the Global Impact of Local Actions, Steps: Water, Recycling, Energy, Pollutants, Teleworkers and Outsourcing, Telecommuting, Outsourcing, how to Outsource. **Going Paperless:** Paper Problems, The Environment, Costs: Paper and Office, Practicality, Storage, Destruction, Going Paperless, Organizational Realities, Changing Over, Paperless Billing, Handheld Computers vs. the Clipboard, Unified Communications, Intranets, What to Include, Building an Intranet, Microsoft Office SharePoint Server 2007, Electronic Data Interchange (EDI), Nuts and Bolts, Value Added Networks, Advantages, Obstacles.	**12**

IV	**Recycling:** Means of Disposal, Recycling, Refurbishing, Make the Decision, Life Cycle, from beginning to end, Life, Cost, Green Design, Recycling Companies, Finding the Best One, Checklist, Certifications, Hard Drive Recycling, Consequences, cleaning a Hard Drive, Pros and cons of each method, CDs and DVDs, good and bad about CD and DVDs disposal, Change the mind-set, David vs. America Online. **Hardware Considerations:** Certification Programs, EPEAT, RoHS, Energy Star, Computers, Monitors, Printers, Scanners, All-in-Ones, Thin Clients, Servers, Blade Servers, Consolidation, Products, Hardware Considerations, Planned Obsolescence, Packaging, Toxins, Other Factors, Remote Desktop, Using Remote Desktop, Establishing a Connection.	**12**
V	**Greening Your Information Systems:** Initial Improvement Calculations, Selecting Metrics, Tracking Progress, Change Business Processes, Customer Interaction, Paper Reduction, Green Supply Chain, Improve Technology Infrastructure, Reduce PCs and Servers, Shared Services, Hardware Costs, Cooling. **Staying Green:** Organizational Check-ups, Chief Green Officer, Evolution, Sell the CEO, SMART Goals, Equipment Check-ups, Gather Data, Tracking the data, Baseline Data, Benchmarking, Analyse Data, Conduct Audits, Certifications, Benefits, Realities, Helpful Organizations.	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Green IT	Toby Velte, Anthony Velte, Robert Elsenpeter	McGraw Hill		2008
2.	Harnessing Green IT: Principles and Practices	San Murugesan, G. R. Ganadharan,	Wiley & IEEE.		
3.	Green Data Center: Steps for the Journey	Alvin Galea, Michael Schaefer, Mike Ebbers	Shroff Publishers and Distributers		2011
4.	Green IT	Deepak Shikarpur	Vishwkarma Publications,		2014
5.	Green Computing Tools and Techniques for Saving Energy, Money and Resources	Bud E. Smith	CRC Press		2014
	Green Computing and Green IT Best Practice	Jason Harris	Emereo		

Course Outcomes:

Learners will be able to,

- **Understand the concept of Green IT and problems related to it.**
- **Know different standards for Green IT.**
- **Understand the how power usage can be minimized in Technology.**
- **Learn about how the way of work is changing.**
- **Understand the concept of recycling.**
- **Know how information system can stay Green Information system.**

Annexure I

B. Sc (Information Technology)		Semester – II	
Course Name: Practical's in PL/SQL		**Course Code: USIT2P5**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

- **To understand the basics of PL/SQL.**
- **To understand control and conditional statement in PL/SQL.**
- **To understand working of sequences and cursor in PL/SQL.**
- **To understand concept of stored procedure and functions.**
- **To understand triggers and packages in PL/SQL.**
- **To understand the concept of Exception handling.**

List of Practical:	
1.	**PL/SQL Basics**
a.	Use of variables.
b.	Write executable statement.
c.	Interacting with Oracle Server.
d.	Create anonymous PL/SQL block
2.	**Control Structure in PL/SQL .**
a.	Using while loop
b.	Do loop
c.	For loop
d.	Use of GOTO statement
3.	**Create conditional statement using PL/SQL**
a.	Using if statement
b.	Using if else statement
c.	Using elsif ladder
d.	Using case expression.
4.	**Creation of Sequence in PL/SQL**
5.	**Create cursor in PL/SQL**
a.	Implicit cursor
b.	Explicit

Annexure I

c.	Parameterized cursor
d.	Cursor for loop
6.	**Creation of Procedures in PL/SQL**
7.	**Functions in PL/SQL**
a.	Compute and returns the maximum value
b.	Compute factorial of given number.
8.	**Creation of Trigger**
a.	Create Row level trigger
b.	Create Statement level trigger
c.	Create instead of trigger
9.	**Handling exceptions**
a.	Creation of user defined exception
b.	Creation of system defined exception.
10.	**Creation of Package in PL/SQL**

Course Outcomes:

Learner will be able to:

- **Understand the basics of PL/SQL.**
- **Use of the control and conditional statement in PL/SQL.**
- **Apply sequences and cursor in PL/SQL.**
- **Know the concept of stored procedure and functions**
- **Create the triggers and packages in PL/SQL.**
- **Implement the concept of Exception handling.**

Academic Council 11/05/2017
Item No: 4.286

UNIVERSITY OF MUMBAI

Syllabus for S.Y.B.Sc.

Programme: B.Sc.

Course: Information Technology

with effect from the academic year

2017 – 2018

Semester – 3

SEMESTER III

B. Sc. (Information Technology)		Semester – III	
Course Name: Python Programming		**Course Code: USIT301**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction:** The Python Programming Language, History, features, Installing Python, Running Python program, Debugging : Syntax Errors, Runtime Errors, Semantic Errors, Experimental Debugging, Formal and Natural Languages, The Difference Between Brackets, Braces, and Parentheses, **Variables and Expressions** Values and Types, Variables, Variable Names and Keywords, Type conversion, Operators and Operands, Expressions, Interactive Mode and Script Mode, Order of Operations. **Conditional Statements:** if, if-else, nested if –else **Looping**: for, while, nested loops **Control statements:** Terminating loops, skipping specific conditions	**12**
II	**Functions:** Function Calls, Type Conversion Functions, Math Functions, Composition, Adding New Functions, Definitions and Uses, Flow of Execution, Parameters and Arguments, Variables and Parameters Are Local, Stack Diagrams, Fruitful Functions and Void Functions, Why Functions? Importing with from, Return Values, Incremental Development, Composition, Boolean Functions, More Recursion, Leap of Faith, Checking Types **Strings:** A String Is a Sequence, Traversal with a for Loop, String Slices, Strings Are Immutable, Searching, Looping and Counting, String Methods, The in Operator, String Comparison, String Operations.	**12**
III	**Lists:** Values and Accessing Elements, Lists are mutable, traversing a List, Deleting elements from List, Built-in List Operators, Concatenation, Repetition, `In` Operator, Built-in List functions and methods **Tuples and Dictionaries:** Tuples, Accessing values in Tuples, Tuple Assignment, Tuples as return values, Variable-length argument tuples, Basic tuples operations, Concatenation, Repetition, `in` Operator, Iteration, Built-in Tuple Functions Creating a Dictionary, Accessing Values in a dictionary, Updating Dictionary, Deleting Elements from Dictionary, Properties of Dictionary keys, Operations in Dictionary, Built-In Dictionary Functions, Built-in Dictionary Methods **Files:** Text Files, The File Object Attributes, Directories	**12**

	Exceptions: Built-in Exceptions, Handling Exceptions, Exception with Arguments, User-defined Exceptions	
IV	**Regular Expressions –** Concept of regular expression, various types of regular expressions, using match function. **Classes and Objects:** Overview of OOP (Object Oriented Programming), Class Definition, Creating Objects, Instances as Arguments, Instances as return values, Built-in Class Attributes, Inheritance, Method Overriding, Data Encapsulation, Data Hiding **Multithreaded Programming:** Thread Module, creating a thread, synchronizing threads, multithreaded priority queue **Modules:** Importing module, Creating and exploring modules, Math module, Random module, Time module	**12**
V	**Creating the GUI Form and Adding Widgets:** **Widgets:** Button, Canvas, Checkbutton, Entry, Frame, Label, Listbox, Menubutton, Menu, Message, Radiobutton, Scale, Scrollbar, text, Toplevel, Spinbox, PanedWindow, LabelFrame, tkMessagebox. Handling Standard attributes and Properties of Widgets. **Layout Management:** Designing GUI applications with proper Layout Management features. **Look and Feel Customization**: Enhancing Look and Feel of GUI using different appearances of widgets. **Storing Data in Our MySQL Database via Our GUI :** Connecting to a MySQL database from Python, Configuring the MySQL connection, Designing the Python GUI database, Using the INSERT command, Using the UPDATE command, Using the DELETE command, Storing and retrieving data from MySQL database.	**12**

B. Sc. (Information Technology)		Semester – III	
Course Name: Data Structures		**Course Code: USIT302**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction:** Data and Information, Data Structure, Classification of Data Structures, Primitive Data Types, Abstract Data Types, Data structure vs. File Organization, Operations on Data Structure, Algorithm, Importance of Algorithm Analysis, Complexity of an Algorithm, Asymptotic Analysis and Notations, Big O Notation, Big Omega Notation, Big Theta Notation, Rate of Growth and Big O Notation. **Array**: Introduction, One Dimensional Array, Memory Representation of One Dimensional Array, Traversing, Insertion, Deletion, Searching, Sorting, Merging of Arrays, Multidimensional Arrays, Memory Representation of Two Dimensional Arrays, General Multi-Dimensional Arrays, Sparse Arrays, Sparse Matrix, Memory Representation of Special kind of Matrices, Advantages and Limitations of Arrays.	**12**
II	**Linked List:** Linked List, One-way Linked List, Traversal of Linked List, Searching, Memory Allocation and De-allocation, Insertion in Linked List, Deletion from Linked List, Copying a List into Other List, Merging Two Linked Lists, Splitting a List into Two Lists, Reversing One way linked List, Circular Linked List, Applications of Circular Linked List, Two way Linked List, Traversing a Two way Linked List, Searching in a Two way linked List, Insertion of an element in Two way Linked List, Deleting a node from Two way Linked List, Header Linked List, Applications of the Linked list, Representation of Polynomials, Storage of Sparse Arrays, Implementing other Data Structures.	**12**
III	**Stack**: Introduction, Operations on the Stack Memory Representation of Stack, Array Representation of Stack, Applications of Stack, Evaluation of Arithmetic Expression, Matching Parenthesis, infix and postfix operations, Recursion**.** **Queue:** Introduction, Queue, Operations on the Queue, Memory Representation of Queue, Array representation of queue, Linked List Representation of Queue, Circular Queue, Some special kinds of queues, Deque, Priority Queue, Application of Priority Queue, Applications of Queues.	**12**

IV	**Sorting and Searching Techniques** Bubble, Selection, Insertion, Merge Sort. Searching: Sequential, Binary, Indexed Sequential Searches, Binary Search. **Tree:** Tree, Binary Tree, Properties of Binary Tree, Memory Representation of Binary Tree, Operations Performed on Binary Tree, Reconstruction of Binary Tree from its Traversals, Huffman Algorithm, Binary Search Tree, Operations on Binary Search Tree, Heap, Memory Representation of Heap, Operation on Heap, Heap Sort. **Advanced Tree Structures:** Red Black Tree, Operations Performed on Red Black Tree, AVL Tree, Operations performed on AVL Tree, 2-3 Tree, B-Tree.	**12**
V	**Hashing Techniques** Hash function, Address calculation techniques, Common hashing functions Collision resolution, Linear probing, Quadratic, Double hashing, Bucket hashing, Deletion and rehashing **Graph**: Introduction, Graph, Graph Terminology, Memory Representation of Graph, Adjacency Matrix Representation of Graph, Adjacency List or Linked Representation of Graph, Operations Performed on Graph, Graph Traversal, Applications of the Graph, Reachability, Shortest Path Problems, Spanning Trees.	**12**

Course Name: Computer Networks		**Course Code: USIT303**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction:** Data communications, networks, network types, Internet history, standards and administration. **Network Models:** Protocol layering, TCP/IP protocol suite, The OSI model. **Introduction to Physical layer:** Data and signals, periodic analog signals, digital signals, transmission impairment, data rate limits, performance. **Digital and Analog transmission:** Digital-to-digital conversion, analog-to-digital conversion, transmission modes, digital-to-analog conversion, analog-to-analog conversion.	**12**
II	**Bandwidth Utilization: Multiplexing and Spectrum Spreading:** Multiplexing, Spread Spectrum **Transmission media:** Guided Media**,** Unguided Media **Switching:** Introduction, circuit switched networks, packet switching, structure of a switch. **Introduction to the Data Link Layer:** Link layer addressing, Data Link Layer Design Issues, Error detection and correction, block coding, cyclic codes, checksum, forward error correction, error correcting codes, error detecting codes.	**12**
III	**Data Link Control:** DLC services, data link layer protocols, HDLC, Point-to-point protocol. **Media Access Control**: Random access, controlled access, channelization, Wired LANs – Ethernet Protocol, standard ethernet, fast ethernet, gigabit ethernet, 10 gigabit ethernet, **Wireless LANs:** Introduction, IEEE 802.11 project, Bluetooth, WiMAX, Cellular telephony, Satellite networks. **Connecting devices and Virtual LANs.**	**12**
IV	**Introduction to the Network Layer**: Network layer services, packet switching, network layer performance, IPv4 addressing, forwarding of IP packets, Internet Protocol, ICMPv4, Mobile IP **Unicast Routing:** Introduction, routing algorithms, unicast routing protocols. **Next generation IP:** IPv6 addressing, IPv6 protocol, ICMPv6 protocol, transition from IPv4 to IPv6.	**12**
V	**Introduction to the Transport Layer**: Introduction, Transport layer protocols (Simple protocol, Stop-and-wait protocol, Go-Back-n	**12**

	protocol, Selective repeat protocol, Bidirectional protocols), Transport layer services, User datagram protocol, Transmission control protocol, **Standard Client0Server Protocols:** World wide-web and HTTP, FTP, Electronic mail, Telnet, Secured Shell, Domain name system.

Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction to Databases and Transactions** What is database system, purpose of database system, view of data, relational databases, database architecture, transaction management **Data Models** The importance of data models, Basic building blocks, Business rules, The evolution of data models, Degrees of data abstraction. **Database Design, ER Diagram and Unified Modeling Language** Database design and ER Model: overview, ER Model, Constraints, ER Diagrams, ERD Issues, weak entity sets, Codd's rules, Relational Schemas, Introduction to UML	**12**
II	**Relational database model:** Logical view of data, keys, integrity rules, Relational Database design: features of good relational database design, atomic domain and Normalization (1NF, 2NF, 3NF, BCNF). **Relational Algebra and Calculus** Relational algebra: introduction, Selection and projection, set operations, renaming, Joins, Division, syntax, semantics. Operators, grouping and ungrouping, relational comparison. **Calculus:** Tuple relational calculus, Domain relational Calculus, calculus vs algebra, computational capabilities	**12**
III	**Constraints, Views and SQL** Constraints, types of constrains, Integrity constraints, Views: Introduction to views, data independence, security, updates on views, comparison between tables and views SQL: data definition, aggregate function, Null Values, nested sub queries, Joined relations. Triggers.	**12**
IV	**Transaction management and Concurrency** Control Transaction management: ACID properties, serializability and concurrency control, Lock based concurrency control (2PL, Deadlocks), Time stamping methods, optimistic methods, database recovery management.	**12**
V	**PL-SQL**: Beginning with PL / SQL, Identifiers and Keywords, Operators, Expressions, Sequences, Control Structures, Cursors and Transaction, Collections and composite data types, Procedures and Functions, Exceptions Handling, Packages, With Clause and Hierarchical Retrieval, Triggers.	**12**

Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Matrices:** Inverse of a matrix, Properties of matrices, Elementary Transformation, Rank of Matrix, Echelon or Normal Matrix, Inverse of matrix, Linear equations, Linear dependence and linear independence of vectors, Linear transformation, Characteristics roots and characteristics vectors, Properties of characteristic vectors, Caley-Hamilton Theorem, Similarity of matrices, Reduction of matrix to a diagonal matrix which has elements as characteristics values. **Complex Numbers:** Complex number, Equality of complex numbers, Graphical representation of complex number(Argand's Diagram), Polar form of complex numbers, Polar form of x+iy for different signs of x,y, Exponential form of complex numbers, Mathematical operation with complex numbers and their representation on Argand's Diagram, Circular functions of complex angles, Definition of hyperbolic function, Relations between circular and hyperbolic functions, Inverse hyperbolic functions, Differentiation and Integration, Graphs of the hyperbolic functions, Logarithms of complex quality, j(=i)as an operator(Electrical circuits)	**12**
II	**Equation of the first order and of the first degree:** Separation of variables, Equations homogeneous in x and y, Non-homogeneous linear equations, Exact differential Equation, Integrating Factor, Linear Equation and equation reducible to this form, Method of substitution. **Differential equation of the first order of a degree higher than the first:** Introduction, Solvable for p (or the method of factors), Solve for y, Solve for x, Clairaut's form of the equation, Methods of Substitution, Method of Substitution. **Linear Differential Equations with Constant Coefficients:** Introduction, The Differential Operator, Linear Differential Equation f(D) y = 0, Different cases depending on the nature of the root of the equation f(D) = 0, Linear differential equation f(D) y = X, The complimentary Function, The inverse operator 1/f(D) and the symbolic expiration for the particular integral 1/f(D) X; the general methods, Particular integral : Short methods, Particular integral : Other methods, Differential equations reducible to the linear differential equations with constant coefficients.	**12**
III	**The Laplace Transform:** Introduction, Definition of the Laplace Transform, Table of Elementary Laplace Transforms, Theorems on Important Properties of Laplace Transformation, First Shifting	**12**

	Theorem, Second Shifting Theorem, The Convolution Theorem, Laplace Transform of an Integral, Laplace Transform of Derivatives, **Inverse Laplace Transform:** Shifting Theorem, Partial fraction Methods, Use of Convolution Theorem, Solution of Ordinary Linear Differential Equations with Constant Coefficients, Solution of Simultaneous Ordinary Differential Equations, Laplace Transformation of Special Function, Periodic Functions, Heaviside Unit Step Function, Dirac-delta Function(Unit Impulse Function),	
IV	**Multiple Integrals:** Double Integral, Change of the order of the integration, Double integral in polar co-ordinates, Triple integrals. **Applications of integration:** Areas, Volumes of solids.	**12**
V	**Beta and Gamma Functions –** Definitions**,** Properties and Problems. Duplication formula. **Differentiation Under the Integral Sign** **Error Functions**	**12**

B. Sc. (Information Technology)		Semester – III	
Course Name: Python Programming Practical		**Course Code: USIT3P1**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

List of Practical	
1.	**Write the program for the following:**
a.	Create a program that asks the user to enter their name and their age. Print out a message addressed to them that tells them the year that they will turn 100 years old.
b.	Enter the number from the user and depending on whether the number is even or odd, print out an appropriate message to the user.
c.	Write a program to generate the Fibonacci series.
d.	Write a function that reverses the user defined value.
e.	Write a function to check the input value is Armstrong and also write the function for Palindrome.
f.	Write a recursive function to print the factorial for a given number.
2.	**Write the program for the following:**
a.	Write a function that takes a character (i.e. a string of length 1) and returns True if it is a vowel, False otherwise.
b.	Define a function that computes the *length* of a given list or string.

c.	Define a *procedure* `histogram()` that takes a list of integers and prints a histogram to the screen. For example, `histogram([4, 9, 7])` should print the following:
	
	`****`
	`*********`
	`*******`

3.	**Write the program for the following:**
a.	A *pangram* is a sentence that contains all the letters of the English alphabet at least once, for example: *The quick brown fox jumps over the lazy dog*. Your task here is to write a function to check a sentence to see if it is a pangram or not.
b.	Take a list, say for example this one: `a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]` and write a program that prints out all the elements of the list that are less than 5.
4.	**Write the program for the following:**

a.	Write a program that takes two lists and returns True if they have at least one common member.
b.	Write a Python program to print a specified list after removing the 0th, 2nd, 4th and 5th elements.
c.	Write a Python program to clone or copy a list
5.	**Write the program for the following:**
a.	Write a Python script to sort (ascending and descending) a dictionary by value.
b.	Write a Python script to concatenate following dictionaries to create a new one. Sample Dictionary : dic1={1:10, 2:20} dic2={3:30, 4:40} dic3={5:50,6:60} Expected Result : {1: 10, 2: 20, 3: 30, 4: 40, 5: 50, 6: 60}
c.	Write a Python program to sum all the items in a dictionary.
6.	**Write the program for the following:**
a.	Write a Python program to read an entire text file.
b.	Write a Python program to append text to a file and display the text.
c.	Write a Python program to read last n lines of a file.
7.	**Write the program for the following:**
a.	Design a class that store the information of student and display the same
b.	Implement the concept of inheritance using python
c.	Create a class called `Numbers`, which has a single class attribute called `MULTIPLIER`, and a constructor which takes the parameters `x` and `y` (these should all be numbers). i. Write a method called `add` which returns the sum of the attributes `x` and `y`. ii. Write a class method called multiply, which takes a single number parameter a and returns the product of a and MULTIPLIER. iii. Write a static method called subtract, which takes two number parameters, b and c, and returns b - c. iv. Write a method called value which returns a tuple containing the values of x and y. Make this method into a property, and write a setter and a deleter for manipulating the values of `x` and `y`.
8.	**Write the program for the following:**
a.	Open a new file in IDLE ("New Window" in the "File" menu) and save it as geometry.py in the directory where you keep the files you create for this course. Then copy the functions you wrote for calculating volumes and areas in the "Control Flow and Functions" exercise into this file and save it. Now open a new file and save it in the same directory. You should now be able to import your own module like this: `import geometry`

	Try and add `print dir(geometry)` to the file and run it. Now write a function pointyShapeVolume(x, y, squareBase) that calculates the volume of a square pyramid if squareBase is True and of a right circular cone if squareBase is False. x is the length of an edge on a square if squareBase is True and the radius of a circle when squareBase is False. y is the height of the object. First use squareBase to distinguish the cases. Use the circleArea and squareArea from the geometry module to calculate the base areas.
b.	Write a program to implement exception handling.
9.	**Write the program for the following:**
a.	Try to configure the widget with various options like: bg=”red”, family=”times”, size=18
b.	Try to change the widget type and configuration options to experiment with other widget types like Message, Button, Entry, Checkbutton, Radiobutton, Scale etc.
10.	**Design the database applications for the following:**
a.	Design a simple database application that stores the records and retrieve the same.
b.	Design a database application to search the specified record from the database.
c.	Design a database application to that allows the user to add, delete and modify the records.

Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

List of Practical	
1.	**Implement the following:**
a.	Write a program to store the elements in 1-D array and perform the operations like searching, sorting and reversing the elements. [Menu Driven]
b.	Read the two arrays from the user and merge them and display the elements in sorted order.[Menu Driven]
c.	Write a program to perform the Matrix addition, Multiplication and Transpose Operation. [Menu Driven]
2.	**Implement the following for Linked List:**
a.	Write a program to create a single linked list and display the node elements in reverse order.
b.	Write a program to search the elements in the linked list and display the same
c.	Write a program to create double linked list and sort the elements in the linked list.
3.	**Implement the following for Stack:**
a.	Write a program to implement the concept of Stack with Push, Pop, Display and Exit operations.
b.	Write a program to convert an infix expression to postfix and prefix conversion.
c.	Write a program to implement Tower of Hanoi problem.
4.	**Implement the following for Queue:**
a.	Write a program to implement the concept of Queue with Insert, Delete, Display and Exit operations.
b.	Write a program to implement the concept of Circular Queue
c.	Write a program to implement the concept of Deque.
5.	**Implement the following sorting techniques:**
a.	Write a program to implement bubble sort.
b.	Write a program to implement selection sort.
c.	Write a program to implement insertion sort.
6.	**Implement the following data structure techniques:**
a.	Write a program to implement merge sort.
b.	Write a program to search the element using sequential search.
c.	Write a program to search the element using binary search.

7.	**Implement the following data structure techniques:**
a.	Write a program to create the tree and display the elements.
b.	Write a program to construct the binary tree.
c.	Write a program for inorder, postorder and preorder traversal of tree
8.	**Implement the following data structure techniques:**
a.	Write a program to insert the element into maximum heap.
b.	Write a program to insert the element into minimum heap.
9.	**Implement the following data structure techniques:**
a.	Write a program to implement the collision technique.
b.	Write a program to implement the concept of linear probing.
10.	**Implement the following data structure techniques:**
a.	Write a program to generate the adjacency matrix.
b.	Write a program for shortest path diagram.

The practical's will be based on HTML5, CSS, CORDOVA and PhoneGAP API. (Android will be introduced later after they learn Java)

List of Practical	
	Setting up CORDOVA, PhoneGAP Project and environment.
1.	• Creating and building simple "Hello World" App using Cordova • Adding and Using Buttons • Adding and Using Event Listeners
2.	• Creating and Using Functions • Using Events • Handling and Using Back Button
3.	• Installing and Using Plugins • Installing and Using Battery Plugin • Installing and Using Camera Plugin
4.	• Installing and Using Contacts Plugin • Installing and Using Device Plugin • Installing and Using Accelerometer Plugin
5.	• Install and Using Device Orientation plugin • Install and Using Device Orientation plugin • Create and Using Prompt Function
6.	• Installing and Using File Plugin • Installing and Using File Transfer Plugin • Using Download and Upload functions
7.	• Installing and Using Globalization Plugin • Installing and Using Media Plugin • Installing and Using Media Capture Plugin
8.	• Installing and Using Network Information Plugin • Installing and Using Splash Screen Plugin • Installing and Using Vibration Plugin

9.	• Developing Single Page Apps • Developing Multipage Apps • Storing Data Locally in a Cordova App
10.	• Use of sqlite plugin with PhoneGap / apache Cordova • Using Sqlite read/write and search • Populating Cordova SQLite storage with the JQuery API

SEMESTER IV

B. Sc. (Information Technology)		Semester – IV	
Course Name: Core Java		**Course Code: USIT401**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction:** History, architecture and its components, Java Class File, Java Runtime Environment, The Java Virtual Machine, JVM Components, The Java API, java platform, java development kit, Lambda Expressions, Methods References, Type Annotations, Method Parameter Reflection, setting the path environment variable, Java Compiler And Interpreter, java programs, java applications, main(), public, static, void, string[] args, statements, white space, case sensitivity, identifiers, keywords, comments, braces and code blocks, variables, variable name **Data types:** primitive data types, Object Reference Types, Strings, Auto boxing, operators and properties of operators, Arithmetic operators, assignment operators, increment and decrement operator, relational operator, logical operator, bitwise operator, conditional operator.	**12**
II	**Control Flow Statements:** The If…Else If…Else Statement, The Switch…Case Statement **Iterations:** The While Loop, The Do … While Loop, The For Loop, The Foreach Loop, Labeled Statements, The Break And Continue Statements, The Return Statement **Classes:** Types of Classes, Scope Rules, Access Modifier, Instantiating Objects From A Class, Initializing The Class Object And Its Attributes, Class Methods, Accessing A Method, Method Returning A Value, Method's Arguments, Method Overloading, Variable Arguments [Varargs], Constructors, this Instance, super Instance, Characteristics Of Members Of A Class, constants, this instance, static fields of a class, static methods of a class, garbage collection.	**12**
III	**Inheritance:** Derived Class Objects, Inheritance and Access Control, Default Base Class Constructors, this and super keywords. Abstract Classes And Interfaces, Abstract Classes, Abstract Methods, Interfaces, What Is An Interface? How Is An Interface Different From An Abstract Class?, Multiple Inheritance, Default Implementation, Adding New Functionality, Method Implementation, Classes V/s Interfaces, Defining An Interface, Implementing Interfaces. **Packages:** Creating Packages, Default Package, Importing Packages, Using A Package.	**12**

IV	**Enumerations, Arrays:** Two Dimensional Arrays, Multi-Dimensional Arrays, Vectors, Adding Elements To A Vector, Accessing Vector Elements, Searching For Elements In A Vector, Working With The Size of The Vector. **Multithreading:** the thread control methods, thread life cycle, the main thread, creating a thread, extending the thread class. **Exceptions:** Catching Java Exceptions, Catching Run-Time Exceptions, Handling Multiple Exceptions, The finally Clause, The throws Clause **Byte streams:** reading console input, writing console output, reading file, writing file, writing binary data, reading binary data, getting started with character streams, writing file, reading file	**12**
V	**Event Handling:** Delegation Event Model, Events, Event classes, Event listener interfaces, Using delegation event model, adapter classes and inner classes. **Abstract Window Toolkit:** Window Fundamentals, Component, Container, Panel, Window, Frame, Canvas. Components – Labels, Buttons, Check Boxes, Radio Buttons, Choice Menus, Text Fields, Text, Scrolling List, Scrollbars, Panels, Frames **Layouts:** Flow Layout, Grid Layout, Border Layout, Card Layout.	**12**

B. Sc. (Information Technology)		Semester – IV	
Course Name: Introduction to Embedded Systems		**Course Code: USIT402**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction:** Embedded Systems and general purpose computer systems, history, classifications, applications and purpose of embedded systems **Core of embedded systems:** microprocessors and microcontrollers, RISC and CISC controllers, Big endian and Little endian processors, Application specific ICs, Programmable logic devices, COTS, sensors and actuators, communication interface, embedded firmware, other system components. **Characteristics and quality attributes of embedded systems:** Characteristics, operational and non-operational quality attributes.	**12**
II	**Embedded Systems – Application and Domain Specific:** Application specific – washing machine, domain specific - automotive. **Embedded Hardware:** Memory map, i/o map, interrupt map, processor family, external peripherals, memory – RAM , ROM, types of RAM and ROM, memory testing, CRC ,Flash memory. **Peripherals:** Control and Status Registers, Device Driver, Timer Driver - Watchdog Timers.	**12**
III	**The 8051 Microcontrollers:** Microcontrollers and Embedded processors, Overview of 8051 family. 8051 Microcontroller hardware, Input/output pins, Ports, and Circuits, External Memory. **8051 Programming in C:** Data Types and time delay in 8051 C, I/O Programming, Logic operations, Data conversion Programs.	**12**
IV	**Designing Embedded System with 8051 Microcontroller:** Factors to be considered in selecting a controller, why 8051 Microcontroller, Designing with 8051. **Programming embedded systems:** structure of embedded program, infinite loop, compiling, linking and debugging.	**12**
V	**Real Time Operating System (RTOS):** Operating system basics, types of operating systems, Real-Time Characteristics, Selection Process of an RTOS. **Design and Development:** Embedded system development Environment – IDE, types of file generated on cross compilation, disassembler/ de-compiler, simulator, emulator and debugging, embedded product development life-cycle, trends in embedded industry.	**12**

Unit	Details	Lectures
I	**The Mean, Median, Mode, and Other Measures of Central Tendency**: Index, or Subscript, Notation, Summation Notation, Averages, or Measures of Central Tendency ,The Arithmetic Mean , The Weighted Arithmetic Mean ,Properties of the Arithmetic Mean ,The Arithmetic Mean Computed from Grouped Data ,The Median ,The Mode, The Empirical Relation Between the Mean, Median, and Mode, The Geometric Mean G, The Harmonic Mean H ,The Relation Between the Arithmetic, Geometric, and Harmonic Means, The Root Mean Square, Quartiles, Deciles, and Percentiles, Software and Measures of Central Tendency. **The Standard Deviation and Other Measures of Dispersion**: Dispersion, or Variation, The Range, The Mean Deviation, The Semi-Interquartile Range, The 10–90 Percentile Range, The Standard Deviation, The Variance, Short Methods for Computing the Standard Deviation, Properties of the Standard Deviation, Charlie's Check, Sheppard's Correction for Variance, Empirical Relations Between Measures of Dispersion, Absolute and Relative Dispersion; Coefficient of Variation, Standardized Variable; Standard Scores, Software and Measures of Dispersion. **Introduction to R:** Basic syntax, data types, variables, operators, control statements, R-functions, R –Vectors, R – lists, R Arrays.	**12**
II	**Moments, Skewness, and Kurtosis** : Moments , Moments for Grouped Data ,Relations Between Moments , Computation of Moments for Grouped Data, Charlie's Check and Sheppard's Corrections, Moments in Dimensionless Form, Skewness, Kurtosis, Population Moments, Skewness, and Kurtosis, Software Computation of Skewness and Kurtosis. **Elementary Probability Theory**: Definitions of Probability, Conditional Probability; Independent and Dependent Events, Mutually Exclusive Events, Probability Distributions, Mathematical Expectation, Relation Between Population, Sample Mean, and Variance, Combinatorial Analysis, Combinations, Stirling's Approximation to n!, Relation of Probability to Point Set Theory, Euler or Venn Diagrams and Probability. **Elementary Sampling Theory** : Sampling Theory, Random Samples and Random Numbers, Sampling With and Without Replacement,	**12**

	Sampling Distributions, Sampling Distribution of Means, Sampling Distribution of Proportions, Sampling Distributions of Differences and Sums, Standard Errors, Software Demonstration of Elementary Sampling Theory.	
III	**Statistical Estimation Theory**: Estimation of Parameters, Unbiased Estimates, Efficient Estimates, Point Estimates and Interval Estimates; Their Reliability, Confidence-Interval Estimates of Population Parameters, Probable Error. **Statistical Decision Theory:** Statistical Decisions, Statistical Hypotheses, Tests of Hypotheses and Significance, or Decision Rules, Type I and Type II Errors, Level of Significance, Tests Involving Normal Distributions, Two-Tailed and One-Tailed Tests, Special Tests, Operating-Characteristic Curves; the Power of a Test, p-Values for Hypotheses Tests, Control Charts, Tests Involving Sample Differences, Tests Involving Binomial Distributions. **Statistics in R:** mean, median, mode, Normal Distribution , Binomial Distribution, Frequency Distribution in R.	**12**
IV	**Small Sampling Theory**: Small Samples, Student's t Distribution, Confidence Intervals, Tests of Hypotheses and Significance, The Chi-Square Distribution, Confidence Intervals for Sigma , Degrees of Freedom, The F Distribution. **The Chi-Square Test**: Observed and Theoretical Frequencies, Definition of chi-square, Significance Tests, The Chi-Square Test for Goodness of Fit, Contingency Tables, Yates' Correction for Continuity, Simple Formulas for Computing chi-square, Coefficient of Contingency, Correlation of Attributes, Additive Property of chi-square.	**12**
V	**Curve Fitting and the Method of Least Squares:** Relationship Between Variables, Curve Fitting, Equations of Approximating Curves, Freehand Method of Curve Fitting, The Straight Line, The Method of Least Squares, The Least-Squares Line, Nonlinear Relationships, The Least-Squares Parabola, Regression, Applications to Time Series, Problems Involving More Than Two Variables. **Correlation Theory:** Correlation and Regression, Linear Correlation, Measures of Correlation, The Least-Squares Regression Lines, Standard Error of Estimate, Explained and Unexplained Variation, Coefficient of Correlation, Remarks Concerning the Correlation Coefficient, Product-Moment Formula for the Linear Correlation Coefficient, Short Computational Formulas, Regression Lines and the Linear Correlation Coefficient, Correlation of Time Series, Correlation of Attributes, Sampling Theory of Correlation, Sampling Theory of Regression.	**12**

Course Name: Software Engineering		**Course Code: USIT404**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction:** What is software engineering? Software Development Life Cycle, Requirements Analysis, Software Design, Coding, Testing, Maintenance etc. **Software Requirements:** Functional and Non-functional requirements, User Requirements, System Requirements, Interface Specification, Documentation of the software requirements. **Software Processes:** Process and Project, Component Software Processes. **Software Development Process Models.** • Waterfall Model. • Prototyping. • Iterative Development. • Rational Unified Process. • The RAD Model • Time boxing Model. **Agile software development**: Agile methods, Plan-driven and agile development, Extreme programming, Agile project management, Scaling agile methods.	**12**
II	**Socio-technical system:** Essential characteristics of socio technical systems, Emergent System Properties, Systems Engineering, Components of system such as organization, people and computers, Dealing Legacy Systems. **Critical system:** Types of critical system, A simple safety critical system, Dependability of a system, Availability and Reliability, Safety and Security of Software systems. **Requirements Engineering Processes:** Feasibility study, Requirements elicitation and analysis, Requirements Validations, Requirements Management. **System Models:** Models and its types, Context Models, Behavioural Models, Data Models, Object Models, Structured Methods.	**12**
III	**Architectural Design:** Architectural Design Decisions, System Organisation, Modular Decomposition Styles, Control Styles, Reference Architectures.	**12**

	User Interface Design: Need of UI design, Design issues, The UI design Process, User analysis, User Interface Prototyping, Interface Evaluation. **Project Management** Software Project Management, Management activities, Project Planning, Project Scheduling, Risk Management. **Quality Management:** Process and Product Quality, Quality assurance and Standards, Quality Planning, Quality Control, Software Measurement and Metrics.	
IV	**Verification and Validation:** Planning Verification and Validation, Software Inspections, Automated Static Analysis, Verification and Formal Methods. **Software Testing:** System Testing, Component Testing, Test Case Design, Test Automation. **Software Measurement**: Size-Oriented Metrics, Function-Oriented Metrics, Extended Function Point Metrics **Software Cost Estimation:** Software Productivity, Estimation Techniques, Algorithmic Cost Modelling, Project Duration and Staffing	**12**
V	**Process Improvement:** Process and product quality, Process Classification, Process Measurement, Process Analysis and Modeling, Process Change, The CMMI Process Improvement Framework. **Service Oriented Software Engineering:** Services as reusable components, Service Engineering, Software Development with Services. **Software reuse:** The reuse landscape, Application frameworks, Software product lines, COTS product reuse. **Distributed software engineering**: Distributed systems issues, Client–server computing, Architectural patterns for distributed systems, Software as a service	**12**

Unit	Details	Lectures
I	**Introduction to Computer Graphics:** Overview of Computer Graphics, Computer Graphics Application and Software, Description of some graphics devices, Input Devices for Operator Interaction, Active and Passive Graphics Devices, Display Technologies, Storage Tube Graphics Displays, Calligraphic Refresh Graphics Displays, Raster Refresh (Raster-Scan) Graphics Displays, Cathode Ray Tube Basics, Color CRT Raster Scan Basics, Video Basics, The Video Controller, Random-Scan Display Processor, LCD displays. **Scan conversion** – Digital Differential Analyzer (DDA) algorithm, Bresenhams' Line drawing algorithm. Bresenhams' method of Circle drawing, Midpoint Circle Algorithm, Midpoint Ellipse Algorithm, Mid-point criteria, Problems of Aliasing, end-point ordering and clipping lines, Scan Converting Circles, Clipping Lines algorithms– Cyrus-Beck, Cohen-Sutherland and Liang-Barsky, Clipping Polygons, problem with multiple components.	**12**
II	**Two-Dimensional Transformations:** Transformations and Matrices, Transformation Conventions, 2D Transformations, Homogeneous Coordinates and Matrix Representation of 2D Transformations, Translations and Homogeneous Coordinates, Rotation, Reflection, Scaling, Combined Transformation, Transformation of Points, Transformation of The Unit Square, Solid Body Transformations, Rotation About an Arbitrary Point, Reflection through an Arbitrary Line, A Geometric Interpretation of Homogeneous Coordinates, The Window-to-Viewport Transformations. **Three-Dimensional Transformations:** Three-Dimensional Scaling, Three-Dimensional Shearing, Three-Dimensional Rotation, Three-Dimensional Reflection, Three-Dimensional Translation, Multiple Transformation, Rotation about an Arbitrary Axis in Space, Reflection through an Arbitrary Plane, Matrix Representation of 3D Transformations, Composition of 3D Transformations, Affine and Perspective Geometry, Perspective Transformations, Techniques for Generating Perspective Views, Vanishing Points, the Perspective Geometry and camera models, Orthographic Projections, Axonometric Projections, Oblique Projections, View volumes for projections.	**12**

III	**Viewing in 3D** Stages in 3D viewing, Canonical View Volume (CVV), Specifying an Arbitrary 3D View, Examples of 3D Viewing, The Mathematics of Planar Geometric Projections, Combined transformation matrices for projections and viewing, Coordinate Systems and matrices, camera model and viewing pyramid. **Light:** Radiometry, Transport, Equation, Photometry **Color:** Colorimetry, Color Spaces, Chromatic Adaptation, Color Appearance	**12**
IV	**Visible-Surface Determination:** Techniques for efficient Visible-Surface Algorithms, Categories of algorithms, Back face removal, The z-Buffer Algorithm, Scan-line method, Painter's algorithms (depth sorting), Area sub-division method, BSP trees, Visible-Surface Ray Tracing, comparison of the methods. **Plane Curves and Surfaces:** Curve Representation, Nonparametric Curves, Parametric Curves, Parametric Representation of a Circle, Parametric Representation of an Ellipse, Parametric Representation of a Parabola, Parametric Representation of a Hyperbola, Representation of Space Curves, Cubic Splines, , Bezier Curves, B-spline Curves, B-spline Curve Fit, B-spline Curve Subdivision, Parametric Cubic Curves, Quadric Surfaces. Bezier Surfaces.	**12**
V	**Computer Animation:** Principles of Animation, Key framing, Deformations, Character Animation, Physics-Based Animation, Procedural Techniques, Groups of Objects. **Image Manipulation and Storage:** What is an Image? Digital image file formats, Image compression standard – JPEG, Image Processing - Digital image enhancement, contrast stretching, Histogram Equalization, smoothing and median Filtering.	**12**

B. Sc. (Information Technology)		Semester –IV	
Course Name: Core Java Practical		**Course Code: USIT4P1**	
Periods per week **1 Period is 50 minutes**	**Lectures per week**	**3**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**

List of Practical	
1.	**Java Basics**
a.	Write a Java program that takes a number as input and prints its multiplication table upto 10.
b.	Write a Java program to display the following pattern. ***** **** *** ** *
c.	Write a Java program to print the area and perimeter of a circle.
2.	**Use of Operators**
a.	Write a Java program to add two binary numbers.
b.	Write a Java program to convert a decimal number to binary number and vice versa.
c.	Write a Java program to reverse a string.
3.	**Java Data Types**
a.	Write a Java program to count the letters, spaces, numbers and other characters of an input string.
b.	Implement a Java function that calculates the sum of digits for a given char array consisting of the digits '0' to '9'. The function should return the digit sum as a long value.
c.	Find the smallest and largest element from the array
4.	**Methods and Constructors**
a.	Designed a class SortData that contains the method asec() and desc().
b.	Designed a class that demonstrates the use of constructor and destructor.
c.	Write a java program to demonstrate the implementation of abstract class.
5.	**Inheritance**
a.	Write a java program to implement single level inheritance.
b.	Write a java program to implement method overriding
c.	Write a java program to implement multiple inheritance.

6.	**Packages and Arrays**
a.	Create a package, Add the necessary classes and import the package in java class.
b.	Write a java program to add two matrices and print the resultant matrix.
c.	Write a java program for multiplying two matrices and print the product for the same.
7.	**Vectors and Multithreading**
a.	Write a java program to implement the vectors.
b.	Write a java program to implement thread life cycle.
c.	Write a java program to implement multithreading.
8.	**File Handling**
a.	Write a java program to open a file and display the contents in the console window.
b.	Write a java program to copy the contents from one file to other file.
c.	Write a java program to read the student data from user and store it in the file.
9.	**GUI and Exception Handling**
a.	Design a AWT program to print the factorial for an input value.
b.	Design an AWT program to perform various string operations like reverse string, string concatenation etc.
c.	Write a java program to implement exception handling.
10.	**GUI Programming.**
a.	Design an AWT application that contains the interface to add student information and display the same.
b.	Design a calculator based on AWT application.
c.	Design an AWT application to generate result marks sheet.

Books and References:

B. Sc. (Information Technology)		Semester – IV	
Course Name: Introduction to Embedded Systems Practical		**Course Code: USIT4P2**	
Periods per week **1 Period is 50 minutes**	**Lectures per week**	**3**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**

List of Practical	
1.	Design and develop a reprogrammable embedded computer using 8051 microcontrollers and to show the following aspects. a. Programming b. Execution c. Debugging
2. A	Configure timer control registers of 8051 and develop a program to generate given time delay.
B	To demonstrate use of general purpose port i.e. Input/ output port of two controllers for data transfer between them.
3. A	Port I / O: Use one of the four ports of 8051 for O/P interfaced to eight LED's. Simulate binary counter (8 bit) on LED's
B	To interface 8 LEDs at Input-output port and create different patterns.
C	To demonstrate timer working in timer mode and blink LED without using any loop delay routine.
4. A	Serial I / O: Configure 8051 serial port for asynchronous serial communication with serial port of PC exchange text messages to PC and display on PC screen. Signify end of message by carriage return.
B	To demonstrate interfacing of seven-segment LED display and generate counting from 0 to 99 with fixed time delay.
C	Interface 8051 with D/A converter and generate square wave of given frequency on oscilloscope.
5. A	Interface 8051 with D/A converter and generate triangular wave of given frequency on oscilloscope.
B	Using D/A converter generate sine wave on oscilloscope with the help of lookup table stored in data area of 8051.
6.	Interface stepper motor with 8051 and write a program to move the motor through a given angle in clock wise or counter clock wise direction.

7.	Generate traffic signal.
8.	Implement Temperature controller.
9.	Implement Elevator control.
10.	**Using FlashMagic**
A	To demonstrate the procedure for flash programming for reprogrammable embedded system board using FlashMagic
B	To demonstrate the procedure and connections for multiple controllers programming of same type of controller with same source code in one go, using flash magic.

B. Sc. (Information Technology)		Semester – IV	
Course Name: Computer Oriented Statistical Techniques Practical		**Course Code: USIT4P3**	
Periods per week **1 Period is 50 minutes**	**Lectures per week**	**3**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**

List of Practical	
1.	Using R execute the basic commands, array, list and frames.
2.	Create a Matrix using R and Perform the operations addition, inverse, transpose and multiplication operations.
3.	Using R Execute the statistical functions: mean, median, mode, quartiles, range, inter quartile range histogram
4.	Using R import the data from Excel / .CSV file and Perform the above functions.
5.	Using R import the data from Excel / .CSV file and Calculate the standard deviation, variance, co-variance.
6.	Using R import the data from Excel / .CSV file and draw the skewness.
7.	Import the data from Excel / .CSV and perform the hypothetical testing.
8.	Import the data from Excel / .CSV and perform the Chi-squared Test.
9.	Using R perform the binomial and normal distribution on the data.
10.	Perform the Linear Regression using R.
11.	Compute the Least squares means using R.
12.	Compute the Linear Least Square Regression

Books and References:

Periods per week **1 Period is 50 minutes**	**Lectures per week**	**3**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**

List of Practical (To be executed using Star UML or any similar software)	
1.	Study and implementation of class diagrams.
2.	Study and implementation of Use Case Diagrams.
3.	Study and implementation of Entity Relationship Diagrams.
4.	Study and implementation of Sequence Diagrams.
5.	Study and implementation of State Transition Diagrams.
6.	Study and implementation of Data Flow Diagrams.
7.	Study and implementation of Collaboration Diagrams.
8.	Study and implementation of Activity Diagrams.
9.	Study and implementation of Component Diagrams.
10.	Study and implementation of Deployment Diagrams.

B. Sc. (Information Technology)		Semester – IV	
Course Name: Computer Graphics and Animation		**Course Code: USIT4P5**	
Periods per week **1 Period is 50 minutes**	**Lectures per week**	**3**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**

List of Practical	
1.	**Solve the following:**
a.	Study and enlist the basic functions used for graphics in C / C++ / Python language. Give an example for each of them.
b.	Draw a co-ordinate axis at the center of the screen.
2.	**Solve the following:**
a.	Divide your screen into four region, draw circle, rectangle, ellipse and half ellipse in each region with appropriate message.
b.	Draw a simple hut on the screen.
3.	**Draw the following basic shapes in the center of the screen :**
	i. Circle ii. Rectangle iii. Square iv. Concentric Circles v. Ellipse vi. Line
4.	**Solve the following:**
a.	Develop the program for DDA Line drawing algorithm.
b.	Develop the program for Bresenham's Line drawing algorithm.
5.	**Solve the following:**
a.	Develop the program for the mid-point circle drawing algorithm.
b.	Develop the program for the mid-point ellipse drawing algorithm.
6.	**Solve the following:**
a.	Write a program to implement 2D scaling.
b.	Write a program to perform 2D translation
7.	**Solve the following:**
a.	Perform 2D Rotation on a given object.
b.	Program to create a house like figure and perform the following operations. i. Scaling about the origin followed by translation. ii. Scaling with reference to an arbitrary point. iii. Reflect about the line y = mx + c.

8.	**Solve the following:**
a.	Write a program to implement Cohen-Sutherland clipping.
b.	Write a program to implement Liang - Barsky Line Clipping Algorithm
9.	**Solve the following:**
a.	Write a program to fill a circle using Flood Fill Algorithm.
b.	Write a program to fill a circle using Boundary Fill Algorithm.
10.	**Solve the following:**
a.	Develop a simple text screen saver using graphics functions.
b.	Perform smiling face animation using graphic functions.
c.	Draw the moving car on the screen.

USIT607		Cyber Laws	
USIT6P1	Skill Enhancement Course Practical	Project Implementation	2
USIT6P2	Skill Enhancement Course Practical	Security in Computing Practical	2
USIT6P3	Skill Enhancement Course Practical	Business Intelligence Practical	2
USIT6P4	Discipline Specific Elective Practical (Any One)*	Principles of Geographic Information Systems Practical	2
USIT6P5		Enterprise Networking Practical	
USIT6P6	Skill Enhancement Course Practical	Advanced Mobile Programming	2
		Total Credits	**20**

***The choice of Practical course is based on the theory Course. For Semester V, USIT504, USIT505, USIT506 and USIT507, the practical courses are USIT5P4, USIT5P5 USIT5P6, USIT5P7. For Semester VI, USIT604, USIT605 the practical courses are USIT6P4, USIT6P5 respectively. Practical Course USIT6P6 is compulsory.**

SEMESTER V

B. Sc. (Information Technology)		Semester – V	
Course Name: Software Project Management		**Course Code: USIT501**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction to Software Project Management**: Introduction, Why is Software Project Management Important? What is a Project? Software Projects versus Other Types of Project, Contract Management and Technical Project Management, Activities Covered by Software Project Management, Plans, Methods and Methodologies, Some Ways of Categorizing Software Projects, Project Charter, Stakeholders, Setting Objectives, The Business Case, Project Success and Failure, What is Management? Management Control, Project Management Life Cycle, Traditional versus Modern Project Management Practices. **Project Evaluation and Programme Management**: Introduction, Business Case, Project Portfolio Management, Evaluation of Individual Projects, Cost–benefit Evaluation Techniques, Risk Evaluation, Programme Management, Managing the Allocation of Resources within Programmes, Strategic Programme Management, Creating a Programme, Aids to Programme Management, Some Reservations about Programme Management, Benefits Management. **An Overview of Project Planning** : Introduction to Step Wise Project Planning, Step 0: Select Project, Step 1: Identify Project Scope and Objectives, Step 2: Identify Project Infrastructure, Step 3: Analyse Project Characteristics, Step 4: Identify Project Products and Activities, Step 5: Estimate Effort for Each Activity, Step 6: Identify Activity Risks, Step 7: Allocate Resources, Step 8: Review/Publicize Plan, Steps 9 and 10: Execute Plan/Lower Levels of Planning	**12**
II	**Selection of an Appropriate Project Approach:** Introduction, Build or Buy? Choosing Methodologies and Technologies, Software Processes and Process Models, Choice of Process Models, Structure versus Speed of Delivery, The Waterfall Model, The Spiral Model, Software Prototyping, Other Ways of Categorizing Prototypes, Incremental Delivery, Atern/Dynamic Systems Development Method, Rapid Application Development, Agile Methods, Extreme Programming (XP), Scrum, Lean Software Development, Managing Iterative Processes, Selecting the Most Appropriate Process Model. **Software Effort Estimation:** Introduction, Where are the Estimates Done? Problems with Over- and Under-Estimates, The Basis for Software Estimating, Software Effort Estimation Techniques, Bottom-up Estimating, The Top-down Approach and Parametric Models, Expert Judgement, Estimating by Analogy, Albrecht Function Point	**12**

	Analysis, Function Points Mark II, COSMIC Full Function Points, COCOMO II: A Parametric Productivity Model, Cost Estimation, Staffing Pattern, Effect of Schedule Compression, Capers Jones Estimating Rules of Thumb.	
III	**Activity Planning:** Introduction, Objectives of Activity Planning, When to Plan, Project Schedules, Projects and Activities, Sequencing and Scheduling Activities, Network Planning Models, Formulating a Network Model, Adding the Time Dimension, The Forward Pass, Backward Pass, Identifying the Critical Path, Activity Float, Shortening the Project Duration, Identifying Critical Activities, Activity-on-Arrow Networks. **Risk Management**: Introduction, Risk, Categories of Risk, Risk Management Approaches, A Framework for Dealing with Risk, Risk Identification, Risk Assessment, Risk Planning, Risk Management, Evaluating Risks to the Schedule, Boehm's Top 10 Risks and Counter Measures, Applying the PERT Technique, Monte Carlo Simulation, Critical Chain Concepts. **Resource Allocation**: Introduction, Nature of Resources, Identifying Resource Requirements, Scheduling Resources, Creating Critical Paths, Counting the Cost, Being Specific, Publishing the Resource Schedule, Cost Schedules, Scheduling Sequence.	**12**
IV	**Monitoring and Control**: Introduction, Creating the Framework, Collecting the Data, Review, Visualizing Progress, Cost Monitoring, Earned Value Analysis, Prioritizing Monitoring, Getting the Project Back to Target, Change Control, Software Configuration Management (SCM). **Managing Contracts**: Introduction, Types of Contract, Stages in Contract Placement, Typical Terms of a Contract, Contract Management, Acceptance. **Managing People in Software Environments**: Introduction, Understanding Behaviour, Organizational Behaviour: A Background, Selecting the Right Person for the Job, Instruction in the Best Methods, Motivation, The Oldham–Hackman Job Characteristics Model, Stress, Stress Management, Health and Safety, Some Ethical and Professional Concerns.	**12**
V	**Working in Teams:** Introduction, Becoming a Team, Decision Making, Organization and Team Structures, Coordination Dependencies, Dispersed and Virtual Teams, Communication Genres, Communication Plans, Leadership. **Software Quality :** Introduction, The Place of Software Quality in Project Planning, Importance of Software Quality, Defining Software Quality, Software Quality Models, ISO 9126, Product and Process Metrics, Product versus Process Quality Management, Quality Management Systems, Process Capability Models, Techniques to Help Enhance Software Quality, Testing, Software Reliability, Quality Plans.	**12**

	Project Closeout: Introduction, Reasons for Project Closure, Project Closure Process, Performing a Financial Closure, Project Closeout Report.	

Books and References:					
Sr. No.	**Title**	**Author/s**	**Publisher**	**Edition**	**Year**
1.	Software Project Management	Bob Hughes, Mike Cotterell, Rajib Mall	TMH	6th	2018
2.	Project Management and Tools & Technologies – An overview	Shailesh Mehta	SPD	1st	2017
3.	Software Project Management	Walker Royce	Pearson		2005

B. Sc. (Information Technology)		Semester – V	
Course Name: Internet of Things		**Course Code: USIT502**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**The Internet of Things: An Overview** : The Flavour of the Internet of Things, The "Internet" of "Things", The Technology of the Internet of Things, Enchanted Objects, Who is Making the Internet of Things? **Design Principles for Connected Devices:** Calm and Ambient Technology, Magic as Metaphor, Privacy, Keeping Secrets, Whose Data Is It Anyway? Web Thinking for Connected Devices, Small Pieces, Loosely Joined, First-Class Citizens On The Internet, Graceful Degradation, Affordances. **Internet Principles:** Internet Communications: An Overview, IP, TCP, The IP Protocol Suite (TCP/IP), UDP, IP Addresses, DNS, Static IP Address Assignment, Dynamic IP Address Assignment, IPv6, MAC Addresses, TCP and UDP Ports, An Example: HTTP Ports, Other Common Ports, Application Layer Protocols, HTTP, HTTPS: Encrypted HTTP, Other Application Layer Protocols.	**12**
II	**Thinking About Prototyping:** Sketching, Familiarity, Costs versus Ease of Prototyping, Prototypes and Production, Changing Embedded Platform, Physical Prototypes and Mass Personalisation, Climbing into the Cloud, Open Source versus Closed Source, Why Closed? Why Open? Mixing Open and Closed Source, Closed Source for Mass Market Projects, Tapping into the Community. **Prototyping Embedded Devices:** Electronics, Sensors, Actuators, Scaling Up the Electronics, Embedded Computing Basics, Microcontrollers, System-on-Chips, Choosing Your Platform, Arduino, Developing on the Arduino, Some Notes on the Hardware, Openness, Raspberry Pi, Cases and Extension Boards, Developing on the Raspberry Pi, Some Notes on the Hardware, Openness.	**12**
III	**Prototyping the Physical Design:** Preparation, Sketch, Iterate, and Explore, Nondigital Methods, Laser Cutting, Choosing a Laser Cutter, Software, Hinges and Joints, 3D Printing, Types of 3D Printing, Software, CNC Milling, Repurposing/Recycling. **Prototyping Online Components:** Getting Started with an API, Mashing Up APIs, Scraping, Legalities, Writing a New API, Clockodillo, Security, Implementing the API, Using Curl to Test, Going Further, Real-Time Reactions, Polling, Comet, Other Protocols, MQ Telemetry Transport,	**12**

	Extensible Messaging and Presence Protocol, Constrained Application Protocol.	
IV	**Techniques for Writing Embedded Code:** Memory Management, Types of Memory, Making the Most of Your RAM, Performance and Battery Life, Libraries, Debugging, **Business Models:** A Short History of Business Models, Space and Time, From Craft to Mass Production, The Long Tail of the Internet, Learning from History, The Business Model Canvas, Who Is the Business Model For? Models, Make Thing, Sell Thing, Subscriptions, Customisation, Be a Key Resource, Provide Infrastructure: Sensor Networks, Take a Percentage, Funding an Internet of Things Startup, Hobby Projects and Open Source, Venture Capital, Government Funding, Crowdfunding, Lean Startups.	**12**
V	**Moving to Manufacture:** What Are You Producing? Designing Kits, Designing Printed circuit boards, Software Choices, The Design Process, Manufacturing Printed Circuit Boards, Etching Boards, Milling Boards. Assembly, Testing, Mass-Producing the Case and Other Fixtures, Certification, Costs, Scaling Up Software, Deployment, Correctness and Maintainability, Security, Performance, User Community. **Ethics:** Characterizing the Internet of Things, Privacy, Control, Disrupting Control, Crowdsourcing, Environment, Physical Thing, Electronics, Internet Service, Solutions, The Internet of Things as Part of the Solution, Cautious Optimism, The Open Internet of Things Definition.	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Designing the Internet of Things	Adrian McEwen, Hakim Cassimally	WILEY	First	2014
2.	Internet of Things – Architecture and Design	Raj Kamal	McGraw Hill	First	2017
3.	Getting Started with the Internet of Things	Cuno Pfister	O'Reilly	Sixth	2018
4.	Getting Started with Raspberry Pi	Matt Richardson and Shawn Wallace	SPD	Third	2016

B. Sc. (Information Technology)		Semester – V	
Course Name: Advanced Web Programming		**Course Code: USIT503**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introducing .NET**: The .NET Framework, C#, VB, and the .NET Languages, The Common Language Runtime, The .NET Class Library. **The C# Language**: C# Language Basics, Variables and Data Types, Variable Operations, Object-Based Manipulation, Conditional Logic, Loops, Methods. **Types, Objects, and Namespaces**: The Basics About Classes, Building a Basic Class, Value Types and Reference Types, Understanding Namespaces and Assemblies, Advanced Class Programming.	**12**
II	**Web Form Fundamentals**: Writing Code, Using the Code-Behind Class, Adding Event Handlers, Understanding the Anatomy of an ASP.NET Application, Introducing Server Controls, Using the Page Class, Using Application Events, Configuring an ASP.NET Application. **Form Controls**: Stepping Up to Web Controls, Web Control Classes, List Controls, Table Controls, Web Control Events and AutoPostBack, Validation, Understanding Validation, Using the Validation Controls, Rich Controls, The Calendar, The AdRotator, Pages with Multiple Views, User Controls and Graphics, User Controls, Dynamic Graphics, The Chart Control, Website Navigation: Site Maps, URL Mapping and Routing, The SiteMapPath Control, The TreeView Control, The Menu Control.	**12**
III	**Error Handling, Logging, and Tracing** : Avoiding Common Errors, Understanding Exception Handling, Handling Exceptions, Throwing Your Own Exceptions, Using Page Tracing **State Management** : Understanding the Problem of State, Using View State, Transferring Information Between Pages, Using Cookies, Managing Session State, Configuring Session State, Using Application State, Comparing State Management Options **Styles, Themes, and Master Pages** : Styles, Themes, Master Page Basics, Advanced Master Pages,	**12**
IV	**ADO.NET Fundamentals**: Understanding Databases, Configuring Your Database, Understanding SQL Basics, Understanding the Data Provider Model, Using Direct Data Access, Using Disconnected Data Access. **Data Binding**: Introducing Data Binding, Using Single-Value Data Binding, Using Repeated-Value Data Binding, Working with Data Source Controls,	**12**

	The Data Controls: The GridView, Formatting the GridView, Selecting a GridView Row, Editing with the GridView, Sorting and Paging the GridView, Using GridView Templates, The DetailsView and FormView	
V	**XML**: XML Explained, The XML Classes, XML Validation, XML Display and Transforms. **Security Fundamentals**: Understanding Security Requirements, Authentication and Authorization, Forms Authentication, Windows Authentication. **ASP.NET AJAX**: Understanding Ajax, Using Partial Refreshes, Using Progress Notification, Implementing Timed Refreshes, Working with the ASP.NET AJAX Control Toolkit.	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Beginning ASP.NET 4.5 in C#	Matthew MacDonald	Apress		2012
2.	C# 2015	Anne Bohem and Joel Murach	Murach	Third	2016
3.	Murach's ASP.NET 4.6 Web Programming in C#2015	Mary Delamater and Anne Bohem	SPD	Sixth	2016
4.	ASP.NET 4.0 programming	J. Kanjilal	Tata McGraw-Hill		2011
5.	Programming ASP.NET	D.Esposito	Microsoft Press (Dreamtech)		2011
6.	Beginning Visual C# 2010	K. Watson, C. Nagel, J.H Padderson, J.D. Reid, M.Skinner	Wrox (Wiley)		2010

B. Sc. (Information Technology)		Semester – V	
Course Name: Artificial Intelligence		**Course Code: USIT504 (Elective I)**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction:** What is Artificial Intelligence? Foundations of AI, history, the state of art AI today. **Intelligent Agents:** agents and environment, good behavior, nature of environment, the structure of agents.	**12**
II	**Solving Problems by Searching:** Problem solving agents, examples problems, searching for solutions, uninformed search, informed search strategies, heuristic functions. **Beyond Classical Search:** local search algorithms, searching with non-deterministic action, searching with partial observations, online search agents and unknown environments.	**12**
III	**Adversarial Search:** Games, optimal decisions in games, alpha-beta pruning, stochastic games, partially observable games, state-of-the-are game programs. **Logical Agents:** Knowledge base agents, The Wumpus world, logic, propositional logic, propositional theorem proving, effective propositional model checking, agents based on propositional logic.	**12**
IV	**First Order Logic:** Syntax and semantics, using First Order Logic, Knowledge engineering in First Order Logic. **Inference in First Order Logic:** propositional vs. First Order, unification and lifting, forward and backward chaining, resolution.	**12**
V	**Planning:** Definition of Classical Planning, Algorithms for planning as state space search, planning graphs, other classical planning approaches, analysis of planning approaches, Time, Schedules and resources, hierarchical planning, Planning and Acting in Nondeterministic Domains, multiagent planning, **Knowledge Representation:** Categories and Objects, events, mental events and objects, reasoning systems for categories, reasoning with default information, Internet shopping world	**12**

Books and References:

2.	A First Course in Artificial Intelligence	Deepak Khemani	TMH	First	2017
3.	Artificial Intelligence: A Rational Approach	Rahul Deva	Shroff publishers	1st	2018
4.	Artificial Intelligence	Elaine Rich, Kevin Knight and Shivashankar Nair	TMH	3rd	2009
5.	Artificial Intelligence & Soft Computing for Beginners	Anandita Das Bhattacharjee	SPD	1st	2013

B. Sc. (Information Technology)		Semester – V	
Course Name: Linux System Administration		**Course Code: USIT505 (Elective I)**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction to Red Hat Enterprise Linux:** Linux, Open Source and Red Hat, Origins of Linux, Distributions, Duties of Linux System Administrator. **Command Line:** Working with the Bash Shell, Getting the Best of Bash, Useful Bash Key Sequences, Working with Bash History, Performing Basic File System Management Tasks, Working with Directories, Piping and Redirection, Finding Files **System Administration Tasks:** Performing Job Management Tasks, System and Process Monitoring and Management, Managing Processes with ps, Sending Signals to Processes with the kill Command, Using top to Show Current System Activity, Managing Process Niceness, Scheduling Jobs, Mounting Devices, Working with Links, Creating Backups, Managing Printers, Setting Up System Logging, Setting Up Rsyslog, Common Log Files, Setting Up Logrotate **Managing Software:** Understanding RPM, Understanding Meta Package Handlers, Creating Your Own Repositories, Managing Repositories, Installing Software with Yum, Querying Software, Extracting Files from RPM Packages	**12**
II	**Configuring and Managing Storage:** Understanding Partitions and Logical Volumes, Creating Partitions, Creating File Systems, File Systems Overview, Creating File Systems, Changing File System Properties, Checking the File System Integrity, Mounting File Systems Automatically Through fstab, Working with Logical Volumes, Creating Logical Volumes, Resizing Logical Volumes, Working with Snapshots, Replacing Failing Storage Devices, Creating Swap Space, Working with Encrypted Volumes **Connecting to the Network:** Understanding NetworkManager, Working with Services and Runlevels, Configuring the Network with NetworkManager, Working with system-config-network, NetworkManager Configuration Files, Network Service Scripts, Networking from the Command Line, Troubleshooting Networking, Setting Up IPv6, Configuring SSH, Enabling the SSH Server, Using the SSH Client, Using PuTTY on Windows Machines, Configuring Key-Based SSH Authentication, Using Graphical Applications with SSH, Using SSH Port Forwarding, Configuring VNC Server Access	**12**

	Working with Users, Groups, and Permissions: Managing Users and Groups, Commands for User Management, Managing Passwords, Modifying and Deleting User Accounts, Configuration Files, Creating Groups, Using Graphical Tools for User, and Group Management, Using External Authentication Sources, the Authentication Process, sssd, nsswitch, Pluggable Authentication Modules, Managing Permissions, the Role of Ownership, Basic Permissions: Read, Write, and Execute, Advanced Permissions, Working with Access Control Lists, Setting Default Permissions with umask, Working with Attributes	
III	**Securing Server with iptables:** Understanding Firewalls, Setting Up a Firewall with system-config-firewall, Allowing Services, Trusted Interfaces, Masquerading, Configuration Files, Setting Up a Firewall with iptables, Tables, Chains, and Rules, Composition of Rule, Configuration Example, Advanced iptables Configuration, Configuring Logging, The Limit Module, Configuring NAT **Setting Up Cryptographic Services:** Introducing SSL, Proof of Authenticity: the Certificate Authority, Managing Certificates with openssl, Creating a Signing Request, Working with GNU Privacy Guard, Creating GPG Keys, Key Transfer, Managing GPG Keys, Encrypting Files with GPG, GPG Signing, Signing RPM Files **Configuring Server for File Sharing:** What is NFS? Advantages and Disadvantages of NFS, Configuring NFS4, Setting Up NFSv4, Mounting an NFS Share, Making NFS Mounts Persistent, Configuring Automount, Configuring Samba, Setting Up a Samba File Server, Samba Advanced Authentication Options, Accessing Samba Shares, Offering FTP Services.	**12**
IV	**Configuring DNS and DHCP:** Introduction to DNS, The DNS Hierarchy, DNS Server Types, The DNS Lookup Process, DNS Zone Types, Setting Up a DNS Server, Setting Up a Cache-Only Name Server, Setting Up a Primary Name Server, Setting Up a Secondary Name Server, Understanding DHCP, Setting Up a DHCP Server **Setting Up a Mail Server:** Using the Message Transfer Agent, the Mail Delivery Agent, the Mail User Agent, Setting Up Postfix as an SMTP Server, Working with Mutt, Basic Configuration, Internet Configuration, Configuring Dovecot for POP and IMAP **Configuring Apache on Red Hat Enterprise Linux:** Configuring the Apache Web Server, Creating a Basic Website, Understanding the Apache Configuration Files, Apache Log Files, Working with Virtual Hosts, Securing the Web Server with TLS Certificates, Configuring Authentication, Setting Up Authentication with .htpasswd, Configuring LDAP Authentication, Setting Up MySQL	**12**

V	**Introducing Bash Shell Scripting:** Introduction, Elements of a Good Shell Script, Executing the Script, Working with Variables and Input, Understanding Variables, Variables, Subshells, and Sourcing, Working with Script Arguments, Asking for Input, Using Command Substitution, Substitution Operators, Changing Variable Content with Pattern Matching, Performing Calculations, Using Control Structures, Using if...then...else, Using case, Using while, Using until, Using for, Configuring booting with GRUB. **High-Availability Clustering:** High-Availability Clustering, The Workings of High Availability, High-Availability Requirements, Red Hat High-Availability Add-on Software, Components, Configuring Cluster-Based Services, Setting Up Bonding, Setting Up Shared Storage, Installing the Red Hat High Availability Add-On, Building the Initial State of the Cluster, Configuring Additional Cluster Properties, Configuring a Quorum Disk, Setting Up Fencing, Creating Resources and Services, Troubleshooting a Nonoperational Cluster, Configuring GFS2 File Systems **Setting Up an Installation Server:** Configuring a Network Server as an Installation Server, Setting Up a TFTP and DHCP Server for PXE Boot, Installing the TFTP Server, Configuring DHCP for PXE Boot, Creating the TFTP PXE Server Content, Creating a Kickstart File, Using a Kickstart File to Perform an Automated, Installation, Modifying the Kickstart File with, system-config-kickstart, Making Manual Modifications to the Kickstart File	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Red Hat Enterprise Linux 6 Administration	Sander van Vugt	John Wiley and Sons		2013
2.	Red hat Linux Networking and System Administration	Terry Collings and Kurt Wall	Wiley	3rd	
3.	Linux Administration: A Beginner's Guide	Wale Soyinka	TMH	Fifth Edition	

B. Sc. (Information Technology)		Semester – V	
Course Name: Enterprise Java		**Course Code: USIT506 (Elective II)**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Understanding Java EE:** What is an Enterprise Application? What is java enterprise edition? Java EE Technologies, Java EE evolution, Glassfish server **Java EE Architecture, Server and Containers:** Types of System Architecture, Java EE Server, Java EE Containers. **Introduction to Java Servlets:** The Need for Dynamic Content, Java Servlet Technology, Why Servlets? What can Servlets do? **Servlet API and Lifecycle:** Java Servlet API, The Servlet Skeleton, The Servlet Life Cycle, A Simple Welcome Servlet **Working With Servlets:** Getting Started, Using Annotations Instead of Deployment Descriptor. **Working with Databases:** What Is JDBC? JDBC Architecture, Accessing Database, The Servlet GUI and Database Example.	**12**
II	**Request Dispatcher:** Resquestdispatcher Interface, Methods of Requestdispatcher, Requestdispatcher Application. **COOKIES:** Kinds Of Cookies, Where Cookies Are Used? Creating Cookies Using Servlet, Dynamically Changing The Colors Of A Page **SESSION:** What Are Sessions? Lifecycle Of Http Session, Session Tracking With Servlet API, A Servlet Session Example **Working With Files:** Uploading Files, Creating an Upload File Application, Downloading Files, Creating a Download File Application. **Working With Non-Blocking I/O:** Creating a Non-Blocking Read Application, Creating The Web Application, Creating Java Class, Creating Servlets, Retrieving The File, Creating index.jsp	**12**
III	**Introduction To Java Server Pages:** Why use Java Server Pages? Disadvantages Of JSP, JSP v\s Servlets, Life Cycle of a JSP Page, How does a JSP function? How does JSP execute? About Java Server Pages **Getting Started With Java Server Pages:** Comments, JSP Document, JSP Elements, JSP GUI Example. **Action Elements:** Including other Files, Forwarding JSP Page to Another Page, Passing Parameters for other Actions, Loading a Javabean. **Implicit Objects, Scope And El Expressions:** Implicit Objects, Character Quoting Conventions, Unified Expression Language [Unified El], Expression Language.	**12**

	Java Server Pages Standard Tag Libraries: What is wrong in using JSP Scriptlet Tags? How JSTL Fixes JSP Scriptlet's Shortcomings? Disadvantages Of JSTL, Tag Libraries.	
IV	**Introduction To Enterprise Javabeans:** Enterprise Bean Architecture, Benefits of Enterprise Bean, Types of Enterprise Bean, Accessing Enterprise Beans, Enterprise Bean Application, Packaging Enterprise Beans **Working With Session Beans:** When to use Session Beans? Types of Session Beans, Remote and Local Interfaces, Accessing Interfaces, Lifecycle of Enterprise Beans, Packaging Enterprise Beans, Example of Stateful Session Bean, Example of Stateless Session Bean, Example of Singleton Session Beans. **Working with Message Driven Beans:** Lifecycle of a Message Driven Bean, Uses of Message Driven Beans, The Message Driven Beans Example. **Interceptors:** Request And Interceptor, Defining An Interceptor, AroundInvoke Method, Applying Interceptor, Adding An Interceptor To An Enterprise Bean, Build and Run the Web Application. **Java Naming and Directory Interface**: What is Naming Service? What is Directory Service? What is Java Naming and Directory interface? Basic Lookup, JNDI Namespace in Java EE, Resources and JNDI, Datasource Resource Definition in Java EE.	**12**
V	**Persistence, Object/Relational Mapping And JPA:** What is Persistence? Persistence in Java, Current Persistence Standards in Java, Why another Persistence Standards? Object/Relational Mapping, **Introduction to Java Persistence API:** The Java Persistence API, JPA, ORM, Database and the Application, Architecture of JPA, How JPA Works? JPA Specifications. **Writing JPA Application:** Application Requirement Specifications, Software Requirements, The Application Development Approach, Creating Database And Tables in Mysql, Creating a Web Application, Adding the Required Library Files, Creating a Javabean Class, Creating Persistence Unit [Persistence.Xml], Creating JSPS, The JPA Application Structure, Running The JPA Application. **Introduction to Hibernate:** What is Hibernate? Why Hibernate? Hibernate, Database and The Application, Components of Hibernate, Architecture of Hibernate, How Hibernate Works? **Writing Hibernate Application:** Application Requirement Specifications, Software Requirements, The Application Development Approach, Creating Database and Tables in Mysql, Creating a Web Application, Adding The Required Library Files, Creating a Javabean Class, Creating Hibernate Configuration File, Adding a Mapping Class, Creating JSPS, Running The Hibernate Application.	**12**

Books and References:

3.	Advanced Java Programming	Uttam Kumar Roy	Oxford Press		2015

B. Sc. (Information Technology)		Semester – V	
Course Name: Next Generation Technologies		Course Code: USIT507 (Elective II)	
Periods per week (1 Period is 50 minutes),		5	
Credits		2	
		Hours	Marks
Evaluation System	Theory Examination	2½	75
	Internal	--	25

Unit	Details	Lectures
I	**Big Data:** Getting Started, Big Data, Facts About Big Data, Big Data Sources, Three Vs of Big Data, Volume, Variety, Velocity, Usage of Big Data, Visibility, Discover and Analyze Information, Segmentation and Customizations, Aiding Decision Making, Innovation, Big Data Challenges, Policies and Procedures, Access to Data, Technology and Techniques, Legacy Systems and Big Data, Structure of Big Data, Data Storage, Data Processing, Big Data Technologies **NoSQL:** SQL, NoSQL, Definition, A Brief History of NoSQL, ACID vs. BASE, CAP Theorem (Brewer's Theorem), The BASE, NoSQL Advantages and Disadvantages, Advantages of NoSQL, Disadvantages of NoSQL, SQL vs. NoSQL Databases, Categories of NoSQL Databases **Introducing MongoDB:** History, MongoDB Design Philosophy, Speed, Scalability, and Agility, Non-Relational Approach, JSON-Based Document Store, Performance vs. Features, Running the Database Anywhere, SQL Comparison	**12**
II	**The MongoDB Data Model:** The Data Model, JSON and BSON, The Identifier (_id), Capped Collection, Polymorphic Schemas, Object-Oriented Programming, Schema Evolution **Using MongoDB Shell:** Basic Querying, Create and Insert, Explicitly Creating Collections, Inserting Documents Using Loop, Inserting by Explicitly Specifying _id, Update, Delete, Read, Using Indexes, Stepping Beyond the Basics, Using Conditional Operators, Regular Expressions, MapReduce, aggregate(), Designing an Application's Data Model, Relational Data Modeling and Normalization, MongoDB Document Data Model Approach **MongoDB Architecture:** Core Processes, mongod, mongo, mongos, MongoDB Tools, Standalone Deployment, Replication, Master/Slave Replication, Replica Set, Implementing Advanced Clustering with Replica Sets, Sharding, Sharding Components, Data Distribution Process, Data Balancing Process, Operations, Implementing Sharding, Controlling Collection Distribution (Tag-Based Sharding), Points to	**12**

	Remember When Importing Data in a ShardedEnvironment, Monitoring for Sharding, Monitoring the Config Servers, Production Cluster Architecture, Scenario 1, Scenario 2, Scenario 3, Scenario 4	
III	**MongoDB Storage Engine:** Data Storage Engine, Data File (Relevant for MMAPv1), Namespace (.ns File), Data File (Relevant for WiredTiger), Reads and Writes, How Data Is Written Using Journaling, GridFS – The MongoDB File System, The Rationale of GridFS, GridFSunder the Hood, Using GridFS, Indexing, Types of Indexes, Behaviors and Limitations **MongoDB Use Cases:** Use Case 1 -Performance Monitoring, Schema Design, Operations, Sharding, Managing the Data, Use Case 2 – Social Networking, Schema Design, Operations, Sharding **MongoDB Limitations:** MongoDB Space Is Too Large (Applicable for MMAPv1), Memory Issues (Applicable for Storage Engine MMAPv1), 32-bit vs. 64-bit, BSON Documents, Namespaces Limits, Indexes Limit, Capped Collections Limit - Maximum Number of Documents in a Capped Collection, Sharding Limitations, Shard Early to Avoid Any Issues, Shard Key Can't Be Updated, Shard Collection Limit, Select the Correct Shard Key, Security Limitations, No Authentication by Default, Traffi c to and from MongoDB Isn't Encrypted, Write and Read Limitations, Case-Sensitive Queries, Type-Sensitive Fields, No JOIN, Transactions, MongoDB Not Applicable Range **MongoDB Best Practices:** Deployment, Hardware Suggestions from the MongoDB Site, Few Points to be Noted, Coding, Application Response Time Optimization, Data Safety, Administration, Replication Lag, Sharding, Monitoring	**12**
IV	**The End of Disk? SSD and In-Memory Databases:** The End of Disk?, Solid State Disk, The Economics of Disk, SSD-Enabled Databases, In-Memory Databases, TimesTen, Redis, SAP HANA, VoltDB, Oracle 12c "in-Memory Database, Berkeley Analytics Data Stack and Spark, Spark Architecture **jQuery:** Introduction, Traversing the DOM, DOM Manipulation with jQuery, Events, Ajax with jQuery, jQuery Plug-ins, jQuery Image Slider	**12**
V	**JSON:** Introduction, JSON Grammar, JSON Values, JSON Tokens, Syntax, JSON vs XML, Data Types, Objects, Arrays, Creating JSON, JSON Object, Parsing JSON, Persisting JSON, Data Interchange, JSON PHP, JSON HTML, JSONP	**12**

4.	Beginning JSON	Ben Smith	Apress		

B. Sc. (Information Technology)		Semester – V	
Course Name: Project Dissertation		**Course Code: USIT5P1**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

The details are given in Appendix – I

B. Sc. (Information Technology)		Semester – V	
Course Name: Internet of Things Practical		Course Code: USIT5P2	
Periods per week (1 Period is 50 minutes)		3	
Credits		2	
		Hours	Marks
Evaluation System	Practical Examination	2½	50
	Internal	--	--

Practical No	Details
0	Starting Raspbian OS, Familiarising with Raspberry Pi Components and interface, Connecting to ethernet, Monitor, USB.
1	Displaying different LED patterns with Raspberry Pi.
2	Displaying Time over 4-Digit 7-Segment Display using Raspberry Pi
3	Raspberry Pi Based Oscilloscope
4	Controlling Raspberry Pi with WhatsApp.
5	Setting up Wireless Access Point using Raspberry Pi
6	Fingerprint Sensor interfacing with Raspberry Pi
7	Raspberry Pi GPS Module Interfacing
8	IoT based Web Controlled Home Automation using Raspberry Pi
9	Visitor Monitoring with Raspberry Pi and Pi Camera
10	Interfacing Raspberry Pi with RFID.
11	Building Google Assistant with Raspberry Pi.
12	Installing Windows 10 IoT Core on Raspberry Pi

Raspberry Pi Kits and components should be made available in the ratio of 1 kit : 3 students minimum.

B. Sc. (Information Technology)		Semester – V	
Course Name: Advanced Web Programming Practical		**Course Code: USIT5P3**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

List of Practical	
1.	**Working with basic C# and ASP .NET**
a.	Create an application that obtains four int values from the user and displays the product.
b.	Create an application to demonstrate string operations.
c.	Create an application that receives the (Student Id, Student Name, Course Name, Date of Birth) information from a set of students. The application should also display the information of all the students once the data entered.
	Create an application to demonstrate following operations i. Generate Fibonacci series. ii. Test for prime numbers. iii. Test for vowels. iv. Use of foreach loop with arrays v. Reverse a number and find sum of digits of a number.
2.	**Working with Object Oriented C# and ASP .NET**
a.	Create simple application to perform following operations i. Finding factorial Value ii. Money Conversion iii. Quadratic Equation iv. Temperature Conversion
b.	Create simple application to demonstrate use of following concepts i. Function Overloading ii. Inheritance (all types) iii. Constructor overloading iv. Interfaces
c.	Create simple application to demonstrate use of following concepts i. Using Delegates and events ii. Exception handling
3.	**Working with Web Forms and Controls**
a.	Create a simple web page with various sever controls to demonstrate setting and use of their properties. (Example : AutoPostBack)
b.	Demonstrate the use of Calendar control to perform following operations. a) Display messages in a calendar control b) Display vacation in a calendar control c) Selected day in a calendar control using style d) Difference between two calendar dates
c.	Demonstrate the use of Treeview control perform following operations. a) Treeview control and datalist b) Treeview operations
4.	**Working with Form Controls**
a.	Create a Registration form to demonstrate use of various Validation controls.
b.	Create Web Form to demonstrate use of Adrotator Control.
c.	Create Web Form to demonstrate use User Controls.

5.	**Working with Navigation, Beautification and Master page.**
a.	Create Web Form to demonstrate use of Website Navigation controls and Site Map.
b.	Create a web application to demonstrate use of Master Page with applying Styles and Themes for page beautification.
c.	Create a web application to demonstrate various states of ASP.NET Pages.
6.	**Working with Database**
a.	Create a web application bind data in a multiline textbox by querying in another textbox.
b.	Create a web application to display records by using database.
c.	Demonstrate the use of Datalist link control.
7.	**Working with Database**
a.	Create a web application to display Databinding using dropdownlist control.
b.	Create a web application for to display the phone no of an author using database.
c.	Create a web application for inserting and deleting record from a database. (Using Execute-Non Query).
8.	**Working with data controls**
a.	Create a web application to demonstrate various uses and properties of SqlDataSource.
b.	Create a web application to demonstrate data binding using DetailsView and FormView Control.
c.	Create a web application to display Using Disconnected Data Access and Databinding using GridView.
9.	**Working with GridView control**
a.	Create a web application to demonstrate use of GridView control template and GridView hyperlink.
b.	Create a web application to demonstrate use of GridView button column and GridView events.
c.	Create a web application to demonstrate GridView paging and Creating own table format using GridView.
10.	**Working with AJAX and XML**
a.	Create a web application to demonstrate reading and writing operation with XML.
b.	Create a web application to demonstrate Form Security and Windows Security with proper Authentication and Authorization properties.
c.	Create a web application to demonstrate use of various Ajax controls.
11.	**Programs to create and use DLL**

B. Sc. (Information Technology)		Semester – V	
Course Name: Artificial Intelligence Practical		**Course Code: USIT5P4 (Elective I)**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Practical No		Details
1	a	Write a program to implement depth first search algorithm.
	b	Write a program to implement breadth first search algorithm.
2	a	Write a program to simulate 4-Queen / N-Queen problem.
	b	Write a program to solve tower of Hanoi problem.
3	a	Write a program to implement alpha beta search.
	b	Write a program for Hill climbing problem.
4	a	Write a program to implement A* algorithm.
	b	Write a program to implement AO* algorithm.
5	a	Write a program to solve water jug problem.
	b	Design the simulation of tic – tac – toe game using min-max algorithm.
6	a	Write a program to solve Missionaries and Cannibals problem.
	b	Design an application to simulate number puzzle problem.
7	a	Write a program to shuffle Deck of cards.
	b	Solve traveling salesman problem using artificial intelligence technique.
8	a	Solve the block of World problem.
	b	Solve constraint satisfaction problem
9	a	Derive the expressions based on Associative law
	b	Derive the expressions based on Distributive law
10	a	Write a program to derive the predicate. (for e.g.: Sachin is batsman , batsman is cricketer) - > Sachin is Cricketer.
	b	Write a program which contains three predicates: male, female, parent. Make rules for following family relations: father, mother, grandfather,grandmother, brother, sister, uncle, aunt, nephew and niece, cousin. Question: i. Draw Family Tree. ii. Define: Clauses, Facts, Predicates and Rules with conjunction and disjunction

The practicals can be implemented in C / C++ / Java/ Python / R /Prolog / LISP or any other language.

B. Sc. (Information Technology)		Semester – V	
Course Name: Linux System Administration		**Course Code: USIT5P5 (Elective I)**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Practical No	Details
0	**Installation of RHEL 6.X**
1	**Graphical User Interface and Command Line Interface and Processes**
a	Exploring the Graphical Desktop
b	The Command Line Interface
c	Managing Processes
2	**Storage Devices and Links, Backup and Repository**
b	Working with Storage Devices and Links
a	Making a Backup
b	Creating a Repository
3	**Working with RPMsm Storage and Networking**
a	Using Query Options
b	Extracting Files From RPMs
c	Configuring and Managing Storage
d	Connecting to the Network
4	**Working with Users, Groups, and Permissions**
5	**Firewall and Cryptographic services**
a	Securing Server with iptables
b	Setting Up Cryptographic Services
6	**Configuring Server for File Sharing**
a	Configuring NFS Server and Client
b	Configuring Samba
c	Configuring FTP
7	**DNS, DHCP and Mail Server**
a	Configuring DNS
b	Configuring DHCP
c	Setting Up a Mail Server

8	**Web Server**
a	Configuring Apache on Red Hat Enterprise Linux
b	Writing a Script to Monitor Activity on the Apache Web Server
c	Using the select Command
9	**Shell Scripts and High-Availability Clustering**
a	Writing Shell Scripts
b	Configuring Booting with GRUB
c	Configuring High Availability Clustering
10	**Setting Up an Installation Server**
a	Configuring Network Server as an Installation Server
b	Setting Up a TFTP and DHCP Server for PXE Boot

B. Sc. (Information Technology)		Semester – V	
Course Name: Enterprise Java		**Course Code: USIT5P6 (Elective II)**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

List of Practical	
1.	**Implement the following Simple Servlet applications.**
a.	Create a simple calculator application using servlet.
b.	Create a servlet for a login page. If the username and password are correct then it says message "Hello <username>" else a message "login failed"
c.	Create a registration servlet in Java using JDBC. Accept the details such as Username, Password, Email, and Country from the user using HTML Form and store the registration details in the database.
2.	**Implement the following Servlet applications with Cookies and Sessions.**
a.	Using Request Dispatcher Interface create a Servlet which will validate the password entered by the user, if the user has entered "Servlet" as password, then he will be forwarded to Welcome Servlet else the user will stay on the index.html page and an error message will be displayed.
b.	Create a servlet that uses Cookies to store the number of times a user has visited servlet.
c.	Create a servlet demonstrating the use of session creation and destruction. Also check whether the user has visited this page first time or has visited earlier also using sessions.
3.	**Implement the Servlet IO and File applications.**
a.	Create a Servlet application to upload and download a file.
b.	Develop Simple Servlet Question Answer Application using Database.
c.	Create simple Servlet application to demonstrate Non-Blocking Read Operation.
4.	**Implement the following JSP applications.**
a.	Develop a simple JSP application to display values obtained from the use of intrinsic objects of various types.
b.	Develop a simple JSP application to pass values from one page to another with validations. (Name-txt, age-txt, hobbies-checkbox, email-txt, gender-radio button).
c.	Create a registration and login JSP application to register and authenticate the user based on username and password using JDBC.
5.	**Implement the following JSP JSTL and EL Applications.**
a.	Create an html page with fields, eno, name, age, desg, salary. Now on submit this data to a JSP page which will update the employee table of database with matching eno.
b.	Create a JSP page to demonstrate the use of Expression language.
c.	Create a JSP application to demonstrate the use of JSTL.

6.	**Implement the following EJB Applications.**
a.	Create a Currency Converter application using EJB.
b.	Develop a Simple Room Reservation System Application Using EJB.
c.	Develop simple shopping cart application using EJB [Stateful Session Bean].
7.	**Implement the following EJB applications with different types of Beans.**
a.	Develop simple EJB application to demonstrate Servlet Hit count using Singleton Session Beans.
b.	Develop simple visitor Statistics application using Message Driven Bean [Stateless Session Bean].
c.	Develop simple Marks Entry Application to demonstrate accessing Database using EJB.
8.	**Implement the following JPA applications.**
a.	Develop a simple Inventory Application Using JPA.
b.	Develop a Guestbook Application Using JPA.
c.	Create simple JPA application to store and retrieve Book details.
9.	**Implement the following JPA applications with ORM and Hibernate.**
a.	Develop a JPA Application to demonstrate use of ORM associations.
b.	Develop a Hibernate application to store Feedback of Website Visitor in MySQL Database.
c.	Develop a Hibernate application to store and retrieve employee details in MySQL Database.
10.	**Implement the following Hibernate applications.**
a.	Develop an application to demonstrate Hibernate One- To -One Mapping Using Annotation.
b.	Develop Hibernate application to enter and retrieve course details with ORM Mapping.
c.	Develop a five page web application site using any two or three Java EE Technologies.

B. Sc. (Information Technology)		Semester – V	
Course Name: Next Generation Technologies Practical		**Course Code: USIT5P7 (Elective II)**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Practical No	Details
1	**MongoDB Basics**
a	Write a MongoDB query to create and drop database.
b	Write a MongoDB query to create, display and drop collection
c	Write a MongoDB query to insert, query, update and delete a document.
2	**Simple Queries with MongoDB**
3	**Implementing Aggregation**
a	Write a MongoDB query to use sum, avg, min and max expression.
b	Write a MongoDB query to use push and addToSet expression.
c	Write a MongoDB query to use first and last expression.
4	**Replication, Backup and Restore**
a	Write a MongoDB query to create Replica of existing database.
b	Write a MongoDB query to create a backup of existing database.
c	Write a MongoDB query to restore database from the backup.
5	**Java and MongoDB**
a	Connecting Java with MongoDB and inserting, retrieving, updating and deleting.
6	**PHP and MongoDB**
a	Connecting PHP with MongoDB and inserting, retrieving, updating and deleting.
7	**Python and MongoDB**
a	Connecting Python with MongoDB and inserting, retrieving, updating and deleting.
8	**Programs on Basic jQuery**
a	jQuery Basic, jQuery Events
b	jQuery Selectors, jQuery Hide and Show effects
c	jQuery fading effects, jQuery Sliding effects

9	**jQuery Advanced**
a	jQuery Animation effects, jQuery Chaining
b	jQuery Callback, jQuery Get and Set Contents
c	jQuery Insert Content, jQuery Remove Elements and Attribute
10	**JSON**
a	Creating JSON
b	Parsing JSON
c	Persisting JSON
11	**Create a JSON file and import it to MongoDB**
a	Export MongoDB to JSON.
b	Write a MongoDB query to delete JSON object from MongoDB

SEMESTER VI

B. Sc. (Information Technology)		Semester – VI	
Course Name: Software Quality Assurance		**Course Code: USIT601**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Introduction to Quality:** Historical Perspective of Quality, What is Quality? (Is it a fact or perception?), Definitions of Quality, Core Components of Quality, Quality View, Financial Aspect of Quality, Customers, Suppliers and Processes, Total Quality Management (TQM), Quality Principles of Total Quality Management, Quality Management Through Statistical Process Control, Quality Management Through Cultural Changes, Continual (Continuous) Improvement Cycle, Quality in Different Areas, Benchmarking and Metrics, Problem Solving Techniques, Problem Solving Software Tools. **Software Quality:** Introduction, Constraints of Software Product Quality Assessment, Customer is a King, Quality and Productivity Relationship, Requirements of a Product, Organisation Culture, Characteristics of Software, Software Development Process, Types of Products, Schemes of Criticality Definitions, Problematic Areas of Software Development Life Cycle, Software Quality Management, Why Software Has Defects? Processes Related to Software Quality, Quality Management System Structure, Pillars of Quality Management System, Important Aspects of Quality Management.	**12**
II	**Fundamentals of testing:** Introduction, Necessity of testing, What is testing? Fundamental test process, The psychology of testing, Historical Perspective of Testing, Definitions of Testing, Approaches to Testing, Testing During Development Life Cycle, Requirement Traceability Matrix, Essentials of Software Testing, Workbench, Important Features of Testing Process, Misconceptions About Testing, Principles of Software Testing, Salient Features of Good Testing, Test Policy, Test Strategy or Test Approach, Test Planning, Testing Process and Number of Defects Found in Testing, Test Team Efficiency, Mutation Testing, Challenges in Testing, Test Team Approach, Process Problems Faced by Testing, Cost Aspect of Testing, Establishing Testing Policy, Methods, Structured Approach to Testing, Categories of Defect, Defect, Error, or Mistake in Software, Developing Test Strategy, Developing Testing Methodologies (Test Plan), Testing Process, Attitude Towards Testing (Common People Issues), Test Methodologies/Approaches, People Challenges in Software Testing, Raising Management Awareness for Testing, Skills Required by Tester,	**12**

	Testing throughout the software life cycle, Software development models, Test levels, Test types, the targets of testing, Maintenance testing	
III	**Unit Testing: Boundary Value Testing:** Normal Boundary Value Testing, Robust Boundary Value Testing, Worst-Case Boundary Value Testing, Special Value Testing, Examples, Random Testing, Guidelines for Boundary Value Testing, **Equivalence Class Testing:** Equivalence Classes, Traditional Equivalence Class Testing, Improved Equivalence Class Testing, Edge Testing, Guidelines and Observations. **Decision Table–Based Testing:** Decision Tables, Decision Table Techniques, Cause-and-Effect Graphing, Guidelines and Observations, **Path Testing:** Program Graphs, DD-Paths, Test Coverage Metrics, Basis Path Testing, Guidelines and Observations, **Data Flow Testing:** Define/Use Testing, Slice-Based Testing, Program Slicing Tools.	**12**
IV	**Software Verification and Validation:** Introduction, Verification, Verification Workbench, Methods of Verification, Types of reviews on the basis od Stage Phase, Entities involved in verification, Reviews in testing lifecycle, Coverage in Verification, Concerns of Verification, Validation, Validation Workbench, Levels of Validation, Coverage in Validation, Acceptance Testing, Management of Verification and Validation, Software development verification and validation activities. **V-test Model:** Introduction, V-model for software, Testing during Proposal stage, Testing during requirement stage, Testing during test planning phase, Testing during design phase, Testing during coding, VV Model, Critical Roles and Responsibilities.	**12**
V	**Levels of Testing:** Introduction, Proposal Testing, Requirement Testing, Design Testing, Code Review, Unit Testing, Module Testing, Integration Testing, Big-Bang Testing, Sandwich Testing, Critical Path First, Sub System Testing, System Testing, Testing Stages. **Special Tests:** Introduction, GUI testing, Compatibility Testing, Security Testing, Performance Testing, Volume Testing, Stress Testing, Recovery Testing, Installation Testing, Requirement Testing, Regression Testing, Error Handling Testing, Manual Support Testing, Intersystem Testing, Control Testing, Smoke Testing, Adhoc Testing, Parallel Testing, Execution Testing, Operations Testing, Compliance Testing, Usability Testing, Decision Table Testing, Documentation Testing, Training testing, Rapid Testing, Control flow graph, Generating tests on the basis of Combinatorial Designs, State Graph, Risk Associated with New Technologies, Process maturity level of Technology, Testing Adequacy of Control in New technology usage, Object Oriented Application Testing, Testing of Internal Controls, COTS Testing, Client Server Testing, Web Application Testing, Mobile Application Testing, eBusiness eCommerce Testing, Agile Development Testing, Data Warehousing Testing.	**12**

Books and References:

4.	Software Testing: A Craftsman's Approach	Paul C. Jorgenson	CRC Press	4th	2017

B. Sc. (Information Technology)		Semester – VI	
Course Name: Security in Computing		**Course Code: USIT602**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Information Security Overview** : The Importance of Information Protection, The Evolution of Information Security, Justifying Security Investment, Security Methodology, How to Build a Security Program, The Impossible Job, The Weakest Link, Strategy and Tactics, Business Processes vs. Technical Controls. **Risk Analysis**: Threat Definition, Types of Attacks, Risk Analysis. **Secure Design Principles**: The CIA Triad and Other Models, Defense Models, Zones of Trust, Best Practices for Network Defense.	**12**
II	**Authentication and Authorization**: Authentication, Authorization **Encryption**: A Brief History of Encryption, Symmetric-Key Cryptography, Public Key Cryptography, Public Key Infrastructure. **Storage Security**: Storage Security Evolution, Modern Storage Security, Risk Remediation, Best Practices. **Database Security**: General Database Security Concepts, Understanding Database Security Layers, Understanding Database-Level Security, Using Application Security, Database Backup and Recovery, Keeping Your Servers Up to Date, Database Auditing and Monitoring.	**12**
III	**Secure Network Design**: Introduction to Secure Network Design, Performance, Availability, Security. **Network Device Security**: Switch and Router Basics, Network Hardening. **Firewalls**: Overview, The Evolution of Firewalls, Core Firewall Functions, Additional Firewall Capabilities, Firewall Design. **Wireless Network Security**: Radio Frequency Security Basics, Data-Link Layer Wireless Security Features, Flaws, and Threats, Wireless Vulnerabilities and Mitigations, Wireless Network Hardening Practices and Recommendations, Wireless Intrusion Detection and Prevention, Wireless Network Positioning and Secure Gateways.	**12**
IV	**Intrusion Detection and Prevention Systems**: IDS Concepts, IDS Types and Detection Models, IDS Features, IDS Deployment Considerations, Security Information and Event Management (SIEM). **Voice over IP (VoIP) and PBX Security**: Background, VoIP Components, VoIP Vulnerabilities and Countermeasures, PBX, TEM: Telecom Expense Management. **Operating System Security Models**: Operating System Models, Classic Security Models, Reference Monitor, Trustworthy Computing, International Standards for Operating System Security.	**12**

V	**Virtual Machines and Cloud Computing**: Virtual Machines, Cloud Computing. **Secure Application Design**: Secure Development Lifecycle, Application Security Practices, Web Application Security, Client Application Security, Remote Administration Security. **Physical Security**: Classification of Assets, Physical Vulnerability Assessment, Choosing Site Location for Security, Securing Assets: Locks and Entry Controls, Physical Intrusion Detection.	**12**

3.	Principles of Computer Security: CompTIA Security+ and Beyond	Wm.Arthur Conklin, Greg White	McGraw Hill	Second	2010

B. Sc. (Information Technology)		Semester – VI	
Course Name: Business Intelligence		**Course Code: USIT603**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**Business intelligence:** Effective and timely decisions, Data, information and knowledge, The role of mathematical models, Business intelligence architectures, Ethics and business intelligence **Decision support systems:** Definition of system, Representation of the decision-making process, Evolution of information systems, Definition of decision support system, Development of a decision support system	**12**
II	**Mathematical models for decision making:** Structure of mathematical models, Development of a model, Classes of models **Data mining:** Definition of data mining, Representation of input data , Data mining process, Analysis methodologies **Data preparation**: Data validation, Data transformation, Data reduction	**12**
III	**Classification**: Classification problems, Evaluation of classification models, Bayesian methods, Logistic regression, Neural networks, Support vector machines **Clustering:** Clustering methods, Partition methods, Hierarchical methods, Evaluation of clustering models	**12**
IV	**Business intelligence applications:** **Marketing models**: Relational marketing, Sales force management, **Logistic and production models**: Supply chain optimization, Optimization models for logistics planning, Revenue management systems. **Data envelopment analysis**: Efficiency measures, Efficient frontier, The CCR model, Identification of good operating practices	**12**
V	**Knowledge Management:** Introduction to Knowledge Management, Organizational Learning and Transformation, Knowledge Management Activities, Approaches to Knowledge Management, Information Technology (IT) In Knowledge Management, Knowledge Management Systems Implementation, Roles of People in Knowledge Management **Artificial Intelligence and Expert Systems:** Concepts and Definitions of Artificial Intelligence, Artificial Intelligence Versus Natural Intelligence, Basic Concepts of Expert Systems, Applications of Expert Systems, Structure of Expert Systems, Knowledge Engineering, Development of Expert Systems	**12**

Books and References:

3.	Fundamental of Business Intelligence	Grossmann W, Rinderle-Ma	Springer	First	2015

B. Sc. (Information Technology)		Semester – VI	
Course Name: Principles of Geographic Information Systems		**Course Code: USIT604 (Elective I)**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Unit	Details	Lectures
I	**A Gentle Introduction to GIS** **The nature of GIS:** Some fundamental observations, Defining GIS, GISystems, GIScience and GIApplications, Spatial data and Geoinformation. **The real world and representations of it:** Models and modelling, Maps, Databases, Spatial databases and spatial analysis **Geographic Information and Spatial Database** **Models and Representations of the real world** **Geographic Phenomena:** Defining geographic phenomena, types of geographic phenomena, Geographic fields, Geographic objects, Boundaries **Computer Representations of Geographic Information:** Regular tessellations, irregular tessellations, Vector representations, Topology and Spatial relationships, Scale and Resolution, Representation of Geographic fields, Representation of Geographic objects **Organizing and Managing Spatial Data** **The Temporal Dimension**	**12**
II	**Data Management and Processing Systems** **Hardware and Software Trends** **Geographic Information Systems:** GIS Software, GIS Architecture and functionality, Spatial Data Infrastructure (SDI) **Stages of Spatial Data handling:** Spatial data handling and preparation, Spatial Data Storage and maintenance, Spatial Query and Analysis, Spatial Data Presentation. **Database management Systems:** Reasons for using a DBMS, Alternatives for data management, The relational data model, Querying the relational database. **GIS and Spatial Databases:** Linking GIS and DBMS, Spatial database functionality.	**12**
III	**Spatial Referencing and Positioning** **Spatial Referencing:** Reference surfaces for mapping, Coordinate Systems, Map Projections, Coordinate Transformations	**12**

	Satellite-based Positioning: Absolute positioning, Errors in absolute positioning, Relative positioning, Network positioning, code versus phase measurements, Positioning technology **Data Entry and Preparation** **Spatial Data Input:** Direct spatial data capture, Indirect spatial data captiure, Obtaining spatial data elsewhere **Data Quality:** Accuracy and Positioning, Positional accuracy, Attribute accuracy, Temporal accuracy, Lineage, Completeness, Logical consistency **Data Preparation:** Data checks and repairs, Combining data from multiple sources **Point Data Transformation:** Interpolating discrete data, Interpolating continuous data	
IV	**Spatial Data Analysis** **Classification of analytical GIS Capabilities** **Retrieval, classification and measurement:** Measurement, Spatial selection queries, Classification **Overlay functions:** Vector overlay operators,Raster overlay operators **Neighbourhood functions:** Proximity computations, Computation of diffusion, Flow computation, Raster based surface analysis **Analysis:** Network analysis, interpolation, terrain modeling **GIS and Application models:** GPS, Open GIS Standards, GIS Applications and Advances **Error Propagation in spatial data processing:** How Errors propagate, Quantifying error propagation	**12**
V	**Data Visualization** **GIS and Maps, The Visualization Process** **Visualization Strategies: Present or explore?** **The cartographic toolbox:** What kind of data do I have?, How can I map my data? **How to map?:** How to map qualitative data, How to map quantitative data, How to map the terrain elevation, How to map time series **Map Cosmetics, Map Dissemination**	**12**

I	**IT Service Management:** Introduction, What is service management? What are services? Business Process, Principles of Service management: Specialisation and Coordination, The agency principle, Encapsulation, Principles of systems, The service Life Cycle, Functions and processes across the life cycle. **Service Strategy Principles:** Value creation, Service Assets, Service Provider Service Structures, Service Strategy Principles. **Service Strategy:** Define the market, Develop the offerings, Develop Strategic Assets, Prepare for execution. **Challenges, Critical Success factors and risks:** Complexity, Coordination and Control, Preserving value, Effectiveness in measurement, Risks.	12
II	**Service Design:** Fundamentals, **Service Design Principles:** Goals, Balanced Design, Identifying Service requirements, identifying and documenting business requirements and drivers, Design activities, Design aspects, Subsequent design activities, Design constraints, Service oriented architecture, Business Service Management, Service Design Models **Service Design Processes:** Service Catalogue Management, Service Level Management, Capacity Management, Availability Management, IT Service Continuity Management, Information Security Management, Supplier Management **Challenges, Critical Success factors and risks:** Challenges, Risks	12
III	**Service Transition:** Fundamentals, **Service Transition Principles:** Principles Supporting Service Transition, Policies for Service Transition **Service Transition Processes:** Transition planning and support, Change Management, Service Asses Configuration Management, Service and Deployment Management, Service Validation and Testing, Evaluation, Knowledge Management. **Challenges, Critical Success factors and risks:** Challenges, Critical Success factors, Risks, Service Transition under difficult Conditions.	12
IV	**Service Operation:** Fundamentals, **Service Operation Principles:** Functions, groups, teams, departments and divisions, Achieving balance in service operations, Providing service, Operation staff involvement in service design and service transition, Operational Health, Communication, Documentation	12

	Service Operation Processes: Event Management, Incident Management, Request fulfilment, Problem Management, Access Management, Operational activities of processes covered in other lifecycle phases. **Challenges, Critical Success factors and risks:** Challenges, Critical Success factors, Risks	
V	**Continual Service Improvement(CSI) Principles:** CSI Approach, CSI and organizational change, Ownership, CSI register, External and Internal drivers, Service level management, Knowledge management, The Deming cycle, Service Measurement, IT governance, Frameworks, models, standards and quality Systems, CSI inputs and outputs. **CSI Process:** The seven step improvement process. **CSI Methods nad Techniques:** Methods and techniques, Assessments, benchmarking, Service Measurement, Metrics, Return on Investment, Service reporting, CSI and other service management processes, **Organising for CSI:** Organisational development, Functions, roles, Customer Engagement, Responsibility model - RACI, Competence and training. **Technology considerations:** Tools to support CSI activities. **Implementing CSI:** Critical Considerations for implementing CSI, The start, Governance, CSI and organisational change, Communication Strategy and Plan	**12**

1	**Configure Routers**
a	OSPF MD5 authentication.
b	NTP.
c	to log messages to the syslog server.
d	to support SSH connections.
2	**Configure AAA Authentication**
a	Configure a local user account on Router and configure authenticate on the console and vty lines using local AAA
b	Verify local AAA authentication from the Router console and the PC-A client
3	**Configuring Extended ACLs**
a	**Configure, Apply and Verify an Extended Numbered ACL**
4	**Configure IP ACLs to Mitigate Attacks and IPV6 ACLs**
a	Verify connectivity among devices before firewall configuration.
b	Use ACLs to ensure remote access to the routers is available only from management station PC-C.
c	Configure ACLs on to mitigate attacks.
d	Configuring IPv6 ACLs
5	**Configuring a Zone-Based Policy Firewall**
6	Configure IOS Intrusion Prevention System (IPS) Using the CLI
a	Enable IOS IPS.
b	Modify an IPS signature.
7	**Layer 2 Security**
a	Assign the Central switch as the root bridge.
b	Secure spanning-tree parameters to prevent STP manipulation attacks.
c	Enable port security to prevent CAM table overflow attacks.
8	**Layer 2 VLAN Security**
9	**Configure and Verify a Site-to-Site IPsec VPN Using CLI**

10	**Configuring ASA Basic Settings and Firewall Using CLI**
a	Configure basic ASA settings and interface security levels using CLI
b	Configure routing, address translation, and inspection policy using CLI
c	Configure DHCP, AAA, and SSH
d	Configure a DMZ, Static NAT, and ACLs

Practical No	Details
1	Import the legacy data from different sources such as (Excel , SqlServer, Oracle etc.) and load in the target system. (You can download sample database such as Adventureworks, Northwind, foodmart etc.)
2	Perform the Extraction Transformation and Loading (ETL) process to construct the database in the Sqlserver.
3	a. Create the Data staging area for the selected database. b. Create the cube with suitable dimension and fact tables based on ROLAP, MOLAP and HOLAP model.
4	a.Create the ETL map and setup the schedule for execution. b. Execute the MDX queries to extract the data from the datawarehouse.
5	a. Import the datawarehouse data in Microsoft Excel and create the Pivot table and Pivot Chart. b. Import the cube in Microsoft Excel and create the Pivot table and Pivot Chart to perform data analysis.
6	Apply the what – if Analysis for data visualization. Design and generate necessary reports based on the data warehouse data.
7	Perform the data classification using classification algorithm.
8	Perform the data clustering using clustering algorithm.
9	Perform the Linear regression on the given data warehouse data.
10	Perform the logistic regression on the given data warehouse data.

The BI tools such as Tableau / Power BI / BIRT / R / Excel or any other can be used.

13	**Programming Network Communications and Services (JSON)**

APPENDIX – 1

Project Dissertation Semester V and Project Implementation Semester VI

Chapter 1 to 4 should be submitted in Semester V in spiral binding. These chapter have also to be included in Semester VI report. Semester VI report has to be hard bound with golden embossing. Students will be evaluated based on the dissertation in semester V and dissertation and viva voce in Semester VI.

I. OBJECTIVES

- Describe the Systems Development Life Cycle (SDLC).
- Evaluate systems requirements.
- Complete a problem definition.
- Evaluate a problem definition.
- Determine how to collect information to determine requirements.
- Perform and evaluate feasibility studies like cost-benefit analysis, technical feasibility, time feasibility and Operational feasibility for the project.
- Work on data collection methods for fact finding.
- Construct and evaluate data flow diagrams.
- Construct and evaluate data dictionaries.
- Evaluate methods of process description to include structured English, decision tables and decision trees.
- Evaluate alternative tools for the analysis process.
- Create and evaluate such alternative graphical tools as systems flow charts and state transition diagrams.
- Decide the S/W requirement specifications and H/W requirement specifications.
- Plan the systems design phase of the SDLC.
- Distinguish between logical and physical design requirements.
- Design and evaluate system outputs.
- Design and evaluate systems inputs.
- Design and evaluate validity checks for input data.

- Design and evaluate user interfaces for input.
- Design and evaluate file structures to include the use of indexes.
- Estimate storage requirements.
- Explain the various file update processes based on the standard file organizations.
- Decide various data structures.
- Construct and evaluate entity-relationship (ER) diagrams for RDBMS related projects.
- Perform normalization for the unnormalized tables for RDBMS related projects
- Decide the various processing systems to include distributed, client/server, online and others.
- Perform project cost estimates using various techniques.
- Schedule projects using both GANTT and PERT charts.
- Perform coding for the project.
- Documentation requirements and prepare and evaluate systems documentation.
- Perform various systems testing techniques/strategies to include the phases of testing.
- Systems implementation and its key problems.
- Generate various reports.
- Be able to prepare and evaluate a final report.
- Brief the maintenance procedures and the role of configuration management in operations.
- To decide the future scope and further enhancement of the system.
- Plan for several appendices to be placed in support with the project report documentation.
- Decide the various processing systems to include distributed, client/server, online and others.
- Perform project cost estimates using various techniques.
- Schedule projects using both GANTT and PERT charts.
- Perform coding for the project.
- Documentation requirements and prepare and evaluate systems documentation.
- Perform various systems testing techniques/strategies to include the phases of testing.
- Systems implementation and its key problems.
- Generate various reports.
- Be able to prepare and evaluate a final report.
- Brief the maintenance procedures and the role of configuration management in operations.
- To decide the future scope and further enhancement of the system.
- Plan for several appendices to be placed in support with the project report documentation.

- Work effectively as an individual or as a team member to produce correct, efficient, well-organized and documented programs in a reasonable time.
- Recognize problems that are amenable to computer solutions, and knowledge of the tool necessary for solving such problems.
- Develop of the ability to assess the implications of work performed.
- Get good exposure and command in one or more application areas and on the software
- Develop quality software using the software engineering principles
- Develop of the ability to communicate effectively.

II. Type of the Project

The majority of the students are expected to work on a real-life project preferably in some industry/ Research and Development Laboratories/Educational Institution/Software Company. Students are encouraged to work in the areas listed below. However, it is ***not mandatory*** for a student to work on a real-life project. The student can formulate a project problem with the help of her/his Guide and submit the project proposal of the same. **Approval of the project proposal is mandatory**. If approved, the student can commence working on it, and complete it. Use the latest versions of the software packages for the development of the project.

III. SOFTWARE AND BROAD AREAS OF APPLICATION

FRONT END / GUI Tools	.Net Technologies,Java
DBMS/BACK END	Oracle, SQL Plus, MY SQL, SQL Server,
LANGUAGES	C, C++, Java, VC++, C#, R,Python
SCRIPTING LANGUAGES	PHP,JSP, SHELL Scripts (Unix), TcL/TK,
.NET Platform	F#,C#. Net, Visual C#. Net, ASP.Net
MIDDLE WARE (COMPONENT) TECHNOLOGIES	COM/DCOM, Active-X, EJB
UNIX INTERNALS	Device Drivers, RPC, Threads, Socket programming
NETWORK/WIRELESS TECHNOLOGIES	-

REALTIME OPERATING SYSTEM/ EMBEDDED SKILLS	LINUX, Raspberry Pi, Arduino, 8051
APPLICATION AREAS	Financial / Insurance / Manufacturing / Multimedia / Computer Graphics / Instructional Design/ Database Management System/ Internet / Intranet / Computer Networking-Communication Software development/ E-Commerce/ ERP/ MRP/ TCP-IP programming / Routing protocols programming/ Socket programming.

IV. Introduction

The project report should be documented with scientific approach to the solution of the problem that the students have sought to address. The project report should be prepared in order to solve the problem in a methodical and professional manner, making due references to appropriate techniques, technologies and professional standards. The student should start the documentation process from the first phase of software development so that one can easily identify the issues to be focused upon in the ultimate project report. The student should also include the details from the project diary, in which they will record the progress of their project throughout the course. The project report should contain enough details to enable examiners to evaluate the work. The important points should be highlighted in the body of the report, with details often referred to appendices.

1.1 PROJECT REPORT:

Title Page

Original Copy of the Approved Proforma of the Project Proposal

Certificate of Authenticated work

Role and Responsibility Form

Abstract

Acknowledgement

Table of Contents

Table of Figures

CHAPTER 1: INTRODUCTION

1.1 Background

1.2 Objectives

1.3 Purpose, Scope, and Applicability

1.3.1 Purpose

1.3.2 Scope

1.3.3 Applicability

1.4 Achievements

1.5 Organisation of Report

CHAPTER 2: SURVEY OF TECHNOLOGIES

CHAPTER 3: REQUIREMENTS AND ANALYSIS

3.1 Problem Definition

3.2 Requirements Specification

3.3 Planning and Scheduling

3.4 Software and Hardware Requirements

3.5 Preliminary Product Description

3.6 Conceptual Models

CHAPTER 4: SYSTEM DESIGN

4.1 Basic Modules

4.2 Data Design

4.2.1 Schema Design

4.2.2 Data Integrity and Constraints

4.3 Procedural Design

4.3.1 Logic Diagrams

4.3.2 Data Structures

4.3.3 Algorithms Design

4.4 User interface design

4.5 Security Issues

4.6 Test Cases Design

The documentation should use tools like star UML, Visuo for windows, Rational Rose for design as part of Software Project Management Practical Course. The documentation should be spiral bound for semester V and the entire documentation should be hard bound during semester VI.

CHAPTER 5: IMPLEMENTATION AND TESTING

5.1 Implementation Approaches

5.2 Coding Details and Code Efficiency

5.2.1 Code Efficiency

5.3 Testing Approach

5.3.1 Unit Testing

5.3.2 Integrated Testing

5.3.3 Beta Testing

5.4 Modifications and Improvements

5.5 Test Cases

CHAPTER 6: RESULTS AND DISCUSSION

6.1 Test Reports

6.2 User Documentation

CHAPTER 7: CONCLUSIONS

7.1 Conclusion

7.1.1 Significance of the System

7.2 Limitations of the System

7.3 Future Scope of the Project

REFERENCES

GLOSSARY

APPENDIX A

APPENDIX B

V. EXPLANATION OF CONTENTS

Title Page

Sample format of Title page is given in Appendix 1 of this block. Students should follow the given format.

Original Copy of the Approved Proforma of the Project Proposal

Sample Proforma of Project Proposal is given in Appendix 2 of this block. Students should follow the given format.

Certificate of Authenticated work

Sample format of Certificate of Authenticated work is given in Appendix 3 of this block. Students should follow the given format.

Role and Responsibility Form

Sample format for Role and Responsibility Form is given in Appendix 4 of this block.
Students should follow the given format.

Abstract

This should be one/two short paragraphs (100-150 words total), summarising the project work. It is important that this is not just a re-statement of the original project outline. A suggested flow is background, project aims and main achievements. From the abstract, a reader should be able to ascertain if the project is of interest to them and, it should present results of which they may wish to know more details.

Acknowledgements

This should express student's gratitude to those who have helped in the preparation of project.

Table of Contents: The table of contents gives the readers a view of the detailed structure of the report. The students would need to provide section and subsection headings with associated pages. The formatting details of these sections and subsections are given below.

Table of Figures: List of all Figures, Tables, Graphs, Charts etc. along with their page numbers in a table of figures.

Chapter 1: Introduction

The introduction has several parts as given below:

Background: A description of the background and context of the project and its relation to work already done in the area. Summarise existing work in the area concerned with the project work.

Objectives: Concise statement of the aims and objectives of the project. Define exactly what is going to be done in the project; the objectives should be about 30 /40 words.
Purpose, Scope and Applicability: The description of Purpose, Scope, and Applicability are given below:

• Purpose: Description of the topic of the project that answers questions on why this project is being done. How the project could improve the system its significance and theoretical framework.
• Scope: A brief overview of the methodology, assumptions and limitations. The students should answer the question: What are the main issues being covered in the project? What are the main functions of the project?
• Applicability: The student should explain the direct and indirect applications of their work. Briefly discuss how this project will serve the computer world and people.
Achievements: Explain what knowledge the student achieved after the completion of the work. What contributions has the project made to the chosen area? Goals achieved - describes the degree to which the findings support the original objectives laid out by the project. The goals may be partially or fully achieved, or exceeded.

Organisation of Report: Summarising the remaining chapters of the project report, in effect, giving the reader an overview of what is to come in the project report.

Chapter 2: Survey of Technologies

In this chapter Survey of Technologies should demonstrate the students awareness and understanding of Available Technologies related to the topic of the project. The student should give the detail of all the related technologies that are necessary to complete the project. The should describe the technologies available in the chosen area and present a comparative study of all those Available Technologies. Explain why the student selected the one technology for the completion of the objectives of the project.

Chapter 3: Requirements and Analysis

Problem Definition: Define the problem on which the students are working in the project.

Provide details of the overall problem and then divide the problem in to sub-problems. Define each sub-problem clearly.

Requirements Specification: In this phase the student should define the requirements of the system, independent of how these requirements will be accomplished. The Requirements Specification describes the things in the system and the actions that can be done on these things. Identify the operation and problems of the existing system.

Planning and Scheduling: Planning and scheduling is a complicated part of software development. Planning, for our purposes, can be thought of as determining all the small tasks that must be carried out in order to accomplish the goal. Planning also takes into account, rules, known as constraints, which, control when certain tasks can or cannot happen. Scheduling can be thought of as determining whether adequate resources are available to carry out the plan. The student should show the Gantt chart and Program Evaluation Review Technique (PERT).

Software and Hardware Requirements: Define the details of all the software and hardware needed for the development and implementation of the project.

• Hardware Requirement: In this section, the equipment, graphics card, numeric co-processor, mouse, disk capacity, RAM capacity etc. necessary to run the software must be noted.

• Software Requirements: In this section, the operating system, the compiler, testing tools, linker, and the libraries etc. necessary to compile, link and install the software must be listed.

Preliminary Product Description: Identify the requirements and objectives of the new system. Define the functions and operation of the application/system the students are developing as project.

Conceptual Models: The student should understand the problem domain and produce a model of the system, which describes operations that can be performed on the system, and the allowable sequences of those operations. Conceptual Models could consist of complete Data Flow Diagrams, ER diagrams, Object-oriented diagrams, System Flowcharts etc.

Chapter 4: System Design

Describes desired features and operations in detail, including screen layouts, business rules, process diagrams, pseudocode and other documentation.

Basic Modules: The students should follow the divide and conquer theory, so divide the overall problem into more manageable parts and develop each part or module separately. When all modules are ready, the student should integrate all the modules into one system. In this phase, the student should briefly describe all the modules and the functionality of these modules.

Data Design: Data design will consist of how data is organised, managed and manipulated.

• Schema Design: Define the structure and explanation of schemas used in the project.

• Data Integrity and Constraints: Define and explain all the validity checks and constraints provided to maintain data integrity.

Procedural Design: Procedural design is a systematic way for developing algorithms or procedurals.

• Logic Diagrams: Define the systematical flow of procedure that improves its comprehension and helps the programmer during implementation. e.g., Control Flow Chart, Process Diagrams etc.

• Data Structures: Create and define the data structure used in procedures.

• Algorithms Design: With proper explanations of input data, output data, logic of processes, design and explain the working of algorithms.

User Interface Design: Define user, task, environment analysis and how to map those requirements in order to develop a "User Interface". Describe the external and internal components and the architecture of user interface. Show some rough pictorial views of the user interface and its components.

Security Issues: Discuss Real-time considerations and Security issues related to the project and explain how the student intends avoiding those security problems. What are the security policy plans and architecture?

Test Cases Design: Define test cases, which will provide easy detection of errors and mistakes with in a minimum period of time and with the least effort. Explain the different conditions in which the students wish to ensure the correct working of the project.

Chapter 5: Implementation and Testing

Implementation Approaches: Define the plan of implementation, and the standards the students have used in the implementation.

Coding Details and Code Efficiency: Students not need include full source code, instead, include only the important codes (algorithms, applets code, forms code etc). The program code should contain comments needed for explaining the work a piece of code does. Comments may be needed to explain why it does it, or, why it does a particular way.

The student can explain the function of the code with a shot of the output screen of that program code.

• Code Efficiency: The student should explain how the code is efficient and how the students have handled code optimisation.

Testing Approach: Testing should be according to the scheme presented in the system design chapter and should follow some suitable model – e.g., category partition, state machine-based. Both functional testing and user-acceptance testing are appropriate. Explain the approach of testing.

• Unit Testing: Unit testing deals with testing a unit or module as a whole. This would test the interaction of many functions but, do confine the test within one module.

• Integrated Testing: Brings all the modules together into a special testing environment, then checks for errors, bugs and interoperability. It deals with tests for the entire application. Application limits and features are tested here.

Modifications and Improvements: Once the students finish the testing they are bound to be faced with bugs, errors and they will need to modify your source code to improve the system. Define what modification are implemented in the system and how it improved the system.

Chapter 6: Results and Discussion

Test Reports: Explain the test results and reports based on the test cases, which should show that the project is capable of facing any problematic situation and that it works fine in different conditions. Take the different sample inputs and show the outputs.

User Documentation: Define the working of the software; explain its different functions, components with screen shots. The user document should provide all the details of the product in such a way that any user reading the manual, is able to understand the working and functionality of the document.

Chapter 7: Conclusions

Conclusion: The conclusions can be summarised in a fairly short chapter (2 or 3 pages). This chapter brings together many of the points that would have made in the other chapters.

Limitations of the System: Explain the limitations encountered during the testing of the project that the students were not able to modify. List the criticisms accepted during the demonstrations of the project.

Future Scope of the Project describes two things: firstly, new areas of investigation prompted by developments in this project, and secondly, parts of the current work that was not completed due to time constraints and/or problems encountered.

REFERENCES

It is very important that the students acknowledge the work of others that they have used or adapted in their own work, or that provides the essential background or context to the project. The use of references is the standard way to do this. Please follow the given standard for the references for books, journals, and online material. The citation is mandatory in both the reports.

E.g:

Linhares, A., & Brum, P. (2007). Understanding our understanding of strategic scenarios: What role do chunks play? *Cognitive Science*, *31*(6), 989-1007. https://doi.org/doi:10.1080/03640210701703725

Lipson, Charles (2011). Cite right : A quick guide to citation styles; MLA, APA, Chicago, the sciences, professions, and more (2nd ed.). Chicago [u.a.]: University of Chicago Press. p. 187. ISBN 9780226484648.

Elaine Ritchie, J Knite. (2001). *Artificial Intelligence, Chapter 2 , p.p 23 - 44.* Tata McGrawHill.

GLOSSARY

If you the students any acronyms, abbreviations, symbols, or uncommon terms in the project report then their meaning should be explained where they first occur. If they go on to use any of them extensively then it is helpful to list them in this section and define the meaning.

APPENDICES

These may be provided to include further details of results, mathematical derivations, certain illustrative parts of the program code (e.g., class interfaces), user documentation etc.

In particular, if there are technical details of the work done that might be useful to others who wish to build on this work, but that are not sufficiently important to the project as a whole to justify being discussed in the main body of the project, then they should be included as appendices.

VI. SUMMARY

Project development usually involves an engineering approach to the design and development of a software system that fulfils a practical need. Projects also often form an important focus for discussion at interviews with future employers as they provide a detailed example of what the students are capable of achieving. In this course the students can choose your project topic from the lists given in Unit 4: Category-wise Problem Definition.

System Design (20 bold, centered)

Subheadings are as shown below with following format (16 bold, CAPS)
Specify figures as Fig 11.1 – caption

3.1 Module Division
3.2 Data Dictionary
3.3 E-R Diagrams
3.4 Data Flow Diagrams / UML

Note: write brief description at the bottom of all diagrams

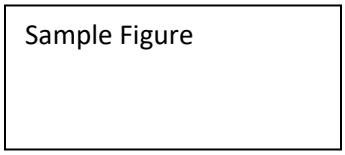

Fig. 3.1: Caption

Chapter 4

Implementation and Testing (20 bold, centered)

4.1 Code (Place Core segments)

Content includes description about coding phase in your project (Font-12)

(* don't include complete code-----just description)

4.2 Testing Approach

Subheadings are as shown below with following format (16 bold, CAPS)

4.2.1 Unit Testing

4.2.2 Integration Testing

Note:

- Explain about above testing methods
- Explain how the above techniques are applied in your project

Provide Test plans, test cases, etc relevant to your project

Chapter 5

Results and Discussions (20 bold, centered)

Note: Place Screen Shots and write the functionality of each screen at the bottom

Chapter 6

Conclusion and Future Work (20 bold, centered)

The conclusions can be summarized in a fairly short chapter around 300 words. Also include limitations of your system and future scope (12, justified)

Chapter 7

*** NOTE ABOUT PROJECT VIVA VOCE:**

Student may be asked to write code for problem during VIVA to demonstrate his coding capabilities and he/she may be asked to write any segment of coding used in the in the project. The project can be done in group of at most four students. However, the length and depth of the project should be justified for the projects done in group. A big project can be modularised and different modules can be assigned as separate project to different students.

Marks Distribution:

Semester V: 50 Marks

Documentation: 50 marks

Semester VI: 150 Marks

Documentation: 50 Marks:

Implementation and Viva Voce: 100 Marks

The plagiarism should be maintained as per the UGC guidelines.

1. Strategic Management

Modules at a Glance

SN	Modules	No. of Lectures
1	Introduction to Strategic Management	15
2	Strategy Formulation, Implementation and Evaluation	15
3	Business, Corporate and Global Strategies	15
4	Emerging Strategic Trends	15
	Total	**60**

Objectives

SN	Objectives
1	To enable the learners to understand new forms of Strategic Management concepts and their use in business
2	To provide information pertaining to Business, Corporate and Global Reforms
3	To develop learning and analytical skills of the learners to enable them to solve cases and to provide strategic solutions
4	To acquaint the learners with recent developments and trends in the business corporate world

SN	Modules/ Units
1	**Introduction to Strategic Management**
	• Concept of Strategic Management, Strategic Management Process, Vision, Mission and Goals, Benefits and Risks of Strategic Management. • Levels of Strategies: Corporate, Business and Operational Level Strategy • Functional Strategies: Human Resource Strategy, Marketing Strategy, Financial Strategy , Operational Strategy • Business Environment: Components of Environment- Micro and Macro and Environmental Scanning
2	**Strategy Formulation, Implementation and Evaluation**
	• Strategic Formulation: Stages and Importance, Formulation of Alternative Strategies: Mergers, Acquisitions, Takeovers, Joint Ventures, Diversification, Turnaround, Divestment and Liquidation. • Strategic Analysis and Choice: Issues and Structures, Corporate Portfolio Analysis- SWOT Analysis, BCG Matrix, GE Nine Cell Matrix, Hofer's Matrix, • ETOP- Environmental Threat and Opportunity Profile, Strategic Choice- Factors and Importance. • Strategic Implementation: Steps, Importance and Problems, Resource Allocation- Importance & Challenges • Strategic Evaluation and Control: Importance, Limitations and Techniques • Budgetary Control: Advantages, Limitations
3	**Business, Corporate and Global Strategies**
	• Corporate Restructuring Strategies: Concept, Need and Forms, Corporate Renewal Strategies: Concept, Internal and External factors and Causes. • Strategic Alliance: Concept, Types, Importance, Problems of Indian Strategic Alliances and International Businesses • Public Private Participation: Importance, Problems and Governing Strategies of PPP Model. • Information Technology Driven Strategies: Importance, Limitations and contribution of IT sector in Indian Business
4	**Emerging Strategic Trends**
	• Business Process Outsourcing and Knowledge Process Outsourcing in India: Concept and Strategies. Reasons for growing BPO and KPO businesses in India. • Reengineering Business Processes- Business Reengineering, Process Reengineering and Operational Reengineering • Disaster Management: Concept, Problems and Consequences of Disasters, Strategies for Managing and Preventing disasters and Cope up Strategies. • Start-up Business Strategies and Make in India Model: Process of business start ups and its Challenges, Growth Prospects and government initiatives in Make in India Model with reference to National manufacturing, Contribution of Make in India Policy in overcoming industrial sickness

Revised Syllabus of Courses of
Master of Commerce (M.Com) Programme at Semester I
(To be implemented from Academic Year- 2016-2017)

Core Courses (CC)

2. Economics for Business Decisions

Modules at a Glance

SN	Modules	No. of Lectures
1	Basic Principles in Business Economics	15
2	Demand and Supply Analysis	15
3	Production Decisions and Cost Analysis	15
4	Market Structure Analysis	15
	Total	**60**

Objectives

SN	Objectives
1	This course is designed to equip the students with basic tools of economic theory and its practical applications
2	The course aims at familiarising the students with the understanding of the economic aspects of current affairs and thereby prepares them to analyse the market behaviour with economic way of thinking
3	In addition to providing an insight into application of economic principles in business decisions, it also intends to widen analytical ability of the students and to provide them a foundation for further study of economics
4	In order to make the study practical oriented, the paper requires discussion of some cases involving the use of concepts of business economics

SN	Modules/ Units
1	**Basic Principles in Business Economics**
	• Meaning and scope of Business Economics - twin principles of scarcity and efficiency; incremental and Marginal principle; profit maximisation principle; market economy and invisible hand; production possibility frontier; Opportunity cost - accounting profit and economic profit; market failure, externality, public goods and economic role of Government
2	**Demand and Supply Analysis**
	• Determinants of demand - market demand function - theory of attributes, snob appeal, band wagon and Veblen effect and demand function. Law of supply- elasticity of supply • Applications of elasticity of demand and supply to economic issues: Paradox of bumper harvest- tax on price and quantity - minimum floor and maximum ceilings: minimum wages controversy and Administered price control • The theory of consumer choice - Consumer preference and budget constraint - equilibrium position of tangency with the help of Indifference curve analysis- effect of changes in price and income on consumer equilibrium
3	**Production decisions and Cost analysis**
	• Production function - short run and long run - Law of variable proportion, returns to scale, scale economies, scope economies- least cost factor combination for a given output- Expansion path and Multiproduct firm- cost reduction through experience - learning curve • Economic analysis of Cost: Classification of costs, short run and long run cost functions.
4	**Market structure analysis**
	• Difference between perfectly and imperfectly competitive markets -Perfect competition and Monopoly as limiting cases of market imperfections - Sources of market power - profit maximisation of simple and discriminating monopolist- methods of measuring monopoly power - Public policy towards monopoly power • Different forms of imperfect competition - Monopolistic competition and Oligopoly - Strategic decision making in oligopoly markets- collusive and non-collusive oligopoly- colliding oligopoly : rivalry among few, price war and kinked demand curve- collusive oligopoly models of price leadership and cartel - basic concepts of game theory - Using Game theory to analyse strategic decisions - application of model of prisoner's dilemma in market decisions

Revised Syllabus of Courses of
Master of Commerce (M.Com) Programme at Semester I
(To be implemented from Academic Year- 2016-2017)

Core Courses (CC)

3. Cost and Management Accounting

Modules at a Glance

SN	Modules	No. of Lectures
1	Marginal Costing, Absorption Costing and Management Decisions	15
2	Standard Costing	15
3	Budgetary Control	15
4	Operating Costing	15
	Total	**60**

Objectives

SN	Objectives
1	To enhance the abilities of learners to develop the concept of Cost and management accounting and its significance in the business
2	To enable the learners to understand, develop and apply the techniques of costing in the decision making in the business corporates
3	To enable the learners in understanding, developing, preparing and presenting the financial report in the business corporates

SN	Modules/ Units
1	**Marginal Costing, Absorption Costing and Management Decisions**
	• Meaning of Absorption Costing - Distinction between Absorption Costing and Marginal Costing - Problems on Breakeven Analysis - Cost Volume Profit Analysis - Breakeven Charts - Contribution Margin and Various Decision Making Problems • Managerial Decisions through Cost Accounting such as Pricing Accepting Special Offer - Profit Planning - Make or Buy Decisions - Determining Key Factors - Determining Sales Mix - Determining Optimum Activity Level - Performance Evaluation - Alternative Methods of Production, Cost Reduction & Cost Control
2	**Standard Costing**
	• Standard Costing as an Instrument of Cost Control and Cost Reduction - Fixation of Standards - Theory and Problems based on Analysis of Variances of Materials, Labour Overheads and sales including Sub-variances
3	**Budgetary Control**
	• Budget and Budgetary Control - Zero Based Budget - Performance Budgets - Functional Budgets Leading to the Preparation of Master Budgets - Capital Expenditure Budget - Fixed and Flexible Budgets - Preparation of Different Types of Budgets
4	**Operating Costing**
	• Meaning of Operating Costing - Determination of Per Unit Cost - Collection of Costing Data - Practical Problems based on Costing of Hospital, Hotel and Goods & Passenger Transport

Revised Syllabus of Courses of
Master of Commerce (M.Com) Programme at Semester I
(To be implemented from Academic Year- 2016-2017)

Core Courses (CC)

4. Business Ethics and Corporate Social Responsibility

Modules at a Glance

SN	Modules	No. of Lectures
1	Introduction to Business Ethics	15
2	Indian Ethical Practices and Corporate Governance	15
3	Introduction to Corporate Social Responsibility	15
4	Areas of CSR and CSR Policy	15
	Total	**60**

Objectives

SN	Objectives
1	To familiarize the learners with the concept and relevance of Business Ethics in the modern era
2	To enable learners to understand the scope and complexity of Corporate Social responsibility in the global and Indian context

SN	Modules/ Units
1	**Introduction to Business Ethics**
	• Business Ethics – Concept, Characteristics, Importance and Need for business ethics. Indian Ethos, Ethics and Values, Work Ethos, • Sources of Ethics, Concept of Corporate Ethics, code of Ethics-Guidelines for developing code of ethics, Ethics Management Programme, Ethics Committee. • Various approaches to Business Ethics - Theories of Ethics- Friedman's Economic theory, Kant's Deontological theory, Mill & Bentham's Utilitarianism theory • Gandhian Approach in Management and Trusteeship, Importance and relevance of trusteeship principle in Modern Business, Gandhi's Doctrine of Satya and Ahimsa, • Emergence of new values in Indian Industries after economic reforms of 1991
2	**Indian Ethical Practices and Corporate Governance**
	• Ethics in Marketing and Advertising, Human Resources Management, Finance and Accounting, Production, Information Technology, Copyrights and Patents • Corporate Governance: Concept, Importance, Evolution of Corporate Governance, Principles of Corporate Governance, • Regulatory Framework of Corporate Governance in India, SEBI Guidelines and clause 49, Audit Committee, Role of Independent Directors, Protection of Stake Holders, Changing roles of corporate Boards. • Elements of Good Corporate Governance, Failure of Corporate Governance and its consequences
3	**Introduction to Corporate Social Responsibility**
	• Corporate Social Responsibility: Concept, Scope & Relevance and Importance of CSR in Contemporary Society. • Corporate philanthropy, Models for Implementation of CSR, Drivers of CSR, Prestigious awards for CSR in India. • CSR and Indian Corporations- Legal Provisions and Specification on CSR, A Score Card, Future of CSR in India. • Role of NGO's and International Agencies in CSR, Integrating CSR into Business
4	**Areas of CSR and CSR Policy**
	• CSR towards Stakeholders-- Shareholders, Creditors and Financial Institutions, Government, Consumers, Employees and Workers, Local Community and Society. • CSR and environmental concerns. • Designing CSR Policy- Factors influencing CSR Policy, Role of HR Professionals in CSR • Global Recognitions of CSR- ISO- 14000-SA 8000 – AA 1000 – Codes formulated by UN Global Compact – UNDP, Global Reporting Initiative; major codes on CSR. • CSR and Sustainable Development • CSR through Triple Bottom Line in Business

3	Corporate Finance	**06**
4	E-Commerce	**06**
	Total Credits	**24**

Revised Syllabus of Courses of
Master of Commerce (M.Com) Programme at Semester II
(To be implemented from Academic Year- 2016-2017)

Core Courses (CC)

1. Research Methodology for Business

Modules at a Glance

SN	Modules	No. of Lectures
1	Introduction to Research	15
2	Research Process	15
3	Data Processing and Statistical Analysis	15
4	Research Reporting and Modern Practices in Research	15
	Total	**60**

Objectives

SN	Objectives
1	To enhance the abilities of learners to undertake research in business & social sciences
2	To enable the learners to understand, develop and apply the fundamental skills in formulating research problems
3	To enable the learners in understanding and developing the most appropriate methodology for their research
4	To make the learners familiar with the basic statistical tools and techniques applicable for research

SN	Modules/ Units
1	**Introduction to Research**
	• Features and Importance of research in business, Objectives and Types of research- Basic, Applied, Descriptive, Analytical and Empirical Research. • Formulation of research problem, Research Design, significance of Review of Literature • Hypothesis: Formulation, Sources, Importance and Types • Sampling: Significance, Methods, Factors determining sample size
2	**Research Process**
	• Stages in Research process • Data Collection: Primary data: Observation, Experimentation, Interview, Schedules, Survey, • Limitations of Primary data • Secondary data: Sources and Limitations, • Factors affecting the choice of method of data collection. • Questionnaire: Types, Steps in Questionnaire Designing, Essentials of a good questionnaire
3	**Data Processing and Statistical Analysis**
	• Data Processing: Significance in Research, Stages in Data Processing: Editing, Coding, Classification, Tabulation, Graphic Presentation • Statistical Analysis: Tools and Techniques, Measures of Central Tendency, Measures of Dispersion, Correlation Analysis and Regression Analysis. • Testing of Hypotheses – ▪ Parametric Test-t test, f test, z test ▪ Non-Parametric Test -Chi square test, ANOVA, Factor Analysis • Interpretation of data: significance and Precautions in data interpretation
4	**Research Reporting and Modern Practices in Research**
	• Research Report Writing: Importance, Essentials, Structure/ layout, Types • References and Citation Methods: ▪ APA (American Psychological Association) ▪ CMS (Chicago Manual Style) ▪ MLA (Modern Language Association) • Footnotes and Bibliography • Modern Practices: Ethical Norms in Research, Plagiarism, Role of Computers in Research

Master of Commerce (M.Com) Programme at Semester II
(To be implemented from Academic Year- 2016-2017)

Core Courses (CC)

2. Macro Economics Concepts and Applications

Modules at a Glance

SN	Modules	No. of Lectures
1	Aggregate Income and its Dimensions	15
2	Keynesian concepts of Aggregate Demand (ADF), Aggregate Supply (ASF)	15
3	Economic Policy Implications in the IS-LM framework	15
4	International Aspects of Macroeconomic Policy	15
	Total	**60**

Objectives

SN	Objectives
1	The heavily application-oriented nature of macroeconomics course is introduced in order to enable the learners to grasp fully the theoretical rationale behind policies at the country as well as corporate level
2	This course the learners to receive a firm grounding on the basic macroeconomic concepts that strengthen analysis of crucial economic policies
3	Learners are expected to regularly read suggested current readings and related articles in the dailies and journals are analysed class rooms

SN	Modules/ Units
1	**Aggregate Income and its Dimensions**
	• Aggregate Income and its dimensions: National income aggregates - and measurement; - GNP, GDP, NDP, Real and nominal income concepts, measures of inflation and price indices - GDP deflator, - Nominal and real interest rates- PPP income and HDI
2	**Keynesian concepts of Aggregate Demand (ADF), Aggregate Supply (ASF)**
	• Keynesian concepts of Aggregate Demand (ADF), Aggregate Supply (ASF), Interaction of ADF and ASF and determination of real income; Inflationary gap • Policy trade- off between Inflation and unemployment – Phillips' curve – short run and long run
3	**Economic Policy Implications in the IS-LM framework**
	• The IS-LM model: Equilibrium in goods and money market; Monetary and real influences on IS-LM curves, Economic fluctuations and Stabilisation policies in IS-LM framework - Transmission mechanism and the crowding out effect; composition of output and policy mix, IS-LM in India
4	**International Aspects of Macroeconomic Policy**
	• International aspects of Macroeconomic policy: Balance of payments disequilibrium of an open economy - corrective policy measures -Expenditure changing policies and expenditure switching policies BOP adjustments through monetary and fiscal policies -The Mundell-Fleming model - Devaluation, revaluation as expenditure switching policies - effectiveness of devaluation and J - curve effect

(To be implemented from Academic Year- 2016-2017)

Core Courses (CC)

3. Corporate Finance

Modules at a Glance

SN	Modules	No. of Lectures
1	Scope and Objectives of Financial Management	15
2	Time Value of Money	15
3	Financial Analysis - Application of Ratio Analysis in Financial Decision Making	15
4	Financial Decisions	15
	Total	**60**

Objectives

SN	Objectives
1	To enhance the abilities of learners to develop the objectives of Financial Management
2	To enable the learners to understand, develop and apply the techniques of investment in the financial decision making in the business corporates
3	To enhance the abilities of learners to analyse the financial statements

SN	Modules/ Units
1	**Scope and Objectives of Financial Management**
	• Introduction, Meaning, Importance, Scope, Objectives, Profit v/s Value Maximization
2	**Time Value of Money**
	• Concept, Present Value, Annuity, Techniques of Discounting, Techniques of Compounding, Bond Valuation and YTM
3	**Financial Analysis - Application of Ratio Analysis in Financial Decision Making**
	Management Analysis • Profitability Ratios: Gross Profit Ratio, Operating Profit Ratio, Return on Capital Employed • Efficiency Ratios: Sales to Capital Employed, Sales to Fixed Assets, Profit to Fixed Assets, Stock Turnover Ratio, Debtors Turnover Ratio, Creditors Turnover Ratio • Liquidity Ratios: Current Ratio, Quick Ratio • Stability Ratio: Capital Gearing Ratio, Interest Coverage Ratio • Investor's Analysis • Earnings per Share, P/E Ratio, Dividend Yield
4	**Financial Decisions**
	• Cost of Capital - Introduction, Definition of Cost of Capital, Measurement of Cost of Capital, WACC, Marginal Cost of Capital • Capital Structure Decisions - Meaning, Choice of Capital Structure, Importance, Optimal Capital Structure, EBIT-EPS Analysis, Cost of Capital, Capital Structure and Market Price of Share, Capital Structure Theories, Dividend Policy - Pay Out Ratio • Business Risk and Financial Risk - Introduction, Debt v/s Equity Financing, Types of Leverage, Investment Objective/Criteria for Individuals/Non-business Purpose

Core Courses (CC)

4. E-Commerce

Modules at a Glance

SN	Modules	No. of Lectures
1	Introduction to Electronic Commerce –Evolution and Models	15
2	World Wide Web and E-enterprise	15
3	E-marketing and Electronic Payment System	15
4	Legal and Regulatory Environment and Security issues of E-commerce	15
	Total	**60**

Objectives

SN	Objectives
1	To provide an analytical framework to understand the emerging world of e-commerce
2	To make the learners familiar with current challenges and issues in e-commerce
3	To develop the understanding of the learners towards various business models
4	To enable to understand the Web- based Commerce and equip the learners to assess e-commerce requirements of a business
5	To develop understanding of learners relating to Legal and Regulatory Environment and Security issues of E-commerce

SN	Modules/ Units
1	**Introduction to Electronic Commerce –Evolution and Models**
	• Evolution of E-Commerce-Introduction, History/Evolution of Electronic Commerce, Roadmap of E-Commerce in India, Main activities, Functions and Scope of E-Commerce. • Benefits and Challenges of E-Commerce, E-Commerce Business Strategies for Marketing, Sales and Promotions. • Business Models of E-Commerce- Characteristics of Business to Business(B2B), Business to Consumers (B2C), Business to Government (B2G) • Concepts of other models of E-commerce. • Business to Consumer E-Commerce process, Business to Business E-Commerce-Need and Importance, alternative models of B2B E-Commerce. • E-Commerce Sales Product Life Cycle (ESLC) Model
2	**World Wide Web and E-enterprise**
	• World Wide Web-Reasons for building own website, Benefits of Website, Registering a Domain Name, Role of web site in B2C E-commerce; push and pull approaches; Web site design principles. • EDI and paperless trading; Pros & Cons of EDI; Related new technologies use in E-commerce. • Applications of E-commerce and E-enterprise - Applications to Customer Relationship Management- Types of E-CRM, Functional Components of E-CRM. • Managing the E-enterprise- Introduction, Managing the • E-enterprise, Comparison between Conventional and • E-organisation, Organisation of Business in an E-enterprise, Benefits and Limitations of E- enterprise
3	**E-marketing and Electronic Payment System**
	• E-Marketing- Scope and Techniques of E-Marketing, Traditional web promotion; Web counters; Web advertisements, Role of Social media. • E-Commerce Customer Strategies for Purchasing and support activities, Planning for Electronic Commerce and its initiates, The pros and cons of online shopping, Justify an Internet business. • Electronic Payment System-Characteristics of E-payment system, SET Protocol for credit card payment, prepaid e-payment service, post-paid E-payment system, Types of payment systems. • Operational, credit and legal risks of E-payment system, Risk management options for E-payment systems, Set standards / principles for E-payment

SN	Modules/ Units
4	**Legal and Regulatory Environment and Security issues of E-commerce**
	• Introduction to Cyber Laws-World Scenario, Cyber-crime& Laws in India and their limitations, Hacking, Web Vandals, E-mail Abuse, Software Piracy and Patents. • Taxation Issues, Protection of Cyber Consumers in India and CPA 1986, Importance of Electronic Records as Evidence. • Security Issues in E-Commerce- Risk management approach to Ecommerce Security - Types and sources of threats, Protecting electronic commerce assets and intellectual property. • Security Tools, Client server network security, Electronic signature, Encryption and concepts of public and private key infrastructure

Scheme of Examination:

The performance of the learners will be evaluated in two components. One component will be the Internal Assessment component carrying 40% marks and the second component will be the Semester End Examination component carrying 60% marks.

Internal Assessment:

The Internal Assessment will consist of one class test of 40 marks for each course excluding projects. The question paper pattern will be shown as below:

Question Paper Pattern

(Internal Assessment)

Maximum Marks: 40 marks

Questions to be set: 03

Duration: 1½ hours

Question No	Particular	Marks
Q-1	Objective Questions Students to answer 10 sub questions out of 15 sub questions. *(*Multiple choice/ True or False/ Match the columns/ Fill in the blanks)* ***OR*** Objective Questions A) Sub Questions to be asked 08 and to be answered any 05 B) Sub Questions to be asked 08 and to be answered any 05 *(*Multiple choice/ True or False/ Match the columns/ Fill in the blanks)*	10 Marks
Q-2	Concept based short questions Students to answer 5 sub questions out of 8 sub questions.	10 Marks
Q-3	Practical problems or short questions Students to answer 02 sub questions out of 03 sub questions	20 Marks

Question Paper Pattern

(Practical Courses)

Maximum Marks: 60

Questions to be set: 04

Duration: 2 Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Practical Question	15 Marks
	OR	
Q-1	Practical Question	15 Marks
Q-2	Practical Question	15 Marks
	OR	
Q-2	Practical Question	15 Marks
Q-3	Practical Question	15 Marks
	OR	
Q-3	Practical Question	15 Marks
Q-4	Objective Question *(Multiple Choice/ True or False/ Fill in the Blanks/ Match the Columns/ Short Questions.)*	15 Marks
	OR	
Q-4	Short Notes *(Any three out of five)*	15 Marks

Note:

Full length question of 15 marks may be divided into two sub questions of 08 and 07 marks.

Question Paper Pattern

(Theoretical Courses)

Maximum Marks: 60

Questions to be set: 04

Duration: 2 Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Full length Question	15 Marks
	OR	
Q-1	Full length Question	15 Marks
Q-2	Full length Question	15 Marks
	OR	
Q-2	Full length Question	15 Marks
Q-3	Full length Question	15 Marks
	OR	
Q-3	Full length Question	15 Marks
Q-4	Objective Question *(Multiple Choice/ True or False/ Fill in the Blanks/ Match the Columns/ Short Questions.)*	15 Marks
	OR	
Q-4	Short Notes *(Any three out of five)*	15 Marks

Note:

Full length question of 15 marks may be divided into two sub questions of 08 and 07 marks.

Sr. No	Particular
01	**Standard of Passing** The learner to pass a course shall have to obtain a minimum of 40% marks in aggregate for each course where the course consists of Internal Assessment & Semester End Examination. The learner shall obtain minimum of 40% marks (i.e. 16 out of 40) in the Internal Assessment and 40% marks in Semester End Examination (i.e. 24 out of 60) separately, to pass the course and minimum of Grade E in the project component, wherever applicable to pass a particular semester. A learner will be said to have passed the course if the learner passes the Internal Assessment & Semester End Examination together.
02	**Allowed to Keep Terms (ATKT)** 1) A learner shall be allowed to keep term for Semester II irrespective of number of courses of failure in the semester I. 2) A learner shall be allowed to keep term for Semester III if he/she passes each of the semester I and Semester II OR a learner fails in not more than two courses of Semester I and not more than two courses of Semester II.

UNIVERSITY OF MUMBAI

Revised Syllabus for the
M.Sc. SemI/II/III/IV
Program: M.Sc.
Course : Bioanalytical Sciences

(Credit Based Semester and Grading System with effect from the academic year 2014–2015)

Preamble:

Indian Pharmaceutical industry:

Indian Pharmaceutical industry has long proved its mite both at national and international arena. With the WTO regime just rising in the horizon our pharma companies are in for a great boom especially in manufacturing and marketing generics which would be out of patent regime during 2005 to 2007. The market for these molecules is expected to be around 100 billion dollars. Even if our companies make a share of 01 % percent, substantial revenue is in the offering. Coupled with this they can strive to have few new molecules up their scheme

Ayurveda, Siddha and Unani (ASU) Medicines - Our rich heritage:

The Indian sub-continent houses one of the world's richest flora & fauna and has one of the world's oldest medicinal systems - Ayurveda. Ayurveda (Ayur - life; Veda - knowledge) is an encyclopedia of the Indian medicinal system, which has a history of over 3000 years. It reflects the law of nature, inherent to life of all living beings. Along with Ayurveda other systems of medicine like the folk medicines, Unani and Siddha are also being practiced in the subcontinent. Ayurveda, Unani and Siddha (ASU) medicines are quit popular among the Indians, and have been followed for over several hundred years.

Department of Indian Systems of Medicine and Homeopathy, Government of India recognizes Ayurveda, Siddha and Unani as standard systems of medicine. Having given the recognition and since these medicines are gaining the trust of people the world over, the Government is trying to implement regulatory guidelines to ensure consistent quality of efficacy & quality. Therefore, standardization of herbal medicines is the need of the hour. This will help not only lead to better acceptance of medicines of Indian systems by the people but will also help to bring these systems on par with the modern medicines where modern scientific principles and techniques are employed to ensure quality and efficacy of the drug formulations.

Inadequacy of Trained personnel:

Major hurdle faced by the R&D centers at various Pharma laboratories is the lack of adequately trained and GLP oriented personnel. This forms a major set back when the application of sophisticated technology especially in the bio analytical field is concerned. The lacunae become more evident when dealing with newer dosage forms and peptide based drugs.

Indian ASU formulations are already in great demand. There is, however, a dire need for standardization techniques based on modern instrumental procedures and principles. A major hurdle in achieving this is the lack of adequate expertise among the manufacturers of ASU drugs. The same inadequacy is seen even among the national laboratories and other Testing and research centers.

This lacunae needs to addressed very diligently and the proposed programme is a step in this direction. Bioanalytical evaluations are interdisciplinary programmes and require highly skilled personnel with strong background of Bio-analytical techniques. There is no programme available today for such a training to generate such expertise in analysts. Though industry uses sophisticated instruments in QC and drug development, there is a dire need of technical personnel with an overall expertise in various bioanalytical techniques including biological techniques to be able to take up R&D in newer formulations and standardization of ASU formulations to come up with meaningful evaluations.

Objectives of the Course

- Develop trained manpower in the field of Bio-analytical Sciences with specific emphasis for exploitation of ASU system of medicine as well as its need for changing trends of modern pharmaceutical Industries
- Amalgamate traditional analytical chemical techniques with modern genomic and proteomic technologies of manufacturing and analysis
- Introduce the powerful tools of informatics in routine use at manufacturing, QC and research.
- Exposure to National & International regulatory affairs with reference to drugs

M.Sc. Bioanalytical Sciences: SYLLABUS IN BRIEF

M.Sc. Semester - I

Paper	Code	Lectures	Credits	Code	Practical	Credits
Different Medicinal Systems, Pharmacognosy & Extraction Techniques	PSBN101	60	4	PSBNP101	60	2
GLP, Drug Act and Quality Management	PSBN102	60	4	PSBNP102	60	2
Chromatography and Spectroscopy-I	PSBN103	60	4	PSBNP103	60	2
Proteomics, Bioinformatics & Environmental Issues	PSBN104	60	4	PSBNP104	60	2
TOTAL		**240**	**16**		**240**	**8**
TOTAL CREDITS			**24**			

M.Sc. Semester - II

Paper	Code	Lectures	Credits	Code	Practical	Credits
Indian Pharmaceutical Industry, Phytochemistry & Extraction Techniques	PSBN101	60	4	PSBNP101	60	2
IPR and Patenting, Stability Studies and Packaging	PSBN102	60	4	PSBNP102	60	2
Chromatography and Spectroscopy-I	PSBN103	60	4	PSBNP103	60	2
New Drug Development, Immunoassays, Pharmacokinetics, Laboratory Safety Measures	PSBN104	60	4	PSBNP104	60	2
TOTAL		**240**	**16**		**240**	**8**
TOTAL CREDITS			**24**			

M.Sc. Semester –III

Note: Industrial Training will be for 8-12 weeks and may be spread out in Semester III and IV for a total of 4 credits.

Paper	Code	Lectures	Credits	Code	Practical	Credits
Basic Microbiology, Genomics, CE and Toxicology-I	PSBN301	60	4	PSBNP301	60	2
MS applications, Metabolite studies, Thermal Analysis and Tracer Techniques-I	PSBN302	60	4	PSBNP302	60	2
Standardization of ASU drugs, Statistics & GMP-I	PSBN303	60	4	PSBNP303	60	2
BA/ BE Studies, GCP and Method Validation-I	PSBN304	60	4	PSBNP304	60	2
TOTAL		**240**	**16**		**240**	**8**
TOTAL CREDITS			**24**			

M.Sc. Semester –IV

Note: Industrial Training will be for 8-12 weeks and may be spread out in Semester III and IV for a total of 4 credits.

Paper	Code	Lectures	Credits	Code	Practical	Credits
Basic Microbiology, Genomics, CE and Toxicology-II	PSBN401	60	4	PSBNP401	60	2
MS applications, Metabolite studies, Thermal AGenomics, CE and Toxicolognalysis and Tracer Techniques-II	PSBN402	60	4	PSBNP402	60	2#
Standardization of ASU drugs, Statistics & GMP-II	PSBN403	60	4	PSBNP403	60	2
BA/ BE Studies, GCP and Method Validation-II	PSBN404	60	4	PSBNP404	60	2
TOTAL		**240**	**16**		**240**	**8**
TOTAL CREDITS			**24**			

Distribution of Topics

M.Sc. Semester I

PSBN101-Different Medicinal Systems, Pharmacognosy & Extraction Techniques

101.1	Indian systems of Medicine (ASU) – Ayurveda, Siddha & Unani	(15)
101.2	Modern Medicine	(15)
101.3	Pharmacognosy	(15)
101.4	Principle of extraction and Isolation of analytes	(15)

PSBN102- GLP, Drug Act and Quality Management

102.1	Good Laboratory Practice (GLP)	(15)
102.2	Pharmacopeial standards and Testing Procedure	(15)
102.3	Drug Act & Regulations	(15)
102.4	Quality Control (QC) and Quality Assurance (QA)	(15)

PSBN103-Chromatography & Spectroscopy-I

103.1	Theory of Chromatographic separation and TLC	(15)
103.2	HPLC – 1	(15)
103.3	GC – I	(15)
103.4	Spectroscopy – I	(15)

PSBN104-Proteomics, Bioinformatics & Environmental Issues

104.1	OMICS	(15)
104.2	Electrophoresis	(15)
104.3	Bioinformatics	(15)
104.4	Environmental Issues of Bioanalytical laboratory	(15)

Distribution of Topics

M.Sc. Semester II

PSBN201-Indian Pharmaceutical Industry, Phytochemistry & Extraction Techniques

201.1	R and D in Pharma industry and Recent trends in Indian Pharmaceutical industry	(15)
201.2	Solid Phase Extraction (SPE)	(15)
201.3	Phytochemistry	(15)
201.4	Super Critical Fluid Extraction (SCFE) and SCFC (Super Critical Fluid Chromatography)	(15)

PSBN202- IPR and Patenting, Stability Studies and Packaging

202.1	IPR and Patenting- I	(15)
202.2	Stability Studies	(15)
202.3	IPR and Patenting -2	(15)
202.4	Packaging in Pharma industry	(15)

PSBN203- Chromatography & Spectroscopy-II

203.1	HPTLC	(15)
203.2	HPLC – 2	(15)
203.3	GC – II	(15)
203.4	Spectroscopy – II	(15)

PSBN204- New Drug Development, Immunoassays, Pharmacokinetics, Laboratory Safety Measures

204.1	NCE and its development into a New Drug and Enzymes	(15)
204.2	Immunoassay & ELISA	(15)
204.3	Basic Pharmacokinetics, pharmacodynamics and Drug properties	(15)
204.4	Laboratory Safety measures w.r.t handling of chemicals and biological materials	(15)

Distribution of Topics

M.Sc. Semester III

PSBN 301- Basic Microbiology, Genomics, CE and Toxicology-I

301.1	Basic Microbiology and Its application in Pharmaceuticals	(15)
301.2	Genomics	(15)
301.3	Basic and Regulatory Toxicology	(15)
301.4	Regulatory Microbiology and its application in Pharmaceutical and food industry	(15)

PSBN302- MS applications, Metabolite studies, Thermal Analysis and Tracer Techniques-I

302.1	MS basics	(15)
302.2	Hyphenation	(15)
302.3	Thermal Analysis	(15)
302.4	Analytical Methods	(15)

PSBN303- Standardization of ASU drugs, Statistics & GMP-I

303.1	Standardization of ASU drugs	(15)
303.2	General Statistical Methods	(15)
303.3	Concepts of Biostatistics	(15)
303.4	Good Manufacturing Practice	(15)

PSBN304- BA/ BE Studies, GCP and Method Validation-I

304.1	Ethical Issues in Clinical Trials	(15)
304.2	Good Clinical Practice (GCP) – 1	(15)
304.3	Bioavailability (BA) & Bioequivalence (BE) studies – 1	(15)
304.4	Analytical Method Validation	(15)

Distribution of Topics

M.Sc. Semester IV

PSBN401- Basic Microbiology, Genomics, CE and Toxicology-II

401.1	Bioassays in Pharmaceutical Evaluation	(15)
401.2	Polymerase Chain Reaction(PCR) & DNA fingerprinting	(15)
401.3	Automation and Analysis	(15)
401.4	Capillary Electrophoresis	(15)

PSBN402 MS applications, Metabolite studies, Thermal Analysis and Tracer Techniques-II

402.1	Applications of Quantitative Analysis	(15)
402.2	Applications of Qualitative Analysis	(15)
402.3	LC/MS/MS	(15)
402.4	Tracer Techniques in Bioanalytical assays	(15)

PSBN403- Standardization of ASU drugs, Statistics & GMP-II

403.1	Regulatory Aspects of ASU drugs	(15)
403.2	Environmental Safety in Bioanalytical laboratory	(15)
403.3	Electronic Data Management	(15)
403.4	Regulatory Issues	(15)

PSBN404- BA/ BE Studies, GCP and Method Validation-II

404.1	Therapeutic drug monitoring and Pharmacovigilance	(15)
404.2	Good Clinical Practice (GCP) – 2	(15)
404.3	Bioavailability (BA) & Bioequivalence (BE) studies – 2	(15)
404.4	QC and QA of ASU drugs	(15)

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES

60 Lectures / paper/semester
SEMESTER I -Theory
PSBN101-Different Medicinal Systems, Pharmacognosy & Extraction Techniques
(Lecture allotment includes periods for Seminars and Discussions)

Module No.	Topics
101.1	Title: Indian systems of Medicine (ASU) – Ayurveda, Siddha & Unani (15) Subtopics: 1. Principles and practice 2. Types of Drug Formulation 3. Methods of Manufacture – Raw Material To Finished Product 4. Types of Drug 5. Excipients in various dosage form
101.2	Title: Modern Medicine (15) Subtopics: 1. Principles and practice 2. API and concept of its formulation into a dosage form 3. Different types Drug Formulations 4. Excipients in various dosage forms 5. Disease Management (Comparison of ASU and Modern Drugs) a. Diabetes b. Tuberculosis c. Hypertension d. Hepatitis e. Malaria f. Dengue g. Influenza
101.3	Title: Pharmacognosy (15) Subtopics: 1. Introduction, Plants and their medicinal uses example of one plant to be given 2. Concepts of ethanobotany, ethno medicines and pharmacology 3. Phytogeographical regions to be explained with respect to endemism and hot spots (explain only concepts) 4. Herbaria evaluation to include Plant collection, Authentication, storage and drying techniques. 5. Raw material evaluation to include Microbial load, Raw material characterization, proximate evaluation, photomicrography 6. Concepts of GAP and GHP for medicinal plants(only introduction)
101.4	Title: Principle of extraction and Isolation of analytes (15) Subtopics: 1. Introduction 2. Physico-chemical properties of drugs and solvents 3. Concept of partition & Partition Coefficient

	4. Solvent properties 5. Selection of solvent 6. Extraction efficiency 7. Introduction to classical methods of extraction 8. Introduction to modern methods of extraction- advantages & disadvantages - Include LLE (Soxhlet) and LME 9. Applications of extraction 10. Microwave assisted extraction its advantages and disadvantages 11. Ionization and its effect on the extraction of drugs 12. The 'First law of drug metabolism' 13. Matrix components & analyte isolation 14. Concentration of extracts 15. Isolations of fractions 16. Purification of isolate

PSBNP 101

- Liquid – liquid extraction of a modern drug from plasma and formulations (e.g. Diclofenac sodium, Glimiperide, Aceclofenac, Metformin etc.)

- Microscopic evaluation of sections and powders with adulteration and formulation comparision of the following medicinal plants;

1) Emblica officinalis – (Amla - dried fruit)
2) Vitex nigundo - Leaves
3) Asteracantha Longifolia – Whole plant
4) Calotropis gigantea – Leaves
5) Phyllanthus amarus – Whole plant

Calculation in terms of percent occurrence of key anatomical characteristics in the powder to be recorded.

- Individual student must report findings of ANY THREE from the above list but in each institution evaluation on all the listed plants must be carried out.

- Separation of plant pigments using paper chromatography

- Determination of sugars by descending paper chromatography.

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES
SEMESTER I -Theory
PSBN102- GLP, Drug Act and Quality Management
(Lecture allotment includes periods for Seminars and Discussions)

102.1	Title: Good Laboratory Practice (GLP) (15) Subtopics: 1. What is GLP? 2. Practicing GLP 3. Guidelines to GLP 4. Documentation of Laboratory work 5. Preparation of SOPs

	6. Calibration records 7. significance of validation in GLP 8. Transfer of methods 9. Documentation of results
102.2	Title: Pharmacopeial standards and Testing Procedure (15) Subtopics: 1. Introduction to WHO guidelines 2. Introduction to Pharmacopoeias IP, BP, USP(JP, EP, AP where ever applicable) 3. Specified test in Monographs w.r.t liquid formulation (injectible) and solid dosage form (USP, EP, BP, IP) 4. Include AP, Indian HP and AFI (wherever applicable)
102.3	Title: Drug Act & Regulations (15) Subtopics: 1. Indian Drugs and Cosmetics Act w.r.t Schedule Y,M,H. Include Schedule A, S (introduction) 2.Introduction to foreign guidelines w.r.t US, EU, Australia & Japan 3. Introduction to CFR 21 part 11
102.4	Title: Quality Control (QC) and Quality Assurance (QA) (15) Subtopics: 1. Introduction 2. What is QC? What is QA? 3. Requirements for implementing QC & QA 4. QC & QA concepts in ASU drugs 5. Standardizing an Analytical method a. Preliminary requirements of a discriminatory quantitaion b. Detection of the analyte of interest c. Separation of analyte form the matrix components d. Sample preparation for quantitation 6. Factors for standardization a. Solid-phase extraction b. Extraction sequence c. Liquid/liquid extraction d. Quantification 7. Support work & documentation 8. Validation 9. Audit requirements ,audits and audit reports 10. Personnel Responsibility in QA

PSBNP 102

- Students must submit a Field Note Book of their field excursion including Presentation of the field visit
- Research Paper Review
- Carry out dissolution test, disintegration, hardness and friability on any one tablet preparation

- Modification by using Sodium dodecyl sulphate buffer and other buffer system (for water soluble and water insoluble drug). And With one modification that student should carry out tablet preparation with the help of IR Punch and then study all the test w.r.t. different parameters.

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES
SEMESTER I –Theory
PSBN103-Chromatography & Spectroscopy-I
(Lecture allotment includes periods for Seminars and Discussions)

103.1	Title: Theory of Chromatographic separation and TLC (15) Subtopics: 1. Principles of chromatographic separation 2. Introduction to chromatographic separation techniques 3. Principles and Practice of TLC 4. Uses of TLC 5. Some recommended solvents systems Detection of compounds on TLC plates
103.2	Title: HPLC – 1 (15) Subtopics: 1. Principles and Instrumentation 2. The chromatographic process 3. The chromatogram 4. Separation mode 5. Column chemistry 6. System parameters 7. Reverse-phase HPLC 8. Introduction to various HPLC techniques; a. Ion-pair HPLC b. Ion-exchange HPLC c. Normal-phase HPLC d. Affinity Chromatography e. Gel permeation Chromatography 9. Recent advances (Fast LC, online extractions, add on pumps, online derivatization, multi dimensional LC)
103.3	Title: GC – I (15) Subtopics: 1. Principles and Instrumentation 2. Factors that affect the chromatographic separation (Temperature, Type of column etc.) 3. GC techniques 4. Types of columns and their application 5. Selection of liquid stationary phases (Packed and capillary columns) 6. GC hardware a. Introduction to flow and pressure controllers

	b. Injection techniques- on column injection, large volume injection, split -splitless, PTV and various auto injectors- gas sampling as well as liquid sampling c. Column Oven- temperature programming, (High /cryogenic oven temperature)
103.4	Title: Spectroscopy – I (15) Subtopics: 1. Introduction to atomic and molecular Spectroscopy 2. UV ,Visible and fluorescence i. Principles & Instrumentation ii. Applications 3. Nephalometry i. Principles & Instrumentation ii. Applications 4. Turbidometry i. Principles & Instrumentation ii. Applications 5. IR i. Principles & Instrumentation ii. Applications 6. Basic concepts of NMR spectroscopy

PSBNP 103

- Gas Chromatograhic separation of solvent mixtures (e.g. Menthol & Ethanol, Toluene & Methanol etc.)
- HPLC separation of herbal raw material from its formulation (e.g. Asteracantha longifolia from LUKOL / SPEMAN, Phyllanthus amarus from LIV 52, Tribulus terrestris from Ghokshuradi guggul etc.)
- HPLC separation of a modern drug from plasma and its formulations (e.g. Diclofenac sodium, Glimiperide, Aceclofenac, Metformin etc.)
- HPLC separation of modern drugs from their combination formulation (e.g. Diclofenac Sodium &Paracetamol, Metformin &Glimiperide etc.)
- Determination of Caffeine from a given sample by
  i) UV spectrophotometry
  ii)HPLC
- IR analysis of a modern drug (e.g. Diclofenac Sodium, etc.)
- Derivatisation in GC

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES
SEMESTER I -Theory
PSBN104-Proteomics, Bioinformatics & Environmental Issues
(Lecture allotment includes periods for Seminars and Discussions)

104.1	Title: OMICS (15)

	Subtopics: 1. Introduction to Omics: a. Genomics b. Metabolomics c. Lipidomics d. Proteomics 2. Significance of proteome 3. Overview of proteomics a. Methods for cell disruption/protein extraction b. Protein purification/ Fractionation c. Protein identification and characterization 4. Modification of proteins (invitro/invivo) a. Post translational b. Chemical
104.2	Title: Electrophoresis (15) Subtopics: 1. Basic Protein Chemistry 2. Principles of electrophoretic separation 3. Equipment and process 4. Agarose gel electrophoresis 5. PAGE – Native & SDS, 2DGE, Extensions of Electrophoresis-Immunoelectrophoresis/pulsefield 6. Standardization of electrophoretic technique 7. Detection techniques 8. Applications of electrophoresis
104.3	Title: Bioinformatics (15) Subtopics: 1. What is bioinformatics? 2. Databases and Search Tools 3. Applications of bioinformatics a. Genomics b. Proteomics c. Drug discovery (Docking software) 4. Using various libraries & tools w.r.t structure/ literature to drug development/ proteins 5. Introduction to Chemi-informatics
104.4	Title: Environmental Issues of Bioanalytical laboratory (15) Laboratory Waste: Management, control and Regulatory issues 1. Introduction to types and sources of Laboratory waste 2. Chemical & Biological materials: Hazards and Handling 3. Hazard Controls & Information (*Workplace Hazardous Materials Information System {WHMIS} as example)* 4. Introduction to :

	• Chemical Storage and Segregation • Chemical Laboratory Emergency Response • Equipment Safety • Laboratory Inspections • Transportation and Receiving of Hazardous Materials 5. Regulations of Pollution Control Board for Laboratories.

PSBNP 104

- Separation of human serum / plasma proteins / egg white using PAGE((Protein molecular weight determination kit may be used)
- Evaluate the given data of protein and nucleic acid sequence using a global database with appropriate search engine / software (e.g. BIOEDIT). Prepare a report stating the steps involved and a brief analysis of the findings.
- Evaluate the given data of peptide sequence using a global database with appropriate search engine / software (e.g. BIOEDIT). Prepare a report stating the steps involved and a brief analysis on the functional annotation of the peptide.
- Bioinformatics : Clustal W. omega, BLAST A, Blast O, Fasta, Alignment, Prosite, SCOP, Rasmol, CATH, Identification of Protein,
- Separation of proteins using 2D gel electrophoresis
- Calculation of Ka, Ke, t ½, Cmax and Tmax from the given data (2 expts.)
- Protein profiling of plant seed by SDS-PAGE

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES
60 Lectures / paper/semester
SEMESTER II-theory
PSBN201-Indian Pharmaceutical Industry, Phytochemistry & Extraction Techniques
(Lecture allotment includes periods for Seminars and Discussions)

201.1	Title: R and D in Pharma industry and Recent trends in Indian Pharmaceutical industry (15) Subtopics: 1. Historical background with emphasis on Post 1947 period 2. Market trends and activities 3. Govt. initiatives and the public sector in Pharmaceutical Industry 4. The role of Drug Pricing policy in India and its impact on the Indian Pharmaceutical Industry 5. Role of Analytical chemist in Pharmaceutical Industry 6. R&D strategies of Indian Pharma 7. Pharma R&D 8. Bulk Drug manufacturing & its R&D 9. Varied Dosage forms and its R&D
201.2	Title: Solid Phase Extraction (SPE) (15)

	Subtopics: 1. Introduction 2. General properties of bonded silica sorbents 3. Sorbent/analyte interactions 4. Sample pretreatment of different biological matrices 5. Developing SPE methods 6. Example of an SPE method (introduction of SPME) 7. Disc cartridges 8. 96-Well Format (e.g. Porvair Microsep TM system) 9. Direct injection of plasma 10. Other new developments
201.3	Title: Phytochemistry (15) Subtopics: 1) Natural drug substances from plants (primary and secondary metabolites) 2) Broad classification of secondary metabolites a. Nitrogenous b. Non nitrogenous c. Isoprenoids 3) Secondary drug metabolite production with special reference with integrated pathway 4) Key Factors affecting synthesis of secondary metabolites 5) Choice of solvent for extraction of phytoconstituents 6) Extraction Techniques of Crude plant material w.r.t 1)maceration(Types- Kwatha and Swarasa) 2)percolation 3)steam distillation
201.4	Title: Super Critical Fluid Extraction (SCFE) and SCFC (Super Critical Fluid Chromatography) (15) Subtopics: 1. The concept of SCFE & SCFC 2. Instrumentation of SCFE & SCFC 3. Factors affecting SCFE & SCFC 4. Benefits of SCFE & SCFC 5. Application of SCFE for natural products and Application of SCFC 6. Conclusions and future perspectives

PSBNP 201

- SPE of a modern drug from formulation (e.g. Atorvastatin, Diclofenac sodium, Sibutramine etc.
- SPE of a modern drug from plasma (e.g. Atorvastatin, Diclofenac sodium, Sibutramine etc.)
- Prepare specific reagents and conduct qualitative test for the presence of alkaloids, tannins, lignans, steroids and glycosides using TLC. Compare the results using standards (if available).
- Preparation of Herbarium of following medicinal plants;
  1) Asteracanthalongifolia
  2) Trigonellafoenum
  3) Clitoriaternatea
  4) Coriandrumsativum
  5) Achyranthusaspera
  6) Scopariadulcis
  7) Amaranthusspinosa
  8) Phyllanthusamarus
  9) Calotroprisgigantea
  10) Vitexnigundo

  Individual student must **submit** herbaria of ANY THREE from the above list but in each institution herbarium of all the listed plants must be prepared.
- Preparation of calibration graphs for Li, Na, and K by flame Photometry using their solutions of appropriate concentrations and studying interference of
  i) K in Na estimation
  OR
  ii) Na in Li estimation
  OR
  iii) Li in K estimation
- Determination of percentage purity of CaCO3/MgCO3 by
  i) Titrimetry
  ii) Complexometry
  iii) IE chromatography
- Comparison of classical and modern method of extraction of phytoconstituent of medicinal plants
- Effect of drying on phytoconstituents.(Terpenes, alkaloids, tannins
- Phytochemical variation within a species using HPLC/HPTLC

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES
SEMESTER II-theory
PSBN202- IPR and Patenting, Stability Studies and Packaging
(Lecture allotment includes periods for Seminars and Discussions)

202.1	Title: IPR and Patenting- I (15) Subtopics: 1. Concept of IPR - Understanding the meaning of IPR & its significance in knowledge based economy. 2. Types of IPR - Patents, Trade Marks & Service Marks, Design Registration, Trade Secrets, Geographical indications, Protection of New Plant Varieties, Copyright. 3. Global Harmonization - Impact of IPR on global trade and the need for harmonization, WTO and its role in a global harmonization, TRIPS and introduction to the articles in TRIPs document as well as

	the flexibilities provided by TRIPS. 4. International Agreements related to IPR & patents - Paris Convention, PCT.
202.2	Title: Stability Studies (15) Subtopics: 1. Factors that influence stability of drug formulations 2. Types of Stability chambers and their design considerations 3. Stability issues of ASU raw materials and finished products 4. Guidelines on Stability evaluations 5. Approaches to stability studies of ASU formulations
202.3	Title: IPR and Patenting -2 (15) Subtopics: 1. Indian Patent Act - a. Criteria to be fulfilled for Patentability - new/novel, non-obvious/inventive step, useful/capable of industrial application. b. Non-patentable subject matter - what is not patentable. c. Concept of Mailbox and EMR and how it has helped India in its transition to full TRIPS compliance. d. Role of patentee and patent offices in patent management including lab documentation, confidentiality agreements, pre- and post-grant opposition, servicing of patents. e. Provisional Patents, Divisional Patents & Patents of Addition. 2. IPR as a strategic tool - a. Concepts of piracy, reverse engineering and knowledge worker. b. Benefits of creating and/or owning patents and other IPR. c. How India has leveraged the flexibilities provided by TRIPS to safeguard the industry and prevent ever-greening of patents. 3. IP clearance – Precautions before launching of product anywhere in the world - a. Concepts of Freedom to operate (FTO) search and analysis for patents, Exclusivity and SPC status check b. Other IPR checks like trademarks, copyrights (for printed data on leaflets, packages etc.), Putting IPR related disclaimers while advertising product list or selling products.
202.4	Title: Packaging in Pharma industry (15) Subtopics: 1. Introduction to Packaging 2. Fundamentals of Distribution 3. Packaging Forms & their Significance 4. Packaging Materials (covering basic mfg process, applications and significance) 5. Paper, Paper Board and CFB Glass,metals, Basic Polymer based materials, Polymer based composite materials 6. Ancillary Mats 7. Package Material Testing 8. Compatibility & Migration Studies 9. Accelerated Shelf Life Testing - Theory and Problems. 10. GMP 11. Packaging Validation 12. Packaging Laws and regulatory compliance

PSBNP 202

- Students must submit a Report of the Industrial Visits including Presentation of the industrial visit.
- Patent Claim Drafting
- Accelerated stability studies of various formulations or drugs with respect to Temperature (b) Effect of buffers / pH dependent (2 – 4 Expts.)
- Test for degradation of compounds using TLC for any two drugs.
- Stability testing of solution and solid dosage forms for photo degradation.(2 experiments).
- Effect of hydrogen peroxide, hydrochloric acid and sodium hydroxide solutions on the stability of drugs in solution at elevated temperatures and room temperature. (2 experiments).
- Stability studies of drugs in dosage forms at 25oC, 60% RH and 40oC, 75% RH and at different Pressure

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES
SEMESTER II-theory
PSBN203- Chromatography & Spectroscopy-II
(Lecture allotment includes periods for Seminars and Discussions)

203.1	Title: HPTLC (15) Subtopics: 1. Principles and Instrumentation 2. HPTLC vs TLC 3. Densitometry & quantitaion in HPTLC 4. HPTLC in fingerprinting & QC 5. Troubleshooting 6. Applications of HPTLC
203.2	Title: HPLC – 2 (15) Subtopics: 1. Chiral HPLC 2. Column switching in HPLC 3. Gradient reverse-phase HPLC 4. Column conditions 5. automation in HPLC 6. HPLC detectors d. Introduction e. Principles of detection f. Universal and Specific a. Detectors g. Detector response h. Sensitivity considerations i. Selectivity 7. Manual and Electronic data Processing 8. Troubleshooting

	9. Applications of HPLC
203.3	Title: GC – II (15) Subtopics: 1. Universal and specific Detectors in GC (FID, TCD, ECD, FPD and NPD) 2. Derivatisation for GC 3. GC strategy for analysis involving biological matrices 4. Troubleshooting 5. Applications
203.4	Title: Spectroscopy – II (15) Subtopics: 1. Theory and applications of ; i. Circular Dichroism (CD) ii. Optical Rotary Dispersion (ORD) 2. Emission spectroscopy 3. Principles, instrumentation and applications of i. Flame photometry ii. Atomic Emission Spectroscopy 4. AAS i. Principles & Instrumentation ii. Applications 5. ICP i. Principles & Instrumentation ii. Applications 6. X – ray diffraction i. Principles & Instrumentation ii. Applications

PSBNP 203

- HPTLC separation of a modern drug from plasma and its formulations (e.g. Diclofenac sodium, Glimiperide, Aceclofenac, Metformin etc.)
- HPTLC fingerprinting of Herbal raw material (e.g. Asteracanthalongifolia, Ricinus cummunis, Calotropisgigantia)
- HPTLC detection of herbal raw material from its formulations (e.g. Asteracantha longifolia from LUKOL / SPEMAN, Vitexnigundo from PANCHGUN TAILA, Glycerrizhaglabra from ANU TAILA)
- Gas Chromatographic separation of solutes from their matrix (e.g. Diclofenac sodium from its formulation, Methanol from plasma etc.)
- Determination of Caffeine from a given sample by
  i) HPTLC

  ii) HPLC

  iii) UV

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES
SEMESTER II-theory
PSBN204- New Drug Development, Immunoassays, Pharmacokinetics, Laboratory Safety Measures
(Lecture allotment includes periods for Seminars and Discussions)

204.1	Title: NCE and its development into a New Drug and Enzymes (15) 1. What is NCE? 2. Stages in the development of NCE 3. Preclinical studies on NCE 4. Enzyme as Therapeutics agents, as diagnostics, as catalyst in processes as drug target
204.2	Title: Immunoassay & ELISA (15) Subtopics: 1. Introduction 2. Definitions 3. Theory 4. Requirements for immunoassay 5. Practical aspects 6. Data handling 7. Advantages of immunoassay 8. Principles and instrumentation in ELISA 9. Applications of ELISA 10. Types of Detection systems

204.3	Title: Basic Pharmacokinetics, pharmacodynamics and Drug properties (15) Subtopics: 1. Basic concepts of Pharmacokinetcs & pharmacodynamics 2. Different pharmacokinetic & pharmacodynamics parameters and their meanings 3. Basic techniques of evaluating Pharmacokinetic & pharmacodynamics parameters 4. Basic types of models in pharmacokinetics & pharmacodynamics 5. General classification of Drugs and their formulations 6. Drug – Route of entry, Absorption and Distribution with examples 7. Concepts of Drug Metabolism & elimination with examples 8. Adverse Drug reactions(ADRs) 9. Serious Adverse Events(SAEs)
204.4	Title: Laboratory Safety Measures w.r.t handling of chemicals and biological materials (15) Subtopics: 1. General Precautions ,labels and signage's 2. Material handling and disposal 3. Material Safety Data Sheets(MSDS) and SOP (Standard Operating Procedure) 4. Personal safety & Clothing 5. Levels of safety 6. Fire safety and fire fighting 7. Working in Biosafety Cabinets and hoods

PSBNP 204

- Immunoassay of HEPALISA in serum.
- Immunoassay for HCG in urine
- Immunoassay of T3 and T4 by RIA/IRMA
- Calculation of different Pharmacokinetic parameters like Ka, Ke, t½, C max, Tmax and AUC from the given blood data.

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES SEMESTER III-theory PSBN301- Basic Microbiology, Genomics, Capillary Electrophoresis and Toxicology – I (Lecture allotment includes periods for Seminars and Discussions)	
301.1	Title: Basic Microbiology and its application in pharmaceuticals (15) Subtopics: 1. Microbes & Their environment, Significance and scope of Microbiology, Biodiversity and types of Microorganisms, Visualization of Microorganisms : staining and Simple and compound microscopy, Electron Microscopy 2. Growth of Microorganisms, methods to study growth of microorganisms, preservation of microorganisms, maintenance media, etc 3. Sources of antimicrobial agents: plants and microorganisms, therapeutic Antimicrobial Agents e.g. Erythromycin, Amphotericin B, Cephalosporins and their commercial production, Antimicrobial Drug Resistance and Drug Discovery
301.2	Title: Genomics (15) Subtopics: 1. Nucleic Acid chemistry 2. Principles of DNA sequencing 3. DNA & RNA probes 4. Concepts of Gene manipulation (introduction only) 5. Restriction enzymes & their uses 6. Vectors & their uses 7. Producing Transgenic organisms 8. Hybridoma technology 9. cDNA production & applications 10. . Gene libraries & applications
301.3	Title: Basic and Regulatory Toxicology (15) Subtopics: 1. Introduction, scope and types of toxicological studies. 2. Toxicants, their route of entry, distribution 3. Metabolism & elimination of toxicants 4. Concept of LD50, ED50 Title: Regulatory Toxicology 5. Types of toxicity studies 6. Design considerations. 7. Evaluation of results 8. Extrapolation to man. 9. OECD Guidelines on Toxicological studies 10. Schedule Y and its interpretation.

301.4	Title: Regulatory Microbiology and its application in pharmaceutical and food industry (15) Subtopics: (New Addition) 1. Asepsis, Sterilization and Disinfection, concept of Death curve of microbial population, Aseptic filling in pharmaceutical industry, Classification Clean rooms / Clean areas, QA and QC in Microbiology Laboratory 2. Important Microbes for Food & Drug Industry, Pathogenic Organisms in Food & Pharma Industry 3. Sources of contamination, Microbial Contamination in ASU preparations 4. Regulatory Microbiological testing in pharmaceuticals 5. Microbiological Assays for pharmaceutical products

PSBNP 301

- Plant DNA extraction and separation using agarose Gel.
- DNA fingerprint (Genomic DNA isolation kit may be used) of two bacterial strains e.g. Resistant and wild strains of E. coli)
- Gram staining of bacteria and mounting of filamentous and non-filamentous fungi *(Staphylococcus aureus, E. coli, Candida albicans, Penicilliumsps, Lactobacillus sps etc.)*
- Sterility testing (Microbial load) of drug formulations (According to IP 2013)
- CCl4 liver dysfunction in rats and evaluation using liver function tests (An experimental comparison using suitable groups of controls, natural recovery and treatment with known hepatoprotectants to be carried out)
- LD 50 evaluation using a suitable model (e.g. *Daphnia* / rice weevil)
- Isolation & screening of industrially important microorganisms
- Sterility testing of laminar airflow bench top.
- Strain improvement by mutation (by UV radiation & Chemical mutagens)
- Central streak with Bacillus species isolated from soil

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES

SEMESTER III-theory

PSBN302- MS Applications, Metabolite Studies, Thermal Analysis and Tracer Techniques - I
(Lecture allotment includes periods for Seminars and Discussions)

302.1	Title: MS basics (15) Subtopics: 1.MS 2. MS/MS, TQ/Ion Trap 3. Components: Inlets, Ion sources, Analyzers, Detectors, Vacuum System, etc Introduction

302.2	Title: Hyphenation (15) Subtopics: 1. LC/MS and LC/MS/MS 2. GC/MS and GC/MS/MS 3. Scan events in TQ and other tandem systems and hybrid systems 4. ICP/MS and its applications in pharmaceuticals and food 5. Recent advances in the field of mass spectrometry
302.3	Title: Thermal analysis (15) Subtopics: 1. Principles of Thermal Analysis 2. Instrumentation Requirements 3. Applications of Thermal Analysis 4. Thermal analysis of Bhasma preparations 5.Thermal Analysis Techniques
302.4	Title: Analytical Methods (15) Subtopics: 1. Method development and applications 2. Sample preparation 3. Headspace GC and GC-MS

PSBNP 302

- LC/MS quantitation of a modern drug (e.g. Diclofenac Sodium, Ezetimibe etc.)
- GC/MS separation of plant essential oil (Demonstration)
- LC/MS/MS qunatitation of a modern drug from plasma (e.g. Diclofenac Sodium)
- LC/MS/MS quantitation of meatbilite of a modern drug from plasma (eg. Mycopenolic acid, metabolite of Mycophenolatemofitil)
- Mass Fingerprinting of peptides using a suitable sample.

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES

SEMESTER III-theory

PSBN303- Standardization of ASU Drugs, Statistics and GMP - I

(Lecture allotment includes periods for Seminars and Discussions)

303.1	Title: Standardization of ASU drugs (15) Subtopics: 1. Need of standardization of Ayurvedic drugs

	2. What does standardization involve? 3. Bioanalytical tools for standardization 4. Clinical studies in Standardization 5. Approaches to standardization; 6. Raw materials 7. In-process materials 8. Finished products 9. Developing standardized QC methods 10. Shelf life studies on finished products
303.2	Title: General Statistical Methods (15) Subtopics: 1. Basic concepts of sample statistics 2. Concept of sample size and power 3. Concept of ramdomisation and sampling techniques 4. Concept of significance and confidence limits 5. Introduction to Various statistical tests - parametric and non parametric 6. Use of Statistical Packages for Data evaluation 7.Concept of random sampling and sampling techniques 8. Concept of level of significance, power of test and confidence limits 9.Concept of sample size 10.Application of normal distribution
303.3	Title: Concepts of Biostatistics (15) Subtopics: 1. Statistical approach to biological samples 2. Variations in biological samples & their statistical treatment 3. Introduction to Data collection techniques 4. Design of experiments with eg. Block designs, Latin square 5. COV and ANOVA 6. Student's t test and F test 7. Regression analysis with application to Std Graph 8. Non parametric tests with examples 9. Statistical Guidance from regulatory agencies 10. . Student's T test, chi square test, Z test and F test 11.Single sample and two sample Non parametric tests with examples 12.Use of statistical packages for data analysis (SPSS software)
303.4	Title: Good Manufacturing Practice (15) Subtopics: 1. What is GMP? 2. Requirements of GMP implementation 3. Documentation of GMP practices 4. Regulatory certification of GMP 5. GMP in production of ASU drugs 6. Harmonization of SOP of manufacture 7. Audit for GMP compliances

PSBNP 303

- The project should involve industrial training of 8 to 12 weeks period. Data evaluation must involve application of biostatistics

- Problem based on Biostatistics

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES

SEMESTER III-theory

PSBN304- BA/BE Studies, GCP and Method Validation - I

(Lecture allotment includes periods for Seminars and Discussions)

304.1	Title: Ethical Issues in Clinical Trials (15) Subtopics: 1. Origin of Ethical Issues 2. Dealing with Ethical issues 3. Ensuring compliance to ethical issues 4. Ethical Committees & their set up 5. Regulatory powers of ethical committees 6. Ethical issues in animal studies 7.Compliance to ethical guidelines 8.Dealing with Ethical issues (subject compensation and subject rights) 9. Compliance to current ethical guidelines
304.2	Title: Good Clinical Practice (GCP) – 1 (15) Subtopics: 1. What is GCP? 2. Origin of GCP 3. Earlier Guidelines for GCP 4. Requirements of GCP compliance
304.3	Title: Bioavailability (BA) & Bioequivalence (BE) studies – 1 (15) Subtopics: 1. What is BA? 2. Parameters to evaluate BA of a drug 3. Factors that influence BA of a drug 4. Evaluating BA of a drug 5. Estimating BA parameters of a drug 6. What is BE? 7. Parameters to evaluate BE of a drug 8. Factors that influence BE of a drug 9. Evaluating BE of a drug 10. Estimating BE parameters of a drug

304.4	Title: Analytical Method Validation (15) Subtopics: 1. Strategies for Method development 2. What and Why of method validation 3. Regulatory requirements of validation 4. IQ, OQ and PQ of analytical instruments 5. Use of Reference standards 6. Issues of Method transfer 7. Intra and inter lab – Validation 8. Sampling 9. Calibration of glassware and instruments, concepts of Good weighing Practice 10. Use of Reference standards and working standards 11. format of Certificate of Analysis

PSBNP 304

- Determination of iron from a given sample / sample solution by
  i) Redox titration
  ii)Colorimetry
  iii)Atomic Absorption Spectroscopy

- Study of matrix effect on IR spectra using solution IR technique and quantitate the solutefrom a given sample. Identify solute from a given solution using IR library and carry out quantitative assay.

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES

SEMESTER IV-theory

PSBN401- Basic Microbiology, Genomics, Capillary Electrophoresis and Toxicology – I
(Lecture allotment includes periods for Seminars and Discussions)

401.1	Title: Bio assays in Pharmaceutical evaluation (15) Subtopics: 1. General idea about bio assay systems used in pharmaceutical evaluations 2. In vitro assays and in vivo assays 3. Ethical issues of using animal assay systems 4. Alternatives to animal assays – one or two examples
401.2	Title: Polymerase Chain Reaction (PCR) & DNA Fingerprinting (15) Subtopics: 1. Types of PCR & its applications 2. DNA amplification w.r.t its applications 3. DNA fingerprinting and applications 4. Use of genomic techniques in diagnostics

401.3	Title: Automation and analysis (15) Subtopics: 1. Automation and its advantages in sample preparation 2. Automation in bioanalysis 3. Advanced automated liquid handling systems 4. Robotic Workstations 5. High throughput Screening
401.4	Title: Capillary Electrophoresis (15) Subtopics: 1. Introduction 2. How capillary electrophoresis works 3. Why capillary electrophoresis works 4. CE hardware Use in bioanalysis

PSBNP 401

- CE separation of a modern drug from plasma and its formulation (e.g. DFS)
- CE separation of peptides (e.g. erythropoietin as per E.P.)
- CE separation of N. Acids
- PCR (PCR Kit may be used) for Plant DNA and RFLP (RFLP kit may be used) (e.g. *Phyllanthus*sps.)
- DNA sequencing using sample from a suitable organism

  OR
- Identification of Genetically Modified Organism (GMO identification kit may be used)
- Blue white screening of mutated organism
- Serum levels of drug attained by agar cup method
- Zone of inhibition assay for penicillin (using spiked plasma and formulation)
- Zone of exhibition assay for Vitamin B12

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES

SEMESTER IV-theory

PSBN402- MS Applications, Metabolite Studies, Thermal Analysis and Tracer Techniques - I
(Lecture allotment includes periods for Seminars and Discussions)

402.1	Title: Applications of Quantitative Analysis (15) 1.SM quantitation for e.g.

	2. Macromolecule quantitation for e.g
402.2	Title: Applications of Qualitative Analysis (15) Subtopics: 1. Technique of generating drug metabolites 2. Metabolite Identification 3. Impurity profiling
402.3	Title: LC/MS/MS (15) Subtopics: 1. Impurity profile in drugs and drug products 2. Proteomics 3. Pesticides, pesticide residues in food
402.4	Title: Tracer techniques in Bioanalytical assays (15) Subtopics: 1. Concept of Radioactivity & Half life 2. ∝ , β, γ emitters and their biological applications 3. Using tracers in assays 4. Detectors and counters 5. Concept of autoradiography 6. Radio labeled probes and their uses

PSBNP 402

- The project should involve preparation of herbal formulations and standardization Student can work on one of the following formulation

1. Any oil based preparation or ayurvedictaila preparation
2. Any vatti(Ayurvedic) or Guliga(Siddha)
3. Awahela (semi-solid,jiggery/sugar syrup based formulation)
4. Any preparation from unani e.g. Saffoof, Jawarish, Majoon.

Students should involve any modern chromatographic techniques,microscopic evaluation, chemical and physical tests for QC of formulation prepared.

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES

SEMESTER IV-theory

PSBN403- Standardization of ASU Drugs, Statistics and GMP - I
(Lecture allotment includes periods for Seminars and Discussions)

403.1	Title: Regulatory Aspects of ASU drugs (15) Subtopics: 1. National initiatives for regulation of ASU drugs 2. Schedule T and Schedule Y of Drugs and Cosmetics Act 3. International initiatives for regulation of ASU drugs with special reference to - WHO guidelines on traditional medicine - Approaches of US and EU to ASU drug regulation 4. Provisions of Drugs and Cosmetics Act applied to ASU (e.g. Schedule T and Y)
403.2	Title: Environmental Safety in Bioanalytical laboratory (15) Subtopics: • Strategies to reduce environmental impact of Bioanalytical laboratory • Standards of Laboratory Safety (Including Biosafety Levels) • Overview of guidelines for laboratories handing Radioactive substances • Introduction to ISO 14001 and OSHAS 18001. • Introduction to Environment Impact Assessment & Reporting • Biodiversity: Red Data Book, Endemic and endangered Medicinal Plant Species, Conservation and sustainable use of medicinal raw materials, Introduction to Wildlife Act of India & CITES • Carbon footprints and Carbon credits.
403.3	Title: Electronic Data Management (15) Subtopics: 1. Electronic Acquisition of data 2. Management of data in Computers 3. Electronic Data Validation and regulatory requirements 4. Electronic signatures & its regulation 5. Generating reports using computers 6. Regulatory requirements of Data evaluation
403.4	Title: Regulatory Issues (15) Subtopics: 1. OTC drugs 2. Cosmetics 3. Food supplements 4. Nutraceuticals w.r.t. FSSI regulations

PSBNP 403

- IR patterns of an Ayurvedic Bhasma preparation (e.g. calcium containing shanka bhasma – comparison with pure $CaCO_3$ and formulations like Calcium supplement tablets)
- AAS of a suitable Ayurvedic metal bhasma preparation (e.g Tamara bhasma) / Paracetamol

- Environment audit report
- Problem based on calculation of carbon credit and carbon footprint

DETAILED SYLLABUS FOR M. Sc. BIOANALYTICAL SCIENCES

SEMESTER IV-theory

PSBN404- BA/BE Studies, GCP and Method Validation - I

(Lecture allotment includes periods for Seminars and Discussions)

404.1	Title: Therapeutic drug monitoring and Pharmacovigilance (15) Subtopics: 1. Purpose of therapeutic Drug Monitoring 2. Bioanalytical techniques in TDM 3. Analytical and practical issues of TDM 4. Pharmacoeconomics of TDM 5. Significance and need for Pharmacovigilance 6. Indian scenario and the role of regulatory in Pharmacovigilance 7. Pharmacovigilance and safe use of medicines (with case studies)
404.2	Title: Good Clinical Practice (GCP) – 2 (15) Subtopics: 1. GCP guidelines of ICH 2. GCP guidelines of ICMR 3. Ensuring GCP 4. Documentation of GCP practice 5. Audit of GCP compliance
404.3	Title: Bioavailability (BA) & Bioequivalence (BE) studies – 2 (15) Subtopics: 1. Design of a BA study 2. Conduct of a BA study 3. Data collection and evaluation 4. Reporting a BA study 5. Regulatory requirements of BA 6. Design of a BE study 7. Conduct of a BE study 8. Regulatory requirements of BA and BE 9. Data record and evaluation 10. Estimating Pharmacokinetic parameters 11. Assessment of Bioequivalence 12. Regulatory requirements and their compliance in pharmacokinetics
404.4	Title: QC and QA of ASU drugs (15) Subtopics: 1. Herbal pharmacopoeia and Ayurvedic Formulary of India

	2. Approaches to Quality control of ASU formulations 3. Govt initiatives 4. Some Initiatives from manufacturers 5. QC of RM and In-process materials (some examples) 6. QC / OA for finished products (some examples) 7. Applications of Herbal pharmacopoeia and Ayurvedic Formulary of India 8. Recent advances in Quality control of ASU formulations 9. QC / OA for finished products (some examples like Taila, Vati, Churna, Sufoof, Jawarish, Majoon,etc.))

PSBNP 404

- BA & BE of a modern drug (Demonstration – witnessing an actual trial)
- Calculation of AUC and bioequivalence from the given data (2 expts.)
- Total viable count of herbal formulations/raw material
- Screening of pathogens from herbal formulation/raw material (*E.coli, S. aureus, Candida albicans*)

University of Mumbai

No. UG/ 106 of 2019-20

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges, the Head of the University Department and Directors of the recognized Institutions in Science & Technology Faculty is invited to the syllabus uploaded by Academic Authority Unit which was accepted by the Academic Council at its meeting held on 27th February, 2013 **vide** item No. 4.133 relating to the revised syllabus as per (CBSGS) for M.Sc. Information Technology (Sem. I & II).

They are hereby informed that the recommendations made by the Ad-hoc Board of Studies in Information & Technology at its meeting held on 25th July, 2019 have been accepted by the Academic Council at its meeting held on 26th July, 2019 **vide** item No.4.76 and that in accordance therewith, the revised syllabus as per the (CBCS) for the M.Sc. (I. T.) (Part – I) (Sem.-I & II) has been brought into force with effect from the academic year 2019-20, accordingly. (The same is available on the University's website www.mu.ac.in).

MUMBAI – 400 032
11th September, 2019

(Dr. Ajay Deshmukh)
REGISTRAR

To

The Principals of the affiliated Colleges, the Head of the University Department and Directors of the recognized Institutions in Science & Technology Faculty. (Circular No. UG/334 of 2017-18 dated 9th January, 2018.)

A.C/4.76/26/07/2019

****

No. UG/ 106 -A of 2019-20 MUMBAI-400 032 11th September, 2019

Copy forwarded with Compliments for information to:-

1) The I/c Dean, Faculty of Science & Technology,
2) The Chairman, Board of Studies in Information & Technology,
3) The Director, Board of Examinations and Evaluation,
4) The Director, Board of Students Development,
5) The Co-ordinator, University Computerization Centre,

UNIVERSITY OF MUMBAI

Syllabus for Approval

Sr. No.	Heading	Particulars
1	Title of the Course	M.Sc in Information Technology Part I
2	Eligibility for Admission	B.Sc(IT), B.Sc(CS), B.E, BCA (Sem I & II) B.Sc(Phy), B.Sc(Maths), B.Sc(Stats) B.Sc(Electronics)
3	Passing Marks	40%
4	Ordinances / Regulations (if any)	-
5	No. of Years / Semesters	Two Years - Four Semesters
6	Level	P.G. / ~~U.G.~~ / ~~Diploma~~ / ~~Certificate~~ (Strike out which is not applicable)
7	Pattern	~~Yearly~~ / Semester (Strike out which is not applicable)
8	Status	~~New~~ / Revised (Strike out which is not applicable)
9	To be implemented from Academic Year	From Academic Year 2019-2020

Date: 25/7/19

Signature :

Name of BOS Chairperson / ~~Dean~~ : Dr. (Mrs.) R. Srivaramangai

rsrimangai@udct.mu.ac.in

Academic Council: 26/07/2019

Item No: 4.76

UNIVERSITY OF MUMBAI

Syllabus for M.Sc. Part I (Semester I and II)

Programme: M.Sc.

Subject: Information Technology

(Choice Based Credit System with effect from the academic year 2019 – 2020)

Semester – I		
Course Code	**Course Title**	**Credits**
PSIT101	Research in Computing	4
PSIT102	Data Science	4
PSIT103	Cloud Computing	4
PSIT104	Soft Computing Techniques	4
PSIT1P1	Research in Computing Practical	2
PSIT1P2	Data Science Practical	2
PSIT1P3	Cloud Computing Practical	2
PSIT1P4	Soft Computing Techniques Practical	2
	Total Credits	**24**

Semester – II		
Course Code	**Course Title**	**Credits**
PSIT201	Big Data Analytics	4
PSIT202	Modern Networking	4
PSIT203	Microservices Architecture	4
PSIT204	Image Processing	4
PSIT2P1	Big Data Analytics Practical	2
PSIT2P2	Modern Networking Practical	2
PSIT2P3	Microservices Architecture Practical	2
PSIT2P4	Image Processing Practical	2
	Total Credits	**24**

Program Specific Outcomes

PSO1: Ability to apply the knowledge of Information Technology with recent trends aligned with research and industry.

PSO2: Ability to apply IT in the field of Computational Research, Soft Computing, Big Data Analytics, Data Science, Image Processing, Artificial Intelligence, Networking and Cloud Computing.

PSO3: Ability to provide socially acceptable technical solutions in the domains of Information Security, Machine Learning, Internet of Things and Embedded System, Infrastructure Services as specializations.

PSO4: Ability to apply the knowledge of Intellectual Property Rights, Cyber Laws and Cyber Forensics and various standards in interest of National Security and Integrity along with IT Industry.

PSO5: Ability to write effective project reports, research publications and content development and to work in multidisciplinary environment in the context of changing technologies.

SEMESTER I

M. Sc (Information Technology)		Semester – I	
Course Name: Research in Computing		**Course Code: PSIT101**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• To be able to conduct business research with an understanding of all the latest theories. • To develop the ability to explore research techniques used for solving any real world or innovate problem.

Pre requisites	Basic knowledge of statistical methods. Analytical and logical thinking.

Unit	Details	Lectures
I	**Introduction:** Role of Business Research, Information Systems and Knowledge Management, Theory Building, Organization ethics and Issues	**12**
II	**Beginning Stages of Research Process:** Problem definition, Qualitative research tools, Secondary data research	**12**
III	**Research Methods and Data Collection:** Survey research, communicating with respondents, Observation methods, Experimental research	**12**
IV	**Measurement Concepts, Sampling and Field work:** Levels of Scale measurement, attitude measurement, questionnaire design, sampling designs and procedures, determination of sample size	**12**
V	**Data Analysis and Presentation:** Editing and Coding, Basic Data Analysis, Univariate Statistical Analysis and Bivariate Statistical analysis and differences between two variables. Multivariate Statistical Analysis.	**12**

Books and References:					
Sr. No.	**Title**	**Author/s**	**Publisher**	**Edition**	**Year**

		Atanu Adhikari, M.Griffin			
2.	Business Analytics	Albright Winston	Cengage	5e	2015
3.	Research Methods for Business Students Fifth Edition	Mark Saunders			2011
4.	Multivariate Data Analysis	Hair	Pearson	7e	2014

M. Sc (Information Technology)		**Semester – I**	
Course Name: Research in Computing Practical		**Course Code: PSIT1P1**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	**Details**
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	A learner will be able to: □ solve real world problems with scientific approach. □ develop analytical skills by applying scientific methods. □ recognize, understand and apply the language, theory and models of the field of business analytics □ foster an ability to critically analyze, synthesize and solve complex unstructured business problems □ understand and critically apply the concepts and methods of business analytics □ identify, model and solve decision problems in different settings □ interpret results/solutions and identify appropriate courses of action for a given managerial situation whether a problem or an opportunity □ create viable solutions to decision making problems

M. Sc (Information Technology)		Semester – I	
Course Name: Data Science		**Course Code: PSIT102**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• Develop in depth understanding of the key technologies in data science and business analytics: data mining, machine learning, visualization techniques, predictive modeling, and statistics. • Practice problem analysis and decision-making. • Gain practical, hands-on experience with statistics programming languages and big data tools through coursework and applied research experiences.

Pre requisites	Basic understanding of statistics

Unit	Details	Lectures
I	**Data Science Technology Stack:** Rapid Information Factory Ecosystem, Data Science Storage Tools, Data Lake, Data Vault, Data Warehouse Bus Matrix, Data Science Processing Tools ,Spark, Mesos, Akka , Cassandra, Kafka, Elastic Search, R ,Scala, Python, MQTT, The Future **Layered Framework:** Definition of Data Science Framework, Cross-Industry Standard Process for Data Mining (CRISP-DM), Homogeneous Ontology for Recursive Uniform Schema, The Top Layers of a Layered Framework, Layered Framework for High-Level Data Science and Engineering **Business Layer:** Business Layer, Engineering a Practical Business Layer **Utility Layer:** Basic Utility Design, Engineering a Practical Utility Layer	**12**
II	**Three Management Layers:** Operational Management Layer, Processing-Stream Definition and Management, Audit, Balance, and Control Layer, Balance, Control, Yoke Solution, Cause-and-Effect, Analysis System, Functional Layer, Data Science Process **Retrieve Superstep :** Data Lakes, Data Swamps, Training the Trainer Model, Understanding the Business Dynamics of the Data Lake, Actionable Business Knowledge from Data Lakes, Engineering a Practical Retrieve Superstep, Connecting to Other Data Sources,	**12**
III	**Assess Superstep:** Assess Superstep, Errors, Analysis of Data, Practical Actions, Engineering a Practical Assess Superstep,	**12**

IV	**Process Superstep :** Data Vault, Time-Person-Object-Location-Event Data Vault, Data Science Process, Data Science, **Transform Superstep :** Transform Superstep, Building a Data Warehouse, Transforming with Data Science, Hypothesis Testing, Overfitting and Underfitting, Precision-Recall, Cross-Validation Test.	**12**
V	**Transform Superstep:** Univariate Analysis, Bivariate Analysis, Multivariate Analysis, Linear Regression, Logistic Regression, Clustering Techniques, ANOVA, Principal Component Analysis (PCA), Decision Trees, Support Vector Machines, Networks, Clusters, and Grids, Data Mining, Pattern Recognition, Machine Learning, Bagging Data,Random Forests, Computer Vision (CV) , Natural Language Processing (NLP), Neural Networks, TensorFlow. **Organize and Report Supersteps :** Organize Superstep, Report Superstep, Graphics, Pictures, Showing the Difference	**12**

M. Sc (Information Technology)		**Semester – I**	
Course Name: Data Science Practical		**Course Code: PSIT1P2**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	Details
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Apply quantitative modeling and data analysis techniques to the solution of real world business problems, communicate findings, and effectively present results using data visualization techniques. • Recognize and analyze ethical issues in business related to intellectual property, data security, integrity, and privacy.

- Apply ethical practices in everyday business activities and make well-reasoned ethical business and data management decisions.
- Demonstrate knowledge of statistical data analysis techniques utilized in business decision making.
- Apply principles of Data Science to the analysis of business problems.
- Use data mining software to solve real-world problems.
- Employ cutting edge tools and technologies to analyze Big Data.
- Apply algorithms to build machine intelligence.
- Demonstrate use of team work, leadership skills, decision making and organization theory.

M. Sc (Information Technology)		Semester – I	
Course Name: Cloud Computing		**Course Code: PSIT103**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• To learn how to use Cloud Services. • To implement Virtualization. • To implement Task Scheduling algorithms. • Apply Map-Reduce concept to applications. • To build Private Cloud. • Broadly educate to know the impact of engineering on legal and societal issues involved.

Unit	Details	Lectures
I	**Introduction to Cloud Computing:** Introduction, Historical developments, Building Cloud Computing Environments, **Principles of Parallel and Distributed Computing:** Eras of Computing, Parallel v/s distributed computing, Elements of Parallel Computing, Elements of distributed computing, Technologies for distributed computing. **Virtualization:** Introduction, Characteristics of virtualized environments, Taxonomy of virtualization techniques, Virtualization and cloud computing, Pros and cons of virtualization, Technology examples. Logical Network Perimeter, Virtual Server, Cloud Storage Device, Cloud usage monitor, Resource replication, Ready-made environment.	**12**
II	**Cloud Computing Architecture:** Introduction, Fundamental concepts and models, Roles and boundaries, Cloud Characteristics, Cloud Delivery models, Cloud Deployment models, Economics of the cloud, Open challenges. **Fundamental Cloud Security:** Basics, Threat agents, Cloud security threats, additional considerations. **Industrial Platforms and New Developments:** Amazon Web Services, Google App Engine, Microsoft Azure.	**12**
III	**Specialized Cloud Mechanisms:** Automated Scaling listener, Load Balancer, SLA monitor, Pay-per-use monitor, Audit monitor, fail over system, Hypervisor, Resource Centre, Multidevice broker, State Management Database. **Cloud Management Mechanisms:** Remote administration system, Resource Management System, SLA Management System, Billing Management System, **Cloud Security Mechanisms:** Encryption, Hashing, Digital Signature, Public Key Infrastructure (PKI), Identity and Access Management (IAM), Single	**12**

	Sign-On (SSO), Cloud-Based Security Groups, Hardened Virtual Server Images	
IV	**Fundamental Cloud Architectures:** Workload Distribution Architecture, Resource Pooling Architecture, Dynamic Scalability Architecture, Elastic Resource Capacity Architecture, Service Load Balancing Architecture, Cloud Bursting Architecture, Elastic Disk Provisioning Architecture, Redundant Storage Architecture. **Advanced Cloud Architectures:** Hypervisor Clustering Architecture, Load Balanced Virtual Server Instances Architecture, Non-Disruptive Service Relocation Architecture, Zero Downtime Architecture, Cloud Balancing Architecture, Resource Reservation Architecture, Dynamic Failure Detection and Recovery Architecture, Bare-Metal Provisioning Architecture, Rapid Provisioning Architecture, Storage Workload Management Architecture	**12**
V	**Cloud Delivery Model Considerations:** Cloud Delivery Models: The Cloud Provider Perspective, Cloud Delivery Models: The Cloud Consumer Perspective, **Cost Metrics and Pricing Models**: Business Cost Metrics, Cloud Usage Cost Metrics, Cost Management Considerations, **Service Quality Metrics and SLAs:** Service Quality Metrics, SLA Guidelines	**12**

Books and References:

2.	Cloud Computing Concepts, Technology & Architecture	Thomas Erl, Zaigham Mahmood, and Ricardo Puttini	Prentice Hall	-	2013
3.	Distributed and Cloud Computing, From Parallel Processing to the Internet of Things	Kai Hwang, Jack Dongarra, Geoffrey Fox	MK Publishers	--	2012

M. Sc (Information Technology)		Semester – I	
Course Name: Cloud Computing Practical		**Course Code: PSIT1P3**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	Details
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Analyze the Cloud computing setup with its vulnerabilities and applications using different architectures. • Design different workflows according to requirements and apply map reduce programming model. • Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms. • Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds • Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application • Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

M. Sc (Information Technology)		Semester – I	
Course Name: Soft Computing Techniques		**Course Code: PSIT104**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• Soft computing concepts like fuzzy logic, neural networks and genetic algorithm, where Artificial Intelligence is mother branch of all. • All these techniques will be more effective to solve the problem efficiently

Pre requisites	Basic concepts of Artificial Intelligence. Knowledge of Algorithms

Unit	Details	Lectures
I	Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, Fuzzy Computing, Neural Computing, Genetic Algorithms, Associative Memory, Adaptive Resonance Theory, Classification, Clustering, Bayesian Networks, Probabilistic reasoning, applications of soft computing.	**12**
II	Artificial Neural Network: Fundamental concept, Evolution of Neural Networks, Basic Models, McCulloh-Pitts Neuron, Linear Separability, Hebb Network. Supervised Learning Network: Perceptron Networks, Adaptive Linear Neuron, Multiple Adaptive Linear Neurons, Backpropagation Network, Radial Basis Function, Time Delay Network, Functional Link Networks, Tree Neural Network. Associative Memory Networks: Training algorithm for pattern Association, Autoassociative memory network, hetroassociative memory network, bi-directional associative memory, Hopfield networks, iterative autoassociative memory networks, temporal associative memory networks.	**12**
III	UnSupervised Learning Networks: Fixed weight competitive nets, Kohonen self-organizing feature maps, learning vectors quantization, counter propogation networks, adaptive resonance theory networks. Special Networks: Simulated annealing, Boltzman machine, Gaussian Machine, Cauchy Machine, Probabilistic neural net, cascade correlation network, cognition network, neo-cognition network, cellular neural network, optical neural network Third Generation Neural Networks: Spiking Neural networks, convolutional neural networks, deep learning neural networks, extreme learning machine model.	**12**

IV	Introduction to Fuzzy Logic, Classical Sets and Fuzzy sets: Classical sets, Fuzzy sets. Classical Relations and Fuzzy Relations: Cartesian Product of relation, classical relation, fuzzy relations, tolerance and equivalence relations, non-iterative fuzzy sets. Membership Function: features of the membership functions, fuzzification, methods of membership value assignments. Defuzzification: Lambda-cuts for fuzzy sets, Lambda-cuts for fuzzy relations, Defuzzification methods. Fuzzy Arithmetic and Fuzzy measures: fuzzy arithmetic, fuzzy measures, measures of fuzziness, fuzzy integrals.	**12**
V	Fuzzy Rule base and Approximate reasoning: Fuzzy proportion, formation of rules, decomposition of rules, aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, Fuzzy logic control systems, control system design, architecture and operation of FLC system, FLC system models and applications of FLC System. Genetic Algorithm: Biological Background, Traditional optimization and search techniques, genetic algorithm and search space, genetic algorithm vs. traditional algorithms, basic terminologies, simple genetic algorithm, general genetic algorithm, operators in genetic algorithm, stopping condition for genetic algorithm flow, constraints in genetic algorithm, problem solving using genetic algorithm, the schema theorem, classification of genetic algorithm, Holland classifier systems, genetic programming, advantages and limitations and applications of genetic algorithm. Differential Evolution Algorithm, Hybrid soft computing techniques – neuro – fuzzy hybrid, genetic neuro-hybrid systems, genetic fuzzy hybrid and fuzzy genetic hybrid systems.	**12**

M. Sc (Information Technology)		**Semester – I**	
Course Name: Soft Computing Techniques Practical		**Course Code: PSIT1P4**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	**Details**
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Identify and describe soft computing techniques and their roles in building intelligent machines • Recognize the feasibility of applying a soft computing methodology for a particular problem • Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems • Apply genetic algorithms to combinatorial optimization problems • Apply neural networks for classification and regression problems • Effectively use existing software tools to solve real problems using a soft computing approach • Evaluate and compare solutions by various soft computing approaches for a given problem.

SEMESTER II

M. Sc (Information Technology)		Semester – II	
Course Name: BigData Analytics		**Course Code: PSIT201**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• To provide an overview of an exciting growing field of big data analytics. • To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce. • To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability. • To enable students to have skills that will help them to solve complex real-world problems in for decision support.

Unit	Details	Lectures
I	Introduction to Big Data, Characteristics of Data, and Big Data Evolution of Big Data, Definition of Big Data, Challenges with big data, Why Big data? Data Warehouse environment, Traditional Business Intelligence versus Big Data. State of Practice in Analytics, Key roles for New Big Data Ecosystems, Examples of big Data Analytics. Big Data Analytics, Introduction to big data analytics, Classification of Analytics, Challenges of Big Data, Importance of Big Data, Big Data Technologies, Data Science, Responsibilities, Soft state eventual consistency. Data Analytics Life Cycle	**12**
II	Analytical Theory and Methods: Clustering and Associated Algorithms, Association Rules, Apriori Algorithm, Candidate Rules, Applications of Association Rules, Validation and Testing, Diagnostics, Regression, Linear Regression, Logistic Regression, Additional Regression Models.	**12**
III	Analytical Theory and Methods: Classification, Decision Trees, Naïve Bayes, Diagnostics of Classifiers, Additional Classification Methods, Time Series Analysis, Box Jenkins methodology, ARIMA Model, Additional methods. Text Analysis, Steps, Text Analysis Example, Collecting Raw Text, Representing Text, Term Frequency-Inverse Document Frequency (TFIDF), Categorizing Documents by Topics, Determining Sentiments	**12**
IV	Data Product, Building Data Products at Scale with Hadoop, Data Science Pipeline and Hadoop Ecosystem, Operating System for Big Data, Concepts, Hadoop Architecture, Working with Distributed file system, Working with Distributed Computation, Framework for Python and Hadoop Streaming, Hadoop Streaming, MapReduce with Python,	**12**

	Advanced MapReduce. In-Memory Computing with Spark, Spark Basics, Interactive Spark with PySpark, Writing Spark Applications,	
V	Distributed Analysis and Patterns, Computing with Keys, Design Patterns, Last-Mile Analytics, Data Mining and Warehousing, Structured Data Queries with Hive, HBase, Data Ingestion, Importing Relational data with Sqoop, Injesting stream data with flume. Analytics with higher level APIs, Pig, Spark's higher level APIs.	**12**

,

Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• To understand the state-of-the-art in network protocols, architectures and applications. • Analyze existing network protocols and networks. • Develop new protocols in networking • To understand how networking research is done • To investigate novel ideas in the area of Networking via term-long research projects.

Pre requisites	Fundamentals of Networking

Unit	Details	Lectures
I	Modern Networking Elements of Modern Networking The Networking Ecosystem ,Example Network Architectures,Global Network Architecture,A Typical Network Hierarchy Ethernet Applications of Ethernet Standards Ethernet Data Rates Wi-Fi Applications of Wi-Fi,Standards Wi-Fi Data Rates 4G/5G Cellular First Generation Second Generation, Third Generation Fourth Generation Fifth Generation, Cloud Computing Cloud Computing Concepts The Benefits of Cloud Computing Cloud Networking Cloud Storage, Internet of Things Things on the Internet of Things, Evolution Layers of the Internet of Things, Network Convergence Unified Communications, Requirements and Technology Types of Network and Internet Traffic,Elastic Traffic,Inelastic Traffic, Real-Time Traffic Characteristics Demand: Big Data, Cloud Computing, and Mobile TrafficBig Data Cloud Computing,,Mobile Traffic, Requirements: QoS and QoE,,Quality of Service,Quality of Experience, Routing Characteristics, Packet Forwarding, Congestion Control ,Effects of Congestion,Congestion Control Techniques, SDN and NFV Software-Defined Networking,Network Functions Virtualization Modern Networking Elements	**12**
II	Software-Defined Networks SDN: Background and Motivation, Evolving Network Requirements Demand Is Increasing,Supply Is IncreasingTraffic Patterns Are More ComplexTraditional Network Architectures are Inadequate, The SDN Approach Requirements SDN Architecture Characteristics of Software-	**12**

	Defined Networking, SDN- and NFV-Related Standards Standards-Developing Organizations Industry Consortia Open Development Initiatives, SDN Data Plane and OpenFlow SDN Data Plane, Data Plane Functions Data Plane Protocols OpenFlow Logical Network Device Flow Table Structure Flow Table Pipeline, The Use of Multiple Tables Group Table OpenFlow Protocol, SDN Control Plane SDN Control Plane Architecture Control Plane Functions, Southbound Interface Northbound InterfaceRouting, ITU-T Model, OpenDaylight OpenDaylight Architecture OpenDaylight Helium, REST REST Constraints Example REST API, Cooperation and Coordination Among Controllers, Centralized Versus Distributed Controllers, High-Availability Clusters Federated SDN Networks, Border Gateway Protocol Routing and QoS Between Domains, Using BGP for QoS Management IETF SDNi OpenDaylight SNDi SDN Application Plane SDN Application Plane Architecture Northbound Interface Network Services Abstraction Layer Network Applications, User Interface, Network Services Abstraction Layer Abstractions in SDN, Frenetic Traffic Engineering PolicyCop Measurement and Monitoring Security OpenDaylight DDoS Application Data Center Networking, Big Data over SDN Cloud Networking over SDN Mobility and Wireless Information-Centric Networking CCNx, Use of an Abstraction Layer	
III	Virtualization, Network Functions Virtualization: Concepts and Architecture, Background and Motivation for NFV, Virtual Machines The Virtual Machine Monitor, Architectural Approaches Container Virtualization, NFV Concepts Simple Example of the Use of NFV, NFV Principles High-Level NFV Framework, NFV Benefits and Requirements NFV Benefits, NFV Requirements, NFV Reference Architecture NFV Management and Orchestration, Reference Points Implementation, NFV Functionality, NFV Infrastructure,Container Interface,Deployment of NFVI Containers,Logical Structure of NFVI Domains,ComputeDomain, Hypervisor Domain,Infrastructure Network Domain, Virtualized Network Functions, VNF Interfaces,VNFC to VNFC Communication,VNF Scaling, NFV Management and Orchestration, Virtualized Infrastructure Manager,Virtual Network Function Manager,NFV Orchestrator, Repositories, Element Management, OSS/BSS, NFV Use Cases Architectural Use Cases, Service-Oriented Use Cases, SDN and NFV Network Virtualization, Virtual LANs ,The Use of Virtual LANs,Defining VLANs, Communicating VLAN Membership,IEEE 802.1Q VLAN Standard, Nested VLANs, OpenFlow VLAN Support, Virtual Private Networks, IPsec VPNs,MPLS VPNs, Network Virtualization, Simplified Example, Network Virtualization Architecture, Benefits of Network Virtualization, OpenDaylight's Virtual Tenant Network, Software-Defined Infrastructure,Software-Defined Storage, SDI Architecture	**12**

IV	Defining and Supporting User Needs, Quality of Service, Background, QoS Architectural Framework, Data Plane, Control Plane, Management Plane, Integrated Services Architecture, ISA Approach ISA Components, ISA Services, Queuing Discipline, Differentiated Services, Services, DiffServ Field, DiffServ Configuration and Operation, Per-Hop Behavior, Default Forwarding PHB, Service Level Agreements, IP Performance Metrics, OpenFlow QoS Support, Queue Structures, Meters, QoE: User Quality of Experience, Why QoE?,Online Video Content Delivery, Service Failures Due to Inadequate QoE Considerations QoE-Related Standardization Projects, Definition of Quality of Experience, Definition of Quality, Definition of Experience Quality Formation Process, Definition of Quality of Experience, QoE Strategies in Practice, The QoE/QoS Layered Model Summarizing and Merging the ,QoE/QoS Layers, Factors Influencing QoE, Measurements of QoE, Subjective Assessment, Objective Assessment, End-User Device Analytics, Summarizing the QoE Measurement Methods, Applications of QoE Network Design Implications of QoS and QoE Classification of QoE/ QoS Mapping Models, Black-Box Media-Based QoS/QoE Mapping Models, Glass-Box Parameter-Based QoS/QoE Mapping Models,Gray-Box QoS/QoE Mapping Models, Tips for QoS/QoE Mapping Model Selection,IP-Oriented Parameter-Based QoS/QoE Mapping Models,Network Layer QoE/QoS Mapping Models for Video Services, Application Layer QoE/QoS Mapping Models for Video Services Actionable QoE over IP-Based Networks, The System-Oriented Actionable QoE Solution, The Service-Oriented Actionable QoE Solution, QoE Versus QoS Service Monitoring, QoS Monitoring Solutions, QoE Monitoring Solutions, QoE-Based Network and Service Management, QoE-Based Management of VoIP Calls, QoE-Based Host-Centric Vertical Handover, QoE-Based Network-Centric Vertical Handover	**12**
V	Modern Network Architecture: Clouds and Fog, Cloud Computing, Basic Concepts, Cloud Services, Software as a Service, Platform as a Service, Infrastructure as a Service, Other Cloud Services, XaaS, Cloud Deployment Models, Public Cloud Private Cloud Community Cloud, Hybrid Cloud, Cloud Architecture, NIST Cloud Computing Reference Architecture,ITU-T Cloud Computing Reference Architecture, SDN and NFV, Service Provider Perspective Private Cloud Perspective, ITU-T Cloud Computing Functional Reference Architecture, The Internet of Things: Components The IoT Era Begins, The Scope of the Internet of Things Components of IoT-Enabled Things, Sensors, Actuators, Microcontrollers, Transceivers, RFID, The Internet of Things: Architecture and Implementation, IoT Architecture,ITU-T IoT Reference Model, IoT World Forum Reference Model, IoT Implementation, IoTivity, Cisco IoT System, ioBridge, Security Security Requirements, SDN Security Threats to SDN, Software-Defined Security, NFV Security, Attack Surfaces, ETSI Security Perspective, Security Techniques, Cloud Security, Security Issues and Concerns, Cloud Security Risks and Countermeasures, Data Protection	**12**

	in the Cloud, Cloud Securityas a Service, Addressing Cloud Computer Security Concerns, IoT Security, The Patching Vulnerability, IoT Security and Privacy Requirements Defined by ITU-TAn IoT Security Framework, Conclusion

M. Sc (Information Technology)		**Semester – II**	
Course Name: Modern Networking Practical		**Course Code: PSIT2P2**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	Details
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Demonstrate in-depth knowledge in the area of Computer Networking. • To demonstrate scholarship of knowledge through performing in a group to identify, formulate and solve a problem related to Computer Networks • Prepare a technical document for the identified Networking System Conducting experiments to analyze the identified research work in building Computer Networks

M. Sc (Information Technology)		Semester – I	
Course Name: Microservice Architecture		**Course Code: PSIT203**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• Gain a thorough understanding of the philosophy and architecture of Web applications using ASP.NET Core MVC; • Gain a practical understanding of.NET Core; • Acquire a working knowledge of Web application development using ASP.NET Core MVC 6 and Visual Studio • Persist data with XML Serialization and ADO.NET with SQL Server • Create HTTP services using ASP.NET Core Web API; • Deploy ASP.NET Core MVC applications to the Windows Azure cloud.

Unit	Details	Lectures
I	**Microservices:** Understanding Microservices, Adopting Microservices, The Microservices Way. **Microservices Value Proposition:** Deriving Business Value, defining a Goal-Oriented, Layered Approach, Applying the Goal-Oriented, Layered Approach. **Designing Microservice Systems:** The Systems Approach to Microservices, A Microservices Design Process, **Establishing a Foundation:** Goals and Principles, Platforms, Culture.	**12**
II	**Service Design:** Microservice Boundaries, API design for Microservices, Data and Microservices, Distributed Transactions and Sagas, Asynchronous Message-Passing and Microservices, dealing with Dependencies, **System Design and Operations:** Independent Deployability, More Servers, Docker and Microservices, Role of Service Discovery, Need for an API Gateway, Monitoring and Alerting. **Adopting Microservices in Practice:** Solution Architecture Guidance, Organizational Guidance, Culture Guidance, Tools and Process Guidance, Services Guidance.	**12**
III	**Building Microservices with ASP.NET Core:** Introduction, Installing .NET Core, Building a Console App, Building ASP.NET Core App. **Delivering Continuously:** Introduction to Docker, Continuous integration with Wercker, Continuous Integration with Circle CI, Deploying to Dicker Hub. **Building Microservice with ASP.NET Core:** Microservice, Team Service, API First Development, Test First Controller, Creating a CI pipeline, Integration Testing, Running the team service Docker Image. **Backing Services:**	**12**

	Microservices Ecosystems, Building the location Service, Enhancing Team Service.	
IV	**Creating Data Service:** Choosing a Data Store**,** Building a Postgres Repository, Databases are Backing Services, Integration Testing Real Repositories, Exercise the Data Service.**Event Sourcing and CQRS:** Event Sourcing, CQRS pattern, Event Sourcing and CQRS, Running the samples. **Building an ASP.NET Core Web Application:** ASP.NET Core Basics, Building Cloud-Native Web Applications. **Service Discovery:** Cloud Native Factors, Netflix Eureka, Discovering and Advertising ASP.NET Core Services. DNS and Platform Supported Discovery.	**12**
V	**Configuring Microservice Ecosystems:** Using Environment Variables with Docker, Using Spring Cloud Config Server, Configuring Microservices with etcd, **Securing Applications and Microservices:** Security in the Cloud, Securing ASP.NET Core Web Apps, Securing ASP.NET Core Microservices. **Building Real-Time Apps and Services:** Real-Time Applications Defined, Websockets in the Cloud, Using a Cloud Messaging Provider, Building the Proximity Monitor. **Putting It All Together:** Identifying and Fixing Anti-Patterns, Continuing the Debate over Composite Microservices, The Future.	**12**

Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	Details
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	Develop web applications using Model View Control. Create MVC Models and write code that implements business logic within Model methods, properties, and events. Create Views in an MVC application that display and edit data and interact with Models and Controllers. Boost your hire ability through innovative and independent learning. Gaining a thorough understanding of the philosophy and architecture of .NET Core Understanding packages, metapackages and frameworks Acquiring a working knowledge of the .NET programming model Implementing multi-threading effectively in .NET applications

M. Sc (Information Technology)		Semester – II	
Course Name: Image Processing		**Course Code: PSIT204**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• Review the fundamental concepts of a digital image processing system. • Analyze images in the frequency domain using various transforms. • Evaluate the techniques for image enhancement and image restoration. • Categorize various compression techniques. • Interpret Image compression standards. • Interpret image segmentation and representation techniques.

Unit	Details	Lectures
I	**Introduction:** Digital Image Processing, Origins of Digital Image Processing, Applications and Examples of Digital Image Processing, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, **Digital Image Fundamentals:** Elements of Visual Perception, Light and the Electromagnetic Spectrum, Image Sensing and Acquisition, Image Sampling and Quantization, Basic Relationships Between Pixels, Basic Mathematical Tools Used in Digital Image Processing, **Intensity Transformations and Spatial Filtering:** Basics, Basic Intensity Transformation Functions, Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing (Lowpass) Spatial Filters, Sharpening (Highpass) Spatial Filters, Highpass, Bandreject, and Bandpass Filters from Lowpass Filters, Combining Spatial Enhancement Methods, Using Fuzzy Techniques for Intensity Transformations and Spatial Filtering	**12**
II	**Filtering in the Frequency Domain:** Background, Preliminary Concepts, Sampling and the Fourier Transform of Sampled Functions, The Discrete Fourier Transform of One Variable, Extensions to Functions of Two Variables, Properties of the 2-D DFT and IDFT, Basics of Filtering in the Frequency Domain, Image Smoothing Using Lowpass Frequency Domain Filters, Image Sharpening Using Highpass Filters, Selective Filtering, Fast Fourier Transform **Image Restoration and Reconstruction:** A Model of the Image Degradation/Restoration Process, Noise Models, Restoration in the Presence of Noise Only-----Spatial Filtering, Periodic Noise Reduction Using Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Constrained Least Squares Filtering, Geometric Mean Filter, Image Reconstruction from Projections	**12**
III	**Wavelet and Other Image Transforms:** Preliminaries, Matrix-based Transforms, Correlation, Basis Functions in the Time-Frequency Plane, Basis	**12**

	Images, Fourier-Related Transforms, Walsh-Hadamard Transforms, Slant Transform, Haar Transform, Wavelet Transforms **Color Image Processing:** Color Fundamentals, Color Models, Pseudocolor Image Processing, Full-Color Image Processing, Color Transformations, Color Image Smoothing and Sharpening, Using Color in Image Segmentation, Noise in Color Images, Color Image Compression. **Image Compression and Watermarking:** Fundamentals, Huffman Coding, Golomb Coding, Arithmetic Coding, LZW Coding, Run-length Coding, Symbol-based Coding, 8 Bit-plane Coding, Block Transform Coding, Predictive Coding, Wavelet Coding, Digital Image Watermarking,	
IV	**Morphological Image Processing:** Preliminaries, Erosion and Dilation, Opening and Closing, The Hit-or-Miss Transform, Morphological Algorithms, Morphological Reconstruction, Morphological Operations on Binary Images, Grayscale Morphology **Image Segmentation I: Edge Detection, Thresholding, and Region Detection:** Fundamentals, Thresholding, Segmentation by Region Growing and by Region Splitting and Merging, Region Segmentation Using Clustering and Superpixels, Region Segmentation Using Graph Cuts, Segmentation Using Morphological Watersheds, Use of Motion in Segmentation	**12**
V	**Image Segmentation II: Active Contours: Snakes and Level Sets:** Background, Image Segmentation Using Snakes, Segmentation Using Level Sets. **Feature Extraction:** Background, Boundary Preprocessing, Boundary Feature Descriptors, Region Feature Descriptors, Principal Components as Feature Descriptors, Whole-Image Features, Scale-Invariant Feature Transform (SIFT)	**12**

Books and References:

M. Sc (Information Technology)		**Semester – II**	
Course Name: Image Processing Practical		**Course Code: PSIT2P4**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	**Details**
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Understand the relevant aspects of digital image representation and their practical implications. • Have the ability to design pointwise intensity transformations to meet stated specifications. • Understand 2-D convolution, the 2-D DFT, and have the abitilty to design systems using these concepts. • Have a command of basic image restoration techniques. • Understand the role of alternative color spaces, and the design requirements leading to choices of color space. • Appreciate the utility of wavelet decompositions and their role in image processing systems. • Have an understanding of the underlying mechanisms of image compression, and the ability to design systems using standard algorithms to meet design specifications.

Evaluation Scheme

Internal Evaluation (40 Marks)

The internal assessment marks shall be awarded as follows:

1. **30 marks (Any one of the following):**
    a. **Written Test or**
    b. **SWAYAM (Advanced Course) of minimum 20 hours and certification exam completed or**
    c. **NPTEL (Advanced Course) of minimum 20 hours and certification exam completed or**
    d. **Valid International Certifications (Prometric, Pearson, Certiport, Coursera, Udemy and the like)**
    e. **One certification marks shall be awarded one course only. For four courses, the students will have to complete four certifications.**
2. **10 marks**
   The marks given out of 40 for publishing the research paper should be divided into four course and should awarded out of 10 in each of the four course.

i. **Suggested format of Question paper of 30 marks for the written test.**

Q1.	**Attempt *any two* of the following:**	**16**
a.		
b.		
c.		
d.		
Q2.	**Attempt *any two* of the following:**	**14**
a.		
b.		
c.		
d.		

ii. **10 marks from every course coming to a total of 40 marks, shall be awarded on publishing of research paper in UGC approved Journal with plagiarism less than 10%. The marks can be awarded as per the impact factor of the journal, quality of the paper, importance of the contents published, social value.**

External Examination: (60 marks)

	All questions are compulsory	
Q1	**(Based on Unit 1) Attempt *any two* of the following:**	**12**
a.		
b.		
c.		
d.		
Q2	**(Based on Unit 2) Attempt *any two* of the following:**	**12**
Q3	**(Based on Unit 3) Attempt *any two* of the following:**	**12**
Q4	**(Based on Unit 4) Attempt *any two* of the following:**	**12**
Q5	**(Based on Unit 5) Attempt *any two* of the following:**	**12**

Practical Evaluation (50 marks)

A Certified copy journal is essential to appear for the practical examination.

1.	**Practical Question 1**	**20**
2.	**Practical Question 2**	**20**
3.	**Journal**	**5**
4.	**Viva Voce**	**5**

OR

1.	**Practical Question**	**40**
2.	**Journal**	**5**
3.	**Viva Voce**	**5**

University of Mumbai

No. UG/ 106 of 2019-20

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges, the Head of the University Department and Directors of the recognized Institutions in Science & Technology Faculty is invited to the syllabus uploaded by Academic Authority Unit which was accepted by the Academic Council at its meeting held on 27th February, 2013 **vide** item No. 4.133 relating to the revised syllabus as per (CBSGS) for M.Sc. Information Technology (Sem. I & II).

They are hereby informed that the recommendations made by the Ad-hoc Board of Studies in Information & Technology at its meeting held on 25th July, 2019 have been accepted by the Academic Council at its meeting held on 26th July, 2019 **vide** item No.4.76 and that in accordance therewith, the revised syllabus as per the (CBCS) for the M.Sc. (I. T.) (Part – I) (Sem.-I & II) has been brought into force with effect from the academic year 2019-20, accordingly. (The same is available on the University's website www.mu.ac.in).

UNIVERSITY OF MUMBAI

Syllabus for M.Sc. Part I (Semester I and II)

Programme: M.Sc.

Subject: Information Technology

(Choice Based Credit System with effect from the academic year 2019 – 2020)

Semester – I		
Course Code	**Course Title**	**Credits**
PSIT101	Research in Computing	4
PSIT102	Data Science	4
PSIT103	Cloud Computing	4
PSIT104	Soft Computing Techniques	4
PSIT1P1	Research in Computing Practical	2
PSIT1P2	Data Science Practical	2
PSIT1P3	Cloud Computing Practical	2
PSIT1P4	Soft Computing Techniques Practical	2
	Total Credits	**24**

Semester – II		
Course Code	**Course Title**	**Credits**
PSIT201	Big Data Analytics	4
PSIT202	Modern Networking	4
PSIT203	Microservices Architecture	4
PSIT204	Image Processing	4
PSIT2P1	Big Data Analytics Practical	2
PSIT2P2	Modern Networking Practical	2
PSIT2P3	Microservices Architecture Practical	2
PSIT2P4	Image Processing Practical	2
	Total Credits	**24**

Program Specific Outcomes

PSO1: Ability to apply the knowledge of Information Technology with recent trends aligned with research and industry.

PSO2: Ability to apply IT in the field of Computational Research, Soft Computing, Big Data Analytics, Data Science, Image Processing, Artificial Intelligence, Networking and Cloud Computing.

PSO3: Ability to provide socially acceptable technical solutions in the domains of Information Security, Machine Learning, Internet of Things and Embedded System, Infrastructure Services as specializations.

PSO4: Ability to apply the knowledge of Intellectual Property Rights, Cyber Laws and Cyber Forensics and various standards in interest of National Security and Integrity along with IT Industry.

PSO5: Ability to write effective project reports, research publications and content development and to work in multidisciplinary environment in the context of changing technologies.

SEMESTER I

M. Sc (Information Technology)		Semester – I	
Course Name: Research in Computing		**Course Code: PSIT101**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• To be able to conduct business research with an understanding of all the latest theories. • To develop the ability to explore research techniques used for solving any real world or innovate problem.

Pre requisites	Basic knowledge of statistical methods. Analytical and logical thinking.

Unit	Details	Lectures
I	**Introduction:** Role of Business Research, Information Systems and Knowledge Management, Theory Building, Organization ethics and Issues	**12**
II	**Beginning Stages of Research Process:** Problem definition, Qualitative research tools, Secondary data research	**12**
III	**Research Methods and Data Collection:** Survey research, communicating with respondents, Observation methods, Experimental research	**12**
IV	**Measurement Concepts, Sampling and Field work:** Levels of Scale measurement, attitude measurement, questionnaire design, sampling designs and procedures, determination of sample size	**12**
V	**Data Analysis and Presentation:** Editing and Coding, Basic Data Analysis, Univariate Statistical Analysis and Bivariate Statistical analysis and differences between two variables. Multivariate Statistical Analysis.	**12**

Books and References:

M. Sc (Information Technology)		**Semester – I**	
Course Name: Research in Computing Practical		**Course Code: PSIT1P1**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	**Details**
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	A learner will be able to: □ solve real world problems with scientific approach. □ develop analytical skills by applying scientific methods. □ recognize, understand and apply the language, theory and models of the field of business analytics □ foster an ability to critically analyze, synthesize and solve complex unstructured business problems □ understand and critically apply the concepts and methods of business analytics □ identify, model and solve decision problems in different settings □ interpret results/solutions and identify appropriate courses of action for a given managerial situation whether a problem or an opportunity □ create viable solutions to decision making problems

M. Sc (Information Technology)		Semester – I	
Course Name: Data Science		**Course Code: PSIT102**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• Develop in depth understanding of the key technologies in data science and business analytics: data mining, machine learning, visualization techniques, predictive modeling, and statistics. • Practice problem analysis and decision-making. • Gain practical, hands-on experience with statistics programming languages and big data tools through coursework and applied research experiences.

Pre requisites	Basic understanding of statistics

Unit	Details	Lectures
I	**Data Science Technology Stack:** Rapid Information Factory Ecosystem, Data Science Storage Tools, Data Lake, Data Vault, Data Warehouse Bus Matrix, Data Science Processing Tools ,Spark, Mesos, Akka , Cassandra, Kafka, Elastic Search, R ,Scala, Python, MQTT, The Future **Layered Framework:** Definition of Data Science Framework, Cross-Industry Standard Process for Data Mining (CRISP-DM), Homogeneous Ontology for Recursive Uniform Schema, The Top Layers of a Layered Framework, Layered Framework for High-Level Data Science and Engineering **Business Layer:** Business Layer, Engineering a Practical Business Layer **Utility Layer:** Basic Utility Design, Engineering a Practical Utility Layer	**12**
II	**Three Management Layers:** Operational Management Layer, Processing-Stream Definition and Management, Audit, Balance, and Control Layer, Balance, Control, Yoke Solution, Cause-and-Effect, Analysis System, Functional Layer, Data Science Process **Retrieve Superstep :** Data Lakes, Data Swamps, Training the Trainer Model, Understanding the Business Dynamics of the Data Lake, Actionable Business Knowledge from Data Lakes, Engineering a Practical Retrieve Superstep, Connecting to Other Data Sources,	**12**
III	**Assess Superstep:** Assess Superstep, Errors, Analysis of Data, Practical Actions, Engineering a Practical Assess Superstep,	**12**

IV	**Process Superstep :** Data Vault, Time-Person-Object-Location-Event Data Vault, Data Science Process, Data Science, **Transform Superstep :** Transform Superstep, Building a Data Warehouse, Transforming with Data Science, Hypothesis Testing, Overfitting and Underfitting, Precision-Recall, Cross-Validation Test.	**12**
V	**Transform Superstep:** Univariate Analysis, Bivariate Analysis, Multivariate Analysis, Linear Regression, Logistic Regression, Clustering Techniques, ANOVA, Principal Component Analysis (PCA), Decision Trees, Support Vector Machines, Networks, Clusters, and Grids, Data Mining, Pattern Recognition, Machine Learning, Bagging Data,Random Forests, Computer Vision (CV) , Natural Language Processing (NLP), Neural Networks, TensorFlow. **Organize and Report Supersteps :** Organize Superstep, Report Superstep, Graphics, Pictures, Showing the Difference	**12**

Evaluation System	**Practical Examination**	**2**	**40**

Practical No	Details
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Apply quantitative modeling and data analysis techniques to the solution of real world business problems, communicate findings, and effectively present results using data visualization techniques. • Recognize and analyze ethical issues in business related to intellectual property, data security, integrity, and privacy.

- Apply ethical practices in everyday business activities and make well-reasoned ethical business and data management decisions.
- Demonstrate knowledge of statistical data analysis techniques utilized in business decision making.
- Apply principles of Data Science to the analysis of business problems.
- Use data mining software to solve real-world problems.
- Employ cutting edge tools and technologies to analyze Big Data.
- Apply algorithms to build machine intelligence.
- Demonstrate use of team work, leadership skills, decision making and organization theory.

M. Sc (Information Technology)		Semester – I	
Course Name: Cloud Computing		**Course Code: PSIT103**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• To learn how to use Cloud Services. • To implement Virtualization. • To implement Task Scheduling algorithms. • Apply Map-Reduce concept to applications. • To build Private Cloud. • Broadly educate to know the impact of engineering on legal and societal issues involved.

Unit	Details	Lectures
I	**Introduction to Cloud Computing:** Introduction, Historical developments, Building Cloud Computing Environments, **Principles of Parallel and Distributed Computing:** Eras of Computing, Parallel v/s distributed computing, Elements of Parallel Computing, Elements of distributed computing, Technologies for distributed computing. **Virtualization:** Introduction, Characteristics of virtualized environments, Taxonomy of virtualization techniques, Virtualization and cloud computing, Pros and cons of virtualization, Technology examples. Logical Network Perimeter, Virtual Server, Cloud Storage Device, Cloud usage monitor, Resource replication, Ready-made environment.	**12**
II	**Cloud Computing Architecture:** Introduction, Fundamental concepts and models, Roles and boundaries, Cloud Characteristics, Cloud Delivery models, Cloud Deployment models, Economics of the cloud, Open challenges. **Fundamental Cloud Security:** Basics, Threat agents, Cloud security threats, additional considerations. **Industrial Platforms and New Developments:** Amazon Web Services, Google App Engine, Microsoft Azure.	**12**
III	**Specialized Cloud Mechanisms:** Automated Scaling listener, Load Balancer, SLA monitor, Pay-per-use monitor, Audit monitor, fail over system, Hypervisor, Resource Centre, Multidevice broker, State Management Database. **Cloud Management Mechanisms:** Remote administration system, Resource Management System, SLA Management System, Billing Management System, **Cloud Security Mechanisms:** Encryption, Hashing, Digital Signature, Public Key Infrastructure (PKI), Identity and Access Management (IAM), Single	**12**

	Sign-On (SSO), Cloud-Based Security Groups, Hardened Virtual Server Images	
IV	**Fundamental Cloud Architectures:** Workload Distribution Architecture, Resource Pooling Architecture, Dynamic Scalability Architecture, Elastic Resource Capacity Architecture, Service Load Balancing Architecture, Cloud Bursting Architecture, Elastic Disk Provisioning Architecture, Redundant Storage Architecture. **Advanced Cloud Architectures:** Hypervisor Clustering Architecture, Load Balanced Virtual Server Instances Architecture, Non-Disruptive Service Relocation Architecture, Zero Downtime Architecture, Cloud Balancing Architecture, Resource Reservation Architecture, Dynamic Failure Detection and Recovery Architecture, Bare-Metal Provisioning Architecture, Rapid Provisioning Architecture, Storage Workload Management Architecture	**12**
V	**Cloud Delivery Model Considerations:** Cloud Delivery Models: The Cloud Provider Perspective, Cloud Delivery Models: The Cloud Consumer Perspective, **Cost Metrics and Pricing Models**: Business Cost Metrics, Cloud Usage Cost Metrics, Cost Management Considerations, **Service Quality Metrics and SLAs:** Service Quality Metrics, SLA Guidelines	**12**

M. Sc (Information Technology)		Semester – I	
Course Name: Cloud Computing Practical		**Course Code: PSIT1P3**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	Details
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Analyze the Cloud computing setup with its vulnerabilities and applications using different architectures. • Design different workflows according to requirements and apply map reduce programming model. • Apply and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms. • Create combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds • Assess cloud Storage systems and Cloud security, the risks involved, its impact and develop cloud application • Broadly educate to know the impact of engineering on legal and societal issues involved in addressing the security issues of cloud computing.

M. Sc (Information Technology)		Semester – I	
Course Name: Soft Computing Techniques		**Course Code: PSIT104**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• Soft computing concepts like fuzzy logic, neural networks and genetic algorithm, where Artificial Intelligence is mother branch of all. • All these techniques will be more effective to solve the problem efficiently

Pre requisites	Basic concepts of Artificial Intelligence. Knowledge of Algorithms

Unit	Details	Lectures
I	Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, Fuzzy Computing, Neural Computing, Genetic Algorithms, Associative Memory, Adaptive Resonance Theory, Classification, Clustering, Bayesian Networks, Probabilistic reasoning, applications of soft computing.	**12**
II	Artificial Neural Network: Fundamental concept, Evolution of Neural Networks, Basic Models, McCulloh-Pitts Neuron, Linear Separability, Hebb Network. Supervised Learning Network: Perceptron Networks, Adaptive Linear Neuron, Multiple Adaptive Linear Neurons, Backpropagation Network, Radial Basis Function, Time Delay Network, Functional Link Networks, Tree Neural Network. Associative Memory Networks: Training algorithm for pattern Association, Autoassociative memory network, hetroassociative memory network, bi-directional associative memory, Hopfield networks, iterative autoassociative memory networks, temporal associative memory networks.	**12**
III	UnSupervised Learning Networks: Fixed weight competitive nets, Kohonen self-organizing feature maps, learning vectors quantization, counter propogation networks, adaptive resonance theory networks. Special Networks: Simulated annealing, Boltzman machine, Gaussian Machine, Cauchy Machine, Probabilistic neural net, cascade correlation network, cognition network, neo-cognition network, cellular neural network, optical neural network Third Generation Neural Networks: Spiking Neural networks, convolutional neural networks, deep learning neural networks, extreme learning machine model.	**12**

IV	Introduction to Fuzzy Logic, Classical Sets and Fuzzy sets: Classical sets, Fuzzy sets. Classical Relations and Fuzzy Relations: Cartesian Product of relation, classical relation, fuzzy relations, tolerance and equivalence relations, non-iterative fuzzy sets. Membership Function: features of the membership functions, fuzzification, methods of membership value assignments. Defuzzification: Lambda-cuts for fuzzy sets, Lambda-cuts for fuzzy relations, Defuzzification methods. Fuzzy Arithmetic and Fuzzy measures: fuzzy arithmetic, fuzzy measures, measures of fuzziness, fuzzy integrals.	**12**
V	Fuzzy Rule base and Approximate reasoning: Fuzzy proportion, formation of rules, decomposition of rules, aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, Fuzzy logic control systems, control system design, architecture and operation of FLC system, FLC system models and applications of FLC System. Genetic Algorithm: Biological Background, Traditional optimization and search techniques, genetic algorithm and search space, genetic algorithm vs. traditional algorithms, basic terminologies, simple genetic algorithm, general genetic algorithm, operators in genetic algorithm, stopping condition for genetic algorithm flow, constraints in genetic algorithm, problem solving using genetic algorithm, the schema theorem, classification of genetic algorithm, Holland classifier systems, genetic programming, advantages and limitations and applications of genetic algorithm. Differential Evolution Algorithm, Hybrid soft computing techniques – neuro – fuzzy hybrid, genetic neuro-hybrid systems, genetic fuzzy hybrid and fuzzy genetic hybrid systems.	**12**

M. Sc (Information Technology)		**Semester – I**	
Course Name: Soft Computing Techniques Practical		**Course Code: PSIT1P4**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	**Details**
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Identify and describe soft computing techniques and their roles in building intelligent machines • Recognize the feasibility of applying a soft computing methodology for a particular problem • Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems • Apply genetic algorithms to combinatorial optimization problems • Apply neural networks for classification and regression problems • Effectively use existing software tools to solve real problems using a soft computing approach • Evaluate and compare solutions by various soft computing approaches for a given problem.

SEMESTER II

M. Sc (Information Technology)		Semester – II	
Course Name: BigData Analytics		**Course Code: PSIT201**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• To provide an overview of an exciting growing field of big data analytics. • To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce. • To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability. • To enable students to have skills that will help them to solve complex real-world problems in for decision support.

Unit	Details	Lectures
I	Introduction to Big Data, Characteristics of Data, and Big Data Evolution of Big Data, Definition of Big Data, Challenges with big data, Why Big data? Data Warehouse environment, Traditional Business Intelligence versus Big Data. State of Practice in Analytics, Key roles for New Big Data Ecosystems, Examples of big Data Analytics. Big Data Analytics, Introduction to big data analytics, Classification of Analytics, Challenges of Big Data, Importance of Big Data, Big Data Technologies, Data Science, Responsibilities, Soft state eventual consistency. Data Analytics Life Cycle	**12**
II	Analytical Theory and Methods: Clustering and Associated Algorithms, Association Rules, Apriori Algorithm, Candidate Rules, Applications of Association Rules, Validation and Testing, Diagnostics, Regression, Linear Regression, Logistic Regression, Additional Regression Models.	**12**
III	Analytical Theory and Methods: Classification, Decision Trees, Naïve Bayes, Diagnostics of Classifiers, Additional Classification Methods, Time Series Analysis, Box Jenkins methodology, ARIMA Model, Additional methods. Text Analysis, Steps, Text Analysis Example, Collecting Raw Text, Representing Text, Term Frequency-Inverse Document Frequency (TFIDF), Categorizing Documents by Topics, Determining Sentiments	**12**
IV	Data Product, Building Data Products at Scale with Hadoop, Data Science Pipeline and Hadoop Ecosystem, Operating System for Big Data, Concepts, Hadoop Architecture, Working with Distributed file system, Working with Distributed Computation, Framework for Python and Hadoop Streaming, Hadoop Streaming, MapReduce with Python,	**12**

	Advanced MapReduce. In-Memory Computing with Spark, Spark Basics, Interactive Spark with PySpark, Writing Spark Applications,	
V	Distributed Analysis and Patterns, Computing with Keys, Design Patterns, Last-Mile Analytics, Data Mining and Warehousing, Structured Data Queries with Hive, HBase, Data Ingestion, Importing Relational data with Sqoop, Injesting stream data with flume. Analytics with higher level APIs, Pig, Spark's higher level APIs.	**12**

,

M. Sc (Information Technology)		**Semester – II**	
Course Name: BigData Analytics Practical		**Course Code: PSIT2P1**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	**Details**
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Understand the key issues in big data management and its associated applications in intelligent business and scientific computing. • Acquire fundamental enabling techniques and scalable algorithms like Hadoop, Map Reduce and NO SQL in big data analytics. • Interpret business models and scientific computing paradigms, and apply software tools for big data analytics. • Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.

M. Sc (Information Technology)		Semester – I	
Course Name: Modern Networking		**Course Code: PSIT202**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• To understand the state-of-the-art in network protocols, architectures and applications. • Analyze existing network protocols and networks. • Develop new protocols in networking • To understand how networking research is done • To investigate novel ideas in the area of Networking via term-long research projects.

Pre requisites	Fundamentals of Networking

Unit	Details	Lectures
I	Modern Networking Elements of Modern Networking The Networking Ecosystem ,Example Network Architectures,Global Network Architecture,A Typical Network Hierarchy Ethernet Applications of Ethernet Standards Ethernet Data Rates Wi-Fi Applications of Wi-Fi,Standards Wi-Fi Data Rates 4G/5G Cellular First Generation Second Generation, Third Generation Fourth Generation Fifth Generation, Cloud Computing Cloud Computing Concepts The Benefits of Cloud Computing Cloud Networking Cloud Storage, Internet of Things Things on the Internet of Things, Evolution Layers of the Internet of Things, Network Convergence Unified Communications, Requirements and Technology Types of Network and Internet Traffic,Elastic Traffic,Inelastic Traffic, Real-Time Traffic Characteristics Demand: Big Data, Cloud Computing, and Mobile TrafficBig Data Cloud Computing,,Mobile Traffic, Requirements: QoS and QoE,,Quality of Service,Quality of Experience, Routing Characteristics, Packet Forwarding, Congestion Control ,Effects of Congestion,Congestion Control Techniques, SDN and NFV Software-Defined Networking,Network Functions Virtualization Modern Networking Elements	**12**
II	Software-Defined Networks SDN: Background and Motivation, Evolving Network Requirements Demand Is Increasing,Supply Is IncreasingTraffic Patterns Are More ComplexTraditional Network Architectures are Inadequate, The SDN Approach Requirements SDN Architecture Characteristics of Software-	**12**

	Defined Networking, SDN- and NFV-Related Standards Standards-Developing Organizations Industry Consortia Open Development Initiatives, SDN Data Plane and OpenFlow SDN Data Plane, Data Plane Functions Data Plane Protocols OpenFlow Logical Network Device Flow Table Structure Flow Table Pipeline, The Use of Multiple Tables Group Table OpenFlow Protocol, SDN Control Plane SDN Control Plane Architecture Control Plane Functions, Southbound Interface Northbound InterfaceRouting, ITU-T Model, OpenDaylight OpenDaylight Architecture OpenDaylight Helium, REST REST Constraints Example REST API, Cooperation and Coordination Among Controllers, Centralized Versus Distributed Controllers, High-Availability Clusters Federated SDN Networks, Border Gateway Protocol Routing and QoS Between Domains, Using BGP for QoS Management IETF SDNi OpenDaylight SNDi SDN Application Plane SDN Application Plane Architecture Northbound Interface Network Services Abstraction Layer Network Applications, User Interface, Network Services Abstraction Layer Abstractions in SDN, Frenetic Traffic Engineering PolicyCop Measurement and Monitoring Security OpenDaylight DDoS Application Data Center Networking, Big Data over SDN Cloud Networking over SDN Mobility and Wireless Information-Centric Networking CCNx, Use of an Abstraction Layer	
III	Virtualization, Network Functions Virtualization: Concepts and Architecture, Background and Motivation for NFV, Virtual Machines The Virtual Machine Monitor, Architectural Approaches Container Virtualization, NFV Concepts Simple Example of the Use of NFV, NFV Principles High-Level NFV Framework, NFV Benefits and Requirements NFV Benefits, NFV Requirements, NFV Reference Architecture NFV Management and Orchestration, Reference Points Implementation, NFV Functionality, NFV Infrastructure,Container Interface,Deployment of NFVI Containers,Logical Structure of NFVI Domains,ComputeDomain, Hypervisor Domain,Infrastructure Network Domain, Virtualized Network Functions, VNF Interfaces,VNFC to VNFC Communication,VNF Scaling, NFV Management and Orchestration, Virtualized Infrastructure Manager,Virtual Network Function Manager,NFV Orchestrator, Repositories, Element Management, OSS/BSS, NFV Use Cases Architectural Use Cases, Service-Oriented Use Cases, SDN and NFV Network Virtualization, Virtual LANs ,The Use of Virtual LANs,Defining VLANs, Communicating VLAN Membership,IEEE 802.1Q VLAN Standard, Nested VLANs, OpenFlow VLAN Support, Virtual Private Networks, IPsec VPNs,MPLS VPNs, Network Virtualization, Simplified Example, Network Virtualization Architecture, Benefits of Network Virtualization, OpenDaylight's Virtual Tenant Network, Software-Defined Infrastructure,Software-Defined Storage, SDI Architecture	**12**

IV	Defining and Supporting User Needs, Quality of Service, Background, QoS Architectural Framework, Data Plane, Control Plane, Management Plane, Integrated Services Architecture, ISA Approach ISA Components, ISA Services, Queuing Discipline, Differentiated Services, Services, DiffServ Field, DiffServ Configuration and Operation, Per-Hop Behavior, Default Forwarding PHB, Service Level Agreements, IP Performance Metrics, OpenFlow QoS Support, Queue Structures, Meters, QoE: User Quality of Experience, Why QoE?,Online Video Content Delivery, Service Failures Due to Inadequate QoE Considerations QoE-Related Standardization Projects, Definition of Quality of Experience, Definition of Quality, Definition of Experience Quality Formation Process, Definition of Quality of Experience, QoE Strategies in Practice, The QoE/QoS Layered Model Summarizing and Merging the ,QoE/QoS Layers, Factors Influencing QoE, Measurements of QoE, Subjective Assessment, Objective Assessment, End-User Device Analytics, Summarizing the QoE Measurement Methods, Applications of QoE Network Design Implications of QoS and QoE Classification of QoE/ QoS Mapping Models, Black-Box Media-Based QoS/QoE Mapping Models, Glass-Box Parameter-Based QoS/QoE Mapping Models,Gray-Box QoS/QoE Mapping Models, Tips for QoS/QoE Mapping Model Selection,IP-Oriented Parameter-Based QoS/QoE Mapping Models,Network Layer QoE/QoS Mapping Models for Video Services, Application Layer QoE/QoS Mapping Models for Video Services Actionable QoE over IP-Based Networks, The System-Oriented Actionable QoE Solution, The Service-Oriented Actionable QoE Solution, QoE Versus QoS Service Monitoring, QoS Monitoring Solutions, QoE Monitoring Solutions, QoE-Based Network and Service Management, QoE-Based Management of VoIP Calls, QoE-Based Host-Centric Vertical Handover, QoE-Based Network-Centric Vertical Handover	**12**
V	Modern Network Architecture: Clouds and Fog, Cloud Computing, Basic Concepts, Cloud Services, Software as a Service, Platform as a Service, Infrastructure as a Service, Other Cloud Services, XaaS, Cloud Deployment Models, Public Cloud Private Cloud Community Cloud, Hybrid Cloud, Cloud Architecture, NIST Cloud Computing Reference Architecture,ITU-T Cloud Computing Reference Architecture, SDN and NFV, Service Provider Perspective Private Cloud Perspective, ITU-T Cloud Computing Functional Reference Architecture, The Internet of Things: Components The IoT Era Begins, The Scope of the Internet of Things Components of IoT-Enabled Things, Sensors, Actuators, Microcontrollers, Transceivers, RFID, The Internet of Things: Architecture and Implementation, IoT Architecture,ITU-T IoT Reference Model, IoT World Forum Reference Model, IoT Implementation, IoTivity, Cisco IoT System, ioBridge, Security Security Requirements, SDN Security Threats to SDN, Software-Defined Security, NFV Security, Attack Surfaces, ETSI Security Perspective, Security Techniques, Cloud Security, Security Issues and Concerns, Cloud Security Risks and Countermeasures, Data Protection	**12**

	in the Cloud, Cloud Securityas a Service, Addressing Cloud Computer Security Concerns, IoT Security, The Patching Vulnerability, IoT Security and Privacy Requirements Defined by ITU-TAn IoT Security Framework, Conclusion

M. Sc (Information Technology)		**Semester – II**	
Course Name: Modern Networking Practical		**Course Code: PSIT2P2**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	Details
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Demonstrate in-depth knowledge in the area of Computer Networking. • To demonstrate scholarship of knowledge through performing in a group to identify, formulate and solve a problem related to Computer Networks • Prepare a technical document for the identified Networking System Conducting experiments to analyze the identified research work in building Computer Networks

M. Sc (Information Technology)		Semester – I	
Course Name: Microservice Architecture		**Course Code: PSIT203**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• Gain a thorough understanding of the philosophy and architecture of Web applications using ASP.NET Core MVC; • Gain a practical understanding of.NET Core; • Acquire a working knowledge of Web application development using ASP.NET Core MVC 6 and Visual Studio • Persist data with XML Serialization and ADO.NET with SQL Server • Create HTTP services using ASP.NET Core Web API; • Deploy ASP.NET Core MVC applications to the Windows Azure cloud.

Unit	Details	Lectures
I	**Microservices:** Understanding Microservices, Adopting Microservices, The Microservices Way. **Microservices Value Proposition:** Deriving Business Value, defining a Goal-Oriented, Layered Approach, Applying the Goal-Oriented, Layered Approach. **Designing Microservice Systems:** The Systems Approach to Microservices, A Microservices Design Process, **Establishing a Foundation:** Goals and Principles, Platforms, Culture.	**12**
II	**Service Design:** Microservice Boundaries, API design for Microservices, Data and Microservices, Distributed Transactions and Sagas, Asynchronous Message-Passing and Microservices, dealing with Dependencies, **System Design and Operations:** Independent Deployability, More Servers, Docker and Microservices, Role of Service Discovery, Need for an API Gateway, Monitoring and Alerting. **Adopting Microservices in Practice:** Solution Architecture Guidance, Organizational Guidance, Culture Guidance, Tools and Process Guidance, Services Guidance.	**12**
III	**Building Microservices with ASP.NET Core:** Introduction, Installing .NET Core, Building a Console App, Building ASP.NET Core App. **Delivering Continuously:** Introduction to Docker, Continuous integration with Wercker, Continuous Integration with Circle CI, Deploying to Dicker Hub. **Building Microservice with ASP.NET Core:** Microservice, Team Service, API First Development, Test First Controller, Creating a CI pipeline, Integration Testing, Running the team service Docker Image. **Backing Services:**	**12**

	Microservices Ecosystems, Building the location Service, Enhancing Team Service.	
IV	**Creating Data Service:** Choosing a Data Store**,** Building a Postgres Repository, Databases are Backing Services, Integration Testing Real Repositories, Exercise the Data Service.**Event Sourcing and CQRS:** Event Sourcing, CQRS pattern, Event Sourcing and CQRS, Running the samples. **Building an ASP.NET Core Web Application:** ASP.NET Core Basics, Building Cloud-Native Web Applications. **Service Discovery:** Cloud Native Factors, Netflix Eureka, Discovering and Advertising ASP.NET Core Services. DNS and Platform Supported Discovery.	**12**
V	**Configuring Microservice Ecosystems:** Using Environment Variables with Docker, Using Spring Cloud Config Server, Configuring Microservices with etcd, **Securing Applications and Microservices:** Security in the Cloud, Securing ASP.NET Core Web Apps, Securing ASP.NET Core Microservices. **Building Real-Time Apps and Services:** Real-Time Applications Defined, Websockets in the Cloud, Using a Cloud Messaging Provider, Building the Proximity Monitor. **Putting It All Together:** Identifying and Fixing Anti-Patterns, Continuing the Debate over Composite Microservices, The Future.	**12**

Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	Details
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	Develop web applications using Model View Control. Create MVC Models and write code that implements business logic within Model methods, properties, and events. Create Views in an MVC application that display and edit data and interact with Models and Controllers. Boost your hire ability through innovative and independent learning. Gaining a thorough understanding of the philosophy and architecture of .NET Core Understanding packages, metapackages and frameworks Acquiring a working knowledge of the .NET programming model Implementing multi-threading effectively in .NET applications

M. Sc (Information Technology)		Semester – II	
Course Name: Image Processing		**Course Code: PSIT204**	
Periods per week **1 Period is 60 minutes**	**Lectures**	**4**	
	Credits	**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Theory Internal	**--**	**40**

Objectives	• Review the fundamental concepts of a digital image processing system. • Analyze images in the frequency domain using various transforms. • Evaluate the techniques for image enhancement and image restoration. • Categorize various compression techniques. • Interpret Image compression standards. • Interpret image segmentation and representation techniques.

Unit	Details	Lectures
I	**Introduction:** Digital Image Processing, Origins of Digital Image Processing, Applications and Examples of Digital Image Processing, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, **Digital Image Fundamentals:** Elements of Visual Perception, Light and the Electromagnetic Spectrum, Image Sensing and Acquisition, Image Sampling and Quantization, Basic Relationships Between Pixels, Basic Mathematical Tools Used in Digital Image Processing, **Intensity Transformations and Spatial Filtering:** Basics, Basic Intensity Transformation Functions, Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing (Lowpass) Spatial Filters, Sharpening (Highpass) Spatial Filters, Highpass, Bandreject, and Bandpass Filters from Lowpass Filters, Combining Spatial Enhancement Methods, Using Fuzzy Techniques for Intensity Transformations and Spatial Filtering	**12**
II	**Filtering in the Frequency Domain:** Background, Preliminary Concepts, Sampling and the Fourier Transform of Sampled Functions, The Discrete Fourier Transform of One Variable, Extensions to Functions of Two Variables, Properties of the 2-D DFT and IDFT, Basics of Filtering in the Frequency Domain, Image Smoothing Using Lowpass Frequency Domain Filters, Image Sharpening Using Highpass Filters, Selective Filtering, Fast Fourier Transform **Image Restoration and Reconstruction:** A Model of the Image Degradation/Restoration Process, Noise Models, Restoration in the Presence of Noise Only-----Spatial Filtering, Periodic Noise Reduction Using Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Constrained Least Squares Filtering, Geometric Mean Filter, Image Reconstruction from Projections	**12**
III	**Wavelet and Other Image Transforms:** Preliminaries, Matrix-based Transforms, Correlation, Basis Functions in the Time-Frequency Plane, Basis	**12**

	Images, Fourier-Related Transforms, Walsh-Hadamard Transforms, Slant Transform, Haar Transform, Wavelet Transforms **Color Image Processing:** Color Fundamentals, Color Models, Pseudocolor Image Processing, Full-Color Image Processing, Color Transformations, Color Image Smoothing and Sharpening, Using Color in Image Segmentation, Noise in Color Images, Color Image Compression. **Image Compression and Watermarking:** Fundamentals, Huffman Coding, Golomb Coding, Arithmetic Coding, LZW Coding, Run-length Coding, Symbol-based Coding, 8 Bit-plane Coding, Block Transform Coding, Predictive Coding, Wavelet Coding, Digital Image Watermarking,	
IV	**Morphological Image Processing:** Preliminaries, Erosion and Dilation, Opening and Closing, The Hit-or-Miss Transform, Morphological Algorithms, Morphological Reconstruction, Morphological Operations on Binary Images, Grayscale Morphology **Image Segmentation I: Edge Detection, Thresholding, and Region Detection:** Fundamentals, Thresholding, Segmentation by Region Growing and by Region Splitting and Merging, Region Segmentation Using Clustering and Superpixels, Region Segmentation Using Graph Cuts, Segmentation Using Morphological Watersheds, Use of Motion in Segmentation	**12**
V	**Image Segmentation II: Active Contours: Snakes and Level Sets:** Background, Image Segmentation Using Snakes, Segmentation Using Level Sets. **Feature Extraction:** Background, Boundary Preprocessing, Boundary Feature Descriptors, Region Feature Descriptors, Principal Components as Feature Descriptors, Whole-Image Features, Scale-Invariant Feature Transform (SIFT)	**12**

	Credits	**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**40**

Practical No	**Details**
1 - 10	10 Practical based on above syllabus, covering entire syllabus

Course Outcome	• Understand the relevant aspects of digital image representation and their practical implications. • Have the ability to design pointwise intensity transformations to meet stated specifications. • Understand 2-D convolution, the 2-D DFT, and have the abitilty to design systems using these concepts. • Have a command of basic image restoration techniques. • Understand the role of alternative color spaces, and the design requirements leading to choices of color space. • Appreciate the utility of wavelet decompositions and their role in image processing systems. • Have an understanding of the underlying mechanisms of image compression, and the ability to design systems using standard algorithms to meet design specifications.

Evaluation Scheme

Internal Evaluation (40 Marks)

The internal assessment marks shall be awarded as follows:

1. **30 marks (Any one of the following):**
    a. **Written Test or**
    b. **SWAYAM (Advanced Course) of minimum 20 hours and certification exam completed or**
    c. **NPTEL (Advanced Course) of minimum 20 hours and certification exam completed or**
    d. **Valid International Certifications (Prometric, Pearson, Certiport, Coursera, Udemy and the like)**
    e. **One certification marks shall be awarded one course only. For four courses, the students will have to complete four certifications.**
2. **10 marks**
   The marks given out of 40 for publishing the research paper should be divided into four course and should awarded out of 10 in each of the four course.

i. **Suggested format of Question paper of 30 marks for the written test.**

Q1.	**Attempt *any two* of the following:**	**16**
a.		
b.		
c.		
d.		
Q2.	**Attempt *any two* of the following:**	**14**
a.		
b.		
c.		
d.		

ii. **10 marks from every course coming to a total of 40 marks, shall be awarded on publishing of research paper in UGC approved Journal with plagiarism less than 10%. The marks can be awarded as per the impact factor of the journal, quality of the paper, importance of the contents published, social value.**

External Examination: (60 marks)

	All questions are compulsory	
Q1	**(Based on Unit 1) Attempt *any two* of the following:**	**12**
a.		
b.		
c.		
d.		
Q2	**(Based on Unit 2) Attempt *any two* of the following:**	**12**
Q3	**(Based on Unit 3) Attempt *any two* of the following:**	**12**
Q4	**(Based on Unit 4) Attempt *any two* of the following:**	**12**
Q5	**(Based on Unit 5) Attempt *any two* of the following:**	**12**

Practical Evaluation (50 marks)

A Certified copy journal is essential to appear for the practical examination.

1.	**Practical Question 1**	**20**
2.	**Practical Question 2**	**20**
3.	**Journal**	**5**
4.	**Viva Voce**	**5**

University Of Mumbai

Syllabus for M.Sc. I.T. Part II
Semester III and IV
Programme: M.Sc.
Subject: Information Technology
CHOICE BASED(REVISED)
with effect from the academic year
2020 – 2021

Artificial Intelligence Track
Image Processing Track
Cloud Computing Track
Security Track

SEMESTER - III					
	Course Title				
Course Code	Theory	Credits	Course Code	Practical	Credits
PSIT301	Technical Writing and Entrepreneurship Development	4	PSIT3P1	Project Documentation and Viva	2
Elective 1: Select Any one from the courses listed below along with corresponding practical course					
PSIT302a	Applied Artificial Intelligence	4	PSIT3P2a	Applied Artificial Intelligence Practical	2
PSIT302b	Computer Vision		PSIT3P2b	Computer Vision Practical	
PSIT302c	Cloud Application Development		PSIT3P2c	Cloud Application Development Practical	
PSIT302d	Security Breaches and Countermeasures		PSIT3P2d	Security Breaches and Countermeasures Practical	
Elective 2: Select Any one from the courses listed below along with corresponding practical course					
PSIT303a	Machine Learning	4	PSIT3P3a	Machine Learning Practical	2
PSIT303b	Biomedical Image Processing		PSIT3P3b	Biomedical Image Processing Practical	
PSIT303c	Cloud Management		PSIT3P3c	Cloud Management Practical	
PSIT303d	Malware Analysis		PSIT3P3d	Malware Analysis Practical	
Elective 3: Select Any one from the courses listed below along with corresponding practical course					
PSIT304a	Robotic Process Automation	4	PSIT3P4a	Robotic Process Automation Practical	2
PSIT304b	Virtual Reality and Augmented Reality		PSIT3P4b	Virtual Reality and Augmented Reality Practical	
PSIT304c	Data Center Technologies		PSIT3P4c	Data Center Technologies Practical	
PSIT304d	Offensive Security		PSIT3P4d	Offensive Security Practical	
	Total Theory Credits	**16**		Total Practical Credits	**8**
Total Credits for Semester III: 24					

SEMESTER - IV					
	Course Title				
Course Code	Theory	Credits	Course Code	Practical	Credits
PSIT401	Blockchain	4	PSIT4P1		2
Elective 1: Select Any one from the courses listed below along with corresponding practical course					
PSIT402a	Natural Language Processing	4	PSIT4P2a	Natural Language Processing Practical	2
PSIT402b	Digital Image Forensics		PSIT4P2b	Digital Image Forensics Practical	
PSIT402c	Advanced IoT		PSIT4P2c	Advanced IoT Practical	
PSIT402d	Cyber Forensics		PSIT4P2d	Cyber Forensics Practical	
Elective 2: Select Any one from the courses listed below along with corresponding practical course					
PSIT403a	Deep Learning	4	PSIT4P3a	Deep Learning Practical	2
PSIT403b	Remote Sensing		PSIT4P3b	Remote Sensing Practical	
PSIT403c	Server Virtualization on VMWare Platform		PSIT4P3c	Server Virtualization on VMWare Platform Practical	
PSIT403d	Security Operations Center		PSIT4P3d	Security Operations Center Practical	
Elective 3: Select Any one from the courses listed below. Project Implementation and Viva is compulsory					
PSIT404a	Human Computer Interaction	4	PSIT4P4	Project Implementation and Viva	2
PSIT404b	Advanced Applications of Image Processing				
PSIT404c	Storage as a Service				
PSIT404d	Information Security Auditing				
	Total Theory Credits	**16**		Total Practical Credits	**8**
Total Credits for Semester IV: 24					

If a student selects all 6 papers of Artificial Intelligence Track, he should be awarded the degree **M.Sc. (Information Technology), Artificial Intelligence Specialisation.**
If a student selects all 6 papers of Image Processing Track, he should be awarded the degree **M.Sc. (Information Technology), Image Processing Specialisation.**
If a student selects all 6 papers of Cloud Computing Track, he should be awarded the degree **M.Sc. (Information Technology), Cloud Computing Specialisation**
If a student selects all 6 papers of Artificial Security Track, he should be awarded the degree **M.Sc. (Information Technology), Security Specialisation**
All other students will be awarded M.Sc. (Information Technology) degree.

Table of Contents

PSIT301: Technical Writing and Entrepreneurship Development 3
PSIT3P1: Project Documentation and Viva 7
PSIT302a: Applied Artificial Intelligence 8
PSIT302b: Computer Vision 10
PSIT302c: Cloud Application Development 13
PSIT302d: Security Breaches and Countermeasures 16
PSIT303a: Machine Learning 19
PSIT303b: Biomedical Image Processing 21
PSIT303c: Cloud Management 24
PSIT303d: Malware Analysis 32
PSIT304a: Robotic Process Automation 35
PSIT304b: Virtual Reality and Augmented Reality 38
PSIT304c: Data Centre Technologies 40
PSIT304d: Offensive Security 45
PSIT401: Blockchain 51
PSIT402a: Natural Language Processing 54
PSIT402b: Digital Image Forensics 57
PSIT402c: Advanced IoT 59
PSIT402d: Cyber Forensics 61
PSIT403a: Deep Learning 63
PSIT403b: Remote Sensing 65
PSIT403c: Server Virtualization on VMWare Platform 69
PSIT403d: Security Operations Centre 75
PSIT404a: Human Computer Interaction 80
PSIT404b: Advanced IoT 82
PSIT404c: Storage as a Service 84
PSIT404d: Information Security Auditing 90
PSIT4P4: Project Implementation and Viva 93
Evaluation Scheme 94
Internal Evaluation (40 Marks) 94
External Examination: (60 marks) 94
Practical Evaluation (50 marks) 95
Project Documentation and Viva Voce Evaluation 95
Project Implementation and Viva Voce Evaluation 95
Appendix – 1 95

SEMESTER III

PSIT301: Technical Writing and Entrepreneurship Development

M. Sc (Information Technology)		**Semester – III**	
Course Name: Technical Writing and Entrepreneurship Development		**Course Code: PSIT301**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- This course aims to provide conceptual understanding of developing strong foundation in general writing, including research proposal and reports.
- It covers the technological developing skills for writing Article, Blog, E-Book, Commercial web Page design, Business Listing Press Release, E-Listing and Product Description.
- This course aims to provide conceptual understanding of innovation and entrepreneurship development.

Unit	Details	Lectures	Outcome
I	Introduction to Technical Communication: What Is Technical Communication? The Challenges of Producing Technical Communication, Characteristics of a Technical Document, Measures of Excellence in Technical Documents, Skills and Qualities Shared by Successful Workplace Communicators, How Communication Skills and Qualities Affect Your Career? **Understanding Ethical and Legal Considerations:** A Brief Introduction to Ethics, Your Ethical Obligations, Your Legal Obligations, The Role of Corporate Culture in Ethical and Legal Conduct, Understanding Ethical and Legal Issues Related to Social Media, Communicating Ethically Across Cultures, Principles for Ethical Communication **Writing Technical Documents:** Planning, Drafting, Revising, Editing, Proofreading **Writing Collaboratively:** Advantages and Disadvantages of Collaboration, Managing Projects, Conducting Meetings, Using Social Media and Other Electronic Tools in Collaboration, Importance of Word Press Website, Gender and Collaboration, Culture and Collaboration.	**12**	**CO1**
II	**Introduction to Content Writing:** Types of Content (Article, Blog, E-Books, Press Release, Newsletters Etc), Exploring Content Publication Channels. Distribution of your content across various channels. **Blog Creation:** Understand the psychology behind your web traffic, Creating killing landing pages which attract users, Using	**12**	**CO2**

	Landing Page Creators, Setting up Accelerated Mobile Pages, Identifying UI UX Experience of your website or blog. **Organizing Your Information:** Understanding Three Principles for Organizing Technical Information, Understanding Conventional Organizational Patterns, **Emphasizing Important Information:** Writing Clear, Informative Titles, Writing Clear, Informative Headings, Writing Clear Informative Lists, Writing Clear Informative Paragraphs.		
III	**Creating Graphics:** The Functions of Graphics, The Characteristics of an Effective Graphic, Understanding the Process of Creating Graphics, Using Color Effectively, Choosing the Appropriate Kind of Graphic, Creating Effective Graphics for Multicultural Readers. **Researching Your Subject:** Understanding the Differences Between Academic and Workplace Research, Understanding the Research Process, Conducting Secondary Research, Conducting Primary Research, **Research and Documentation:** Literature Reviews, Interviewing for Information, Documenting Sources, Copyright, Paraphrasing, Questionnaires. **Report Components:** Abstracts, Introductions, Tables of Contents, Executive Summaries, Feasibility Reports, Investigative Reports, Laboratory Reports, Test Reports, Trip Reports, Trouble Reports	**12**	**CO3**
IV	**Writing Proposals:** Understanding the Process of Writing Proposals, The Logistics of Proposals, The "Deliverables" of Proposals, Persuasion and Proposals, Writing a Proposal, The Structure of the Proposal. **Writing Informational Reports:** Understanding the Process of Writing Informational Reports, Writing Directives, Writing Field Reports, Writing Progress and Status Reports, Writing Incident Reports, Writing Meeting Minutes. **Writing Recommendation Reports:** Understanding the Role of Recommendation Reports, Using a Problem-Solving Model for Preparing Recommendation Reports, Writing Recommendation Reports. **Reviewing, Evaluating, and Testing Documents and Websites:** Understanding Reviewing, Evaluating, and Testing, Reviewing Documents and Websites, Conducting Usability Evaluations, Conducting Usability Tests, Using Internet tools to check writing Quality, Duplicate Content Detector, What is Plagiarism?, How to avoid writing plagiarism content? **Innovation management: an introduction:** The importance of innovation, Models of innovation, Innovation as a management process. **Market adoption and technology diffusion:** Time lag between innovation and useable product, Innovation and the market , Innovation and market vision ,Analysing internet search data to help	**12**	**CO4**

	adoption and forecasting sales ,Innovative new products and consumption patterns, Crowd sourcing for new product ideas, Frugal innovation and ideas from everywhere, Innovation diffusion theories.		
V	**Managing innovation within firms:** Organisations and innovation, The dilemma of innovation management, Innovation dilemma in low technology sectors, Dynamic capabilities, Managing uncertainty, Managing innovation projects **Operations and process innovation:** Operations management, The nature of design and innovation in the context of operations, Process design, Process design and innovation **Managing intellectual property:** Intellectual property, Trade secrets, An introduction to patents, Trademarks, Brand names, Copyright **Management of research and development:** What is research and development?, R&D management and the industrial context, R&D investment and company success, Classifying R&D, R&D management and its link with business strategy, Strategic pressures on R&D, Which business to support and how?, Allocation of funds to R&D, Level of R&D expenditure **Managing R&D projects:** Successful technology management, The changing nature of R&D management, The acquisition of external technology, Effective R&D management, The link with the product innovation process, Evaluating R&D projects.	**12**	**CO5**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Technical Communication	Mike Markel	Bedford/St. Martin's	11	2014
2.	Innovation Management and New Product Development	Paul Trott	Pearson	06	2017
3.	Handbook of Technical Writing	Gerald J. Alred , Charles T. Brusaw , Walter E. Oliu	Bedford/St. Martin's	09	2008
4.	Technical Writing 101: A Real-World Guide to Planning and Writing Technical Content	Alan S. Pringle and Sarah S. O'Keefe	scriptorium	03	2009
5.	Innovation and Entrepreneurship	Peter Drucker	Harper Business	03	2009

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Develop technical documents that meet the requirements with standard guidelines. Understanding the essentials and hands-on learning about effective Website Development.
CO2: Write Better Quality Content Which Ranks faster at Search Engines. Build effective Social Media Pages.
CO3: Evaluate the essentials parameters of effective Social Media Pages.
CO4: Understand importance of innovation and entrepreneurship.
CO5: Analyze research and development projects.

PSIT3P1: Project Documentation and Viva

M. Sc (Information Technology)		**Semester – III**	
Course Name: Project Documentation and Viva		**Course Code: PSIT3P1**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	--

The learners are expected to develop a project beyond the undergraduate level. Normal web sites, web applications, mobile apps are not expected. Preferably, the project should be from the elective chosen by the learner at the post graduate level. In semester three. The learner is supposed to prepare the synopsis and documentation. The same project has to be implemented in Semester IV.
More details about the project is given is Appendix 1.

PSIT302a: Applied Artificial Intelligence

M. Sc (Information Technology)		**Semester – III**	
Course Name: Applied Artificial Intelligence		Course Code: PSIT302a	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To explore the applied branches of artificial intelligence
- To enable the learner to understand applications of artificial intelligence
- To enable the student to solve the problem aligned with derived branches of artificial intelligence.

Unit	*Details*	*Lectures*	*Outcome*
I	**Review of AI:** History, foundation and Applications **Expert System and Applications:** Phases in Building Expert System, Expert System Architecture, Expert System versus Traditional Systems, Rule based Expert Systems, Blackboard Systems, Truth Maintenance System, Application of Expert Systems, Shells and Tools	**12**	**CO1**
II	**Probability Theory:** joint probability, conditional probability, Bayes's theorem, probabilities in rules and facts of rule based system, cumulative probabilities, rule based system and Bayesian method **Fuzzy Sets and Fuzzy Logic:** Fuzzy Sets, Fuzzy set operations, Types of Member ship Functions, Multivalued Logic, Fuzzy Logic, Linguistic variables and Hedges, Fuzzy propositions, inference rules for fuzzy propositions, fuzzy systems, possibility theory and other enhancement to Logic	**12**	**CO2**
III	**Machine Learning Paradigms:** Machine Learning systems, supervised and un-supervised learning, inductive learning, deductive learning, clustering, support vector machines, cased based reasoning and learning. **Artificial Neural Networks:** Artificial Neural Networks, Single-Layer feedforward networks, multi-layer feed-forward networks, radial basis function networks, design issues of artificial neural networks and recurrent networks	**12**	**CO3**
IV	**Evolutionary Computation:** Soft computing, genetic algorithms, genetic programming concepts, evolutionary programming, swarm intelligence, ant colony paradigm, particle swarm optimization and applications of evolutionary algorithms. **Intelligent Agents:** Agents vs software programs, classification of agents, working of an agent, single agent and multiagent systems, performance evaluation, architecture, agent communication language, applications	**12**	**CO4**

V	Advanced Knowledge Representation Techniques: Conceptual dependency theory, script structures, CYC theory, script structure, CYC theory, case grammars, semantic web. Natural Language Processing: Sentence Analysis phases, grammars and parsers, types of parsers, semantic analysis, universal networking language, dictionary	**12**	**CO5**

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Artificial Intelligence	Saroj Kaushik	Cengage	1st	2019
2.	Artificial Intelligence: A Modern Approach	A. Russel, Peter Norvig		1st	
3.	Artificial Intelligence	Elaine Rich,Kevin Knight,Shivashankar B. Nair	Tata Mc-Grawhill	3rd	

M. Sc (Information Technology)		**Semester – III**	
Course Name: Artificial Intelligence Practical		**Course Code: PSIT3P2a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	--

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of course the learner will:
CO1: be able to understand the fundamentals concepts of expert system and its applications.
CO2: be able to use probability and concept of fuzzy sets for solving AI based problems.
CO3: be able to understand the applications of Machine Learning. The learner can also apply fuzzy system for solving problems.
CO4: learner will be able to apply to understand the applications of genetic algorithms in different problems related to artificial intelligence.
CO5: A learner can use knowledge representation techniques in natural language processing.

PSIT302b: Computer Vision

M. Sc (Information Technology)		Semester – III	
Course Name: Computer Vision		**Course Code: PSIT302b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To develop the student's understanding of the issues involved in trying to define and simulate perception.
- To familiarize the student with specific, well known computer vision methods, algorithms and results.
- To provide the student additional experience in the analysis and evaluation of complicated systems.
- To provide the student additional software development experience.
- To provide the student with paper and proposal writing experience.

Unit	Details	Lectures	Outcome
I	**Introduction:** What is computer vision?, A brief history, Image formation, Geometric primitives and transformations, Geometric primitives, D transformations, D transformations, D rotations, D to D projections, Lens distortions, Photometric image formation, Lighting, Reflectance and shading, Optics, The digital camera, Sampling and aliasing, Color ,Compression **Feature-based alignment**: D and D feature-based alignment, D alignment using least squares , Application: Panography , Iterative algorithms , Robust least squares and RANSAC , D alignment , Pose estimation , Linear algorithms, Iterative algorithms , Application: Augmented reality , Geometric intrinsic calibration, Calibration patterns, Vanishing points , Application: Single view metrology , Rotational motion ,Radial distortion	**12**	**CO1**
II	**Structure from motion :** Triangulation, Two-frame structure from motion , Projective (uncalibrated) reconstruction, Self-calibration , Application: View morphing , Factorization, Perspective and projective factorization , Application: Sparse D model extraction, Bundle adjustment, Exploiting sparsity , Application: Match move and augmented reality , Uncertainty and ambiguities , Application: Reconstruction from Internet photos , Constrained structure and motion , Line-based techniques , Plane-based techniques **Dense motion estimation :** Translational alignment , Hierarchical motion estimation, Fourier-based alignment ,	**12**	**CO2**

	Incremental refinement , Parametric motion, Application: Video stabilization, Learned motion models , Spline-based motion, Application: Medical image registration, Optical flow, Multi-frame motion estimation ,Application: Video denoising , Application: De-interlacing , Layered motion, Application: Frame interpolation, Transparent layers and reflections		
III	**Image stitching :** Motion models, Planar perspective motion, Application: Whiteboard and document scanning , Rotational panoramas , Gap closing , Application: Video summarization and compression, Cylindrical and spherical coordinates, Global alignment, Bundle adjustment,Parallax removal , Recognizing panoramas, Direct vsfeature-based alignment, Compositing , Choosing a compositing surface, Pixel selection and weighting (de-ghosting) , Application: Photomontage,Blending **Computational photography :** Photometric calibration ,Radiometric response function ,Noise level estimation ,Vignetting ,Optical blur (spatial response) estimation ,High dynamic range imaging ,Tone mapping ,Application: Flash photograpy,Super-resolution and blur removal,Color image demosaicing ,Application: Colorization,Image matting and compositing ,Blue screen matting ,Natural image matting ,Optimization-based matting ,Smoke, shadow, and flash matting ,Video matting ,Texture analysis and synthesis ,Application: Hole filling and inpainting ,Application: Non-photorealistic rendering	**12**	**CO3**
IV	Stereo correspondence Epipolar geometry , Rectification ,Plane sweep , Sparse correspondence , D curves and profiles , Dense correspondence, Similarity measures , Local methods , Sub-pixel estimation and uncertainty , Application: Stereo-based head tracking , Global optimization , Dynamic programming , Segmentation-based techniques, Application: Z-keying and background replacement, Multi-view stereo, Volumetric and D surface reconstruction, Shape from silhouettes **3D reconstruction :** Shape from X , Shape from shading and photometric stereo, Shape from texture, Shape from focus , Active rangefinding , Range data merging , Application: Digital heritage , Surface representations , Surface interpolation, Surface simplification, Geometry images , Point-based representations, Volumetric representations , Implicit surfaces and level sets , Model-based reconstruction, Architecture, Heads and faces , Application: Facial animation , Whole body modeling and tracking ,Recovering texture maps and albedos , Estimating BRDFs ,Application: D photography	**12**	**CO4**

V	**Image-based rendering :** View interpolation, View-dependent texture maps, Application: Photo Tourism , Layered depth images, Impostors, sprites, and layers, Light fields and Lumigraphs , Unstructured Lumigraph, Surface light fields, Application: Concentric mosaics, Environment mattes, Higher-dimensional light fields , The modeling to rendering continuum, Video-based rendering , Video-based animation, Video textures , Application: Animating pictures, D Video, Application: Video-based walkthroughs **Recognition :** Object detection, Face detection, Pedestrian detection, Face recognition, Eigenfaces, Active appearance and D shape models, Application: Personal photo collections, Instance recognition, Geometric alignment, Large databases, Application: Location recognition, Category recognition, Bag of words, Part-based models, Recognition with segmentation, Application: Intelligent photo editing, Context and scene understanding , Learning and large image collections, Application: Image search, Recognition databases and test sets	**12**	**CO5**

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Computer Vision: Algorithms and Applications	Richard Szeliski	Springer	1st Edition	2010

M. Sc (Information Technology)		**Semester – III**	
Course Name: Computer Vision Practical		**Course Code: PSIT3P2b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	--

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:
CO1: Understand the basics of computer vision
CO2: Understand and analyse various structure form motion and various estimates of Dense Motion
CO3: Apply various motion models to images and understand computation photography techniques
CO4: Apply Epipolar geometry , Rectification and various other 3D correspondence and Stereo reconstruction techniques
CO5: Understand image-based rendering and reconstruction

PSIT302c: Cloud Application Development

M. Sc (Information Technology)		**Semester – III**	
Course Name: Cloud Application Development		**Course Code: PSIT302c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To develop and deploy Microservices for cloud
- To understand Kubernetes and deploy applications on Azure Kubernetes Service
- To understand DevOps for Azure
- To follow the DevOps practices for software development
- To build APIs for Azure and AWS

Unit	Details	Lectures	Outcomes
I	**Implementing Microservices:** Client to microservices communication, Interservice communication, data considerations, security, monitoring, microservices hosting platform options. **Azure Service Fabric:** Introduction, core concepts, supported programming models, service fabric clusters, develop and deploy applications of service fabric. **Monitoring Azure Service Fabric Clusters:** Azure application, resource manager template, Adding Application Monitoring to a Stateless Service Using Application Insights, Cluster monitoring, Infrastructure monitoring.	**12**	**CO1**
II	**Azure Kubernetes Service (AKS):** Introduction to kubernetes and AKS, AKS development tools, Deploy applications on AKS. **Monitoring AKS:** Monitoring, Azure monitor and analytics, monitoring AKS clusters, native kubernetes dashboard, Prometheus and Grafana. **Securing Microservices:** Authentication in microservices, Implenting security using API gateway pattern, Creating application using Ocrlot and securing APIs with Azure AD. **Database Design for Microservices:** Data stores, monolithic approach, Microservices approach, harnessing cloud computing, dataase options on MS Azure, overcoming application development challenges. **Building Microservices on Azure Stack:** Azure stack, Offering IaaS, PaaS on-premises simplified, SaaS on Azure stack.	**12**	**CO2**

III	.**NET DevOps for Azure:** DevOps introduction, Problem and solution. **Professional Grade DevOps Environment:** The state of DevOps, professional grade DevOps vision, DevOps architecture, tools for professional DevOps environment, DevOps centered application. **Tracking work:** Process template, Types of work items, Customizing the process, Working with the process. **Tracking code:** Number of repositories, Git repository, structure, branching pattern, Azure repos configuration, Git and Azure.	**12**	**CO3**
IV	**Building the code:** Structure of build, using builds with .NET core and Azure pipelines, **Validating the code:** Strategy for defect detection, Implementing defect detection. **Release candidate creation:** Designing release candidate architecture, Azure artifacts workflow for release candidates, **Deploying the release:** Designing deployment pipeline, Implementing deployment in Azure pipelines. **Operating and monitoring release:** Principles, Architectures for observability, Jumpstarting observability.	**12**	**CO4**
V	**Introduction to APIs:** Introduction, API economy, APIs in public sector. **API Strategy and Architecture:** API Strategy, API value chain, API architecture, **API** management. **API Development:** Considerations, Standards, kick-start API development, team orientation. **API Gateways:** API Gateways in public cloud, Azure API management, AWS API gateway. **API Security:** Request-based security, Authentication and authorization.	**12**	**CO5**

3.	Practical API Architecture and Development with Azure and AWS - Design and Implementation of APIs for the Cloud	Thurupathan Vijayakumar	Apress	--	2018

M. Sc (Information Technology)		Semester – III	
Course Name: Cloud Application Development Practical		**Course Code: PSIT3P2c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	--

List of Practical:
10 practical covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:

CO01: Develop the Microservices for cloud and deploy them on Microsoft Azure.

CO02: Build and deploy services to Azure Kubernetes service.

CO03: Understand and build the DevOps way.

CO04: Thoroughly build the applications in the DevOps way.

CO05: Build the APIs for Microsoft Azure and AWS.

PSIT302d: Security Breaches and Countermeasures

M. Sc (Information Technology)		Semester – III	
Course Name: Security Breaches and Countermeasures		**Course Code: PSIT302d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To get the insight of the security loopholes in every aspect of computing.
- To understand the threats and different types of attacks that can be launched on computing systems.
- To know the countermeasures that can be taken to prevent attacks on computing systems.
- To test the software against the attacks.

Unit	Details	Lectures	Outcome
I	**Introduction to Security Breaching**: Overview of Information Security, Threats and Attack vectors, Concepts of Hacking – Ethical and Unethical, Information Security Controls, Concepts of penetration Testing, Information Security Laws and Standards. **Evaluation Security of IT Organisation:** Concepts, Methodology, Tools, Countermeasures, Penetration Testing. **Network Scanning:** Concepts, Scanning beyond IDS and firewalls, Tools, Banner Grabbing, Scanning Techniques, Network Diagrams, penetration testing. **Enumeration:** Concepts, Different types of enumeration: Netbios, SNMP, LDAP, NTP, SMTP, DNS, other enumeration techniques, Countermeasures, Penetration Testing	**12**	**CO1**
II	**Analysis of Vulnerability:** Concepts, Assessment Solutions, Scoring Systems, Assessment Tools, Assessment Reports. **Breaching System Security:** Concepts, Cracking passwords, Escalating privileges, Executing Applications, Hiding files, covering tracks, penetration testing. **Threats due to malware:** Concepts, Malware Analysis, Trojan concepts, countermeasures, Virus and worm concepts, anti-malware software, penetration testing. **Network Sniffing:** Concepts, countermeasures, sniffing techniques, detection techniques, tools, penetration testing.	**12**	**CO2**

III	**Social Engineering:** Concepts, Impersonation on networking sites, Techniques, Identity theft, Insider threats, countermeasures, Pen testing. **Denial of Service and Distributed Denial of service:** Concepts, techniques, botnets, attack tools, countermeasures, protection tools, penetration testing. **Hijacking an active session:** Concepts, tools, application level session hijacking, countermeasures, network level session hijacking, penetration testing. **Evasion of IDS, Firewalls and Honeypots:** Introduction and concepts, detecting honeypots, evading IDS, IDS and Firewall evasion countermeasures, evading firewalls, penetration testing.	**12**	**CO3**
IV	**Compromising Web Servers:** Concepts, attacks, attack methodology, attack tools, countermeasures, patch management, web server security tools, penetration testing. **Compromising Web Applications:** Concepts**,** threats, methods, tools, countermeasures, testing tools, penetration testing. **Performing SQL Injection:** Concepts, types, methodology, tools, techniques, countermeasures. **Compromising Wireless Networks:** Concepts, wireless encryption, threats, methodology, tools, compromising Bluetooth, countermeasures, wireless security tools, penetration testing.	**12**	**CO4**
V	**Compromising Mobile Platforms:** Attack vectors, Compromising Android OS, Compromising iOS, Mobile spyware, Mobile Device Management, Mobile security, penetration testing. **Compromising IoT:** Concepts, attacks, compromising methodology, tools, countermeasures, penetration testing. **Cloud Security:** Concepts, Security, threats, attacks, tools, penetration testing. **Cryptography:** Concepts, email encryption, algorithms, disk encryption, tools, cryptanalysis, Public key infrastructure, countermeasures.	**12**	**CO5**

Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcome:
CO1: The student should be able to identify the different security breaches that can occur. The student should be able to evaluate the security of an organization and identify the loopholes. The student should be able to perform enumeration and network scanning.

CO2: The student should be able to identify the vulnerability in the systems, breach the security of the system, identify the threats due to malware and sniff the network. The student should be able to do the penetration testing to check the vulnerability of the system towards malware and network sniffing.

CO3: The student should be able to perform social engineering and educate people to be careful from attacks due to social engineering, understand and launch DoS and DDoS attacks, hijack and active session and evade IDS and Firewalls. This should help the students to make the organization understand the threats in their systems and build robust systems.

CO4: The student should be able to identify the vulnerabilities in the Web Servers, Web Applications, perform SQL injection and get into the wireless networks. The student should be able to help the organization aware about these vulnerabilities in their systems.

CO5: The student should be able to identify the vulnerabilities in the newer technologies like mobiles, IoT and cloud computing. The student should be able to use different methods of cryptography.

PSIT303a: Machine Learning

M. Sc (Information Technology)		**Semester – III**	
Course Name: Machine Learning		**Course Code: PSIT303a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understanding Human learning aspects.
- Understanding primitives in learning process by computer.
- Understanding nature of problems solved with Machine Learning

Unit	Details	Lectures	Outcome
I	**Introduction:** Machine learning, Examples of Machine Learning Problems, Structure of Learning, learning versus Designing, Training versus Testing, Characteristics of Machine learning tasks, Predictive and descriptive tasks, Machine learning Models: Geometric Models, Logical Models, Probabilistic Models. Features: Feature types, Feature Construction and Transformation, Feature Selection.	**12**	**CO1**
II	**Classification and Regression: Classification:** Binary Classification- Assessing Classification performance, Class probability Estimation Assessing class probability Estimates, Multiclass Classification. **Regression**: Assessing performance of Regression- Error measures, Overfitting- Catalysts for Overfitting, Case study of Polynomial Regression. **Theory of Generalization:** Effective number of hypothesis, Bounding the Growth function, VC Dimensions, Regularization theory.	**12**	**CO2**
III	**Linear Models:** Least Squares method, Multivariate Linear Regression, Regularized Regression, Using Least Square regression for Classification. Perceptron, Support Vector Machines, Soft Margin SVM, Obtaining probabilities from Linear classifiers, Kernel methods for non-Linearity.	**12**	**CO2 CO3**
IV	**Logic Based and Algebraic Model: Distance Based Models:** Neighbours and Examples, Nearest Neighbours Classification, Distance based clustering-K means Algorithm, Hierarchical clustering, **Rule Based Models:** Rule learning for subgroup discovery, Association rule mining. **Tree Based Models:** Decision Trees, Ranking and Probability estimation Trees, Regression trees, Clustering Trees.	**12**	**CO2 CO3 CO4**

V	Probabilistic Model: Normal Distribution and Its Geometric Interpretations, Naïve Bayes Classifier, Discriminative learning with Maximum likelihood, Probabilistic Models with Hidden variables: Estimation-Maximization Methods, Gaussian Mixtures, and Compression based Models. **Trends In Machine Learning :** Model and Symbols-Bagging and Boosting, Multitask learning, Online learning and Sequence Prediction, Data Streams and Active Learning, Deep Learning, Reinforcement Learning.	**12**	**CO5**

2.	Introduction to Statistical Machine Learning with Applications in R	Hastie, Tibshirani, Friedman	Springer	2nd	2012
3.	Introduction to Machine Learning	Ethem Alpaydin	PHI	2nd	2013

M. Sc (Information Technology)		**Semester – III**	
Course Name: Machine Learning Practical		**Course Code: PSIT3P3a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:
CO1: Understand the key issues in Machine Learning and its associated applications in intelligent business and scientific computing.
CO2: Acquire the knowledge about classification and regression techniques where a learner will be able to explore his skill to generate data base knowledge using the prescribed techniques.
CO3: Understand and implement the techniques for extracting the knowledge using machine learning methods.
CO4: Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.
CO5: Understand the statistical approach related to machine learning. He will also Apply the algorithms to a real-world problem, optimize the models learned and report on the expected accuracy that can be achieved by applying the models.

PSIT303b: Biomedical Image Processing

M. Sc (Information Technology)		**Semester – III**	
Course Name: Biomedical Image Processing		**Course Code: PSIT303b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To design intelligent systems that can analyze biomedical images.
- To understand different scientific approaches in biomedical image processing.
- To understand the structure of biomedical images and how to correlate it with different biological data.
- To design systems to identify different physical conditions on the basis of biomedical data.

Unit	Details	Lectures	Outcome
I	**Introduction:** Biosignals, Biosignal Measurement Systems, Transducers, Amplifier/Detector, Analog Signal Processing and Filters, ADC Conversion, Data Banks **Bio signal Measurements, Noise, and Analysis:** Biosignals, Noise, Signal Analysis: Data Functions and Transforms **Spectral Analysis: Classical Methods :** Fourier Series Analysis, Power Spectrum, Spectral Averaging: Welch's Method **Noise Reduction and Digital Filters :** Noise Reduction, Noise Reduction through Ensemble Averaging, Z-Transform, Finite Impulse Response Filters, Infinite Impulse Response Filters	**12**	**CO1**
II	**Modern Spectral Analysis: The Search for Narrowband Signals:** Parametric Methods, Nonparametric Analysis: Eigen analysis Frequency Estimation **Time Frequency Analysis:** Basic Approaches, The Short-Term Fourier Transform: The Spectrogram, The Wigner Ville Distribution: A Special Case of Cohen's Class, Cohen's Class Distributions **Wavelet Analysis:** Continuous Wavelet Transform, Discrete Wavelet Transform, Feature Detection: Wavelet Packets **Optimal and Adaptive Filters:** Optimal Signal Processing: Wiener Filters, Adaptive Signal Processing, Phase-Sensitive Detection	**12**	**CO2**

III	Multivariate Analyses: Principal Component Analysis and Independent Component Analysis : Linear Transformations, Principal Component Analysis, Independent Component Analysis **Chaos and Nonlinear Dynamics :** Nonlinear Systems, Phase Space, Estimating the Embedding Parameters, Quantifying Trajectories in Phase Space: The Lyapunov Exponent, Nonlinear Analysis: The Correlation Dimension, Tests for Nonlinearity: Surrogate Data Analysis **Nonlinearity Detection: Information-Based Methods :** Information and Regularity, Mutual Information Function, Spectral Entropy, Phase-Space-Based Entropy Methods, Detrended Fluctuation Analysis	**12**	**CO3**
IV	**Image Processing: Filters, Transformations, and Registration :** Two-Dimensional Fourier Transform, Linear Filtering, Spatial Transformations, Image Registration **Image Segmentation :** Pixel-Based Methods, Continuity-Based Methods, Multi thresholding Morphological Operations, Edge-Based Segmentation **Image Acquisition and Reconstruction :** Imaging Modalities, CT, PET, and SPECT, Magnetic Resonance Imaging, Functional MRI	**12**	**CO4**
V	**Classification I: Linear Discriminant Analysis and Support Vector Machines :** Linear Discriminators, Evaluating Classifier Performance, Higher Dimensions: Kernel Machines Support Vector Machines, Machine Capacity: Overfitting or "Less Is More", Extending the Number of Variables and Classes, Cluster Analysis **Classification II: Adaptive Neural Nets :** Training the McCullough Pitts Neuron, The Gradient Decent Method or Delta Rule, Two-Layer Nets: Back Projection, Three-Layer Nets, Training Strategies, Multiple Classifications, Multiple Input Variables	**12**	**CO5**

M. Sc (Information Technology)		Semester – III	
Course Name: Biomedical Image Processing Practical		**Course Code: PSIT3P3b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand basics of Bio signals and various classical techniques of bio signal processing.

CO2: Understand various modern spectral analysis techniques.

CO3: Understand and apply various multivariate analysis techniques on bio signals.

CO4: Understand and apply various transformations filters to images, and different techniques for image acquisition and construction.

CO5: Understand the AI perspective in biological image processing using SVM and Neural Networks.

PSIT303c: Cloud Management

M. Sc (Information Technology)		Semester – III	
Course Name: Cloud Management		**Course Code: PSIT303c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To Understand the Fundamental Ideas Behind Cloud Computing, The Evolution Of The Paradigm, Its Applicability; Benefits, As Well As Current And Future Challenges;
- The Basic ideas And Principles In Data Center Design; Cloud Management Techniques And Cloud Software Deployment Considerations;
- Different CPU, Memory And I/O Virtualization Techniques That Serve In Offering Software, Computation
- And Storage Services On The Cloud; Software Defined Networks (SDN) And Software Defined Storage (SDS);
- Cloud Storage Technologies And Relevant Distributed File Systems, Nosql Databases And Object Storage;
- The Variety Of Programming Models And Develop Working Experience In Several Of Them.

Unit	Details	Lectures	Outcome
I	What is VMM? What's new in VMM Get Started Release notes - VMM Turn telemetry data on/off Deploy a VMM cloud Create a VMM cloud Manage a VMM cloud Deploy a guarded host fabric Deploy guarded hosts Configure fallback HGS settings Deploy a shielded VHDX and VM template Deploy a shielded VM Deploy a shielded Linux VM Deploy and manage a software defined network (SDN) infrastructure Deploy an SDN network controller Deploy an SDN SLB Deploy an SDN RAS gateway Deploy SDN using PowerShell Set up a VM network in SDN Encrypt VM networks in SDN Allow and block VM traffic with SDN port ACLs Control SDN virtual network bandwidth with QoS Load balance network traffic Set up NAT for traffic forwarding in an SDN Route traffic across networks in the SDN infrastructure Configure SDN guest clusters Update the NC server certificate Set up SDN SLB VIPs Back up and restore the SDN infrastructure Remove an SDN from VMM Manage SDN resources in the VMM fabric Deploy and manage Storage Spaces	**12**	**CO1**

	Direct Set up a hyper-converged Storage Spaces Direct cluster Set up a disaggregated Storage Spaces Direct cluster Manage Storage Spaces Direct clusters Assign storage QoS policies for Clusters How To Plan System requirements – VMM Plan VMM installation Plan a VMM high availability deployment Identify VMM ports and protocols Plan the VMM compute fabric Plan the VMM networking fabric Identify supported storage arrays Upgrade and install Upgrade VMM Install VMM Install the VMM console Enable enhanced console session Deploy VMM for high availability Deploy a highly available VMM management server Deploy a highly available SQL Server database for VMM Deploy a highly available VMM library Set up TLS 1.2 Deploy update rollups Back up and restore VMM Manage the VMM library Library overview Add file-based resources to the VMM library Add profiles to the VMM library Add VM templates to the VMM library Add service templates to the VMM library Manage VMM library resources Manage virtualization servers Manage VMM host groups Add existing Hyper-V hosts and clusters to the fabric Add a Nano server as a Hyper-V host or cluster Run a script on host Create a cluster from standalone Hyper-V hosts Provision a Hyper-V host or cluster from bare-metal Create a guest Hyper-V cluster from a service template Set up networking for Hyper-V hosts and clusters Set up storage for Hyper-V hosts and clusters Manage MPIO for Hyper-V hosts and clusters Manage Hyper-V extended port ACLs Manage Hyper-V clusters Update Hyper-V hosts and clusters Run a rolling upgrade of Hyper-V clusters Service Hyper-V hosts for maintenance Manage VMware servers Manage management servers Manage infrastructure servers Manage update servers Manage networking Network fabric overview Set up logical networks Set up logical networks in UR1 Set up VM networks Set up IP address pools Add a network gateway Set up port profiles Set up logical switches Set up MAC address pools Integrate NLB with service templates Set up an IPAM server Manage storage Set up storage fabric Set up storage classifications Add storage devices Allocate storage to host groups Set up a Microsoft iSCSI Target Server Set up a Virtual Fibre Channel Set up file storage Set up Storage Replica in VMM		

II	Service Manager What's new in Service Manager Get started Evaluation and activation of Service Manager Service Manager components Supported configurations System requirements - Service Manager Release notes - Service Manager Enable service log on Manage telemetry settings How to Plan Planning for Service Manager Plan for deployment Service Manager editions Recommended deployment topologies Operations Manager considerations Service Manager databases Port assignments Prepare for deployment Service Manager performance Plan for performance and scalability Plan for hardware performance Deploy Deploy Service Manager Deployment scenarios Install on a single computer Install on two computers Install on four computers Set up remote SQL Server Reporting Services Use SQL Server AlwaysOn availability groups for failover Create and deploy server images Install on VMs Configure PowerShell Register with the data warehouse to enable reporting Deploy additional management servers Deployment considerations with a disjointed namespace Learn about the new Self Service portal Deploy the Self-Service portal Set up load balancing Back up the encryption key Index non-English knowledge articles Troubleshoot deployment issues Deploy from a command line Move databases Upgrade Upgrade Service Manager Upgrade the self-service portal to Service Manager 2016 Upgrade SQL Server Reporting Services Set up a lab environment for upgrade Prepare the production environment Prepare the lab environment Run an upgrade Complete tasks after upgrade Troubleshoot upgrade issues Administer Use management packs to add functionality Use connectors to import data Import data from Active Directory Domain Services Import data and alerts from Operations Manager Import data from Configuration Manager Import runbooks from Orchestrator Import data from VMM Use a CSV file to import data Optionally disable ECL logging for faster connector synchronization Configuration items Configure incident management Configure service level management Configure workflows Configure change and activity management Configure release management Configure Desired Configuration Management to generate incidents Configure notifications Use the service catalog to offer services Use groups, queues, and lists in Service Manager	**12**	**CO2**

	Use runbooks to automate procedures User interface customization Manage user roles Manage Run As accounts Manage knowledge articles Configure and use Service Manager cmdlets Manage the data warehouse Register source systems to the data warehouse Troubleshoot computer problems with tasks Configure your preference for sharing diagnostic and usage data Operate Search for information Manage incidents and problems Manage changes and activities Manage service requests Manage release records Data warehouse reporting and analytics Use and manage standard reports		
III	What is Configuration Manager? Microsoft Endpoint Configuration Manager FAQ What happened to SCCM? Introduction Find help for Configuration Manager How to use the docs How to use the console Accessibility features Software Center user guide Fundamentals Configuration Manager fundamentals Sites and hierarchies About upgrade, update, and install Manage devices Client management Security Role-based administration Configuration Manager and Windows as a Service Plan and design Get ready for Configuration Manager Product changes Features and capabilities Security and privacy for Configuration Manager Security and privacy overview Plan for security Security best practices and privacy information Privacy statement - Configuration Manager Cmdlet Library Additional privacy information Configure security Cryptographic controls technical reference Enable TLS About enabling TLS Enable TLS on clients Enable TLS on site servers and remote site systems Common issues when enabling TLS 1Migrate data between hierarchies Migration overview Plan for migration Planning for migration Prerequisites for migration Checklists for migration Determine whether to migrate data Planning the source hierarchy Planning migration jobs Planning client migration Planning for content deployment Planning to migrate objects Planning to monitor migration Planning to complete migration Configure source hierarchies and source sites Operations for migrating Security and privacy for migration Deploy servers and roles Deploy servers and roles Install infrastructure Get installation media Before you run setup Setup reference Setup downloader Prerequisite checker	**12**	**CO3**

	Prerequisite checks Installing sites Prepare to install sites overview Prepare to install sites Prerequisites for installing sites Use the setup wizard Use a command-line Command-line overview Command-line options Install consoles Upgrade an evaluation install Upgrade to Configuration Manager Scenarios to streamline your installation Configure sites and hierarchies Configure sites and hierarchies overview Add site system roles Add site system roles overview Install site system roles Install cloud-based distribution points About the service connection point Configuration options for site system roles Database replicas for management points Site components Publish site data Manage content and content infrastructure Content infrastructure overview Install and configure distribution points Deploy and manage content Monitor content Microsoft Connected Cache Troubleshoot Microsoft Connected Cache Run discovery Discovery methods overview About discovery methods Select discovery methods Configure discovery methods Site boundaries and boundary groups Site boundaries and boundary groups overview Boundaries Boundary groups Procedures for boundary groups High availability High availability options Site server high availability Flowchart - Passive site server setup Flowchart - Promote site server (planned) Flowchart - Promote site server (unplanned) Prepare to use SQL Server Always On Configure SQL Server Always On Use a SQL Server cluster Custom locations for database files Configure role-based administration		
IV	What's new in Orchestrator Automate with runbooks Get started Install Orchestrator Work with runbooks in the Orchestrator console Example runbook: Creating a runbook to monitor a folder Release notes – Orchestrator Turn on/off telemetry How To Plan Database sizing and performance Feature performance considerations System requirements – Orchestrator Design a runbook Deploy Upgrade Orchestrator Deploy runbooks Configure Orchestrator database connections Migrate Orchestrator between environments Change the Orchestrator database Manage Runbooks Design and build runbooks Create and test a sample runbook Control runbook activities Monitor activities Runbook properties Track runbooks Install TLS Install and enable TLS 1.2 Manage Orchestrator Servers Runbook permissions Back up Orchestrator	**12**	**CO4**

	Bench mark Optimize performance of .Net activities Configure runbook throttling Recover a database Recover web components Add an integration pack View Orchestrator data with PowerPivot Change Orchestrator user groups Common activity properties Computer groups Standard Activities Orchestrator standard activities Alphabetical list of Standard Activities Ports and protocols of Standard Activities System Run Program Run .NET Script End Process Start/Stop Service Restart System Save Event Log Query WMI Run SSH Command Get SNMP Variable Monitor SNMP Trap Send SNMP Trap Set SNMP Variable Scheduling Monitor Date/Time Check Schedule Monitoring Monitor Event Log Monitor Service Get Service Status Monitor Process Get Process Status Monitor Computer/IP Get Computer/IP Status Monitor Disk Space Get Disk Space Status Monitor Internet Application Get Internet Application Status Monitor WMI File Management Compress File Copy File Create Folder Decompress File Delete File Delete Folder Get File Status Monitor File Monitor Folder Move File Move Folder PGP Decrypt File PGP Encrypt File Print File Rename File Email Send Email Notification Send Event Log Message Send Syslog Message Send Platform Event Utilities Apply XSLT Query XML Map Published Data Compare Values Write Web Pages Read Text Log Write to Database Query Database Monitor Counter Get Counter Value Modify Counter Invoke Web Services Format Date/Time Generate Random Text Map Network Path Disconnect Network Path Get Dial-up Status Connect/Disconnect Dial-up Text File Management Append Line Delete Line Find Text Get Lines Insert Line Read Line Search and Replace Text Runbook Control Invoke Runbook Initialize Data Junction Return Data Orchestrator Integration Toolkit Overview of Orchestrator Integration Toolkit Installation Command Line Activity Wizard Integration Pack Wizard Integration Packs Active Directory Active Directory activities Add Computer To Group Add Group To Group Add User To Group Create Computer Create Group Create User Delete Computer Delete Group Delete User Disable Computer Disable User Enable Computer Enable User		

	Get Computer Get Group Get Organizational Unit Get User Move Computer Move Group Move User Remove Computer From Group Remove Group From Group Remove User From Group Rename Group Rename User Reset User Password Unlock User Update Computer Update Group Update User		
V	Data Protection Manager How does DPM work? What can DPM back up? DPM-compatible tape libraries Get Started DPM build versions DPM release notes What's new in DPM What DPM supports How To Plan Your DPM Environment Get ready to deploy DPM servers Prepare your environment for DPM Prepare data storage Identify compatible tape libraries Identify data sources you want to protect Install or Upgrade DPM Install DPM Upgrade your DPM installation Add Modern Backup storage Deduplicate DPM storage Deploy DPM Deploy the DPM protection agent Deploy protection groups Configure firewall settings Offline backup Using own disk Protect Workloads Back up Hyper-V virtual machines Back up Exchange with DPM Back up SharePoint with DPM Back up SQL Server with DPM Back up client computers with DPM Back up file data with DPM Back up system state and bare metal Back up and restore VMware servers Back up and restore VMM servers Prepare to back up a generic data source Prepare machines in workgroups and untrusted domains for backup Back up the DPM server Monitor and Manage Monitor DPM Set up DPM logging Generate DPM reports Use SCOM to manage and monitor DPM servers Improve replication performance Use central console to manage DPM servers	**12**	**CO5**

Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:

CO1: Understand the concepts of VMM, SDN, NAS , HyperV etc.
CO2: Understand and demonstrate the use of Service manager with various deployments that can be performed using it.
CO3: Understand SCCM and Demonstrate the use of Configuration Manager
CO4: Understand automation with runbooks and demonstrate the use of Windows Orchestrator
CO5: Understand and demonstrate the use of Data Protection Manager

PSIT303d: Malware Analysis

M. Sc (Information Technology)		Semester – III	
Course Name: Malware Analysis		**Course Code: PSIT303d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Possess the skills necessary to carry out independent analysis of modern malware samples using both static and dynamic analysis techniques.
- Have an intimate understanding of executable formats, Windows internals and API, and analysis techniques.
- Extract investigative leads from host and network-based indicators associated with a malicious program.
- Apply techniques and concepts to unpack, extract, decrypt, or bypass new anti-analysis techniques in future malware samples.
- Achieve proficiency with industry standard tools including IDA Pro, OllyDbg, WinDBG, PE Explorer, ProcMon etc.

Unit	Details	Lectures	Outcome
I	**Malware Analysis:** Introduction, Techniques, Types of malware, General rules for Malware Analysis. **Basic Static Techniques:** Antivirus Scanning, Hashing, Finding Strings, Packed and Obfuscated Malware, Portable Executable Malware, Portable executable File Format, Linked Libraries and Functions, Static Analysis, The PE file headers and sections. **Malware Analysis in Virtual Machines:** Structure of VM, Creating and using Malware Analysis machine, Risks of using VMware for malware analysis, Record/Replay. **Basic Dynamic Analysis:** Sandboxes, Running Malware, Monitoring with process monitor, Viewing processes with process explorer, Comparing registry snapshots with regshot, Faking a network, Packet sniffing with Wireshark, Using INetSim, Basic Dynamic Tools. x86 Disassembly	**12**	**CO1**
II	**IDA PRO:** Loading an executable, IDA Pro Interface, Using cross references, Analysing functions, Using graphing options, Enhancing disassembly, Extending IDA with plug-ins. **Recognising C Code constructs in assembly:** Global v/s local variables, Disassembling arithmetic operations, recognizing if statements, recognizing loops, function call conventions, Analysing switch statements, Disassembling arrays, Identifying structs, Analysing linked list traversal. **Analysing Malicious Windows Programs:** The windows API, The Windows Registry, Networking APIs,	**12**	**CO2**

	Understanding running malware. Kernel v/s user mode, Native API. **Advanced Dynamic Analysis – Debugging:** Source-level v/s Assembly-level debugging, kernel v/s user mode debugging, Using a debugger, Exceptions, Modifying execution with a debugger, modifying program execution.		
III	**Advanced Dynamic Analysis – OLLYDBG:** Loading Malware, The Ollydbg Interface, Memory Map, Viewing threads and Stacks, Executing code, Breakpoints, Loading DLLs, Tracing, Exception handling, Patching, Analysing shell code, Assistance features, Plug-ins, Scriptable debugging. **Kernel Debugging with WINDBG:** Drivers and kernel code, Using WinDbg, Microsoft Symbols, kernel debugging and using it, Rootkits, Loading drivers, kernel issues with windows. **Malware Functionality – Malware Behavior:** Downloaders and launchers, Backdoors, Credential stealers, Persistence mechanisms, Privilege escalation, covering the tracks. **Covert Malware Launching:** Launchers, Process injection, Process replacement, Hook injection, detours, APC injection.	**12**	**CO3**
IV	**Data Encoding:** Goal of Analysing algorithms, Simple ciphers, Common cryptographic algorithms, Custom encoding, decoding. **Malware – focused network signatures:** Network countermeasures**,** Safely investigating attacker online, Content-Based Network Countermeasures, Combining Dynamic and Static Analysis Techniques, Understanding the Attacker's Perspective**.** **Anti-disassembly:** Concepts, Defeating disassembly algorithms, anti-disassembly techniques, Obscuring flow control, Thwarting stack-frame analysis. **Anti-debugging:** Windows debugger detection, debugger behavior, Interfering with debugger functionality, Debugger vulnerabilities.	**12**	**CO4**
V	**Anti-virtual machine techniques:** VMWare artifacts, Vulnerable functions, Tweaking settings, Escaping the virtual machine. **Packers and unpacking:** Packer anatomy, Identifying Packed Programs, Unpacking options, Automated Unpacking, Manual Unpacking, Common packers, Analysing without unpacking, Packed DLLs, **Shellcode Analysis:** Loading shellcode for analysis, Position-independent Code, Identifying Execution Location, Manual Symbol Resolution, Shellcode encoding, NOP Sleds, Finding Shellcode. **C++ Analysis:** OOP, Virtual and Non-virtual functions, Creating and destroying objects.	**12**	**CO5**

	64-bit Malware: Why 64-bit malware? Differences in x64 architecture, Windows 32-bit on Windows 64-bit, 64-bit hints at malware functionality.

3.	Windows Malware Analysis Essentials	Victor Marak	Packt Publishing		2015

M. Sc (Information Technology)		**Semester – III**	
Course Name: Malware Analysis Practical		**Course Code: PSIT3P3d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:
CO1: Understand various introductory techniques of malware analysis and creating the testing environment
CO2: Perform advanced dynamic analysis and recognize constructs in assembly code.
CO3: Perform Reverse Engineering using OLLYDBG and WINDBG and study the behaviours and functions of malware
CO4: Understand data encoding, various techniques for anti-disassembly and anti-debugging
CO5: Understand various anti virtual machine techniques and perform shellcode analysis of various languages along with x64 architecture.

PSIT304a: Robotic Process Automation

M. Sc (Information Technology)		Semester – III	
Course Name: Robotic Process Automation		**Course Code: PSIT304a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To make the students aware about the automation today in the industry.
- To make the students aware about the tools used for automation.
- To help the students automate a complete process

Unit	Details	Lectures	Outcome
I	**Robotic Process Automation:** Scope and techniques of automation, About UiPath **Record and Play:** UiPath stack, Downloading and installing UiPath Studio, Learning UiPath Studio, Task recorder, Step-by-step examples using the recorder.	**12**	**CO1**
II	**Sequence, Flowchart, and Control Flow:** Sequencing the workflow, Activities, Control flow, various types of loops, and decision making, Step-by-step example using Sequence and Flowchart, Step-by-step example using Sequence and Control flow **Data Manipulation:** Variables and scope, Collections, Arguments – Purpose and use, Data table usage with examples, Clipboard management, File operation with step-by-step example, CSV/Excel to data table and vice versa (with a step-by-step example)	**12**	**CO2**
III	**Taking Control of the Controls :** Finding and attaching windows, Finding the control, Techniques for waiting for a control, Act on controls – mouse and keyboard activities, Working with UiExplorer, Handling events, Revisit recorder, Screen Scraping, When to use OCR, Types of OCR available, How to use OCR, Avoiding typical failure points **Tame that Application with Plugins and Extensions:** Terminal plugin, SAP automation, Java plugin, Citrix automation, Mail plugin, PDF plugin, Web integration, Excel and Word plugins, Credential management, Extensions – Java, Chrome, Firefox, and Silverlight	**12**	**CO3**
IV	**Handling User Events and Assistant Bots:** What are assistant bots?, Monitoring system event triggers, Hotkey trigger, Mouse trigger, System trigger ,Monitoring image and element triggers, An example of	**12**	**CO4**

	monitoring email, Example of monitoring a copying event and blocking it, Launching an assistant bot on a keyboard event **Exception Handling, Debugging, and Logging:** Exception handling, Common exceptions and ways to handle them, Logging and taking screenshots, Debugging techniques, Collecting crash dumps, Error reporting		
V	**Managing and Maintaining the Code:** Project organization, Nesting workflows, Reusability of workflows, Commenting techniques, State Machine, When to use Flowcharts, State Machines, or Sequences, Using config files and examples of a config file, Integrating a TFS server **Deploying and Maintaining the Bot:** Publishing using publish utility, Overview of Orchestration Server, Using Orchestration Server to control bots, Using Orchestration Server to deploy bots, License management, Publishing and managing updates	**12**	**CO5**

Course Name: Robotic Process Automation		**Course Code: PSIT3P4a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completing the course, a learner will be able to:

CO1: Understand the mechanism of business process and can provide the solution in an optimize way.

CO2: Understand the features use for interacting with database plugins.

CO3: Use the plug-ins and other controls used for process automation.

CO4: Use and handle the different events, debugging and managing the errors.

CO5: Test and deploy the automated process.

PSIT304b: Virtual Reality and Augmented Reality

M. Sc (Information Technology)		**Semester – III**	
Course Name: Virtual Reality and Augmented Reality		**Course Code: PSIT304b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To learn background of VR including a brief history of VR, different forms of VR and related technologies, and broad overview of some of the most important concepts
- To provide background in perception to educate VR creators on concepts and theories of how we perceive and interact with the world around us
- To make learner aware of high-level concepts for designing/building assets and how subtle design choices can influence user behavior
- To learn about art for VR and AR should be optimized for spatial displays with spatially aware input devices to interact with digital objects in true 3D
- Walkthrough of VRTK, an open source project meant to spur on cross-platform development

Unit	Details	Lectures	Outcome
I	Introduction: What Is Virtual Reality, A History of VR, An Overview of Various Realities, Immersion, Presence, and Reality Trade-Offs, The Basics: Design Guidelines, Objective and Subjective Reality, Perceptual Models and Processes, Perceptual Modalities	**12**	**CO1**
II	Perception of Space and Time, Perceptual Stability, Attention, and Action, Perception: Design Guidelines, Adverse Health Effects, Motion Sickness, Eye Strain, Seizures, and Aftereffects, Hardware Challenges, Latency, Measuring Sickness, Reducing Adverse Effects, Adverse Health Effects: Design Guidelines	**12**	**CO2**
III	Content Creation, Concepts of Content Creation, Environmental Design, Affecting Behavior, Transitioning to VR Content Creation, Content Creation: Design Guidelines, Interaction, Human-Centered Interaction, VR Interaction Concepts, Input Devices, Interaction Patterns and Techniques, Interaction: Design Guidelines	**12**	**CO3**
IV	Design and Art Across Digital Realities, Designing for Our Senses, Virtual Reality for Art, 3D Art Optimization, Computer Vision That Makes Augmented Reality Possible Works, Virtual Reality and Augmented Reality: Cross-Platform Theory	**12**	**CO4**
V	Virtual Reality Toolkit: Open Source Framework for the Community, Data and Machine Learning Visualization	**12**	**CO5**

	Design and Development in Spatial Computing, Character AI and Behaviors, The Virtual and Augmented Reality Health Technology Ecosystem

M. Sc (Information Technology)		**Semester – III**	
Course Name: Virtual Reality and Augmented Reality Practical		**Course Code: PSIT3P4b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Apply the concepts of VR and AR in real life.
CO2: Reduce the greatest risk to VR.
CO3: Design the way users interact within the scenes they find themselves in.
CO4: be exposed to VR, AR and today's resources
CO5: Effectively use open source VR software.

PSIT304c: Data Centre Technologies

M. Sc (Information Technology)		Semester – III	
Course Name: Data Centre Technologies		**Course Code: PSIT304c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Identify important requirements to design and support a data center.
- Determine a data center environment's requirement including systems and network architecture as well as services.
- Evaluate options for server farms, network designs, high availability, load balancing, data center services, and trends that might affect data center designs.
- Assess threats, vulnerabilities and common attacks, and network security devices available to protect data centers.
- Design a data center infrastructure integrating features that address security, performance, and availability.
- Measure data center traffic patterns and performance metrics.

Unit	Details	Lectures	Outcome
I	Virtualization History and Definitions Data Center Essential Definitions Data Center Evolution Operational Areas and Data Center Architecture The Origins of Data Center Virtualization Virtual Memory Mainframe Virtualization Hot Standby Router Protocol Defining Virtualization Data Center Virtualization Timeline Classifying Virtualization Technologies A Virtualization Taxonomy Virtualization Scalability Technology Areas Classification Examples Summary Data Center Network Evolution Ethernet Protocol: Then and Now Ethernet Media Coaxial Cable Twisted-Pair Optical Fiber Direct-Attach Twinaxial Cables Ethernet Data Rate Timeline Data Center Network Topologies Data Center Network Layers Design Factors for Data Center Networks Physical Network Layout Considerations The ANSI/TIA-942 Standard Network Virtualization Benefits Network Logical Partitioning Network Simplification and Traffic Load Balancing Management Consolidation and Cabling Optimization Network Extension	**12**	**CO1**

Course Name: Data Centre Technologies Practical		**Course Code: PSIT3P4c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand basic concepts in Virtualization.
CO2: Understand concepts of Load Balancing and Aggregation /virtual switching
CO3: Understand Data center Migration and Fabric Building
CO4: Understand various Changes in Server Architecture
CO5: Understand the concepts of Cloud computing and how to move towards a cloud computing technology.

PSIT304d: Offensive Security

M. Sc (Information Technology)		Semester – III	
Course Name: Offensive Security		**Course Code: PSIT304d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understanding of security requirements within an organization
- How to inspect, protect assets from technical and managerial perspectives
- To Learn various offensive strategies to penetrate the organizations security.
- To learn various tools that aid in offensive security testing.

Unit	Details	Lectures	Outcome
I	Fault Tolerance and Resilience in Cloud Computing Environments, Securing Web Applications, Services, and Servers, Wireless Network Security, Wireless Sensor Network Security: The Internet of Things, Security for the Internet of Things, Cellular Network Security	**12**	**CO1**
II	Social Engineering Deceptions and Defenses, What Is Vulnerability Assessment, Risk Management, Insider Threat, Disaster Recovery, Security Policies and Plans Development	**12**	**CO2**
III	Introduction to Metasploit and Supporting Tools The importance of penetration testing Vulnerability assessment versus penetration testing The need for a penetration testing framework Introduction to Metasploit When to use Metasploit? Making Metasploit effective and powerful using supplementary tools Nessus NMAP w3af Armitage Setting up Your Environment Using the Kali Linux virtual machine - the easiest way Installing Metasploit on Windows Installing Metasploit on Linux Setting up exploitable targets in a virtual environment Metasploit Components and Environment Configuration Anatomy and structure of Metasploit Metasploit components Auxiliaries Exploits Encoders Payloads Post, Playing around with msfconsole Variables in Metasploit Updating the Metasploit Framework 55	**12**	**CO3**

IV	Information Gathering with Metasploit Information gathering and enumeration Transmission Control Protocol User Datagram Protocol File Transfer Protocol Server Message Block Hypertext Transfer Protocol Simple Mail Transfer Protocol Secure Shell Domain Name System Remote Desktop Protocol Password sniffing Advanced search with shodan Vulnerability Hunting with Metasploit Managing the database Work spaces Importing scans Backing up the database **NMAP** NMAP scanning approach **Nessus** Scanning using Nessus from msfconsole Vulnerability detection with Metasploit auxiliaries Auto exploitation with db_autopwn **Post exploitation** What is meterpreter? Searching for content Screen capture Keystroke logging Dumping the hashes and cracking with JTR Shell command Privilege escalation Client-side Attacks with Metasploit Need of client-side attacks What are client-side attacks? What is a Shellcode? What is a reverse shell? What is a bind shell? What is an encoder? **The msfvenom utility** Generating a payload with msfvenom Social Engineering with Metasploit Generating malicious PDF Creating infectious media drives	**12**	**CO4**
V	Approaching a Penetration Test Using Metasploit Organizing a penetration test Preinteractions Intelligence gathering/reconnaissance phase Predicting the test grounds Modeling threats Vulnerability analysis Exploitation and post-exploitation Reporting Mounting the environment Setting up Kali Linux in virtual environment The fundamentals of Metasploit Conducting a penetration test with Metasploit Recalling the basics of Metasploit Benefits of penetration testing using Metasploit Open source Support for testing large networks and easy naming conventions Smart payload generation and switching mechanism Cleaner exits The GUI environment	**12**	**CO5**

	Penetration testing an unknown network Assumptions Gathering intelligence Using databases in Metasploit Modeling threats Vulnerability analysis of VSFTPD backdoor The attack procedure The procedure of exploiting the vulnerability Exploitation and post exploitation Vulnerability analysis of PHP-CGI query string parameter vulnerability Exploitation and post exploitation Vulnerability analysis of HFS Exploitation and post exploitation Maintaining access Clearing tracks Revising the approach Reinventing Metasploit Ruby – the heart of Metasploit Creating your first Ruby program Interacting with the Ruby shell Defining methods in the shell Variables and data types in Ruby Working with strings Concatenating strings The substring function The split function Numbers and conversions in Ruby Conversions in Ruby Ranges in Ruby Arrays in Ruby Methods in Ruby Decision-making operators Loops in Ruby Regular expressions Wrapping up with Ruby basics **Developing custom modules** Building a module in a nutshell The architecture of the Metasploit framework Understanding the file structure The libraries layout Understanding the existing modules The format of a Metasploit module Disassembling existing HTTP server scanner module Libraries and the function Writing out a custom FTP scanner module Libraries and the function Using msftidy Writing out a custom SSH authentication brute forcer Rephrasing the equation Writing a drive disabler post exploitation module Writing a credential harvester post exploitation module **Breakthrough meterpreter scripting** Essentials of meterpreter scripting Pivoting the target network Setting up persistent access API calls and mixins Fabricating custom meterpreter scripts Working with RailGun Interactive Ruby shell basics Understanding RailGun and its scripting Manipulating Windows API calls Fabricating sophisticated RailGun scripts		

	The Exploit Formulation Process The absolute basics of exploitation The basics The architecture System organization basics Registers Exploiting stack-based buffer overflows with Metasploit Crashing the vulnerable application Building the exploit base Calculating the offset Using the pattern_create tool Using the pattern_offset tool Finding the JMP ESP address Using Immunity Debugger to find executable modules Using msfbinscan Stuffing the space Relevance of NOPs Determining bad characters Determining space limitations Writing the Metasploit exploit module Exploiting SEH-based buffer overflows with Metasploit Building the exploit base Calculating the offset Using pattern_create tool Using pattern_offset tool *Table of Contents* Finding the POP/POP/RET address The Mona script Using msfbinscan Writing the Metasploit SEH exploit module Using NASM shell for writing assembly instructions **Bypassing DEP in Metasploit modules** Using msfrop to find ROP gadgets Using Mona to create ROP chains Writing the Metasploit exploit module for DEP bypass

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:
CO1: Understand basic security issues in cloud, IoT etc.
CO2: Understand different security techniques and policies
CO3: Use Vulnerability assessment and exploitation tool
CO4: Analyze the network perform reconnaissance and enumerate the target to detect vulnerabilities
CO5: Perform offensive tests using Metasploit on various application, generating payloads etc.

SEMESTER IV

PSIT401: Blockchain

M. Sc (Information Technology)		Semester – IV	
Course Name: Blockchain		**Course Code: PSIT401**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To provide conceptual understanding of the function of Blockchain as a method of securing distributed ledgers, how consensus on their contents is achieved, and the new applications that they enable.
- To cover the technological underpinnings of blockchain operations as distributed data structures and decision-making systems, their functionality and different architecture types.
- To provide a critical evaluation of existing "smart contract" capabilities and platforms, and examine their future directions, opportunities, risks and challenges.

Unit	Details	Lectures	Outcome
I	**Blockchain:** Introduction, History, Centralised versus Decentralised systems, Layers of blockchain, Importance of blockchain, Blockchain uses and use cases. **Working of Blockchain:** Blockchain foundation, Cryptography, Game Theory, Computer Science Engineering, Properties of blockchain solutions, blockchain transactions, distributed consensus mechanisms, Blockchain mechanisms, Scaling blockchain **Working of Bitcoin:** Money, Bitcoin, Bitcoin blockchain, bitcoin network, bitcoin scripts, Full Nodes and SVPs, Bitcoin wallets.	**12**	**CO1**
II	**Ethereum:** three parts of blockchain, Ether as currency and commodity, Building trustless systems, Smart contracts, Ethereum Virtual Machine, The Mist browser, Wallets as a Computing Metaphor, The Bank Teller Metaphor, Breaking with Banking History, How Encryption Leads to Trust, System Requirements, Using Parity with Geth, Anonymity in Cryptocurrency, Central Bank Network, Virtual Machines, EVM Applications, State Machines, Guts of the EVM, Blocks, Mining's Place in the State Transition Function, Renting Time on the EVM, Gas, Working with Gas, Accounts, Transactions, and Messages, Transactions and Messages, Estimating Gas Fees for Operations, Opcodes in the EVM.	**12**	**CO2**

	Solidity Programming: Introduction, Global Banking Made Real, Complementary Currency, Programming the EVM, Design Rationale, Importance of Formal Proofs, Automated Proofs, Testing, Formatting Solidity Files, Reading Code, Statements and Expressions in Solidity, Value Types, Global Special Variables, Units, and Functions,		
III	**Hyperledger:** Overview, Fabric, composer, installing hyperledger fabric and composer, deploying, running the network, error troubleshooting. **Smart Contracts and Tokens:** EVM as Back End, Assets Backed by Anything, Cryptocurrency Is a Measure of Time, Function of Collectibles in Human Systems, Platforms for High-Value Digital Collectibles, Tokens as Category of Smart Contract, Creating a Token, Deploying the Contract, Playing with Contracts.	**12**	**CO3**
IV	**Mining Ether:** Why? Ether's Source, Defining Mining, Difficulty, Self-Regulation, and the Race for Profit, How Proof of Work Helps Regulate Block Time, DAG and Nonce, Faster Blocks, Stale Blocks, Difficulties, Ancestry of Blocks and Transactions, Ethereum and Bitcoin, Forking, Mining, Geth on Windows, Executing Commands in the EVM via the Geth Console, Launching Geth with Flags, Mining on the Testnet, GPU Mining Rigs, Mining on a Pool with Multiple GPUs. **Cryptoecnomics:** Introduction, Usefulness of cryptoeconomics, Speed of blocks, Ether Issuance scheme, Common Attack Scenarios.	**12**	**CO4**
V	**Blockchain Application Development:** Decentralized Applications, Blockchain Application Development, Interacting with the Bitcoin Blockchain, Interacting Programmatically with Ethereum—Sending Transactions, Creating a Smart Contract, Executing Smart Contract Functions, Public vs. Private Blockchains, Decentralized Application Architecture, **Building an Ethereum DApp:** The DApp, Setting Up a Private Ethereum Network, Creating the Smart Contract, Deploying the Smart Contract, Client Application, **DApp deployment:** Seven Ways to Think About Smart Contracts, Dapp Contract Data Models, EVM back-end and front-end communication, JSON-RPC, Web 3, JavaScript API, Using Meteor with the EVM, Executing Contracts in the Console, Recommendations for Prototyping, Third-Party Deployment Libraries, **Creating Private Chains.**	**12**	**CO5**

M. Sc (Information Technology)		**Semester – III**	
Course Name: Blockchain		**Course Code: PSIT**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:

CO1: The students would understand the structure of a blockchain and why/when it is better than a simple distributed database.

CO2: Analyze the incentive structure in a blockchain based system and critically assess its functions, benefits and vulnerabilities

CO3: Evaluate the setting where a blockchain based structure may be applied, its potential and its limitations

CO4: Understand what constitutes a "smart" contract, what are its legal implications and what it can and cannot do, now and in the near future

CO5: Develop blockchain DApps.

PSIT402a: Natural Language Processing

M. Sc (Information Technology)		Semester – IV	
Course Name: Natural Language Processing		**Course Code: PSIT402a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- The prime objective of this course is to introduce the students to the field of Language Computing and its applications ranging from classical era to modern context.
- To provide understanding of various NLP tasks and NLP abstractions such as Morphological analysis, POS tagging, concept of syntactic parsing, semantic analysis etc.
- To provide knowledge of different approaches/algorithms for carrying out NLP tasks.
- To highlight the concepts of Language grammar and grammar representation in Computational Linguistics.

Unit	Details	Lectures	Outcome
I	Introduction to NLP, brief history, NLP applications: Speech to Text(STT), Text to Speech(TTS), Story Understanding, NL Generation, QA system, Machine Translation, Text Summarization, Text classification, Sentiment Analysis, Grammar/Spell Checkers etc., challenges/Open Problems, NLP abstraction levels, Natural Language (NL) Characteristics and NL computing approaches/techniques and steps, NL tasks: Segmentation, Chunking, tagging, NER, Parsing, Word Sense Disambiguation, NL Generation, Web 2.0 Applications : Sentiment Analysis; Text Entailment; Cross Lingual Information Retrieval (CLIR).	**12**	**CO1**
II	Text Processing Challenges, Overview of Language Scripts and their representation on Machines using Character Sets, Language, Corpus and Application Dependence issues, Segmentation: word level(Tokenization), Sentence level. Regular Expression and Automata Morphology, Types, Survey of English and Indian Languages Morphology, Morphological parsing FSA and FST, Porter stemmer, Rule based and Paradigm based Morphology, Human Morphological Processing, Machine Learning approaches.	**12**	**CO2**
III	Word Classes ad Part-of-Speech tagging(POS), survey of POS tagsets, Rule based approaches (ENGTOWL), Stochastic approaches(Probabilistic, N-gram and HMM), TBL morphology, unknown word handling,	**12**	**CO3**

	evaluation metrics: Precision/Recall/F-measure, error analysis.		
IV	NL parsing basics, approaches: TopDown, BottomUp, Overview of Grammar Formalisms: constituency and dependency school, Grammar notations CFG, LFG, PCFG, LTAG, Feature- Unification, overview of English CFG, Indian Language Parsing in Paninian Karaka Theory, CFG parsing using Earley's and CYK algorithms, Probabilistic parsing, Dependency Parsing: Covington algorithm, MALT parser, MST parser.	**12**	**CO4**
V	Concepts and issues in NL, Theories and approaches for Semantic Analysis, Meaning Representation, word similarity, Lexical Semantics, word senses and relationships, WordNet (English and IndoWordnet), Word Sense Disambiguation: Lesk Algorithm Walker's algorithm, Coreferences Resolution:Anaphora, Cataphora.	**12**	**CO5**

Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Students will get idea about know-hows, issues and challenge in Natural Language Processing and NLP applications and their relevance in the classical and modern context.

CO2: Student will get understanding of Computational techniques and approaches for solving NLP problems and develop modules for NLP tasks and tools such as Morph Analyzer, POS tagger, Chunker, Parser, WSD tool etc.

CO3: Students will also be introduced to various grammar formalisms, which they can apply in different fields of study.

CO4: Students can take up project work or work in R&D firms working in NLP and its allied areas.

CO5: Student will be able to understand applications in different sectors

PSIT402b: Digital Image Forensics

M. Sc (Information Technology)		Semester – IV	
Course Name: Digital Image Forensics		**Course Code: PSIT402b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To understand describe the origin of computer forensics and the relationship between law enforcement and industry.
- Describe electronic evidence and the computing investigation process.
- Extracting Digital Evidence from Images and establishing them in court of Law.
- Enhancing images for investigation and various techniques to enhance images.
- Interpret and present Evidences in Court of Law.

Unit	Details	Lectures	Outcome
I	History of Forensic Digital Enhancement, Establishing Integrity of Digital Images for Court,	**12**	**CO1**
II	Digital Still and Video Cameras, Color Modes and Channel Blending to Extract Detail	**12**	**CO2**
III	Multiple Image Techniques, Fast Fourier Transform (FFT) – Background Pattern Removal.	**12**	**CO3**
IV	Contrast Adjustment Techniques, Advanced Processing Techniques, Comparison and Measurement	**12**	**CO4**
V	The Approach – Developing Enhancement Strategies for Images Intended for Analysis, Digital Imaging in the Courts, Interpreting and Presenting Evidence	**12**	**CO5**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year

2.	Forensic Uses of Digital Imaging	John C. Russ, Jens Rindel, P. Lord	Taylor & Francis Group	2nd	2016

M. Sc (Information Technology)		Semester – III	
Course Name: Digital Image Forensics Practical		**Course Code: PSIT4P2b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand the basics of image forensics and techniques to establish their integrity

CO2: Understand different techniques for extracting detail from images.

CO3: Understand and apply various advanced techniques in image processing and to compare and measure various parameters associated with them

CO4: Apply various enhancement strategies for digital images

CO5: Prepare the evidence to be acceptable in the court of law.

PSIT402c: Advanced IoT

M. Sc (Information Technology)		**Semester – IV**	
Course Name: Advanced IoT		**Course Code: PSIT402c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To understand the latest developments in IoT
- To build smart IoT applications
- To leverage the applications of IoT in different technologies
- To build own IoT platform

Unit	Details	Lectures	Outcome
I	The Artificial Intelligence 2.0, IoT and Azure IoT Suite, Creating Smart IoT Application	**12**	**CO1**
II	Cognitive APIs, Consuming Microsoft Cognitive APIs, Building Smarter Application using Cognitive APIs.	**12**	**CO2**
III	Implementing Blockchain as a service, Capturing, Analysing and Visualizing real-time data, Making prediction with machine learning.	**12**	**CO3**
IV	IoT and Microservices, Service Fabric, Build your own IoT platform: Introduction, Building blocks for IoT solution, Essentials for building your own platform, Platform requirements, building the platform by initializing cloud instance, installing basic software stacks, securing instance and software, installing node.js and Node-RED, Message broker.	**12**	**CO4**
V	Building Critical components, configuring message broker, creating REST interface, Rule engine and authentication, documentation and testing, Introspection on what we build and deliverables.	**12**	**CO5**

Course Name: Advanced IoT Practical		**Course Code: PSIT4P2c**	
Periods per week (1 Period is 60 minutes)		**4**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**50**
	Internal	**--**	**-**

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Build smart IoT applications on Azure.

CO2: Use Microsoft cognitive APIs to build IoT applications.

CO3: Implement Blockchain in IoT.

CO4: Install and use microservices in IoT.

CO5: Build own IoT platform and use it in a customised way.

PSIT402d: Cyber Forensics

M. Sc (Information Technology)		Semester – IV	
Course Name: Cyber Forensics		**Course Code: PSIT402d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Explain laws relevant to computer forensics
- Seize digital evidence from pc systems
- Recover data to be used as evidence
- Analyse data and reconstruct events
- Explain how data may be concealed or hidden

Unit	Details	Lectures	Outcome
I	Computer Forensics: The present Scenario, The Investigation Process, Computers – Searching and Seizing, Electronic Evidence, Procedures to be followed by the first responder.	**12**	**CO1**
II	Setting up a lab for Computer Forensics, Hard Disks and File Systems, Forensics on Windows Machine, Acquire and Duplicate Data	**12**	**CO2**
III	Recovery of deleted files and partitions, Using Access Data FTK and Encase for forensics Investigation, Forensic analysis of Steganography and Image files, Cracking Application passwords.	**12**	**CO3**
IV	Capturing logs and correlating to the events, Network Forensics – Investigating logs and Network traffic, Investigating Wireless and Web Attacks.	**12**	**CO4**
V	Email Tracking and Email Crime investigation. Mobile Forensics, Reports of Investigation, Become an expert witness.	**12**	**CO5**

M. Sc (Information Technology)		Semester – IV	
Course Name: Cyber Forensics Practical		**Course Code: PSIT4P2d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Investigate the cyber forensics with standard operating procedures.

CO2: Recover the data from the hard disk with legal procedure.

CO3: To recover and analyse the data using forensics tool

CO4: Acquire the knowledge of network analysis and use it for analysing the internet attacks.

CO5: Able to investigate internet frauds done through various gadgets like mobile, laptops, tablets and become a forensic investigator.

PSIT403a: Deep Learning

M. Sc (Information Technology)		Semester – IV	
Course Name: Deep Learning		**Course Code: PSIT403a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To present the mathematical, statistical and computational challenges of building neural networks
- To study the concepts of deep learning
- To enable the students to know deep learning techniques to support real-time applications

Unit	Details	Lectures	Outcome
I	**Applied Math and Machine Learning Basics:** Linear Algebra: Scalars, Vectors, Matrices and Tensors , Multiplying Matrices and Vectors , Identity and Inverse Matrices, Linear Dependence and Span , norms, special matrices and vectors, eigen decompositions. **Numerical Computation:** Overflow and under flow, poor conditioning, Gradient Based Optimization, Constraint optimization.	**12**	**CO1**
II	**Deep Networks:** Deep feedforward network , regularization for deep learning , Optimization for Training deep models	**12**	**CO2**
III	Convolutional Networks, Sequence Modelling, Applications	**12**	**CO3**
IV	Deep Learning Research: Linear Factor Models, Autoencoders, representation learning	**12**	**CO4**
V	Approximate Inference, Deep Generative Models	**12**	**CO5**

Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:
CO1: Describes basics of mathematical foundation that will help the learner to understand the concepts of Deep Learning.
CO2: Understand and describe model of deep learning
CO3: Design and implement various deep supervised learning architectures for text & image data.
CO4: Design and implement various deep learning models and architectures.
CO5: Apply various deep learning techniques to design efficient algorithms for real-world applications.

PSIT403b: Remote Sensing

M. Sc (Information Technology)		Semester – IV	
Course Name: Remote Sensing Practical		**Course Code: PSIT403b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Attain a foundational knowledge and comprehension of the physical, computational, and perceptual basis for remote sensing.
- Gain familiarity with a variety of physical, biological, and human geographic applications of remote sensing.
- Gain basic experience in the hands-on application of remote sensing data through visual interpretation and digital image processing exercises.
- Analyze and synthesize understanding by identifying and developing a research and application proposal using remote sensing.

Unit	Details	Lectures	Outcome
I	Remote Sensing: Basic Principles Introduction, Electromagnetic Radiation and Its Properties, Terminology, Nature of Electromagnetic Radiation, The Electromagnetic Spectrum, Sources of Electromagnetic Radiation, Interactions with the Earth's Atmosphere, Interaction with Earth-Surface Materials, Spectral Reflectance of Earth Surface Materials Remote Sensing Platforms and Sensors Introduction, Characteristics of Imaging Remote Sensing Instruments, Spatial Resolution, Spectral Resolution, Radiometric Resolution, Optical, Near-infrared and Thermal Imaging Sensors, Along-Track Scanning Radiometer (ATSR), Advanced Very High Resolution Radiometer (AVHRR) and NPOESS VIIRS, MODIS, Ocean Observing Instruments, IRS LISS, Landsat Instruments, SPOT Sensors, Advanced Spaceborne Thermal Emission and Reflection Radiometer (ASTER), High-Resolution Commercial and Small Satellite Systems, Microwave Imaging Sensors, European Space Agency Synthetic Aperture Spaceborne Radars, Radarsat, TerraSAR-X and COSMO/Skymed, ALOS PALSAR	**12**	**CO1**
II	Hardware and Software Aspects of Digital Image Processing Introduction, Properties of Digital Remote Sensing Data, Digital Data, Data Formats, System Processing,	**12**	**CO2**

	Numerical Analysis and Software Accuracy, Some Remarks on Statistics, Preprocessing of Remotely-Sensed Data Introduction, Cosmetic Operations, Missing Scan Lines, Destriping Methods, Geometric Correction and Registration, Orbital Geometry Model, Transformation Based on Ground Control Points, Resampling Procedures, Image Registration, Other Geometric Correction Methods, Atmospheric Correction, Background, Image-Based Methods, Radiative Transfer Models, Empirical Line Method, Illumination and View Angle Effects, Sensor Calibration, Terrain Effects		
III	Image Enhancement Techniques Introduction, Human Visual System, Contrast Enhancement, Linear Contrast Stretch, Histogram Equalization, Gaussian Stretch, Pseudocolour Enhancement, Density Slicing, Pseudocolour Transform, Image Transforms Introduction, Arithmetic Operations, Image Addition, Image Subtraction, Image Multiplication, Image Division and Vegetation Indices, Empirically Based Image Transforms, Perpendicular Vegetation Index, Tasselled Cap (Kauth–Thomas) Transformation, Principal Components Analysis, Standard Principal Components Analysis, Noise-Adjusted PCA, Decorrelation Stretch, Hue-Saturation-Intensity (HSI) Transform, The Discrete Fourier Transform, Two-Dimensional Fourier Transform, Applications of the Fourier Transform, The Discrete Wavelet Transform, The One-Dimensional Discrete Wavelet Transform, The Two-Dimensional Discrete Wavelet Transform, Change Detection, Introduction, NDVI Difference Image, PCA, Canonical Correlation Change Analysis, Image Fusion, HSI Algorithm, PCA, Gram-Schmidt Orthogonalization, Wavelet-Based Methods, Evaluation – Subjective Methods, Evaluation – Objective Methods	**12**	**CO3**
IV	Filtering Techniques Spatial Domain Low-Pass (Smoothing) Filters, Moving Average Filter, Median Filter, Adaptive Filters, Spatial Domain High-Pass (Sharpening) Filters, Image Subtraction Method, Derivative-Based Methods, Spatial Domain Edge Detectors, Frequency Domain Filters **Classification :** Geometrical Basis of Classification, Unsupervised Classification, The *k*-Means Algorithm, ISODATA, A Modified *k*-Means Algorithm, Supervised Classification, Training Samples, Statistical Classifiers, Neural Classifiers, Subpixel Classification Techniques, The Linear Mixture Model, Spectral Angle Mapping, ICA, Fuzzy Classifiers, More Advanced Approaches to	**12**	**CO4**

	Image Classification, Support Vector Machines , Decision Trees , Other Methods of Classification, Incorporation of Non-spectral Features, Texture, Use of External Data, Contextual Information, Feature Selection, Classification Accuracy Advanced Topics Introduction, SAR Interferometry, Basic Principles, Interferometric Processing, Problems in SAR Interferometry, Applications of SAR Interferometry, Imaging Spectroscopy, Processing Imaging Spectroscopy Data, Lidar, Lidar Details, Lidar Applications		
V	**Environmental Geographical Information Systems**: A Remote Sensing Perspective, Definitions, The Synergy between Remote Sensing and GIS, Data Models, Data Structures and File Formats, Spatial Data Models, Data Structures, File Formats, Raster to Vector and Vector to Raster Conversion, Geodata Processing, Buffering, Overlay, Locational Analysis, Slope and Aspect, Proximity Analysis, Contiguity and Connectivity, Spatial Analysis, Point Patterns and Interpolation. **Relating Field and Remotely-Sensed Measurements**: Statistical Analysis, Exploratory Data Analysis and Data Mining, Environmental Modelling, Visualization, Multicriteria Decision Analysis of Groundwater Recharge Zones, Data Characteristics, Multicriteria Decision Analysis, Evaluation, Assessing Flash Flood Hazards by Classifying Wadi Deposits in Arid Environments, Water Resources in Arid Lands, Case Study from the Sinai Peninsula, Egypt, Optical and Microwave Data Fusion, Classification of Wadi Deposits, Correlation of Classification Results with Geology and Terrain Data, Remote Sensing and GIS in Archaeological Studies, Introduction, Homul (Guatemala) Case Study, Aksum (Ethiopia) Case Study	**12**	**CO5**

Books and References:

M. Sc (Information Technology)		**Semester – IV**	
Course Name: Remote Sensing Practical		**Course Code: PSIT4P3b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand the basics of remote sensing and its various applications

CO2: Understand the Hardware and Software aspects of Digital Image Processing and demonstrate various techniques in pre-processing data

CO3: Demonstrate various image enhancement and transformation techniques.
CO4: Understand and Demonstrate various filtering, classification techniques along with advanced functionalities.

CO5: Perform comparison of Field and Remotely sensed measurements using various techniques.

PSIT403c: Server Virtualization on VMWare Platform

M. Sc (Information Technology)		Semester – IV	
Course Name: Server Virtualization on VMWare Platform		**Course Code: PSIT403c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Identify the need for Server Virtualization
- Describe the components and features of vSphere 6.7 and ESXi
- Describe how VMware's products help solve business and technical challenges with regard to Server Virtualization

Unit	Details	Lectures	Outcome
I	**Introducing VMware vSphere 6.7:** Exploring VMware vSphere 6.7, Examining the Products in the vSphere Suite, Examining the Features in VMware vSphere, Licensing VMware vSphere, Why Choose vSphere? **Planning and Installing VMware ESXi:** VMware ESXi Architecture, Understanding the ESXi Hypervisor, Examining the ESXi Components, Planning a VMware vSphere Deployment, Choosing a Server Platform, Determining a Storage Architecture, Integrating with the Network Infrastructure, Deploying VMware ESXi, Installing VMware ESXi Interactively, Performing an Unattended Installation of VMware ESXi, Deploying VMware ESXi with vSphere Auto Deploy, Performing Post-installation Configuration, Reconfiguring the Management Network, Using the vSphere Host Client, Configuring Time Synchronization, Configuring Name Resolution, **Installing and Configuring vCenter Server:** Introducing vCenter Server, Centralizing User Authentication Using vCenter Single Sign-On, Understanding the Platform Services Controller, Using the vSphere Web Client for Administration, Providing an Extensible Framework, Choosing the Version of vCenter Server, Planning and Designing a vCenter Server Deployment, Sizing Hardware for vCenter Server, Planning for vCenter Server Availability, Running vCenter Server and Its Components as VMs, Installing vCenter Server and Its Components, Installing vCenter Server in an Enhanced Linked Mode Group, Exploring vCenter Server, The vSphere Web Client Home Screen,	**12**	**CO1**

	Using the Navigator, Creating and Managing a vCenter Server Inventory, Understanding Inventory Views and Objects, Creating and Adding Inventory Objects, Exploring vCenter Server's Management Features, Understanding Basic Host Management, Examining Basic Host Configuration, Using Scheduled Tasks, Using the Events and Events Consoles in vCenter Server, Working with Host Profiles, Tags and Custom Attributes, Managing vCenter Server Settings, General vCenter Server Settings, Licensing, Message of the Day, Advanced Settings, Auto Deploy, vCenter HA, Key Management Servers, Storage Providers, vSphere Web Client Administration, Roles, Licensing, vCenter Solutions Manager, System Configuration, VMware Appliance Management Administration, Summary, Monitor, Access, Networking, Time, Services, Update, Administration, Syslog, Backup.		
II	vSphere Update Manager and the vCenter Support Tools: vSphere Update Manager, vSphere Update Manager and the vCenter Server Appliance, Installing the Update Manager Download Service, The vSphere Update Manager Plug-in Contents, Reconfiguring the VUM or UMDS, Installation with the Update Manager Utility, Upgrading VUM from a Previous Version, Configuring vSphere Update Manager, Creating Baselines Routine Updates, Attaching and Detaching Baselines or Baseline Groups, Performing a Scan, Staging Patches, Remediating Hosts, Upgrading VMware Tools, Upgrading Host Extensions, Upgrading Hosts with vSphere Update Manager, Importing an ESXi Image and Creating the Host Upgrade Baseline, Upgrading a Host, Upgrading VM Hardware, Performing an Orchestrated Upgrade, Investigating Alternative Update Options, Using vSphere Update Manager PowerCLI, Upgrading and Patching without vSphere Update Manager, vSphere Auto Deploy, Deploying Hosts with Auto Deploy, vCenter Support Tools, ESXi Dump Collector, Other vCenter Support Tools. **Creating and Configuring a vSphere Network:** Putting Together a vSphere Network, Working with vSphere Standard Switches, Comparing Virtual Switches and Physical Switches, Understanding Ports and Port Groups, Understanding Uplinks, Configuring the Management Network, Configuring VMkernel Networking, Enabling Enhanced Multicast Functions, Configuring TCP/IP Stacks, Configuring Virtual Machine Networking, Configuring VLANs, Configuring NIC Teaming, Using and Configuring Traffic Shaping, Bringing It All Together, Working with vSphere Distributed Switches,	**12**	**CO2**

	Creating a vSphere Distributed Switch, Removing an ESXi Host from a Distributed Switch, Removing a Distributed Switch, Managing Distributed Switches, Working with Distributed Port Groups, Managing VMkernel Adapters, Using NetFlow on vSphere Distributed Switches, Enabling Switch Discovery Protocols, Enabling Enhanced Multicast Functions, Setting Up Private VLANs, Configuring LACP, Configuring Virtual Switch Security, Understanding and Using Promiscuous Mode, Allowing MAC Address Changes and Forged Transmits.		
III	**Creating and Configuring Storage Devices:** Reviewing the Importance of Storage Design, Examining Shared Storage Fundamentals, Comparing Local Storage with Shared Storage, Defining Common Storage Array Architectures, Explaining RAID, Understanding vSAN, Understanding Midrange and External Enterprise Storage Array Design, Choosing a Storage Protocol, Making Basic Storage Choices, Implementing vSphere Storage Fundamentals, Reviewing Core vSphere Storage Concepts, Understanding Virtual Volumes, SCs vs LUNs, Storage Policies, Virtual Volumes, Working with VMFS Datastores, Working with Raw Device Mappings, Working with NFS Datastores, Working with vSAN, Working with Virtual Machine–Level Storage, Configuration, Leveraging SAN and NAS Best Practices **Ensuring High Availability and Business Continuity:** Understanding the Layers of High Availability, Clustering VMs, Introducing Network Load Balancing Clustering, Introducing Windows Server Failover Clustering, Implementing vSphere High Availability, Understanding vSphere High Availability Clusters. Understanding vSphere High Availability's Core Components, Enabling vSphere HA, Configuring vSphere High Availability, Configuring vSphere HA Groups, Rules, Overrides, and Orchestrated VM Restart, Managing vSphere High Availability, Introducing vSphere SMP Fault Tolerance, Using vSphere SMP Fault Tolerance with vSphere High Availability, Examining vSphere Fault Tolerance, Use Cases, Planning for Business Continuity, Providing Data Protection, Recovering from Disasters, Using vSphere Replication. **Securing VMware vSphere:** Overview of vSphere Security, Securing ESXi Hosts, Working with ESXi Authentication, Controlling Access to ESXi Hosts, Keeping ESXi Hosts Patched, Managing ESXi Host Permissions, Configuring ESXi Host Logging, Securing the ESXi Boot Process, Reviewing Other ESXi Security Recommendations, Securing vCenter Server,	**12**	**CO3**

	Managing vSphere Certificates, Working with Certificate Stores, Getting Started with Certificate Management, Authenticating Users with Single Sign-On, Understanding the vpxuser Account, Managing vCenter Server Permissions, Configuring vCenter Server Appliance Logging, Securing Virtual Machines, Configuring a Key Management Server for VM and VSAN Encryption, Virtual Trusted Platform Module, Configuring Network Security Policies, Keeping VMs Patched.		
IV	**Creating and Managing Virtual Machines:** Understanding Virtual Machines, Examining Virtual Machines from the Inside, Examining Virtual Machines from the Outside, Creating a Virtual Machine, Choosing Values for Your New Virtual Machine, Sizing Virtual Machines, Naming Virtual Machines, Sizing Virtual Machine Hard Disks, Virtual Machine Graphics, Installing a Guest Operating System, Working with Installation Media, Using the Installation Media, Working in the Virtual Machine Console, Installing VMware Tools, Installing VMware Tools in Windows, Installing VMware Tools in Linux, Managing Virtual Machines, Adding or Registering Existing VMs, Changing VM Power States, Removing VMs, Deleting VMs, Modifying Virtual Machines, Changing Virtual Machine Hardware, Using Virtual Machine Snapshots. **Using Templates and vApps:** Cloning VMs, Creating a Customization Specification, Cloning a Virtual Machine, Introducing vSphere Instant Cloning, Creating Templates and Deploying Virtual Machines, Cloning a Virtual Machine to a Template, Deploying a Virtual Machine from a Template, Using OVF Templates, Deploying a VM from an OVF Template, Exporting a VM as an OVF Template, Examining OVF Templates, Using Content Libraries, Content Library Data and Storage, Content Library Synchronization, Creating and Publishing a Content Library, Subscribing to a Content Library, Operating Content Libraries, Working with vApps, Creating a vApp, Editing a vApp, Changing a vApp's Power State, Cloning a vApp, Importing Machines from Other Environments, **Managing Resource Allocation:** Reviewing Virtual Machine, Resource Allocation, Working with Virtual Machine Memory, Understanding ESXi Advanced Memory Technologies, Controlling Memory Allocation, Managing Virtual Machine CPU Utilization, Default CPU Allocation, Setting CPU Affinity, Using CPU Reservations, Using CPU Limits, Using CPU Shares, Summarizing How Reservations, Limits, and Shares Work with CPUs, Using Resource Pools, Configuring	**12**	**CO4**

	Resource Pools, Understanding Resource Allocation with Resource Pools, Regulating Network I/O Utilization, Controlling Storage I/O Utilization, Enabling Storage I/O Control, Configuring Storage Resource Settings for a Virtual Machine, Using Flash Storage.		
V	**Balancing Resource Utilization:** Comparing Utilization with Allocation, Exploring vMotion, Examining vMotion Requirements, Performing a vMotion Migration Within a Cluster, Ensuring vMotion Compatibility, Using Per-Virtual-Machine CPU Masking, Using Enhanced vMotion Compatibility, Using Storage vMotion, Combining vMotion with Storage vMotion, Cross-vCenter vMotion, Examining Cross-vCenter vMotion Requirements, Performing a Cross-vCenter Motion, Exploring vSphere Distributed Resource Scheduler, Understanding Manual Automation Behavior, Reviewing Partially Automated Behavior, Examining Fully Automated Behavior, Working with Distributed Resource Scheduler Rules, Working with Storage DRS, Creating and Working with Datastore Clusters , Configuring Storage DRS. **Monitoring VMware vSphere Performance:** Overview of Performance Monitoring, Using Alarms Understanding Alarm Scopes, Creating Alarms, Managing Alarms, Working with Performance Charts, Overview Layout, Advanced Layout, Working with *esxtop,* Monitoring CPU Usage, Monitoring Memory Usage, Monitoring Network Usage, Monitoring Disk Usage. **Automating VMware vSphere:** Why Use Automation? vSphere Automation Automating with PowerCLI, PowerShell and PowerCLI, What's New in PowerCLI, Installing and Configuring PowerCLI on Windows, Installing and Configuring PowerCLI on macOS, Installing and Configuring PowerCLI on Linux, Additional PowerCLI Capabilities Getting Started with PowerCLI, Building PowerCLI Scripts, PowerCLI Advanced Capabilities, Additional Resources.	**12**	**CO5**

M Sc (Information Technology)		Semester – IV	
Course Name: Server Virtualization on VMWare Platform Practical		**Course Code: PSIT4P3c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed The detailed list of practical will be circulated later in the official workshop

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand VMWare VSphere 67, Install ESXi and Configure VSphere Centre

CO2: Demonstrate the use of VSphere Update Manager and Create a VSphere Network

CO3: Understand VSphere Security, Create and configure storage devices and Perform configurations to ensure business continuity
CO4: Demonstrate Resource allocation, Creating and managing virtual machine and the use of templates

CO5: Understand automation of vSphere and manage resource allocation

PSIT403d: Security Operations Centre

M. Sc (Information Technology)		Semester – IV	
Course Name: Security Operations Centre		**Course Code: PSIT403d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- The SOC (Security Operations Centre) allows an organization to enforce and test its security policies, processes, procedures and activities through one central platform that monitors and evaluates the effectiveness of the individual elements and the overall security system of the organization.
- This will also allow the learners to configure various use cases and detect various attacks across the network and report them in real time and also take appropriate actions.
- This course will cover the design, deployment and operation of the SOC.
- Once this course is completed, students will have the skills to perform your SOC responsibilities effectively.

Unit	Details	Lectures	Outcome
I	**Introduction to Security Operations Management** Foundation Topics Introduction to Identity and Access Management Phases of the Identity and Access Lifecycle Registration and Identity Validation Privileges Provisioning Access Review Access Revocation Password Management Password Creation Password Storage and Transmission Password Reset Password Synchronization Directory Management Single Sign-On Kerberos Federated SSO Security Assertion Markup Language OAuth OpenID Connect Security Events and Logs Management Logs Collection, Analysis, and Disposal Syslog Security Information and Event Manager Assets Management Assets Inventory Assets Ownership Assets Acceptable Use and Return Policies Assets Classification Assets Labeling Assets and Information Handling Media Management Introduction to Enterprise Mobility Management Mobile Device Management Configuration and Change Management Configuration Management Change Management Vulnerability Management	**12**	**CO1**

Periods per week (1 Period is 60 minutes)		**4**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**50**
	Internal	**--**	**-**

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:
CO1: Understanding basics of SOC, Cryptography and managing and deploying VPNs.

CO2: Analyse Windows and Linux based logs along with logs generated by endpoints.

CO3: Understand and analyze various forms of intrusions, threats and perform forensic analysis on them.

CO4: Understand the incident response process and handle incidents by adhering to compliance policies and standards set by the organization.

CO5: Understand the various types of attacks and vulnerabilities, categorize events and perform incident analysis.

PSIT404a: Human Computer Interaction

M. Sc (Information Technology)		Semester – IV	
Course Name: Human Computer Interaction		**Course Code: PSIT404a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understand the important aspects of implementation of human-computer interfaces.
- Identify the various tools and techniques for interface analysis, design, and evaluation.
- Identify the impact of usable interfaces in the acceptance and performance utilization of information systems

Unit	Details	Lectures	Outcome
I	**The Interaction:** Models of interaction, Design Focus, Frameworks and HCI, Ergonomics, Interaction styles, Elements of the WIMP interface,Interactivity **Paradigms:** Introduction, Paradigms for interaction **Interaction design basics:** What is design?, The process of design, User focus, Cultural probes, Navigation design, the big button trap, Modes, Screen design and layout, Alignment and layout matters, Checking screen colors, Iteration and prototyping **HCI in the software process**: The software life cycle, Usability engineering , Iterative design and prototyping, Prototyping in practice, Design rationale	**12**	**CO1**
II	**Design**: Principles to support usability, Standards, Guidelines, Golden rules and heuristics, HCI patterns **Implementation support:** Elements of windowing systems, Programming the application, Going with the grain, Using toolkits, User interface management systems **Evaluation techniques:** What is evaluation?, Goals of evaluation, Evaluation through expert analysis, Evaluation through user participation, Choosing an evaluation method	**12**	**CO2**
III	**Universal design:** Universal design principles, Multi-modal interaction, Designing websites for screen readers, Choosing the right kind of speech, Designing for diversity **User support:** Requirements of user support, Approaches to user support, Adaptive help systems, Designing user support systems **Cognitive models:** Goal and task hierarchies, Linguistic	**12**	**CO3**

	models, The challenge of display-based systems, Physical and device models, Cognitive architectures		
IV	**Socio-organizational issues and stakeholder requirements:** Organizational issues, Capturing requirements **Communication and collaboration models:** Face-to-face communication, Conversation, Text-based communication, Group working **Task analysis:** Differences between task analysis and other techniques, Task decomposition, Knowledge-based analysis, Entity–relationship-based techniques, Sources of information and data collection, Uses of task analysis	**12**	**CO4**
V	**Dialog notations and design:** What is dialog?, Dialog design notations, Diagrammatic notations, Textual dialog notations, Dialog semantics, Dialog analysis and design **Models of the system:** Standard formalisms, Interaction models, Continuous behavior **Modeling rich interaction:** Status–event analysis, Rich contexts, Low intention and sensor-based interaction	**12**	**CO5**

Books and References:

1.	Human Computer Interaction	Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale	Pearson Education	3rd	
2.	Designing the User Interface	Shneiderman B., Plaisant C., Cohen M., Jacobs S.	Pearson	5th	2013

Course Outcomes:

After completion of the course, a student should be able to:

CO1: have a clear understanding of HCI principles that influence a system's interface design, before writing any code.
CO2: understand the evaluation techniques used for any of the proposed system.
CO3: understand the cognitive models and its design.
CO4: able to understand how to manage the system resources and do the task analysis.
CO5: able to design and implement a complete system.

PSIT404b: Advanced IoT

M. Sc (Information Technology)		Semester – IV	
Course Name: Advanced IoT		**Course Code: PSIT404b**	
Periods per week (1 Period is 60 minutes)		**4**	
Credits		**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Internal	**--**	**40**

Course Objectives:

- To understand the applications on image processing in different disciplines.
- To apply the concepts to new areas of research in Image processing.

Unit	Details	Lectures	Outcome
I	Fuzzy Approaches and Analysis in Image Processing, Text information extraction from images, Image and Video steganography based on DCT and wavelet transform.	**12**	**CO1**
II	Zernike-Moments-Based Shape Descriptors for Pattern Recognition and Classification Applications, An Image De-Noising Method Based on Intensity Histogram Equalization Technique for Image Enhancement, A New Image Encryption Method Based on Improved Cipher Block Chaining with Optimization Technique	**12**	**CO2**
III	A Technique to Approximate Digital Planar Curve with Polygon, Shape Determination of Aspired Foreign Body on Pediatric Radiography Images Using Rule-Based Approach, Evaluation of Image Detection and Description Algorithms for Application in Monocular SLAM, Diophantine Equations for Enhanced Security in Watermarking Scheme for Image Authentication	**12**	**CO3**
IV	Design, Construction, and Programming of a Mobile Robot Controlled by Artificial Vision, Review and Applications of Multimodal Biometrics for Secured Systems, Background Subtraction and Object Tracking via Key Frame-Based Rotational Symmetry Dynamic Texture, A Novel Approach of Human Tracking Mechanism in Wireless Camera Networks	**12**	**CO4**
V	Digital Image Steganography: Survey, Analysis, and Application, Vegetation Index: Ideas, Methods, Influences, and Trends, Expert System through GIS-Based Cloud	**12**	**CO5**

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Advanced Image Processing Techniques and Applications	N. Suresh Kumar, Arun Kumar Sangaiah, M. Arun, S. Anand	IGI global	--	2017

Course Outcomes:

After completion of the course, a student should be able to:

CO01: Understand the advanced applications of Image processing.

CO02: Understand the application of image processing pattern recognition, encryption and image enhancement.

CO03: Understand and apply the image processing techniques in identification of foreign body using radiography, watermarking techniques.

CO04: Apply the image processing techniques to robot vision, biometrics, human tracking using wireless camera.

CO05: Apply image processing in steganography, expert systems through GIS based cloud.

PSIT404c: Storage as a Service

M. Sc (Information Technology)		Semester – IV	
Course Name: Storage as a Service		**Course Code: PSIT404c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understand the need for Storage Area Network and Data protection to satisfy the information explosion requirements.
- Study storage technologies: SAN, NAS, IP storage etc., which will bridge the gap between the emerging trends in industry and academics.
- To get an insight of Storage area network architecture, protocols and its infrastructure.
- To study and discuss the applications of SAN to fulfill the needs of the storage management in the heterogeneous environment.
- Study and understand the management of Storage Networks
- To understand different techniques of managing store.

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Information Storage and Management: Storing, Managing, and Protecting Digital Information in Classic, Virtualized, and Cloud Environments	EMC	John Wiley & Sons	2nd	2012

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand different techniques of storage and RAID Technologies
CO2: Understand different intelligent storage technologies. Also, understand the benefits of Fibre Channel Storage Networks along with iSCSI.
CO3: Understand the architecture of NAS and deployment along with Object based and unified storage technologies. Also, the learner will be able to configure the storage devices to maintain highest level of availability
CO4: Understand Replication and Migration techniques and implement them.
CO5: Understand Different techniques for managing and securing storage infrastructure.

PSIT404d: Information Security Auditing

M. Sc (Information Technology)		Semester – IV	
Course Name: Information Security Auditing		**Course Code: PSIT404d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understand various information security policies in place.
- Assess an organization based on the needs and suggest the requisite information security policies to be deployed.
- Audit the organization across relevant policies and assist the organization in implementing such policies along with suggesting improvements.

Unit	Details	Lectures	Outcome
I	Secrets of a Successful Auditor Understanding the Demand for IS Audits Understanding Policies, Standards, Guidelines, and Procedures Understanding Professional Ethics Understanding the Purpose of an Audit Differentiating between Auditor and Auditee Roles Implementing Audit Standards Auditor Is an Executive Position Understanding the Corporate Organizational Structure Governance Strategy Planning for Organizational Control Overview of Tactical Management Planning and Performance Overview of Business Process Reengineering Operations Management Summary Audit Process Understanding the Audit Program Establishing and Approving an Audit Charter Preplanning Specific Audits Performing an Audit Risk Assessment Determining Whether an Audit Is Possible Performing the Audit Gathering Audit Evidence Conducting Audit Evidence Testing Generating Audit Findings Report Findings Conducting Follow-up (Closing Meeting)	**12**	**CO1**
II	Information Systems Acquisition and Development Project Governance and Management Business Case and Feasibility Analysis System Development Methodologies Control Identification and Design Testing Methodologies Configuration and Release Management	**12**	**CO2**

	System Migration, Infrastructure Deployment and Data Conversion Post-implementation Review		
III	Information Systems Operations Introduction Common Technology Components IT Asset Management Job Scheduling and Production Process Automation System Interfaces End-user Computing Data Governance Systems Performance Management Problem and Incident Management Change, Configuration, Release and IT Service Level Management Database Management Business Resilience Business Impact Analysis Data Backup, Storage and Restoration Business Continuity Plan Disaster Recovery Plans	**12**	**CO3**
IV	Information Systems Life Cycle Governance in Software Development Management of Software Quality Overview of the Executive Steering Committee Change Management Management of the Software Project Overview of the System Development Life Cycle Overview of Data Architecture Decision Support Systems Program Architecture Centralization vs. Decentralization Electronic Commerce System Implementation and Operations Understanding the Nature of IT Services Performing IT Operations Management Performing Capacity Management Using Administrative Protection Performing Problem Management Monitoring the Status of Controls Implementing Physical Protection	**12**	**CO4**
V	Protecting Information Assets Understanding the Threat Using Technical Protection Business Continuity and Disaster Recovery Debunking the Myths Understanding the Five Conflicting Disciplines Called Business Continuity Defining Disaster Recovery Defining the Purpose of Business Continuity Uniting Other Plans with Business Continuity Understanding the Five Phases of a Business Continuity Program Understanding the Auditor Interests in BC/DR Plans	**12**	**CO5**

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	CISA®: Certified Information Systems Auditor	David Cannon	SYBEX	Fourth Edition	2016
2.	CISA Review Manual 27th Edition		ISACA		2019
3.	CISA Certified Information Systems Auditor All-in-One Exam Guide, Fourth Edition,		O'Reilly	4th Edition	2019

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand various information security policies and process flow, Ethics of an Information security Auditor.

CO2: Understand various information systems in an organization, their criticality and various governance and management policies associated with them.

CO3: Critically analyse various operational strategies like asset management, data governance etc. and suggest requisite changes as per organizations requirements with improvements.

CO4: Understand the information flow across the organization and identify the weak spots, and also suggest improvements to strengthen them.

CO5: Come up with strong strategies to protect information assets and come up with an efficient business continuity plan, disaster recovery strategy etc.

PSIT4P4: Project Implementation and Viva

M. Sc (Information Technology)		**Semester – IV**	
Course Name: Project Implementation and Viva		**Course Code: PSIT4P4**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

The project dissertation and Viva Voce details are given in Appendix 1.

Evaluation Scheme

Internal Evaluation (40 Marks)

The internal assessment marks shall be awarded as follows:

1. **30 marks (Any one of the following):**
   a. **Written Test or**
   b. **SWAYAM (Advanced Course) of minimum 20 hours and certification exam completed or**
   c. **NPTEL (Advanced Course) of minimum 20 hours and certification exam completed or**
   d. **Valid International Certifications (Prometric, Pearson, Certiport, Coursera, Udemy and the like)**
   e. **One certification marks shall be awarded one course only. For four courses, the students will have to complete four certifications.**
2. **10 marks**
   The marks given out of 40 (30 in Semester 4) for publishing the research paper should be divided into four course and should awarded out of 10 in each of the four course.

i. Suggested format of Question paper of 30 marks for the written test.

Q1.	**Attempt *any two* of the following:**	**16**
a.		
b.		
c.		
d.		
Q2.	**Attempt *any two* of the following:**	**14**
a.		
b.		
c.		
d.		

ii. 10 marks from every course coming to a total of 40 marks, shall be awarded on publishing of research paper in UGC approved / Other Journal with plagiarism less than 10%. The marks can be awarded as per the impact factor of the journal, quality of the paper, importance of the contents published, social value.

External Examination: (60 marks)

	All questions are compulsory	
Q1	**(Based on Unit 1) Attempt *any two* of the following:**	**12**
a.		
b.		

c.		
d.		
Q2	**(Based on Unit 2) Attempt *any two* of the following:**	**12**
Q3	**(Based on Unit 3) Attempt *any two* of the following:**	**12**
Q4	**(Based on Unit 4) Attempt *any two* of the following:**	**12**
Q5	**(Based on Unit 5) Attempt *any two* of the following:**	**12**

Practical Evaluation (50 marks)

A Certified copy of hard-bound journal is essential to appear for the practical examination.

1.	**Practical Question 1**	**20**
2.	**Practical Question 2**	**20**
3.	**Journal**	**5**
4.	**Viva Voce**	**5**

OR

1.	**Practical Question**	**40**
2.	**Journal**	**5**
3.	**Viva Voce**	**5**

Project Documentation and Viva Voce Evaluation

The documentation should be checked for plagiarism and as per UGC guidelines, should be less than 10%.

1.	**Documentation Report (Chapter 1 to 4)**	**20**
2.	**Innovation in the topic**	**10**
3.	**Documentation/Topic presentation and viva voce**	**20**

Project Implementation and Viva Voce Evaluation

1.	**Documentation Report (Chapter 5 to last)**	**20**
2.	**Implementation**	**10**
3.	**Relevance of the topic**	**10**
4.	**Viva Voce**	**10**

Appendix – 1

Project Documentation and Viva-voce (Semester III) and Project Implementation and Viva-Voce (Semester IV)

Goals of the course Project Documentation and Viva-Voce

The student should:

- be able to apply relevant knowledge and abilities, within the main field of study, to a given problem
- within given constraints, even with limited information, independently analyse and discuss complex inquiries/problems and handle larger problems on the advanced level within the main field of study
- reflect on, evaluate and critically review one's own and others' scientific results
- be able to document and present one's own work with strict requirements on structure, format, and language usage
- be able to identify one's need for further knowledge and continuously develop one's own knowledge

To start the project:

- Start thinking early in the programme about suitable projects.
- Read the instructions for the project.
- Attend and listen to other student´s final oral presentations.
- Look at the finished reports.
- Talk to senior master students.
- Attend possible information events (workshops / seminars / conferences etc.) about the related topics.

Application and approval:

- Read all the detailed information about project.
- Finalise finding a place and supervisor.
- Check with the coordinator about subject/project, place and supervisor.
- Write the project proposal and plan along with the supervisor.
- Fill out the application together with the supervisor.
- Hand over the complete application, proposal and plan to the coordinator.
- Get an acknowledgement and approval from the coordinator to start the project.

During the project:

- Search, gather and read information and literature about the theory.
- Document well the practical work and your results.
- Take part in seminars and the running follow-ups/supervision.
- Think early on about disposition and writing of the final report.
- Discuss your thoughts with the supervisor and others.
- Read the SOP and the rest you need again.
- Plan for and do the mid-term reporting to the coordinator/examiner.
- Do a mid-term report also at the work-place (can be a requirement in some work-places).
- Write the first draft of the final report and rewrite it based on feedback from the supervisor and possibly others.
- Plan for the final presentation of the report.

Finishing the project:

- Finish the report and obtain an OK from the supervisor.

- Ask the supervisor to send the certificate and feedback form to the coordinator.
- Attend the pre-final oral presentation arranged by the Coordinator.
- Rewrite the final report again based on feedback from the opponents and possibly others.
- Prepare a title page and a popular science summary for your report.
- Send the completed final report to the coordinator (via plagiarism software)
- Rewrite the report based on possible feedback from the coordinator.
- Appear for the final exam.

Project Proposal/research plan

- The student should spend the first 1-2 weeks writing a 1-2 pages project plan containing:
  - Short background of the project
  - Aims of the project
  - Short description of methods that will be used
  - Estimated time schedule for the project
- The research plan should be handed in to the supervisor and the coordinator.
- Writing the project plan will help you plan your project work and get you started in finding information and understanding of methods needed to perform the project.

Project Documentation

The documentation should contain:

- Introduction - that should contain a technical and social (when possible) motivation of the project topic.
- Description of the problems/topics.
- Status of the research/knowledge in the field and literature review.
- Description of the methodology/approach. (The actual structure of the chapters here depends on the topic of the documentation.)
- Results - must always contain analyses of results and associated uncertainties.
- Conclusions and proposals for the future work.
- Appendices (when needed).
- Bibliography - references and links.

For the master's documentation, the chapters cannot be dictated, they may vary according to the type of project. However, in Semester III Project Documentation and Viva Voce must contain at least 4 chapters (Introduction, Review of Literature, Methodology / Approach, Proposed Design / UI design, etc. depending on the type of project.) The Semester III report should be spiral bound.

In Semester IV, the remaining Chapters should be included (which should include Experiments performed, Results and discussion, Conclusions and proposals for future work, Appendices) and Bibliography - references and links. Semester IV report should include all the chapters and should be hardbound.

Academic Council _____
Item No: 4.100

University Of Mumbai

Syllabus for M.Sc. I.T. Part II
Semester III and IV
Programme: M.Sc.
Subject: Information Technology

SEMESTER III

PSIT301: Technical Writing and Entrepreneurship Development

M. Sc (Information Technology)		**Semester – III**	
Course Name: Technical Writing and Entrepreneurship Development		**Course Code: PSIT301**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- This course aims to provide conceptual understanding of developing strong foundation in general writing, including research proposal and reports.
- It covers the technological developing skills for writing Article, Blog, E-Book, Commercial web Page design, Business Listing Press Release, E-Listing and Product Description.
- This course aims to provide conceptual understanding of innovation and entrepreneurship development.

Unit	Details	Lectures	Outcome
I	Introduction to Technical Communication: What Is Technical Communication? The Challenges of Producing Technical Communication, Characteristics of a Technical Document, Measures of Excellence in Technical Documents, Skills and Qualities Shared by Successful Workplace Communicators, How Communication Skills and Qualities Affect Your Career? **Understanding Ethical and Legal Considerations:** A Brief Introduction to Ethics, Your Ethical Obligations, Your Legal Obligations, The Role of Corporate Culture in Ethical and Legal Conduct, Understanding Ethical and Legal Issues Related to Social Media, Communicating Ethically Across Cultures, Principles for Ethical Communication **Writing Technical Documents:** Planning, Drafting, Revising, Editing, Proofreading **Writing Collaboratively:** Advantages and Disadvantages of Collaboration, Managing Projects, Conducting Meetings, Using Social Media and Other Electronic Tools in Collaboration, Importance of Word Press Website, Gender and Collaboration, Culture and Collaboration.	**12**	**CO1**
II	**Introduction to Content Writing:** Types of Content (Article, Blog, E-Books, Press Release, Newsletters Etc), Exploring Content Publication Channels. Distribution of your content across various channels. **Blog Creation:** Understand the psychology behind your web traffic, Creating killing landing pages which attract users, Using	**12**	**CO2**

	Landing Page Creators, Setting up Accelerated Mobile Pages, Identifying UI UX Experience of your website or blog. **Organizing Your Information:** Understanding Three Principles for Organizing Technical Information, Understanding Conventional Organizational Patterns, **Emphasizing Important Information:** Writing Clear, Informative Titles, Writing Clear, Informative Headings, Writing Clear Informative Lists, Writing Clear Informative Paragraphs.		
III	**Creating Graphics:** The Functions of Graphics, The Characteristics of an Effective Graphic, Understanding the Process of Creating Graphics, Using Color Effectively, Choosing the Appropriate Kind of Graphic, Creating Effective Graphics for Multicultural Readers. **Researching Your Subject:** Understanding the Differences Between Academic and Workplace Research, Understanding the Research Process, Conducting Secondary Research, Conducting Primary Research, **Research and Documentation:** Literature Reviews, Interviewing for Information, Documenting Sources, Copyright, Paraphrasing, Questionnaires. **Report Components:** Abstracts, Introductions, Tables of Contents, Executive Summaries, Feasibility Reports, Investigative Reports, Laboratory Reports, Test Reports, Trip Reports, Trouble Reports	**12**	**CO3**
IV	**Writing Proposals:** Understanding the Process of Writing Proposals, The Logistics of Proposals, The "Deliverables" of Proposals, Persuasion and Proposals, Writing a Proposal, The Structure of the Proposal. **Writing Informational Reports:** Understanding the Process of Writing Informational Reports, Writing Directives, Writing Field Reports, Writing Progress and Status Reports, Writing Incident Reports, Writing Meeting Minutes. **Writing Recommendation Reports:** Understanding the Role of Recommendation Reports, Using a Problem-Solving Model for Preparing Recommendation Reports, Writing Recommendation Reports. **Reviewing, Evaluating, and Testing Documents and Websites:** Understanding Reviewing, Evaluating, and Testing, Reviewing Documents and Websites, Conducting Usability Evaluations, Conducting Usability Tests, Using Internet tools to check writing Quality, Duplicate Content Detector, What is Plagiarism?, How to avoid writing plagiarism content? **Innovation management: an introduction:** The importance of innovation, Models of innovation, Innovation as a management process. **Market adoption and technology diffusion:** Time lag between innovation and useable product, Innovation and the market , Innovation and market vision ,Analysing internet search data to help	**12**	**CO4**

	adoption and forecasting sales ,Innovative new products and consumption patterns, Crowd sourcing for new product ideas, Frugal innovation and ideas from everywhere, Innovation diffusion theories.		
V	**Managing innovation within firms:** Organisations and innovation, The dilemma of innovation management, Innovation dilemma in low technology sectors, Dynamic capabilities, Managing uncertainty, Managing innovation projects **Operations and process innovation:** Operations management, The nature of design and innovation in the context of operations, Process design, Process design and innovation **Managing intellectual property:** Intellectual property, Trade secrets, An introduction to patents, Trademarks, Brand names, Copyright **Management of research and development:** What is research and development?, R&D management and the industrial context, R&D investment and company success, Classifying R&D, R&D management and its link with business strategy, Strategic pressures on R&D, Which business to support and how?, Allocation of funds to R&D, Level of R&D expenditure **Managing R&D projects:** Successful technology management, The changing nature of R&D management, The acquisition of external technology, Effective R&D management, The link with the product innovation process, Evaluating R&D projects.	**12**	**CO5**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Technical Communication	Mike Markel	Bedford/St. Martin's	11	2014
2.	Innovation Management and New Product Development	Paul Trott	Pearson	06	2017
3.	Handbook of Technical Writing	Gerald J. Alred , Charles T. Brusaw , Walter E. Oliu	Bedford/St. Martin's	09	2008
4.	Technical Writing 101: A Real-World Guide to Planning and Writing Technical Content	Alan S. Pringle and Sarah S. O'Keefe	scriptorium	03	2009
5.	Innovation and Entrepreneurship	Peter Drucker	Harper Business	03	2009

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Develop technical documents that meet the requirements with standard guidelines. Understanding the essentials and hands-on learning about effective Website Development.
CO2: Write Better Quality Content Which Ranks faster at Search Engines. Build effective Social Media Pages.
CO3: Evaluate the essentials parameters of effective Social Media Pages.
CO4: Understand importance of innovation and entrepreneurship.
CO5: Analyze research and development projects.

PSIT3P1: Project Documentation and Viva

M. Sc (Information Technology)		**Semester – III**	
Course Name: Project Documentation and Viva		**Course Code: PSIT3P1**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	--

The learners are expected to develop a project beyond the undergraduate level. Normal web sites, web applications, mobile apps are not expected. Preferably, the project should be from the elective chosen by the learner at the post graduate level. In semester three. The learner is supposed to prepare the synopsis and documentation. The same project has to be implemented in Semester IV.
More details about the project is given is Appendix 1.

PSIT302a: Applied Artificial Intelligence

M. Sc (Information Technology)		**Semester – III**	
Course Name: Applied Artificial Intelligence		Course Code: PSIT302a	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To explore the applied branches of artificial intelligence
- To enable the learner to understand applications of artificial intelligence
- To enable the student to solve the problem aligned with derived branches of artificial intelligence.

Unit	*Details*	*Lectures*	*Outcome*
I	**Review of AI:** History, foundation and Applications **Expert System and Applications:** Phases in Building Expert System, Expert System Architecture, Expert System versus Traditional Systems, Rule based Expert Systems, Blackboard Systems, Truth Maintenance System, Application of Expert Systems, Shells and Tools	**12**	**CO1**
II	**Probability Theory:** joint probability, conditional probability, Bayes's theorem, probabilities in rules and facts of rule based system, cumulative probabilities, rule based system and Bayesian method **Fuzzy Sets and Fuzzy Logic:** Fuzzy Sets, Fuzzy set operations, Types of Member ship Functions, Multivalued Logic, Fuzzy Logic, Linguistic variables and Hedges, Fuzzy propositions, inference rules for fuzzy propositions, fuzzy systems, possibility theory and other enhancement to Logic	**12**	**CO2**
III	**Machine Learning Paradigms:** Machine Learning systems, supervised and un-supervised learning, inductive learning, deductive learning, clustering, support vector machines, cased based reasoning and learning. **Artificial Neural Networks:** Artificial Neural Networks, Single-Layer feedforward networks, multi-layer feed-forward networks, radial basis function networks, design issues of artificial neural networks and recurrent networks	**12**	**CO3**
IV	**Evolutionary Computation:** Soft computing, genetic algorithms, genetic programming concepts, evolutionary programming, swarm intelligence, ant colony paradigm, particle swarm optimization and applications of evolutionary algorithms. **Intelligent Agents:** Agents vs software programs, classification of agents, working of an agent, single agent and multiagent systems, performance evaluation, architecture, agent communication language, applications	**12**	**CO4**

V	Advanced Knowledge Representation Techniques: Conceptual dependency theory, script structures, CYC theory, script structure, CYC theory, case grammars, semantic web. Natural Language Processing: Sentence Analysis phases, grammars and parsers, types of parsers, semantic analysis, universal networking language, dictionary	**12**	**CO5**

M. Sc (Information Technology)		**Semester – III**	
Course Name: Artificial Intelligence Practical		**Course Code: PSIT3P2a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	--

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of course the learner will:
CO1: be able to understand the fundamentals concepts of expert system and its applications.
CO2: be able to use probability and concept of fuzzy sets for solving AI based problems.
CO3: be able to understand the applications of Machine Learning. The learner can also apply fuzzy system for solving problems.
CO4: learner will be able to apply to understand the applications of genetic algorithms in different problems related to artificial intelligence.
CO5: A learner can use knowledge representation techniques in natural language processing.

PSIT302b: Computer Vision

M. Sc (Information Technology)		Semester – III	
Course Name: Computer Vision		**Course Code: PSIT302b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To develop the student's understanding of the issues involved in trying to define and simulate perception.
- To familiarize the student with specific, well known computer vision methods, algorithms and results.
- To provide the student additional experience in the analysis and evaluation of complicated systems.
- To provide the student additional software development experience.
- To provide the student with paper and proposal writing experience.

Unit	Details	Lectures	Outcome
I	**Introduction:** What is computer vision?, A brief history, Image formation, Geometric primitives and transformations, Geometric primitives, D transformations, D transformations, D rotations, D to D projections, Lens distortions, Photometric image formation, Lighting, Reflectance and shading, Optics, The digital camera, Sampling and aliasing, Color ,Compression **Feature-based alignment**: D and D feature-based alignment, D alignment using least squares , Application: Panography , Iterative algorithms , Robust least squares and RANSAC , D alignment , Pose estimation , Linear algorithms, Iterative algorithms , Application: Augmented reality , Geometric intrinsic calibration, Calibration patterns, Vanishing points , Application: Single view metrology , Rotational motion ,Radial distortion	**12**	**CO1**
II	**Structure from motion :** Triangulation, Two-frame structure from motion , Projective (uncalibrated) reconstruction, Self-calibration , Application: View morphing , Factorization, Perspective and projective factorization , Application: Sparse D model extraction, Bundle adjustment, Exploiting sparsity , Application: Match move and augmented reality , Uncertainty and ambiguities , Application: Reconstruction from Internet photos , Constrained structure and motion , Line-based techniques , Plane-based techniques **Dense motion estimation :** Translational alignment , Hierarchical motion estimation, Fourier-based alignment ,	**12**	**CO2**

	Incremental refinement , Parametric motion, Application: Video stabilization, Learned motion models , Spline-based motion, Application: Medical image registration, Optical flow, Multi-frame motion estimation ,Application: Video denoising , Application: De-interlacing , Layered motion, Application: Frame interpolation, Transparent layers and reflections		
III	**Image stitching :** Motion models, Planar perspective motion, Application: Whiteboard and document scanning , Rotational panoramas , Gap closing , Application: Video summarization and compression, Cylindrical and spherical coordinates, Global alignment, Bundle adjustment,Parallax removal , Recognizing panoramas, Direct vsfeature-based alignment, Compositing , Choosing a compositing surface, Pixel selection and weighting (de-ghosting) , Application: Photomontage,Blending **Computational photography :** Photometric calibration ,Radiometric response function ,Noise level estimation ,Vignetting ,Optical blur (spatial response) estimation ,High dynamic range imaging ,Tone mapping ,Application: Flash photograpy,Super-resolution and blur removal,Color image demosaicing ,Application: Colorization,Image matting and compositing ,Blue screen matting ,Natural image matting ,Optimization-based matting ,Smoke, shadow, and flash matting ,Video matting ,Texture analysis and synthesis ,Application: Hole filling and inpainting ,Application: Non-photorealistic rendering	**12**	**CO3**
IV	Stereo correspondence Epipolar geometry , Rectification ,Plane sweep , Sparse correspondence , D curves and profiles , Dense correspondence, Similarity measures , Local methods , Sub-pixel estimation and uncertainty , Application: Stereo-based head tracking , Global optimization , Dynamic programming , Segmentation-based techniques, Application: Z-keying and background replacement, Multi-view stereo, Volumetric and D surface reconstruction, Shape from silhouettes **3D reconstruction :** Shape from X , Shape from shading and photometric stereo, Shape from texture, Shape from focus , Active rangefinding , Range data merging , Application: Digital heritage , Surface representations , Surface interpolation, Surface simplification, Geometry images , Point-based representations, Volumetric representations , Implicit surfaces and level sets , Model-based reconstruction, Architecture, Heads and faces , Application: Facial animation , Whole body modeling and tracking ,Recovering texture maps and albedos , Estimating BRDFs ,Application: D photography	**12**	**CO4**

V	**Image-based rendering :** View interpolation, View-dependent texture maps, Application: Photo Tourism , Layered depth images, Impostors, sprites, and layers, Light fields and Lumigraphs , Unstructured Lumigraph, Surface light fields, Application: Concentric mosaics, Environment mattes, Higher-dimensional light fields , The modeling to rendering continuum, Video-based rendering , Video-based animation, Video textures , Application: Animating pictures, D Video, Application: Video-based walkthroughs **Recognition :** Object detection, Face detection, Pedestrian detection, Face recognition, Eigenfaces, Active appearance and D shape models, Application: Personal photo collections, Instance recognition, Geometric alignment, Large databases, Application: Location recognition, Category recognition, Bag of words, Part-based models, Recognition with segmentation, Application: Intelligent photo editing, Context and scene understanding , Learning and large image collections, Application: Image search, Recognition databases and test sets	**12**	**CO5**

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:
CO1: Understand the basics of computer vision
CO2: Understand and analyse various structure form motion and various estimates of Dense Motion
CO3: Apply various motion models to images and understand computation photography techniques
CO4: Apply Epipolar geometry , Rectification and various other 3D correspondence and Stereo reconstruction techniques
CO5: Understand image-based rendering and reconstruction

PSIT302c: Cloud Application Development

M. Sc (Information Technology)		**Semester – III**	
Course Name: Cloud Application Development		**Course Code: PSIT302c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To develop and deploy Microservices for cloud
- To understand Kubernetes and deploy applications on Azure Kubernetes Service
- To understand DevOps for Azure
- To follow the DevOps practices for software development
- To build APIs for Azure and AWS

Unit	Details	Lectures	Outcomes
I	**Implementing Microservices:** Client to microservices communication, Interservice communication, data considerations, security, monitoring, microservices hosting platform options. **Azure Service Fabric:** Introduction, core concepts, supported programming models, service fabric clusters, develop and deploy applications of service fabric. **Monitoring Azure Service Fabric Clusters:** Azure application, resource manager template, Adding Application Monitoring to a Stateless Service Using Application Insights, Cluster monitoring, Infrastructure monitoring.	**12**	**CO1**
II	**Azure Kubernetes Service (AKS):** Introduction to kubernetes and AKS, AKS development tools, Deploy applications on AKS. **Monitoring AKS:** Monitoring, Azure monitor and analytics, monitoring AKS clusters, native kubernetes dashboard, Prometheus and Grafana. **Securing Microservices:** Authentication in microservices, Implenting security using API gateway pattern, Creating application using Ocrlot and securing APIs with Azure AD. **Database Design for Microservices:** Data stores, monolithic approach, Microservices approach, harnessing cloud computing, dataase options on MS Azure, overcoming application development challenges. **Building Microservices on Azure Stack:** Azure stack, Offering IaaS, PaaS on-premises simplified, SaaS on Azure stack.	**12**	**CO2**

III	.**NET DevOps for Azure:** DevOps introduction, Problem and solution. **Professional Grade DevOps Environment:** The state of DevOps, professional grade DevOps vision, DevOps architecture, tools for professional DevOps environment, DevOps centered application. **Tracking work:** Process template, Types of work items, Customizing the process, Working with the process. **Tracking code:** Number of repositories, Git repository, structure, branching pattern, Azure repos configuration, Git and Azure.	**12**	**CO3**
IV	**Building the code:** Structure of build, using builds with .NET core and Azure pipelines, **Validating the code:** Strategy for defect detection, Implementing defect detection. **Release candidate creation:** Designing release candidate architecture, Azure artifacts workflow for release candidates, **Deploying the release:** Designing deployment pipeline, Implementing deployment in Azure pipelines. **Operating and monitoring release:** Principles, Architectures for observability, Jumpstarting observability.	**12**	**CO4**
V	**Introduction to APIs:** Introduction, API economy, APIs in public sector. **API Strategy and Architecture:** API Strategy, API value chain, API architecture, **API** management. **API Development:** Considerations, Standards, kick-start API development, team orientation. **API Gateways:** API Gateways in public cloud, Azure API management, AWS API gateway. **API Security:** Request-based security, Authentication and authorization.	**12**	**CO5**

M. Sc (Information Technology)		Semester – III	
Course Name: Cloud Application Development Practical		**Course Code: PSIT3P2c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	--

List of Practical:
10 practical covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:

CO01: Develop the Microservices for cloud and deploy them on Microsoft Azure.

CO02: Build and deploy services to Azure Kubernetes service.

CO03: Understand and build the DevOps way.

CO04: Thoroughly build the applications in the DevOps way.

CO05: Build the APIs for Microsoft Azure and AWS.

PSIT302d: Security Breaches and Countermeasures

M. Sc (Information Technology)		Semester – III	
Course Name: Security Breaches and Countermeasures		**Course Code: PSIT302d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To get the insight of the security loopholes in every aspect of computing.
- To understand the threats and different types of attacks that can be launched on computing systems.
- To know the countermeasures that can be taken to prevent attacks on computing systems.
- To test the software against the attacks.

Unit	Details	Lectures	Outcome
I	**Introduction to Security Breaching**: Overview of Information Security, Threats and Attack vectors, Concepts of Hacking – Ethical and Unethical, Information Security Controls, Concepts of penetration Testing, Information Security Laws and Standards. **Evaluation Security of IT Organisation:** Concepts, Methodology, Tools, Countermeasures, Penetration Testing. **Network Scanning:** Concepts, Scanning beyond IDS and firewalls, Tools, Banner Grabbing, Scanning Techniques, Network Diagrams, penetration testing. **Enumeration:** Concepts, Different types of enumeration: Netbios, SNMP, LDAP, NTP, SMTP, DNS, other enumeration techniques, Countermeasures, Penetration Testing	**12**	**CO1**
II	**Analysis of Vulnerability:** Concepts, Assessment Solutions, Scoring Systems, Assessment Tools, Assessment Reports. **Breaching System Security:** Concepts, Cracking passwords, Escalating privileges, Executing Applications, Hiding files, covering tracks, penetration testing. **Threats due to malware:** Concepts, Malware Analysis, Trojan concepts, countermeasures, Virus and worm concepts, anti-malware software, penetration testing. **Network Sniffing:** Concepts, countermeasures, sniffing techniques, detection techniques, tools, penetration testing.	**12**	**CO2**

III	**Social Engineering:** Concepts, Impersonation on networking sites, Techniques, Identity theft, Insider threats, countermeasures, Pen testing. **Denial of Service and Distributed Denial of service:** Concepts, techniques, botnets, attack tools, countermeasures, protection tools, penetration testing. **Hijacking an active session:** Concepts, tools, application level session hijacking, countermeasures, network level session hijacking, penetration testing. **Evasion of IDS, Firewalls and Honeypots:** Introduction and concepts, detecting honeypots, evading IDS, IDS and Firewall evasion countermeasures, evading firewalls, penetration testing.	**12**	**CO3**
IV	**Compromising Web Servers:** Concepts, attacks, attack methodology, attack tools, countermeasures, patch management, web server security tools, penetration testing. **Compromising Web Applications:** Concepts**,** threats, methods, tools, countermeasures, testing tools, penetration testing. **Performing SQL Injection:** Concepts, types, methodology, tools, techniques, countermeasures. **Compromising Wireless Networks:** Concepts, wireless encryption, threats, methodology, tools, compromising Bluetooth, countermeasures, wireless security tools, penetration testing.	**12**	**CO4**
V	**Compromising Mobile Platforms:** Attack vectors, Compromising Android OS, Compromising iOS, Mobile spyware, Mobile Device Management, Mobile security, penetration testing. **Compromising IoT:** Concepts, attacks, compromising methodology, tools, countermeasures, penetration testing. **Cloud Security:** Concepts, Security, threats, attacks, tools, penetration testing. **Cryptography:** Concepts, email encryption, algorithms, disk encryption, tools, cryptanalysis, Public key infrastructure, countermeasures.	**12**	**CO5**

Books and References:

2.	All in One, Certified Ethical Hacker	Matt Walker	Tata McGraw Hill	-	2012
3.	CEH V10: EC-Council Certified Ethical Hacker Complete Training Guide	I.P. Specialist	IPSPECIALIST	-	2018

M. Sc (Information Technology)		Semester – III	
Course Name: Security Breaches and Countermeasures Practical		**Course Code: PSIT3P3d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcome:
CO1: The student should be able to identify the different security breaches that can occur. The student should be able to evaluate the security of an organization and identify the loopholes. The student should be able to perform enumeration and network scanning.

CO2: The student should be able to identify the vulnerability in the systems, breach the security of the system, identify the threats due to malware and sniff the network. The student should be able to do the penetration testing to check the vulnerability of the system towards malware and network sniffing.

CO3: The student should be able to perform social engineering and educate people to be careful from attacks due to social engineering, understand and launch DoS and DDoS attacks, hijack and active session and evade IDS and Firewalls. This should help the students to make the organization understand the threats in their systems and build robust systems.

CO4: The student should be able to identify the vulnerabilities in the Web Servers, Web Applications, perform SQL injection and get into the wireless networks. The student should be able to help the organization aware about these vulnerabilities in their systems.

CO5: The student should be able to identify the vulnerabilities in the newer technologies like mobiles, IoT and cloud computing. The student should be able to use different methods of cryptography.

PSIT303a: Machine Learning

M. Sc (Information Technology)		**Semester – III**	
Course Name: Machine Learning		**Course Code: PSIT303a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understanding Human learning aspects.
- Understanding primitives in learning process by computer.
- Understanding nature of problems solved with Machine Learning

Unit	Details	Lectures	Outcome
I	**Introduction:** Machine learning, Examples of Machine Learning Problems, Structure of Learning, learning versus Designing, Training versus Testing, Characteristics of Machine learning tasks, Predictive and descriptive tasks, Machine learning Models: Geometric Models, Logical Models, Probabilistic Models. Features: Feature types, Feature Construction and Transformation, Feature Selection.	**12**	**CO1**
II	**Classification and Regression: Classification:** Binary Classification- Assessing Classification performance, Class probability Estimation Assessing class probability Estimates, Multiclass Classification. **Regression**: Assessing performance of Regression- Error measures, Overfitting- Catalysts for Overfitting, Case study of Polynomial Regression. **Theory of Generalization:** Effective number of hypothesis, Bounding the Growth function, VC Dimensions, Regularization theory.	**12**	**CO2**
III	**Linear Models:** Least Squares method, Multivariate Linear Regression, Regularized Regression, Using Least Square regression for Classification. Perceptron, Support Vector Machines, Soft Margin SVM, Obtaining probabilities from Linear classifiers, Kernel methods for non-Linearity.	**12**	**CO2 CO3**
IV	**Logic Based and Algebraic Model: Distance Based Models:** Neighbours and Examples, Nearest Neighbours Classification, Distance based clustering-K means Algorithm, Hierarchical clustering, **Rule Based Models:** Rule learning for subgroup discovery, Association rule mining. **Tree Based Models:** Decision Trees, Ranking and Probability estimation Trees, Regression trees, Clustering Trees.	**12**	**CO2 CO3 CO4**

V	Probabilistic Model: Normal Distribution and Its Geometric Interpretations, Naïve Bayes Classifier, Discriminative learning with Maximum likelihood, Probabilistic Models with Hidden variables: Estimation-Maximization Methods, Gaussian Mixtures, and Compression based Models. **Trends In Machine Learning :** Model and Symbols-Bagging and Boosting, Multitask learning, Online learning and Sequence Prediction, Data Streams and Active Learning, Deep Learning, Reinforcement Learning.	**12**	**CO5**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year

2.	Introduction to Statistical Machine Learning with Applications in R	Hastie, Tibshirani, Friedman	Springer	2nd	2012
3.	Introduction to Machine Learning	Ethem Alpaydin	PHI	2nd	2013

M. Sc (Information Technology)		**Semester – III**	
Course Name: Machine Learning Practical		**Course Code: PSIT3P3a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:
CO1: Understand the key issues in Machine Learning and its associated applications in intelligent business and scientific computing.
CO2: Acquire the knowledge about classification and regression techniques where a learner will be able to explore his skill to generate data base knowledge using the prescribed techniques.
CO3: Understand and implement the techniques for extracting the knowledge using machine learning methods.
CO4: Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.
CO5: Understand the statistical approach related to machine learning. He will also Apply the algorithms to a real-world problem, optimize the models learned and report on the expected accuracy that can be achieved by applying the models.

PSIT303b: Biomedical Image Processing

M. Sc (Information Technology)		**Semester – III**	
Course Name: Biomedical Image Processing		**Course Code: PSIT303b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To design intelligent systems that can analyze biomedical images.
- To understand different scientific approaches in biomedical image processing.
- To understand the structure of biomedical images and how to correlate it with different biological data.
- To design systems to identify different physical conditions on the basis of biomedical data.

Unit	Details	Lectures	Outcome
I	**Introduction:** Biosignals, Biosignal Measurement Systems, Transducers, Amplifier/Detector, Analog Signal Processing and Filters, ADC Conversion, Data Banks **Bio signal Measurements, Noise, and Analysis:** Biosignals, Noise, Signal Analysis: Data Functions and Transforms **Spectral Analysis: Classical Methods :** Fourier Series Analysis, Power Spectrum, Spectral Averaging: Welch's Method **Noise Reduction and Digital Filters :** Noise Reduction, Noise Reduction through Ensemble Averaging, Z-Transform, Finite Impulse Response Filters, Infinite Impulse Response Filters	**12**	**CO1**
II	**Modern Spectral Analysis: The Search for Narrowband Signals:** Parametric Methods, Nonparametric Analysis: Eigen analysis Frequency Estimation **Time Frequency Analysis:** Basic Approaches, The Short-Term Fourier Transform: The Spectrogram, The Wigner Ville Distribution: A Special Case of Cohen's Class, Cohen's Class Distributions **Wavelet Analysis:** Continuous Wavelet Transform, Discrete Wavelet Transform, Feature Detection: Wavelet Packets **Optimal and Adaptive Filters:** Optimal Signal Processing: Wiener Filters, Adaptive Signal Processing, Phase-Sensitive Detection	**12**	**CO2**

III	Multivariate Analyses: Principal Component Analysis and Independent Component Analysis : Linear Transformations, Principal Component Analysis, Independent Component Analysis **Chaos and Nonlinear Dynamics :** Nonlinear Systems, Phase Space, Estimating the Embedding Parameters, Quantifying Trajectories in Phase Space: The Lyapunov Exponent, Nonlinear Analysis: The Correlation Dimension, Tests for Nonlinearity: Surrogate Data Analysis **Nonlinearity Detection: Information-Based Methods :** Information and Regularity, Mutual Information Function, Spectral Entropy, Phase-Space-Based Entropy Methods, Detrended Fluctuation Analysis	**12**	**CO3**
IV	**Image Processing: Filters, Transformations, and Registration :** Two-Dimensional Fourier Transform, Linear Filtering, Spatial Transformations, Image Registration **Image Segmentation :** Pixel-Based Methods, Continuity-Based Methods, Multi thresholding Morphological Operations, Edge-Based Segmentation **Image Acquisition and Reconstruction :** Imaging Modalities, CT, PET, and SPECT, Magnetic Resonance Imaging, Functional MRI	**12**	**CO4**
V	**Classification I: Linear Discriminant Analysis and Support Vector Machines :** Linear Discriminators, Evaluating Classifier Performance, Higher Dimensions: Kernel Machines Support Vector Machines, Machine Capacity: Overfitting or "Less Is More", Extending the Number of Variables and Classes, Cluster Analysis **Classification II: Adaptive Neural Nets :** Training the McCullough Pitts Neuron, The Gradient Decent Method or Delta Rule, Two-Layer Nets: Back Projection, Three-Layer Nets, Training Strategies, Multiple Classifications, Multiple Input Variables	**12**	**CO5**

Books and References:

M. Sc (Information Technology)		Semester – III	
Course Name: Biomedical Image Processing Practical		**Course Code: PSIT3P3b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand basics of Bio signals and various classical techniques of bio signal processing.

CO2: Understand various modern spectral analysis techniques.

CO3: Understand and apply various multivariate analysis techniques on bio signals.

CO4: Understand and apply various transformations filters to images, and different techniques for image acquisition and construction.

CO5: Understand the AI perspective in biological image processing using SVM and Neural Networks.

PSIT303c: Cloud Management

M. Sc (Information Technology)		Semester – III	
Course Name: Cloud Management		**Course Code: PSIT303c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To Understand the Fundamental Ideas Behind Cloud Computing, The Evolution Of The Paradigm, Its Applicability; Benefits, As Well As Current And Future Challenges;
- The Basic ideas And Principles In Data Center Design; Cloud Management Techniques And Cloud Software Deployment Considerations;
- Different CPU, Memory And I/O Virtualization Techniques That Serve In Offering Software, Computation
- And Storage Services On The Cloud; Software Defined Networks (SDN) And Software Defined Storage (SDS);
- Cloud Storage Technologies And Relevant Distributed File Systems, Nosql Databases And Object Storage;
- The Variety Of Programming Models And Develop Working Experience In Several Of Them.

Unit	Details	Lectures	Outcome
I	What is VMM? What's new in VMM Get Started Release notes - VMM Turn telemetry data on/off Deploy a VMM cloud Create a VMM cloud Manage a VMM cloud Deploy a guarded host fabric Deploy guarded hosts Configure fallback HGS settings Deploy a shielded VHDX and VM template Deploy a shielded VM Deploy a shielded Linux VM Deploy and manage a software defined network (SDN) infrastructure Deploy an SDN network controller Deploy an SDN SLB Deploy an SDN RAS gateway Deploy SDN using PowerShell Set up a VM network in SDN Encrypt VM networks in SDN Allow and block VM traffic with SDN port ACLs Control SDN virtual network bandwidth with QoS Load balance network traffic Set up NAT for traffic forwarding in an SDN Route traffic across networks in the SDN infrastructure Configure SDN guest clusters Update the NC server certificate Set up SDN SLB VIPs Back up and restore the SDN infrastructure Remove an SDN from VMM Manage SDN resources in the VMM fabric Deploy and manage Storage Spaces	**12**	**CO1**

	Direct Set up a hyper-converged Storage Spaces Direct cluster Set up a disaggregated Storage Spaces Direct cluster Manage Storage Spaces Direct clusters Assign storage QoS policies for Clusters How To Plan System requirements – VMM Plan VMM installation Plan a VMM high availability deployment Identify VMM ports and protocols Plan the VMM compute fabric Plan the VMM networking fabric Identify supported storage arrays Upgrade and install Upgrade VMM Install VMM Install the VMM console Enable enhanced console session Deploy VMM for high availability Deploy a highly available VMM management server Deploy a highly available SQL Server database for VMM Deploy a highly available VMM library Set up TLS 1.2 Deploy update rollups Back up and restore VMM Manage the VMM library Library overview Add file-based resources to the VMM library Add profiles to the VMM library Add VM templates to the VMM library Add service templates to the VMM library Manage VMM library resources Manage virtualization servers Manage VMM host groups Add existing Hyper-V hosts and clusters to the fabric Add a Nano server as a Hyper-V host or cluster Run a script on host Create a cluster from standalone Hyper-V hosts Provision a Hyper-V host or cluster from bare-metal Create a guest Hyper-V cluster from a service template Set up networking for Hyper-V hosts and clusters Set up storage for Hyper-V hosts and clusters Manage MPIO for Hyper-V hosts and clusters Manage Hyper-V extended port ACLs Manage Hyper-V clusters Update Hyper-V hosts and clusters Run a rolling upgrade of Hyper-V clusters Service Hyper-V hosts for maintenance Manage VMware servers Manage management servers Manage infrastructure servers Manage update servers Manage networking Network fabric overview Set up logical networks Set up logical networks in UR1 Set up VM networks Set up IP address pools Add a network gateway Set up port profiles Set up logical switches Set up MAC address pools Integrate NLB with service templates Set up an IPAM server Manage storage Set up storage fabric Set up storage classifications Add storage devices Allocate storage to host groups Set up a Microsoft iSCSI Target Server Set up a Virtual Fibre Channel Set up file storage Set up Storage Replica in VMM		

II	Service Manager What's new in Service Manager Get started Evaluation and activation of Service Manager Service Manager components Supported configurations System requirements - Service Manager Release notes - Service Manager Enable service log on Manage telemetry settings How to Plan Planning for Service Manager Plan for deployment Service Manager editions Recommended deployment topologies Operations Manager considerations Service Manager databases Port assignments Prepare for deployment Service Manager performance Plan for performance and scalability Plan for hardware performance Deploy Deploy Service Manager Deployment scenarios Install on a single computer Install on two computers Install on four computers Set up remote SQL Server Reporting Services Use SQL Server AlwaysOn availability groups for failover Create and deploy server images Install on VMs Configure PowerShell Register with the data warehouse to enable reporting Deploy additional management servers Deployment considerations with a disjointed namespace Learn about the new Self Service portal Deploy the Self-Service portal Set up load balancing Back up the encryption key Index non-English knowledge articles Troubleshoot deployment issues Deploy from a command line Move databases Upgrade Upgrade Service Manager Upgrade the self-service portal to Service Manager 2016 Upgrade SQL Server Reporting Services Set up a lab environment for upgrade Prepare the production environment Prepare the lab environment Run an upgrade Complete tasks after upgrade Troubleshoot upgrade issues Administer Use management packs to add functionality Use connectors to import data Import data from Active Directory Domain Services Import data and alerts from Operations Manager Import data from Configuration Manager Import runbooks from Orchestrator Import data from VMM Use a CSV file to import data Optionally disable ECL logging for faster connector synchronization Configuration items Configure incident management Configure service level management Configure workflows Configure change and activity management Configure release management Configure Desired Configuration Management to generate incidents Configure notifications Use the service catalog to offer services Use groups, queues, and lists in Service Manager	**12**	**CO2**

	Use runbooks to automate procedures User interface customization Manage user roles Manage Run As accounts Manage knowledge articles Configure and use Service Manager cmdlets Manage the data warehouse Register source systems to the data warehouse Troubleshoot computer problems with tasks Configure your preference for sharing diagnostic and usage data Operate Search for information Manage incidents and problems Manage changes and activities Manage service requests Manage release records Data warehouse reporting and analytics Use and manage standard reports		
III	What is Configuration Manager? Microsoft Endpoint Configuration Manager FAQ What happened to SCCM? Introduction Find help for Configuration Manager How to use the docs How to use the console Accessibility features Software Center user guide Fundamentals Configuration Manager fundamentals Sites and hierarchies About upgrade, update, and install Manage devices Client management Security Role-based administration Configuration Manager and Windows as a Service Plan and design Get ready for Configuration Manager Product changes Features and capabilities Security and privacy for Configuration Manager Security and privacy overview Plan for security Security best practices and privacy information Privacy statement - Configuration Manager Cmdlet Library Additional privacy information Configure security Cryptographic controls technical reference Enable TLS About enabling TLS Enable TLS on clients Enable TLS on site servers and remote site systems Common issues when enabling TLS 1Migrate data between hierarchies Migration overview Plan for migration Planning for migration Prerequisites for migration Checklists for migration Determine whether to migrate data Planning the source hierarchy Planning migration jobs Planning client migration Planning for content deployment Planning to migrate objects Planning to monitor migration Planning to complete migration Configure source hierarchies and source sites Operations for migrating Security and privacy for migration Deploy servers and roles Deploy servers and roles Install infrastructure Get installation media Before you run setup Setup reference Setup downloader Prerequisite checker	**12**	**CO3**

	Prerequisite checks Installing sites Prepare to install sites overview Prepare to install sites Prerequisites for installing sites Use the setup wizard Use a command-line Command-line overview Command-line options Install consoles Upgrade an evaluation install Upgrade to Configuration Manager Scenarios to streamline your installation Configure sites and hierarchies Configure sites and hierarchies overview Add site system roles Add site system roles overview Install site system roles Install cloud-based distribution points About the service connection point Configuration options for site system roles Database replicas for management points Site components Publish site data Manage content and content infrastructure Content infrastructure overview Install and configure distribution points Deploy and manage content Monitor content Microsoft Connected Cache Troubleshoot Microsoft Connected Cache Run discovery Discovery methods overview About discovery methods Select discovery methods Configure discovery methods Site boundaries and boundary groups Site boundaries and boundary groups overview Boundaries Boundary groups Procedures for boundary groups High availability High availability options Site server high availability Flowchart - Passive site server setup Flowchart - Promote site server (planned) Flowchart - Promote site server (unplanned) Prepare to use SQL Server Always On Configure SQL Server Always On Use a SQL Server cluster Custom locations for database files Configure role-based administration		
IV	What's new in Orchestrator Automate with runbooks Get started Install Orchestrator Work with runbooks in the Orchestrator console Example runbook: Creating a runbook to monitor a folder Release notes – Orchestrator Turn on/off telemetry How To Plan Database sizing and performance Feature performance considerations System requirements – Orchestrator Design a runbook Deploy Upgrade Orchestrator Deploy runbooks Configure Orchestrator database connections Migrate Orchestrator between environments Change the Orchestrator database Manage Runbooks Design and build runbooks Create and test a sample runbook Control runbook activities Monitor activities Runbook properties Track runbooks Install TLS Install and enable TLS 1.2 Manage Orchestrator Servers Runbook permissions Back up Orchestrator	**12**	**CO4**

	Bench mark Optimize performance of .Net activities Configure runbook throttling Recover a database Recover web components Add an integration pack View Orchestrator data with PowerPivot Change Orchestrator user groups Common activity properties Computer groups Standard Activities Orchestrator standard activities Alphabetical list of Standard Activities Ports and protocols of Standard Activities System Run Program Run .NET Script End Process Start/Stop Service Restart System Save Event Log Query WMI Run SSH Command Get SNMP Variable Monitor SNMP Trap Send SNMP Trap Set SNMP Variable Scheduling Monitor Date/Time Check Schedule Monitoring Monitor Event Log Monitor Service Get Service Status Monitor Process Get Process Status Monitor Computer/IP Get Computer/IP Status Monitor Disk Space Get Disk Space Status Monitor Internet Application Get Internet Application Status Monitor WMI File Management Compress File Copy File Create Folder Decompress File Delete File Delete Folder Get File Status Monitor File Monitor Folder Move File Move Folder PGP Decrypt File PGP Encrypt File Print File Rename File Email Send Email Notification Send Event Log Message Send Syslog Message Send Platform Event Utilities Apply XSLT Query XML Map Published Data Compare Values Write Web Pages Read Text Log Write to Database Query Database Monitor Counter Get Counter Value Modify Counter Invoke Web Services Format Date/Time Generate Random Text Map Network Path Disconnect Network Path Get Dial-up Status Connect/Disconnect Dial-up Text File Management Append Line Delete Line Find Text Get Lines Insert Line Read Line Search and Replace Text Runbook Control Invoke Runbook Initialize Data Junction Return Data Orchestrator Integration Toolkit Overview of Orchestrator Integration Toolkit Installation Command Line Activity Wizard Integration Pack Wizard Integration Packs Active Directory Active Directory activities Add Computer To Group Add Group To Group Add User To Group Create Computer Create Group Create User Delete Computer Delete Group Delete User Disable Computer Disable User Enable Computer Enable User		

	Get Computer Get Group Get Organizational Unit Get User Move Computer Move Group Move User Remove Computer From Group Remove Group From Group Remove User From Group Rename Group Rename User Reset User Password Unlock User Update Computer Update Group Update User		
V	Data Protection Manager How does DPM work? What can DPM back up? DPM-compatible tape libraries Get Started DPM build versions DPM release notes What's new in DPM What DPM supports How To Plan Your DPM Environment Get ready to deploy DPM servers Prepare your environment for DPM Prepare data storage Identify compatible tape libraries Identify data sources you want to protect Install or Upgrade DPM Install DPM Upgrade your DPM installation Add Modern Backup storage Deduplicate DPM storage Deploy DPM Deploy the DPM protection agent Deploy protection groups Configure firewall settings Offline backup Using own disk Protect Workloads Back up Hyper-V virtual machines Back up Exchange with DPM Back up SharePoint with DPM Back up SQL Server with DPM Back up client computers with DPM Back up file data with DPM Back up system state and bare metal Back up and restore VMware servers Back up and restore VMM servers Prepare to back up a generic data source Prepare machines in workgroups and untrusted domains for backup Back up the DPM server Monitor and Manage Monitor DPM Set up DPM logging Generate DPM reports Use SCOM to manage and monitor DPM servers Improve replication performance Use central console to manage DPM servers	**12**	**CO5**

M. Sc (Information Technology)		Semester – III	
Course Name: Cloud Management Practical		**Course Code: PSIT3P3c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:

CO1: Understand the concepts of VMM, SDN, NAS , HyperV etc.
CO2: Understand and demonstrate the use of Service manager with various deployments that can be performed using it.
CO3: Understand SCCM and Demonstrate the use of Configuration Manager
CO4: Understand automation with runbooks and demonstrate the use of Windows Orchestrator
CO5: Understand and demonstrate the use of Data Protection Manager

PSIT303d: Malware Analysis

M. Sc (Information Technology)		Semester – III	
Course Name: Malware Analysis		**Course Code: PSIT303d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Possess the skills necessary to carry out independent analysis of modern malware samples using both static and dynamic analysis techniques.
- Have an intimate understanding of executable formats, Windows internals and API, and analysis techniques.
- Extract investigative leads from host and network-based indicators associated with a malicious program.
- Apply techniques and concepts to unpack, extract, decrypt, or bypass new anti-analysis techniques in future malware samples.
- Achieve proficiency with industry standard tools including IDA Pro, OllyDbg, WinDBG, PE Explorer, ProcMon etc.

Unit	Details	Lectures	Outcome
I	**Malware Analysis:** Introduction, Techniques, Types of malware, General rules for Malware Analysis. **Basic Static Techniques:** Antivirus Scanning, Hashing, Finding Strings, Packed and Obfuscated Malware, Portable Executable Malware, Portable executable File Format, Linked Libraries and Functions, Static Analysis, The PE file headers and sections. **Malware Analysis in Virtual Machines:** Structure of VM, Creating and using Malware Analysis machine, Risks of using VMware for malware analysis, Record/Replay. **Basic Dynamic Analysis:** Sandboxes, Running Malware, Monitoring with process monitor, Viewing processes with process explorer, Comparing registry snapshots with regshot, Faking a network, Packet sniffing with Wireshark, Using INetSim, Basic Dynamic Tools. x86 Disassembly	**12**	**CO1**
II	**IDA PRO:** Loading an executable, IDA Pro Interface, Using cross references, Analysing functions, Using graphing options, Enhancing disassembly, Extending IDA with plug-ins. **Recognising C Code constructs in assembly:** Global v/s local variables, Disassembling arithmetic operations, recognizing if statements, recognizing loops, function call conventions, Analysing switch statements, Disassembling arrays, Identifying structs, Analysing linked list traversal. **Analysing Malicious Windows Programs:** The windows API, The Windows Registry, Networking APIs,	**12**	**CO2**

	Understanding running malware. Kernel v/s user mode, Native API. **Advanced Dynamic Analysis – Debugging:** Source-level v/s Assembly-level debugging, kernel v/s user mode debugging, Using a debugger, Exceptions, Modifying execution with a debugger, modifying program execution.		
III	**Advanced Dynamic Analysis – OLLYDBG:** Loading Malware, The Ollydbg Interface, Memory Map, Viewing threads and Stacks, Executing code, Breakpoints, Loading DLLs, Tracing, Exception handling, Patching, Analysing shell code, Assistance features, Plug-ins, Scriptable debugging. **Kernel Debugging with WINDBG:** Drivers and kernel code, Using WinDbg, Microsoft Symbols, kernel debugging and using it, Rootkits, Loading drivers, kernel issues with windows. **Malware Functionality – Malware Behavior:** Downloaders and launchers, Backdoors, Credential stealers, Persistence mechanisms, Privilege escalation, covering the tracks. **Covert Malware Launching:** Launchers, Process injection, Process replacement, Hook injection, detours, APC injection.	**12**	**CO3**
IV	**Data Encoding:** Goal of Analysing algorithms, Simple ciphers, Common cryptographic algorithms, Custom encoding, decoding. **Malware – focused network signatures:** Network countermeasures**,** Safely investigating attacker online, Content-Based Network Countermeasures, Combining Dynamic and Static Analysis Techniques, Understanding the Attacker's Perspective**.** **Anti-disassembly:** Concepts, Defeating disassembly algorithms, anti-disassembly techniques, Obscuring flow control, Thwarting stack-frame analysis. **Anti-debugging:** Windows debugger detection, debugger behavior, Interfering with debugger functionality, Debugger vulnerabilities.	**12**	**CO4**
V	**Anti-virtual machine techniques:** VMWare artifacts, Vulnerable functions, Tweaking settings, Escaping the virtual machine. **Packers and unpacking:** Packer anatomy, Identifying Packed Programs, Unpacking options, Automated Unpacking, Manual Unpacking, Common packers, Analysing without unpacking, Packed DLLs, **Shellcode Analysis:** Loading shellcode for analysis, Position-independent Code, Identifying Execution Location, Manual Symbol Resolution, Shellcode encoding, NOP Sleds, Finding Shellcode. **C++ Analysis:** OOP, Virtual and Non-virtual functions, Creating and destroying objects.	**12**	**CO5**

	64-bit Malware: Why 64-bit malware? Differences in x64 architecture, Windows 32-bit on Windows 64-bit, 64-bit hints at malware functionality.

M. Sc (Information Technology)		**Semester – III**	
Course Name: Malware Analysis Practical		**Course Code: PSIT3P3d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:
CO1: Understand various introductory techniques of malware analysis and creating the testing environment
CO2: Perform advanced dynamic analysis and recognize constructs in assembly code.
CO3: Perform Reverse Engineering using OLLYDBG and WINDBG and study the behaviours and functions of malware
CO4: Understand data encoding, various techniques for anti-disassembly and anti-debugging
CO5: Understand various anti virtual machine techniques and perform shellcode analysis of various languages along with x64 architecture.

PSIT304a: Robotic Process Automation

M. Sc (Information Technology)		Semester – III	
Course Name: Robotic Process Automation		**Course Code: PSIT304a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To make the students aware about the automation today in the industry.
- To make the students aware about the tools used for automation.
- To help the students automate a complete process

Unit	Details	Lectures	Outcome
I	**Robotic Process Automation:** Scope and techniques of automation, About UiPath **Record and Play:** UiPath stack, Downloading and installing UiPath Studio, Learning UiPath Studio, Task recorder, Step-by-step examples using the recorder.	**12**	**CO1**
II	**Sequence, Flowchart, and Control Flow:** Sequencing the workflow, Activities, Control flow, various types of loops, and decision making, Step-by-step example using Sequence and Flowchart, Step-by-step example using Sequence and Control flow **Data Manipulation:** Variables and scope, Collections, Arguments – Purpose and use, Data table usage with examples, Clipboard management, File operation with step-by-step example, CSV/Excel to data table and vice versa (with a step-by-step example)	**12**	**CO2**
III	**Taking Control of the Controls :** Finding and attaching windows, Finding the control, Techniques for waiting for a control, Act on controls – mouse and keyboard activities, Working with UiExplorer, Handling events, Revisit recorder, Screen Scraping, When to use OCR, Types of OCR available, How to use OCR, Avoiding typical failure points **Tame that Application with Plugins and Extensions:** Terminal plugin, SAP automation, Java plugin, Citrix automation, Mail plugin, PDF plugin, Web integration, Excel and Word plugins, Credential management, Extensions – Java, Chrome, Firefox, and Silverlight	**12**	**CO3**
IV	**Handling User Events and Assistant Bots:** What are assistant bots?, Monitoring system event triggers, Hotkey trigger, Mouse trigger, System trigger ,Monitoring image and element triggers, An example of	**12**	**CO4**

	monitoring email, Example of monitoring a copying event and blocking it, Launching an assistant bot on a keyboard event **Exception Handling, Debugging, and Logging:** Exception handling, Common exceptions and ways to handle them, Logging and taking screenshots, Debugging techniques, Collecting crash dumps, Error reporting		
V	**Managing and Maintaining the Code:** Project organization, Nesting workflows, Reusability of workflows, Commenting techniques, State Machine, When to use Flowcharts, State Machines, or Sequences, Using config files and examples of a config file, Integrating a TFS server **Deploying and Maintaining the Bot:** Publishing using publish utility, Overview of Orchestration Server, Using Orchestration Server to control bots, Using Orchestration Server to deploy bots, License management, Publishing and managing updates	**12**	**CO5**

M. Sc (Information Technology)		**Semester – III**	
Course Name: Robotic Process Automation		**Course Code: PSIT3P4a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completing the course, a learner will be able to:

CO1: Understand the mechanism of business process and can provide the solution in an optimize way.

CO2: Understand the features use for interacting with database plugins.

CO3: Use the plug-ins and other controls used for process automation.

CO4: Use and handle the different events, debugging and managing the errors.

CO5: Test and deploy the automated process.

PSIT304b: Virtual Reality and Augmented Reality

M. Sc (Information Technology)		**Semester – III**	
Course Name: Virtual Reality and Augmented Reality		**Course Code: PSIT304b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To learn background of VR including a brief history of VR, different forms of VR and related technologies, and broad overview of some of the most important concepts
- To provide background in perception to educate VR creators on concepts and theories of how we perceive and interact with the world around us
- To make learner aware of high-level concepts for designing/building assets and how subtle design choices can influence user behavior
- To learn about art for VR and AR should be optimized for spatial displays with spatially aware input devices to interact with digital objects in true 3D
- Walkthrough of VRTK, an open source project meant to spur on cross-platform development

Unit	Details	Lectures	Outcome
I	Introduction: What Is Virtual Reality, A History of VR, An Overview of Various Realities, Immersion, Presence, and Reality Trade-Offs, The Basics: Design Guidelines, Objective and Subjective Reality, Perceptual Models and Processes, Perceptual Modalities	**12**	**CO1**
II	Perception of Space and Time, Perceptual Stability, Attention, and Action, Perception: Design Guidelines, Adverse Health Effects, Motion Sickness, Eye Strain, Seizures, and Aftereffects, Hardware Challenges, Latency, Measuring Sickness, Reducing Adverse Effects, Adverse Health Effects: Design Guidelines	**12**	**CO2**
III	Content Creation, Concepts of Content Creation, Environmental Design, Affecting Behavior, Transitioning to VR Content Creation, Content Creation: Design Guidelines, Interaction, Human-Centered Interaction, VR Interaction Concepts, Input Devices, Interaction Patterns and Techniques, Interaction: Design Guidelines	**12**	**CO3**
IV	Design and Art Across Digital Realities, Designing for Our Senses, Virtual Reality for Art, 3D Art Optimization, Computer Vision That Makes Augmented Reality Possible Works, Virtual Reality and Augmented Reality: Cross-Platform Theory	**12**	**CO4**
V	Virtual Reality Toolkit: Open Source Framework for the Community, Data and Machine Learning Visualization	**12**	**CO5**

	Design and Development in Spatial Computing, Character AI and Behaviors, The Virtual and Augmented Reality Health Technology Ecosystem

Course Name: Virtual Reality and Augmented Reality Practical		**Course Code: PSIT3P4b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Apply the concepts of VR and AR in real life.
CO2: Reduce the greatest risk to VR.
CO3: Design the way users interact within the scenes they find themselves in.
CO4: be exposed to VR, AR and today's resources
CO5: Effectively use open source VR software.

PSIT304c: Data Centre Technologies

M. Sc (Information Technology)		Semester – III	
Course Name: Data Centre Technologies		**Course Code: PSIT304c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Identify important requirements to design and support a data center.
- Determine a data center environment's requirement including systems and network architecture as well as services.
- Evaluate options for server farms, network designs, high availability, load balancing, data center services, and trends that might affect data center designs.
- Assess threats, vulnerabilities and common attacks, and network security devices available to protect data centers.
- Design a data center infrastructure integrating features that address security, performance, and availability.
- Measure data center traffic patterns and performance metrics.

Unit	Details	Lectures	Outcome
I	Virtualization History and Definitions Data Center Essential Definitions Data Center Evolution Operational Areas and Data Center Architecture The Origins of Data Center Virtualization Virtual Memory Mainframe Virtualization Hot Standby Router Protocol Defining Virtualization Data Center Virtualization Timeline Classifying Virtualization Technologies A Virtualization Taxonomy Virtualization Scalability Technology Areas Classification Examples Summary Data Center Network Evolution Ethernet Protocol: Then and Now Ethernet Media Coaxial Cable Twisted-Pair Optical Fiber Direct-Attach Twinaxial Cables Ethernet Data Rate Timeline Data Center Network Topologies Data Center Network Layers Design Factors for Data Center Networks Physical Network Layout Considerations The ANSI/TIA-942 Standard Network Virtualization Benefits Network Logical Partitioning Network Simplification and Traffic Load Balancing Management Consolidation and Cabling Optimization Network Extension	**12**	**CO1**

CO1: Understand basic concepts in Virtualization.
CO2: Understand concepts of Load Balancing and Aggregation /virtual switching
CO3: Understand Data center Migration and Fabric Building
CO4: Understand various Changes in Server Architecture
CO5: Understand the concepts of Cloud computing and how to move towards a cloud computing technology.

PSIT304d: Offensive Security

M. Sc (Information Technology)		Semester – III	
Course Name: Offensive Security		**Course Code: PSIT304d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understanding of security requirements within an organization
- How to inspect, protect assets from technical and managerial perspectives
- To Learn various offensive strategies to penetrate the organizations security.
- To learn various tools that aid in offensive security testing.

Unit	Details	Lectures	Outcome
I	Fault Tolerance and Resilience in Cloud Computing Environments, Securing Web Applications, Services, and Servers, Wireless Network Security, Wireless Sensor Network Security: The Internet of Things, Security for the Internet of Things, Cellular Network Security	**12**	**CO1**
II	Social Engineering Deceptions and Defenses, What Is Vulnerability Assessment, Risk Management, Insider Threat, Disaster Recovery, Security Policies and Plans Development	**12**	**CO2**
III	Introduction to Metasploit and Supporting Tools The importance of penetration testing Vulnerability assessment versus penetration testing The need for a penetration testing framework Introduction to Metasploit When to use Metasploit? Making Metasploit effective and powerful using supplementary tools Nessus NMAP w3af Armitage Setting up Your Environment Using the Kali Linux virtual machine - the easiest way Installing Metasploit on Windows Installing Metasploit on Linux Setting up exploitable targets in a virtual environment Metasploit Components and Environment Configuration Anatomy and structure of Metasploit Metasploit components Auxiliaries Exploits Encoders Payloads Post, Playing around with msfconsole Variables in Metasploit Updating the Metasploit Framework 55	**12**	**CO3**

IV	Information Gathering with Metasploit Information gathering and enumeration Transmission Control Protocol User Datagram Protocol File Transfer Protocol Server Message Block Hypertext Transfer Protocol Simple Mail Transfer Protocol Secure Shell Domain Name System Remote Desktop Protocol Password sniffing Advanced search with shodan Vulnerability Hunting with Metasploit Managing the database Work spaces Importing scans Backing up the database **NMAP** NMAP scanning approach **Nessus** Scanning using Nessus from msfconsole Vulnerability detection with Metasploit auxiliaries Auto exploitation with db_autopwn **Post exploitation** What is meterpreter? Searching for content Screen capture Keystroke logging Dumping the hashes and cracking with JTR Shell command Privilege escalation Client-side Attacks with Metasploit Need of client-side attacks What are client-side attacks? What is a Shellcode? What is a reverse shell? What is a bind shell? What is an encoder? **The msfvenom utility** Generating a payload with msfvenom Social Engineering with Metasploit Generating malicious PDF Creating infectious media drives	**12**	**CO4**
V	Approaching a Penetration Test Using Metasploit Organizing a penetration test Preinteractions Intelligence gathering/reconnaissance phase Predicting the test grounds Modeling threats Vulnerability analysis Exploitation and post-exploitation Reporting Mounting the environment Setting up Kali Linux in virtual environment The fundamentals of Metasploit Conducting a penetration test with Metasploit Recalling the basics of Metasploit Benefits of penetration testing using Metasploit Open source Support for testing large networks and easy naming conventions Smart payload generation and switching mechanism Cleaner exits The GUI environment	**12**	**CO5**

	Penetration testing an unknown network Assumptions Gathering intelligence Using databases in Metasploit Modeling threats Vulnerability analysis of VSFTPD backdoor The attack procedure The procedure of exploiting the vulnerability Exploitation and post exploitation Vulnerability analysis of PHP-CGI query string parameter vulnerability Exploitation and post exploitation Vulnerability analysis of HFS Exploitation and post exploitation Maintaining access Clearing tracks Revising the approach Reinventing Metasploit Ruby – the heart of Metasploit Creating your first Ruby program Interacting with the Ruby shell Defining methods in the shell Variables and data types in Ruby Working with strings Concatenating strings The substring function The split function Numbers and conversions in Ruby Conversions in Ruby Ranges in Ruby Arrays in Ruby Methods in Ruby Decision-making operators Loops in Ruby Regular expressions Wrapping up with Ruby basics **Developing custom modules** Building a module in a nutshell The architecture of the Metasploit framework Understanding the file structure The libraries layout Understanding the existing modules The format of a Metasploit module Disassembling existing HTTP server scanner module Libraries and the function Writing out a custom FTP scanner module Libraries and the function Using msftidy Writing out a custom SSH authentication brute forcer Rephrasing the equation Writing a drive disabler post exploitation module Writing a credential harvester post exploitation module **Breakthrough meterpreter scripting** Essentials of meterpreter scripting Pivoting the target network Setting up persistent access API calls and mixins Fabricating custom meterpreter scripts Working with RailGun Interactive Ruby shell basics Understanding RailGun and its scripting Manipulating Windows API calls Fabricating sophisticated RailGun scripts		

	The Exploit Formulation Process The absolute basics of exploitation The basics The architecture System organization basics Registers Exploiting stack-based buffer overflows with Metasploit Crashing the vulnerable application Building the exploit base Calculating the offset Using the pattern_create tool Using the pattern_offset tool Finding the JMP ESP address Using Immunity Debugger to find executable modules Using msfbinscan Stuffing the space Relevance of NOPs Determining bad characters Determining space limitations Writing the Metasploit exploit module Exploiting SEH-based buffer overflows with Metasploit Building the exploit base Calculating the offset Using pattern_create tool Using pattern_offset tool *Table of Contents* Finding the POP/POP/RET address The Mona script Using msfbinscan Writing the Metasploit SEH exploit module Using NASM shell for writing assembly instructions **Bypassing DEP in Metasploit modules** Using msfrop to find ROP gadgets Using Mona to create ROP chains Writing the Metasploit exploit module for DEP bypass

1.	Computer and Information Security Handbook	John R. Vacca	Morgan Kaufmann Publisher	3rd	2017
2.	Metasploit Revealed: Secrets of the Expert Pentester	Sagar Rahalkar	Packt Publishing		2017

M. Sc (Information Technology)		**Semester – III**	
Course Name: Offensive Security Practical		**Course Code: PSIT3P4d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:
CO1: Understand basic security issues in cloud, IoT etc.
CO2: Understand different security techniques and policies
CO3: Use Vulnerability assessment and exploitation tool
CO4: Analyze the network perform reconnaissance and enumerate the target to detect vulnerabilities
CO5: Perform offensive tests using Metasploit on various application, generating payloads etc.

SEMESTER IV

PSIT401: Blockchain

M. Sc (Information Technology)		Semester – IV	
Course Name: Blockchain		**Course Code: PSIT401**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To provide conceptual understanding of the function of Blockchain as a method of securing distributed ledgers, how consensus on their contents is achieved, and the new applications that they enable.
- To cover the technological underpinnings of blockchain operations as distributed data structures and decision-making systems, their functionality and different architecture types.
- To provide a critical evaluation of existing "smart contract" capabilities and platforms, and examine their future directions, opportunities, risks and challenges.

Unit	Details	Lectures	Outcome
I	**Blockchain:** Introduction, History, Centralised versus Decentralised systems, Layers of blockchain, Importance of blockchain, Blockchain uses and use cases. **Working of Blockchain:** Blockchain foundation, Cryptography, Game Theory, Computer Science Engineering, Properties of blockchain solutions, blockchain transactions, distributed consensus mechanisms, Blockchain mechanisms, Scaling blockchain **Working of Bitcoin:** Money, Bitcoin, Bitcoin blockchain, bitcoin network, bitcoin scripts, Full Nodes and SVPs, Bitcoin wallets.	**12**	**CO1**
II	**Ethereum:** three parts of blockchain, Ether as currency and commodity, Building trustless systems, Smart contracts, Ethereum Virtual Machine, The Mist browser, Wallets as a Computing Metaphor, The Bank Teller Metaphor, Breaking with Banking History, How Encryption Leads to Trust, System Requirements, Using Parity with Geth, Anonymity in Cryptocurrency, Central Bank Network, Virtual Machines, EVM Applications, State Machines, Guts of the EVM, Blocks, Mining's Place in the State Transition Function, Renting Time on the EVM, Gas, Working with Gas, Accounts, Transactions, and Messages, Transactions and Messages, Estimating Gas Fees for Operations, Opcodes in the EVM.	**12**	**CO2**

	Solidity Programming: Introduction, Global Banking Made Real, Complementary Currency, Programming the EVM, Design Rationale, Importance of Formal Proofs, Automated Proofs, Testing, Formatting Solidity Files, Reading Code, Statements and Expressions in Solidity, Value Types, Global Special Variables, Units, and Functions,		
III	**Hyperledger:** Overview, Fabric, composer, installing hyperledger fabric and composer, deploying, running the network, error troubleshooting. **Smart Contracts and Tokens:** EVM as Back End, Assets Backed by Anything, Cryptocurrency Is a Measure of Time, Function of Collectibles in Human Systems, Platforms for High-Value Digital Collectibles, Tokens as Category of Smart Contract, Creating a Token, Deploying the Contract, Playing with Contracts.	**12**	**CO3**
IV	**Mining Ether:** Why? Ether's Source, Defining Mining, Difficulty, Self-Regulation, and the Race for Profit, How Proof of Work Helps Regulate Block Time, DAG and Nonce, Faster Blocks, Stale Blocks, Difficulties, Ancestry of Blocks and Transactions, Ethereum and Bitcoin, Forking, Mining, Geth on Windows, Executing Commands in the EVM via the Geth Console, Launching Geth with Flags, Mining on the Testnet, GPU Mining Rigs, Mining on a Pool with Multiple GPUs. **Cryptoecnomics:** Introduction, Usefulness of cryptoeconomics, Speed of blocks, Ether Issuance scheme, Common Attack Scenarios.	**12**	**CO4**
V	**Blockchain Application Development:** Decentralized Applications, Blockchain Application Development, Interacting with the Bitcoin Blockchain, Interacting Programmatically with Ethereum—Sending Transactions, Creating a Smart Contract, Executing Smart Contract Functions, Public vs. Private Blockchains, Decentralized Application Architecture, **Building an Ethereum DApp:** The DApp, Setting Up a Private Ethereum Network, Creating the Smart Contract, Deploying the Smart Contract, Client Application, **DApp deployment:** Seven Ways to Think About Smart Contracts, Dapp Contract Data Models, EVM back-end and front-end communication, JSON-RPC, Web 3, JavaScript API, Using Meteor with the EVM, Executing Contracts in the Console, Recommendations for Prototyping, Third-Party Deployment Libraries, **Creating Private Chains.**	**12**	**CO5**

M. Sc (Information Technology)		**Semester – III**	
Course Name: Blockchain		**Course Code: PSIT**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:

CO1: The students would understand the structure of a blockchain and why/when it is better than a simple distributed database.

CO2: Analyze the incentive structure in a blockchain based system and critically assess its functions, benefits and vulnerabilities

CO3: Evaluate the setting where a blockchain based structure may be applied, its potential and its limitations

CO4: Understand what constitutes a "smart" contract, what are its legal implications and what it can and cannot do, now and in the near future

CO5: Develop blockchain DApps.

PSIT402a: Natural Language Processing

M. Sc (Information Technology)		Semester – IV	
Course Name: Natural Language Processing		**Course Code: PSIT402a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- The prime objective of this course is to introduce the students to the field of Language Computing and its applications ranging from classical era to modern context.
- To provide understanding of various NLP tasks and NLP abstractions such as Morphological analysis, POS tagging, concept of syntactic parsing, semantic analysis etc.
- To provide knowledge of different approaches/algorithms for carrying out NLP tasks.
- To highlight the concepts of Language grammar and grammar representation in Computational Linguistics.

Unit	Details	Lectures	Outcome
I	Introduction to NLP, brief history, NLP applications: Speech to Text(STT), Text to Speech(TTS), Story Understanding, NL Generation, QA system, Machine Translation, Text Summarization, Text classification, Sentiment Analysis, Grammar/Spell Checkers etc., challenges/Open Problems, NLP abstraction levels, Natural Language (NL) Characteristics and NL computing approaches/techniques and steps, NL tasks: Segmentation, Chunking, tagging, NER, Parsing, Word Sense Disambiguation, NL Generation, Web 2.0 Applications : Sentiment Analysis; Text Entailment; Cross Lingual Information Retrieval (CLIR).	**12**	**CO1**
II	Text Processing Challenges, Overview of Language Scripts and their representation on Machines using Character Sets, Language, Corpus and Application Dependence issues, Segmentation: word level(Tokenization), Sentence level. Regular Expression and Automata Morphology, Types, Survey of English and Indian Languages Morphology, Morphological parsing FSA and FST, Porter stemmer, Rule based and Paradigm based Morphology, Human Morphological Processing, Machine Learning approaches.	**12**	**CO2**
III	Word Classes ad Part-of-Speech tagging(POS), survey of POS tagsets, Rule based approaches (ENGTOWL), Stochastic approaches(Probabilistic, N-gram and HMM), TBL morphology, unknown word handling,	**12**	**CO3**

	evaluation metrics: Precision/Recall/F-measure, error analysis.		
IV	NL parsing basics, approaches: TopDown, BottomUp, Overview of Grammar Formalisms: constituency and dependency school, Grammar notations CFG, LFG, PCFG, LTAG, Feature- Unification, overview of English CFG, Indian Language Parsing in Paninian Karaka Theory, CFG parsing using Earley's and CYK algorithms, Probabilistic parsing, Dependency Parsing: Covington algorithm, MALT parser, MST parser.	**12**	**CO4**
V	Concepts and issues in NL, Theories and approaches for Semantic Analysis, Meaning Representation, word similarity, Lexical Semantics, word senses and relationships, WordNet (English and IndoWordnet), Word Sense Disambiguation: Lesk Algorithm Walker's algorithm, Coreferences Resolution:Anaphora, Cataphora.	**12**	**CO5**

M. Sc (Information Technology)		**Semester – IV**	
Course Name: Natural Language Processing Practical		**Course Code: PSIT4P2a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Students will get idea about know-hows, issues and challenge in Natural Language Processing and NLP applications and their relevance in the classical and modern context.

CO2: Student will get understanding of Computational techniques and approaches for solving NLP problems and develop modules for NLP tasks and tools such as Morph Analyzer, POS tagger, Chunker, Parser, WSD tool etc.

CO3: Students will also be introduced to various grammar formalisms, which they can apply in different fields of study.

CO4: Students can take up project work or work in R&D firms working in NLP and its allied areas.

CO5: Student will be able to understand applications in different sectors

PSIT402b: Digital Image Forensics

M. Sc (Information Technology)		Semester – IV	
Course Name: Digital Image Forensics		**Course Code: PSIT402b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To understand describe the origin of computer forensics and the relationship between law enforcement and industry.
- Describe electronic evidence and the computing investigation process.
- Extracting Digital Evidence from Images and establishing them in court of Law.
- Enhancing images for investigation and various techniques to enhance images.
- Interpret and present Evidences in Court of Law.

Unit	Details	Lectures	Outcome
I	History of Forensic Digital Enhancement, Establishing Integrity of Digital Images for Court,	**12**	**CO1**
II	Digital Still and Video Cameras, Color Modes and Channel Blending to Extract Detail	**12**	**CO2**
III	Multiple Image Techniques, Fast Fourier Transform (FFT) – Background Pattern Removal.	**12**	**CO3**
IV	Contrast Adjustment Techniques, Advanced Processing Techniques, Comparison and Measurement	**12**	**CO4**
V	The Approach – Developing Enhancement Strategies for Images Intended for Analysis, Digital Imaging in the Courts, Interpreting and Presenting Evidence	**12**	**CO5**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year

2.	Forensic Uses of Digital Imaging	John C. Russ, Jens Rindel, P. Lord	Taylor & Francis Group	2nd	2016

M. Sc (Information Technology)		Semester – III	
Course Name: Digital Image Forensics Practical		**Course Code: PSIT4P2b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand the basics of image forensics and techniques to establish their integrity

CO2: Understand different techniques for extracting detail from images.

CO3: Understand and apply various advanced techniques in image processing and to compare and measure various parameters associated with them

CO4: Apply various enhancement strategies for digital images

CO5: Prepare the evidence to be acceptable in the court of law.

PSIT402c: Advanced IoT

M. Sc (Information Technology)		**Semester – IV**	
Course Name: Advanced IoT		**Course Code: PSIT402c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To understand the latest developments in IoT
- To build smart IoT applications
- To leverage the applications of IoT in different technologies
- To build own IoT platform

Unit	Details	Lectures	Outcome
I	The Artificial Intelligence 2.0, IoT and Azure IoT Suite, Creating Smart IoT Application	**12**	**CO1**
II	Cognitive APIs, Consuming Microsoft Cognitive APIs, Building Smarter Application using Cognitive APIs.	**12**	**CO2**
III	Implementing Blockchain as a service, Capturing, Analysing and Visualizing real-time data, Making prediction with machine learning.	**12**	**CO3**
IV	IoT and Microservices, Service Fabric, Build your own IoT platform: Introduction, Building blocks for IoT solution, Essentials for building your own platform, Platform requirements, building the platform by initializing cloud instance, installing basic software stacks, securing instance and software, installing node.js and Node-RED, Message broker.	**12**	**CO4**
V	Building Critical components, configuring message broker, creating REST interface, Rule engine and authentication, documentation and testing, Introspection on what we build and deliverables.	**12**	**CO5**

Books and References:

3.	Build your own IoT Platform	Anand Tamboli	Apress	--	2019

4.	Internet of Things Architectures, Protocols and Standards	Simone Cirani Gianluigi Ferrari Marco Picone Luca Veltri	Wiley	1	2019

M. Sc (Information Technology)		**Semester – IV**	
Course Name: Advanced IoT Practical		**Course Code: PSIT4P2c**	
Periods per week (1 Period is 60 minutes)		**4**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**50**
	Internal	**--**	**-**

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Build smart IoT applications on Azure.

CO2: Use Microsoft cognitive APIs to build IoT applications.

CO3: Implement Blockchain in IoT.

CO4: Install and use microservices in IoT.

CO5: Build own IoT platform and use it in a customised way.

PSIT402d: Cyber Forensics

M. Sc (Information Technology)		Semester – IV	
Course Name: Cyber Forensics		**Course Code: PSIT402d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Explain laws relevant to computer forensics
- Seize digital evidence from pc systems
- Recover data to be used as evidence
- Analyse data and reconstruct events
- Explain how data may be concealed or hidden

Unit	Details	Lectures	Outcome
I	Computer Forensics: The present Scenario, The Investigation Process, Computers – Searching and Seizing, Electronic Evidence, Procedures to be followed by the first responder.	**12**	**CO1**
II	Setting up a lab for Computer Forensics, Hard Disks and File Systems, Forensics on Windows Machine, Acquire and Duplicate Data	**12**	**CO2**
III	Recovery of deleted files and partitions, Using Access Data FTK and Encase for forensics Investigation, Forensic analysis of Steganography and Image files, Cracking Application passwords.	**12**	**CO3**
IV	Capturing logs and correlating to the events, Network Forensics – Investigating logs and Network traffic, Investigating Wireless and Web Attacks.	**12**	**CO4**
V	Email Tracking and Email Crime investigation. Mobile Forensics, Reports of Investigation, Become an expert witness.	**12**	**CO5**

4.	Practical Cyber Forensics	Niranjan Reddy	Apress	--	2019

M. Sc (Information Technology)		Semester – IV	
Course Name: Cyber Forensics Practical		**Course Code: PSIT4P2d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Investigate the cyber forensics with standard operating procedures.

CO2: Recover the data from the hard disk with legal procedure.

CO3: To recover and analyse the data using forensics tool

CO4: Acquire the knowledge of network analysis and use it for analysing the internet attacks.

CO5: Able to investigate internet frauds done through various gadgets like mobile, laptops, tablets and become a forensic investigator.

PSIT403a: Deep Learning

M. Sc (Information Technology)		Semester – IV	
Course Name: Deep Learning		**Course Code: PSIT403a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- To present the mathematical, statistical and computational challenges of building neural networks
- To study the concepts of deep learning
- To enable the students to know deep learning techniques to support real-time applications

Unit	Details	Lectures	Outcome
I	**Applied Math and Machine Learning Basics:** Linear Algebra: Scalars, Vectors, Matrices and Tensors , Multiplying Matrices and Vectors , Identity and Inverse Matrices, Linear Dependence and Span , norms, special matrices and vectors, eigen decompositions. **Numerical Computation:** Overflow and under flow, poor conditioning, Gradient Based Optimization, Constraint optimization.	**12**	**CO1**
II	**Deep Networks:** Deep feedforward network , regularization for deep learning , Optimization for Training deep models	**12**	**CO2**
III	Convolutional Networks, Sequence Modelling, Applications	**12**	**CO3**
IV	Deep Learning Research: Linear Factor Models, Autoencoders, representation learning	**12**	**CO4**
V	Approximate Inference, Deep Generative Models	**12**	**CO5**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year

3.	Deep Learning: Methods and Applications	Deng & Yu	Now Publishers	1st	2013
4.	Deep Learning CookBook	Douwe Osinga	O'Reilly	1st	2017

M. Sc (Information Technology)		Semester – IV	
Course Name: Deep Learning Practical		**Course Code: PSIT4P3a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:
After completion of the course, a student should be able to:
CO1: Describes basics of mathematical foundation that will help the learner to understand the concepts of Deep Learning.
CO2: Understand and describe model of deep learning
CO3: Design and implement various deep supervised learning architectures for text & image data.
CO4: Design and implement various deep learning models and architectures.
CO5: Apply various deep learning techniques to design efficient algorithms for real-world applications.

PSIT403b: Remote Sensing

M. Sc (Information Technology)		Semester – IV	
Course Name: Remote Sensing Practical		**Course Code: PSIT403b**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Attain a foundational knowledge and comprehension of the physical, computational, and perceptual basis for remote sensing.
- Gain familiarity with a variety of physical, biological, and human geographic applications of remote sensing.
- Gain basic experience in the hands-on application of remote sensing data through visual interpretation and digital image processing exercises.
- Analyze and synthesize understanding by identifying and developing a research and application proposal using remote sensing.

Unit	Details	Lectures	Outcome
I	Remote Sensing: Basic Principles Introduction, Electromagnetic Radiation and Its Properties, Terminology, Nature of Electromagnetic Radiation, The Electromagnetic Spectrum, Sources of Electromagnetic Radiation, Interactions with the Earth's Atmosphere, Interaction with Earth-Surface Materials, Spectral Reflectance of Earth Surface Materials Remote Sensing Platforms and Sensors Introduction, Characteristics of Imaging Remote Sensing Instruments, Spatial Resolution, Spectral Resolution, Radiometric Resolution, Optical, Near-infrared and Thermal Imaging Sensors, Along-Track Scanning Radiometer (ATSR), Advanced Very High Resolution Radiometer (AVHRR) and NPOESS VIIRS, MODIS, Ocean Observing Instruments, IRS LISS, Landsat Instruments, SPOT Sensors, Advanced Spaceborne Thermal Emission and Reflection Radiometer (ASTER), High-Resolution Commercial and Small Satellite Systems, Microwave Imaging Sensors, European Space Agency Synthetic Aperture Spaceborne Radars, Radarsat, TerraSAR-X and COSMO/Skymed, ALOS PALSAR	**12**	**CO1**
II	Hardware and Software Aspects of Digital Image Processing Introduction, Properties of Digital Remote Sensing Data, Digital Data, Data Formats, System Processing,	**12**	**CO2**

	Numerical Analysis and Software Accuracy, Some Remarks on Statistics, Preprocessing of Remotely-Sensed Data Introduction, Cosmetic Operations, Missing Scan Lines, Destriping Methods, Geometric Correction and Registration, Orbital Geometry Model, Transformation Based on Ground Control Points, Resampling Procedures, Image Registration, Other Geometric Correction Methods, Atmospheric Correction, Background, Image-Based Methods, Radiative Transfer Models, Empirical Line Method, Illumination and View Angle Effects, Sensor Calibration, Terrain Effects		
III	Image Enhancement Techniques Introduction, Human Visual System, Contrast Enhancement, Linear Contrast Stretch, Histogram Equalization, Gaussian Stretch, Pseudocolour Enhancement, Density Slicing, Pseudocolour Transform, Image Transforms Introduction, Arithmetic Operations, Image Addition, Image Subtraction, Image Multiplication, Image Division and Vegetation Indices, Empirically Based Image Transforms, Perpendicular Vegetation Index, Tasselled Cap (Kauth–Thomas) Transformation, Principal Components Analysis, Standard Principal Components Analysis, Noise-Adjusted PCA, Decorrelation Stretch, Hue-Saturation-Intensity (HSI) Transform, The Discrete Fourier Transform, Two-Dimensional Fourier Transform, Applications of the Fourier Transform, The Discrete Wavelet Transform, The One-Dimensional Discrete Wavelet Transform, The Two-Dimensional Discrete Wavelet Transform, Change Detection, Introduction, NDVI Difference Image, PCA, Canonical Correlation Change Analysis, Image Fusion, HSI Algorithm, PCA, Gram-Schmidt Orthogonalization, Wavelet-Based Methods, Evaluation – Subjective Methods, Evaluation – Objective Methods	**12**	**CO3**
IV	Filtering Techniques Spatial Domain Low-Pass (Smoothing) Filters, Moving Average Filter, Median Filter, Adaptive Filters, Spatial Domain High-Pass (Sharpening) Filters, Image Subtraction Method, Derivative-Based Methods, Spatial Domain Edge Detectors, Frequency Domain Filters **Classification :** Geometrical Basis of Classification, Unsupervised Classification, The *k*-Means Algorithm, ISODATA, A Modified *k*-Means Algorithm, Supervised Classification, Training Samples, Statistical Classifiers, Neural Classifiers, Subpixel Classification Techniques, The Linear Mixture Model, Spectral Angle Mapping, ICA, Fuzzy Classifiers, More Advanced Approaches to	**12**	**CO4**

	Image Classification, Support Vector Machines , Decision Trees , Other Methods of Classification, Incorporation of Non-spectral Features, Texture, Use of External Data, Contextual Information, Feature Selection, Classification Accuracy Advanced Topics Introduction, SAR Interferometry, Basic Principles, Interferometric Processing, Problems in SAR Interferometry, Applications of SAR Interferometry, Imaging Spectroscopy, Processing Imaging Spectroscopy Data, Lidar, Lidar Details, Lidar Applications

Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand the basics of remote sensing and its various applications

CO2: Understand the Hardware and Software aspects of Digital Image Processing and demonstrate various techniques in pre-processing data

CO3: Demonstrate various image enhancement and transformation techniques.
CO4: Understand and Demonstrate various filtering, classification techniques along with advanced functionalities.

CO5: Perform comparison of Field and Remotely sensed measurements using various techniques.

PSIT403c: Server Virtualization on VMWare Platform

M. Sc (Information Technology)		Semester – IV	
Course Name: Server Virtualization on VMWare Platform		**Course Code: PSIT403c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Identify the need for Server Virtualization
- Describe the components and features of vSphere 6.7 and ESXi
- Describe how VMware's products help solve business and technical challenges with regard to Server Virtualization

Unit	Details	Lectures	Outcome
I	**Introducing VMware vSphere 6.7:** Exploring VMware vSphere 6.7, Examining the Products in the vSphere Suite, Examining the Features in VMware vSphere, Licensing VMware vSphere, Why Choose vSphere? **Planning and Installing VMware ESXi:** VMware ESXi Architecture, Understanding the ESXi Hypervisor, Examining the ESXi Components, Planning a VMware vSphere Deployment, Choosing a Server Platform, Determining a Storage Architecture, Integrating with the Network Infrastructure, Deploying VMware ESXi, Installing VMware ESXi Interactively, Performing an Unattended Installation of VMware ESXi, Deploying VMware ESXi with vSphere Auto Deploy, Performing Post-installation Configuration, Reconfiguring the Management Network, Using the vSphere Host Client, Configuring Time Synchronization, Configuring Name Resolution, **Installing and Configuring vCenter Server:** Introducing vCenter Server, Centralizing User Authentication Using vCenter Single Sign-On, Understanding the Platform Services Controller, Using the vSphere Web Client for Administration, Providing an Extensible Framework, Choosing the Version of vCenter Server, Planning and Designing a vCenter Server Deployment, Sizing Hardware for vCenter Server, Planning for vCenter Server Availability, Running vCenter Server and Its Components as VMs, Installing vCenter Server and Its Components, Installing vCenter Server in an Enhanced Linked Mode Group, Exploring vCenter Server, The vSphere Web Client Home Screen,	**12**	**CO1**

	Using the Navigator, Creating and Managing a vCenter Server Inventory, Understanding Inventory Views and Objects, Creating and Adding Inventory Objects, Exploring vCenter Server's Management Features, Understanding Basic Host Management, Examining Basic Host Configuration, Using Scheduled Tasks, Using the Events and Events Consoles in vCenter Server, Working with Host Profiles, Tags and Custom Attributes, Managing vCenter Server Settings, General vCenter Server Settings, Licensing, Message of the Day, Advanced Settings, Auto Deploy, vCenter HA, Key Management Servers, Storage Providers, vSphere Web Client Administration, Roles, Licensing, vCenter Solutions Manager, System Configuration, VMware Appliance Management Administration, Summary, Monitor, Access, Networking, Time, Services, Update, Administration, Syslog, Backup.		
II	vSphere Update Manager and the vCenter Support Tools: vSphere Update Manager, vSphere Update Manager and the vCenter Server Appliance, Installing the Update Manager Download Service, The vSphere Update Manager Plug-in Contents, Reconfiguring the VUM or UMDS, Installation with the Update Manager Utility, Upgrading VUM from a Previous Version, Configuring vSphere Update Manager, Creating Baselines Routine Updates, Attaching and Detaching Baselines or Baseline Groups, Performing a Scan, Staging Patches, Remediating Hosts, Upgrading VMware Tools, Upgrading Host Extensions, Upgrading Hosts with vSphere Update Manager, Importing an ESXi Image and Creating the Host Upgrade Baseline, Upgrading a Host, Upgrading VM Hardware, Performing an Orchestrated Upgrade, Investigating Alternative Update Options, Using vSphere Update Manager PowerCLI, Upgrading and Patching without vSphere Update Manager, vSphere Auto Deploy, Deploying Hosts with Auto Deploy, vCenter Support Tools, ESXi Dump Collector, Other vCenter Support Tools. **Creating and Configuring a vSphere Network:** Putting Together a vSphere Network, Working with vSphere Standard Switches, Comparing Virtual Switches and Physical Switches, Understanding Ports and Port Groups, Understanding Uplinks, Configuring the Management Network, Configuring VMkernel Networking, Enabling Enhanced Multicast Functions, Configuring TCP/IP Stacks, Configuring Virtual Machine Networking, Configuring VLANs, Configuring NIC Teaming, Using and Configuring Traffic Shaping, Bringing It All Together, Working with vSphere Distributed Switches,	**12**	**CO2**

	Creating a vSphere Distributed Switch, Removing an ESXi Host from a Distributed Switch, Removing a Distributed Switch, Managing Distributed Switches, Working with Distributed Port Groups, Managing VMkernel Adapters, Using NetFlow on vSphere Distributed Switches, Enabling Switch Discovery Protocols, Enabling Enhanced Multicast Functions, Setting Up Private VLANs, Configuring LACP, Configuring Virtual Switch Security, Understanding and Using Promiscuous Mode, Allowing MAC Address Changes and Forged Transmits.		
III	**Creating and Configuring Storage Devices:** Reviewing the Importance of Storage Design, Examining Shared Storage Fundamentals, Comparing Local Storage with Shared Storage, Defining Common Storage Array Architectures, Explaining RAID, Understanding vSAN, Understanding Midrange and External Enterprise Storage Array Design, Choosing a Storage Protocol, Making Basic Storage Choices, Implementing vSphere Storage Fundamentals, Reviewing Core vSphere Storage Concepts, Understanding Virtual Volumes, SCs vs LUNs, Storage Policies, Virtual Volumes, Working with VMFS Datastores, Working with Raw Device Mappings, Working with NFS Datastores, Working with vSAN, Working with Virtual Machine–Level Storage, Configuration, Leveraging SAN and NAS Best Practices **Ensuring High Availability and Business Continuity:** Understanding the Layers of High Availability, Clustering VMs, Introducing Network Load Balancing Clustering, Introducing Windows Server Failover Clustering, Implementing vSphere High Availability, Understanding vSphere High Availability Clusters. Understanding vSphere High Availability's Core Components, Enabling vSphere HA, Configuring vSphere High Availability, Configuring vSphere HA Groups, Rules, Overrides, and Orchestrated VM Restart, Managing vSphere High Availability, Introducing vSphere SMP Fault Tolerance, Using vSphere SMP Fault Tolerance with vSphere High Availability, Examining vSphere Fault Tolerance, Use Cases, Planning for Business Continuity, Providing Data Protection, Recovering from Disasters, Using vSphere Replication. **Securing VMware vSphere:** Overview of vSphere Security, Securing ESXi Hosts, Working with ESXi Authentication, Controlling Access to ESXi Hosts, Keeping ESXi Hosts Patched, Managing ESXi Host Permissions, Configuring ESXi Host Logging, Securing the ESXi Boot Process, Reviewing Other ESXi Security Recommendations, Securing vCenter Server,	**12**	**CO3**

	Managing vSphere Certificates, Working with Certificate Stores, Getting Started with Certificate Management, Authenticating Users with Single Sign-On, Understanding the vpxuser Account, Managing vCenter Server Permissions, Configuring vCenter Server Appliance Logging, Securing Virtual Machines, Configuring a Key Management Server for VM and VSAN Encryption, Virtual Trusted Platform Module, Configuring Network Security Policies, Keeping VMs Patched.		
IV	**Creating and Managing Virtual Machines:** Understanding Virtual Machines, Examining Virtual Machines from the Inside, Examining Virtual Machines from the Outside, Creating a Virtual Machine, Choosing Values for Your New Virtual Machine, Sizing Virtual Machines, Naming Virtual Machines, Sizing Virtual Machine Hard Disks, Virtual Machine Graphics, Installing a Guest Operating System, Working with Installation Media, Using the Installation Media, Working in the Virtual Machine Console, Installing VMware Tools, Installing VMware Tools in Windows, Installing VMware Tools in Linux, Managing Virtual Machines, Adding or Registering Existing VMs, Changing VM Power States, Removing VMs, Deleting VMs, Modifying Virtual Machines, Changing Virtual Machine Hardware, Using Virtual Machine Snapshots. **Using Templates and vApps:** Cloning VMs, Creating a Customization Specification, Cloning a Virtual Machine, Introducing vSphere Instant Cloning, Creating Templates and Deploying Virtual Machines, Cloning a Virtual Machine to a Template, Deploying a Virtual Machine from a Template, Using OVF Templates, Deploying a VM from an OVF Template, Exporting a VM as an OVF Template, Examining OVF Templates, Using Content Libraries, Content Library Data and Storage, Content Library Synchronization, Creating and Publishing a Content Library, Subscribing to a Content Library, Operating Content Libraries, Working with vApps, Creating a vApp, Editing a vApp, Changing a vApp's Power State, Cloning a vApp, Importing Machines from Other Environments, **Managing Resource Allocation:** Reviewing Virtual Machine, Resource Allocation, Working with Virtual Machine Memory, Understanding ESXi Advanced Memory Technologies, Controlling Memory Allocation, Managing Virtual Machine CPU Utilization, Default CPU Allocation, Setting CPU Affinity, Using CPU Reservations, Using CPU Limits, Using CPU Shares, Summarizing How Reservations, Limits, and Shares Work with CPUs, Using Resource Pools, Configuring	**12**	**CO4**

	Resource Pools, Understanding Resource Allocation with Resource Pools, Regulating Network I/O Utilization, Controlling Storage I/O Utilization, Enabling Storage I/O Control, Configuring Storage Resource Settings for a Virtual Machine, Using Flash Storage.		
V	**Balancing Resource Utilization:** Comparing Utilization with Allocation, Exploring vMotion, Examining vMotion Requirements, Performing a vMotion Migration Within a Cluster, Ensuring vMotion Compatibility, Using Per-Virtual-Machine CPU Masking, Using Enhanced vMotion Compatibility, Using Storage vMotion, Combining vMotion with Storage vMotion, Cross-vCenter vMotion, Examining Cross-vCenter vMotion Requirements, Performing a Cross-vCenter Motion, Exploring vSphere Distributed Resource Scheduler, Understanding Manual Automation Behavior, Reviewing Partially Automated Behavior, Examining Fully Automated Behavior, Working with Distributed Resource Scheduler Rules, Working with Storage DRS, Creating and Working with Datastore Clusters , Configuring Storage DRS. **Monitoring VMware vSphere Performance:** Overview of Performance Monitoring, Using Alarms Understanding Alarm Scopes, Creating Alarms, Managing Alarms, Working with Performance Charts, Overview Layout, Advanced Layout, Working with *esxtop,* Monitoring CPU Usage, Monitoring Memory Usage, Monitoring Network Usage, Monitoring Disk Usage. **Automating VMware vSphere:** Why Use Automation? vSphere Automation Automating with PowerCLI, PowerShell and PowerCLI, What's New in PowerCLI, Installing and Configuring PowerCLI on Windows, Installing and Configuring PowerCLI on macOS, Installing and Configuring PowerCLI on Linux, Additional PowerCLI Capabilities Getting Started with PowerCLI, Building PowerCLI Scripts, PowerCLI Advanced Capabilities, Additional Resources.	**12**	**CO5**

M Sc (Information Technology)		Semester – IV	
Course Name: Server Virtualization on VMWare Platform Practical		**Course Code: PSIT4P3c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

List of Practical:
10 practicals covering the entire syllabus must be performed The detailed list of practical will be circulated later in the official workshop

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand VMWare VSphere 67, Install ESXi and Configure VSphere Centre

CO2: Demonstrate the use of VSphere Update Manager and Create a VSphere Network

CO3: Understand VSphere Security, Create and configure storage devices and Perform configurations to ensure business continuity
CO4: Demonstrate Resource allocation, Creating and managing virtual machine and the use of templates

CO5: Understand automation of vSphere and manage resource allocation

PSIT403d: Security Operations Centre

M. Sc (Information Technology)		Semester – IV	
Course Name: Security Operations Centre		**Course Code: PSIT403d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- The SOC (Security Operations Centre) allows an organization to enforce and test its security policies, processes, procedures and activities through one central platform that monitors and evaluates the effectiveness of the individual elements and the overall security system of the organization.
- This will also allow the learners to configure various use cases and detect various attacks across the network and report them in real time and also take appropriate actions.
- This course will cover the design, deployment and operation of the SOC.
- Once this course is completed, students will have the skills to perform your SOC responsibilities effectively.

Unit	Details	Lectures	Outcome
I	**Introduction to Security Operations Management** Foundation Topics Introduction to Identity and Access Management Phases of the Identity and Access Lifecycle Registration and Identity Validation Privileges Provisioning Access Review Access Revocation Password Management Password Creation Password Storage and Transmission Password Reset Password Synchronization Directory Management Single Sign-On Kerberos Federated SSO Security Assertion Markup Language OAuth OpenID Connect Security Events and Logs Management Logs Collection, Analysis, and Disposal Syslog Security Information and Event Manager Assets Management Assets Inventory Assets Ownership Assets Acceptable Use and Return Policies Assets Classification Assets Labeling Assets and Information Handling Media Management Introduction to Enterprise Mobility Management Mobile Device Management Configuration and Change Management Configuration Management Change Management Vulnerability Management	**12**	**CO1**

	Vulnerability Identification Finding Information about a Vulnerability Vulnerability Scan Penetration Assessment Product Vulnerability Management Vulnerability Analysis and Prioritization Vulnerability Remediation Patch Management References and Additional Readings **Fundamentals of Cryptography and Public Key Infrastructure** (PKI) Cryptography Ciphers and Keys Ciphers Keys Block and Stream Ciphers Symmetric and Asymmetric Algorithms Symmetric Algorithms Asymmetric Algorithms Hashes Hashed Message Authentication Code Digital Signatures Digital Signatures in Action Key Management Next-Generation Encryption Protocols IPsec and SSL IPsec SSL Fundamentals of PKI Public and Private Key Pairs RSA Algorithm, the Keys, and Digital Certificates Certificate Authorities Root and Identity Certificates Root Certificate Identity Certificate X.500 and X.509v3 Certificates Authenticating and Enrolling with the CA Public Key Cryptography Standards Simple Certificate Enrollment Protocol Revoking Digital Certificates Using Digital Certificates PKI Topologies Single Root CA Hierarchical CA with Subordinate CAs Cross-certifying CAs Exam Preparation Tasks Review All Key Topics Complete Tables and Lists from Memory **Introduction to Virtual Private Networks (VPNs)** What Are VPNs? Course Name: Security Operations Centre Practical		**Course Code: PSIT4P3d**	
Periods per week (1 Period is 60 minutes)		**4**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2**	**50**
	Internal	**--**	**-**

List of Practical:
10 practicals covering the entire syllabus must be performed. The detailed list of practical will be circulated later in the official workshop.

Course Outcomes:

After completion of the course, a student should be able to:
CO1: Understanding basics of SOC, Cryptography and managing and deploying VPNs.

CO2: Analyse Windows and Linux based logs along with logs generated by endpoints.

CO3: Understand and analyze various forms of intrusions, threats and perform forensic analysis on them.

CO4: Understand the incident response process and handle incidents by adhering to compliance policies and standards set by the organization.

CO5: Understand the various types of attacks and vulnerabilities, categorize events and perform incident analysis.

PSIT404a: Human Computer Interaction

M. Sc (Information Technology)		Semester – IV	
Course Name: Human Computer Interaction		**Course Code: PSIT404a**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understand the important aspects of implementation of human-computer interfaces.
- Identify the various tools and techniques for interface analysis, design, and evaluation.
- Identify the impact of usable interfaces in the acceptance and performance utilization of information systems

Unit	Details	Lectures	Outcome
I	**The Interaction:** Models of interaction, Design Focus, Frameworks and HCI, Ergonomics, Interaction styles, Elements of the WIMP interface,Interactivity **Paradigms:** Introduction, Paradigms for interaction **Interaction design basics:** What is design?, The process of design, User focus, Cultural probes, Navigation design, the big button trap, Modes, Screen design and layout, Alignment and layout matters, Checking screen colors, Iteration and prototyping **HCI in the software process**: The software life cycle, Usability engineering , Iterative design and prototyping, Prototyping in practice, Design rationale	**12**	**CO1**
II	**Design**: Principles to support usability, Standards, Guidelines, Golden rules and heuristics, HCI patterns **Implementation support:** Elements of windowing systems, Programming the application, Going with the grain, Using toolkits, User interface management systems **Evaluation techniques:** What is evaluation?, Goals of evaluation, Evaluation through expert analysis, Evaluation through user participation, Choosing an evaluation method	**12**	**CO2**
III	**Universal design:** Universal design principles, Multi-modal interaction, Designing websites for screen readers, Choosing the right kind of speech, Designing for diversity **User support:** Requirements of user support, Approaches to user support, Adaptive help systems, Designing user support systems **Cognitive models:** Goal and task hierarchies, Linguistic	**12**	**CO3**

	models, The challenge of display-based systems, Physical and device models, Cognitive architectures		
IV	**Socio-organizational issues and stakeholder requirements:** Organizational issues, Capturing requirements **Communication and collaboration models:** Face-to-face communication, Conversation, Text-based communication, Group working **Task analysis:** Differences between task analysis and other techniques, Task decomposition, Knowledge-based analysis, Entity–relationship-based techniques, Sources of information and data collection, Uses of task analysis	**12**	**CO4**
V	**Dialog notations and design:** What is dialog?, Dialog design notations, Diagrammatic notations, Textual dialog notations, Dialog semantics, Dialog analysis and design **Models of the system:** Standard formalisms, Interaction models, Continuous behavior **Modeling rich interaction:** Status–event analysis, Rich contexts, Low intention and sensor-based interaction	**12**	**CO5**

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year

2.	Designing the User Interface	Shneiderman B., Plaisant C., Cohen M., Jacobs S.	Pearson	5th	2013

Course Outcomes:

After completion of the course, a student should be able to:

CO1: have a clear understanding of HCI principles that influence a system's interface design, before writing any code.
CO2: understand the evaluation techniques used for any of the proposed system.
CO3: understand the cognitive models and its design.
CO4: able to understand how to manage the system resources and do the task analysis.
CO5: able to design and implement a complete system.

PSIT404b: Advanced IoT

M. Sc (Information Technology)		Semester – IV	
Course Name: Advanced IoT		**Course Code: PSIT404b**	
Periods per week (1 Period is 60 minutes)		**4**	
Credits		**4**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**60**
	Internal	**--**	**40**

Course Objectives:

- To understand the applications on image processing in different disciplines.
- To apply the concepts to new areas of research in Image processing.

Unit	Details	Lectures	Outcome
I	Fuzzy Approaches and Analysis in Image Processing, Text information extraction from images, Image and Video steganography based on DCT and wavelet transform.	**12**	**CO1**
II	Zernike-Moments-Based Shape Descriptors for Pattern Recognition and Classification Applications, An Image De-Noising Method Based on Intensity Histogram Equalization Technique for Image Enhancement, A New Image Encryption Method Based on Improved Cipher Block Chaining with Optimization Technique	**12**	**CO2**
III	A Technique to Approximate Digital Planar Curve with Polygon, Shape Determination of Aspired Foreign Body on Pediatric Radiography Images Using Rule-Based Approach, Evaluation of Image Detection and Description Algorithms for Application in Monocular SLAM, Diophantine Equations for Enhanced Security in Watermarking Scheme for Image Authentication	**12**	**CO3**
IV	Design, Construction, and Programming of a Mobile Robot Controlled by Artificial Vision, Review and Applications of Multimodal Biometrics for Secured Systems, Background Subtraction and Object Tracking via Key Frame-Based Rotational Symmetry Dynamic Texture, A Novel Approach of Human Tracking Mechanism in Wireless Camera Networks	**12**	**CO4**
V	Digital Image Steganography: Survey, Analysis, and Application, Vegetation Index: Ideas, Methods, Influences, and Trends, Expert System through GIS-Based Cloud	**12**	**CO5**

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Advanced Image Processing Techniques and Applications	N. Suresh Kumar, Arun Kumar Sangaiah, M. Arun, S. Anand	IGI global	--	2017

Course Outcomes:

After completion of the course, a student should be able to:

CO01: Understand the advanced applications of Image processing.

CO02: Understand the application of image processing pattern recognition, encryption and image enhancement.

CO03: Understand and apply the image processing techniques in identification of foreign body using radiography, watermarking techniques.

CO04: Apply the image processing techniques to robot vision, biometrics, human tracking using wireless camera.

CO05: Apply image processing in steganography, expert systems through GIS based cloud.

PSIT404c: Storage as a Service

M. Sc (Information Technology)		Semester – IV	
Course Name: Storage as a Service		**Course Code: PSIT404c**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understand the need for Storage Area Network and Data protection to satisfy the information explosion requirements.
- Study storage technologies: SAN, NAS, IP storage etc., which will bridge the gap between the emerging trends in industry and academics.
- To get an insight of Storage area network architecture, protocols and its infrastructure.
- To study and discuss the applications of SAN to fulfill the needs of the storage management in the heterogeneous environment.
- Study and understand the management of Storage Networks
- To understand different techniques of managing store.

Unit	Details	Lectures	Outcome

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Information Storage and Management: Storing, Managing, and Protecting Digital Information in Classic, Virtualized, and Cloud Environments	EMC	John Wiley & Sons	2nd	2012

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand different techniques of storage and RAID Technologies
CO2: Understand different intelligent storage technologies. Also, understand the benefits of Fibre Channel Storage Networks along with iSCSI.
CO3: Understand the architecture of NAS and deployment along with Object based and unified storage technologies. Also, the learner will be able to configure the storage devices to maintain highest level of availability
CO4: Understand Replication and Migration techniques and implement them.
CO5: Understand Different techniques for managing and securing storage infrastructure.

PSIT404d: Information Security Auditing

M. Sc (Information Technology)		Semester – IV	
Course Name: Information Security Auditing		**Course Code: PSIT404d**	
Periods per week (1 Period is 60 minutes)		4	
Credits		4	
		Hours	**Marks**
Evaluation System	**Theory Examination**	2½	60
	Internal	--	40

Course Objectives:

- Understand various information security policies in place.
- Assess an organization based on the needs and suggest the requisite information security policies to be deployed.
- Audit the organization across relevant policies and assist the organization in implementing such policies along with suggesting improvements.

Unit	Details	Lectures	Outcome
I	Secrets of a Successful Auditor Understanding the Demand for IS Audits Understanding Policies, Standards, Guidelines, and Procedures Understanding Professional Ethics Understanding the Purpose of an Audit Differentiating between Auditor and Auditee Roles Implementing Audit Standards Auditor Is an Executive Position Understanding the Corporate Organizational Structure Governance Strategy Planning for Organizational Control Overview of Tactical Management Planning and Performance Overview of Business Process Reengineering Operations Management Summary Audit Process Understanding the Audit Program Establishing and Approving an Audit Charter Preplanning Specific Audits Performing an Audit Risk Assessment Determining Whether an Audit Is Possible Performing the Audit Gathering Audit Evidence Conducting Audit Evidence Testing Generating Audit Findings Report Findings Conducting Follow-up (Closing Meeting)	**12**	**CO1**
II	Information Systems Acquisition and Development Project Governance and Management Business Case and Feasibility Analysis System Development Methodologies Control Identification and Design Testing Methodologies Configuration and Release Management	**12**	**CO2**

	System Migration, Infrastructure Deployment and Data Conversion Post-implementation Review		
III	Information Systems Operations Introduction Common Technology Components IT Asset Management Job Scheduling and Production Process Automation System Interfaces End-user Computing Data Governance Systems Performance Management Problem and Incident Management Change, Configuration, Release and IT Service Level Management Database Management Business Resilience Business Impact Analysis Data Backup, Storage and Restoration Business Continuity Plan Disaster Recovery Plans	**12**	**CO3**
IV	Information Systems Life Cycle Governance in Software Development Management of Software Quality Overview of the Executive Steering Committee Change Management Management of the Software Project Overview of the System Development Life Cycle Overview of Data Architecture Decision Support Systems Program Architecture Centralization vs. Decentralization Electronic Commerce System Implementation and Operations Understanding the Nature of IT Services Performing IT Operations Management Performing Capacity Management Using Administrative Protection Performing Problem Management Monitoring the Status of Controls Implementing Physical Protection	**12**	**CO4**
V	Protecting Information Assets Understanding the Threat Using Technical Protection Business Continuity and Disaster Recovery Debunking the Myths Understanding the Five Conflicting Disciplines Called Business Continuity Defining Disaster Recovery Defining the Purpose of Business Continuity Uniting Other Plans with Business Continuity Understanding the Five Phases of a Business Continuity Program Understanding the Auditor Interests in BC/DR Plans	**12**	**CO5**

Books and References:					
Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	CISA®: Certified Information Systems Auditor	David Cannon	SYBEX	Fourth Edition	2016
2.	CISA Review Manual 27th Edition		ISACA		2019
3.	CISA Certified Information Systems Auditor All-in-One Exam Guide, Fourth Edition,		O'Reilly	4th Edition	2019

Course Outcomes:

After completion of the course, a student should be able to:

CO1: Understand various information security policies and process flow, Ethics of an Information security Auditor.

CO2: Understand various information systems in an organization, their criticality and various governance and management policies associated with them.

CO3: Critically analyse various operational strategies like asset management, data governance etc. and suggest requisite changes as per organizations requirements with improvements.

CO4: Understand the information flow across the organization and identify the weak spots, and also suggest improvements to strengthen them.

CO5: Come up with strong strategies to protect information assets and come up with an efficient business continuity plan, disaster recovery strategy etc.

PSIT4P4: Project Implementation and Viva

M. Sc (Information Technology)		**Semester – IV**	
Course Name: Project Implementation and Viva		**Course Code: PSIT4P4**	
Periods per week (1 Period is 60 minutes)		4	
Credits		2	
		Hours	**Marks**
Evaluation System	**Practical Examination**	2	50
	Internal	--	-

The project dissertation and Viva Voce details are given in Appendix 1.

Evaluation Scheme

Internal Evaluation (40 Marks)

The internal assessment marks shall be awarded as follows:

1. **30 marks (Any one of the following):**
   a. **Written Test or**
   b. **SWAYAM (Advanced Course) of minimum 20 hours and certification exam completed or**
   c. **NPTEL (Advanced Course) of minimum 20 hours and certification exam completed or**
   d. **Valid International Certifications (Prometric, Pearson, Certiport, Coursera, Udemy and the like)**
   e. **One certification marks shall be awarded one course only. For four courses, the students will have to complete four certifications.**
2. **10 marks**
   The marks given out of 40 (30 in Semester 4) for publishing the research paper should be divided into four course and should awarded out of 10 in each of the four course.

i. Suggested format of Question paper of 30 marks for the written test.

Q1.	**Attempt *any two* of the following:**	**16**
a.		
b.		
c.		
d.		
Q2.	**Attempt *any two* of the following:**	**14**
a.		
b.		
c.		
d.		

ii. 10 marks from every course coming to a total of 40 marks, shall be awarded on publishing of research paper in UGC approved / Other Journal with plagiarism less than 10%. The marks can be awarded as per the impact factor of the journal, quality of the paper, importance of the contents published, social value.

External Examination: (60 marks)

	All questions are compulsory	
Q1	**(Based on Unit 1) Attempt *any two* of the following:**	**12**
a.		
b.		

c.		
d.		
Q2	**(Based on Unit 2) Attempt *any two* of the following:**	**12**
Q3	**(Based on Unit 3) Attempt *any two* of the following:**	**12**
Q4	**(Based on Unit 4) Attempt *any two* of the following:**	**12**
Q5	**(Based on Unit 5) Attempt *any two* of the following:**	**12**

Practical Evaluation (50 marks)

A Certified copy of hard-bound journal is essential to appear for the practical examination.

1.	**Practical Question 1**	**20**
2.	**Practical Question 2**	**20**
3.	**Journal**	**5**
4.	**Viva Voce**	**5**

OR

1.	**Practical Question**	**40**
2.	**Journal**	**5**
3.	**Viva Voce**	**5**

Project Documentation and Viva Voce Evaluation

The documentation should be checked for plagiarism and as per UGC guidelines, should be less than 10%.

1.	**Documentation Report (Chapter 1 to 4)**	**20**
2.	**Innovation in the topic**	**10**
3.	**Documentation/Topic presentation and viva voce**	**20**

Project Implementation and Viva Voce Evaluation

1.	**Documentation Report (Chapter 5 to last)**	**20**
2.	**Implementation**	**10**
3.	**Relevance of the topic**	**10**
4.	**Viva Voce**	**10**

Appendix – 1

Project Documentation and Viva-voce (Semester III) and Project Implementation and Viva-Voce (Semester IV)

Goals of the course Project Documentation and Viva-Voce

The student should:

- be able to apply relevant knowledge and abilities, within the main field of study, to a given problem
- within given constraints, even with limited information, independently analyse and discuss complex inquiries/problems and handle larger problems on the advanced level within the main field of study
- reflect on, evaluate and critically review one's own and others' scientific results
- be able to document and present one's own work with strict requirements on structure, format, and language usage
- be able to identify one's need for further knowledge and continuously develop one's own knowledge

To start the project:

- Start thinking early in the programme about suitable projects.
- Read the instructions for the project.
- Attend and listen to other student´s final oral presentations.
- Look at the finished reports.
- Talk to senior master students.
- Attend possible information events (workshops / seminars / conferences etc.) about the related topics.

Application and approval:

- Read all the detailed information about project.
- Finalise finding a place and supervisor.
- Check with the coordinator about subject/project, place and supervisor.
- Write the project proposal and plan along with the supervisor.
- Fill out the application together with the supervisor.
- Hand over the complete application, proposal and plan to the coordinator.
- Get an acknowledgement and approval from the coordinator to start the project.

During the project:

- Search, gather and read information and literature about the theory.
- Document well the practical work and your results.
- Take part in seminars and the running follow-ups/supervision.
- Think early on about disposition and writing of the final report.
- Discuss your thoughts with the supervisor and others.
- Read the SOP and the rest you need again.
- Plan for and do the mid-term reporting to the coordinator/examiner.
- Do a mid-term report also at the work-place (can be a requirement in some work-places).
- Write the first draft of the final report and rewrite it based on feedback from the supervisor and possibly others.
- Plan for the final presentation of the report.

Finishing the project:

- Finish the report and obtain an OK from the supervisor.

- Ask the supervisor to send the certificate and feedback form to the coordinator.
- Attend the pre-final oral presentation arranged by the Coordinator.
- Rewrite the final report again based on feedback from the opponents and possibly others.
- Prepare a title page and a popular science summary for your report.
- Send the completed final report to the coordinator (via plagiarism software)
- Rewrite the report based on possible feedback from the coordinator.
- Appear for the final exam.

Project Proposal/research plan

- The student should spend the first 1-2 weeks writing a 1-2 pages project plan containing:
  - Short background of the project
  - Aims of the project
  - Short description of methods that will be used
  - Estimated time schedule for the project
- The research plan should be handed in to the supervisor and the coordinator.
- Writing the project plan will help you plan your project work and get you started in finding information and understanding of methods needed to perform the project.

Project Documentation

The documentation should contain:

- Introduction - that should contain a technical and social (when possible) motivation of the project topic.
- Description of the problems/topics.
- Status of the research/knowledge in the field and literature review.
- Description of the methodology/approach. (The actual structure of the chapters here depends on the topic of the documentation.)
- Results - must always contain analyses of results and associated uncertainties.
- Conclusions and proposals for the future work.
- Appendices (when needed).
- Bibliography - references and links.

For the master's documentation, the chapters cannot be dictated, they may vary according to the type of project. However, in Semester III Project Documentation and Viva Voce must contain at least 4 chapters (Introduction, Review of Literature, Methodology / Approach, Proposed Design / UI design, etc. depending on the type of project.) The Semester III report should be spiral bound.

In Semester IV, the remaining Chapters should be included (which should include Experiments performed, Results and discussion, Conclusions and proposals for future work, Appendices) and Bibliography - references and links. Semester IV report should include all the chapters and should be hardbound.

UNIVERSITY OF MUMBAI

Syllabus for Semester-I and Semester -II

Program: M.Sc.

Course: Computer Science

Choice Based Credit System (CBCS) (Revised)

With effect from the academic year 2021–2022)

CONTENTS

1. PREAMBLE

2. PROGRAM OUTCOME

3. PROGRAMME STRUCTURE

4. DETAILED SYLLABUS FOR SEMESTER - I & SEMESTER - II

5. EVALUATION

6. SCHEME OF EXAMINATIONS AND DISTRIBUTION PATTERN OF MARKS

1. PREAMBLE

M.Sc. in Computer Science is a two-year post-graduate programme with the objective to develop human resources with core competence in various thrust areas of Computer Science. It will provide students with opportunities to develop and hone core competency in the field of computer science and encourage them to make a mark in the much sought-after IT industry.

The Syllabus of this Course creates a unique identity for M.Sc. in Comp Science distinct from similar degrees in other related subjects,focuses on core Computer Science subjects, incorporate advanced and most recent trends, Identify and nurture research temper among students, Offer provision for internship with industry and Focus, as far as possible, only on open-source software

The syllabus for the semester I and semester II has tried to initiate steps to meet these goals. By extending the syllabus to semester III and semester IV, it is assumed that these goals will be met to a larger extent. The syllabus proposes to have four core compulsory courses in Semester I and Semester II. UNIT -1 of Paper I ofSemester - I and Semester - II are ABILITY ENHANCEMENT UNITS and UNIT- 4 of all papers of Semester - I and Semester - II is SKILL ENHANCEMENT UNIT. Semester III and Semester IV proposes electives courses based on a recent and emerging area. Inclusion of Project as part of the internal assessment is an attempt to translate theory into practice. It is assumed that, with this back ground, a student can take up challenging research project in the semester III and semester IV and will be better fit for industry as he or she will have strong foundation on fundamentals and exposure to advanced and emerging trends.

We thank all the industry experts, senior faculties and our colleague's department of Computer Science of different colleges as well as University of Mumbai; who have given their valuable comments and suggestions, which we tried to incorporate. We thank the Chairperson and members of the Ad-hoc Board of Studies in Computer Science of University for their faith in us. Thanks to one and all who have directly or indirectly helped in this venture.

2. PROGRAM OUTCOMES

The M. Sc. Computer Science programme is designed to help the students to:

- To be fundamentally strong at core subject of Computer Science.
- To apply programming and computational skills for industrial solutions.
- Broad understanding of latest technological trends.
- To identify opportunities for establishing an enterprise for immediate Employment.
- Able to understand and apply fundamental research concepts.
- Able to use efficient soft skills for professional development.
- Engage in independent and life-long learning for continued professional development.

3. PROGRAMME STRUCTURE

A	**Programme Duration**	**Four Semester (2 Years)**
B	**Total Credits required for Successful Completion**	**96**
C	**Credits required from Core Courses**	**42**
D	**Credits required for the Ability Enhancement Courses**	**02**
E	**Credits required for the Skill Enhancement Courses**	**12**
F	**Credits required for the Practical Course**	**28**
G	**Project**	**06**
H	**Internship**	**06**
I	**Minimum Attendance per Semester**	**75%**

This is the syllabus for the Semester-I and Semester-II of M.Sc. Computer Science program of University of Mumbai to be implemented from the year 2021-22. The Syllabus offers four Theory Courses and Four Practical Courses each in each Semester.

SEMESTER - I

The syllabus proposes four subjects in Semester -I. Each subject has Theory and Practical components. Each of these Courses is of Four Credits each and is expected to complete in 60 hours.

The following table gives the details of the Theory Courses in Semester -I.

Semester - I: Theory courses

Course Code	Course Title	No of Hours	Credit
PSCS101	**Algorithm for Optimization**	**60**	**04**
PSCS102	**Software Defined Networking**	**60**	**04**
PSCS103	**Applied Signal and Image Processing**	**60**	**04**
PSCS104	**Advanced Database Techniques**	**60**	**04**
Total Credits for Theory courses in Semester-I			**16**

Semester - I: Practical Lab courses

The syllabus proposes Four Laboratory courses of 2 Credits each. As far as the Practical are concerned, equal weightage similar to that of Theory courses has been given in terms of the number of hours.

The following table gives the details of the Practical Courses in Semester -I

Course Code	Course Title	No of Hours	Credit
PSCSP101	**Algorithm for Optimization**	**60**	**02**
PSCSP102	**Software Defined Networking**	**60**	**02**
PSCSP103	**Applied Signal and Image Processing**	**60**	**02**
PSCSP104	**Advanced Database Techniques**	**60**	**02**
Total Credits for Practical courses in Semester-I			**08**

SEMESTER - II

The Syllabus proposes four subjects in Semester - II also. As in the case of Semester-I, each subject has theory and practical components. Each of these courses is of Four Credits and Two credits respectively and is expected to complete in 60 hours.

The following table gives the details of the Theory Courses in Semester -II.

Semester - II: Theory courses

Course Code	Course Title	No of Hours	Credit
PSCS201	**Applied Machine and Deep Learning**	**60**	**04**
PSCS202	**Natural Language Processing**	**60**	**04**
PSCS203	**Web Mining**	**60**	**04**
PSCS204	**Embedded and IoT Technology**	**60**	**04**
Total Credits for Theory courses in Semester -II			**16**

Semester - II: Practical Lab courses

The Syllabus proposes Four Laboratory courses of 2 Credits each. As far as the Practical are concerned, equal weightage similar to that of Theory courses has been given in terms of the number of hours.

The following table summarizes the details of the practical courses in the Semester - II.

Course Code	Course Title	No of Hours	Credit
PSCSP201	**Applied Machine and Deep Learning**	**60**	**02**
PSCSP202	**Natural Language Processing**	**60**	**02**
PSCSP203	**Web Mining**	**60**	**02**
PSCSP204	**Embedded and IoT Technology**	**60**	**02**
Total Credits for Practical Courses in Semester -II			**08**

4.DETAILED SYLLABUS FOR SEMESTER - I & SEMESTER - II

SEMESTER- I

Course Code	Course Title	Credits
PSCS101	**Algorithm for Optimization**	**04**

Course Outcome: -

- You will be able to effectively implement optimization techniques to the existing algorithm to improve its performance.
- You will be able to work in the areas of Machine Learning and Data Sciences Algorithms

Course Specific Outcome: -

- Optimization with a focus on practical algorithms for the design of engineering systems
- Exposure to multivariable calculus, linear algebra, and probability concepts.
- Learn a wide variety of optimization topics, introducing the underlying mathematical problem formulations and the algorithms for solving them.

UNIT 1: (Ability Enhancement) **Introduction to Optimization Process** Basic Optimization Problem, Constraints, Critical Points, Conditions for Local Minima, Contour Plots. Unimodality, Fibonacci Search, Golden Section Search, Quadratic Fit Search.	**15L**
UNIT 2: Order Methods First-Order Methods, Gradient Descent, Conjugate Gradient, Adagrad, RMSProp, Adadelta, Adam, Hypergradient Descent. Second-Order Methods, Newton's Method, Secant Method, Quasi-Newton Methods.	**15L**
UNIT 3: Sampling and Surrogate Models Sampling Plans, Full Factorial, Random Sampling, Uniform Projection Plans, Stratified Sampling, Space-Filling Metrics. Surrogate Models, Fitting Surrogate Models, Linear Models, Basis Functions, Fitting Noisy Objective Functions, Model Selection,	**15L**

Probabilistic Surrogate Models, Gaussian Distribution, Gaussian Processes, Prediction	
UNIT 4: (Skill Enhancement) **Optimization and Uncertainty** Optimization under Uncertainty, Uncertainty, Set-Based Uncertainty, Probabilistic Uncertainty. Uncertainty Propagation, Sampling Methods, Taylor Approximation, Polynomial Chaos, Bayesian Monte Carlo. Dynamic Programming, Ant Colony Optimization. Expression Optimization, Grammars, Genetic Programming, Grammatical Evolution, Probabilistic Grammars, Probabilistic Prototype Trees	**15L**

TEXT BOOK:

1. Algorithms for Optimization Mykel J. Kochenderfer, Tim A. Wheeler, The MIT Press 2019.

REFERENCE BOOKS:

1. Think Julia: How to Think Like a Computer Scientist by Allen B. Downey and Ben Lauwens 1st Edition 2019 O'reilly.
2. Decision Making Under Uncertainty: Theory and Application by Mykel J. Kochenderfer MIT Lincoln Laboratory Series 2015.
3. Introduction to Algorithms, By Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest and Clifford Stein 3Ed. (International Edition) (MIT Press) 2009

Course Code	Course Title	Credits
PSCSP101	**Practical Course on Algorithm Optimization**	**02**
Note: All the Practical's should be implemented using Julia Link: Julia:https://julialang.org/		
1	Implement Contour Plots.	
2	Implement Fibonacci and Golden section search.	
3	Implement Quadratic Fit Search.	
4	Implement Gradient descent.	
5	Implement quasi-Newton methods to find the local maxima.	

6	Implement the Adagrad method with application, RMSprop and Adadelta.
7	Implement radial basis functions using surrogate modelling.
8	Apply Random Forest in surrogate Model.
9	Implement Gaussian Process and its application.
10	Path finding using Ant Colony Optimization with an application.

Course Code	Course Title	Credits
PSCS102	**Software Defined Networking**	**04**

Course Outcome: -

- To make the students capable of understanding computer network basics.
- To Obtain the knowledge of Software defined networks with understanding of data plane, control plane and application plane.
- To apply network virtualization for industry standard solutions.
- To improve skills in implementing network virtualization and Software Defined Network (SDN).

Course Specific Outcome: -

- Learners will be able to understand basic concepts of Software Defined Networking and network virtualization.
- Learners will be able to explore OpenFlow specifications to build Software defined networks.
- Learners will be able to analyse and implement theories and practical related to Network management and Virtualization.
- Learners will be able to apply knowledge of Software Defined Networking as per industry standards.

Unit 1: Introduction to Computer Networking Basic Concepts and Definitions: LAN, MAN, WAN, AD-Hoc, Wireless Network, Understanding the layered architecture of OSI/RM and TCP-IP Model, Concepts and implementation of IPV4 and IPV6, Study of various network Routing protocols, Introduction to Transport layer and Application layer protocols.	**15L**

UNIT 2:Software Defined Networking Elements of Modern Networking, Requirements and Technology, SDN: Background and Motivation, SDN Data Plane and OpenFlow, SDN Control Plane, SDN Application Plane	**15L**
UNIT 3: Network Functions Virtualization Concepts and Architecture, NFV Functionality, Network Virtualization Quality of Service, MODERN NETWORK ARCHITECTURE: CLOUDS AND FOG, Cloud Computing, The Internet of Things: Components	**15L**
UNIT 4: (Skill Enhancement) **Design and implementation of Network** Understand and implement Layer 2/3 switching techniques (VLAN /TRUNKING/ Managing Spanning Tree), Implementation of OSPF V2 and V3, Implementation BGP, Implementation Multicast Routing, Implementation of MPLS, Implementation of Traffic Filtering by using Standard and Extended Access Control List, Implementation of Routing redistribution, Implementation of Policy Based Routing/ Load Balancing /QOS/Natting /VRF	**15L**

TEXT BOOK:

Course Code	Course Title	Credits
PSCSP102	**Practical Course on Software Defined Networking**	**02**

Note: All the Practical's should be implemented using GNS3/EVE-NG/CISCO VIRL

Link: GNS3 :https://www.gns3.com/software/download
EVE-NG: https://www.eve-ng.net/index.php/download/
CISCO VIRL:https://learningnetwork.cisco.com/s/question/0D53i00000Kswpr/virl-15-download

1	Implement IP SLA (IP Service Level Agreement)
2	Implement IPv4 ACLs 1. Standard 2. Extended
3	1. Implement SPAN Technologies (Switch Port Analyzer) 2. Implement SNMP and Syslog 3. Implement Flexible NetFlow
4	1. Implement a GRE Tunnel 2. Implement VTP 3. Implement NAT
5	Implement Inter-VLAN Routing
6	Observe STP Topology Changes and Implement RSTP 1. Implement Advanced STP Modifications and Mechanisms 2. Implement MST
7	1. Implement EtherChannel 2. Tune and Optimize EtherChannel Operations
8	OSPF Implementation 1. Implement Single-Area OSPFv2 2. Implement Multi-Area OSPFv2 3. OSPFv2 Route Summarization and Filtering 4. Implement Multiarea OSPFv3
9	Implement BGP Communities 1. Implement MP-BGP 2. Implement eBGP for IPv4

	3. Implement BGP Path Manipulation
10	Implement IPsec Site-to-Site VPNs 1. Implement GRE over IPsec Site-to-Site VPNs 2. Implement VRF Lite
11	Simulating SDN with 1. OpenDaylight SDN Controller with the Mininet Network Emulator 2. OFNet SDN network emulator
12	Simulating OpenFlow Using MININET

Course Code	Course Title	Credits
PSCS103	**Applied Signal and Image Processing**	**04**

Course Outcome: -

- Introduce the concepts of signal processing terms and relate them to image processing
- Learn about basic image processing techniques (e.g., noise removal and image enhancement).
- Develop skills to design and implement algorithms for advanced image analysis
- Apply image processing to design solutions to real-life problems

Course Specific Outcome: -

- Understanding the terminologies of signal and digital image processing
- Ability to apply various images, intensity transformations, and spatial filtering.
- Knowledge of Perform frequency domain operations on images.
- Ability to apply image segmentation and extract image features.
- Apply image processing algorithms in practical applications.

UNIT 1: Fundamentals of Digital Signals Processing Periodic signals, Spectral decomposition, Signals, Reading and writing Waves, Spectrums, Wave objects, Signal objects Noise: Uncorrelated noise, Integrated spectrum, Brownian noise, Pink Noise, Gaussian noise; Autocorrelation: Correlation, Serial correlation, Autocorrelation, Autocorrelation of periodic signals, Correlation as a dot product Frequency domain Operations: Representing Image as Signals, Sampling and Fourier Transforms, Discrete Fourier Transform, Convolution and Frequency Domain Filtering, Smoothing using low-pass filters, Sharpening using high-pass filters. Fast Fourier Transforms.	**15L**
UNIT 2: Image Processing fundamentals and Pixel-Transformation Definition, Application of Image Processing, Image Processing Pipeline, Tools and Libraries for Image Processing, Image types and files formats. Intensity Transformations- Log Transform, Power-law Transform, Contrast Stretching, Thresholding Histogram Processing- Histogram Equalization and Histogram Matching; Linear and Non-linear smoothing of Images, Sharpening of images Image Derivative: Derivatives and gradients, Laplacian, the effect of noise on gradient computation	**15L**
UNIT 3: Structural and Morphological Operations Edge Detection: Sobel, Canny Prewitt, Robert edge detection techniques, LoG and DoG filters, Image Pyramids: Gaussian Pyramid, Laplacian Pyramid Morphological Image Processing: Erosion, Dilation, Opening and closing, Hit-or-Miss Transformation, Skeletonizing, Computing the	**15L**

convex hull, removing small objects, White and black top-hats, Extracting the boundary, Grayscale operations	
UNIT 4: (Skill Enhancement) **Advanced Image Processing Operations** Extracting Image Features and Descriptors: Feature detector versus descriptors, Boundary Processing and feature descriptor, Principal Components, Harris Corner Detector, Blob detector, Histogram of Oriented Gradients, Scale-invariant feature transforms, Haar-like features Image Segmentation: Hough Transform for detecting lines and circles, Thresholding and Otsu's segmentation, Edge-based/region-based segmentation Region growing, Region splitting and Merging, Watershed algorithm, Active Contours, morphological snakes, and GrabCut algorithms	**15L**
TEXT BOOK: 1. Digital Image Processing by Rafael Gonzalez & Richard Woods, Pearson; 4th edition, 2018 2. Think DSP: Digital Signal Processing in Python by Allen Downey, O'Reilly Media; 1st edition (August 16, 2016)	
REFERENCE BOOKS: 1. Understanding Digital Image Processing, Vipin Tyagi, CRC Press, 2018 2. Digital Signal and Image Processing by Tamal Bose, John Wiley 2010 3. Hands-On Image Processing with Python by Sandipan Dey,Packt Publishing, 2018 4. Fundamentals of Digital Images Processing by A K Jain, Pearson, 2010	

Course Code	Course Title	Credits
PSCSP103	**Practical Course on Applied Signal and Image Processing**	**02**
Note: All the Practical's should be implemented using Python Link:https://www.python.org/downloads/		
1	Write program to demonstrate the following aspects of signal processing on suitable data 1. Upsampling and downsampling on Image/speech signal 2. Fast Fourier Transform to compute DFT	
2	Write program to perform the following on signal 1. Create a triangle signal and plot a 3-period segment. 2. For a given signal, plot the segment and compute the correlation between them.	
3	Write program to demonstrate the following aspects of signal on sound/image data 1. Convolution operation 2. Template Matching	
4	Write program to implement point/pixel intensity transformations such as 1. Log and Power-law transformations 2. Contrast adjustments 3. Histogram equalization 4. Thresholding, and halftoning operations	
5	Write a program to apply various enhancements on images using image derivatives by implementing Gradient and Laplacian operations.	
6	Write a program to implement linear and nonlinear noise smoothing on suitable image or sound signal.	

7	Write a program to apply various image enhancement using image derivatives by implementing smoothing, sharpening, and unsharp masking filters for generating suitable images for specific application requirements.
8	Write a program to Apply edge detection techniques such as Sobel and Canny to extract meaningful information from the given image samples
9	Write the program to implement various morphological image processing techniques.
10	Write the program to extract image features by implementing methods like corner and blob detectors, HoG and Haar features.
11	Write the program to apply segmentation for detecting lines, circles, and other shapes/objects. Also, implement edge-based and region-based segmentation.

Course Code	Course Title	Credits
PSCS104	**Advanced Database Techniques**	**04**

Course Outcome: -

- To cover advanced topics of databases to become more proficient.
- To provide students with theoretical knowledge and practical skills in advanced topics in database systems, big data and modern data-intensive systems.
- To Expand Students, view and introduce advanced topics and Business Intelligence.

Course Specific Outcome: -

- To form professional competencies related to design and implementation of non-relational databases, including object-oriented, parallel and Distributed.
- Learners will be able to explore XML, and Mobile databases.
- Learners will be able to deal with methods used for dealing with spatial and Temporal Databases.
- Learner will have a solid grasp on business intelligence tools and XML.

UNIT 1: Enhanced Database Models Object–Oriented Databases: Need of Object-oriented databases, Complex Data Types, Structured Types and Inheritance, Object-Identity and Reference, ODL and OQL, Implementing O-R Features, Persistent Programming Languages, Object-Oriented versus Object-Relational, Example of Object oriented and object relational database implementation, comparison of RDBMS, OODBMS, ORDBMS XML Databases: Structured Semi structure and unstructured data, XML hierarchical tree data model, Documents DTD and XML schema, XML Documents & Database, XML query and transformation, Storage of XML data, Xpath. XQuery, Join and Nesting Queries, XML database applications. Spatial Databases: Types of spatial data, Geographical Information Systems (GIS), Conceptual Data Models for spatial databases, Logical data models for spatial databases: Raster and vector model. Physical data models for spatial databases: Clustering methods (space filling curves), Storage methods (R-tree). Query processing. Temporal Databases: Time ontology, structure, and granularity, Temporal data models, Temporal relational algebra.	**15L**
UNIT 2: Cooperative Transaction Model Parallel and Distributed Databases: Architecture of parallel databases, Parallel query evaluation, Parallelizing individual operations, Sorting Joins Distributed Databases: Concepts, Data fragmentation, Replication and allocation techniques for distributed database design, Query processing, Concurrency control and recovery in distributed databases, Architecture and Design: Centralised versus non centralized Databases, Homogeneous and Heterogeneous DDBMS, Functions and Architecture, Distributed database design, query processing in DDBMS, Distributed concurrency management, deadlock management, Distributed Commit Protocols: 2 PC and 3 PC, Concepts of replication servers. Mobile Database: Overview, Features, Advantages and Disadvantages, Mobile databases in Android System	**15L**

UNIT 3: Learning the NoSQL Basics Introduction to NoSQL: Characteristics of NoSQL, NoSQL Storage types, Advantages and Drawbacks, NoSQL Products Interfacing and interacting with NoSQL: Storing Data In and Accessing Data from MongoDB, Redis, HBase and Apache Cassandra, Language Bindings for NoSQL Data Stores Understanding the storage architecture: Working with Column-Oriented Databases, HBase Distributed Storage Architecture, Document Store Internals, Understanding Key/Value Stores in Memcached and Redis, Eventually Consistent Non-relational Databases Performing CRUD operations: Creating Records, Accessing Data, Updating and Deleting Data	**15L**
UNIT 4: : (Skill Enhancement) **Gaining Proficiency With NoSQL** Querying NoSQL Stores: Similarities Between SQL and MongoDB Query Features, Accessing Data from Column-Oriented Databases Like HBase, Querying Redis Data Stores Indexing And Ordering Data Sets: Essential Concepts Behind a Database Index, Indexing and Ordering in MongoDB, ouchDB and Apache Cassandra Managing Transactions And Data Integrity: RDBMS and ACID, Distributed ACID Systems, Upholding CAP, Consistency Implementations Using NoSQL in The Cloud: Google App Engine Data Store, Amazon SimpleDB	**15L**

TEXT BOOK:

1. Database Management Systems by Raghu Ramakrishnan and Johannes Gehrke, McGraw Hill, 3rd Edition, 2014
2. Professional NoSQL By Shashank Tiwari, Wrox-John Wiley & Sons, Inc, 2011

Note: All the Practical's should be implemented using NoSQL Link: https://www.oracle.com/database/technologies/nosql-database-server-downloads.html		
1	Create different types that include attributes and methods. Define tables for these types by adding a sufficient number of tuples. Demonstrate insert, update and delete operations on these tables. Execute queries on them.	
2	Create an XML database and demonstrate insert, update and delete operations on these tables. Issue queries on it.	
3	Demonstrate distributed databases environment by dividing given global conceCreate a table that stores spatial data and issue queries on it. ptual schema, into vertical and Horizontal fragments and place them on different nodes. Execute queries on these fragments.	
4	Create a table that stores spatial data and issues queries on it.	
5	Create a temporal database and issue queries on it.	
6	Demonstrate the Accessing and Storing and performing CRUD operations in	

	1. MongoDB **2.** Redis
7	Demonstrate the Accessing and Storing and performing CRUD operations in 1. HBase **2.** Apache Cassandra
8	Demonstrating MapReduce in MongoDB to count the number of female (F) and male (M) respondents in the database.
9	Demonstrate the indexing and ordering operations in 1. MongoDB 2. CouchDB **3.** Apache Cassandra
10	Demonstrate the use of data management and operations using NoSQL in the Cloud.

SEMESTER - II

Course Code	Course Title	Credit
PSCS201	Applied Machine and Deep Learning	04

Course Outcome: -

- Developing projects in machine learning for industrial applications.
- Understanding and implementing algorithms and techniques of Machine Learning useful in the field of Data Science, Image Processing, NLP, etc.

Course Specific Outcome:

- Understand core concepts of ML through implementations in python.
- Working with diverse toolkits and packages useful for developing projects in ML
- Implement and understand deep learning and ANNs useful for industry today.

UNIT 1: (Ability Enhancement) **The Fundamentals of Machine Learning** What is Machine Learning? Why use Machine Learning? Types of Machine Learning, Supervised Learning, Unsupervised Learning & Reinforcement Learning. Challenges of Machine Learning, Testing and Validation A First Application: Classification, MNIST Dataset, Performance Measures, Confusion Matrix, Precision and Recall, Precision/Recall Tradeoff, The ROC Curve, Multiclass Classification, Error Analysis.	**15L**
UNIT 2: Training Models Linear Regression, Gradient Descent, Batch Gradient Descent, Stochastic Gradient Descent, Mini-batch Gradient Descent, Polynomial Regression, Learning Curves, The Bias/Variance Tradeoff, Ridge Regression, Lasso Regression, Early Stopping, Logistic Regression, Decision Boundaries, Softmax Regression, Cross Entropy.	**15L**

UNIT 3: Support Vector Machines Linear SVM Classification, Soft Margin Classification, Nonlinear SVM Classification, Polynomial Kernel, Gaussian RBF Kernel, SVM Regression, Decision Trees, Training and Visualizing a Decision Tree, Making Predictions, The CART Training Algorithm, Gini Impurity vs Entropy, Regularization Hyperparameters.	**15L**
UNIT 4: (Skill Enhancement) **Fundamentals of Deep Learning** What is Deep Learning? Need Deep Learning? Introduction to Artificial Neural Network (ANN), Core components of neural networks, Multi-Layer Perceptron (MLP), Activation functions, Sigmoid, Rectified Linear Unit (ReLU), Introduction to Tensors and Operations, Tensorflow framework.	**15L**

TEXT BOOK:

Course Code	Course Title	Credits
PSCSP201	**Practical Course onApplied Machine and Deep Learning**	**02**
Note: All the Practical's should be implemented using Python and TensorFlow. **Link:Python :https://www.python.org/downloads/** **TensorFlow :https://www.tensorflow.org/install**		
1	Implement Linear Regression (Diabetes Dataset)	
2	Implement Logistic Regression (Iris Dataset)	
3	Implements Multinomial Logistic Regression (Iris Dataset)	
4	Implement SVM classifier (Iris Dataset)	
5	Train and fine-tune a Decision Tree for the Moons Dataset	
6	Train an SVM regressor on the California Housing Dataset	
7	Implement Batch Gradient Descent with early stopping for Softmax Regression	
8	Implement MLP for classification of handwritten digits (MNIST Dataset)	
9	Classification of images of clothing using Tensorflow (Fashion MNIST dataset)	
10	Implement Regression to predict fuel efficiency using Tensorflow (Auto MPG dataset)	

Course Code	Course Title	Credits
PSCS202	**Natural Language Processing**	**04**

Course Outcome: -

- Understanding the importance and concepts of Natural Language Processing (NLP)
- Applying algorithms available for the processing of linguistic information and computational properties of natural languages.
- Knowledge on various morphological, syntactic, and semantic NLP tasks.
- Introducing various NLP software libraries and data sets publicly available.

● Designing and developing practical NLP based applications **Course Specific Outcome: -** ● The ability to describe the concepts of morphology, syntax, semantics, discourse & pragmatics of natural language ● Discover various linguistic and statistical features relevant to the basic NLP task, namely, spelling correction, morphological analysis, parts-of-speech tagging, parsing, and semantic analysis ● Assess and Evaluate NLP based systems ● Ability to choose appropriate solutions for solving typical NLP subproblems (tokenizing, tagging, parsing) ● Analyse NLP problems to decompose them inadequate independent components and develop real-life applications	
UNIT 1: Introduction to Natural Language Processing (NLP) and Language Modelling Introduction to NLP: Introduction and applications, NLP phases, Difficulty of NLP including ambiguity; Spelling error and Noisy Channel Model; Concepts of Parts-of speech and Formal Grammar of English. Language Modelling: N-gram and Neural Language Models Language Modelling with N-gram, Simple N-gram models, smoothing (basic techniques), Evaluating language models; Neural Network basics, Training; Neural Language Model, Case study: application of neural language model in NLP system development Python Libraries for NLP: Using Python libraries/packages such as NaturalLanguage Toolkit (NLTK), spaCy, genism	**15L**
UNIT 2: Morphology & Parsing in NLP Computational morphology & Parts-of-speech Tagging: basic concepts; Tagset; Lemmatization, Early approaches: Rule-based and TBL; POS tagging using HMM, Introduction to POS Tagging using	**15L**

Neural Model. Parsing Basic concepts: top-down and bottom-up parsing, treebank; Syntactic parsing: CKY parsing; Statistical Parsing basics: Probabilistic Context-Free Grammar (PCFG); Probabilistic CKY Parsing of PCFGs.	
UNIT 3: Semantics and Word Embedding Semantics Vector Semantics: Words and Vector; Measuring Similarity; Semantics with dense vectors; SVD and Latent Semantic Analysis Embeddings from prediction: Skip-gram and Continuous Bag of words; Concept of Word Sense; Introduction to WordNet	**15L**
UNIT 4: (Skill Enhancement) **NLP Applications and Case Studies** Intelligent Work Processors: Machine Translation; User Interfaces; man-machine Interfaces: Natural language Querying Tutoring and Authoring Systems. Speech Recognition Commercial use of NLP: NLP in customer Service, Sentiment Analysis, Emotion Mining, Handling Frauds and SMS, Bots, LSTM & BERT models, Conversations	**15L**

TEXT BOOK:

1. “Speech and Language Processing”, Jurafsky Dan and Martin James H., 3rd Edition, Pearson, 2018.
2. “Natural Language Processing with Python”, Steven Bird, Ewan Klein, and Edward Loper, 2nd Edition, O’Reilly, 2016.

Course Code	Course Title	Credits
PSCSP202	**Practical Course on Natural Language Processing**	**02**

Note: - The following set of practicals can be performed using any Python Libraries for NLP such as NLTK, spaCy, genism:

Link:-https://www.python.org/downloads/

1	Write a program to implement sentence segmentation and word tokenization
2	Write a program to Implement stemming and lemmatization
3	Write a program to Implement a tri-gram model
4	Write a program to Implement PoS tagging using HMM & Neural Model
5	Write a program to Implement syntactic parsing of a given text
6	Write a program to Implement dependency parsing of a given text
7	Write a program to Implement Named Entity Recognition (NER)
8	Write a program to Implement Text Summarization for the given sample text

Apply the concepts and techniques of Natural language processing learned for real-life applications. A suitable application can be modelled which demonstrates the NLP skills. Some of the concepts/themes for lab exercises (not limited to the following) are described.

9	Consider a scenario of applying NLP in Customer Service. Design and develop an application that demonstrates NLP operations for working with tasks and data like voice calls, chats, Ticket Data, Email Data. Process the data to understand the voice of the Customer (intent mining, Top words, word cloud, classify topics). Identify issues, replace patterns and gain insight into sales chats.
10	Consider a scenario of Online Review and demonstrate the concept of sentiment analysis and emotion mining by applying various approaches like lexicon-based approach and rule-based

	approaches.
11	Apply NLP in Banking, Financial Services, and Insurance. Design Application to detect frauds and work with SMS data.
12	Demonstrate the use of NLP in designing Virtual Assistants. Apply LSTM, build conversational Bots.

Course Code	Course Title	Credits
PSCS203	**Web Mining**	**04**

Course Outcome: -

- To Understand the difference between Web Mining and Data mining.
- To Understand the Basics and Needs of Web Mining.
- To Understand Web-based Data.
- To Understand Opinion Mining and Sentiment classification.

Course Specific Outcome:

- Develop deep understanding of mining techniques exclusively for the Internet
- Understand and develop analytics for social media data.
- Design and implementation of various web analytical tool to understand complex unstructured data on the Internet for aiding individuals and Businesses to grow their business

UNIT 1: Introduction to Web Mining Web Mining, Data Mining, Basic Concepts, Difference, Mining Sequential Patterns on Prefix Span, Generating Rules from Sequential Patterns. Basic Concepts of Information Retrieval, Information Retrieval Models, Relevance feedback, Evaluation measures Text and Web Page Preprocessing, Inverted Index and Its Compression, latent semantic indexing, Web Search, Web Spamming	**15L**
UNIT 2: Opinion Mining and Web Usage Mining Web Information Retrieval, Sentiment Classification, Feature based	

Opinion Mining and Summarization, Comparative Sentence and Relation Mining, Opinion Search and Opinion Spam. Web Usage Mining.	**15L**
UNIT 3: Social Network & Link Analysis Link Analysis, Scrapy using python (without pipelining), Social Network Analysis, Co-Citation and Bibliographic Coupling, PageRank, HITS, Community Discovery	**15L**
UNIT 4: (Skill Enhancement) **Webpage crawlers and usage mining** Basic Crawler Algorithm, Implementation Issues, Universal Crawlers, Focused Crawlers, Topical Crawlers, Crawler Ethics and Conflicts, Data modelling and webpage usage mining., Discovery and analysis of web usage patterns, Recommender systems and collaborative filtering, query log mining	**15L**

Course Code	Course Title	Credits
PSCSP203	**Practical Course on Web Mining**	**02**
Note: - The following set of practical's should be implemented in Scrape, python: **Link:-Python : https://www.python.org/downloads/**		

1	Scrape an online E-Commerce Site for Data. 1. Extract product data from Amazon - be it any product and put these details in the MySQL database. One can use pipeline. Like 1 pipeline to process the scraped data and other to put data in the databaseand since Amazon has some restrictions on scraping of data, ask them to work on small set of requests otherwise proxies and all would have to be used. 2. Scrape the details like color, dimensions, material etc. Or customer ratings by features.
2	Scrape an online Social Media Site for Data. Use python to scrape information from twitter.
3	Page Rank for link analysis using python Create a small set of pages namely page1, page2, page3 and page4 apply random walk on the same
4	Perform Spam Classifier.
5	Demonstrate Text Mining and Webpage Pre-processing using meta information from the web pages (Local/Online).
6	Apriori Algorithm implementation in case study.
7	Develop a basic crawler for the web search for user defined keywords.
8	Develop a focused crawler for local search.
9	Develop a programme for deep search implementation to detect plagiarism in documents online.
10	Sentiment analysis for reviews by customers and visualize the same.

Course Code	**Course Title**	**Credits**
PSCS204	**Embedded and IoT Technology**	**04**

Course Outcome: -

- The course is designed to enable students, to understand and implement IoT in industry.
- Design and executive projects in IoT with Automatic Identification and Data Capture

Course Specific Outcome: -

- Understand basic components and functionalities of Embedded System including its hardware.
- Effectively achieve collaboration of various technologies in IoT and enable the same using software programming like Python, Embedded C etc.
- Understand case studies in IoT and replicate the same for more detailed analysis of the IoT development.

UNIT 1: Embedded System Basics Introduction to Embedded Systems, Design of Embedded Systems, Memory Architecture, Input/Output. Basic electronics: Semiconductors, Transistors, BJT, Flip Flops, Resistors, Capacitors, CMOS, MOSFET, FPGA, Relays. Microcontrollers, UART Communications, SPI-peripherals interface, I2C communication, Wireless Sensor Network (WSN)	**15L**
UNIT 2: Basics of IOT Introduction IoT:Evolution of the IoT concept, vision and definition of IoT, basic characteristics of IoT, distinguish the IoT from other related technologies, IoT enablers, IoT architectures, pros and cons of IoT, IoT architecture concepts for specific IoT applications. IoT Building Blocks -Hardware and Software:The basic IoT building blocks, smart thing components and capabilities, basics of Packet Tracer with reference to IoT, basics of IoT gateway, Cloud, and analytics Sensing Principles and Wireless Sensor Network:Sensor fundamentals and classification of sensors, physical principles of some common sensors, basics of WSNs, WSN architecture and types, layer-level functionality of WSN protocol stack.	**15L**
UNIT 3: Advanced IOT Technologies IoT Gateway:IoT architecture domains, IoT gateway architecture, IoT	**15L**

gateway functionalities, IoT gateway selection criteria, IoT gateway and edge computing, edge computing-based solution for specific IoT applications IoT Protocol Stack:Mapping of IoT protocols to layered IoT architecture, functionality of infrastructure, service discovery, and application layer protocols of IoT protocol stack IoT Cloud and Fog Computing:Components of IoT Cloud architecture, usage of application domains of IoT Cloud platforms, layered architecture of Fog computing, distinguish Fog computing from other related terms IoT Applications:Main applications of IoT, Implementation details of various IoT application domains	
UNIT 4: (Skill Enhancement) **Security, Communication and Data analytics in IOT** IoT Security: Security constraints in IoT systems, security requirements of IoT systems, IoT attacks, security threats at each layer of IoT architecture, design secure IoT system for specific application Social IoT: Nature of social relationships among IoT Devices, functionality of different components of social IoT architecture, social aspects of smart devices in IoT applications Packet Tracer and IoT: Basics of Packet Tracer and Blockly programming language, design simple IoT projects in Packet Tracer.	**15L**

Course Code	Course Title	Credits
PSCSP204	**Practical Course onEmbedded and IoT Technology**	**02**
Note: - The following set of practicals should be implemented in CodeVisionAVR, Proteus8, Cisco Packet Tracer, Keli V5, Python **Link: -Python:https://www.python.org/downloads/** **CodeVisionAVR :https://www.codevision.be/** **Proteus8:https://www.labcenter.com/downloads/** **Cisco Packet Tracer:https://www.netacad.com/courses/packet-tracer** **Keli V5: https://www.keil.com/download/**		
1	Design and implement basics embedded circuits 1. Automatic Alarm system- Alarm should get tigger by senor 2. Timer based buzzer 3. Sensor based Counting device	
2	Demonstrate communication between two embedded devices using UART port	
3	Built an IoT system to send ticket before entering the bus.	
4	Demonstrate an IoT based game which can be played between two player who are physically at a considerable distance.	
5	Develop a IoT application which will record the movement and orientation of your phone and give the data back to the PC	
6	Develop an IoT application that will raise an alarm whenever with going to rain outside based on the weather prediction data.	
7	Deploy an IoT application which will alert you by beeping or vibrating your phone whenever you get someone call your name.	
8	Develop an IoT application for monitoring water levels in tanks and automatically start the motor to fill the tank if the level goes below the critical level.	
9	Develop an IoT module to which measure the intensity of light and send the same to your PC/ Phone	
10	Develop an IoT application for Motion detection.	

5. EVALUATION

The evaluation of each paper shall contain two parts:

(i) Internal Assessment- 40 Marks.
(ii) External Assessment - 60 Marks.

The Internal to External assessment ratio shall be 2:3.

6. SCHEME OF EXAMINATIONS AND DISTRIBUTION PATTERN OF MARKS

SCHEME OF EXTERNAL EXAMINATIONOF SEMESTER- I AND SEMESTER – II

The External Theory examination of all semesters shall be conducted by the University at the end of each semester.

SCHEME OF INTERNAL EVALUATIONOF SEMESTER- I AND SEMESTER – II

Internal evaluation is to be done by continuous assessment which will consist of two components viz.

- Course Specific Project should be done for Each Course of Semester - I & II. The scope of the Course Specific Project may be within or beyond the scope of the 4 units and practical's prescribed for the Course.
- Assignments / QUIZ / Seminars / Case Studies.

The particulars of the Internal examination for each course of Semester- I and Semester – II are given below:

No	Semester	Course Code	Particular	Marks	Total Marks
1	I / II	PSCS101 / PSCS201	Course Specific Project	30	40
			Assignments / QUIZ / Seminars / Case Studies.	10	

2		PSCS102 / PSCS202	Course Specific Project	30	40
			Assignments / QUIZ / Seminars / Case Studies.	10	
3		PSCS103 / PSCS203	Course Specific Project	30	40
			Assignments / QUIZ / Seminars / Case Studies.	10	
4		PSCS104 / PSCS204	Course Specific Project	30	40
			Assignments / QUIZ / Seminars / Case Studies.	10	

SCHEME OF EXAMINATION FOR PRACTICAL COURSES

There will not be any Internal examination for practical courses of Semester- I and Semester – II.

EXTERNAL EXAMINATION FOR PRACTICAL COURSES

The particulars of the external examination for each practical course of Semester- I and Semester – II are given below:

No	Semester	Course Code	Particular	No of Questions	Marks	Total Marks
1	I / II	PSCSP101 / PSCSP201	Laboratory experiment question with internal choice	01	40	50
			Journal		05	
			VIVA		05	
2		PSCSP102/ PSCSP202	Laboratory experiment question with internal choice	01	40	50

			Journal		05	
			VIVA		05	
3		PSCSP103/ PSCSP203	Laboratory experiment question with internal choice	01	40	50
			Journal		05	
			VIVA		05	
4		PSCSP104/ PSCSP204	Laboratory experiment question with internal choice	01	40	50
			Journal		05	
			VIVA		05	

GUIDELINES OF JOURNALS

A student should maintain a Journal with Practical experiments reported for each of the practical course of Semester- I and Semester - II. Related theories/algorithms need to be explained in a journal.

Certified Journal with at least 70% of the list of the Practical need to be submitted at the time of the practical examination.

AUDIT COURSES

Students who have obtained Undergraduate Degree in subjects other than B.SC Computer science from a duly recognized University shall undertake **an Online Audit Courses provided below.**
They are supposed to submit the **online completion certificate** of the same to the concerned department at the end of each semester 1 and semester 2.

UNIVERSITY OF MUMBAI

Syllabus for Semester-III and Semester -IV
Program: M.Sc.
Course: Computer Science

(Credit Based Semester and Grading System with effect from the academic year 2016–2017)

Preamble

This syllabus is an extension of the syllabus for semester - I and semester – II of MSc Computer Science of University of Mumbai, which came into existence in the academic year 2015-2016. As mentioned in the syllabus of semester I and II, the intended philosophy of the new syllabus is to meet following guidelines:

- Give strong foundation on core Computer Science subjects.
- Expose student to emerging trends in a gradual and incremental way.
- Prepare student community for the demands of ICT industry.
- Offer specialization on a chosen area.
- Create research temper among students in the whole process.

This syllabus for the semester - III and semester – IV has tried to continue the steps initiated in the semester- I and semester –II to meet the goals set. This proposes two core compulsory subjects in semester III. The student has to continue with the tracks they have taken in the semester II as elective subjects. The syllabus also includes project proposal as part of the practical course in elective subjects.

The semester – IV will have one compulsory subject. Student can choose one subject as specialization out of the two electives he or she has been pursuing since the semester – II. That means, there will be four specializations in the semester IV as mentioned below:

- Cloud Computing
- Cyber and Information Security
- Business Intelligence and Big Data Analytics
- Machine Learning

The syllabus also offers an internship and project implementation in the semester – IV, each of which has weights equivalent to a full course. By introducing different electives as tracks in semester –II, espousing more of that tracks in the semester –III and offering the opportunity to choose the specialization based on the tracks pursed in semester –IV

will give the student the added advantage of high level competency in the advanced and emerging areas of computer science. This will definitely equip the student with industry readiness as internship in an IT or IT-related organization gives a practical exposure to what is learned and what is practiced. The strong foundation given in the core courses in different semesters will give enough confidence to the learner to face and adapt to the changing trends and requirements of industry and academia.

As one can easily notice, the syllabus offers lots of emphasis on student driven learning and learning through experience. Research is embedded in the course structure. By introducing Researching Computing in semester – I, Case study in semester – II, Project Proposal in semester – III and Project Implementation in semester – IV (which together has a weightage equivalent to almost two theory courses), the syllabus prepares a strong army of budding computer science researchers. The syllabus designed on the firm believe that by focusing on student driven research on cutting edge and emerging trends with lots of practical experience will make the learning more interesting and stimulating. It is hoped that the student community and teacher colleagues will appreciate the thrust, direction and treatment given in the syllabus.

We thank all our colleagues in the University of Mumbai for their inputs, suggestions and critical observations. We acknowledge the contributions of experts from premier institutions and industry for making the syllabus more relevant. We thank the chairperson and members of the present and previous Adhoc Board of Studies in Computer Science of University for their constant support. Thanks to one and all who have directly or indirectly helped in this venture.

Structure of the syllabus

This is the syllabus for the semester–III and semester–IV of MSc Computer Science program of University of Mumbai to be implemented from the year 2016-2017.

Semester-III

The syllabus offers four theory courses and two practical courses in semester-III. Of the four theory courses, two are compulsory courses. The remaining two are electives. Each elective course has two tracks (track A and track B for elective I and track C and track D for elective II). A student is expected to continue with the track they have chosen in semester-II.

The syllabus proposes four subjects in semester-III. Each subject has theory and practical components.

Semester–III: Theory courses

The four theory courses offered in semester-III are:

(i) Ubiquitous Computing

(ii) Social Network Analysis

(iii) Elective - I

- (a) Track A: Cloud Computing – II (Cloud Computing Technologies)
- (b) Track B: Cyber and Information Security – II (Cyber Forensics)

(iv) Elective – II

- (a) Track C: Business Intelligence and Big Data Analytics – II (Mining Massive Data sets)
- (b) Track D: Machine Learning – II (Advanced Machine Learning)

A student is expected to continue with the same tracks he or she has taken in semester-II for elective –I and elective –II. Each of these theory courses (compulsory as well as elective) is of four credits each and is expected to complete in 60 hours. The details are shown in the following table.

Semester III – Theory courses

Course Code	Course Nomenclature	Lecture In Hours	Credits
PSCS 301	Ubiquitous Computing	60	4
PSCS 302	Social Network Analysis	60	4
PSCS 3031	Elective I - Track A: Cloud Computing –II (Cloud Computing Technologies)	60	4
PSCS 3032	Elective I - Track B: Cyber and Information Security- II (Cyber Forensics)		
PSCS 3033	Elective II - Track C: Business Intelligence and Big Data Analytics –II (Mining Massive Data sets)	60	4
PSCS 3034	Elective II - Track D: Machine Learning –II (Advanced Machine Learning)		
Total Credits for Theory courses in Semester III			16

Semester–III: Practical Laboratory Courses

The syllabus proposes two laboratory courses of 4 credits each. The laboratory experiments from the first two theory courses (PSCS301 and PSCS302) are combined together and are proposed as the first practical course (PSCSP5). Similarly, the laboratory experiments from the elective courses are combined together and taken as the second practical course (PSCSP6). The following table summarizes the details of the practical courses in the semester –III.

Semester-III: Practical Laboratory Courses

Course code	Course Title	No of hours	Credits
PSCSP5	Ubiquitous Computing and Social Network Analysis	60+60= 120	04
PSCSP6	Elective I and Elective II	60+60= 120	04
Total Credits for Practical Laboratory courses in Semester–III			08

Project Proposal: The syllabus introduces a project proposal in the semester-III under lab course PSCSP6. As per this, a student is expected to select a topic for project based on the specialization he or she is planning to take in the semester-IV. Needless to say, the project proposal will be based on a topic related to the elective the student has been pursuing in semester –II and semester-III and intends to continue in semester-IV as specialization.

The proposal will contain introduction, related works, objectives and methodology. The implementation, experimental results and analysis will be part of the Project implementation in the semester-IV.

Semester –IV

The syllabus proposes two subjects in semester-IV, each with theory and practical components. In addition, there will be internship with industry and a project implementation. The important feature of the semester-IV is the specialization a student can choose. A student can choose a specialization based on the electives one has been pursuing since semester–II. Since there are two electives in semester-III, a student can drop one and choose the other as the specialization in semester–IV.

Semester–IV: Theory courses

The two theory courses offered in semester-IV are:

(i) Simulation and Modeling

(ii) Specialization

(a) Track A: Cloud Computing – III (Building Clouds and Services)

(b) Track B: Cyber and Information Security–III (Cryptography and Crypt Analysis)

(c) Track C: Business Intelligence and Big Data Analytics – III (Intelligent Data Analysis)

(d) Track D: Machine Learning – III (Computational Intelligence)

Each of these courses (core as well as the specialization) is expected to complete in 60 hours. The details are given in the following table.

Semester-IV: Theory courses

<table>
<tr><th>Course Code</th><th>Course Nomenclature</th><th>Lecture In Hours</th><th>Credits</th></tr>
<tr><td>PSCS 401</td><td>Simulation and Modeling</td><td>60</td><td>4</td></tr>
<tr><td>PSCS 4021</td><td>Specialization - Track A: Cloud Computing –III (Building Clouds and Services)</td><td rowspan="4">60</td><td rowspan="4">4</td></tr>
<tr><td>PSCS 4022</td><td>Specialization - Track B: Cyber and Information Security- II (Cryptography and Crypt Analysis)</td></tr>
<tr><td>PSCS 4023</td><td>Specialization - Track C: Business Intelligence and Big Data Analytics –III (Intelligent Data Analysis)</td></tr>
<tr><td>PSCS 4024</td><td>Specialization - Track D: Machine Learning –III (Computational Intelligence)</td></tr>
<tr><td colspan="3">Total Credits for Theory courses in Semester-IV</td><td>08</td></tr>
</table>

Semester–IV: Practical Laboratory courses

The syllabus proposes one laboratory course of 4 credits. The laboratory experiments from the two theory courses are combined together and are proposed as the first practical course (PSCSP7).

Semester-IV: Practical course

Course code	Course Title	No of hours	Credits
PSCSP7	Simulation & Modeling and Specialization	60+60= 120	04

Semester–IV: Internship with industry

The syllabus proposes an internship for about 8 weeks to 12 weeks to be done by a student. It is expected that a student chooses an IT or IT-related industry and formally works as a full time intern during the period. The student should subject oneself with an internship evaluation with proper documentation of the attendance and the type of work he or she has done in the chosen organization. Proper certification (as per the guidelines given in Appendix 1 and 2) by the person, to whom the student was reporting, with Organization's seal should be attached as part of the documentation.

Semester–IV: Internship

Course code	Course Title	No of hours	Credits
PSCSP8	Internship with industry	300	06

Semester–IV: Project Implementation

The syllabus proposes project implementation as part of the semester–IV. The project implementation is continuation of the project proposal the students has submitted and evaluated in semester-III. The student is expected to continue with the proposal made and examined in the semester-III and implement the same in the semester–IV. In addition, experimental set up, analysis of results, comparison with results of related works, conclusion and future prospects will be part of the project implementation. A student is expected to make a project implementation report and appear for a project viva. He or she needs to spend around 200 hours for the project implementation, which fetches 6 credits. The details are given below:

Semester–IV: Project Implementation

Course code	Course Title	No of hours	Credits
PSCSP9	Project Implementation	200	06

Detailed syllabus of semester– III

Course Code	Course Title	Credits
PSCS301	**Ubiquitous Computing**	**04**

Unit I: Basics of **Ubiquitous Computing**

Examples of Ubiquitous Computing Applications, Holistic Framework for UbiCom: Smart DEI, Modeling the Key Ubiquitous Computing Properties, Ubiquitous System Environment Interaction, Architectural Design for UbiCom Systems: Smart DEI Model, Smart Devices and Services, Service Architecture Models, Service Provision Life Cycle.

Unit II: Smart Mobiles, Cards and Device Networks

Smart Mobile Devices, Users, Resources and Code, Operating Systems for Mobile Computers and Communicator Devices, Smart Card Devices, Device Networks.

Human–Computer Interaction (HCI): Explicit HCI, Implicit HCI, User Interfaces and Interaction for Devices, Hidden UI Via Basic Smart Devices, Hidden UI Via Wearable and Implanted Devices, Human Centered Design (HCD).

Unit III: Smart Environments

Tagging, Sensing and Controlling, Tagging the Physical World, Sensors and Sensor Networks, Micro Actuation and Sensing: MEMS, Embedded Systems and Real Time Systems, Control Systems.

Unit IV: Ubiquitous Communication

Audio Networks, Data Networks, Wireless Data Networks, Universal and Transparent Audio, Video and Alphanumeric Data Network Access, Ubiquitous Networks, Network Design Issues.

Course Code	Course Title	Credits
PSCS302	Social Network Analysis	04

Unit I: Introduction to social network analysis (SNA)

Introduction to networks and relations- analyzing relationships to understand people and groups, binary and valued relationships, symmetric and asymmetric relationships, multimode relationships, Using graph theory for social networks analysis- adjacency matrices, edge-lists, adjacency lists, graph traversals and distances, depth-first traversal, breadth-first traversal paths and walks, Dijkstra's algorithm, graph distance and graph diameter, social networks vs. link analysis, ego-centric and socio-centric density.

Unit II: Networks, Centrality and centralization in SNA

Understanding networks- density, reachability, connectivity, reciprocity, group-external and group-internal ties in networks, ego networks, extracting and visualizing ego networks, structural holes, Centrality- degree of centrality, closeness and betweenness centrality, local and global centrality, centralization and graph centers, notion of importance within network, Google pagerank algorithm, Analyzing network structure- bottom-up approaches using cliques, N-cliques, N-clans, K-plexes, K-cores, F-groups and top-down approaches using components, blocks and cut-points, lambda sets and bridges, and factions.

Unit III: Measures of similarity and structural equivalence in SNA

Approaches to network positions and social roles- defining equivalence or similarity, structural equivalence, automorphic equivalence, finding equivalence sets, brute force and Tabu search, regular equivalence, equivalence of distances: Maxsim, regular equivalence, Measuring similarity/dissimilarity- valued relations, Pearson correlations covariance and cross-products, Understanding clustering- agglomerative and divisive clusters, Euclidean, Manhattan, and squared distances, binary relations, matches: exact, Jaccard, Hamming,

Unit IV: Two-mode networks for SNA

Understanding mode networks- Bi-partite data structures, visualizing two-mode data, quantitative analysis using two-mode Singular value decomposition (SVD) analysis,

two-mode factor analysis, two-mode correspondence analysis, qualitative analysis using two-mode core-periphery analysis, two-mode factions analysis, affiliation and attribute networks.

Course Code	Course Title	Credits
PSCS3031	Elective I- Track A: Cloud Computing -II (Cloud Computing Technologies)	04

Unit I: Parallel and Distributed Computing

Elements of parallel computing, elements of distributed computing, Technologies for distributed computing: RPC, Distributed object frameworks, Service oriented computing Virtualization – Characteristics, taxonomy, virtualization and cloud computing.

Unit II: Computing Platforms

Cloud Computing definition and characteristics, Enterprise Computing, The internet as a platform, Cloud computing services: SaaS, PaaS, IaaS, Enterprise architecture, Types of clouds.

Unit III: Cloud Technologies

Cloud computing platforms, Web services, AJAX, mashups, multi-tenant software, Concurrent computing: Thread programming, High-throughput computing: Task programming, Data intensive computing: Map-Reduce programming.

Unit IV: Software Architecture

Dev 2.0 platforms, Enterprise software: ERP, SCM, CRM

Custom enterprise applications and Dev 2.0, Cloud applications.

Text book:

Course Code	Course Title	Credits
PSCS3032	**Elective I- Track B: Cyber and Information Security- II (Cyber Forensics)**	**04**

Unit I: Computer Forensic Fundamentals: Introduction to Computer Forensics and objective, the Computer Forensics Specialist, Use of Computer Forensic in Law Enforcement, Users of Computer Forensic Evidence, Case Studies, Information Security Investigations. Types of Computer Forensics Technology: Types of Military Computer Forensic Technology, Types of Law Enforcement Computer Forensic Technology, Types of Business Computer Forensic Technology, Specialized Forensics Techniques, Hidden Data, Spyware and Adware, Encryption Methods and Vulnerabilities, Protecting Data from Being Compromised, Internet Tracing Methods, Security and Wireless Technologies. Types of Computer Forensics Systems: Study different Security System: Internet, Intrusion Detection, Firewall, Storage Area, Network Disaster Recovery, Public Key Infrastructure, Wireless Network, Satellite Encryption, Instant Messaging (IM), Net Privacy, Identity Management, Biometric, Identity Theft.

Unit II: Data Recovery: Data Recovery and Backup, Role of Data Recovery, Hiding and Recovering Hidden Data. Evidence Collection: Need to Collect the Evidence, Types of Evidences, The Rules of Evidence, Collection Steps. Computer Image Verification and Authentication: Special Needs of Evidence Authentication. Identification of Data: Timekeeping, Forensic Identification and Analysis of Technical Surveillance Devices, Reconstructing Past Events: How to Become a Digital Detective, Useable File Formats, Unusable File Formats, Converting Files.

Unit III: Network Forensics: Sources of Network Based Evidence, Principles of Internetworking, Internet Protocol Suite. Evidence Acquisition: Physical Interception, Traffic Acquisition Software, Active Acquisition. Traffic Analysis: Protocol Analysis, Packet Analysis, Flow Analysis, Higher-Layer Traffic analysis. Statistical Flow Analysis: Sensors, Flow Record Export Protocols, Collection and Aggregation, Analysis. Wireless: the IEEE Layer 2 Protocol Series, Wireless Access Point, Wireless Traffic Capture and Analysis, Common Attacks, Locating Wireless Devices. Network Intrusion Detection and

Analysis: NIDS/NIPS Functionality, Modes of Detection, Types of NIDS/NIPS, NIDS/NIPS Evidence Acquisition.

Unit IV: Network Devices and Mobile Phone Forensics: Sources of Logs, Network Architecture, Collecting and Analyzing Evidence, switches, routers, firewalls, interfaces Web Proxies: Need to Investigate Web Proxies, Functionality, Evidence, Squid, Web Proxy Analysis, Encrypted Web Traffic. Mobile Phone Forensics: Crime and Mobile Phones, Voice, SMS and Identification of Data Interception in GSM, Mobile Phone Tricks, SMS Security, Mobile Forensic.

Course Code	Course Title	Credits
PSCS3033	**Elective I- Track C: Business Intelligence and Big Data Analytics –II (Mining Massive Data sets)**	**04**

Unit I: Introduction To Big Data

Big data: Introduction to Big data Platform, Traits of big data, Challenges of conventional systems, Web data, Analytic processes and tools, Analysis vs Reporting, Modern data analytic tools, Statistical concepts: Sampling distributions, Re-sampling, Statistical Inference, Prediction error. Data Analysis: Regression modeling, Analysis of time Series: Linear systems analysis, Nonlinear dynamics, Rule induction, Neural networks: Learning and Generalization, Competitive Learning, Principal Component Analysis and Neural Networks, Fuzzy Logic: Extracting Fuzzy Models from Data, Fuzzy Decision Trees, Stochastic Search Methods.

Unit II: MAP REDUCE

Introduction to Map Reduce: The map tasks, Grouping by key, The reduce tasks, Combiners, Details of MapReduce Execution, Coping with node failures. Algorithms Using MapReduce: Matrix-Vector Multiplication, Computing Selections and Projections, Union, Intersection, and Difference, Natural Join. Extensions to MapReduce: Workflow Systems, Recursive extensions to MapReduce, Common map reduce algorithms.

Unit III: SHINGLING OF DOCUMENTS

Finding Similar Items, Applications of Near-Neighbor Search, Jaccard similarity of sets, Similarity of documents, Collaborative filtering as a similar-sets problem, Documents, k-Shingles, Choosing the Shingle Size, Hashing Shingles, Shingles built from Words. Similarity-Preserving Summaries of Sets, Locality-Sensitive hashing for documents. The Theory of Locality-Sensitive functions. Methods for high degrees of similarity.

Unit IV: MINING DATA STREAMS

Introduction to streams concepts – Stream data model and architecture, Stream computing, Sampling data in a stream, Filtering streams, Counting distinct elements in a stream, Estimating moments, Counting oneness in a Window, Decaying window, Real time analytics Platform(RTAP).

Text book:

Course Code	Course Title	Credits
PSCS3034	**Elective I- Track D: Machine Intelligence - II (Advanced Machine Learning Techniques)**	**04**

Unit I: Probability

A brief review of probability theory, Some common discrete distributions, Some common continuous distributions, Joint probability distributions, Transformations of random variables, Monte Carlo approximation, Information theory. Directed graphical models (Bayes nets): Introduction, Examples, Inference, Learning, Conditional independence properties of DGMs. Mixture models and EM algorithm: Latent variable models, Mixture models, Parameter estimation for mixture models, The EM algorithm.

Unit II: Kernels

Introduction, kernel function, Using Kernel inside GLMs, kernel trick, Support vector machines, Comparison of discriminative kernel methods.

Markov and hidden Markov models: Markov models, Hidden Markov Models (HMM), Inference in HMMs, Learning for HMMs. Undirected graphical models (Markov random fields): Conditional independence properties of UGMs, Parameterization of MRFs, Examples of MRFs, Learning, Conditional random fields (CRFs), applications of CRFs.

Unit III: Monte Carlo inference

Introduction, Sampling from standard distributions, Rejection sampling, Importance sampling, Particle filtering, Applications: visual object tracking, time series forecasting, Rao-Blackwellised Particle Filtering (RBPF).

Markov chain Monte Carlo (MCMC) inference: Gibbs sampling, Metropolis Hastings algorithm, Speed and accuracy of MCMC.

Unit IV: Graphical model structure learning

Structure learning for knowledge discovery, Learning tree structures, Learning DAG structure with latent variables, Learning causal DAGs, Learning undirected Gaussian graphical models, Learning undirected discrete graphical models. Deep learning: Deep generative models, Deep neural networks, Applications of deep networks.

List of practical Experiments for Semester –III

Course Code	Course Title	Credits
PSCSP301	**Ubiquitous Computing**	**02**

No	List of Practical Experiments
1	Design and develop location based messaging app
2	Design and develop chat messaging app which is a location-based
3	Design and develop app demonstrating Simple Downstream Messaging
4	Design and develop app demonstrating Send Upstream Messages
5	Design and develop app for Device Group Messaging
6	Implementing GCM Network Manager
7	Demonstrate use of OpenGTS (Open Source GPS Tracking System)
8	Context-Aware system Context-awareness is a key concept in ubiquitous computing. The Java Context-Awareness Framework (JCAF) is a Java-based context-awareness infrastructure and programming API for creating context-aware applications
9	Develop application demonstrating Human Computer Interaction
10	Write a Java Card applet

Course Code	Course Title	Credits
PSCSP302	Social Network Analysis	02

Sr No	List of Practical Experiments
1	Write a program to compute the following for a given a network: (i) number of edges, (ii) number of nodes; (iii) degree of node; (iv) node with lowest degree; (v) the adjacency list; (vi) matrix of the graph.
2	Perform following tasks: (i) View data collection forms and/or import one-mode/two-mode datasets; (ii) Basic Networks matrices transformations
3	Compute the following node level measures: (i) Density; (ii) Degree; (iii) Reciprocity; (iv) Transitivity; (v) Centralization; (vi) Clustering.
4	For a given network find the following: (i) Length of the shortest path from a given node to another node; (ii) the density of the graph; (iii) Draw egocentric network of node G with chosen configuration parameters.
5	Write a program to distinguish between a network as a matrix, a network as an edge list, and a network as a sociogram (or “network graph”) using 3 distinct networks representatives of each.
6	Write a program to exhibit structural equivalence, automatic equivalence, and regular equivalence from a network.
7	Create sociograms for the persons-by-persons network and the committee-by-committee network for a given relevant problem. Create one-mode network and two-node network for the same.
8	Perform SVD analysis of a network.
9	Identify ties within the network using two-mode core periphery analysis.
10	Find “factions” in the network using two-mode faction analysis.

Note:
One may use programming languages like R, Python, Pajek etc and open software/ tools like (i) EGONet; (ii) Ora; (iii) Netlogo; (iv) Pajek; and (v) NetDraw; to do the practical experiments.

Course Code	**Course Title**	**Credits**
PSCSP3031	**Practical Course on Elective I-Track A:Cloud Computing-II (Cloud Computing Technologies)**	**02**

Sr No	List of Practical Experiments
1	Execute & check the performance of existing algorithms using CloudSim.
2	Install a Cloud Analyst and Integrate with Eclipse/Netbeans. Monitor the performance of an Existing Algorithms.
3	Build an application on private cloud.
4	Demonstrate any Cloud Monitoring tool.
5	Evaluate a Private IAAS Cloud using TryStack.
6	Implement FOSS-Cloud Functionality - VDI (Virtual Desktop Infrastructure)
7	Implement FOSS-Cloud Functionality VSI (Virtual Server Infrastructure) Infrastructure as a Service (IaaS)
8	Implement FOSS-Cloud Functionality - VSI Platform as a Service (PaaS)
9	Implement FOSS-Cloud Functionality - VSI Software as a Service (SaaS)
10	Explore FOSS-Cloud Functionality- Storage Cloud

Course Code	Course Title	Credits
PSCSP3032	**Practical Course on Elective I-Track B: Cyber and Information Security- II (Cyber Forensics)**	**02**

Sr No	List of Practical Experiments
1	Write a program to take backup of mysql database
2	Write a program to restore mysql database
3	Use DriveImage XML to image a hard drive
4	Write a program to create a log file
5	Write a program to find a file in a directory
6	Write a program to find a word in a file
7	Create forensic images of digital devices from volatile data such as memory using Imager for: (i) Computer System; (ii) Server; (iii) Mobile Device
8	Access and extract relevant information from Windows Registry for investigation process using Registry View, perform data analysis and bookmark the findings with respect to: (i) Computer System; (ii) Computer Network; (iii) Mobile Device; (iv) Wireless Network
9	Generate a report based on the analysis done using Registry View for different case scenario of the following: (i) Computer System; (ii) Computer Network; (iii) Mobile Device; (iv) Wireless Network
10	Create a new investigation case using Forensic Tool: (i) Computer System; (ii) Computer Network; (iii) Mobile Device ;(iv) Wireless Network.

Course Code	Course Title	Credits
PSCSP3033	**Practical Course on Elective II-Track C: Business Intelligence and Big Data Analytics - II (Mining Massive Data sets -I)**	**02**

No	List of Practical Experiments
1	Generate regression model and interpret the result for a given data set.
2	Generate forecasting model and interpret the result for a given data set.
3	Write a map-reduce program to count the number of occurrences of each alphabetic character in the given dataset. The count for each letter should be case-insensitive (i.e., include both upper-case and lower-case versions of the letter; Ignore non-alphabetic characters).
4	Write a map-reduce program to count the number of occurrences of each word in the given dataset. (A word is defined as any string of alphabetic characters appearing between non-alphabetic characters like nature's is two words. The count should be case-insensitive. If a word occurs multiple times in a line, all should be counted)
5	Write a map-reduce program to determine the average ratings of movies. The input consists of a series of lines, each containing a movie number, user number, rating and a timestamp.
6	Write a map-reduce program: (i) to find matrix-vector multiplication; (ii) to compute selections and projections; (iii) to find union, intersection, difference, natural Join for a given dataset.
7	Write a program to construct different types of k-shingles for given document.
8	Write a program for measuring similarity among documents and detecting passages which have been reused.
9	Write a program to compute the n- moment for a given stream where n is given.
10	Write a program to demonstrate the Alon-Matias-Szegedy Algorithm for second moments.
Note: The experiments may be done using software/tools like Hadoop / WEKA / R / Java etc.	

Course Code	Course Title	Credits
PSCSP3034	**Practical Course on Elective II- Track D: Machine Intelligence - II (Advanced Machine Learning Techniques)**	**02**

Sr No	List of Practical Experiments
1	Find probability density function or probability mass function, cumulative distribution function and joint distribution function to calculate probabilities and quantiles for standard statistical distributions.
2	Create a Directed Acyclic Graph (DAG) using (i) set of formulae (ii) set of vectors and (iii) set of matrices. Find parents and children of nodes. Read conditional independence from DAG. Add and remove edges from graph.
3	Create a Bayesian network for a given narrative. Set findings and ask queries [One may use narratives like 'chest clinic narrative' and package gRain for the purpose].
4	Implement EM algorithm.
5	Use string kernel to find the similarity of two amino acid sequence where similarity is defined as the number of a substring in common.
6	Demonstrate SVM as a binary classifier.
7	Create a random graph and find its page rank.
8	Apply random walk technique to a multivariate time series.
9	Implement two stage Gibbs Sampler.
10	Implement Metropolis Hastings algorithm.

Detailed syllabus of semester – IV

Course Code	Course Title	Credits
PSCS401	**Simulation and Modeling**	**04**

Unit I: Introduction

Introduction to Simulation, Need of Simulation, Time to simulate, Inside simulation software: Modeling the progress of Time, Modeling Variability, Conceptual Modeling: Introduction to Conceptual modeling, Defining conceptual model, Requirements of the conceptual model, Communicating the conceptual model, Developing the Conceptual Model: Introduction, A framework for conceptual modeling, methods of model simplification.

Unit II: Model Verification and Validation

Data Collection and Analysis: Introduction, Data requirements, Obtaining data, Representing unpredictable variability, Selecting statistical distributions. Obtaining Accurate Results: Introduction, The nature of simulation models and simulation output, Issues in obtaining accurate simulation results, example model, dealing with initialization bias: warm-up and initial conditions, Selecting the number of replications and run-length. Searching the Solution Space: Introduction, The nature of simulation experimentation, Analysis of results from a single scenario, Comparing alternatives, Search experimentation, and Sensitive analysis. Verification, Validation and Confidence: Introduction, Defining Verification and Validation, The difficulties of verification and validation, Methods of verification and validation, Independent verification and validation.

Unit III: Modeling and simulation modeling

Types of models, Analytical vs Simulation modeling, Application of simulation modeling, Level of abstraction, Simulation Modeling. Methods, System Dynamics, Discrete Event Modeling, Agent Based modeling: Introduction to Agent, Agent-based modeling**,** Time in agent based models, Space in agent based models, Discrete space, Continuous space movement in continuous space, Communication between agents, Dynamic creation and destruction of agents, Statics on agent population, Condition triggered events and transition in agents. Building agents based models: The problem statement, Phases of

modeling, Assumptions, 3 D animation. Dynamics Systems: Stock and flow diagrams, examples of stock and flow diagrams. Multi-method modeling: Architecture, Technical aspects of combining modeling methods, Examples.

Unit IV: Design and behavior of models

Designing state-based behavior: Statecharts, State transitions, Viewing and debugging Statecharts at runtime, Statecharts for dynamic objects. Discrete events and Event model object: Discrete event, Event-the simplest low level model object, Dynamic events, and Exchanging data with external world. Presentation and animation: Working with shapes, groups and colors, Designing interactive models: using controls, Dynamic properties of controls, 3D Animation. Randomness in Models: Probability distributions, sources of randomness in the model, randomness in system dynamics model, random number generators, Model time, date and calendar: Virtual and real time: The model time, date and calendar, Virtual and real-time execution modes.

Text book:

- Simulation: The Practice of Model Development and Use by Stewart Robinson, John Wiley and Sons, Ltd, 2004.

Course Code	Course Title	Credits
PSCS4021	**Specialization: Cloud Computing -III (Building Clouds and Services)**	**04**

Unit I: Cloud Reference Architectures and Security

The NIST definition of Cloud Computing, Cloud Computing reference architecture, Cloud Computing use cases, Cloud Computing standards. Cloud Computing Security-Basic Terms and Concepts, Threat Agents, Cloud Security Threats. Cloud Security Mechanisms, Encryption, Hashing, Digital Signature, Public Key Infrastructure (PKI), Identity and Access Management (IAM), Single Sign-On (SSO), Cloud-Based Security Groups, Hardened Virtual Server Images.

Unit II: Cloud Computing Mechanisms

Cloud Infrastructure Mechanisms, Logical Network Perimeter, Virtual Server, Cloud Storage Device, Cloud Usage Monitor, Resource Replication Ready-Made Environment. Specialized Cloud Mechanisms, Automated Scaling Listener, Load Balancer, SLA Monitor, Pay-Per-Use Monitor, Audit Monitor, Failover System, Hypervisor, Resource Cluster, Multi-Device Broker, State Management Database. Cloud Management Mechanisms, Remote Administration System, Resource Management System, SLA Management System, Billing Management System.

Unit III: Cloud Computing Architecture

Fundamental Cloud Architectures, Workload Distribution Architecture, Resource Pooling Architecture, Dynamic Scalability Architecture, Elastic Resource Capacity Architecture, Service Load Balancing Architecture, Cloud Bursting Architecture, Elastic Disk Provisioning Architecture, Redundant Storage Architecture. Advanced Cloud Architectures, Hypervisor Clustering Architecture, Load Balanced Virtual Server Instances Architecture, Non-Disruptive Service Relocation Architecture, Zero Downtime Architecture, Cloud Balancing Architecture, Resource Reservation Architecture, Dynamic Failure Detection and Recovery Architecture, Bare-Metal Provisioning Architecture, Rapid Provisioning Architecture, Storage Workload Management Architecture.

Unit IV: Working with Clouds

Cloud Delivery Model Considerations, Cloud Delivery Models: The Cloud Provider Perspective, Building IaaS Environments, Equipping PaaS Environments, Optimizing SaaS Environments, Cloud Delivery Models: The Cloud Consumer Perspective. Cost Metrics and Pricing Models, Business Cost Metrics, Cloud Usage Cost Metrics, Cost Management Considerations. Service Quality Metrics and SLAs, Service Quality Metrics, Service Availability Metrics, Service Reliability Metrics, Service Performance Metrics, Service Scalability Metrics, Service Resiliency Metrics.

Course Code	Course Title	Credits
PSCS4022	**Specialization: Cyber and Information Security (Cryptography and Crypt Analysis)**	**04**

Unit I: Introduction to Number Theory

Topics in Elementary Number Theory: O and notations, time estimates for doing arithmetic-divisibility and the Euclidean algorithm, Congruence: Definitions and properties, linear congruence, residue classes, Euler's phi function, Fermat's Little Theorem, Chinese Reminder Theorem, Applications to factoring, finite fields, quadratic residues and reciprocity: Quadratic residues, Legendre symbol, Jacobi Symbol. (proofs of the theorems are not expected to cover).

Unit II: Simple Cryptosystems

Shift Cipher, Substitution Cipher, Affine Cipher, Vigenère Cipher, Vermin Cipher, Hill Cipher, Permutation Cipher, Stream Cipher, Cryptanalysis of Affine Cipher, Substitution Cipher, Vigenère Cipher and Hill Cipher, Block Ciphers, Algorithm Modes, DES, Double DES, Triple DES, Meet-in-Middle Attack, AES, IDEA algorithm. Cryptographic Hash Functions: Hash Functions and Data Integrity, Security of Hash Functions, Secure Hash Algorithm, Message Authentication Code, Nested MACs, HMAC.

Unit III: RSA Cryptosystem

The RSA Algorithm, Primarily Testing, Legendre and Jacobi Symbols, The Solovay-Strassen Algorithm, The Miller-Rabin Algorithm, Factoring Algorithm: The pollard p-1 Algorithm, Dixon's Random Squares Algorithm, Attacks on RSA, The Rabin Cryptosystem. Public Key Cryptosystems: The idea of public key Cryptography, The Diffie-Hellman Key Agreement, ElGamal Cryptosystem, The Pollard Rho Discrete Logarithm Algorithm, Elliptic Curves, Knapsack problem.

Unit IV: Key Distribution and Key Agreement Scheme

Diffie-Hellman Key distribution and Key agreement scheme, Key Distribution Patterns, Mitchell-Piper Key distribution pattern, Station-to-station protocol, MTI Key Agreement

scheme. Public-Key Infrastructure: What is PKI?, Secure Socket Layer, Certificates, Certificate Life cycle, Trust Models: Strict Hierarchy Model, Networked PKIs, The web browser Model, Pretty Good Privacy.

Course Code	Course Title	Credits
PSCS4023	**Specialization: Business Intelligence and Big Data Analytics (Intelligent Data Analysis)**	**04**

Unit I: Clustering

Distance/Similarity, Partitioning Algorithm: K-Means; K-Medoids, Partitioning Algorithm for large data set: CLARA; CLARANS, Hierarchical Algorithms: Agglomerative (AGNES); Divisive (DIANA), Density based clustering: DBSCAN, Clustering in Non-Euclidean Spaces, Clustering for Streams and Parallelism.

Unit II: Classification

Challenges, Distance based Algorithm: K nearest Neighbors and kD-Trees, Rules and Trees based Classifiers, Information gain theory, Statistical based classifiers: Bayesian classification, Document classification, Bayesian Networks. Introduction to Support

Vector Machines, Evaluation: Confusion Matrix, Costs, Lift Curves, ROC Curves, Regression/model trees: CHAID (Chi Squared Automatic Interaction Detector). CART (Classification And Regression Tree).

Unit III: Dimensionality Reduction

Introduction to Eigen values and Eigen vectors of Symmetric Matrices, Principal-Component Analysis, Singular-Value Decomposition, CUR Decomposition.

Unit IV: Link Analysis And Recommendation Systems

Link analysis: PageRank, Efficient Computation of PageRank, Topic-Sensitive PageRank, Link Spam. Recommendation Systems: A Model for Recommendation Systems, Content-Based Recommendations, Collaborative Filtering, Dimensionality Reduction.

Course Code	Course Title	Credits
PSCS4024	Specialization: Machine Learning -III (Computational Intelligence)	04

Unit I: Artificial Neural Networks

The Artificial Neuron, Supervised Learning Neural Networks, Unsupervised Learning Neural Networks, Radial Basis Function Networks, Reinforcement Learning, Performance Issues.

Unit II: Evolutionary Computation

Introduction to Evolutionary Computation, Genetic Algorithms, Genetic Programming, Evolutionary Programming, Evolution Strategies, Differential Evolution, Cultural Algorithms, Co-evolution.

Unit III: Computational Swarm Intelligence

Particle Swarm Optimization(PSO) - Basic Particle Swarm Optimization, Social Network Structures, Basic Variations and parameters, Single-Solution PSO. Advanced Topics and applications. Ant Algorithms- Ant Colony Optimization Meta-Heuristic, Cemetery Organization and Brood Care, Division of Labor, Advanced Topics and applications.

Unit IV: Artificial Immune systems, Fuzzy Systems and Rough Sets

Natural Immune System, Artificial Immune Models, Fuzzy Sets, Fuzzy Logic and Reasoning, Fuzzy Controllers, Rough Sets.

Text book:

List of Practical Experiments for Semester –IV

Course Code	**Course Title**	**Credits**
PSCSP401	**Practical course on Simulation and modeling**	**02**

Sr No	List of Practical Experiments
1	Design and develop agent based model by • Creating the agent population • Defining the agent behavior • Add a chart to visualize the model output. [Use a case scenario like grocery store, telephone call center etc for the purpose].
2	Design and develop agent based model by • Creating the agent population • Defining the agent behavior • Adding a chart to visualize the model output • Adding word of mouth effect • Considering product discards

	• Considering delivery time [Use a case scenario like restaurant].
3	Design and develop agent based model by • Creating the agent population • Defining the agent behavior • Adding a chart to visualize the model output • Adding word of mouth effect • Considering product discards • Consider delivery time • Simulating agent impatience • Comparing model runs with different parameter values [Use a scenario like market model]
4	Design and develop System Dynamic model by • Creating a stock and flow diagram • Adding a plot to visualize dynamics • Parameter Variation • Calibration [Use a case scenario like spread of contagious disease for the purpose]
5	Design and develop a discrete-event model that will simulate process by: • Creating a simple model • Adding resources • Creating 3D animation • Modeling delivery [Use a case situation like a company's manufacturing and shipping].
6	Design and develop time-slice simulation for a scenario like airport model to design how passengers move within a small airport that hosts two airlines, each with their own gate. Passengers arrive at the airport, check in, pass the security checkpoint and then go to the waiting area. After boarding starts, each airline's representatives check their passengers' tickets before they allow them to board.

7	Verify and validate a model developed like bank model or manufacturing model
8	Create defense model to stimulate aircraft behavior
9	Stimulate the travelling sales man problem to compute the shortest path.
10	Stimulate the Urban dynamics to address the scenarios like: (a) The problem of public transport line (b) To compute the time taken for train to enter the station

Course Code	**Course Title**	**Credits**
PSCSP4021	**Practical Course on Specialization: Cloud Computing (Building Clouds and Services)**	**02**

Sr No	List of Practical Experiments
1	Develop a private cloud using an open source technology.
2	Develop a public cloud using an open source technology.
3	Explore Service Offerings, Disk Offerings, Network Offerings and Templates.
4	Explore Working of the following with Virtual Machines • VM Lifecycle • Creating VMs • Accessing VMs • Assigning VMs to Hosts
5	Explore Working of the following with Virtual Machines • Changing the Service Offering for a VM • Using SSH Keys for Authentication
6	Explore the working of the following: Storage Overview • Primary Storage

	• Secondary Storage
7	Explore the working of the following: Storage Overview • Working With Volumes • Working with Volume Snapshots
8	Explore managing the Cloud using following: • Tags to Organize Resources in the Cloud • Reporting CPU Sockets
9	Explore managing the Cloud using following: • Changing the Database Configuration • File encryption type
10	Explore managing the Cloud using following: • Administrator Alerts • Customizing the Network Domain Name

Note

Recommended Open Source Technologies for completing practical:

- FOSS-Cloud
- Try Stack
- Apache CloudStack
- OpenStack
- Canonical's OpenStack Autopilot

Recommended Configuration: Desktop PC Core I5 with minimum 250 GB Hard Drive and minimum 8 GB RAM

Course Code	Course Title	Credits
PSCSP4022	**Practical Course on Specialization: Cyber & Information Security (Cryptography and Crypt Analysis)**	**02**

Sr No	List of Practical Experiments
1	Write a program to implement following: • Chinese Reminder Theorem • Fermat's Little Theorem
2	Write a program to implement the (i) Affine Cipher (ii) Rail Fence Technique (iii) Simple Columnar Technique (iv) Vermin Cipher (v) Hill Cipher to perform encryption and decryption.
3	Write a program to implement the (i) RSA Algorithm to perform encryption and decryption.
4	Write a program to implement the (i) Miller-Rabin Algorithm (ii) pollard p-1 Algorithm to perform encryption and decryption.
5	Write a program to implement the ElGamal Cryptosystem to generate keys and perform encryption and decryption.
6	Write a program to implement the Diffie-Hellman Key Agreement algorithm to generate symmetric keys.
7	Write a program to implement the MD5 algorithm compute the message digest.
8	Write a program to implement different processes of DES algorithm like (i) Initial Permutation process of DES algorithm, (ii) Generate Keys for DES algorithm, (iii) S-Box substitution for DES algorithm.
9	Write a program to encrypt and decrypt text using IDEA algorithm.
10	Write a program to implement HMAC signatures.

Course Code	Course Title	Credits
PSCSP2023	**Practical Course on Specialization: Business Intelligence & Big Data Analytics (Intelligent Data Analysis)**	**02**

Sr No	List of Practical Experiments
1	Pre-process the given data set and hence apply clustering techniques like K-Means, K-Medoids. Interpret the result.
2	Pre-process the given data set and hence apply partition clustering algorithms. Interpret the result
3	Pre-process the given data set and hence apply hierarchical algorithms and density based clustering techniques. Interpret the result.
4	Pre-process the given data set and hence classify the resultant data set using tree classification techniques. Interpret the result.
5	Pre-process the given data set and hence classify the resultant data set using Statistical based classifiers. Interpret the result.
6	Pre-process the given data set and hence classify the resultant data set using support vector machine. Interpret the result.
7	Write a program to explain different functions of Principal Components.
8	Write a program to explain CUR Decomposition technique.
9	Write a program to explain links to establish higher-order relationships among entities in Link Analysis.
10	Write a program to implement step-by-step a Collaborative Filtering Recommender System.
The experiments may be done using software/ tools like R/Weka/Java etc.	

Course Code	Course Title	Credits
PSCSP2024	**Practical Course on Specialization: Machine Intelligence (Computational Intelligence)**	**02**

Sr No	List of Practical Experiments
1	Implement feed forward neural network for a given data.
2	Implement Self Organizing Map neural network.
3	Implement Radial Basis Function neural network with gradient descent.
4	Implement a basic genetic algorithm with selection, mutation and crossover as genetic operators.
5	Implement evolution strategy algorithm.
6	Implement general differential evolution algorithm.
7	Implement gbest and lbest of PSO.
8	Implement simple Ant colony optimization algorithm.
9	Implement basic artificial immune system algorithm.
10	Apply different defuzzification methods for centroid calculation of a given fuzzy rule base.

Note: The above practical experiments may use programming languages like C, Java, R etc.

Scheme of Examination for Theory Courses

There will be internal and external examination for the theory courses. The weightage of internal/external and scheme of examination will be as per common guidelines provided by the University for the PG courses in the faculty of Science.

Scheme of Examination for Practical Courses

There will not be any internal examination for practical courses.

External Examination for practical courses:

The evaluation of the external examination of practical course is given below:

Sr No	Semester	Course Code	Particular		No of questions	Marks per question	Total Marks
1	III	PSCSP5	Laboratory experiment question		2	40	80
			Journal		-	10	10
			Viva		-	10	10
		Marks for each course			100		
2	III	PSCSP6	Laboratory experiment question		2	25	50
			Journal		-	10	10
			Viva		-	10	10
			viva on Project Proposal	Documentation		10	30
				Presentation		10	
				Viva		10	
		Total Marks			100		

Sr No	Semester	Course Code	Particular			No of questions	Marks per question	Total Marks
1	IV	PSCSP7	Laboratory experiment question			2	40	80
			Journal			-	10	10
			Viva			-	10	10
		Total Marks					100	
2	IV	PSCSP8	Intern-ship	Internship conduct	Quality and relevance		40	100
					Documentation		30	
					Presentation		30	
				Internship Viva			50	50
			Total Marks				150	
3	IV	PSCSP9	Project Implementation	Project conduct	Quality and relevance		40	100
					Documentation		30	
					Presentation		30	
				Project viva			50	50
			Total Marks				150	

Guide lines for maintenance of journals:

A student should maintain a journal with at least six practical experiments for each part of the practical course. Certified journals need to be submitted at the time of the practical examination.

Guidelines for Project Proposal in Semester - III

- Student should take a topic related to the specialization he or she is planning to take in Semester-IV.
- Should have studied the related topics in the elective he or she has chosen in semester-II and semester- III
- A student is expected to devote at least 2 to 3 months of study as part of topic selection and its documentation.
- The student should be comfortable to implement the proposal in the semester – IV.

Guidelines for Documentation of Project Proposal in Semester –III

Student is expected to make a project proposal documentation which should contain the following:

- **Title:** A suitable title giving the idea about what work is proposed.
- **Introduction:** An introduction to the topic of around 3-5 pages, giving proper back ground of the topic discussed.
- **Related works:** A detailed survey of the relevant works done by others in the domain. Student is expected to refer at least 5 research papers in addition to text books and web-links in the relevant topic. It may be around 7 to 10 pages.
- **Objective:** A detailed objective of the proposal is needed. It may be of 1 to 2 pages.
- **Methodology:** A proper and detailed procedure of how to solve the problem discussed. It shall contain the techniques, tools, software and data to be used. It shall be of around 3 to 5 pages.

The report may be of around 20 pages, which needs to be signed by the teacher in charge and head of the Department. Students should submit the signed project proposal documentation at the time of viva as part of the University examination.

Guidelines for internship in Semester - IV

- Internship should be of 2 to 3 months with 8 to 12 weeks duration.
- A student is expected to find internship by himself or herself. However, the institution should assist their students in getting internship in good organizations.
- The home institution cannot be taken as the place of internship.
- A student is expected to devote at least 300 hours physically at the organization.
- Internship can be on any topic covered in the syllabus mentioned in the syllabus, not restricted to the specialization.
- Internship can be done, in one of the following, but not restricted to, types of organizations:
    - Software development firms
    - Hardware/ manufacturing firms
    - Any small scale industries, service providers like banks
    - Clinics/ NGOs/professional institutions like that of CA, Advocate etc
    - Civic Depts like Ward office/post office/police station/ punchayat.
    - Research Centres/ University Depts/ College as research Assistant for research projects or similar capacities.

Guidelines for making Internship Report in Semester –IV

A student is expected to make a report based on the internship he or she has done in an organization. It should contain the following:

- **Certificate:** A certificate in the prescribed Performa (given in appendix 1) from the organization where the internship done.
- **Evaluation form:** The form filled by the supervisor or to whom the intern was reporting, in the prescribed Performa (given in appendix 2).

- **Title:** A suitable title giving the idea about what work the student has performed during the internship.
- **Description of the organization:** A small description of 1 to 2 pages on the organization where the student has interned
- **Description about the activities done by the section where the intern has worked**: A description of 2 to 4 pages about the section or cell of the organization where the intern actually worked. This should give an idea about the type of activity a new employee is expected to do in that section of the organization.
- **Description of work allotted and actually done by the intern:** A detailed description of the work allotted and actual work performed by the intern during the internship period. Intern may give a weekly report of the work by him or her if needed. It shall be of around 7 to 10 pages.
- **Self assessment:** A self assessment by the intern on what he or she has learnt during the internship period. It shall contain both technical as well as inter personal skills learned in the process. It shall be of around 2 to 3 pages.

The internship report may be around 15 pages and this needs to be submitted to the external examiner at the time of University examination.

Guidelines for Research Implementation in Semester - IV

- Student should continue with topic proposed and evaluated at the semester – III.
- The topic has to be related with the specialization he or she has chosen in the semester – IV.
- A student is expected to devote at least 3 to 4 months of efforts for the implementation.
- Student should submit a detailed project implementation report at the time of viva.

Guidelines for Documentation of Project Proposal in Semester –IV

A Student should submit project implementation report with following details:

- **Title:** Title of the project (Same as the one proposed and evaluated at the semester II examination).
- **Implementation details:** A description of how the project has been implemented. It shall be of 2 to 4 pages.
- **Experimental set up and results:** A detailed explanation on how experiments were conducted, what software used and the results obtained. Details like screen shots, tables and graphs can come here. It shall be of 6 to 10 pages.
- **Analysis of the results:** A description on what the results means and how they have been arrived at. Different performing measures or statistical tools used etc may be part of this. It shall be of 4 to 6 pages.
- **Conclusion:** A conclusion of the project performed in terms of its outcome (May be half a page).
- **Future enhancement:** A small description on what enhancement can be done when more time and resources are available (May be half a page).
- **Program code:** The program code may be given as appendix.

The report may be of around 20 pages (excluding program code), which needs to be signed by the teacher in charge and head of the Department. Student should submit the signed project implementation report along with evaluated copy of the project proposal documentation (of semester –III) at the time of Project evaluation and viva as part of the University examination.

Appendix 1

(Proforma for the certificate for internship in official letter head)

This is to certify that Mr/Ms_____ of _____College/Institution worked as an intern as part of her MSc course in Computer Science of University of Mumbai. The particulars of internship are given below:

Internship starting date: _____

Internship ending date:_____

Actual number of days worked:_____

Tentative number of hours worked:_____ Hours

Broad area of work:_____

A small description of work done by the intern during the period:

_____

_____

_____

_____

_____

_____

Signature:

Name:

Designation:

Contact number:

Email:

(seal of the organization)

Appendix 2

(Proforma for the Evaluation of the intern by the supervisor/to whom the intern was reporting in the organization)

Professional Evaluation of intern

Name of intern:_____

College/institution:_____

[Note: Give a score in the 1-5 scale by putting √ in the respective cells]

Sr No	Particular	Excellent	Very Good	Good	Moderate	Satisfactory
1	Attendance					
2	Punctuality					
3	Adaptability					
4	Ability to shoulder responsibility					
5	Ability to work in a team					
6	Written and oral communication skills					
7	Problem solving skills					
8	Ability to grasp new concepts					
9	Ability to complete task					
10	Quality of work done

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges and Directors of the Recognized Institutions in Faculty of Science & Technology is invited to this office circular No. UG/166 of 2016-17 dated 19th November, 2016 relating to the revised syllabus F.Y.B.Sc.(Chemistry) (Sem . I & II) (CBCS).

They are hereby informed that the recommendations made by the Board of Studies in **Chemistry** at its meeting held on 09th June, 2022 and subsequently passed in the Faculty and then by the Board of Deans at its meeting held on 5th July, 2022 **vide** item No. 6.5 (R) have been accepted by the Academic Council at its meeting held on 11th July, 2022 **vide** item No. 6.5 (R) and that in accordance therewith, the revised syllabus of F.Y.B.Sc.(Chemistry) (Sem . I & II) (CBCS). has been brought into force with effect from the academic year 2022-23. (The same is available on the University's website www.mu.ac.in).

(Dr. Shailendra Deolankar)
I/c Registrar

MUMBAI – 400 032

Proposed syllabus for CBCS

F. Y. B. Sc. Chemistry

For the subject of chemistry, there shall be two papers for 45 lectures each comprising of three units of 15 L each.

Semester-I

1. Paper-I / II (General Chemistry) Unit-I will be for PhysicalChemistry
2. Paper-I / II Unit-II will be for Inorganic Chemistry
3. Paper- I / II Unit-III will be for OrganicChemistry.

Semester-II

1. Paper-I /II (General Chemistry) Unit-I will be for PhysicalChemistry
2. Paper-I / II Unit-II will be for Inorganic Chemistry
3. Paper-I / II Unit-III will be for OrganicChemistry

Choice Based Credit System F.Y.B.Sc. Chemistry
Syllabus To be implemented from the
Academic year 2022-2023

SEMESTER I

Course Code	Unit	Topic	Credits	L/per week
USCH101	I	Chemical Thermodynamics	2	1
		Chemical calculations		
	II	Atomic structure		1
		Periodic Table and periodicity		
	III	Basics of Organic Chemistry:		1
		Bonding and Structure of organic compounds		
		Fundamentals of organic reaction Mechanism		
USCH102	I	Chemical Kinetics	2	1
		Liquid States		
	II	Comparative Chemistry of Main Group elements		1
	III	Stereochemistry I		1
USCHP1	Chemistry Practical		2	6

SEMESTER II

Course Code	Unit	Topic	Credits	L/per week
USCH201	I	Gaseous State	2	1
		Electrochemistry – I		
		Chemical Equilibria and Thermodynamic Parameters		
	II	Concept of Qualitative Analysis		1
		Acid Base Theories		
	III	Chemistry of Aliphatic Hydrocarbons		1
USCH202	I	Ionic Equilibria	2	1
		Photochemistry Molecular Spectroscopy		
	II	Chemical Bond and Reactivity		1
		Oxidation Reduction Chemistry		
	III	Stereochemistry II		1
		Aromatic Hydrocarbons		
USCHP2	Chemistry Practical		2	6

Programme Outcomes
B.Sc. Chemistry

The student graduating with the Degree B.Sc Chemistry should be able to acquire;

i) Core competency: Students will acquire core competency in the subject Chemistry, and in allied subject areas.

ii) A systematic and coherent understanding of the fundamental concepts in Physical chemistry, Organic Chemistry, Inorganic Chemistry, Analytical Chemistry, and all other related allied chemistry subjects.

iii) Students will be able to use the evidence-based comparative chemistry approach to explain chemical synthesis and analysis.

iv) Students will be able to characterize, identify and separate components of organic or inorganic origin and will also be able to analyze them by making use of the modern instrumental methods learned.

v) Students will be able to understand the basic principle of equipmentand instruments used in the chemistry laboratory.

vi) Students will be able to demonstrate the experimental techniques and methods of their area of specialization in Chemistry

vii) The course curriculum also includes components that can be helpful to graduate students to develop critical thinking ability by way of solving problems/numerical using basic chemistry knowledge and concepts.

viii) Appreciate the central role of chemistry in our society and use this as a basis for ethical behavior in issues facing chemists including an understanding of safe handling of chemicals, environmental issues, and key issues facing our society in terms of energy, health, and medicine.

ix) Lifelong learner: The course curriculum is designed to inculcate a habit of learning continuously through the use of advanced ICTtechniques and other available techniques/books/journals for personal academic growth as well as for increasing employability opportunity.

SEMESTER I
Paper I
UNIT I

1.1	**Chemical Thermodynamics (10 L)** **Thermodynamic terms;** System, surrounding, boundaries, types of system, Intensive and Extensive properties, State functions and path functions, Thermodynamic processes. **First law of thermodynamics:** Concept of heat (q), work (w), internal energy (U), enthalpy, heat capacity, relation between heat capacities, sign conventions, calculations of heat, work, internal energy and enthalpy (H). **Thermochemistry:** Heat of reactions, standard states, enthalpy of formation of molecules, enthalpy of combustion and its applications, calculations of bond energy, bond dissociation energy and resonance energy from thermochemical data, Kirchhoff's equation (Numerical problems expected wherever necessary)
1.2	**Chemical Calculations: (5L)** Methods of expressing concentration of solutions: Normality, Molarity, Formality, Mole fractions, Weight ratio, Volume ratio, Weight to volume ratio, ppm, ppb, millimoles, milliequivalents, Preparation of solutions. (Numerical problems expected wherever necessary)
	UNIT II
2.1	**Atomic structure:(8 L)**
	Historical perspectives of the atomic structure; J. J. Thomson Model, Rutherford's Atomic Model- alpha particle scattering experiment, Bohr's theory, its limitations and atomic spectrum of hydrogen atom. Structureof hydrogenatom. **Hydrogenicatoms:** 1. Simple principles of quantummechanics 2. Atomicorbitals i) Hydrogenic energylevels ii) Shells, subshells and orbitals iii) Electronspin iv) Radial shapes oforbitals v) Angular shapes oforbitals. Aufbauprinciple, Hund's rule of maximum multiplicity and Pauli exclusion principle
2.2	**Periodic Table and periodicity:(7 L)** **Long form of Periodic Table;** Classification for elements as main group, transition and inner transition elements. **Periodicity in the following properties:** Atomic and ionic size, electron gain enthalpy, ionization enthalpy, effective nuclear charge (Slater's rule), electronegativity, Pauling and Mulliken methods. (Numerical problemsexpected, wherever applicable.)
	Unit III
3	**Basics of Organic Chemistry**
3.1	**Classification and Nomenclature of Organic Compounds: (5L)** **Nomenclature of mono and bi-functional aliphatic compounds on the basis of priority order of the following classes of compounds**: Alkanes, alkenes, alkynes, haloalkanes, alcohols, ethers, aldehydes, ketones, carboxylic acids, carboxylic acid

	derivatives (acid halides, esters, anhydrides, amides), nitro compounds, nitriles and amines and their cyclic analogues.
3.2	**Bonding and Structure of organic compounds: (4L)** **Hybridization**: sp3, sp2, sp hybridization of carbon and nitrogen; sp3 and sp2 hybridizations of oxygen in Organic compounds (alcohol, ether, aldehyde, ketone, carboxylic acid, ester, cyanide, amine and amide) **Overlap of atomic orbitals:** Overlaps of atomic orbitals to form sigma and pi bonds, shapes of organic molecules. **Shapes of molecules;** Influence of hybridization on bond properties (as applicable to ethane, ethene, ethyne).
3.3	**Fundamentals of organic reaction mechanism: (6L)** **Electronic Effects:** Inductive, electromeric, resonance and mesomeric effects, hyperconjugation and their applications. Dipole moment**;** Organic acids and bases; their relative strengths. **Basic terms & concepts**:: Homolytic and Heterolytic fission with suitable examples. Electrophiles and Nucleophiles; Nucleophilicity and basicity, Electrophilicity and acidity. **Types (primary, secondary, tertiary, allyl, benzyl), shape and their relative stability of the following reactive intermediates**: i. Carbocations ii. Carbanions and iii. Free radicals **Introduction to types of organic reactions:** Addition, Elimination and Substitution reaction. (With one example of each)
	Semester- I **Paper – II** **Unit – I**
1.1	**Chemical Kinetics: (8L)** Rate of reaction, rate constant, measurement of reaction rates, order and molecularity of reaction, Integrated rate equation of first order and Second order reactions (with equal initial concentration of reactants) Determination of order of reaction by a) Integration method b) Graphical method c) Ostwald's isolation method d) Half time method, Effect of temperature on the rate of reaction, Concept of activation energy and its calculation from Arrhenius equation (derivation not expected). (Numerical problems expected wherever necessary).
1.2	**Liquid State: (7L)** **Surface tension:** Introduction, methods of determination of surface tension by drop number method **Viscosity:** Introduction, coefficient of viscosity, relative viscosity, specific viscosity, reduced viscosity, determination of viscosity by Ostwald viscometer **Refractive index**: Introduction, molar refraction and polarizability, determination of refractive index by Abbe's refractometer. **Liquid crystals**: Introduction, Classification and structure of thermotropic phases (Nematic, Smectic and Cholesteric phases), applications of liquid crystals. (Numerical problems expected wherever necessary).
	Unit II
2	**Comparative chemistry of MainGroupElements:(15L)**

	Metallic and non-metallic nature, oxidation states, electronegativity, anomalous behavior of second period elements, allotropy, catenation, diagonal relationship. Comparative chemistry of oxides and hydroxides of group I and group II elements. Some important compounds- **$NaHCO_3$, Na_2CO_3, CaO, $CaCO_3$**; oxides of carbon, oxides of Sulphur and Nitrogen with respect to environmental aspects like greenhouse effect, photochemical smog and acid rain.
	Unit III
3	**Stereochemistry I: (15L)** Projection formulae: Flying Wedge projection, Fischer Projection, Newman and Sawhorse Projection formulae (of erythro, threo isomers of tartaric acid and 2,3 - dichlorobutane) and their interconversions; **Geometrical isomerism in alkene and cycloalkanes**: cis–trans and syn-anti isomerism E/Z notations with C.I.P rules. **Optical Isomerism:** Optical Activity, Specific Rotation, Chirality/Asymmetry, Enantiomers, Molecules with two similar and dissimilar chiral-centres, Diastereoisomers, meso structures, racemic mixture and resolution (methods of resolution not expected). **Relative and absolute configuration**: D/L and R/S designations. **Conformational analysis of alkanes** (ethane, propane and n-butane); Relative stability with energy diagrams

Semester II
Paper I
Unit I

1.1	**Gaseous State (6L)** Kinetic theory of gases, Maxwell-Boltzmann's distribution of velocities (Qualitative discussion), Ideal gas laws, Deviation from ideal gas laws, Ideal and real gases, Reasons for deviation from ideal gas laws, Compressibility factor, Boyle's temperature, van der Waals equation of state, Critical phenomena, Relation between critical constants and van der Waals constants. (Numerical problems expected wherever necessary)
1.2	**Electrochemistry - I (4 L)** Conductance, specific conductance, equivalent conductance, molar conductance, Variation of molar conductance with concentration of strong and weak electrolyte. Reversible electrodes, Electrode potential, standard electrode potential, Galvanic cells, Conventions to represent the galvanic cells, Concept of emf of cell. (Numerical problems expected wherever necessary)
1.3	**Chemical Equilibria and Thermodynamic Parameters (5L)** Second law of thermodynamics, concept of entropy, Physical significance of entropy, Concept of free energy, Helmholtz and Gibbs free energy, Variation of free energy with temperature and pressure, Spontaneity and Physical significance of free energy. Re Reversible and irreversible reactions, equilibrium constants (Kc and Kp), relationship between Kc and Kp. Thermodynamic derivation of equilibrium constant (Numerical problems expected wherever necessary)
	Unit II

2	**Concept of Qualitative Analysis:(8 L)**
2.1	Testing of Gaseous Evolutes, Role of Papers impregnated with Reagents in qualitative analysis (with reference to papers impregnated with starchiodide, potassium dichromate, lead acetate, dimethylglyoxime and oxinereagents).
	Precipitation equilibria,Formation of precipitates likeAgCl, AgBr, AgI and $BaSO_4$ effect of common ions, uncommon ions, oxidationstates, buffer action, complexing agents on precipitation of ionic compounds. (Balanced chemical equations)
2.2	**Acid Base Theories: (7L)**
	Arrhenius, Lowry- Bronsted, Lewis, Solvent – Solute concept of acids and bases, Usanovich concept, Hard and Soft acids and bases, Applications of HSAB.
	Unit III
3	**Chemistry of Aliphatic Hydrocarbons**
3.1	**Carbon - Carbon sigma bonds: (3L)** Chemistry of alkanes: Formation of alkanes, Wurtz Reaction, Wurtz-Fittig reaction, free radical substitutions: Halogenation - relative reactivity and selectivity
3.2	**Carbon - Carbon pi bonds (12L):** **Formation of alkenes and alkynes by elimination reactions**: Mechanism of E1, E2, E1cb reaction. Saytzeff and Hofmann eliminations **Reactions of alkenes**: Electrophilic additions with mechanisms (Markownikoff / AntiMarkownikoff addition), Mechanism of oxymercuration - demercuration, hydroboration - oxidation, ozonolysis, reduction (catalytic and chemical), syn- and anti-dihydroxylation (oxidation), 1, 2- and 1, 4-addition reactions in conjugated dienes, Diels-Alder reaction. **Reaction of alkynes**: Acidity, Electrophilic and Nucleophilic additions with mechanisms. Hydration to form carbonyl compounds, Alkylation of terminal alkynes
	Semester II **Paper II** **Unit I**
1.1	**Ionic Equilibria: (7L)** Strong and weak electrolytes, degree of ionization, factors affecting degree of ionization,Ionization constant and ionic product of water, Ionization of weak acids and bases, Dissociation constants of mono-, di-, and tri-protic acids. pH scale, Buffer solutions, types of buffers, Derivation of Henderson equation for acidic and basic buffers, Buffer action, buffer capacity (Numerical problems expected, wherever necessary)
1.2	**Photochemistry (4L)** Laws of photochemistry, Quantum yield or efficiency, experimental determination of quantum yield, Reasons for low and high quantum yield, Primary and secondary processes. Photochemical reactions (with suitable examples), Photosensitizers and photosensitized reactions, Fluorescence, Phosphorescence and Chemiluminescence. (Numerical problems expected, wherever necessary)
1.3	**Molecular Spectroscopy: (4L)** Electromagnetic radiation, electromagnetic spectrum, Planck's equation, Interaction of electromagnetic radiation with matter; Absorption, Emission, Scattering, Electronic, Vibrational and Rotational transitions, Beer-Lamberts law.

	(Numerical problems expected, wherever necessary)
	Unit II
2.1	**Chemical Bond and Reactivity:(10 L)** Types of chemical bond, comparison between ionic and covalent bonds, polarizability (Fajan's Rule), shapes of molecules, Lewis dot structure, Sidgwick Powell Theory, basic VSEPR theory for AB_n type molecules with and without lone pair of electrons, isoelectronic principles, applications and limitations of VSEPR theory.
2.2	**Oxidation Reduction Chemistry: (5L)** Reductionpotentials, **Redox potentials: half reactions**; balancing redoxequations. **Applications of redoxchemistry**; Redox reagents in Volumetric analysis; a) I_2 b)$KMnO_4$
	Unit III
3.1	**Stereochemistry II: (5L)** **Cycloalkanes and Conformational Analysis: (5L)** Types of cycloalkanes and their relative stability, Baeyer strain theory, Conformational analysis of cyclohexane: Chair, Boat and Twist boat forms; Relative stability with energy diagram.
3.2	**Aromatic Hydrocarbons: (10L)** **Aromaticity:** Hückel's rule, anti-aromaticity, aromatic character of arenes, cyclic carbocations/carbanions and heterocyclic compounds with suitable examples. **Electrophilic aromatic substitution:** halogenation, nitration, sulphonation and Friedel-Crafts alkylation/acylation with their mechanism, Directing effects of the groups

Chemistry lab.
Semester – I

Unit – I: Physical Chemistry

1) To prepare 0.1 N succinic acid and standardize the NaOH solution of different concentrations.
2) To determine the rate constant for the hydrolysis of ester using HCl as catalyst.
3) To determine enthalpy of dissolution of salt (KNO_3)
4) Determination of viscosity of aqueous solutions of (i) polymer (ii) ethanol and (iii) sugar at room temperature (Any two solutions).

Unit II: Inorganic Chemistry

1) Commercial analysis of (anytwo)
    a) Mineralacid
    b) Organicacid
    c) Salt of weak acid and strongbase.
2) Titration using double indicator: analysis of solution of $Na_2CO_3$and$NaHCO_3$

3) Gravimetric analysis
   a) To determine the percent purity of sample of $BaSO_4$containingNH_4Cl
   b) To determine the percent purity of ZnO containing$ZnCO_3$.

Unit III Organic Chemistry

1. Purification of organic compounds by recrystallization selecting suitable solvent (minimum 2 organic compounds to be given)
   (Learners are expected to report a) Solvent for recrystallization. b) Percentage Yield and the melting points of the purified compound.)

2. Basic principles of Organic compound characterization (minimum 4 Solid organic compounds)
   (Learners should perform Preliminary Tests, Solubility Test, obtain melting point and recrystallize the compound with given solvent)

Minimum 80 percent of practical must be completed in each term

Chemistry lab:
Semester - II

Unit – I: Physical Chemistry

1) To determine the amount of strong acid in the given solution by titrating against strong base conductometrically.
2) To determine the dissociation constant of weak acid (Ka) using Henderson's equation and the method of incomplete titration pH metrically.
3) To verify Beer-Lamberts law using $KMnO_4$ solution by colorimetric method.
4) To standardize commercial sample of HCl using borax and to write material safety data of the chemicals involved.

Unit II Inorganic Chemistry

1) **Qualitative analysis: (5 mixtures to beanalyzed)**
   Semi-micro inorganic qualitative analysis of a sample containing two cations and two anions(from amongst):

   Cations (from amongst): Pb^{2+}, Ba^{2+}, Ca^{2+}, Sr^{2+}, Cu^{2+}, Cd^{2+}, Fe^{2+}, Ni^{2+}, Mn^{2+}, Mg^{2+}, Al^{3+}, Cr^{3+}, K^+,NH_4^+

Anions (from amongst):CO_3^{2-}, S^{2-}, SO^{2-}, NO_2^-, NO_3^-, Cl^-, Br^-, I^-, SO_4^{2-}, PO_4
(Scheme of analysis should avoid use of sulphide ion in any form for precipitation/ separation of cations.)

2) **Redox Titration:** To determine the percentage of copper(II) present in agiven sample by titration against a standard aqueous solution of sodium thiosulfate (iodometrytitration)

Unit III Organic Chemistry

1) **Characterization of organic compounds** containing C, H, (O), N, S, X elements (6 solid/liquid Organic compounds)
(Preliminary Tests, Solubility/Miscibility Test, Detection of Elements, Detection of Functional group and determination of Physical constant)

Minimum 80 percent of practicals must be completed in each term

UNIVERSITY OF MUMBAI

Syllabus

for S. Y. B. Sc. / S. Y. B. A. Semester III & IV (CBCS)

Program: B. Sc. / B. A.

Course: Mathematics

with effect from the academic year 2021-2022

(UNIVERSITY OF MUMBAI)

Syllabus for: S.Y.B.Sc./S.Y.B.A.

Program: B.Sc./B/A.
Course: Mathematics
Choice based Credit System (CBCS)
with effect from the
academic year 2021-22

SEMESTER III

Calculus III				
Course Code	UNIT	TOPICS	Credits	L/Week
USMT 301, UAMT 301	I	Infinite Series	2	3
	II	Riemann Integration		
	III	Applications of Integrations and Improper Integrals		
Linear Algebra I				
USMT 302 ,UAMT 302	I	System of Equations and Matrices	2	3
	II	Vector Spaces over IR		
	III	Determinants, Linear Equations (Revisited)		
ORDINARY DIFFERENTIAL EQUATIONS				
USMT 303	I	Higher Order linear Differential Equations	2	3
	II	Systems of First Order Linear differential equations		
	III	Numerical Solutions of Ordinary Differential Equations		
PRACTICALS				
USMTP03		Practicals based on USMT301, USMT 302 and USMT 303	3	5
UAMTP03		Practicals based on UAMT301, UAMT 302	2	4

SEMESTER IV

Multivariable Calculus I				
Course Code	UNIT	TOPICS	Credits	L/Week
USMT 401, UAMT 401	I	Functions of several variables	2	3
	II	Differentiation of Scalar Fields		
	III	Applications of Differentiation of Scalar Fields and Differentiation of Vector Fields		
Linear Algebra II				
USMT 402 ,UAMT 402	I	Linear transformation, Isomorphism, Matrix associated with L.T.	2	3
	II	Inner product spaces		
	III	Eigen values, eigen vectors, diagonalizable matrix		
Numerical methods (Elective A)				
USMT 403A	I	Solutions of algebraic and transcendental equations	2	3
	II	Interpolation, Curve fitting, Numerical integration		
	III	Solutions of linear system of Equations and eigen value problems		
Statistical methods an their applications(Elective B)				
USMT 403B	I	Descriptive Statistics and random variables	2	3
	II	Probability Distribution and Correlation		
	III	Inferential Statistics		
PRACTICALS				
USMTP04		Practicals based on USMT401, USMT 402 and USMT 403	3	5
UAMTP04		Practicals based on UAMT401, UAMT 402	2	4

Teaching Pattern for Semester III

1. Three lectures per week per course. Each lecture is of 48 minutes duration.
2. One Practical (2L) per week per batch for courses USMT301, USMT 302 combined and one Practical (3L) per week for course USMT303 (the batches tobe formed as prescribed by the University. Each practical session is of 48 minutes duration.)

Teaching Pattern for Semester IV

1. Three lectures per week per course. Each lecture is of 48 minutes duration.
2. One Practical (2L) per week per batch for courses USMT301, USMT 302 combined and one Practical (3L) per week for course USMT303 (the batches to be formed as prescribed by the University. Each practical session is of 48 minutes duration.)

Semester-III

Note: Unless indicated otherwise, proofs of the results mentioned in the syllabus should be covered.

USMT301/ UAMT301: Calculus III

Unit I. Infinite Series (15 Lectures)

1. Infinite series in $\mathbb{R}$. Definition of convergence and divergence. Basic examples including geometric series. Elementary results such as if $\sum_{n=1}^{\infty} a_n$ is convergent, then $a_n \longrightarrow 0$ but converse not true. Cauchy Criterion. Algebra of convergent series.
2. Tests for convergence: Comparison Test, Limit Comparison Test, Ratio Test (without proof), Root Test (without proof), Abel Test (without proof) and Dirichlet Test (without proof). Examples. The decimal expansion of real numbers. Convergence of $\sum_{n=1}^{\infty} \frac{1}{n^p}$ $(p > 1)$. Divergence of harmonic series $\sum_{n=1}^{\infty} \frac{1}{n}$.
3. Alternating series. Leibnitz's Test. Examples. Absolute convergence, absolute convergence implies convergence but not conversely. Conditional Convergence.

Unit II. Riemann Integration (15 Lectures)

1. Idea of approximating the area under a curve by inscribed and circumscribed rectangles. Partitions of an interval. Refinement of a partition. Upper and Lower sums for a bounded real valued function on a closed and bounded interval. Riemann integrability and the Riemann integral.
2. Criterion for Riemann integrability. Characterization of the Riemann integral as the limit of a sum. Examples.

3. Algebra of Riemann integrable functions. Also, basic results such as if $f : [a, b] \longrightarrow \mathbb{R}$ is integrable, then (i) $\int_a^b f(x)\ dx = \int_a^c f(x)\ dx + \int_c^b f(x)\ dx$. (ii) $|f|$ is integrable and $\left| \int_a^b f(x)\ dx \right| \leq \int_a^b |f|(x)\ dx$ (iii) If $f(x) \geq 0$ for all $x \in [a, b]$ then $\int_a^b f(x)\ dx \geq 0$.
4. Riemann integrability of a continuous function, and more generally of a bounded function whose set of discontinuities has only finitely many points. Riemann integrability of monotone functions.

Unit III. Applications of Integrations and Improper Integrals (15 lectures)

1. Area between the two curves. Lengths of plane curves. Surface area of surfaces of revolution.
2. Continuity of the function $F(x) = \int_a^x f(t)\ dt, x \in [a, b]$, when $f : [a, b] \longrightarrow \mathbb{R}$ is Riemann integrable. First and Second Fundamental Theorems of Calculus.
3. Mean value theorem. Integration by parts formula. Leibnitz's Rule.
4. Definition of two types of improper integrals. Necessary and sufficient conditions for convergence.
5. Absolute convergence. Comparison and limit comparison tests for convergence.
6. Gamma and Beta functions and their properties. Relationship between them (without proof).

5. R.G. Brtle and D. R. Sherbert; Introduction to Real Analysis Second Ed. ; John Wiley, New Yorm, 1992.

6. M. H. Protter; Basic Elements of Real Analysis; Springer-Verlag, New York, 1998.

USMT/UAMT 302: Linear Algebra I

Unit I. System of Equations, Matrices (15 Lectures)

1. Systems of homogeneous and non-homogeneous linear equations, Simple examples of finding solutions of such systems. Geometric and algebraic understanding of the solutions. Matrices (with real entries), Matrix representation of system of homogeneous and non-homogeneous linear equations. Algebra of solutions of systems of homogeneous linear equations. A system of homogeneous linear equations with number of unknowns more than the number of equations has infinitely many solutions.

2. Elementary row and column operations. Row equivalent matrices. Row reduction (of a matrix to its row echelon form). Gaussian elimination. Applications to solving systems of linear equations. Examples.

3. Elementary matrices. Relation of elementary row operations with elementary matrices. Invertibility of elementary matrices. Consequences such as (i) a square matrix is invertible if and only if its row echelon form is invertible. (ii) invertible matrices are products of elementary matrices. Examples of the computation of the inverse of a matrix using Gauss elimination method.

Unit II. Vector space over $\mathbb{R}$ (15 Lectures)

1. Definition of a vector space over $\mathbb{R}$. Subspaces; criterion for a nonempty subset to be a subspace of a vector space. Examples of vector spaces, including the Euclidean space $\mathbb{R}^n$, lines, planes and hyperplanes in $\mathbb{R}^n$ passing through the origin, space of systems of homogeneous linear equations, space of polynomials, space of various types of matrices, space of real valued functions on a set.

2. Intersections and sums of subspaces. Direct sums of vector spaces. Quotient space of a vector space by its subspace.

3. Linear combination of vectors. Linear span of a subset of a vector space. Definition of a finitely generated vector space. Linear dependence and independence of subsets of a vector space.

4. Basis of a vector space. Basic results that any two bases of a finitely generated vector space have the same number of elements. Dimension of a vector space. Examples. Bases of a vector space as a maximal linearly independent sets and as minimal generating sets.

Unit III. Determinants, Linear Equations (Revisited) (15 Lectures)

1. Inductive definition of the determinant of a $n \times n$ matrix (e. g. in terms of expansion along the first row). Example of a lower triangular matrix. Laplace expansions along an arbitrary row or column. Determinant expansions using permutations
$\Big(\det(A) = \sum_{\sigma \in S_n} \text{sign}(\sigma) \prod_{i=1}^{n} a_{\sigma(i),i} \Big)$.

2. Basic properties of determinants (Statements only); (i) $\det A = \det A^T$. (ii) Multilinearity and alternating property for columns and rows. (iii) A square matrix A is invertible if and only if $\det A \neq 0$. (iv) Minors and cofactors. Formula for A^{-1} when $\det A \neq 0$. (v) $\det(AB) = \det A \det B$.

3. Row space and the column space of a matrix as examples of vector space. Notion of row rank and the column rank. Equivalence of the row rank and the column rank. Invariance of rank upon elementary row or column operations. Examples of computing the rank using row reduction.

4. Relation between the solutions of a system of non-homogeneous linear equations and the associated system of homogeneous linear equations. Necessary and sufficient condition for a system of non-homogeneous linear equations to have a solution [viz., the rank of the coefficient matrix equals the rank of the augmented matrix $[A|B]$]. Equivalence of statements (in which A denotes an $n \times n$ matrix) such as the following.

   (i) The system $A\boldsymbol{x} = \boldsymbol{b}$ of non-homogeneous linear equations has a unique solution.
   (ii) The system $A\boldsymbol{x} = \boldsymbol{0}$ of homogeneous linear equations has no nontrivial solution.
   (iii) A is invertible.
   (iv) $\det A \neq 0$.
   (v) $\operatorname{rank}(A) = n$.

5. Cramers Rule. LU Decomposition. If a square matrix A is a matrix that can be reduced to row echelon form U by Gauss elimination without row interchanges, then A can be factored as $A = LU$ where L is a lower triangular matrix.

USMT303: Ordinary Differential Equations

Unit I. Higher order Linear Differential equations (15 Lectures)

1. The general $n-$th order linear differential equations, Linear independence, An existence and uniqueness theorem, the Wronskian, Classification: homogeneous and non-homogeneous, General solution of homogeneous and non-homogeneous LDE, The Differential operator and its properties.

2. Higher order homogeneous linear differential equations with constant coefficients, the auxiliary equations, Roots of the auxiliary equations: real and distinct, real and repeated, complex and complex repeated.

3. Higher order homogeneous linear differential equations with constant coefficients, the method of undermined coefficients, method of variation of parameters.

4. The inverse differential operator and particular integral, Evaluation of $\frac{1}{f(D)}$ for the functions like e^{ax}, $\sin ax$, $\cos ax$, x^m, $x^m \sin ax$, $x^m \cos ax$, $e^{ax}V$ and xV where V is any function of x,

5. Higher order linear differential equations with variable coefficients:
   The Cauchy's equation: $x^3\frac{d^3y}{dx^3} + x^2\frac{d^2y}{dx^2} + x\frac{dy}{dx} + y = f(x)$ and
   The Legendre's equation: $(ax+b)^3\frac{d^3y}{dx^3} + (ax+b)^2\frac{d^2y}{dx^2} + (ax+b)\frac{dy}{dx} + y = f(x)$.

Reference Books

1. Units 5, 6, 7 and 8 of E.D. Rainville and P.E. Bedient; Elementary Differential Equations; Macmillan.

2. Units 5, 6 and 7 of M.D. Raisinghania; Ordinary and Partial Differential Equations; S. Chand.

Unit II. Systems of First Order Linear Differential Equations (15 Lectures)

(a) Existence and uniqueness theorem for the solutions of initial value problems for a system of two first order linear differential equations in two unknown functions x, y of a single independent variable t, of the form $\begin{cases} \frac{dx}{dt} = F(t,x,y) \\ \frac{dy}{dt} = G(t,x,y) \end{cases}$ (Statement only).

(b) Homogeneous linear system of two first order differential equations in two unknown functions of a single independent variable t, of the form $\begin{cases} \frac{dx}{dt} = a_1(t)x + b_1(t)y, \\ \frac{dy}{dt} = a_2(t)x + b_2(t)y. \end{cases}$.

(c) Wronskian for a homogeneous linear system of first order linear differential equations in two functions x, y of a single independent variable t. Vanishing properties of the Wronskian. Relation with linear independence of solutions.

(d) Homogeneous linear systems with constant coefficients in two unknown functions x, y of a single independent variable t. Auxiliary equation associated to a homogenous system of equations with constant coefficients. Description fo the general solution depending on the roots and their multiplicities of the auxiliary equation, proof of independence of the solutions. Real form of solutions in case the auxiliary equation has complex roots.

(e) Non-homogeneous linear system of linear system of two first order differential equations in two unknown functions of a single independent variable t, of the form
$\begin{cases} \frac{dx}{dt} = a_1(t)x + b_1(t)y + f_1(t), \\ \frac{dy}{dt} = a_2(t)x + b_2(t)y + f_2(t). \end{cases}$
General Solution of non-homogeneous system. Relation between the solutions of a system

of non-homogeneous linear differential equations and the associated system of homogeneous linear differential equations.

Reference Books

1. G.F. Simmons; Differential Equations with Applications and Historical Notes; Taylor's and Francis.

Unit III. Numerical Solution of Ordinary Differential Equations (15 lectures)

1. Numerical Solution of initial value problem of first order ordinary differential equation using:
   (i) Taylor's series method,
   (ii) Picard's method for successive approximation and its convergence,
   (iii) Euler's method and error estimates for Euler's method,
   (iv) Modified Euler's Method,
   (v) Runge-Kutta method of second order and its error estimates,
   (vi) Runge-Kutta fourth order method.
2. Numerical solution of simultaneous and higher order ordinary differential equation using:
   (i) Runge-Kutta fourth order method for solving simultaneous ordinary differential equation,
   (ii) Finite difference method for the solution of two point linear boundary value problem.

Reference Books

USMT P03 / UAMT P03: Practicals

Suggested Practicals for USMT 301/ UAMT 301

1. Examples of convergent / divergent series and algebra of convergent series.
2. Tests for convergence of series.
3. Calculation of upper sum, lower sum and Riemann integral.
4. Problems on properties of Riemann integral.
5. Problems on fundamental theorem of calculus, mean value theorems, integration by parts, Leibnitz rule.
6. Convergence of improper integrals, different tests for convergence. Beta Gamma Functions.
7. Miscellaneous Theoretical Questions based on full paper.

Suggested Practicals for USMT302 / UAMT 302

1. Systems of homogeneous and non-homogeneous linear equations.
2. Elementary row/column operations and Elementary matrices.
3. Vector spaces, Subspaces.
4. Linear Dependence/independence, Basis, Dimension.
5. Determinant and Rank of a matrix.
6. Solution to a system of linear equations, LU decomposition
7. Miscellaneous Theory Questions.
8. Miscellaneous theory questions from units I, II and III.

Suggested Practicals For USMT 303

1. Finding the general solution of homogeneous and non-homogeneous higher order linear differential equations.
2. Solving higher order linear differential equations using method of undetermined coefficients and method of variation of parameters.
3. Solving a system of first order linear ODES have auxiliary equations with real and complex roots.
4. Finding the numerical solution of initial value problems using Taylor's series method, Picard's method, modified Euler's method, Runge-Kutta method of fourth order and calculating their accuracy.
5. Finding the numerical solution of simultaneous ordinary differential equation using fourth order Runge-Kutta method.
6. Finding the numerical solution of two point linear boundary value problem using Finite difference method.

xxxxxx

Semester-IV

Note: Unless indicated otherwise, proofs of the results mentioned in the syllabus should be covered.

USMT 401/ UAMT 401: Multivariable Calculus I

UNIT I. Functions of Several Variables (15 Lectures)

1. Review of vectors in $\mathbb{R}^n$ [with emphasis on $\mathbb{R}^2$ and $\mathbb{R}^3$] and basic notions such as addition and scalar multiplication, inner product, length (norm), and distance between two points.

2. Real-valued functions of several variables (Scalar fields). Graph of a function. Level sets (level curves, level surfaces, etc). Examples. Vector valued functions of several variables (Vector fields). Component functions. Examples.

3. Sequences, Limits and Continuity: Sequence in $\mathbb{R}^n$ [with emphasis on $\mathbb{R}^2$ and $\mathbb{R}^3$] and their limits. Neighbourhoods in $\mathbb{R}^n$. Limits and continuity of scalar fields. Composition of continuous functions. Sequential characterizations. Algebra of limits and continuity (Results with proofs). Iterated limits.
   Limits and continuity of vector fields. Algebra of limits and continuity vector fields. (without proofs).

4. Partial and Directional Derivatives of scalar fields: Definitions of partial derivative and directional derivative of scalar fields (with emphasis on $\mathbb{R}^2$ and $\mathbb{R}^3$). Mean Value Theorem of scalar fields.

UNIT II. Differentiation of Scalar Fields (15 Lectures)

1. Differentiability of scalar fields (in terms of linear transformation). The concept of (total) derivative. Uniqueness of total derivative of a differentiable function at a point. Examples of functions of two or three variables. Increment Theorem. Basic properties including (i) continuity at a point of differentiability, (ii)existence of partial derivatives at a point of differentiability, and (iii) differentiability when the partial derivatives exist and are continuous.

2. Gradient. Relation between total derivative and gradient of a function. Chain rule. Geometric properties of gradient. Tangent planes.

3. Euler's Theorem.

4. Higher order partial derivatives. Mixed Partial Theorem (n=2).

UNIT III. Applications of Differentiation of Scalar Fields and Differentiation of Vector Fields (15 lectures)

1. Applications of Differentiation of Scalar Fields: The maximum and minimum rate of change of scalar fields. Taylor's Theorem for twice continuously differentiable functions. Notions of local maxima, local minima and saddle points. First Derivative Test. Examples. Hessian matrix. Second Derivative Test for functions of two variables. Examples. Method of Lagrange Multipliers.

2. Differentiation of Vector Fields: Differentiability and the notion of (total) derivative. Differentiability of a vector field implies continuity, Jacobian matrix. Relationship between total derivative and Jacobian matrix. The chain rule for derivative of vector fields (statements only).

Reference books

USMT402/UAMT402: Linear Algebra II

UNIT I. Linear Transformations

1. Definition of a linear transformation of vector spaces; elementary properties. Examples. Sums and scalar multiples of linear transformations. Composites of linear transformations. A Linear transformation of $V \longrightarrow W$, where V, W are vector spaces over $\mathbb{R}$ and V is a finite-dimensional vector space is completely determined by its action on an ordered basis of V.
2. Null-space (kernel) and the image (range) of a linear transformation. Nullity and rank of a linear transformation. Rank-Nullity Theorem (Fundamental Theorem of Homomorphisms).
3. Matrix associated with linear transformation of $V \longrightarrow W$ where V and W are finite dimensional vector spaces over $\mathbb{R}$.. Matrix of the composite of two linear transformations. Invertible linear transformations (isomorphisms), Linear operator, Effect of change of bases on matrices of linear operator.

4. Equivalence of the rank of a matrix and the rank of the associated linear transformation. Similar matrices.

UNIT II. Inner Products and Orthogonality

1. Inner product spaces (over $\mathbb{R}$). Examples, including the Euclidean space $\mathbb{R}^n$ and the space of real valued continuous functions on a closed and bounded interval. Norm associated to an inner product. Cauchy-Schwarz inequality. Triangle inequality.

2. Angle between two vectors. Orthogonality of vectors. Pythagoras theorem and some geometric applications in $\mathbb{R}^2$. Orthogonal sets, Orthonormal sets. Gram-Schmidt orthogonalizaton process. Orthogonal basis and orthonormal basis for a finite-dimensional inner product space.

3. Orthogonal complement of any set of vectors in an inner product space. Orthogonal complement of a set is a vector subspace of the inner product space. Orthogonal decomposition of an inner product space with respect to its subspace. Orthogonal projection of a vector onto a line (one dimensional subspace). Orthogonal projection of an inner product space onto its subspace.

UNIT III. Eigenvalues, Eigenvectors and Diagonalisation

1. Eigenvalues and eigenvectors of a linear transformation of a vector space into itself and of square matrices. The eigenvectors corresponding to distinct eigenvalues of a linear transformation are linearly independent. Eigen spaces. Algebraic and geometric multiplicity of an eigenvalue.

2. Characteristic polynomial. Properties of characteristic polynomials (only statements). Examples. Cayley-Hamilton Theorem. Applications.

3. Invariance of the characteristic polynomial and eigenvalues of similar matrices.

4. Diagonalisable matrix. A real square matrix A is diagonalisable if and only if there is a basis of $\mathbb{R}^n$ consisting of eigenvectors of A. (Statement only - $A_{n\times n}$ is diagonalisable if and only if sum of algebraic multiplicities is equal to sum of geometric multiplicities of all the eigenvalues of $A\ = n$). Procedure for diagonalising a matrix.

5. Spectral Theorem for Real Symmetric Matrices (Statement only). Examples of orthogonal diagonalisation of real symmetric matrices. Applications to quadratic forms and classification of conic sections.

Reference books

1. Howard Anton, Chris Rorres; Elementary Linear Algebra; Wiley Student Edition).

2. Serge Lang; Introduction to Linear Algebra; Springer.

3. S Kumaresan; Linear Algebra - A Geometric Approach; PHI Learning.

4. Sheldon Axler; Linear Algebra done right; Springer.

5. Gareth Williams; Linear Algebra with Applications; Jones and Bartlett Publishers.

6. David W. Lewis; Matrix theory.

USMT403A: Numerical Methods (Elective A)

Unit I. Solution of Algebraic and Transcendental Equations (15L)

1. Measures of Errors: Relative, absolute and percentage errors, Accuracy and precision: Accuracy to n decimal places, accuracy to n significant digits or significant figures, Rounding and Chopping of a number, Types of Errors: Inherent error, Round-off error and Truncation error.

2. Iteration methods based on first degree equation: Newton-Raphson method. Secant method. Regula-Falsi method.
   Derivations and geometrical interpretation and rate of convergence of all above methods to be covered.

3. General Iteration method: Fixed point iteration method.

Unit II. Interpolation, Curve fitting, Numerical Integration(15L)

1. Interpolation: Lagrange's Interpolation. Finite difference operators: Forward Difference operator, Backward Difference operator. Shift operator. Newton's forward difference interpolation formula. Newton's backward difference interpolation formula.
   Derivations of all above methods to be covered.

2. Curve fitting: linear curve fitting. Quadratic curve fitting.

3. Numerical Integration: Trapezoidal Rule. Simpson's 1/3 rd Rule. Simpson's 3/8th Rule. Derivations all the above three rules to be covered.

Unit III. Solution Linear Systems of Equations, Eigenvalue problems(15L)

1. Linear Systems of Equations: LU Decomposition Method (Dolittle's Method and Crout's Method). Gauss-Seidel Iterative method.

2. Eigenvalue problems: Jacobi's method for symmetric matrices. Rutishauser method for arbitrary matrices.

Reference Books:

1. Kendall E. and Atkinson; An Introduction to Numerical Analysis; Wiley.

2. M. K. Jain, S. R. K. Iyengar and R. K. Jain; Numerical Methods for Scientific and Engineering Computation; New Age International Publications.

3. S. Sastry; Introductory methods of Numerical Analysis; PHI Learning.

4. An introduction to Scilab-Cse iitb.

Additional Reference Books

1. S.D. Comte and Carl de Boor; Elementary Numerical Analysis, An algorithmic approach; McGrawHillll International Book Company.

2. Hildebrand F.B.; Introduction to Numerical Analysis; Dover Publication, NY.

3. Scarborough James B.; Numerical Mathematical Analysis; Oxford University Press, New Delhi.

USMT403B Statistical Methods and their Applications (Elective B)

Unit I. Descriptive Statistics and random variables (15 Lectures)
Measures of location (mean, median, mode), Partition values and their graphical locations, measures of dispersion, skewness and kurtosis, Exploratory Data Analysis (Five number summary, Box Plot, Outliers), Random Variables (discrete and continuous), Expectation and variance of a random variable.

Unit II. Probability Distributions and Correlation (15 Lectures)
Discrete Probability Distribution (Binomial, Poisson), Continuous Probability Distribution: (Uniform, Normal), Correlation, Karl Pearson's Coefficient of Correlation, Concept of linear Regression, Fitting of a straight line and curve to the given data by the method of least squares, relation between correlation coefficient and regression coefficients.

Unit III. Inferential Statistics (15 lectures)
Population and sample, parameter and statistic, sampling distribution of Sample mean and Sample Variance, concept of statistical hypothesis, critical region, level of significance, confidence interval and two types of errors, Tests of significance (t-test, Z-test, F-test, Chi-Square Test (only applications))

Reference Books

1. Fundamentals of Mathematical Statistics,12th Edition, S. C. Gupta and V. K. Kapoor,Sultan Chand & Sons, 2020.

2. Statistics for Business and Economics, 11th Edition, David R. Anderson, Dennis J. Sweeney and Thomas A. Williams, Cengage Learning, 2011.

3. Introductory Statistics, 8th Edition, Prem S. Mann, John Wiley & Sons Inc., 2013.

4. A First Course in Statistics, 12th Edition, James McClave and Terry Sincich, Pearson Education Limited, 2018.

5. Introductory Statistics, Barbara Illowsky, Susan Dean and Laurel Chiappetta, OpenStax, 2013.

6. Hands-On Programming with R, Garrett Grolemund, O'Reilly.

USMT P04 / UAMT P04: Practicals

Suggested Practical for USMT 401/ UAMT 401

1. Limits and continuity of scalar fields and vector fields, using "definition and otherwise" , iterated limits.
2. Computing directional derivatives, partial derivatives and mean value theorem of scalar fields.
3. Differentiability of scalar field,Total derivative, gradient, level sets and tangent planes.
4. Chain rule, higher order derivatives and mixed partial derivatives of scalar fields.
5. Maximum and minimum rate of change of scalar fields. Taylor's Theorem. Finding Hessian/Jacobean matrix. Differentiation of a vector field at a point. Chain Rule for vector fields.
6. Finding maxima, minima and saddle points. Second derivative test for extrema of functions of two variables and method of Lagrange multipliers.
7. Miscellaneous Theoretical Questions based on full paper.

Suggested Practicals for USMT402/UAMT 402

1. Linear transformation, Kernel, Rank-Nullity Theorem.
2. Linear Isomorphism, Matrix associated with Linear transformations.
3. Inner product and properties, Projection, Orthogonal complements.
4. Orthogonal, orthonormal sets, Gram-Schmidt orthogonalisation
5. Eigenvalues, Eigenvectors, Characteristic polynomial. Applications of Cayley Hamilton Theorem.
6. Diagonalisation of matrix, orthogonal diagonalisation of symmetric matrix and application to quadratic form.
7. Miscellaneous Theoretical Questions based on full paper.

Suggested Practicals for USMT403A

The Practical no. 1 to 6 should be performed either using non-programable scientific calculators or by using the software Scilab.

1. Newton-Raphson method, Secant method.
2. Regula-Falsi method, Iteration Method..
3. Interpolating polynomial by Lagrange's Interpolation, Newton forward and backward difference Interpolation.
4. Curve fitting, Trapezoidal Rule, Simpson's 1/3rd Rule, Simpson's 3/8th Rule.
5. LU decomposition method, Gauss-Seidel Interative method.

6. Jacobi's method, Rutishauser method..
7. Miscellaneous theoretical questions from all units.

Suggested Practicals for USMT403B
All practicals should be performed using any one of the following softwares: MS Excel, R, Strata, SPSS, Sage Math to carry out data analysis and computations.

1. Descriptive Statistics.
2. Random Variables.
3. Probability Distributions.
4. Correlation and Regression.
5. Testing of hypothesis.
6. Case studies.
7. Miscellaneous Theory questions based on Unit I,II,III.

xxxxxx

Scheme of Examination (75:25)

The performance of the learners shall be evaluated into two parts.

- Internal Assessment of 25 percent marks.
- Semester End Examinations of 75 percent marks.

I. **Internal Evaluation of 25 Marks:**

S.Y.B.Sc. :

(i) One class Test of 20 marks to be conducted during Practical session.
Paper pattern of the Test:
Q1: Definitions/ Fill in the blanks/ True or False with Justification (04 Marks).
Q2: Multiple choice 5 questions. (10 Marks: 5×2)
Q3: Attempt any 2 from 3 descriptive questions. (06 marks: 2×3)

(ii) Active participation in routine class: 05 Marks.

OR

Students who are willing to explore topics related to syllabus, dealing with applications historical development or some interesting theorems and their applications can be encouraged to submit a project for 25 marks under the guidance of teachers.

S.Y.B.A. :

(i) One class Test of 20 marks to be conducted during Tutorial session.
Paper pattern of the Test:
Q1: Definitions/ Fill in the blanks/ True or False with Justification (04 Marks).

Q2: Multiple choice 5 questions. (10 Marks: 5×2)

Q3: Attempt any 2 from 3 descriptive questions. (06 marks: 2×3)

(ii) Journal : 05 Marks.

OR

Students who are willing to explore topics related to syllabus, dealing with applications historical development or some interesting theorems and their applications can be encouraged to submit a project for 25 marks under the guidance of teachers.

II. **Semester End Theory Examinations :** There will be a Semester-end external Theory examination of 75 marks for each of the courses USMT301/UAMT301, USMT/USAT 302, USMT 303 of Semester III and USMT/UAMT401, USMT/UAMT 402, USMT 403 of semester IV to be conducted by the college.

1. Duration: The examinations shall be of 2 and $\frac{1}{2}$ hours duration.
2. Theory Question Paper Pattern:
   a) There shall be FOUR questions. The first three questions Q1, Q2, Q3 shall be of 20 marks, each based on the units I, II, III respectively. The question Q4 shall be of 15 marks based on the entire syllabus.
   b) All the questions shall be compulsory. The questions Q1, Q2, Q3, Q4 shall have internal choices within the questions. Including the choices, the marks for each question shall be 25-27.
   c) The questions Q1, Q2, Q3, Q4 may be subdivided into sub-questions as a, b, c, d & e, etc and the allocation of marks depends on the weightage of the topic.

III. **Semester End Examinations Practicals:**

At the end of the Semesters III & IV Practical examinations of three hours duration and 150 marks shall be conducted for the courses USMTP03, USMTP04.

At the end of the Semesters III & IV Practical examinations of two hours duration and 100 marks shall be conducted for the courses UAMTP03, UAMTP04.
In semester III, the Practical examinations for USMT301/UAMT301, USMT302/UAMT302 and USMT303 are held together by the college.
In Semester IV, the Practical examinations for USMT401/UAMT401, USMT402/UAMT402 and USMT403 are held together by the college.

Paper pattern: The question paper shall have two parts A and B.
Each part shall have two Sections.

Section I Objective in nature: Attempt any Eight out of Twelve multiple choice questions (04 objective questions from each unit) ($8 \times 3 = 24$ Marks).

Section II Problems: Attempt any Two out of Three (01 descriptive question from each unit) ($8 \times 2 = 16$ Marks).

Practical Course	Part A	Part B	Part C	Marks out of	duration
USMTP03	Questions from USMT301	Questions from USMT302	Questions from USMT 303	120	3 hours
UAMTP03	Questions from UAMT301	Questions from UAMT302	——	80	2 hours
USMTP04	Questions from USMT401	Questions from USMT402	Questions from USMT403	120	3 hours
UAMTP04	Questions from UAMT401	Questions from UAMT402	——	80	2 hours

Marks for Journals and Viva:
For each course USMT301/UAMT301, USMT302/UAMT302, USMT303, USMT401/UAMT401, USMT402/UAMT402, USMT3031:

1. Journal: 10 marks (5 marks for each journal).

2. Viva: 10 marks.

Each Practical of every course of Semester III and IV shall contain 10 (ten) problems out of which minimum 05 (five) have to be written in the journal. .
A student must have a certified journal before appearing for the practical examination.
In case a student does not posses a certified journal he/she will be evaluated for 120/80 marks. He/she is not qualified for Journal + Viva marks.

University of Mumbai

No. UG/ 125 of 2019-20

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges and Directors of the recognized Institutions in Humanities Faculty is invited to syllabus uploaded by Academic Authority Unit which was accepted by the Academic Council at its meeting held on 19th March, 2012 **vide** item No. 4.5 relating to the revised syllabus as per the (CBSGS) for the S.Y.B.A. Programme – B.A. Course – Economics Paper – II & III (Semester – III & IV).

They are hereby informed that the recommendations made by the Board of Studies in Economics at its meeting held on 07th June, 2019 have been accepted by the Academic Council at its meeting held on 26th July, 2019 **vide** item No.4.25 and that in accordance therewith, the revised syllabus as per the (CBCS) for the S.Y.B.A. (Sem. III) Macro Economics – I in Economics has been brought into force with effect from the academic year 2020-21, accordingly. (The same is available on the University's website www.mu.ac.in).

UNIVERSITY OF MUMBAI

Revised Syllabus for the S.Y.B.A. (Sem III)
Paper III
Macro Economics – I

Course: Economics

(As Per Choice Based Credit System with effect from the academic year 2020-21)

Macro Economics - I

S.Y.B.A. Semester – III Paper III
(Academic Year: 2020 - 21)

Preamble: This course is designed to provide an introduction to the students about the basic building blocks of Macro Economics which will serve as a foundation throughout their career.

Module – I: Introduction to Macro Economics and National Income (12 Lectures)
Introduction: Meaning and Scope of Macro Economics; Concepts of National Income: GNP, NNP, NDP, Per Capita Income, Personal Income and Disposal Income; Methods and Difficulties in Measurement of National Income; Circular Flow of National Income: Closed Economy (Two and Three Sector) and Open Economy Models (Four Sector Model)

Module – II: Consumption and Investment (12 Lectures)
Consumption and Investment; Says Law of Market; Theory of Effective Demand; Consumption Function; Investment Function; Marginal Efficiency of Capital and Rate of Interest- Investment Multiplier

Module – III: Supply of Money and Demand for Money (12 Lectures)
Supply of Money; Determinants of Money Supply; Velocity of Circulation of Money; RBI's Approach to Measurement of Money Supply; Demand for Money: Classical, Keynesian and Friedman's Approaches

Module – IV: Banking (12 Lectures)
Banking: Commercial Bank, Functions of Commercial Banks, Multiple Credit Creation, Balance Sheet of Commercial Bank; Development in Commercial Banking Sector Since 1990-91; Central Bank: Functions of Central Bank - Traditional, Developmental, Promotional

303(A) Demography Paper - I

Preamble: The modules incorporated in this paper educate the students about the inter-relationship between economic development and population along with an exposition of the established theories of population. Issues related to demographic techniques and basic sources of demographic data in the Indian economy have also been included. Aspects of the population policy and the study of its social characteristics are other important components of the modules of this paper.

Semester III

1. Introduction : (15)
    - Demography – Its definition, nature and scope, its relation with other disciplines.
    - Theories of Population - Malthusian Theory, Optimum theory of population and theory of demographic transition.
    - Population growth in India.
    - Features of Indian population.

2. Sources of demographic data in India : (15)
    - Salient features of census – including 2011 census.
    - Civil Registration System.
    - National Sample Survey.
    - Demographic Survey – National Family Health survey -1,2 and 3.
    - Relative merits and demerits of these sources.

3. Techniques of Analysis : (15)
    - Crude birth rate and death rate, Age specific birth rate and death rate, standardized birth rate and death rate.
    - Study of fertility – total fertility rate, gross reproduction rate and net reproduction rate.
    - Measurement of population growth rate – simple growth rate and compound growth rate.

Revised Syllabus for the S.Y.B.A. (Sem III) Paper IV

Public Finance

Course: Economics

(As Per Choice Based Credit System with effect from the academic year 2020-21)

SYBA - SEMESTER III
Economics – Paper IV
Public Finance

Preamble

Public Finance is the study of government policy from the point of economic efficiency and equity. The role and functions of the government have been changing throughout time. The existence of externalities, acceleration of economic growth, raising the level of employment, the need and concern for adjustment in the distribution of income and wealth etc. require the use of package of policies which require tax systems, expenditure programmes, rising of debt, issues of deficit etc. This paper deals with basic concepts which explain the need for government intervention. It exposes the student to public budget through issues of taxation, expenditure, debt and concepts of deficit. The last Unit is related to topics concerning Indian Public Finance.

Unit – I Introduction (12 Lectures)

Meaning and Scope of Public Finance; Public Finance versus Private Finance; Market Failure: Public Goods and Private Goods, Externalities, Efficiency versus Equity; Principles of Sound Finance and Functional Finance; Allocation, Distribution, Stabilisation and Growth Functions of the Government

Unit - II Fiscal Policy: Budget and Taxation (12 Lectures)

Dalton's and Musgrave Versions of the Law of Maximum Social Advantage; Role of Government in a Modern Economy; Types of Public Budget; Structure of Public Budget; Role of Taxation; Merits and Demerits of Direct and Indirect Tax Policy; Features of Good Tax System; Concept of Impact, Incidence and Shifting of Taxation; Elasticity and Determination of Tax Burden

Unit III Fiscal Policy: Public Expenditure and Debt (12 Lectures)

Canons of Public Expenditure; Classification of Public Expenditure; Wagner's Law of Public Expenditure; Public Expenditure as an Instrument of Fiscal Policy; Meaning and Types of Public Debt; Burden of Public Debt; Principles of Public Debt Management; Concepts of Deficits

Unit IV Indian Public Finance (12 Lectures)

Budget of The Government of India (Previous Financial Year); Sources of Public Receipts (Tax And Non-Tax, Introduction To GST); Components of Public Expenditure; Sources of Public Borrowing and Debt Liabilities; Deficits; Appraisal of FRBM Act 2004; Fiscal Federalism: Fourteenth Finance Commission Recommendations

Revised Syllabi for Psychology Core Courses (Major Elective) at the F.Y.B.A.
Choice Based Credit System (CBCS)
Brought into force with effect from the academic year 2018-2019

Code	Sem.	Course Title	Credits	Marks
UAPSY 101	1	Fundamentals of Psychology-Part I	3	100
UAPSY201	2	Fundamentals of Psychology-Part II	3	100

Objectives: -
1. To impart knowledge of the basic concepts and modern trends in Psychology.
2. To foster interest in the subject of Psychology and to create a foundation for further studies in Psychology.
3. To make the students aware of the applications of Psychological concepts in different areas of day to day life.

Semester 1. Fundamentals of Psychology: Part I (Credits = 3)
4 lectures per week

Unit 1. The science of Psychology
a) The history of Psychogy.
b) The Fields of Psychology Today.
c) Scientific research.
d) Ethics of Psychological Research.
e)Applying Psychology to Everyday life.

Unit 2.The Biological Perspective.
a)Neurons and Nerves : Building the Network.
b) An overview of the Nervous System.
c) Distant connections:The Endocrine Glands.
d) Looking inside the Living Brain.
e)From the Bottom up :The structures of the Brain.
f) Classic studies in Psychology.
g) Applying Psychology to Everyday life.

Unit 3.learning.
a) Definition of Learning.
b) Classical conditioning, and Operant conditioning
c) Cognitive learning Theory.
d) Observational Learning.

Unit 4.Memory
a)What is memory?
b) The Information Processing Model:Three Memory Systems.
c)Retrieval of Long –term Memories.

d)Forgetting.
e) Neuroscience of memory.
f) Applying Psychology to Everyday life.

Semester 2. Fundamentals of Psychology: Part II (Credits = 3)

4 lectures per week

Unit 1. Cognition:Thinking ,Intelligence,and Language.
a)How People think.
b)Intelligence.
c) Language
d) Applying Psychology to Everyday life.

Unit 2.Motivation and Emotion.
a)Approaches to understanding Motivation.
b)What ,Hungry again? Why People Eat.
c) Emotion.
d)Culture and Emotions.
e) Applying Psychology to Everyday life.

Unit 3. Theories of Personality.
a)Psychodynamic Perspective.
b)Psychoanalysis in the East .
c) The Behavioural and Social Cognitive View of Personality.
d)The Third Force :Humanism and Personality.
e)Trait Theories:Who are you?
f) Modern Trait Theories:The Big Five and current thoughts on the trait Perspective.
g)Personality :Genetics and Culture.
h)Assessment of Personality.
i) Applying Psychology to Everyday life.

Unit 4. Statistics in Psychology.
a)What are Statistics?
b)Descriptive Statistics.
c) Inferential Statistics.

Modified Pattern of Question Paper for Semester End Assessment implemented from 2018-2019 For Psychology courses at F.Y.B.A.

Duration of examination = **3 hours** Total Marks = **100 (per semester)**

All 5 questions carry **20** marks and are compulsory.
There will be internal choice in each Question.

Q1.Attempt any two questions (unit 1) 20marks

A
B
C

Q2.Attempt any two questions (unit 2) 20marks

A
B
C

Q3.Attempt any two questions (unit 3) 20marks

A
B
C

Q4.Attempt any two questions (unit 4) 20marks

A
B
C

Q5.Attempt any two questions (unit 1 ,2,3,4 one from each unit) 20 marks

A
B
C
D

Semester II
Use of simple calculator shall be permitted.(instruction to be included in the question paper).

Question 4 and Question 5(D)will be based on unit 4 Statistics in Psychology. One Theory question from the contents of the chapter carrying 10 marks and 03 questions for calculations.

Frequency distribution table to be made with 30-35 scores given and a theory question

Calculation of the Mean Median and the Mode with the help of 10 -12 scores given and a theory question.

Calculation of the Range ,Standard deviation and Z Score with the help of 10 -12 scores given.

Syllabus for the S.Y.B.Sc. Program: B.Sc. Course:BOTANY

SEMESTER III
THEORY

Course Code	Title	Credits
USBO301	**PLANT DIVERSITY**	**2 Credits (45 lectures)**
Unit I : Thallophyta (Algae) & Bryophyta • General Characters of Division Phaeophyta: Distribution, Cell structure, range of thallus, Economic Importance. • Structure, life cycle and systematic position of ***Sargassum*** • General Account of Class Anthocerotae and Musci • Structure, life cycle and systematic position of o ***Anthoceros*** o ***Funaria***		**15 Lectures**
Unit II: Angiosperms Systematics: Objectives and Goals of Plant systematic • Plant Nomenclature • Taxonomy in relation to Anatomy Palynology Chemical constituents Embryology Cytology Ecology o With the help of Bentham and Hooker's system **of Classification for flowering plants** study the vegetative, floral characters and economic importance of the following families: o Leguminosae o Asterace o Amaranthaceae o Palmae		**15 Lectures**
Unit III :Modern Techniques to Study Plant Diversity Preservation methods :Dry and Wet method • Microscopy – Principle and working of Light, and electron microscope. • Chromatography- Principles and techniques in paper and thin layer chromatography. • Principles and techniques of Horizontal and Vertical electrophoresis.		**15 Lectures**

Syllabus for the S.Y.B.Sc. Program: B.Sc.Course : BOTANY

SEMESTER III
PRACTICAL

Semester III USBOP3	**Cr**
PRACTICAL Paper I – Plant Diversity II	**1**

Algae & Bryophyta

1. Study of stages in the life cycle of *Sargassum* from fresh/ preserved material and permanent slides.
2. Economic importance and range of thallus in Phaeophyta

3 Study of stages in the life cycle of *Anthoceros* from fresh/ preserved material and permanent slides.

4 Study of stages in the life cycle of *Funaria* from fresh/ preserved material and permanent slides.

Angiosperms

5. Study of plants for anatomy in relation to taxonomy
6. Study of plants for Phenols and Flavanoids (chemotaxonomy)
7. Study of one plant from each family prescribed for theory: morphological peculiarities and economic importance of the members of these families.

Techniques to study Plant Diversity

8. Preparation of herbarium and wet preservation technique
9. Chromatography: Separation of amino by circular paper chromatography
10. Separation of Carotenoids by thin layer chromatography
11. Horizontal and Vertical Gel Electrophoresis – Demonstration

Syllabus for the S.Y.B.Sc. Program: B.Sc. Course:BOTANY

SEMESTER IV
THEORY

Course Code	Title	Credits
USBO401	**PLANT DIVERSITY**	**2 Credits (45 lectures)**
Unit I : Thallophyta: Fungi, Plant Pathology and Lichens Fungi • General characters of Ascomycetae • Structure, life cycle and systematic position of *Erysiphe* and *Xylaria* • Plant Pathology- Symptoms, causative organism, disease cycle and control measures of o Powdery mildew and Late blight of potato • Lichens- Classification, Structure, Method of Reproduction, Economic Importance and Ecological Significance of Lichens.		**15 Lectures**
Unit II: Pteridophyta and Paleobotany Pteridophyta- • Salient features and classification upto orders (with examples of each) of Psilophyta and Lepidophyta (G M Smith's system of classification to be followed) • Structure, life cycle and systematic position of *Selaginella* • Paleobotany- The geological time scale; Formation and types of fossils; Structure and systematic position of form genus *Rhynia*		**15 Lectures**
Unit III : Gymnosperms • Salient features, classification up to orders (with examples of each) and economic importance of Coniferophyta (Chamberlain's system of classification to be followed) • Structure life cycle and systematic position of *Pinus* • Structure and systematic position of the form genus *Cordaites*		**15 Lectures**

Syllabus for the S.Y.B.Sc. Program: B.Sc.Course : BOTANY

SEMESTER IV
PRACTICAL

Semester III USBOP4	**Cr**
PRACTICAL Paper I – Plant Diversity II	**1**

Fungi and Plant Pathology

1 Study of stages in the life cycle of *Erysiphe* from fresh/ preserved material and permanent slides.

2 Study of stages in the life cycle of *Xylaria* from fresh/ preserved material and permanent slides.

3 Study of fungal diseases as prescribed for theory.

4 Study of Lichens (crustose, foliose, & fruiticose).

Pteridophyta and Palaeobotany

5-6 Study of stages in the life cycle of *Selaginella* from fresh/ preserved material and permanent slides.

7 Study of form genera *Rhynia* with the help of permanent slides/ photomicrographs.

Gymnosperms

8- Study of stages in the life cycle of *Pinus* from fresh/ preserved material and permanent slides.

9- Study of the form genus *Cordaites* with the help of permanent slide/ photomicrographs.

Syllabus for the S.Y.B.Sc. Program: B.Sc.Course : BOTANY

Course Code	SEM III- Title	Credits
USBO302	**FORM AND FUNCTION II**	**2 Credits (45 lectures)**
Unit II : Cell Biology • Ultra Structure and functions of the following cell organelles: o Mitochondrion(membranes, cristae, F1 particles and matrix) o Peroxisomes and Glyoxysomes o Ribosomes (prokaryotic, eukaryotic and subunits) • Cell Division and its significance o Cell Cycle, structure of Interphase Nucleus(nuclear envelop, chromatin network, nucleolus and nucleoplasm) o Mitosis & Meiosis o Differences between Mitosis and Meiosis • Nucleic Acids: Types, structure and functions of DNA and RNA		**15 Lectures**
Unit III : Cytogenetics • **Variation in Chromosome structure (Chromosomal Aberrations)** Definition, Origin, Cytological and Genetic Effects of the following: Deletions, Duplications, Inversions and Translocations. • **Sex determination, Sex linked, sex influenced and sex limited traits :** **Sex determination-** Chromosomal Methods: heterogametic males and heterogametic females. Sex determination in monoecious and dioecious plants. Genic Balance Theory of sex determination in Drosophila, Lyon's Hypothesis of X chromosome inactivation. **Sex linked-** eye colour in *Drosophila*, Haemophilia, colour blindness **Sex influenced**- baldness in man • **Extranuclear Genetics** Organelle heredity- o Chloroplast determines heredity - Plastid transmission in plants, Streptomycin resistance in *Chlamydomonas*. o Male sterility in maize		**15 Lectures**
Unit III : Molecular Biology • **DNA replication** : Modes of Replication, Messelson and Stahl Experment, **DNA replication in prokaryotes and eukaryotes**- enzymes involved and molecular mechanism of replication. • **Protein Synthesis**: o Central dogma of Protein synthesis o Transcription in prokaryotes and eukaryotes: promoter sites, initiation, elongation and termination. o RNA processing: Adenylation & Capping.		**15 Lectures**

Syllabus for the S.Y.B.Sc. Program: B.Sc.Course : BOTANY

Course Code	SEM IV-Title	Credits

Syllabus for the S.Y.B.Sc. Program: B.Sc.Course : BOTANY

USBO402	FORM AND FUNCTION II	2 Credits (45 lectures)
Unit I : Anatomy • Normal Secondary Growth in Dicotyledonous stem and root. • Growth rings, periderm, lenticels, tyloses, heart wood and sap wood. • Mechanical Tissue system o Tissues providing mechanical strength and support and their disposition o I-girders in aerial and underground organs • Types of Vascular Bundles.		**15 Lectures**
Unit II : Plant Physiology and Plant Biochemistry • **Respiration: Aerobic:** Glycolysis, TCA Cycle, ETS & Energetic of respiration; Anaerobic respiration. • **Photorespiration** • **Photoperiodism:** Phytochrome Response and Vernalization with reference to flowering in higher plants, Physico-chemical properties of phytochrome, Pr-Pfr interconversion, role of phytochrome in flowering of SDPs and LDPs; • **Vernalization** mechanisms and applications.		**15 Lectures**
Unit III : Ecology and Environmental Botany • Biogeochemical Cycles- Carbon, Nitrogen and Water. • Ecological factors: Concept of environmental factors. Soil as an edaphic factor, Soil composition, types of soil, soil formation, soil profile. • Community ecology- Characters of community - Quantitative characters and qualitative characters		**15 Lectures**

Syllabus for the S.Y.B.Sc. Program: B.Sc.Course : BOTANY

Semester III USBOP3 PRACTICAL Paper II – FORM AND FUNCTION- II	Cr 1

Cell Biology

1 Study of the ultra-structure of cell organelles prescribed for theory from Photomicrographs

2 Estimation of DNA from plant material (one Std & one Unknown, No Std Graph)

3 Estimation of RNA from plant material (one Std & one Unknown, No Std Graph)

Cytogenetics

4 Study of inheritance pattern with reference to Plastid Inheritance

5 Study of cytological consequences of chromosomal aberrations (Laggards, Chromosomal Bridge, Ring chromosome, Chromosomal ring) from permanent slides or photomicrographs.

6 Study of mitosis and meiosis from suitable plant material

Molecular Biology

7 DNA sequencing- Sanger's method

8 Determining the sequence of amino acids in the protein molecule synthesised from the given m-RNA strand (prokaryotic and eukaryotic)

Syllabus for the S.Y.B.Sc. Program: B.Sc.Course : BOTANY

SEMESTER IV USBOT P4 PRACTICALS Paper II – FORM AND FUNCTION- II	Cr 1

Anatomy

1 Study of normal secondary growth in the stem and root of a Dicotyledonous plant

2 Types of mechanical tissues, mechanical tissue system in aerial, underground organs.

3 Study of conducting tissues- Xylem and phloem elements in Gymnosperms and Angiosperms as seen in LS and through maceration technique.

4 Study of different types of vascular bundles.

5 Growth rings, periderm, lenticels, tyloses, heart wood and sap wood

Plant Physiology and Plant Biochemistry

6 Q_{10} – germinating seeds using Phenol red indicator

7 NR activity – *in-vivo*

8 Estimation of proteins by Lowry's method (Prepare standard graph).

Ecology and Environmental Botany

9 Study of the working of the following Ecological Instruments- Soil thermometer, Soil testing kit, Soil pH, Wind anemometer.

10 Mechanical analysis of soil by the sieve method & pH of soil.

11 Quantitative estimation of organic matter of the soil by Walkley and Blacks Rapid titration method.

12 Study of vegetation by the list quadrat method

Syllabus for the S.Y.B.Sc. Program: B.Sc.Course : BOTANY

S.Y.B.Sc. BOTANY PRACTICAL SKELETON PAPER SEMESTER - III

TIME - 3 hours PAPER – II Total Marks – 50

Q.1. Make a squash/ smear preparation of specimen 'A'. Draw and comment on your observations and show the slides to examiners. (10)

Q.2. To estimate DNA/ RNA from the given sample 'B'. (10)

Q.3. Determine the sequence of bases in a DNA strand by Sanger's method from the given data **'C'**

OR

Determine the sequence of amino acids in the polypeptide synthesized from the given m-RNAstrand **'C'**
(10)

Q.4. Identify and describe the specimen/ photograph - D, E and F (15)

Q.5. Journal/Field Report. (05)

KEY :

A. – Mitosis/ Meiosis

B. Germinating seeds/Onion

C. DNA seq/AA seq.

D. Cell organelles

E. Plastid inheritance

F. Chromosomal aberrations

Syllabus for the S.Y.B.Sc. Program: B.Sc.Course : BOTANY

UNIVERSITY OF MUMBAI

S.Y.B.Sc. BOTANY PRACTICAL SKELETON PAPER SEMESTER - IV
TIME - 2 hours 15 min PAPER – II Total Marks – 50

Q.1. a). Make a temporary stained preparation of T.S. of specimen **'A'** and comment on the secondary growth/ mechanical tissue system/ Macerate the given material 'A' and describe the conducting tissue seen. (10)

Q.2. Perform the Physiological experiment **'B'** allotted to you. (13)

Q.3. Perform the Ecological experiment **'C'** allotted to you. (13)

Q.4. Identify and describe the specimen/ slide/ photograph - **'D' 'E' and 'F' .** (06)

Q.5. Viva - Voce. (05)

KEY :

A. – Dicot stem/ dicot root / Mechanical Tissue (*Coleus stem, Typha leaf, Maize stem and* Maize root /*Annona / Magnolia* for maceration).

B. – Q_{10} – germinating seeds using Phenol red indicator
NR activity – *in-vivo*
Estimation of proteins by Lowry's method

C- Mechanical analysis of soil by the sieve method & pH of soil
Estimation of organic matter of the soil
Study of vegetation by the list quadrat method

D - Vascular bundles
E. – Growth rings, periderm, lenticels, tyloses, heart wood and sap wood
F. – Ecological Instrument

PROPOSED SYBSC SYLLABUS FOR ACADEMIC YEAR 2017-18

Course Code	Title	Credits
USBO303	CURRENT TRENDS IN PLANT SCIENCES I	2 Credits (45 lectures)

Unit1: Pharmacognosy and phytochemistry — **15 Lectures**

- Introduction to pharmacopoeia
- Indian pharmacopoeia, Indian Herbal Pharmacopoeia and Ayurvedic Pharmacopoeia
- Study of Monograph from pharmacopoeia
- Secondary Metabolites: Sources, properties, uses and adulterants, regional and seasonal variations
- Adulterants: *Saraca asoca, Polyalthia longifolia*
  Terminalia arjuna, Terminalia tomentosa
  Bacopa monnieri, Centella asiatica
  Abrus, Glycyrrhiza
  Phyllanthus amarus (Bhuiamla)

Unit 2: Forestry and Economic Botany — **15 Lectures**

- Forestry: Outline of types of forest in India
- Forestry: Agro-forestry, Urban forestry, organic farming, Silviculture
- Economic Botany:
- Types of fibers: Jute and cotton,
- Current trends in Fiber industries
- Spices and condiments: Saffron and cardamom
- Commercial market of spices

Unit 3: Industry based on plant products — **15 Lectures**

- Aromatherapy- Introduction, Uses with few examples.
  Jojoba, lemon, jasmin
- Botanical and nutraceuticals -*Spirulina, Vanillin, Garcinia indica/ Garcinia cambogia, Chlorella,* and *Kale.*
- Enzymes industry: Cellulases, Papain, Bromelain
- Biofuels.

	Semester III USBOP3 Cr 1 **PRACTICAL - Paper III CURRENT TRENDS IN PLANT SCIENCES I**
1	Study of *Phyllanthus amarus* *Saraca asoka* *Bacopa monieri*
2	Study of biodiversity (Visit to National Park/ Botanical Garden) Sources of : Fibres & Paper Spices & condiments Preparation of herbal cosmetics (Face pack/ De-tanning cream)
3	Estimation of crude fibre in cereals & their products
4	Preparation & evaluation of probiotic foods
5	Evaluation of nutraceutical value of mushroom/ wheat germ

Course Code	Title	Credits
USBO403	CURRENT TRENDS IN PLANT SCIENCES I	2 Credits (45 lectures)

Unit I : Horticulture and Gardening Introduction to Horticulture: Branches of Horticulture **Gardening:** • Locations in the garden- edges, hedges, lawn, flower beds, avenue, water garden (with names of two plants for each category). Focal point. • **Types of garden** o Formal and informal gardens o National Park: Sanjay Gandhi National Park. o Botanical Garden: Veer Mata JijabaiUdyan (Victoria Garden).	**15 Lectures**
Unit II : Biotechnology • **Introduction to plant tissue culture** o Laboratory organization and techniques in plant tissue culture o Totipotency o Organogenesis o Organ culture – root cultures, meristem cultures, anther and pollen culture, embryo culture. • **R-DNA technology-** o Gene cloning o Enzymes involved in Gene cloning o Vectors used for Gene cloning.	**15 Lectures**
Unit III : Biostatistics and Bioinformatics • **Biostatistics:** o The chi square test. o Correlation – Calculation of coefficient of correlation. • **Bioinformatics** o Information technology: History and tools of IT, Internet and its uses**.**	**15 Lectures**

○ Introduction to Bioinformatics- goal, need, scope and limitation ○ Aims of Bioinformatics: Data organization, Tools of Bioinformatics- tools for web search, Data retrieval tools- Entrez, ○ BLAST ○ Bioinformatics programme in India.	

Semester III USBOP3 **Cr 1** **PRACTICAL - Paper III CURRENT TRENDS IN PLANT SCIENCES I**
Horticulture 1 Study of five examples of plants for each of the garden locations as prescribed for theory 2 Preparation of garden plans – formal and informal gardens 3 Bottle and dish garden preparation.
Biotechnology 4 Various sterilization techniques 5 Preparation of Stock solutions, Preparation of MS medium. 6 Seed sterilization, callus induction 7 Regeneration of plantlet from callus. 8 Identification of the cloning vectors – pBR322, pUC 18, Ti plasmid.
Biostatistics and Bioinformatics 9 Chi square test 10 Calculation of coefficient of correlation 11 Web Search – Google, Entrez. 12 BLAST

UNIVERSITY OF MUMBAI
No. UG/92 of 2018-19

CIRCULAR:-

Attention of the Principals of the affiliated Colleges and Directors of the recognized Institutions in Science & Technology Faculty is invited to this office Circular No. UG/228 of 2009, dated 16th June 2009 relating to syllabus of the Bachelor of Science (B.Sc.) degree course.

They are hereby informed that the recommendations made by the Board of Studies in Biochemistry at its meeting held on 9th April, 2018 have been accepted by the Academic Council at its meeting held on 14th June, 2018 **vide** item No. 4.37 and that in accordance therewith, the revised syllabus as per the (CBCS) for the S.Y.B.Sc. in Biochemistry (Sem - III & IV) has been brought into force with effect from the academic year 2018-19, accordingly. (The same is available on the University's website www.mu.ac.in).

(Dr. Dinesh Kamble)
I/c REGISTRAR

MUMBAI – 400 032
2nd ~~July~~ August, 2018

To

The Principals of the affiliated Colleges & Directors of the recognized Institutions in Science & Technology Faculty. (Circular No. UG/334 of 2017-18 dated 9th January, 2018.)

A.C/4.37/14/06/2018

****

No. UG/ 92 -A of 2018 MUMBAI-400 032 2nd August ~~July~~, 2018

Copy forwarded with Compliments for information to:-

1) The I/c Dean, Faculty of Science & Technology,
2) The Chairman, Board of Studies in Biochemistry,
3) The Director, Board of Examinations and Evaluation,
4) The Director, Board of Students Development,
5) The Co-Ordinator, University Computerization Centre,

(Dr. Dinesh Kamble)

Syllabus for the S.Y.B.Sc.
Program: B.Sc.
Course: Biochemistry

(Choice Based Credit System)

(To be implemented from the Academic year 2018-2019

S.Y.B.Sc. Bio-Chemistry Syllabus
Choice Based Credit System
To be implemented from the Academic year 2018-2019
Summary
SEMESTER III

Course Code & title	UNIT	TOPICS	Credits	L / Week
US BCH 301 Bio-organic chemistry & biophysical methods	I	Acids, bases, buffers and ionic equilibria	2	1
	II	Physicochemical principles		1
	III	Microscopy		1
US BCH 302 Fundamentals of Genetics and Physiology	I	Genetics I	2	1
	II	Blood and Body fluids		1
	III	Biological transport mechanisms		1
US BCH 303 Applied Biochemistry I	I	Introduction to microbiology and cell culture	2	1
	II	Fermentation and downstream processing		1
	III	Industrial biotechnology		1
US BCH P3	Practical's based on both courses in theory		3	9

SEMESTER IV

Course Code & Title	UNIT	TOPICS	Credits	L / Week
US BCH 401 Bio-organic chemistry & biophysical methods	I	Enzymology	2	1
	II	Plant growth regulators and endocrinology		1
	III	Approaches to biochemical investigations		1
US BCH 402 Fundamentals of Genetics and Physiology	I	Genetics II	2	1
	II	Movement and locomotion		1
	III	Neurophysiology		1
US BCH 403 Applied Biochemistry II	I	Trends in biotechnology	2	1
	II	Introduction to pharmacology		1
	III	Resource management		1
US BCH P4	Practical's based on both courses in theory		3	9

S.Y.B.Sc. Bio-Chemistry Syllabus
Choice Based Credit System
To be implemented from the Academic year 2018-2019

SEMESTER III

Course Code	Title	Credits
US BCH 301	**Bio-organic chemistry & biophysical methods**	**2 Credits (45 lectures)**
Unit I:	**Acids, bases, buffers and ionic equilibria**	**15 Lectures**
1.1	Definition – pH, pK, pKw, isoelectric pH, buffer, buffering capacity	
1.2	Derivations: Ionic product of water, Hendersen–Hasselbalch equation,	
1.3	Relation between pI, $pKa_1$and $pKa_2$for a neutral, acidic and basic amino acid	
1.3.1	Ionization and titration curves of glycine, lysine and aspartic acid; pKa, pHm, and pI values of these amino acids	
1.3.2	Sorensen's reaction and formol titration of amino acids	
1.4	Physiological buffers: Hb - HHb, carbonate-bicarbonate, phosphate and protein	
1.5	Numerical on above concepts.	
Unit II:	**Physicochemical principles**	**15 Lectures**
2.1	Diffusion and osmosis	
2.1.1	Ways of expressing solute concentration - mole, molal, normal, percent, activity & ionic strength.	
2.1.2	Diffusion & diffusion coefficient and factors affecting diffusion of solute in solution	
2.1.3	Osmosis - Vant Hoff's law of osmotic pressure law & mathematical expression (no derivation), mechanism of osmosis, role of osmosis in physiology.	
2.1.4	Renal dialysis: Principles and process	
2.2	Colloids and viscosity	
2.2.1	Colloidal state in relation to surface forces, surface area, electrical charge, precipitation and	

	flocculation.	
2.2.2	Surface tension and its measurement, factors affecting surface tension Eg. Role of bile in digestion	
2.2.3	Viscosity - definition, measurement; Donnan membrane equilibrium, relation between Donnan equilibrium and osmotic pressure.	
Unit III:	**Microscopy**	**15 Lectures**
3.1	History, Basic principles of microscopy, of light and colour.	
3.2	Dissection and compound microscope: Construction and parts of a microscope, function of each part, levels of magnification, concept of refractive index and role of oil in magnification	
3.3	Specialized microscopy I	
3.3.1	Differential interference contrast (DIC),	
3.3.2	Phase contrast,	
3.3.3	Dark Field	
3.4	Specialized Microscopy II	
3.4.1	Simple fluorescence microscopy	
3.4.2	Confocal microscopy	
3.4.3	Electron microscopy • Principle, applications and comparative study • Types - SEM and TEM	

Course Code	Title	Credits
USBCH302	**Fundamentals of Genetics and Physiology**	**2 Credits (45 lectures)**
Unit I:	**Genetics: I**	**15 lectures**
1.1	**History**: Contributions of Mendel, Bateson, Hardy-Weinberg, Garrod, Morgan, Griffith, Beadle and Tatum, Avery, Mac Leod, Mc Carthy, Lederberg, Tatum, Barbara Mclintock, Hershey & Chase, Watson &Crick.	
1.2	**Mendelian genetics**: Mendel's experiments - Monohybrid, Dihybrid crosses, Laws of inheritance	
1.3	Dominance, recessivity, co dominance, incomplete (semi) dominance, lethal genes	

1.4	Gene interaction -Epistasis, types of epistasis, multiple alleles, maternal effects	
1.5	Numerical on above concepts	
Unit II:	**Blood and Body Fluids**	**15 lectures**
2.1	**Fluid compartments of the body**–ICF and ECF	
2.2	**Blood**: Composition, characteristics and function; role of plasma proteins, Starlings hypothesis; blood clotting **and** factors involved	
2.3	**Bile**: Composition, characteristics and function; storage	
2.4	**Urine**: Composition–normal and abnormal constituents; formation of urine.	
2.5	**Lymph**: Composition, Formation and Circulation	
Unit III:	**Biological transport mechanisms**	**15 lectures**
3.1	**Transport in plants**: Role of xylem and phloem	
3.2	**Transport in blood:**	
3.2.1	Transport of gases CO_2 and O_2, Role of hemoglobin, O_2 dissociation curves, Bohr effect Chloride shift	
3.2.2	Transport of Metabolites: transport of lipids – lipoproteins and their types, role of plasma protein, albumin in transport of metabolites and drugs	
3.2.3	Transport of Ions: Fe -Ferritin and transferrin and calcium	
3.3	**Transport** a**cross cell membrane*s***	
3.3.1	Channel proteins and Carrier proteins	
3.3.2	Passive transport (simple and facilitated diffusion) with suitable examples; concept of symport, antiport, uniport, Endocytosis and Exocytosis – with one example each	
3.3.3	Active transport: primary–Na^+&K^+ pump, secondary Glucose-amino acid transport, types of glucose transporters (GLUT 1 to GLUT 4), aquaporins, ion channel inhibitors like gramicidin and valinomycin	

Course Code	Title	Credits
USBCH 303	**Applied Biochemistry I**	**(45 lectures)**
Unit I:	**Microbiology in Human Health and Diseases**	**15 lectures**
1.1	Beneficial Microorganism: Lactobacillus, Normal flora of human gut, Probiotics, Yeast, Nitrogen fixing bacteria (Rhizobium and Azotobacter)	
1.2	Harmful microorganisms:	
1.2.1	Air borne- *Mycobacterium tuberculae*(Tuberculosis), *Corynebacterium diptheriae*(Diptheria), *Candida* sp., *Haemophilus influenza*e (Influenza), morbillivirus (measles)	
1.2.2	Water borne- *Shigella sp.* (Dysentery), *Vibrio cholerae* (Cholera), *Salmonella sp.* (Enteric fever), *Hepatitis virus*	
1.2.3	Food borne- *Staphylococcus aureus, Clostridium botulinum (Botulism)*	
1.2.4	Soil borne- *Clostridium tetani*	
1.3	Virology- General structure of a typical virus, classification of viruses based on genome (DNA, RNA); symmetry (helical, icosahedral, complex), host (bacteria, plant, animal, insect); Lytic and Lysogenic cycle	
Unit II:	**Cell and Tissue Culture**	**15 lectures**
2.1	Plant Tissue Culture:	
2.1.1	History, Introduction or definition (explants, callus, dedifferentiation, re-differentiation) concept of totipotency	
2.1.2	Culture techniques; Types of culture (Callus culture, Organ culture, protoplast culture, cell culture)	
2.1.3	Applications: secondary metabolites in plant culture, Micropropagation	
2.2	Animal Cell Culture:	
2.2.1	History, Introduction to Primary cell culture, Cell lines (Finite and continuous)	
2.2.2	Culture techniques used for primary culture,	
2.2.3	Stem cell culture, Animal Organ Culture, Whole embryo culture	
2.2.4	Applications: hybridoma (monoclonal antibody), production of Vaccines	

Unit III:	**Industrial Biochemistry**	**15 lectures**
3.1	Basics of fermentation	
3.1.1	Typical Fermenter, Types of Fermenters (CSTF, Bubble cap, Airlift, Fluidized Bed reactor)	
3.1.2	Industrial production of wine, penicillin	
3.2	Immobilized Enzyme: Introduction, Methods of immobilization (entrapment, adsorption, covalent binding, microencapsulation, cross linking)	
3.2.1	Stabilization of soluble enzyme (solvent and substrate stabilization, enzyme stabilization by polymer. Salts and chemical modification)	
3.3.2	Applications	
3.3	Biosensors: Features of Biosensors, classification based on transducers, applications	
3.4	Single Cell proteins and their applications

SY.B.Sc BIOCHEMISTRY
Practical Syllabus P3

P3 (301)

1) a] Preparation of beta Amylase/Urease/Invertase extract demonstration of the activity Qualitatively.

   b] Determination of the Achromic point of Salivary Amylase.

2) Preparation of Buffers and measurement of pH using pH papers and pH meter.

3) Acid – Base titration of a polyprotic acid [H_2CO_3/H_3PO_4/Glycine hydrochloride]

4) a] A study of some methods of cell rupture: effect of hypo, hyper and isotonic solutions on cells of the onion peel /plant cell (Hydrilla/ Vallisneria/ Spirogyra)

   b] Effect of organic solvents on cell rupture

5) Determination of the Viscosity of sucrose solution using Ostwald's Viscometer.

6) Demonstration of Osmosis through a semi permeable membrane. Potato Osmometer

P3 (302)

1) Mendel's Laws:

   a] Problems based on the laws

   b] case studies based on the laws

2) A study of Human Karyotypes.

3) Isoelectric precipitation of Casein using an indicator.

4) Field visit /Assignment on vermiculture, organic farming, composting, biogas plant followed by a detailed report of at least one [the visit is recommended with the report, but in case it is not possible an assignment is mandatory]

P3 (303)

1) Demonstration of the working of an autoclave and a hot air oven.

2) Optimization of curd – a demonstration.

3) Sterility testing of air by plate exposure technique. [in sterile zone, in lab] and of tap water.

4) A study of various culture inoculation methods. (streak plate, pour plate and spread plate methods).

5) Cell count in a culture medium using optical density

6) Determination of the zone of inhibition of microorganisms using the agar well method and disc method.

7) Flow sheet diagrams of industrial preparation of: a vitamin, an antibiotic, a food item, an enzyme and an alcohol.

Semester IV

Course Code	Title	Credits
USBCH 401	**Bio-organic chemistry & biophysical methods**	**2 Credits 45 lectures**
Unit I:	**Enzymology**	15 lectures
1.1	Definition – Enzyme, coenzyme, cofactor, apoenzyme, holoenzyme, prosthetic group, active site , enzyme specificity, Turnover number, specific activity, Katal, IU.	
1.2	IUB / EC classification upto one digit. Enzyme specificity :Fischers lock & key and Koshlands induced fit theories	
1.3	Activation energy, mechanism of enzyme action (concept of active site, single and bi- substrate reaction), factors affecting enzyme activity – substrate concentration, pH, temperature	
1.4	Enzyme kinetics – Derivation of Michaelis - Menten equation and Lineweaver Burk plot for mono-substrate reactions and numerical problems based on them.	
1.5	Enzyme inhibition – Reversible and Irreversible; competitive and non competitive, (one example of each) Numerical problems on above.	
Unit II:	**Plant growth regulators and endocrinology**	15 lectures
2.1	Plant growth regulators- Structure and function of- auxins, gibberellins, cytokinins, ethylene and abscisic acid.	
2.2	Definition of hormones, hormone receptor, endocrine & exocrine glands	
2.3	Classification of hormones on the basis of:	
2.3.1	Distance of target tissue - autocrine, paracrine, endocrine. Hierarchal organization of the mammalian endocrine system	
2.3.2	Chemistry - One example for each sub class.	
2.4	Chemistry & physiological role of thyroxine, oxytocin & vasopressin, Physiological role of glucocorticoids, FSH, LH, Estrogen, Progesterone (Reproductive cycle) Mode of action of steroid hormones and epinephrine. (amplification cascade Only till the level of protein kinase A) G protein not to be covered.	
Unit III:	**Approaches to Biochemical investigations**	15 lectures
3.1	Whole animal and plant studies - the advantages and	

	disadvantages of any four model systems for biochemical investigation (e.g. *E.coli*, yeast, *Dictyostelium*, *C. elegans*, Drosophila, *Arabidopsis)*	
3.2	Organ & tissue studies	
3.3	Isolated and cultured tissue and cell techniques: isolation, culture and counting of cells.	
3.4	*Cell Fractionation*	
3.4.1	Cell rupture – solid shear, liquid shear, high pressure, ultrasound, osmotic shock, chemical treatment (enzyme, organic solvent), temperature.	
3.4.2	Choice of suspension medium (isotonic & hypotonic solution, PBS) and separation methods.	

Course Code	Title	Credits
USBCH402	**Fundamentals of Genetics and Physiology**	**2Credits 45 lectures**
Unit I:	**Genetics: II**	15 lectures
1.1	**Genome organization**	
1.1.1	Prokaryotic Genome: Nucleoid structure	
1.1.2	Eukaryotic chromosomes: Packaging of DNA(upto Solenoid structure), DNA supercoiling, Topoisomerase, Chromatin structure -Euchromatin, Heterochromatin, structure of condensed chromatin, Centromere, kinetochore, telomere, Comparison of chromosomal structure in prokaryotes and Eukaryotes	
1.2	**Recombination in prokaryotes**	
1.2.1	Transformation: Transformation in *S. pneumoniae*	
1.2.2	Transduction: General features with one example	
1.2.3	Conjugation: Mechanism F+, F- and Hfr strain	
Unit II:	**Movement and locomotion**	15 lectures
2.1	**Movement in plants**	
2.1.1	Movements of Locomotion Spontaneous: Ciliary, Amoeboid, Cyclosis (Rotation, Circulation) Induced: Chemotaxis, Phototaxis, Thermotaxis	
2.1.2	Movements of Curvature: Mechanical: hygroscopic movements Vital:i)Spontaneous-movements of growth(nutation, circumutation, Hyponasty, epinasty); movements of variation ii)Induced–Tropic-hapto/geo/hydrotropism; Nastic–seismonasty, Nyctynasty	
2.2	**Muscle contraction**	
2.2.1	Structural organization of a muscle fibre, myofibril	
2.2.2	Contraction and Relaxation of Muscles; -mechanisms, Other types of contractions–e.g. twitch, tetanus, Isotonic, Isometric regulation of Muscle contraction	
Unit III:	**Neurophysiology**	15 lectures
3.1	**Nervous System Classification:** CNS,PNS; Components: Neurons (3types) and Neuroglia(6types)–structure and function, Axonal transport	

3.2	**Nerve impulse transmission:** Resting Membrane Potential, ion channels [voltage and ligand gated], Action Potential (depolarization, polarization and refraction period), propagation of action potential (salutatory & continuous conduction)	
3.3	**Synaptic transmission**: Physiological anatomy of a synapse;– Electrical & Chemical synapses, Excitatory & inhibitory postsynaptic potentials, Agonists & Antagonists, inactivation of Neurotransmitter	
3.4	**Neurotransmitters**: Structure and function of acetylcholine, catecholamines, GABA, glutamate, glycine	

Course Code	Title	Credits
USBCH 403	**Applied Biochemistry II**	**2 Credits 45 lectures**
Unit I:	**Trends in Biotechnology:**	**15 lectures**
1.1	*Bioremediation:*	
1.1.1	Introduction to terms – Bioremediation, Biotransformation, Xenobiotics, Recalcitrant xenobiotics, Biomagnification, Factors affecting bioremediation	
1.1.2	Types of Bioremediation (*Insitu*, *Exsitu)*; Types of reactions (Aerobic, anaerobic, sequential)	
1.1.3	Applications of Biodegradation - hydrocarbons, (Oil spills) Pesticides and herbicides,Heavy metals (Uranium) contaminated soil and waste land, Ground Water; Genetically Engineered Microbes in bioremediation.	
1.2	Biopesticides:	
1.2.1	Introduction; Types of Biological Control (Classical, inoculation, Inundation);	
1.2.2	Examples each of Bacterial, Viral, Fungal and Protozoal biopesticide .	
1.3	Biofungicide: Examples and applications	
1.4	Biofertilizers: Examples and applications	
Unit II:	**Introduction to Pharmacology**	**15 lectures**
2.1	Scope of pharmacology	
2.2	Sources, Classification, Chemical & physical properties of drug and Nomenclature of drugs	
2.3	Dosage forms and routes of drug administration; Factors affecting dosage and drug delivery	
2.4	Pharmacokinetics: LD 50, ED 50 Half Life, Loading dose, Maintenance dose (Explanation of terms only); Therapeutic index	
2.5	Novel Drug delivery system (NDDS):	
2.5.1	2.5.1 Transdermal and oral modes	
2.5.2	2.5.2 Liposomes and nanoparticles	
Unit III:	**Resource management**	**15 lectures**
3.1	Solid waste: Types of waste, treatment, recycling	

3.2	Waste water- sewage-	
3.2.1	Composition of sewage, types of sewage, detection of pathogenic organism of sewage; preliminary treatment, primary treatment	
3.2.2	Secondary treatment; tertiary treatment, disinfectant	
3.2.3	Sludge treatment and disposal; waste water collection vs sewage treatment in developing countries	
3.3	Biomass and Bio energy production	
3.3.1	Biofuel and Biomass: Fossil fuel; Energy rich crops (sugar and starch; wood-rich; petroleum plants); Animal energy; Sources of biofuel, its cultivation and extraction process	
3.3.2	Biogas: Production, Composition, Applications. Gobar gas. [MSW and LFG, Renewable natural gas, NG vehicle]

S.Y.B.Sc. BIOCHEMISTRY

Practical Syllabus P4

P4 (401)

1) Parts and maintenance of a microscope.
2) A study of electron micrographs of cell organelles.
3) Permanent slides of Muscle tissue
4) Recrystallization of Benzoic acid and determination of its yield.
5) Ammonium sulphate fractionation of protein and its estimation by a suitable method.
6) Field visit/ assignment on any topic from the syllabus.

P4 (402)

1) Blood experiments:
   i] Determination of total RBC count
   ii] Determination of total WBC count
2) Urine analysis :
   i] Normal constituents - Urea, Uric acid, Chloride
   ii] Abnormal constituents – Glucose, Protein Ketone bodies, bile salts and bile pigments.
   iii] Titratable acidity [using neutral red or phenol red]
3) Bile :
   i] Detection of Bilirubin [Iodine test / Gmelin's Nitric acid test / Fouchet's test]
   ii] Detection of Bile salt [Pettenkofer's test. Hays sulphur test]
4) A demonstration of online muscle twitch.
5) Demonstration of plant movement. [A project to be handled in a group. Each group to plan and execute the experiment in any way they choose. Results to be presented to the class during a practical turn.]

P4 (403)

1) Isolation of DNA from Onions and confirmation by DPA test
2) Determination of the Minimum Inhibitory Concentration of any one disinfectant.
3) Determination of the potability of water by conducting a coliform count. [MPN]
4) Gram stain of sewage.
5) Determination of the Chemical Oxygen demand of an effluent / sewage.
6) Preparation of immobilized yeast/ amylase and determination of enzyme activity.

SEMESTER END THEORY ASSESSMENT (100 marks) Duration of the examination shall be of **3 hours**. The theory question paper pattern suggested is as follows:

1. There shall be four questions of 25 marks each.
2. On each unit there will be one question and fourth question will be based on all the units.
3. All questions shall be compulsory with internal choice within the questions.
4. The questions may be subdivided into sub questions as A, B, C etc.

THEORY:

Q1, Q2, Q3 to be based on Unit I, Unit II and Unit III of **25 marks** each and Q4 to be subdivided into A and B of 10 and 15 marks respectively based on Unit I, Unit II and Unit III. **Total 25 marks.**

Options available: (**For Q1, Q2, Q3**) **25 marks each.**

A. Objective: (No Internal options) **04 marks**
Match the following / Answer in one sentence /Define / Give an example / Name the following/ True or false.: Attempt 4 out of 6

B. Answer the following: Attempt 3 out of 6, each of 3 marks, **09 marks**

C. Attempt 2 out of 4, each of 6 marks **12 marks**

Q4 to be subdivided into 2 parts A and B based on Unit I, Unit II and Unit III **Total 25 marks**

A. Define/ Explain the term: Attempt 5 out of 7, each of 2 marks. **10 marks**

B. Attempt 3 out of 6, each of 5 mark with two questions from each unit. **15 marks**

PRACTICAL:

Term End Exam: Practical **40 marks +** Journal **05 marks +** Viva **05 marks= Total 50 marks**

Late Shri. Vishnu Waman Thakur Charitable Trust's
Bhaskar Waman Thakur College of Science,
Yashvant Keshav Patil College of Commerce,
Vidhya Dayanand Patil College of Arts,
(VIVA College)
(NAAC ACCREDITED-'B' Grade, CGPA 2.69)

All HODs/ coordinators are instructed to fill the following as per the academic year. Each subject's program outcome/ Course outcome has to be filled. The new syllabus of all subjects has it which can be used for reference. Please fill for the following academic years and mention it correctly, even if the same syllabus was followed for subsequent academic year you will have to fill it. Following is the example for your reference:

•	
•	
•	
•	
•	
•	
•	
•

•	

Late Shri. Vishnu Waman Thakur Charitable Trust's
Bhaskar Waman Thakur College of Science,
Yashvant Keshav Patil College of Commerce,
Vidhya Dayanand Patil College of Arts,
(VIVA College)
(NAAC ACCREDITED-'B' Grade, CGPA 2.69)

Academic year : 2022-2023

Name of Department: English

Class: S.Y.B.A. English (Ancillary)

Program Outcomes:

To create interest and develop passion amongst learners towards drama (and theatre)
To familiarize learners with the salient elements and characteristics of drama
To introduce learnersto different forms and types of drama
To introduce learners to the trends and characteristics of significant dramatic movements through representative dramas
To equip the learners with the tools and techniquesto critically appreciate drama
To inculcate and propagate human values reflected in the plays among learners
To demonstrate that drama is reflection / representation of life
To Develop analytical skills and critical thinking through close reading of drama

To introduce students to different genres and forms of poetry
To sensitize them to the rhythmical and formal properties of poetry by introducing key elements of poetry
To provide them with basic poetic devices for analyzing poems
To introduce them to the trends and characteristics of significant poetic movements through representative poems
To develop their skills in reading, writing and to critically appreciate poetry
To introduce students to poetry produced in various social and cultural context

- 1. To introduce the students to some major aspects of communication and mass communication. 2. To develop among the students a broad perspective of the past and the present status of Mass Media in India.
- 3. To develop among the students a critical understanding of the Mass Media with regard to their presentation formats, roles and audiences in Indian context.
- 4. To develop among the students a critical understanding of some special roles of different Mass Media in India.
- 5. To help the students to assess the contribution of Indian mass media to national development. 6. To acquaint the students with some issues and laws related to mass media in India.
- 7. To introduce the students to various job and career opportunities in media industry.

Program Specific Outcomes:

- By the end of the course the students should be able to receive and analyse various media products critically and become interested in jobs or career in Media Industry.
-

SEMESTER - III

Course Code: - UAENG301	**Course Title:** Introduction to Drama Paper II

Course Outcomes:

- develop interest and passion for drama (and theatre).
- be familiarized with the salient elements and characteristics of drama.
- be able to identify the different forms and types of drama.
- be capable to identify the varioustrends and characteristics of significant dramatic
- movements through the representative dramas.
- be equipped with the tools and techniquesto critically appreciate drama.
- imbibe human values reflected in the selected plays.
- justify that drama is reflection / representation of life.
- develop analytical skills and critical thinking through close reading of the represnttative
- dramas.

Course Code: UAENG302	**Course Title:** Introduction to Poetry Paper III

Course outcomes:
The students would be able :
Identify different genres and forms of poetry
Identify poetic technique, style and rhetorical devices used in poetry
Critically appreciate poems by separating various component parts and investigating the relationship of the parts to the whole
Demonstrate understanding of wide range of poems from different historical periods, written in a wide range of forms, styles and subject matter
Identify the major poets of world literature and define the importance of their works
Enhance their cultural sensitivity through reading of representative poems from diverse cultural context

Course Code: UAMASSCOM301	**Course Title:** Mass Communication 1

Course outcomes:
The students would be able :

- 1. To introduce the students to some major aspects of communication and mass communication. 2. To develop among the students a broad perspective of the past and the present status of Mass Media in India.
- 3. To develop among the students a critical understanding of the Mass Media with regard to their presentation formats, roles and audiences in Indian context.
- 4. To develop among the students a critical understanding of some special roles of different Mass Media in India.
- 5. To help the students to assess the contribution of Indian mass media to national development. 6. To acquaint the students with some issues and laws related to mass media in India.
- 7. To introduce the students to various job and career opportunities in media industry.

1.Debt Market - 1

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to the debt markets	15
2	Instruments & players in debt markets	15
3	Bonds	15
4	Valuation of bonds	15
	Total	**60**

Sr. No.	Modules / Units
1	**Introduction to the debt markets**
	• Evolution of Debt Markets in India • Primary market & secondary market • Money market & Debt Market in India • Fundamental features of debt instruments • Regulatory framework in the Indian debt market
2	**Instruments & players in debt markets**
	• central government securities: bonds, t-bills, state government bonds, • Open market operations • Securities Trading Corporation of India • Primary dealers in Government Securities • Clearing Corporation of India
3	**Bonds**
	• Features of bonds • Types of bonds • Issuers of bonds • Bond ratings- importance & relevance and rating agencies.
4	**Valuation of bonds**
	• Determinants of the value of bonds • Bond Mathematics • Yield Curve Analysis

2.Equity Markets -1

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Equity Markets- Introduction	15
2	Primary Market	15
3	Secondary Market	15
4	Importance of Equity Markets in developing country like India	15
	Total	**60**

Sr. No.	Modules / Units
1	**Equity Markets- Introduction**
	• Meaning and Definition of equity shares • Growth of Corporate Sector and the simultaneous growth in the number of equity shareholders • Separation of ownership and management in companies • Development of equity culture in India- Current position
2	**Primary Market**
	• IPO - Methods followed, Book Building, Offer for sale • Role of Merchant bankers in fixing the price • Red – Herring Prospectus – it's unique features • ASBA and its features • Green Shoe option • Sweat equity, ESOP • Rights issue of shares, Non voting shares ,ADR, GDR,IDR
3	**Secondary Market**
	• Definition and functions of stock Exchanges • Evolution and Growth of Stock Exchanges in India • NSE, BSE, SME Exchanges and Overseas Stock Exchanges • Recent Development in Stock Exchanges, Merger of SEBI with FOMC • Stock Market Indices
4	**Importance of Equity Markets in developing country like India**
	• Need for attracting more investors towards equity • Need for strengthening secondary markets • Link between Primary Market and Secondary Market

3.Commodities Markets

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Commodity Market	15
2	Commodity market in India.	15
3	Commodity Exchanges	15
4	Strengthening Commodity Market in India	15
	Total	**60**

Sr. No.	Modules / Units
1	**Introduction to Commodity Market**
	• Emergence of Commodity Market • Dynamics of global commodity markets
2	**Commodity Market in India**
	• Commodity Exchanges in India • Role of Information in Commodity Markets • Linkages between equity markets and commodity markets • Commodity markets - Logistics and Warehousing
3	**Commodity Exchanges**
	• Function & Role • Trading & Clearing methods • Commodity futures • Commodity Specific Exchanges Vs Multi Commodity Exchanges
4	**Strengthening commodity markets in India.**
	• Role of Government • Role of Commodity Exchanges • Other Institutions • Training & development of Dealers

4. Portfolio Management

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to portfolio management	15
2	Portfolio Management Strategies	15
3	Portfolio Analysis	15
4	Portfolio Revision and performance management	15
	Total	**60**

Sr. No.	Modules / Units
1	**Introduction to portfolio management**
	Investment process, Investment categories, defining investment goals and objectives, Investment constraints Process of asset allocation, different approaches to allocation decision, overview of allocation techniques
2	**Portfolio Management Strategies**
	Active strategy, passive strategy, semi active strategy, duration shift and immunization, efficient market hypotheses, top down and bottoms up
3	**Portfolio Analysis**
	Analysis: Diversification, portfolio risk and return, single index model, The sharpe index model, Portfolio Beta Selection: Markowitz Risk- Return optimization, concept of utility, Sharpe optimization model, Geometric mean model, Safety First model, Stochastic Dominance Model
4	**Portfolio Revision and performance management**
	Revision: Portfolio rebalancing, portfolio upgrading, Formula plans, constant ratio plan, variable ratio plan, selection and revision of equity portfolio Performance measurement: Methods of calculating rate of return, Money weighted rate of return, Time weighted rate of return, Linked internal rate of return, Buying the index approach, Sharpe's- Treynor's – Jensen's performance measure of portfolio

5.Treasury Management

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Understanding Treasury Management	15
2	Classification of treasury markets and Treasury Services	15
3	Cross currency forwards, present and future value	15
4	Treasury Risk Management	15
	Total	**60**

1	**Understanding Treasury Management**
	Treasury- it's evolution, importance, ideal treasury department, front office, mid office and back office Theories of treasury management Functions of treasury department Liquidity management in treasuries Banking relationship Credit management Treasury objectives and approaches
2	**Classification of treasury market and Treasury Services**
	Domestic or National Treasury Market Forex or International Treasury Features, products, dimensions, ideal ticket size, regulatory framework Treasury Services: Bank Treasury, Government Treasury, Corporate Treasury
3	**Cross Currency forwards, present and future value**
	Calculation of premium, discount etc, pre utlisation of contracts Exchange rate movement- volatility of major currencies Exchange rate and interest rate arbitrage- NDF Markets Cross Currency futures FEDAI Guidelines for merchant quotes
4	**Treasury Risk Management**
	Treasury risk management policy, control and reporting requirements Open position- day end, day light and overnight position limits- limit orders with other banks Mismatch of positions- gap limits- individual and aggregate, stop loss limits, VAR and Capital positions Developing risk framework for organization

4.Business Law-1

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Indian Contract Act	15
2	Special Contracts	15
3	Sale of Goods Act	15
4	Negotiable Instruments Act	15
	Total	**60**

Projects / Assignments (for Internal Assessment)

i. Projects/Assignments should be drawn for the component on Internal Assessment from the topics in **Module 1 to Module 4**.

ii. Students should be given a list of possible topics - at least 3 from each Module at the beginning of the semester.

iii. The Project/Assignment can take the form of Street-Plays / Power-Point Presentations / Poster Exhibitions and similar other modes of presentation appropriate to the topic.

iv. Students can work in groups of not more than 8 per topic.

v. Students must submit a hard / soft copy of the Project / Assignment before appearing for the semester end examination.

QUESTION PAPER PATTERN (Semester III)

The Question Paper Pattern for Semester End Examination shall be as follows:

TOTAL MARKS: 75 **DURATION: 150 MINUTES**

QUESTION NUMBER	DESCRIPTION	MARKS ASSIGNED
1	**i.** Question 1 A will be asked on the meaning / definition of concepts / terms from all Modules. **ii.** Question 1 B will be asked on the topic of the Project / Assignment done by the student during the Semester **iii.** In all 8 Questions will be asked out of which 5 have to be attempted.	**a)** Total marks: 15 **b)** For 1 A, there will be 3 marks for each sub-question. **c)** For 1 B there will be 15 marks without any break-up.
2	Descriptive Question with internal option (A or B) on Module 1	15
3	Descriptive Question with internal option (A or B) on Module 2	15
4	Descriptive Question with internal option (A or B) on Module 3	15
5	Descriptive Question with internal option (A or B) on Module 4	15

5. 2 Foundation Course National Service Scheme Studies (NSSS)

National Service Scheme Studies Paper-III

Modules at a Glance

Sr. No.	Modules	No of Lectures
1	Value System & Gender sensitivity	12
2	Disaster preparedness & Disaster management	10
3	Health, hygiene & Diseases	13
4	Environment & Energy conservation	10
	Total	**45**

Sr. No.	Modules / Units
1	**Value System & Gender sensitivity**
	UNIT - I – Value System Meaning of value, Types of values- human values and social responsibilities- Indian value system- the concepts and its features **UNIT - II - Gender sensitivity and woman empowerment** Concept of gender- causes behind gender related problems- measures Meaning of woman empowerment- schemes for woman empowerment in India
2	**Disaster preparedness & Disaster management**
	UNIT - I - Basics of Disaster preparedness Disaster- its meaning and types Disaster preparedness- its meaning and methods **UNIT - II - Disaster management** Disaster management- concept- disaster cycle - role of technology in disaster response- role of as first responder – the study of 'Avhan' Model
3	**Health, hygiene & Diseases**
	UNIT - I - Health and hygiene Concept of complete health and maintenance of hygiene **UNIT - II - Diseases and disorders- preventive campaigning** Diseases and disorders- preventive campaigning in Malaria, Tuberculosis, Dengue, Cancer, HIV/AIDS, Diabetes
4	**Environment & Energy conservation**
	UNIT - I Environment and Environment enrichment program Environment- meaning, features , issues, conservation of natural resources and sustainability in environment **UNIT - II Energy and Energy conservation program** Energy- the concept, features- conventional and non- conventional energy Energy conservation- the meaning and importance

5.3 Foundation Course of NCC

NCC Paper-III

Modules at a Glance

Sr. No.	Modules	No of Lectures
1	**National Integration & Awareness**	10
2	**Drill: Foot Drill**	10
3	**Adventure Training and Environment Awareness and Conservation**	05
4	**Personality Development and Leadership**	10
5	**Specialized subject (ARMY)**	10
	Total	**45**

Sr. No.	Modules / Units
1	**National Integration & Awareness**
	Desired outcome: The students will display sense of patriotism, secular values and shall be transformed into motivated youth who will contribute towards nation building through national unity and social cohesion. The students shall enrich themselves about the history of our beloved country and will look forward for the solutions based on strengths to the challenges to the country for its development. • Freedom Struggle and nationalist movement in India. • National interests, Objectives, Threats and Opportunities. • Problems/ Challenges of National Integration. • Unity in Diversity
2	**Drill: Foot Drill**
	Desired outcome: The students will demonstrate the sense of discipline, improve bearing, smartness, turnout, develop the quality of immediate and implicit obedience of orders, with good reflexes. • Side pace, pace forward and to the rear • Turning on the march and whiling • Saluting on the march • Marking time, forward march and halt in quick time • Changing step • Formation of squad and squad drill
3	**Adventure Training, Environment Awareness and Conservation**
3A	**Adventure Training**
	Desired outcome: The students will overcome fear & inculcate within them the sense of adventure, sportsmanship, espirit-d-corp and develop confidence, courage, determination, diligence and quest for excellence. • Any Two such as – Obstacle course, Slithering, Trekking, Cycling, Rock Climbing, Para Sailing, Sailing, Scuba Diving etc.
3B	**Environment Awareness and Conservation**
	Desired outcome: The student will be made aware of the modern techniques of waste management and pollution control. • Waste management • Pollution control, water, Air, Noise and Soil
4	**Personality Development and Leadership**
	Desired outcome: The student will inculcate officer like qualities with desired ability to take right decisions. • Time management • Effect of Leadership with historical examples • Interview Skills • Conflict Motives- Resolution
Sr. No.	**Modules / Units**
5	**Specialized Subject: Army Or Navy Or Air**
	Army

	Desired outcome: It will acquaint, expose & provide knowledge about Army/ Navy/ Air force and to acquire information about expanse of Armed Forces ,service subjects and important battles **A. Armed Force** • Task and Role of Fighting Arms • Modes of Entry to Army • Honors and Awards **B. Introduction to Infantry and weapons and equipments** • Characteristics of 5.56mm INSAS Rifle, Ammunition, Fire power, Stripping, Assembling and Cleaning • Organization of Infantry Battalion. **C. Military history** • Study of battles of Indo-Pak War 1965,1971 and Kargil • War Movies **D. Communication** • Characteristics of Walkie-Talkies • Basic RT Procedure • Latest trends and Development (Multi Media, Video Conferencing, IT) ***OR*** **<u>Navy</u>** **A. Naval orientation and service subjects** • Organization of Ship- Introduction on Onboard Organization • Naval Customs and Traditions • Mode of Entry into Indian Navy • Branches of the Navy and their functions • Naval Campaign (Battle of Atlantic, Pearl Harbour, Falkland War/Fleet Review/ PFR/ IFR)s **B. Ship and Boat Modelling** • Types of Models • Introduction of Ship Model- Competition Types of Model Prepare in NSC and RDC • Care and handling of power-tools used- maintenance and purpose of tools

Sr. No.	Modules / Units
	C. Search and Rescue • Role of Indian Coast Guard related to SAR **D. Swimming** • Floating and Breathing Techniques- Precautions while Swimming ***OR*** **AIR** **A. General Service Knowledge** • Organization Of Air Force • Branches of the IAF. **B. Principles of Flight** • Venturi Effect • Aerofoil • Forces on an Aircraft • Lift and Drag **C. Airmanship** • ATC/RT Procedures • Aviation Medicine **D. Aero- Engines** • Types of Engines • Piston Engines • Jet Engines • Turboprop Engines

5.4 Foundation Course of Physical Education

with Effect from the Academic Year 2017-2018

Physical Education Paper-III

Modules at a Glance

Sr. No.	Modules	No of Lectures
1	**Overview of Nutrition**	10
2	**Evaluation of Health, Fitness and Wellness**	10
3	**Prevention and Care of Exercise Injuries**	10
4	**Sports Training**	15
	Total	**45**

Sr. No.	Modules / Units
1	**Overview of Nutrition**
	• Introduction to nutrition & its principles • Role of Nutrition in promotion of health • Dietary Guidelines for Good Health • Regulation of water in body and factors influencing body temperature.
2	**Evaluation of Health, Fitness and Wellness**
	• Meaning & Concept of holistic health • Evaluating Personal health-basic parameters • Evaluating Fitness Activities – Walking & Jogging • Myths & misconceptions of Personal fitness
3	**Prevention and Care of Exercise Injuries**
	• Types of Exercise Injuries • First Aid- Importance & application in Exercise Injuries • Management of Soft tissues injuries • Management of bone injuries
4	**Sports Training**
	• Definition, aims & objectives of Sports training • Importance of Sports training • Principles of Sports training • Drug abuse & its effects

INTERNAL ASSESSMENT (PRACTICUM)
(25 Marks)

SEMESTER –III

(*Continuous Evaluation during practical sessions conducted for 27 hours)*

a. A learner willing to participate in inter-collegiate/ inter university competitions of any game and sports conducted by the University of Mumbai will be evaluated for 15 marks on the basis of his attendance, sincerity and performance during the training / practice / coaching sessions / camps conducted by the college/University for at least 10 days. Academic Council

Item No.

UNIVERSITY OF MUMBAI

Syllabus for the S.Y.B.Sc.

Program:B.Sc.

Course: Physics

(Credit Based Semester and Grading System with effect from the academic year 2016–2017)

Revised Syllabus in Physics (Theory and Practical)

Asper credit based system
Second Year B.Sc.2016–2017.

The revised syllabus in Physics as per credit based system for the Second Year B.Sc. course will be implemented from the academic year 2016–2017.

Objectives:

- To develop analytical abilities towards real world problems
- To familiarize with current and recent scientific and technological developments
- To enrich knowledge through problem solving, hands on activities, study visits, projects etc.

Semester	Paper	Title	Credits
I	**USPHP-301**	Mathematical Methods, Mechanics And Properties Of Matter	2
III	**USPHP-302**	Electricity and Magnetism	2
III	**USPHP-303**	Thermodynamics	2
III	**USPHP-3P**	Practical course-3 (Group A,B,C and Skill)	3
		Total	9
IV	**USPHP-401**	Optics	2
IV	**USPHP-402**	Electronics	2
IV	**USPHP-403**	Cosmology and Quantum Mechanics	2
IV	**USPHP-4P**	Practical course-4 (Group A,B,C and Demo)	3
		Total	9

USPH301: Mathematical Methods, Mechanics and Properties of Matter

Learning Outcomes:

On successful completion of this course students will be able to:

1. Understand the basic mathematical concepts and applications of them in physical situations
2. Understand the concepts of mechanics, acoustics and the properties of matter and be able to perform calculations using them.
3. Demonstrate quantitative problem solving skills in all the topics covered.

UNIT-I i) Waves and Oscillations- i) Linear S.H.M., composition of two collinear S.H.M., superposition of two mutually perpendicular S.H.Ms, Lissajous's figures

SPP: 2.4.3 and 2.4.4

ii) Compound pendulum: Expression for period, maximum and minimum time periods, Centres of suspension and oscillations, Reversible compound pendulum, Kater's reversible pendulum. Advantages of a compound pendulum over a simple pendulum.

HP: (pages 279 to 284)

ii) Fourier series and applications.

Introduction, Fourier cosine and sine series, change of intervals, Complex form of Fourier series, Generalized Fourier series. (Note: - Good number of examples of all types is expected to be covered.)

CH: 7.1, 7.11, 7.12, 7.13, 7.14

UNIT-II Partial Differential equations and its applications.

Introduction, Formation of partial differential equation by eliminating arbitrary constants, by eliminating arbitrary functions, Modeling of vibrating stretched string or membrane one dimensional wave equation D'Alembert's solution to be obtained. By analogy of wave equation, obtain Schrodinger time dependent and time independent equation in one dimension, Modeling of two dimensional heat flow equation, Laplace's equation in two dimensions, Solutions by method of separation of variables, Use of Fourier series.

HKD: 9.3, 9.15, 9.16, 9.17, 9.18, 9.19, 9.20

UNIT-III Mechanics, Acoustics And Properties of Matter

i) Dynamics of system of particle and concept of rigid bodies, CM coordinates, Motion of a centre of mass and linear momentum, angular momentum and torque, angular momentumof a system of CM. Conservation of angular momentum.

BSJ: 6.1, 6.2, 6.4, 6.5, 6.6, 6.7, 6.11, 6.12

ii) Acoustics of Buildings

Reverberation, Sabine's formula (without derivation) Absorption coefficient, Acoustics of Buildings, factors affecting Acoustics of Buildings, Sound distribution in an auditorium.

Ref.:MS:5.9, 5.10, 5.12, 5.13, 5.14, 5.15.

iii) Bending of beams: bending moment, Basic assumptions for theory of bending, cantilever, beam supported at its ends and loaded in the middle, I-section girders, determination of Y by bending, Determination of elastic constants by Searle's method.

BSJ: 10.16, 10.17, 10.18, 10.19, 10.20, 10.22, 10.23, 10.26.

Note: - Good number of problems on all types is expected to be solved in each unit.

BSJ: Mechanics and Electrodynamics Rev Edn. 2005 by Brijlal and Subramanayan and Jeevan Seshan.

Additional reference: KRS: Mechanics by Symon.

USPH-302: ELECTRICITY AND MAGNETISM

Learning Outcomes:

On successful completion of this course students will be able to:

1. Understand the basic mathematical physics concepts and applications of them in physical situations
2. Understand the basic laws of electrostatics and magneto statics and applications of them and be able to perform calculations using them.
3. Demonstrate quantitative problem solving skills in all the topics covered.

UNIT I. i) Mathematical Background

Review of vector algebra and calculus. Product rules, Second derivative,

ii) Integral Calculus: Line, Surface and Volume Integrals, The Fundamental Theorem for Gradients (statement of theorem without proof; do problems), The Fundamental Theorem for Curls (statement of theorem without proof; do problems) The Fundamental Theorem for Divergences (statement of theorem without proof; do problems)

iii) Curvilinear Coordinates: Cylindrical Coordinates, Spherical Coordinates

DJG: 1.2.6 to 1.2.7, 1.3.1 to 1.3.4, 1.4.1 to 1.4.2, Problems 1.3 to 1.35

UNIT II. Electrostatics and Magnetostatics

The Electric Field: Introduction, Coulomb's Law, The Electric Field, Continuous Charge Distribution, Electric Potential, Introduction to Potential, Comments on Potential, The Potential of a Localized Charge Distribution

Work and Energy in Electrostatics: The Work Done to Move a charge, The Energy of a Point Charge Distribution

Magnetostatics: Magnetic Fields

The Biot Savart Law: Steady Currents,The Magnetic Field of a Steady Current Helmholtz coil and solenoid.

DJG: 2.1.1 to 2.1.4, 2.3.1, 2.3.2, 2.3.4, 2.4.1, 2.4.2, 5.1.1, 5.2.1, 5.2.2
BS: 16.10, 16.11

UNIT III: Motion of Charged Particles in Uniform electric and Magnetic Fields: Kinetic Energy of a Charged Particle in an Electric Field, Motion of a Charged Particle in a Constant Electric Field, Cathode Ray Oscilloscope, Charged Particle in an Alternating Electric Field, Force on a Charge in a Magnetic Field, Charged Particle in a Uniform and Constant Magnetic Field, The Cyclotron, Motion of Charged Particles in Combined Electric and Magnetic Fields, Velocity Selector

HP: 13.1, 13.2, 13.2.1, 13.3, 13.4, 13.5, 13.5.1, 13.6, 13.6.1

References:

BS: Mechanics and Electrodynamics Rev Edn. 2005, by Brijlal and Subramanayan and Jeevan Seshan.

HP: Hans and Puri, Mechanics, TMH, 2nd Edition

USPH303: Thermodynamics

Learning Outcomes:

On successful completion of this course students will be able to:

1. Understand the basic concepts of thermodynamics and its applications in physical situations.
2. Understand and learn low temperature physics
3. Demonstrate quantitative problem solving skills in all the topics covered.

UNIT-I

Conversion of heat into work, Heat engine, Carnot's cycle: its efficiency, Refrigerator

Steam engine, Rankine cycle

ABG : 7.1, 7.2, 7.3,7.3.1, 11.2, 11.3,

Second law of thermodynamics, Statements, Equivalence of Kelvin and Plank statement, Carnot's theorem, Reversible and irreversible process, Absolute scale of temperature.

ABG : 7.5, 7.5.1, 7.6, 7.7, 7.8

Otto engine, Efficiency of Otto cycle, Diesel cycle, Efficiency of Diesel cycle, Otto and diesel comparison,

Refrigerator and air-conditioning, General Principle of Refrigerator, Theorem of refrigerator.

ABG : 11.4,11.4.1, 11.5,11.5.1 11.6, 11.7, 11.8, 11.8.1

UNIT-II

Clausius theorem, Entropy, Entropy of cyclic process, Reversible process; Entropy change, Carnot cycle, Reversible heat transfer, Principal of increase in entropy, Generalized form of first and second law, Entropy Change of an ideal gas, Entropy of steam, Entropy and unavailable energy, Entropy and disorder, Absolute entropy.

ABG :-7.9, 7.10, 7.11, 7.12, 7.12.1, 7.12.2, 7.13, 7.14, 7.14.1, 7.14.3, 7.15, 7.16, 7.17

Third law of thermodynamics, Nernst heat theorem, Consequences of the third law, Maxwell's thermodynamic relations, Clausius – Claperyron equation,

ABG : 10.12,10.12.1, 10.12.2, 8.3, 8.3.2

UNIT III

Low temp physics: Different method of liquefaction of gases, method of freezing, Cooling by evaporation, cooling by adiabatic expansion**.**

BS : 7.1, 7.2, 7.3, 7.4

Joule – Thomson effect, Theory of the experiment, JT effect of van der Waals gas, Regenerative cooling, Liquefaction of air, Liquefaction of hydrogen, Liquefaction of helium, Properties and uses of liquid Helium, Feature of He II, He -III Cryostat,

ABG: 10.2, 10.2.1, 10.2.2, 10.3, 10.4, 10.5, 10.6, 10.6.1, 10.7, 10.10

References:

ABG: Thermal Physics, AB Gupta and H. Roy, Book and Allied (P) Ltd, Reprint 2008, 2009.

2. Thermal Physics : Philip M. Morse (W.A. Benjamin Inc. New York)
3. Heat & Thermodynamics : Robert and Miller (ELBS)
4. A treatise of Heat : Saha and Srivastava.

USPHP3P: Revised Practical course

Instructions: i) All the measurements and readings should be written with proper units in SI system only

ii) After completing all the required number of experiments in the semester and recording them in journal, student will have to get their journal certified and produce the certified journal at the time of practical examination.

iii) While evaluating practical, weightage should be given to circuit/ray diagram, observations, tabular representation, experimental skill and procedure, graph, calculation and result.

iv) Skill of doing the experiment and understanding physics concepts should be more important than the accuracy of final result.

Leaning Outcome:

On successful completion of this course students will be able to:

i) To demonstrate their practical skills more effectively.
ii) To understand and practice the skills while doing physics practical.
iii) To understand the use of apparatus and their use without fear.
iv) To correlate their physics theory concepts through practical.
v) Understand the concepts of errors and their estimation.

Group A

1 Surface tension by Jaeger's Method.
2 Bar pendulum: determination of g (Graph Lvs T and L vs LT^2)
3 Y by bending.
4 Searle's experiment: determination of Y and η.
5 Determination of thermal conductivity of bad conductor by Lee's Method.
6 Young's modulus by Koenig's method.
7 Helmholtz resonator- determination of unknown frequency.
8 Moment of Inertia of compound pendulum by method of coincidence.

Group B

9 Verification of Stefan's law (electrical method)
10 Determination of absolute capacitance using BG
11 High resistance by mirror galvanometer

12 Series Capacitance Bridge.
13 LCR parallel resonance.
14 e/m by Thomson's method
15 Temperature coefficient of resistance of conducting material,
16 Measurement of resistance of galvanometer-G by shunting.

Group C

17 Bridge rectifier: Ripple, Load regulation. (with C/ pi filter)
18 Figure of merit of a mirror galvanometer.
19 C1/C2 by de- Sauty's method.
20 Passive low pass filter.
21 Passive high pass filter.
22 High resistance by leakage using BG.
23 Charging and discharging of capacitor.
24 Lissajous figures using CRO.

D) Skill experiments:

1. Wiring of a simple circuit using bread board
2. Use of oscilloscope
3. Travelling microscope (radius of capillary)
4. Spectrometer: mean μ of yellow doublet of mercury source.
5. Component testing, colour code of resistors, capacitors etc.
6. Drawing of graph on semi logarithmic / logarithmic scale.

E) Exemption of two experiments from section A and/or B and/or C may be given if student carry out any one of the following activity.

1. Students should collect the information of at least five Physicistswith their work or any three events on physics. Report that in journal.
2. Students should carry out mini-project up to the satisfaction of professor In-charge of practical.
3. Study tour. Students participated in study tour must submit a study tour report.

For practical examination the learner will be examined in **three experiments** (one from each group). Each experiment will be of two hour duration. Minimum **3** from each group and in all minimum **12** experiments and all the skill experiments are required to be completed compulsorily. Students are required to report all these experiments in the journal. Evaluation in viva-voce will be based on regular experiments and skill experiments

A learner will be allowed to appear for the semester end practical examination only if the candidate submits a certified journal of Physics or a certificate that the learner has completed the practical course of Physics **Semester III** as per the minimum requirements.

USPH401: Optics

Learning Outcomes:

On successful completion of this course students will be able to:

1. Understand the diffraction and polarization processes and applications of them in physical situations.
2. Understand the applications of interference in design and working of interferometers.
3. Understand the resolving power of different optical instruments.
4. Demonstrate quantitative problem solving skills in all the topics covered.

UNIT I: (15 Lectures)

Diffraction:

Fresnel's diffraction: Introduction, Huygen's-Fresnel's theory, Fresnel's assumptions, Distinctionbetween interference and diffraction, Fresnel and Fraunhoffer types of diffraction, diffraction due tosingle edge, position of maximum and minimum intensity, intensity at a point inside a geometricalshadow, diffraction due to a narrow slit, diffraction due to narrow wire.

Fraunhoffer diffraction: introduction, Fraunhoffer diffraction at a single slit, intensity distribution indiffraction pattern due to single slit, Frounhoffer diffraction due to double slit, distinction betweensingle slit and double slit diffraction patterns, plane diffraction grating, theory of plane transmissiongrating, width of principal maxima, prism and grating spectra.

SBA: 17.1, 17.2, 17.3, 17.6, 17.7, 17.10, 17.10.1, 17.10.2, 17.11, 17.12, 18.1, 18.2, 18.2.1, 18.4, 18.4.2, 18.7, 18.7.1, 18.7.2, 18.7.8(i to vi)

Unit II: (15 lectures)

Michelson Interferometer: principle, construction, working, circular fringes, localized fringes, Visibility of fringes. Applications of Michelson interferometer, a) measurement of wavelength b) Determination of the difference in wavelengths of two waves c) Thickness of thin transparent sheet.d) Standardization of meter.

Fabry-Perot interferometer and etalon: Formation of fringes, determination of wavelength, Measurement of difference in wavelength.

SBA: 15.7, 15.7.1 to 15.7.7, 15.8, 15.8.1 o 15.8.3, 15.8.5, 15.12, 15.12. to 15.12.3

Resolving Power: introduction, Raleigh's criterion, resolving power of optical instruments, criterionfor resolution according to Lord Rayleigh's;Resolving power of telescope, resolving power of aprism, resolving power of a plane transmission grating.

SBA:19.1, 19.2, 19.5, 19.6, 19.7, 19.11, 19.12.

UNIT III: **(15 Lectures)**

Polarization: Introduction, The wire grid polarizer and a Polaroid, polarization by reflection, polarization by double refraction, Malus' law, Superposition of two disturbances, the mathematical analysis, the phenomenon of double refraction, quarter wave plates and half wave plates.

AG: 19.1, 19.2.1, 19.2.2, 19.2.3, 19.3, 19.4, 19.4.1, 19.5, 19.6.

[Note: A good number of numerical examples are expected to be covered during the prescribed lectures].

REFRENCES

1. SBA.: A text book of Optics – Subramanyam, Brij Lal, Avadhanulu – S. Chand & Co. Multicoloured Ed. 2007.
2. AG. : Optics – Ajoy Ghatak (3rd Ed) Mc. Graw Hill Co.

USPH402: Electronics

Learning Outcomes:

On successful completion of this course students will be able to:

1. Understand the basics of transistor biasing, operational amplifiers, their applications.
2. Understand the basic concepts of oscillators and be able to perform calculations using them.
3. Understand the working of digital circuits.
4. Use IC 555 timer for various timing applications.
3. Demonstrate quantitative problem solving skills in all the topics covered.

UNIT I (15 Lectures)

1. Transistor Biasing: Essentials of transistor biasing circuit, stability factor, methods of transistor biasing, Emitter bias, Voltage divider bias method.

MM: 9.5, 9.6, 9.7, 9.9, 9.10, 9.12

2. Uni- Junction Transistor: Symbol, construction, I-V characteristics, equivalent circuit

AM: 28.5

3. General amplifier characteristics:

Concept of amplification, amplifier notations, current gain, Voltage gain, power gain, input resistance, output resistance, general theory of feedback, reasons for negative feedback, loop gain.

AM: 7.1 to 7.7, 17.1, 17.2, 17.3.

Practical circuit of transistor amplifier, phase reversal, frequency response, Decibel gain and Band width.

MM: 10.4, 10.5, 11.3

UNIT II **(15 Lectures)**

1. Oscillators: Introduction, effect of positive feedback. Requirements for oscillations, phase shift oscillator, Colpitt's oscillator, Use of UJT as a relaxation oscillator

AM: 18.0 to 18.3, 18.6, 28.5

2. Operational Amplifiers: Introduction, Differential and Common-Mode Operation,Op-Amp Basics, Virtual Ground , Practical Op-Amp Circuits : Inverting amplifier, Non inverting amplifier, Unity Follower, summing amplifier, integrator, differentiator, Frequency Parameters : Gain bandwidth and Slew rate

BN: 14.1 to 14.4 and 14.6 (7^{th} Edition)

BN : 13.1 to 13.4 and 13.6 (8^{th} Ed.)

UNIT III **(15 Lectures)**

1. Number system: Decimal, binary, hexadecimal number system and their mutual conversions.

ML: 5.2 to 5.5, 5.7

2. Binary addition, binary subtraction, unsigned Binary numbers, Sign-magnitude Numbers, 2's compliment representation and 2's compliment arithmetic: addition and subtraction.

ML: 6.1 to 6.6

3. Flip-flops and counters: R-S flip flops, Clocked R-S , D Flip flop, edge triggered J K flip flop, Master slave flip flop, Asynchronous counters: 3 bit ripple up counter and 3 bit ripple down counter

ML: 8.1, 8.2,8.5, 8.8 , 10.1

4. 555 Timer : Block diagram , Monostable and Astable Operation

MB: 23.7, 23.8, 23.9

[Note: A good number of numerical examples are expected to be covered during the prescribed lectures].

Basic Electronics – Ravish Aradhya H V, Mc Graw Hill Education 2013 Ed.

USPH 403 Cosmology and Quantum Mechanics

Learning Outcomes:

On successful completion of this course students will be able to:

1. Understand the basic terms like Cosmology, galaxy, quasars.
2. Understand the postulates of quantum mechanics and to understand need of quantum mechanics.
3. Demonstrate quantitative problem solving skills in all the topics covered.

UNIT I:

Cosmology : Units in cosmology : length, mass, time scale , Magnitude,(solve problems) structural hierarchy (large scale structure of the universe) Hubble's law and expansion of the universe (problems)

JVN E - 1.1 , 1.2, 1.3

Types of galaxy, Radio Sources, Quasars, Radiation background

JVNI - 1.3, 1.4 , 1.5 ,1.6 , 1.9

Quantum mechanics : (Review : failure of classical mechanics to explain black body radiation and how quantum theory was successful , De-Broglie waves) Photo electric effect , waves of what ? Describing a wave, phase velocity and group velocity, Applying the uncertainty principle (problems on all the topics), Applications of quantum mechanics

AB - 2.3, 3.2, 3.3, 3.4, 3.9 Concepts of modern physics (6^{th} Edition) – Arthur Beiser

UNIT II:

Postulates of Quantum mechanics, Quantum mechanics, Wave equation, Schrodinger's equation –time dependent form, Linearity and superposition, Expectation values, Operators, Schrodinger's equation –steady state form Worked out examples and problems

SPS : 4.9

AB - 5.1 to 5.7

UNIT III:

Free states , The free particle , potential step, The rectangular potential barrier, The tunnel effect, The emission of alpha particle for a radioactive element, Square well potential , free states, bound states , particle in a box, Particle in a rectangular three dimensional box, Worked out examples and problems

SPS - 5.1 to 5.6 , 6.1 to 6.3

[Note: A good number of numerical examples are expected to be covered during the prescribed lectures].

Solid state Physics by S O Pillai for Unit 3.

USPHP4P: Revised Practical course

Instructions: i) All the measurements and readings should be written with proper units in SI system only

ii) After completing all the required number of experiments in the semester and recording them in journal, student will have to get their journal certified and produce the certified journal at the time of practical examination.

iii) While evaluating practical, weightage should be given to circuit/ray diagram, observations, tabular representation, experimental skill and procedure, graph, calculation and result.

iv) Skill of doing the experiment and understanding physics concepts should be more important than the accuracy of final result.

Leaning Outcome:

On successful completion of this course students will be able to:

i) To demonstrate their practical skills.
ii) To understand and practice the skills while doing physics practical.
iii) To understand the use of apparatus and their use without fear.
iv) To correlate their physics theory concepts through practical.
v) Understand the concepts of errors and their estimation.

List of experiments:

Group A

1. Optical lever: determination of μ
2. Determination of Couchy's constants.
3. Cylindrical obstacle: determination of λ
4. Fresnel's bi-prism: determination of λ
5. Resolving power of telescope.
6. R.P. of grating
7. Brewster's law: determination of μ
8. Single slit diffraction

Group B

9. Opamp: Inverting amplifier with different gains
10. Opamp: Noninverting amplifier with different gains and voltage follower
11. Opamp: Integrator
12. Opamp: Differentiator.
13. Passive band pass filter.
14. UJT characteristics
15. UJT relaxation oscillator
16. Colpitt's oscillator.

Group C

17. CE amplifier: determination of bandwidth
18. CE amplifier: variation of gain with load
19. Square wave oscillator using gates.
20. Half adder and full adder (7486, 7408)
21. Study of MS-JK flip flop and divide by 2 and 4 counter.
22. 555 timer as Astable multivibrator
23. 555 timer as Monostable multivibrator
24. Use of 555 as timer in seconds and minutes

Demonstration experiments:

1. Laser experiments: straight edge, single slit, ruler grating
2. Optical fibre: transmission of signal
3. Concept of beats
4. Coupled oscillations and resonance
5. Error analysis of a given experiment
6. Wave form generator using Op-amp
7. PC simulations: graph, curve fitting etc.
8. Straight edge Fresnel diffraction
9. Double refraction
10. First order active filter.
11. Hysteresis expt.

E) Exemption of two experiments from section A and/or B and/or C may be given if student

carry out any one of the following activity.

1. Students should collect the information of at least five Physicists with their work or write a report on any major physics events and report that in journal.
2. Students should carry out mini-project up to the satisfaction of professor In-charge of practical.
3. Study tour; Students participated in study tour must submit a study tour report.

REFRENCES

1. Advanced course in Practical Physics D. Chattopadhya, PC. Rakshit & B. Saha. (6^{th} Edition) Book & Allied Pvt. Ltd.
2. BSc Practical Physics – Harnam Singh S. Chand & Co. Ltd. – 2001
3. A Text book of advanced Practical Physics – Samir Kumar Ghosh, New Central Book Agency – (3^{rd} edition)
4. B Sc. Practical Physics – CL Arora (1^{st} Edition) – 2001 S. Chand & Co. Ltd.
5. Practical Physics – CL Squires – (3^{rd} Edition) Cambridge University Press.
6. University Practical Physics – D C Tayal. Himalaya Publication.
7. Advanced Practical Physics – Worsnop & Flint.

For practical examination the learner will be examined in **three experiments** (one from each group). Each experiment will be of two **hour** duration. **Minimum 3** from each group and in all minimum **12** experiments and minimum of 4 demonstration experiments are required to be completed and reported in journal compulsorily. The learner be evaluated at the time of viva voce on the basis of regular experiments and the demonstration experiments.

A learner will be allowed to appear for the semester end practical examination only if the candidate submits a certified journal of Physics or a certificate that the learner has completed the practical course of Physics **Semester IV** as per the minimum requirements.

AC 11-02-2017

Item No. 4.222

UNIVERSITY OF MUMBAI

Essential Elements of the Syllabus

Title : Syllabus for the B.Sc. Course in Physics (from academic year 2017-18) for Semester III & IV

Course Code : **USPH**

Preamble :

This is a revised part of the undergraduate programme (Six Semesters) in Physics, to be taught in Semester III & IV from the academic year 2017-18 onwards.

Developing Curriculum that is progressive and purposeful to create positive improvement in the education system is the logic behind this revision.

Out of the three courses in each Semester, **two** courses are devoted to core Physics, catering to Mechanics, Thermodynamics, Optics , Electrodynamics, Quantum Mechanics, Mathematical Physics and Digital and Analog Electronics. These have been tailored to fit in with the existing FYBSc syllabus (Sem I and Sem II) in terms of continuity and to ensure delivery of quality content to the learner.

The science of Physics has diversified immensely in recent times and numerous new fields in Physics, such as Biophysics, Geo-Physics, Radio-Physics, Physics of metals and materials, etc. have come into existence. The fundamentals and the generality of many principles of Physics are common to all these specialized diverse fields. Most problems in applied areas have been discussed

intensely in academic conferences and journals, but have not found their place in curricula or in text books.

The **third** course in each semester offers interdisciplinary application- oriented topics . It will be offered as a **choice** to all learners across various combinations. This course will seek to foster a spirit of multidisciplinary approach in learning.

The 'practical' component in the applied course will be seen as a combination of laboratory sessions , a visit to a Research Institute/Industry, mini project, an assignment on a relevant topic etc.

For the various units, experts will guide as '**Resource Persons**' and their laboratories/ departments could serve as **Resource Centers**. Faculty members/Teachers can avail of their expertise to train themselves in the delivery of these courses whenever required.

Objective :

Upon completion of the course, students should have acquired the following knowledge and skills:

1. a thorough quantitative and conceptual understanding of the core areas of physics, including mechanics, , thermodynamics, quantum mechanics, electronics at a level compatible with graduate programs in physics at peer institutions.
2. the ability to analyze and interpret quantitative results, both in the core areas of physics and interdisciplinary areas.
3. the ability to use contemporary experimental apparatus and analysis tools to acquire, analyze and interpret scientific data.
4. the ability to apply the principles of physics to solve new and unfamiliar problems.
5. the ability to communicate scientific results effectively in presentations or posters.

Eligibility : Passed semester 1 and Semester II **;** as per rules of passing

Question paper pattern : Paper of 100marks ; 3 hours duration.

(pattern as per guidelines)

Revised Syllabus in Physics (Theory and Practical)

as per Choice based Credit and Grading system

Second year B.Sc. 2017-2018

The revised syllabus in Physics as per credit based system (with choice) of the Second Year B.Sc course will be implemented from the academic year 2017-2018.

Objectives:

- To develop analytical abilities towards real world problems
- To familiarize with current and recent scientific and technological developments
- To enrich knowledge through problem solving hands on activities, study visits, projects etc.

Semester	Paper	Title	Credits
III	USPH301	Mechanics and thermodynamics	2
III	USPH302	Vector calculus ,Analog Electronics	2
III	USPH303	Applied Physics -I	2
III	USPHP3	Practical course -3 (Group A,B,C and Skill)	3
		Total	**9**
IV	USPH401	Optics and Digital Electronics	2
IV	USPH402	Quantum Mechanics	2
IV	USPH403	Applied Physics-II	2
IV	USPHP4	Practical course -4 (Group A,B,C and Demo)	3
		Total	**9**

Proposed syllabus of SYBSc (2017-18)

USPH301 : Mechanics and thermodynamics

Learning Outcomes :

On successful completion of this course, students will be able to :

i) Understand the concepts of mechanics & properties of matter & to apply them to problems.

ii) Comprehend the basic concepts of thermodynamics & its applications in physical situation.

iii) Learn about situations in low temperature.

iv) Demonstrate tentative problem solving skills in all above areas.

UNIT – I **15 Lectures**

I Compound pendulum :
Expression for period, maximum and minimum time period, centres of suspension and oscillations , reversible compound pendulum. Kater's reversible pendulum , compound pendulum and simple pendulum- a relative study.

Ii Center of Mass , .Motion of the Center of Mass , Linear momentum of a Particle Linear momentum of a System of Particles , Linear momentum wrt CM coordinate (i.e shift of origin from Lab to CM), Conservation of Linear Momentum , Some Applications of the Momentum Principle , System of Variable Mass
Torque Acting on a Particle , Angular Momentum of a Particle , Angular Momentum of System of Particles , Total angular momentum wrt CM coordinate. Conservation of Angular Momentum

iii Oscillations **,** The Simple Harmonic Oscillator , Relation between Simple Harmonic Motion and Uniform Circular Motion , Two Body Oscillations, Damped Harmonic Motion , Forced Oscillations and Resonance.

UNIT –II **15 Lectures**

(Review of zeroth and first law of thermodynamics)

I Conversion of heat into work, heat engine, Carnot's cycle: its efficiency.

Ii Second law of thermodynamics, Statements, Equivalence of Kelvin and Plank statement, Carnot's theorem, Reversible and irreversible process, Absolute scale of temperature.

iii Clausius theorem, Entropy, Entropy of a cyclic process, Reversible process, Entropy change, Reversible heat transfer, Principle of increase in entropy, generalized form of first and second law, entropy change of an ideal gas, entropy of steam, entropy and unavailable energy, entropy and disorder, absolute entropy.

UNIT –III **15 Lectures**

i Third law of thermodynamics, Nernst heat theorem, Consequences of the third law, Maxwell's thermodynamic relations, Clausius – Clapeyron equation, Thermal Expansion.

ii Steam engine, Rankine cycle, Otto engine, Efficiency of Otto cycle, Diesel cycle, Efficiency of Diesel cycle, Otto and diesel comparison

iii Low temp Physics: Different methods of liquefaction of gases, methods of freezing, Cooling by evaporation, cooling by adiabatic expansion
Joule - Thompson effect, JT effect of Van der Waal's gas, Liquefaction of helium, properties and uses of liquid Helium

5. A treatise on heat : Meghanad Saha and BN Srivastava , 1969, India Press.
6. Mechanics and Electrodynamics Rev Edn. 2005 by Brijlal and Subramanyan and Jeevan Seshan.

USPH302 : Vector calculus, Analog Electronics

Learning Outcomes:

On successful completion of this course students will be able to :

1) Understand the basic concepts of mathematical physics and their applications in physical situations.

2) Understand the basic laws of electrodynamics and be able to perform calculations using them.

3) Understand the basics of transistor biasing, operational amplifiers, their applications

4) Understand the basic concepts of oscillators and be able to perform calculations using them.

5) Demonstrate quantitative problem solving skill in all the topics covered.

Unit I: Vector Calculus: 15 Lectures

1. Line, Surface and Volume Integrals, The Fundamental Theorem of Calculus, The Fundamental Theorem of Gradient, The Fundamental Theorem of Divergence , The Fundamental Theorem of Curl (Statement and Geometrical interpretation is included, Proof of these theorems are omitted). Problems based on these theorems are required to be done.

2. Curvilinear Coordinates: Cylindrical Coordinates, Spherical Coordinates

Unit II: Analog Electronics **15 Lectures**

1.Transistor Biasing, Inherent Variations of Transistor Parameters, Stabilisation, Essentials of a Transistor Biasing Circuit, Stability Factor, Methods of Transistor Biasing, Base Resistor Method, Emitter Bias Circuit, Circuit analysis of Emitter Bias, Biasing with Collector Feedback Resistor, Voltage Divider Bias Method, Stability factor for Potential Divider Bias.

2.General amplifier characteristics: Concept of amplification, amplifier notations, current gain, Voltage gain, power gain, input resistance, output resistance, general theory of feedback, reasons for negative feedback, loop gain.

3.Practical circuit of transistor amplifier, phase reversal, frequency response, Decibel gain and Band width.

Unit III: Analog Electronics **15 Lectures**

1. Oscillators: Introduction, effect of positive feedback. Requirements for oscillations, phase shift oscillator, Wien Bridge Oscillator, Colpitt's oscillator, Hartley oscillator

2. Operational Amplifiers: Introduction, Schematic symbol of OPAMP, Output voltage from OPAMP, AC analysis, Bandwidth of an OPAMP, Slew rate, Frequency Response of an OPAMP, OPAMP with Negative feedback, Inverting Amplifier, Non-Inverting Amplifier, Voltage Follower, Summing Amplifier, Applications of Summing amplifier, OPAMP Integrator and Differentiator, Critical frequency of Integrator, Comparator

USPH303 : Applied Physics - I

This paper consists of three modules (units) designed in a way so as to offer interdisciplinary & application oriented learning.

Learning Outcomes :

On completion of this, it is expected that

i) Students will be exposed to contextual real life situations.

ii) Students will appreciate the role of Physics in 'interdisciplinary areas related to materials, Bio Physics, Acoustics etc.

iii) The learner will understand the scope of the subject in Industry & Research.

iv) Experimental learning opportunities will faster creative thinking & a spirit of inquiry.

Unit 1 : Acoustics , Lasers and fibre optics 15 Lectures

1)Acoustics of Buildings: Reverberation, Sabine's formula (without derivation) Absorption coefficient, Acoustics of Buildings, factors affecting Acoustics of Buildings, Sound distribution in an auditorium.

2)Laser : Introduction, transition between Atomic energy states (without derivation), Principle of Laser, Properties of Laser, Helium–Neon Laser, Application of Laser, Holography

3) Fibre Optics : Light propagation through Fibres, Fibre Geometry, Internal reflection, Numerical Aperture, Step-Index and Graded-Index Fibres, Applications of Fibres.

References:

Modern Physics Concept and Applications – Sanjeev Puri, Narosa Publication.

Properties of matter and Acoustics – R Murugeshan and K. Shivaprasath, S Chand & Co.Ltd. (2005-Ed)

Unit II : Biophysics **15 Lectures**

Introduction, definition, History & scope of biophysics, biological fluids, physico-chemical properties, viscosity, surface tension, pH, osmosis, osmotic pressure. Diffusion, Ficks' laws of diffusion, dialysis, Cell is unit of life, fundamental understanding prokaryotic and eukaryotic cell structure and function, eukaryotic cell membrane, Fundamentals of transport process through biological membrane, membrane channels. electrical properties of cell, Action potential, propagation of action potential, methods of measurement of action potential, Nernst equation, Golman equation, The Hodgkin-Huxely model of action potential, voltage clamp technique, Patch clamp technique, cell impedance and capacitance .

3. Introductory Biophysics: Perspective on living state by James Claycomb
4. Medical Physiology by Guyton
5. Molecular Biology of Cell by Bruce Albert
6. Text Book of Biophysics by R N Roy

Unit III : Materials – properties and applications **15 Lectures**

<u>Introduction to Materials</u>

Classification of Materials based on structures (Crystalline and Amorphous, single crystal, polycrystalline and nanomaterials) and Functionality (Conducting, insulating, superconducting, reflecting, transmitting etc)
Types of Materials: Metals and alloys, Ceramics, Polymers and Composites, Thin Films, Nanomaterials; Some Physical and Chemical methods of materials synthesis (5L)

<u>Properties of materials</u>

Electrical Properties: Review of energy band diagram for materials - conductors, semiconductors and insulators, Electrical conductivity in metals, semiconductors and insulators (dielectrics), effect of temperature on conductivity

Optical Properties: Reflection, refraction, absorption and transmission of electromagnetic radiation in solids.
Magnetic Properties: Origin of magnetism in solids (basic idea), Types of magnetic order (paramagnetism, diamagnetism, antiferro magnetism, ferromagnetism, ferrimagnetism), magnetic hysteresis (6L)

Applications
Optical materials: LEDs, OLEDs, LCDs, Flat Panel Displays, optical fibers
Dielectric materials: Piezoelectric, ferroelectric and pyroelectric materials
Magnetic Materials: Soft magnets (Transformer steels), Hard magnets for permanent magnets, Magnetic Recording and Storage (4L)

References:

1. Electronic Properties of Materials, Rolf E Hummel
2. Materials Science and Engineering: A First Course by V. Raghavan

USPHP3: Practical course -3

Instructions:

i) All the measurements and readings should be written with proper units in SI system only.
ii) After completing all the required number of experiments in the semester and recording them in journal, student will have to get their journal certified and produce the certified journal at the time of practical examination.
iii) While evaluating practical, weight age should be given to circuit/ray diagram, observations, tabular representation, experimental skills and procedure, graph, calculation and result.
iv) Skill of doing the experiment and understanding physics concepts should be more important than the accuracy of final result.

Learning outcomes :

On successful completion of this course students will be able to :

i) Understand & practice the skills while performing experiments.
ii) Understand the use of apparatus and their use without fear & hesitation.
iii) Correlate the physics theory concepts to practical application.
iv) Understand the concept of errors and their estimation.

Note: Exemption of two experiments from section A and / or B and / or C may be given if student carries out any one of the following activity.

1) Collect the information of at least five Physicists with their work or any three events on physics, report that in journal.
2) Execute a mini project to the satisfaction of teacher in-charge of practical.
3) Participate in a study tour or visit & submit a study tour report.

For practical examinations, the learner will be examined in three experiments (one from each group) .
Each experiment will be of three hours' duration .
A Minimum 3 from each group and in all minimum 12 experiments must be reported in journal.
All the skill experiments are required to be completed compulsorily. Students are required to report all these experiments in the journal. Evaluation in viva voce will be based on regular experiments and skill experiments.

A learner will be allowed to appear for the semester and practical examination only if he submits a certified journal of Physics or a certificate that the learner has completed the practical course of Physics Semester III as per the minimum requirements.

Group A

1 Y by bending.
2 Kater’s pendulum
3 Searle’s experiment: determination of Y and □.
4 Flat spiral spring (Y)
5 Flat spiral spring (n)
6 Young’s modulus by Koenig’s method.
7 Determination of thermal conductivity of bad conductor by Lee’s Method.
8 Helmholtz resonator- determination of unknown frequency.

9 Moment of Inertia of compound pendulum by method of coincidence.
8. Verification of Stefan's law (electrical method)
9. Temperature coefficient of resistance of conducting material,
10. e/m by Thomson's method
11. Charging and discharging of capacitor.
12. LCR parallel resonance.
13. Figure of merit of a mirror galvanometer.
14. Determination of absolute capacitance using BG
15. Measurement of resistance of galvanometer (G by shunting)

Group B

1. Passive low pass filter
2. Passive high pass filters.
3. Passive band pass filter.
4. Opamp: Inverting amplifier with different gains
5. Opamp: Non-inverting amplifier with different gains and voltage follower
6. Opamp: Integrator and Differentiator
7. CE amplifier: determination of bandwidth
8. CE amplifier: variation of gain with load
9. Lissajous figures using CRO.
10. Phase shift oscillator
11. Wien bridge oscillator
12. UJT characteristics
13. UJT relaxation oscillator
14. Colpitt's oscillator
15. Hartley oscillator

Group C

1. Laser experiments: straight edge, single slit, ruler grating
2. Optical fibre: transmission of signal
3. Concept of beats
4. Coupled oscillations and resonance
5. Standardization of pH meter & acid-base titration.
6. Determination of Isoelectric point of Amino Acids/protein.
7. Understanding uv visible spectra of protein/Nucleic Acids.
8. Surface tension of Biological fluid.
9. Microscopic examination of Red blood Cells & White blood Cells.
10. Synthesis of materials - mini project - thin film/nano materials/bulk powders using different routes etc.
11. Visit to research institutes (equivalent to three practical sessions).

12. Assignment & literature survey (equivalent to 2 practical sessions).

Skill experiments

1. Soldering technique
2. Wiring of a simple circuit using bread board
3. Use of DMM
4. Use of oscilloscope
5. Travelling microscope (radius of capillary)
6. Spectrometer: mean μ of yellow doublet of mercury source.
7. Spectrometer: optical leveling and Shuster's method
8. Component testing, colour code of resistors, capacitors etc.
9. Drawing of graph on semi logarithmic / logarithmic scale.
10. Radius of ball bearings (single pan balance)

USPH401 : Optics and Digital Electronics

Learning Outcomes:

On successful completion of this course students will be able to :

1) Understand the diffraction and polarization processes and applications of them in physical situations.
2) Understand the applications of interference in design and working of interferometers.
3) Understand the resolving power of different optical instruments.\
4) Understand the working of digital circuits
5) Use IC 555 time for various timing applications.
6) Demonstrate quantitative problem solving skills in all the topics covered.

UNIT I: (15 Lectures)

Background knowledge (devote one lecture at commencement):

i. Introduction, Huygens's - Fresnel theory, Distinction between interference and diffraction, Fresnel and Fraunhoffer types of diffraction.
ii. Introduction of Polarization, Natural light is unpolarized, Unpolarized and Polarized light
iii. Brewster's law , Polaroid sheets
iv. Prism and grating spectra , Cornu's spiral, Fresnel's integrals.

Diffraction:

Fresnel's Diffraction: Fresnel's assumptions, Rectilinear propagation (Half period zones) of light, Diffraction pattern due to straight edge, Positions of maxima and minima in intensity, Intensity at a point inside the geometrical shadow(straight edge), Diffraction due to a narrow slit, Diffraction due to a narrow wire

Fraunhoffer Diffraction : Introduction, Fraunhoffer diffraction at a single slit, Intensity distribution in diffraction pattern due to a single slit, Fraunhoffer diffraction at a double slit, Distinction between single slit and double slit diffraction pattern and missing orders, Plane diffraction Grating, Theory of plane transmission grating, Width of principal maxima .

Unit II **(15 Lectures)**

Polarization: Types of polarization, Plane polarized light, Circularly polarized light, Elliptically polarized light, Partially polarized light, Production of Plane polarized light, Polarization by reflection from dielectric surface, Polarization by refraction –pile of plates, Polarization by scattering, Polarization by selective Absorption, Polarization by double refraction, Polarizer and Analyzer, Malus' Law, Anisotropic crystal, Calcite crystal, Optic Axis, Double refraction in calcite crystal, Huygens' explanation of double refraction, Ordinary and Extra ordinary rays, Positive and Negative crystals, Superposition of waves linearly polarized at right angles, Superposition of e-Ray and o-Ray, Retarders, Quarter wave plate, Half wave plate, Production of linearly polarized light,Production of elliptically polarized light, Production of circularly polarized light, Analysis of polarized light, Applications of polarized light.

Unit – III

Digital Electronics: **(15 Lectures)**

Background knowledge (devote one lecture at commencement):

i. Binary number system , Arithmetic building blocks , Types of registers

Digital IC signal levels, Binary to Decimal ,Decimal to binary , Hexadecimal number, Hexadecimal to decimal Conversion, Decimal to hexadecimal conversion, Hexadecimal to binary conversion, Binary to hexadecimal conversion, Binary addition, Unsigned binary numbers, Sign magnitude numbers , 1's complement , 2's complement , Converting to and from 2's complement representation , 2's complement arithmetic, The adder-subtractor (ignore IC specific diagrams)

RS Flip-Flops (only NOR gate latch, NAND gate latch) , Gated Flip-Flops, Edge-Triggered RS Flip-Flop, Edge- Triggered D Flip-Flop, Edge-Triggered J-K Flip-Flop, JK Master- Slave Flip-Flops, Bounce elimination switch

Types of registers : SISO , SIPO, PISO , PIPO [in this chapter the teacher should make all IC specific diagrams into general diagrams ie. Ignore pin numbers and IC numbers]

Asynchronous counter -3 bit (ignore IC specific diagrams), Synchronous counter only mod 8, Decade Counters Mod5 and Mod10

A Text Book Of Optics By: Dr.N.Subrahmanyam, Brijlal, Dr M.N. Avadhaanulu (S.Chand, 25th Revised edition2012 Reprint 2013)

AJOY GHATAK: OPTICS (5thEdition)

LMS – Digital Principles and Aplications By Leach, Malvino, Saha 6th edn.

TF – Digital Fundamentals by Thomas L Floyd 10th edn. (Additional Reading)

RPJ – Modern Digital Electronics by R P Jain 4th edn. (Additional Reading)

USPH402: QUANTUM PHYSICS

Learning Outcomes :

On successful completion of this course students will be able to :

1) Understand the postulates of quantum mechanics and to understand its importance in explaining significant phenomena in Physics.

2) Demonstrate quantitative problem solving skills in all the topics covered.

Background Reading (Review):

Origin of Quantum Mechanics:
1) Review of Black body radiation, b) Review of photoelectric effects.
2) Matter waves-De Broglie hypothesis. Davisson and Germer experiment.
3. Wave particle duality
5. Concept of wave packet, phase velocity, group velocity and relation between them
6. Heisenberg's uncertainty principle with thought experiment, different forms of uncertainty.

Unit –I: The Schrodinger wave equation: 15 Lectures

1. Concept of wave function, Born interpretation of wave function.
2. Concepts of operator in quantum mechanics examples – position, momentum and energy operators.
3. Eigenvalue equations, expectation values of operators.
4. Schrodinger equation.

5. Postulates of Quantum Mechanics.
6. Analogy between Wave equation and Schrodinger equation.
7. Time dependent and time independent (Steady State) Schrodinger equation, Stationary State
8. Superposition principle.
9. Probability current density, Equation of continuity and its physical significance.

Unit-II: Applications of Schrodinger steady state equation- 15 Lectures

1. Free particle.
2. Particle in infinitely deep potential well (one - dimension).
3. Particle in finitely deep potential well (one - dimension).
4. Step potential.
5. Particle in three dimension rigid box, degeneracy of energy state.

Unit-III: Applications of Schrodinger steady state equation –II 15 Lectures

1. Potential barrier (Finite height and width) penetration and tunneling effect (derivation of approximate transmission probability)
2. Theory of alpha particle decay from radioactive nucleus.
3. Harmonic oscillator (one-dimension), correspondence principle.

[Note: A good number of numerical examples are expected to be covered during the prescribed lectures].

Reference Books:

1. Concepts of Modern Physics – A. Beiser (6th Ed.) Tata McGraw Hill.
2. Quantum Mechanics – S P Singh, M K Bagade, Kamal Singh, - S. Chand : 2004 Ed.
3. Quantum Mechanics of Atoms, Molecules, Solids, Nuclei and particles. - By R. Eisberg and R. Resnik Published by Wiley.
5. Introduction to Quantum Mechanics. - By D. Griffiths Published by Prentice Hall.
6. Quantum Mechanics. - By Ghatak and Lokanathan Published by Mc. Millan.
7. Quantum Mechanics. - By L. I. Schiff.
8. Quantum Mechanics. - By Powell and Crasemann, Addison-Wesley Pub. Co.

USPH403 : Applied Physics II

Learning Outcomes :

On successful completion of this course, students will be able to :

i) Understand the concepts of mechanics & properties of matter & to apply them to problems.

ii) Comprehend the basic concepts of thermodynamics & its applications in physical situation.

iii) Learn about situations in low temperature.

iv) Demonstrate tentative problem solving skills in all above areas.

Unit 1 : Introduction to Geophysics 15 Lectures

CHAPTER 1 : GEOLOGY AND GEOPHYSICS

1.1 Introduction to Geophysics its branches and relationship with other sciences.

1.2 Earth and solar system: Meteorites and other extra-terrestrial materials.

1.3 Age of Earth and various methods of determination. Planetary evolution of the Earth and its internal structure: Elastic waves and variation of physical and chemical properties in the interior of Earth.

1.4 Major tectonic features of the ocean oceanic and continental crust.

1.5 Continental drift – geological and geophysical evidence: mechanisms, objections and present status.

1.6 Gravity and magnetic anomalies at Mid-ocean ridges: deep sea trenches, continental shield areas and mountain chains.

1.7 Geomagnetism, elements of Earth's magnetism: Internal, external fields and their causes, Palaeomagnetism, Polar wandering paths and reversals, Seafloor spreading and Plate tectonics.

1.8 Seismic belts of the Earth: Seismicity and plate movements.

1.9 Geodynamics of the Indian plate.

1.10 Utility of the different geophysical techniques (discussed above) in exploration for academic as well as for harnessing resources. Geophysical potential fields: Principles of Gravity and Magnetic methods.

1.11 Instrumentation, field procedures used in geophysical studies.

1.12 Case studies

1.13 Problems.

6. *Applied Geophysics (Paperback).* W.M. Telford, L.P. Geldart and R.E. Sheriff, Cambridge University Press, Cambridge (1990).

CHAPTER 2 : GEO-ENVIRONMENTAL SCIENCES

2.1 Environmental Magnetic Analysis relating to magnetic minerals and environmental systems, soil magnetism, mineral magnetic studies of lake and marine sediments and magnetic monitoring of air-, land- and water-pollution.

2.2 Geo-Environmental Studies relating to mining, urban, industrial, coastal and desert management, palaeoclimate, palaeoenvironment, medical geology, climate change and studies related to their impact on ecosystem.

2.3 Natural Hazard Investigations including scientific studies related to natural hazards such as earthquakes, landslides, floods and tsunamis.

2.4 Impact Assessment of Anthropogenic Activities such as heavy metal pollution in Mumbai aquatic system with industries and thermal power plants, urbanization, disposal of industrial and radio-active waste, excessive withdrawal of ground water and use of fertilizers.

Problems.

Unit II : Microprocessors (15 Lectures)

8085 Microprocessor and Basic Assembly Language Programming *(15 lectures)*

Introduction, Historical Perspective, Organization of a Microprocessor Based system, how does
the Microprocessor works, Machine Language, Assembly Language, High Level Languages,
Writing and executing an Assembly Language Program.

8085 Bus Organization, 8085 Programming Model, The 8085 Microprocessor, Pin connection
diagram and function of each pin, A detailed look at 8085 Microprocessor.

Basic definitions: Instruction, Opcode, operand. Instruction word Size, instruction Format, data format **,**Addressing Modes, The 8085 Instruction Set(Classification) Data transfer Operations, Arithmetic Operations, Logical Operations Branch Operations ,
Introduction to Advanced I nstructions Flowchart

Main References:

1. G: Microprocessor Architecture, programming and Applications with the 8085 by Ramesh Gaonkar, 5th Edition, Prentice Hall of India.
Additional references:
1) Microprocessor and Applications by Vibhute and Borole, Technova Publications, Pune.
2) Microprocessor, Principles & Applications by Gilmore (2nd Ed) TMH

Unit III : **15 Lectures**

A)Radiation Physics

1**: Basics of Radiation Science** 3L

Electromagnetic Spectrum, Introduction to radioactivity, Sources of radiation: Alpha, beta and gamma radiation, high energy electron radiation and X-rays, Radiation units, Sources of radiation: natural and man-made, Radiation protection

2: **Radiation Detectors and Beam Calibration** 4L

Types of radiation detectors, Ionization detectors, scintillation detectors, particle detectors, TLD, thin film detectors, Radiation field analyzer, Basic principles of beam profile measurement

Recommended Books:

1. Course in DRP by Dept of Atomic Energy

B) Radio communication :

1: Basics of Communication 3L

Block diagram of communication system, types of communication system: simplex, duplex, analog and digital communication,

Electromagnetic spectrum, base band and broad band communication. Noise

concept and types, signal to noise ratio, noise figure, noise temperature.

2: Amplitude Modulation 2 L

Need of modulation, concept of modulation, AM waveform, mathematical expression of AM, concept of sideband, demodulation principles. AM Receiver: TRF and super-heterodyne receiver,

3: Frequency Modulation 2 L

FM modulation: definition, mathematical representation, frequency spectrum, bandwidth and modulation index.

4.Concept of ASK, PSK, FSK, PAM, PWM, PPM, PCM. 1 L

Recommended Books:

1. Communication Electronics: Principles and applications by Louis E Frenzel 3rd edition TMH Publications.

2. Electronics Communication Systems by Kennedy

3. Telecommunication Switching Systems and Network by Vishwanathan and Thiagarajan, PHI publication.

4. Electronics Communication Systems by Denis Roddy and John Coolen, PHI publication.

USPHP4: Practical course -4

Instructions:

i. All the measurements and readings should be written with proper units in SI system only.

ii. After completing all the Required number of experiments in the semester and recording them in journal, student will have to get their journal certified and produce the certified journal at the time of practical examination.

iii. While evaluating practical, weight age should be given to circuit/ray diagram, observations, tabular representation, experimental skills and procedure, graph, calculation and result.

iv. Skill of doing the experiment and understanding physics concepts should be more important than the accuracy of final result.

Learning Outcomes :

On successful completion of this course students will be able to :

i) Understand & practise the skills while performing experiments.
ii) Understand the use of apparatus and their use without fear & hesitation.
iii) Correlate their physics theory concepts to practical application.
iv) Understand the concept of errors and their estimation.

For practical examination the learner will be examined in the experiments (one from each group) . Each experiment will be of three hour duration;
Minimum 3 from each group and in all minimum 12 experiments and all the demonstration experiments are required to be completed compulsorily.
Students are required to report all these experiments in the journal. Evaluation in viva voce will be based on regular experiments and skill experiments.

A learner will be allowed to appear for the semester and practical examination only if he submits a certified journal of Physics or a certificate that the learner has completed the practical course of Physics Semester III as per the minimum requirements.

Group A

1. Optical lever: determination of μ
2. Cylindrical obstacle: determination of λ
3. Single slit diffraction
4. Fresnel's bi-prism: determination of λ
5. Determination of Couchy's constants.
6. R.P. of telescope.
7. R.P. of grating
8. R. P. of prism
9. Brewster's law: determination of μ
10. Double refraction
11. Polarimeter
12. Laser beam profile
13. Determination of wavelength of laser using grating
14. Determination of R.I. of liquid by laser
15. μ by total internal reflection

Group B

1. Square wave oscillator using gates.
2. Half adder and full adder (7486, 7408)
3. Study of MS-JK flip flop
4. Study of Latch (74LS373)
5. Study of 3:8 Decoder (74LS138)
6. Study of 8:3 Priority Encoder (74LS148)
7. Counters mod 2,5 and 10
8. Shift registers
9. Transistorized Astable multivibrator
10. Transistorized Monostable multivibrator
11. Transistorized Bistable multivibrator
12. Op-Amp as Astable multivibrator
13. IC 555 timer as Astable multivibrator
14. IC 555 timer as Monostable multivibrator
15. IC 555 timer as a Ramp generator

Group C

1. Study of 8085 microprocessor kit and commands.
2. 8 -bit addition, subtraction, multiplication
3. Two digit Decimal addition, subtraction.
4. Memory block transfer from one location to another.
5. Find largest/smallest number in given block.
6. Find number of positive/negative, odd/even elements in given block.
7. Arrange given number in ascending/descending order
   (**Note**: Use 8085 kit or any 8085 simulator to perform practicals)
8. Use of initial magnetization curve to find flux in core
9. Project on a topic (equivalent to three practical sessions)
10. Visit to research institutes (equivalent to three practical sessions)
11. Assignment & literature survey (equivalent to 2 practical sessions).
12. Visit to Hospital with medical diagnostic equipment.
13. Plotting and analysis of detector data (from University /research institutions)
14. Design, Build and test Amplitude Modulator and/or Frequency Modulator
15. Time Division Multiplexing circuit.
16 Frequency Shift Keying(FSK) using IC 555 or XR 2206
17. Demonstration of PAM, PPM and PWM.

Demonstration experiments

1. Error analysis of a given experiment
2. Wave form generator using Op-amp
3. PC simulations: graph, curve fitting etc.
4. Straight edge Fresnel diffraction
5. First order active filter.
6. DAD instruction.

University of Mumbai

No. UG/ 27 of 2019-20

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges and Directors of the recognized Institutions in Humanities Faculty is invited to this office Circular No. UG/299 of 2017-18, dated 7th November, 2017 relating to the revised syllabus as per (CBCS) of S.Y.B.A. Social Psychology Development Psychology and General Applied Component Option A Health Psychology, B Psychology of Adjustment, C Stress Management (Part I) (Sem. III) and (Part II) (Sem.IV).

They are hereby informed that the recommendations made by the Board of Studies in Psychology at its meeting held on 26th March, 2019 have been accepted by the Academic Council at its meeting held on 15th April, 2019 **vide** item No. 4.13 and that in accordance therewith, the revised syllabus as per the (CBCS) for the S.Y.B.A.(Sem.III & IV) Paper II Social Psychology, Paper III Development Psychology, Applied Components (a) Health Psychology, (b) Psychology of Adjustment, (c) Stress Management has been brought into force with effect from the academic year 2019-20, accordingly. (The same is available on the University's website www.mu.ac.in).

MUMBAI – 400 032
1st June, 2019

(Dr. Ajay Deshmukh)
REGISTRAR

To

The Principals of the affiliated Colleges and Directors of the recognized Institutions in Humanities Faculty. (Circular No. UG/334 of 2017-18 dated 9th January, 2018.)

A.C./4.13/15/04/2019

****

No. UG/ 27 -A of 2019 MUMBAI-400 032 1st June, 2019

Copy forwarded with Compliments for information to:-

1) The I/c Dean, Faculty of Humanities,
2) The Chairman, Board of Studies in Psychology,
3) The Director, Board of Examinations and Evaluation,
4) The Professor-cum-Director, Institute of Distance and Open Learning (IDOL),
5) The Director, Board of Students Development,
6) The Co-ordinator, University Computerization Centre,

(Dr. Ajay Deshmukh)
REGISTRAR

Choice Based Credit System (CBCS)
S.Y.B.A. Psychology Syllabi to be implemented from 2019-2020
Social Psychology - Paper II: Part I and Part II

Code	Sem.	Course Title	Credits	Marks
UAPSY 301	3	Social Psychology: Part I	3	100
UAPSY 401	4	Social Psychology: Part II	3	100

Objectives: -
1. To help students in building knowledge of the basic concepts and modern trends in Social Psychology.
2. To foster interest in Social Psychology as a field of study and research among students.
3. To make the students aware of the applications of the various concepts in Social Psychology in the Indian context.

Semester III Social Psychology: Part I (3 lectures per week)

Unit 1: Social Psychology: The Science of the Social Side of Life
a) Social Psychology: What it is and is not
b) Social psychology: Advances at the boundaries
c) How social psychologists answer the questions they ask: Research as the route to increased knowledge
d) The role of theory in social psychology
e) The quest for knowledge and the rights of individuals: Seeking an appropriate balance

Unit 2: Social Perception: Seeking to Understand Others
a) Nonverbal communication: An unspoken language
b) Attribution: Understanding the causes of behavior
c) Impression formation and management: Combining information about others
d) What research tells us about the role of nonverbal cues in job interviews?
e) What research tells us about why some people conclude they are superior to others?

Unit 3: Attitudes: Evaluating and responding to the social world
a) Attitude formation: How attitudes develop
b) When and why do attitudes influence behavior?
c) How do attitudes guide behavior?
d) The science of persuasion: How attitudes are changed
e) Resisting persuasion attempts
f) Cognitive dissonance: What it is and how do we manage it?
g) What research tells us about culture and attitude processes?

Unit 4:Liking, Love and Other close relationships.
a) Internal sources of liking others: The role of needs and emotions
b) External sources of attraction: The effects of proximity, familiarity and physical beauty
c) Sources of liking based on social interaction
d) Close relationships: Foundations of social life
e) What research tells us about dramatic differences in appearance between partners: Is love really blind?
f) What research tells us about two factors that may destroy love—jealousy and infidelity

Semester IV Social Psychology: Part II (3 lectures per week)

Unit 1: Causes, and Cures of Stereotyping, Prejudice and Discrimination
a) How members of different groups perceive inequality
b) The nature and origins of stereotyping

c) Prejudice: Feelings toward social groups
d) Discrimination: Prejudice in action
e) Why prejudice is not inevitable: Techniques for countering its effects
f) What research tells us about the role of existential threat in prejudice

Unit 2: Social Influence: Changing Others' Behavior

a) Conformity: How groups – and norms – influence our behavior.
b) Compliance: To ask – sometimes – is to receive
c) Obedience to authority: Would you harm someone if ordered to do so?
d) Unintentional social Influence: How others change our behaviors even when they are not trying to do so
e) What research tells us about how much we really conform?
f) What research tells us about using scarcity to gain compliance?

Unit 3: Aggression: Its Nature, Causes and Control

a) Perspectives on aggression: In search of the roots of violence
b) Causes of human aggression: Social, cultural, personal and situational
c) Aggression in the classroom and workplace
d) The prevention and control of violence: some useful techniques
e) What research tells us about the role of emotions in aggression?
f) What research tells us about workplace aggression?

Unit 4: Prosocial Behavior: Helping Others

a) Why people help: Motives for prosocial behaviour
b) Responding to an emergency: Will bystanders help
c) Factors that increase or decrease the tendency to help
d) Crowdfunding: A new type of prosocial behaviour
e) Final thoughts: Are prosocial behaviour and aggression opposites?
f) What research tells us about paying it forward: Helping others because we have been helped
g) What research tells us about how people react to being helped

S.Y.B.A. Developmental Psychology: A Focus on Adolescent and Adult Development Paper III Part I and Part II

Code	Sem.	Course Title	Credits	Marks
UAPSY 302	3	Developmental Psychology A Focus on Adolescent and Adult Development: Part I	3	100
UAPSY 402	4	Developmental Psychology A Focus on Adolescent and Adult Development: Part II	3	100

Objectives: -

1. To help students in building knowledge and understanding of the basic concepts, principles, perspectives and modern trends in Developmental Psychology
2. To foster interest in Developmental Psychology as a field of study and research among students.
3. To make the students aware of the implications and applications of the various concepts, principles and theories of Developmental Psychology in daily life in the Indian context

Semester III Developmental Psychology: A Focus on Adolescent and Adult Development Part I
(3 lectures per week)

Unit 1. An Introduction to Lifespan Development and Adolescence Physical & Cognitive development

1A Lifespan Development

a) An orientation to lifespan development
b) Defining life span development
c) Scope of the field (areas, age and individual differences)
d) Basic influences in development (history, age, sociocultural, life events)

1B Adolescence Physical & Cognitive development

e) Physical maturation
f) Cognitive development and schooling
g) Threats to adolescence well being

Unit 2. Social and Personality Development in Adolescence

a) Identity: Asking 'Who am I'
b) Relationships: Family and friends
c) Dating, sexual behaviour and teenage pregnancy

Unit 3. Physical and Cognitive Development in Early Adulthood

a) Physical Development
b) Cognitive development
c) College: Pursuing Higher Education

Unit 4. Social and Personality Development in Early Adulthood

a) Forging Relationships: Intimacy, Liking and Loving during Early Adulthood
b) The Course of Relationships
c) Work: Choosing & Embarking on a Career

Semester IV Developmental Psychology: A Focus on Adolescent and Adult Development Part II
(3 lectures per week)

Unit 1. Physical and Cognitive Development in Middle Adulthood

a) Physical development
b) Health
c) Cognitive development

Unit 2. Social and Personality Development in Middle Adulthood

a) Personality Development
b) Relationships: Family in Middle Age
c) Work& Leisure

Unit 3. Physical and Cognitive Development in Late Adulthood

a) Physical development in Late Adulthood
b) Health and wellness in Late Adulthood
c) Cognitive development in Late Adulthood

Unit 4. Social and Personality Development in Late Adulthood

a) Personality Development and successful aging
b) The daily life of Late Adulthood
c) Relationships: Old & new

S.Y.B.A. Applied Component (Option A) Health Psychology - Part I and Part II

Code	Sem.	Course Title	Credits	Marks
UAHP3A1	3	Health Psychology: Part I	2	100
UAHP4A1	4	Health Psychology: Part II	2	100

Objectives: -

1. To help students in building knowledge of the basic concepts and modern trends in Health Psychology.
2. To foster interest in Health Psychology as a field of study and research among students.
3. To make the students aware of the practical applications of the various concepts in Health Psychology in the Indian context.

Semester III Health Psychology: Part I (4 lectures per week)

Unit 1. What Is Health Psychology and Health Behaviors

1A. Introduction to the field of Health Psychology

a) Definition of health psychology
b) The mind-body relationship
c) The rise of the biopsychosocial method
d) The need for health psychology
e) The role of epidemiology in Health Psychology
f) What is health psychology training for?

1B. Health Behaviors

g) An introduction to health behaviours
h) Health promotion: An overview
i) Changing health habits
j) Cognitive-behavioural approaches to health behaviour change
k) The transtheoretical model of behaviour change
l) Changing health behaviors through social engineering
m) Venues for health-habit modification

Unit 2. Health-Promoting Behaviors

2AHealth-Promoting Behaviors

a) Exercise, its determinants, & interventions
b) Accident prevention
c) Vaccination and screening
d) Developing a healthy diet
e) Sleep
f) Rest, Renewal and savouring

2B. Health-compromising Behaviors

g) Characteristics of health-compromising behaviours
h) Alcoholism & Problem Drinking
i) Smoking

Unit 3: Stress

a) What is stress?
b) Origins of the study of stress
c) The physiology of stress
d) What makes events stressful?
e) How has stress been studied?
f) Sources of chronic stress

Unit 4. Coping, Resilience & Social Support

a) Coping with stress and resilience
b) Coping and external resources
c) Coping outcomes
d) Coping interventions
e) Social support

Semester IV - Health Psychology Part II (4 lectures per week)

Unit 1. Management of Chronic Health Disorders & Placebo Effect

1A Management of Chronic Health Disorders

a) Quality of life
b) Emotional responses to health disorders
c) Personal issues in chronic health disorders
d) Coping with chronic health disorders
e) Co-management of chronic health disorders
f) Psychological interventions and chronic health disorders

1B Complementary and Alternative medicine,& placebo effect

g) Complementary andalternative medicine
h) The placebo effect

Unit 2.Psychological Issues in Advancing and Terminal Illness

a) Death across the life span
b) Psychological issues in advancing illness
c) Are there stages in adjustment to dying?
d) Psychological issues and the terminally ill
e) Alternatives to hospital care for the terminally ill
f) Problems of survivors

Unit 3. Heart Disease, Hypertension, Stroke and Type II Diabetes

a) Coronary heart disease
b) Hypertension
c) Stroke
d) Type II Diabetes

Unit 4.Psychoneuroimmunology and Immune – Related Disorders

a) Psychoneuroimmunology
b) HIV infection and AIDS
c) Cancer
d) Arthritis
e) Type I Diabetes
f) Future trends in the field of Health Psychology

Book for Study -

Books for reference

DiMatteo, M. R., & Martin, L. R. (2017). Health psychology(1st ed.). Pearson Education.

Ogden, J. (2017). Health psychology: A textbook (4th ed.).McGraw Hill Education.

S.Y.B.A. Applied Component (Option B) Psychology of Adjustment - Part I and Part II

Code	Sem.	Course Title	Credits	Marks
UAPA3A1	3	Psychology of Adjustment: Part I	2	100
UAPA4A1	4	Psychology of Adjustment: Part II	2	100

Objectives: -

1. To help students in building knowledge of the basic concepts and modern trends in Psychology of Adjustment

2. To foster interest in Psychology of Adjustment as a field of study and research among students.
3. To make the students aware of the practical applications of the various concepts in Psychology of Adjustment in the Indian context

Semester III - Psychology of Adjustment: Part I (4 lectures per week)

Unit 1. Self-direction in a changing world and seeking selfhood

a) Social change, the challenge of self-direction, themes of personal growth
b) What is self-concept; the components of self-concept, core characteristics of self-concept, the Self-concept and personal growth

Unit 2. Towards better health

a) Body image; Health and the mind–body relationship
b) Coping with illness; Promoting wellness

Unit 3. Taking charge and Managing motives and emotions

a) Personal control, decision making, decisions and personal growth
b) Understanding motivation; Understanding emotions

Unit 4. Sexuality, Love and commitment

a) Sexuality and shared partnerships, sexual responsiveness, sexual orientation, practical issues
b) Love is a many splendored (and defined) thing, finding love, marriage and other committed relationships, adjusting to intimate relationships, divorce and its consequences

Semester IV - Psychology of Adjustment: Part II (4 lectures per week)

Unit 1. Stress

a) Understanding stress; reactions to stress
b) Managing stress

Unit 2. Understanding mental disorders

a) Psychological disorders; Anxiety disorders
b) Mood disorders; Other disorders

Unit 3. Therapy and Treatment

a) Psychotherapy: what it is and who uses it
b) Insight therapies; Cognitive and behavioral therapies
c) Other approaches to treatment; How well does therapy work

Unit 4. : Death, Dying, and Grief

a) Death and Dying
b) Life and Death in Perspective
c) Bereavement and Grief

S.Y.B.A. Applied Component Option C - Stress Management - Part I and Part II

Code	Sem.	Course Title	Credits	Marks
UASM3A1	3	Stress Management: Part I	2	100
UASM4A1	4	Stress Management: Part II	2	100

Objectives: -
1. To impart knowledge and understanding of the basic concepts and modern trends in Stress Management
2. To foster interest in Stress Management as a field of study and research
3. To make the students aware of the practical applications of the various concepts in Stress Management in daily life, in the Indian context

Semester III Stress Management Part I (4 lectures per week)

Unit 1. Stress and Stress Psychophysiology

a) The pioneers, stress theory, the stressor, stress reactivity, a definition of stress,stress management goals
B) Stress psychophysiology: the brain, endocrine system, autonomic nervous system, cardiovascular system, gastrointestinal system, muscles and skin, symptoms and stress

Unit 2. Stress and Illness/Disease, and Intervention

a) Hot reactors, psychosomatic disease, stress and the immunological system, stress and serum cholesterol, specific conditions, post-traumatic stress disorder, stress and other conditions
b) Intervention – coping with a stressor, a model of stress, setting up roadblocks, comprehensive stress management, eustress and the model, taking control and making a commitment

Unit 3. Intrapersonal and Interpersonal Life-Situation Interventions

a) Intrapersonal Interventions: – Eliminating unnecessary stressors, nutrition and stress, noise and stress, life events and stress, hassles and chronic stress, success analysis

b) Interpersonal Interventions – asserting oneself, conflict resolution, communication, emotional intelligence, technostress, time management, social support networking

Unit 4.Perception Interventions

a) Selective awareness, stop to smell the roses, perspective and selective awareness, an attitude of gratitude, humour and stress

b) Type A behaviour pattern, self-esteem, locus of control, anxiety management, resiliency, hardiness

Semester IV. Stress Management: Part II (4 lectures per week)

Unit 1. Relaxation Techniques

a) Meditation

b) Autogenic training, imagery and progressive relaxation

c) Biofeedback and other relaxation techniques

Unit 2. Exercise and Strategies for decreasing stressful behaviors

a) Physiological arousal interventions: Exercise and health, the healthy way to exercise, principles of exercise, assessing cardio-respiratory fitness, starting an exercise program, choosing an exercise program, exercise and the elderly, exercise – keep it going

b) Strategies for decreasing stressful behaviors - Health and lifestyle behaviors, health-behavior assessment, selected lifestyle behaviors, barriers to action, locus of control, various methods for decreasing stressful behaviors, application of behavior change techniques, behavior change theories and stress

Unit 3. Occupational Stress

a) What is Occupational Stress, occupational stress cycle, why is occupational stress of concern, gender and occupational stress, disease and occupational stress

b) Occupational stressors, the workaholic, burnout, women and work outside the home, working in the home, interventions, managing occupational stress

Unit4. Family Stress

a) The family, marriage, cohabitation, divorce, single-parent families, gay and lesbian families

b) Family stressors, a model of family stress, interventions

Question Paper Pattern for all the subjects

Pattern of Question Paper for Semester End Assessment implemented from 2019-2020

Duration of examination = **3 hours** Total Marks = **100 (per semester)**

Instructions: 1. All 5 questions carry **20** marks and are compulsory.
2. There will be internal choice in each Question.

Q1. Attempt any two questions (unit 1) 20 marks

A

B

C

Q2. Attempt any two questions (unit 2) 20 marks

A

B

C

Q3. Attempt any two questions (unit 3) 20 marks

A

B

C

Q4. Attempt any two questions (unit 4) 20 marks

A

B

C

Q5. Attempt any two questions (unit 1, 2, 3, 4 one from each unit) 20 marks

A

B

C

D

PREAMBLE:

The syllabus has been revised in view to understand recent trends in the subject of economics .The Board of Studies in Economics has revised the syllabi of papers at the TYBA which will be made effective from the Academic Year 2018-19. In this revision, some of the existing optional papers have been replaced by new papers. A broad overview of the structure, followed by the syllabi of individual papers, is given below.

DURATION:

- The course shall be a full time course.
- The duration of B.A. course shall be of Three years /Six Semesters.

  FYBA: SEMESTER – I & II (One paper each semester)

  SYBA: SEMESTER – III & IV (Two papers each semester)

  TYBA: SEMESTER – V & VI (Six papers each semester)

PATTERN:

The T.Y.B. A. [Entire Economics] Course shall have 12 papers. Every semester shall have six papers, each carrying 100 marks. However students can opt combination of any two subjects (Economics and any other subject). Every semester shall have three papers of each subject, carrying 100 marks.

SCHEME OF EXAMINATION:

- **Duration** – **Three Hours** for each paper.
- There shall be five questions each of 20 marks.
- All questions shall be compulsory with internal choice within the questions.
- Questions may be subdivided into sub-questions a, b, c and the allocation of marks shall depend on the weightage given to the topic.

Questions	Modules	Marks
Qu.1	Unit I	20
Qu.2	Unit II	20
Qu.3	Unit III	20
Qu.4	Unit IV	20

Qu.5	4 sub-questions from Unit I, II, III & IV	20

COURSE STRUCTURE (APPLICABLE FROM ACADEMIC YEAR 2018 – 2019)

MICROECONOMICS III: PAPER VII

Preamble:

The course is designed to provide sound training in microeconomic theory. Since students have already studied the perfect competition, the focus of this course is on the study of imperfect completion and general equilibrium and welfare economics.

SEMESTER –V

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - I	**COMPULSORY PAPERS**		
ECOMIC501	**MICROECONOMICS III: PAPER VII**	**4**	**100**

Module I: Monopoly – sources of monopoly - Profit maximising monopoly – calculation of price, output and profit for a monopoly – price discrimination: First and third degree-public policy towards monopoly.

Module II: Basics of Game theory – Prisoner's dilemma – dominant strategy equilibrium – Battle of sexes game – Nash equilibrium – Extensive form games – game tree - Solving finite extensive form game.

Module III: Oligopoly – the Cournot model – the Bertrand model - the Edgeworth model – the Chamberlin model – the Kinked demand curve model – Collusion and Cartels – Price Leadership.

Module IV: General Equilibrium and Welfare Economics – Interdependence in the Economy – General Equilibrium and its Existence -The Pareto Optimality Condition of Social Welfare,

Marginal Conditions for Pareto Optimal Resource Allocation, Perfect Competition and Pareto Optimality - Kaldor- Hicks Compensation Criterion - Arrow's Impossibility Theorem.

MACROECONOMICS III: PAPER XIII

Preamble:

This course introduces the students to formal modelling of a macroeconomic theory with analytical tools. It discusses goods market with fixed exchange rate, the money market, uncovered interest rate parity and the benefits and costs of fixed and flexible exchange rate

SEMESTER –VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - I	COMPULSORY PAPERS		
ECOMAE601	MACROECONOMICS III: PAPER XIII	4	100

Module 1: The Goods Market in the Open Economy

Trade Balance and its implications for GDP calculations; Export and Import Functions; The Real Exchange Rate and why it matters; Why equilibrium GDP is consistent with a trade imbalance; Fiscal and Exchange Rate Policy with a Fixed Exchange Rate

Module 2: Money/Financial Markets and Mundell-Fleming

The LM equation for the open economy; Uncovered Interest Parity and its implications for exchange rate determination; The combined IS/LM/UIP model; Fiscal and Monetary Policy under Fixed and Flexible Exchange Rates; The Mundell-Fleming trilemma

Module 3: Exchange Rate Regimes & Exchange Rate Crises

The choice of regime, Fixed or Flexible; The spectrum of arrangements from Hard Peg at one end to Fully Floating at the other; Why the Balance of Payments must always balance under Floating Exchange Rates but need not balance under a Fixed or Managed Exchange Rate regime; The operational aspects of fixing; How a fix might come apart; Exchange Rate crises; The relation between Exchange Rate crises and other kinds of crises (banking crises, financial crises, etc.)

Module 4: International Monetary History, 1900-present

The Gold Standard; The Inter-War Period and the Great Depression; The key issues debated at Bretton Woods and the system that emerged as a result of those debates; 1971 and the collapse of the Bretton Woods system; Fixing in Europe via ERM, and the Dollar Standard elsewhere; The Maastricht Treaty and preparations for the Euro; The Global Financial Crisis and its consequences for the Euro; The Euro Crisis; Chinese ambitions in the present day

ECONOMICS OF DEVELOPMENT: PAPER VIII

SEMESTER –V

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - I	**COMPULSORY PAPERS**		
ECODEV502	**ECONOMICS OF DEVELOPMENT: PAPER VIII**	**4**	**100**

Module 1: Concepts of Economic Growth and Development

Meaning of Growth and Development, Distinction between growth & development, Concept of human development, HDI, GDI, Sustainable development, Green GDP, Three core values of development, Capabilities & functioning

Module 2: Structural Issues in Development Process

Big push theory, Theory of human capital, Role of Education, health & nutrition in economic development, Schumpeter's theory of development, dual economy models of growth, Solows growth model

Module 3: Inequality, Poverty and Development

Measures of poverty and inequality, Kuznets inverted U-hypothesis, Policy options for poverty alleviation, Inclusive growth, Rural credit institutions.

Module 4: Technology and Economic Development

Role of Infrastructure in economic development, Role of technology in economic development, types of technical progress, Intermediate/ Appropriate technology, Green technology,

INTERNATIONAL ECONOMICS: PAPER XIV

Preamble

This course develops a systematic exposition of models that try to explain the composition, direction, and consequences of international trade, and the determinants and effects of trade policy. It then builds on the models of open economy macroeconomics developed in courses 08 and 12, focusing on national policies as well as international monetary systems. It concludes with an analytical account of the causes and consequences of the rapid expansion of international financial flows in recent years. Although the course is based on abstract theoretical models, students will also be exposed to real-world examples and case studies.

SEMESTER –VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - I	COMPULSORY PAPERS		
ECOINE602	INTERNATIONAL ECONOMICS: PAPER XIV	4	100

Module 1: Introduction

What is international economics about? An overview of world trade.

Module 2: Old Theories of International Trade

The Ricardian, specific factors, neoclassical trade theory and Heckscher-Ohlin models, Stolper-Samuelson theorem.

Module 3: New trade theories of International Trade

Monopolistic competition and trade-firm heterogeneity, FDI and the global supply chain

Module 4: Trade Policy

Instruments of trade policy; Why countries cooperate and GATT, GATS, Regional Trade Agreements-controversies in trade policy (labor standards, IPR and environment)

FINANCIAL ECONOMICS: PAPER IX

Preamble:

The course introduces students to the economics of Finance. It aims at imparting knowledge about the basic models of investment and portfolio analysis, including the CAPM. The valuation of assets, derivatives & options is to be studied in addition to patterns of corporate financing.

SEMESTER – V

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	ELECTIVE PAPERS		
ECOFEA503	FINANCIAL ECONOMICS: PAPER IX	3	100

Module1: Investment & portfolio Analysis

Basic theory of interest, discounting & present value; internal rate of return, evaluation criteria , fixed income securities; bonds prices & yields. Structure of interest rate, yield curves, spot & forward rates. Portfolio of assets, random asset returns, Mean variance portfolio analysis, The Markowitz Model & two fund theorem.

Module 2: CAPM

The capital Market line, the CAP Model, the beta of an asset & of a portfolio, security market line, CAPM model in investment & pricing formula.

Module 3: Options & Derivatives

Meaning & types of derivatives: forward contracts, futures - forward & future prices, stock index futures, interest rate futures, future for hedging. Options & Swaps and their types- Option market: call & put options, option trading strategies- spreads, straddles, strips & straps, strangles, the principle of arbitrage. Participants of derivatives market- hedgers, speculators, arbitrageurs.

Module 4: Corporate Finance

Patterns of corporate financing: stock, debt, preferences, convertibles. Capital structure & the cost of capital, corporate debt & dividend policy, the Modigliani –Miller theorem.

Readings:

1. David Luenberger (1997); Investment Science, Oxford University Press.
2. Hull John C. (2005); Options, Futures and other derivatives, Pearson Education 6th Edition.

INDUSTRIAL AND LABOUR ECONOMICS: PAPER XV

Preamble:

Issues pertaining to the labour market, wage policy, trade unions and amicable solutions to industrial disputes have become vital for developing countries, especially for India, where the bulk of the labour force is employed in the unorganised sector, and the organized sector is witnessing a phenomenon of 'jobless' growth. This paper intends to provide knowledge of the same and also discusses the importance of labour welfare and social security measures for the growing labour force in India.

SEMESTER – VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	ELECTIVE PAPERS		
ECOILEC603	INDUSTIRAL AND LABOUR ECONOMICS: PAPER XV	3	100

Module I – Introduction – Indian Labour Market

- Characteristics of the Indian Labour Market
- Child Labour and Female Labour – Problems and Measures
- Globalisation and Indian Labour Market
- Labour Market Reforms – Exit Policy and Need for Safety Nets
- Second National Commission on Labour

MATHEMATICAL AND STATISTICAL TECHNIQUES FOR ECONOMIC ANALYSIS: PAPER X

Preamble

A plethora of data has emerged at an exponential rate and it is the description, interpretation and understanding of these data and drawing of accurate conclusions that is imperative for a student of Economics. The aim of this paper is to provide students with the mathematical and statistical skills and understanding needed for 'knowing why' and 'when' to apply these techniques.

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	**ELECTIVE PAPERS**		
ECOMSEAA504	**MATHEMATICAL AND STATISTICAL TECHNIQUES FOR ECONOMIC ANALYSIS: PAPER X**	**4**	**100**

Module 1: (Lectures 13)

A: Microeconomic applications of equations and graphs

- Linear and non-linear relationships in economic analysis
- Market demand and supply models, taxes, elasticity

B: Derivatives and their applications in various areas of economic analysis

- Derivatives
- Higher order derivatives
- Increasing and decreasing functions; Necessary and sufficient conditions for maxima and minima
- Optimisation of economic functions

Module 2: Linear Algebra (Lectures 10)

- Matrices and basic operations on matrices
- Rank of a matrix
- Inverse of a matrix
- Cramer's rule
- Input-Output Analysis and policy implications
- Linear Programming Problem: Formulation and graphical solution

Module 3: (Lectures 12)

A: Descriptive Statistics and graphing techniques for presenting data

- Concept of primary and secondary data along with tabulation and graphs

- Measures of central tendency (only arithmetic-mean, median, and mode).
- Absolute and relative measures of dispersion (range, quartile deviation, mean deviation and standard deviation) with simple applications.
- Measures of skewness and kurtosis.
- Lorenz Curve

B: Commercial Statistics

- Brokerage, Commission and Insurance

Module 4: Elementary Probability Theory (Lectures 10)

- Sample space and events
- Mutually exclusive, exhaustive and complimentary events
- Conditional probability
- Binomial probability distribution
- Nature and Properties of the Normal Probability Distribution; Standard Scores and the Normal Curve; The Standard Normal Curve: Finding Areas when the Score is Known, Finding Scores when the Area is Known

MATHEMATICAL AND STATISTICAL TECHNIQUES FOR ECONOMIC ANALYSIS:

PAPER XVI

SEMESTER VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	ELECTIVE PAPERS		
ECOMSEA604	MATHEMATICAL AND STATISTICAL TECHNIQUES FOR ECONOMIC ANALYSIS: PAPER XVI	4	100

Module1: Techniques and applications of partial derivatives (Lectures 13)

- Functions of several variables and partial derivatives
- Second order partial derivatives
- Optimisation of multivariable functions
- Constrained optimisation with Lagrange multiplier and its economic interpretation.
- Marginal productivity, Income and price elasticities of demand
- Homogeneous production functions and returns to scale
- Cobb-Douglas production function

Module 2: Integral Calculus (Lectures 12)

- Integration and Definite integral; area under the curve
- Economic applications
- Present value of cash flows (present value of a sum to be received in future and present value of a stream of future income)
- Consumer's and Producer's Surplus
- Learning curve

Module 3: Correlation and Regression (Lectures 10)

- The meaning and significance of Correlation; Scatter plot of Bivariate Distributions; Correlation and Causation

- Karl Pearson's coefficient of correlation
- Spearman's rank correlation coefficient
- Simple regression analysis- Method of Least Squares and Regression Lines
- Regression Coefficients
- Relationship between correlation coefficients and regression coefficients.

Module 4: Index Numbers and Time Series (Lectures 10)

- Simple and composite index numbers
- Construction, uses and problems of index numbers
- Laspeyre's, Paasche's and Fisher's Index numbers
- Cost of living index numbers-real income – wholesale price index number
- Splicing of index numbers
- Components of time series
- Estimation and forecasting of trend by the Least Squares Method

MATHEMATICAL METHODS IN ECONOMICS: PAPER X

Preamble:

The objective of this paper is to transmit the body of basic mathematics that enables the study of economic theory at the undergraduate level, specifically the courses on microeconomic theory,

macroeconomic theory, statistics and econometrics set out in this syllabus. In this course, particular economic models are not the ends, but the means for illustrating the method of applying mathematical techniques to economic theory in general. The level of sophistication at which the material is to be taught is indicated by the contents of the prescribed textbook.

SEMESTER V

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	**ELECTIVE PAPERS**		
ECOMMEB504	**MATHEMATICAL METHODS IN ECONOMICS: PAPER X**	**4**	**100**

Module 1: Functions of one real variable

Graphs; elementary types of functions: quadratic, polynomial, power, exponential, logarithmic; sequences and series: convergence, algebraic properties and applications; continuous functions: characterizations, properties with respect to various operations and applications; differentiable functions: characterizations, properties with respect to various operations and applications; second and higher order derivatives: properties and applications.

Module 2: Single-variable optimization

Geometric properties of functions: convex functions, their characterizations and applications; local and global optima: geometric characterizations, characterizations using calculus and applications.

Module 3: Integration of functions

Areas under curves; indefinite integrals; the definite integral.

Module 4: Difference equations

First order difference equations.

APPLIED ECONOMETRICS: PAPER XVI

Preamble:

The aim of this course is to provide a foundation in applied econometric analysis and develop skills required for empirical research in economics. Topics include specification and selection of regression models, dynamic econometric models, advanced methods in regression analysis and panel data models. Since the emphasis is on application of methods, this course requires understanding of econometric software and computing skills.

SEMESTER VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	ELECTIVE PAPERS		
ECOAEB604	APPLIED ECONOMETRICS: PAPER XVI	4	100

Module 1: Violations of Assumptions in the Linear Regression model

Heteroscedasticity, implications, testing and remedy, autocorrelation, implications, testing and remedy, multicollinearity

Module 2: Regression Diagnostics and Specification

Misspecification; functional forms; model selection, endogeneity and instrumental variables

Module 3: Advanced Topics in Regression Analysis

Dynamic Econometric Models: distributed lag models; autoregressive models; simultaneous equation models.

Module 4: Introduction to R

Running a regression in R, diagnostic tests in R, plotting graphs in R, writing a function in R

Readings:

1. Jeffrey M. Wooldridge, Econometrics, Cengage Learning, India Edition, 2009.
2. Dimitrios Asteriou and Stephen Hall, Applied Econometrics: A Modern Approach, Palgrave Macmillan, 2007.
3. Damodar Gujarati, Econometrics by Example, Palgrave Macmillan, 2011.
4. Kleiber C and Zeilis A (2008) : Applied Econometrics with R, Springer, UseR1

RESEARCH METHODOLOGY: PAPER X

Preamble

The central focus of this course is an introductory study of the concepts, principles and methods of economic research. The course focuses on the logic of social science research and on practical problems of applying quantitative and qualitative methods in the process of formulating research questions. The primary goal is to strengthen student's critical thinking and reasoning skills at planning economic research and to enable them to communicate research results competently.

The study equips the students with the basic understanding of the research methodology and provides an insight into the application of modern analytical tools and techniques for the purpose of economic decision making. The course will provide students an opportunity to learn how to collect and analyze primary and secondary data. Methods covered include interview design and technique, case study method and also a study of secondary data sources. Computer Applications to research analysis and tools commonly used in research are introduced to sharpen the analytical and presentation skills of the learner.

The course is to be taught in two parts in the fifth and sixth semester of final year B.A. degree course in Economics. The entire course is to be conducted from an interdisciplinary perspective. The first part covers the structure of research and theory construction, types of research as well as the main issues of data gathering and data quality and learning of basic statistical tools. The second part provides an overview of the main methodological problems of quantitative and qualitative analysis, an introduction to hypothesis formulation, testing of hypotheses and illustrates the usage of different approaches and application of computers in recent empirical social research.

The course work of this paper will be taught in each semester. There are four units in each semester and each unit will be taught in 10 contact hours. The contact hours allotted to individual unit are notional and are adjustable to the total contact hours. In addition, a learner is expected to undertake practice on quantitative techniques and carry out computer practical exercise to grasp the nuance of fundamental statistical analysis using computers. The contact tools like discussion, group work, seminar, use of web resources and library resources are to be extensively used for teaching this paper. Hands on experience on web search, Practical sessions in the computer laboratory and Library sessions and are inbuilt requisites of this course.

The course in each Semester is categorized into three components;

(a) Conceptual clarity on Research Methodology with 40 marks weightage

(b) Numerical problems on Quantitative Techniques with 20 marks' weightage and

(c) Conduct of a case study, framing of schedule and questionnaire and field visit report as a project and/or Computer Application and Practical on Quantitative Techniques with 40 marks' weightage (for internal assessment.) Also an introduction to presentation tool is to be imparted with Training on Creating presentation, Customizing presentation and showing presentation as integral part of internal assessment.

SEMESTER V

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	**ELECTIVE PAPERS**		
ECOREMC504	**RESEARCH METHODOLOGY: PAPER X**	**4**	**100**

Module 1: Introduction to Concept of Research (10 lectures)

- Nature, Scope & Purpose of social research
- Basic assumptions of research
- Significance of social sciences research
- Objectivity in social sciences research
- Types of research: pure & applied research; formulative or exploratory research; descriptive research, historical research, experimental research, survey research
- Ethical issues relating to research
- Major Difficulties in the Area of economic research

Module 2: Elements of Research Methodology (15 lectures)

I. Steps in Research process:

- Identification, selection and formulation of research problem – sources of research problem – criteria of a good research problem
- Review of literature
- Formulation of hypothesis
- Preparing Research Design: Definition, Concepts, and types– exploratory, descriptive and diagnostic, experimental and Analytical research designs
- Collecting and analysing the data
- Interpretation and report writing

II. Use of web search in research process- introduction to Internet and WWW, Using search engine like Google, Yahoo etc. Use of advanced search techniques

Module 3: Sources of Data for Research (15 lectures)

I. Types of data sources: Primary and Secondary, choice between primary and secondary data

- Primary data-Meaning and Collection methods

i. Observational method

ii. Interview technique

iii. Design of Schedule and Questionnaire

iv. Survey method and Field Visits

v. Case Study as a method

- Major Sources of Secondary data: Meaning, advantages, Relevance, limitations and cautions of secondary data.

II. Sampling Technique: Census and sample survey- Essentials of a good Sampling - Advantages and limitations of sampling, Methods of sampling:

i. random sampling : simple or unrestricted random sampling- mixed or stratified random sampling, systematic or quasi random sampling – multistage or cluster random sampling - sequential random sampling

ii. non random sampling : judgement or purposive sampling–convenience sampling accidental sampling – quota sampling

Sampling and Non-sampling errors - Sample size – selecting an appropriate sampling technique

Module 4: Processing and Analysis of Data (10 lectures)

- Classification, Tabulation and Graphical presentation of socio-economic data
- An introduction to Statistical Analytical Tools – Measures of Central Tendency – Measures of Variation: absolute and relative measures – Quartile deviation, standard deviation, coefficient of variation- Skewness: meaning and Measurement (Karl Pearson's and Bowley's methods)
- Preliminaries of Computer Applications in Data organization & Data Processing Introduction to spreadsheet application, features and functions, Using formulas and functions, Data storing, Features for Statistical data analysis, Graphical representation of data, Generating charts/ graph and other features.

SEMESTER – VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	**ELECTIVE PAPERS**		
ECOREMC604	**RESEARCH METHODOLOGY: PAPER XVI**	**4**	**100**

Module 1: Statistical applications in research (15 lectures)

- Methods of studying Correlation- measurement of simple correlation: graphic method: scatter diagram - coefficient of correlation - Karl Pearson and rank correlation interpretation of $r = \pm 1$
- Linear Regression analysis: meaning, regression lines, regression coefficients, regression equations, relationship between correlation and regression
- Analysis of Time Series – components –trend analysis- moving averages (3, 4 and 5 yearly)- method of least square

Module 2: Index numbers (15 lectures)

Meaning – classification – problems encountered while constructing index numbers- uses and limitation of index numbers

Methods of constructing index numbers:

- Simple index: i) aggregate method ii) simple average of relatives method
- Weighted index: Laspeyer's, Paache's and Fisher's index – weighted average of relatives method
- Chain based index – concepts of Base shifting, splicing, and deflating
- Consumer price index: meaning, need and construction – methods: aggregate expenditure method and family budget method

Module 3: Hypothesis formulation and Hypothesis Testing (10 lectures)

- Definition and functions of hypothesis –Criteria of workable hypothesis – forms and sources of hypothesis
- Concepts in Testing of Hypothesis: Universe / Population, parameter and statistic, Null and Alternative Hypotheses, Levels of Significance, critical region, Type I and type II errors - Point and Interval Estimates

Module 4: Research Report Writing (10 lectures)

Types of Research Report: Technical, Popular, Interim, Summary, Article

- Format of a Research Report
- Principles of writing the Research Report: Organization and Style - Contents-Styles of reporting- Steps in drafting Reports- Editing the final draft-Evaluating the final draft - Organization of the Research Report: Preliminaries, Contents of Report, Structuring the Report: Chapter format- Pagination- Identification- Using quotations- Presenting footnotes – abbreviations- Presentation of tables and figures- Referencing- Documentation-Use and format of appendices- Indexing - Bibliography, Appendices

ECONOMICS OF AGRICULTURE AND COOPERATION: PAPER X

SEMESTER V

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	**ELECTIVE PAPERS**		
ECOEACD504	**ECONOMICS OF AGRICULTURE AND COOPERATION: PAPER X**	**4**	**100**

Module 1: Agricultural Productivity (12 lectures)

Role of agriculture in economic development - Cropping Pattern Agricultural Productivity, Causes of Low Productivity in Agriculture - Measures taken to improve the Agricultural Productivity in India - Water Management and agricultural development - Agricultural labour: Problems and suggestions.

Module 2: Agricultural Credit (12 lectures)

Institutional and Non-Institutional Sources of Credit - Co-operative Credit and Agriculture, Rural Indebtedness - Commercial Banks and Regional Rural Banks, micro finance - NABARD - Role and Performance.

Module 3: Agricultural Marketing (12 lectures)

Types of Marketing - Corporate, Commodity and Global Problems and Measures of Agricultural Marketing - WTO and Indian Agriculture. Problems of Agricultural Marketing and its measures.

Module 4: Agricultural Price and Policy (12 lectures)

New Agricultural Policy – 2007 - Food Security in India - Price Policy of CACP Evaluation, Agricultural Crisis and Farmers' Suicide. Agro-Tourism and its policy

ECONOMICS OF AGRICULTURE AND COOPERATION: PAPER XVI

SEMESTER VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	**ELECTIVE PAPERS**		
ECOEACD604	**ECONOMICS OF AGRICULTURE AND COOPERATION: PAPER XVI**	**4**	**100**

Module 1: Co-operation (12 lectures)

Meaning, features of Co-operation - Principles of Co-operation (Manchester-1995) – Role of Co-operation in Economic development - Globalization and Co-operation-Importance and Benefits of Co-operation.

Module 2: Co-operative Finance in India (12 lectures)

Co-Operative Finance: Need, Structure, Progress and Problems - National Co-operative Development Corporation (N.C.D.C.) -. Farmers service societies and urban Co-operative banks.

Module 3: Agricultural Co-operatives (12 lectures)

Role and Types of Agro-Industries - Problems and Measures of Agro-Industries – Sugar and Dairy Co-operatives - Food and Fruits Processing Industry - Co-Operative Farming.

Module 4: Co-operative Organizations in India (12 lectures)

Consumer Co-operatives - Co-Operative Marketing - Housing Co-operative societies - Labour Co-operative societies - Agricultural Marketing societies-Leadership in Cooperative development.

INTRODUCTION TO ECONOMETRICS: PAPER XI

Preamble:

The objective of this course is to impart a basic understanding of econometrics. The student will be able to appreciate the theoretical basis of the subject. At the same time, it will enhance the student's ability to apply the theoretical techniques to the problems of the real world. Topics like forecasting have been introduced to impart this practical orientation.

SEMESTER V

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	ELECTIVE PAPERS		
ECOITEA505	INTRODUCTION TO ECONOMETRICS: PAPER XI	4	100

Module 1: Idea of a random variable (10 Lectures)

- Concept of a random variable: Discrete and continuous
- Expected values of a random variable
- Variance of a random variable
- Discrete random variables: Bernoulli, Binomial, Poisson
- Continuous random variables: The normal distribution

Module 2: Jointly distributed Random variables (10 Lectures)

- Joint and marginal distributions for bivariate random variables
- Conditional probability
- Conditional mean and variance
- Covariance
- Correlation and Partial correlation
- Central limit theorem (without proof)

Module 3: Statistical Inference (12 Lectures)

- Point and interval estimation
- The Z distribution
- The Null and Alternate hypotheses and significance testing for mean using Z distribution when population variance is known
- The chi-square distribution and testing for sample variance with known population variance
- The F distribution and comparing sample variances
- The t distribution and hypothesis tests when population variance in unknown.

Module 4: Regression Analysis (13 Lectures)

- Two variable regression model
- The concept of the PRF
- Classical assumptions of regression
- Derivation of the OLS estimators and their variance
- Properties of OLS estimators under classical assumptions, Gauss-Markov Theorem (without proof)

• Tests of Hypothesis, confidence intervals for OLS estimators

• Measures of goodness of fit: R square and its limitations, adjusted R square and its Limitations.

INTRODUCTION TO ECONOMETRICS: PAPER XVII

SEMESTER VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	ELECTIVE PAPERS		
ECOITEA605	INTRODUCTION TO ECONOMETRICS: PAPER XVII	4	100

Module 1: Econometric Model Specification (10 Lectures)

• Identification: Structural and reduced form

• Omitted Variables Bias

• Errors in measurement

• Endogeneity and Bias

Module 2: Failure of Classical Assumptions (10 Lectures)

• Multi-collinearity and its implications

• Auto-correlation: Consequences and Durbin-Watson test

• Heteroskedasticity: Consequences and the Goldfeld -Quandt test

Module 3: Forecasting (13 Lectures)

• Forecasting with a)moving averages b) linear trend c) exponential trend- CAGR

• Forecasting with linear regression

• Classical time series decomposition

• Measures of forecast performance: Mean Square Error and Root Mean Square Error

• Limitations of econometric forecasts

Module 4: Linear Programming (12 Lectures)

• Linear programming

• Dual of a linear programming problem

- Simplex method
- Transportation

ENVIRONMENTAL ECONOMICS: PAPER XI

Preamble:

This course focusses on economic causes of environmental problems. In particular, economic principles are applied to environmental questions and their management. Economic implications of environmental policy are addressed as well as valuation of environmental improvements.

SEMESTER V

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	ELECTIVE PAPERS		
ECOENVEB505	ENVIRONMENTAL ECONOMICS: PAPER XI	4	100

Module 1: Introduction to Environmental Economics

What is environmental economics, review of microeconomics and welfare economics, Pareto optimality and market failure in the presence of externalities; property rights and Coase theorem

Module 2: The design and implementation of Environmental Policy

Overview-Criteria for evaluating environmental policies; Standards, Pigovian taxes and effluent fees, tradable permits, choice between taxes and quotas, implementation of environmental policy

Module 3: Measuring benefits of environmental improvements

Economic value of Environment- Use and Non-use values-Measurement method:-market based and non-market based methods, contingent valuation, travel cost method, hedonic price method, risk assessment and perceptions

Module 4: Environmental problems

The global environment- Trans-boundary environmental problems, economics of climate change, International environmental Agreements - , sustainable development: Concepts and measures

References:

1. Barry C. Fields (1997) : Environmental Economics : An Introduction, McGraw Hill International Edition
2. Charles Kolstad (2000): Environmental Economics, Oxford University Press, New York.

DEVELOPMENT THEORY AND EXPERIENCE: PAPER XVII

Preamble:

This is the second paper of economic development sequence. The course begins with demographic concepts and their evolution during the process of development. Then it focuses on the theory migration and discusses the link between migration and development. The structure of markets and contracts is linked to the particular problems of enforcement experienced in poor countries. The course ends with the issues related to environment and development.

SEMESTER VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	ELECTIVE PAPERS		
ECOPUEB605	DEVELOPMENT THEORY AND EXPERIENCE: PAPER XVII	4	100

Module I: Demography and Development

Demographic concepts; birth and death rates, age structure, fertility and mortality; demographic transitions during the process of development; gender bias in preferences and outcomes and evidence on unequal treatment within households; connections between income, mortality, fertility choices and human capital accumulation.

Module II: Structural Transformation

The Lewis model –Clark-Fisher model of structural change , Urbanization: Trends and Projections with reference to India, Urbanization and Development, Causes of urbanization, Urban informal sector, Policies for the urban informal sector, Migration and development, Economic theory of rural-urban migration: Harris-Todaro migration model

Module III: Land, Labor and Credit Markets

Role of Agriculture in Economic Development, Market Failure and Agriculture, The distribution of land ownership; Land reform and its effects on productivity; contractual relationships between tenants and landlords; Land Acquisition; Nutrition and Labor Productivity; Rural Credit Market; Microfinance; Inter-linkages between Rural Factor Markets.

Module IV: The Environment and Development

The core of environmental problems-Rural poverty and environmental destruction-industrialization and environmental pollution-Economic models of environmental issues: privately owned resources, common property resources, public goods and bads: regional environmental degradation and the free rider problem, limitations of pubic good framework.

POLITICAL ECONOMY OF GLOBALISATION: PAPER XVII

Preamble:

This course explores changes in the organisation of production, labour market institutions and corporate structure. It goes on to study the consequences of globalization, especially of financial flows, for the role of the state, economic performance, gender issues, environment, human welfare and development.

SEMESTER VI

COURSE CODE	PAPER TITLE	CREDITS	MARKS
GROUP - II	ELECTIVE PAPERS		
ECOPEG605	POLITICAL ECONOMY OF GLOBALISATION: PAPER XVII	4	100

Module 1: Changing Dynamics of Capitalist Production, Organisational Form and Labour Process

Perspective on political economy with a historical overview: capitalist development in the pre-second world war period, the 'golden age' and later, Fordist and post-fordist production; changing dynamics of organisation of production, markets and labour process; the changing nature of job security and labour rights.

Module 2: The State in the Era of Globalisation: Welfare, Development and Autonomy

Globalisation and the limits of the welfare state, development and state autonomy.

Module 3: The Changing Role of Finance

The changing role of finance in capital accumulation and corporate structure; finance and globalisation - financialisation, financial liberalisation and financial crisis.

Module 4: The Social Dimensions

Globalisation and uneven development – growth, inequality and exclusion, Gender in work, accumulation and globalisation; issues in environment and sustainability; alternatives ahead.

No. UG/ 69 of 2019-20

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges, Directors of the recognized Institutions in Science & Technology Faculty is invited to the syllabus uploaded by Academic Authority Unit which was accepted by the Academic Council at its meeting held on 27th February, 2013 vide item No. 4.48 relating to the revised syllabus as per (CBSGS) for B.Sc. in Biochemistry (6 Units) Sem. V & VI w. e. f. the academic year 2013-14.

They are hereby informed that the recommendations made by the Board of Studies in Biochemistry at its meeting held on 17th May, 2019 have been accepted by the Academic Council at its meeting held on 26th July, 2019 vide item No.4.1 and that in accordance therewith, the revised syllabus as per the (CBCS) for the T.Y.B.Sc. - Biochemistry 6 Units (USBCH) has been brought into force with effect from the academic year 2019-20, accordingly. (The same is available on the University's website www.mu.ac.in).

(Dr. Ajay Deshmukh)
REGISTRAR

MUMBAI – 400 032
14th August, 2019

To

The Principals of the affiliated Colleges, and Directors of the recognized Institutions in Science & Technology Faculty. (Circular No. UG/334 of 2017-18 dated 9th January, 2018.)

A.C/4.1/26/07/2019

****

No. UG/69 -A of 2019-20 MUMBAI-400 032 14th August, 2019.

Copy forwarded with Compliments for information to:-

1) The I/c Dean, Faculty of Science & Technology,
2) The Chairman, Board of Studies in Bio-chemistry,
3) The Director, Board of Examinations and Evaluation,
4) The Director, Board of Students Development,
5) The Co-ordinator, University Computerization Centre.

(Dr. Ajay Deshmukh)

UNIVERSITY OF MUMBAI

Syllabus for the T.Y.B.Sc.
Program: B.Sc.
Course: Biochemistry - 6 units, USBCH

(Choice Based Credit System with effect from the academic year 2019–2020)

T.Y.B.Sc. –BIOCHEMISTRY-(6 Units) Syllabus

Choice Based and Credit System
To be implemented from the Academic year 2019-2020

SEMESTER V
Theory

Course	UNIT	TOPICS	Credits	L / Week
USBCH501	**Metabolism & Analytical Techniques-I**		2.5	
	I	Role of minerals and vitamins in metabolism		1
	II	Bioenergetics & Oxidative Phosphorylation		1
	III	Carbohydrate metabolism		1
	IV	Chromatography		1
USBCH 502	**Environmental Science**		2.5	
	I	Air		1
	II	Water & Water treatment		1
	III	Soil & Noise		1
	IV	Energy, Industrial Pollutants and Environmental Monitoring		1
USBCH 503	**Genetics & Recombinant DNA Technology**		2.5	
	I	DNA Replication & Repair		1
	II	Transcription & Translation		1
	III	Recombinant DNA Technology I		1
	IV	RDT Recombinant DNA Technology		1
USBCH 504	**Immunology and Pathophysiology- I**		2.5	
	I	Human immune system		1
	II	Antigen- Antibody interactions		1
	III	Pathophysiology of metabolic and other disorders		1
	IV	Cancer		1

Practicals

USBCHP05	Practicals of Course USBCH 501 + Course USBCH 502	**3**	**8**
USBCHP06	Practicals of Course USBCH 503 + Course USBCH 504	**3**	**8**

SEMESTER V

T.Y.B.Sc. – BIOCHEMISTRY
USBCH501
METABOLISM & ANALYTICAL TECHNIQUES - I

Learning objective:

- The course will be to understand the concepts of metabolism and the role of vitamins and minerals as coenzymes and cofactor in metabolic pathways.
- This paper aims to acquaint the learner with the maintenance of life processes of biomolecule carbohydrates -reactions / pathways involved in oxidation and synthesis.
- This paper also aims to acquaint the learner with oxidative phosphorylation and photophosphorylation and fixation of carbon dioxide, photorespiration and bioluminescence.
- The learner should also comprehend the principle, working and applications of analytical technique of chromatography which serves as an important tool in separation and deciphering the structure and function of biomolecules.

Learning outcome

At the end of the course the learner should

- understand simple concepts related to metabolism, metabolic roles played by vitamins and minerals, appreciate the correlation between energy molecules, reducing equivalents and pathways
- comprehend the catabolism and anabolism of carbohydrates and the disorders associated with these biomolecules.
- have learnt the principle, working and applications of chromatography technique and be able to appreciate the contribution of this technique to the study of various biomolecules.

Unit No.	Topic No.	Topics	No. of L
I	**1.0**	**Role of vitamins and minerals in metabolism**	**15**
	1.1 1.1.1 1.2 1.2.1	**Minerals as cofactors:** Iron, Calcium, Magnesium, Zinc, Selenium, Molybdenum. **Vitamins as Coenzymes**: Water soluble vitamins –Thiamin, Riboflavin, Niacin, Pyridoxine, Biotin, Lipoic acid: Chemistry of the Vitamin and its coenzyme form [structure not to be done, only group involved in its activity] and one biochemical role; Fat soluble vitamins A, D, E, K:	

	1.2.2	Vitamin A – Chemistry, Wald's Visual cycle and role of Rhodopsin (with structure), Transducin, cGMP in vision; Vitamin D – role in Ca absorption and mobilization; Vit E and Vit K– physiological role (Vitamins D, E, K no structures)	
II	**2.0**	**Bioenergetics & Oxidative Phosphorylation**	**15**
	2.1	**Bioenergetics:** Concept of free energy; Respiratory electron transport chain – Carriers [basic chemistry, redox potentials, orientation on the membrane, sequence}; Q cycle in Complex III; Inhibitors of electron transport – Antimycin A , Amytal, Rotenone, CN, Azide, CO; Barbital Malate-Aspartate shuttle and Glycerol phosphate shuttle	
	2.2.	**Oxidative phosphorylation** –Chemiosmotic hypothesis, Proton motive force; Structure of ATP synthase, Uncoupler- of ETC and Oxidative phosphorylation [DNP]	
	2.3	**Photosynthesis** – Light and dark reactions, Z scheme and electron carriers, photophosphorylation [linear and cyclic]; Calvin cycle – schematic with enzymes; Photorespiration	
	2.4	Bioluminescence. Phenomenon and its biological significance. Applications of Bioluminescence	
III	**3.0**	**Carbohydrate metabolism**	**15**
	3.1.	Catabolism – Cellular location, sequence of reactions, labelling of carbon atoms, and energetics of: Glycolysis (aerobic and anaerobic); Oxidation of pyruvate, Krebs cycle; Glyoxylate pathway; Glycogenolysis – [schematic – no structures, but with enzymes and coenzymes]	
	3.2	Anabolism – HMP shunt (Cellular location, sequence of reactions, multifunctional nature); Gluconeogenesis, Glycogenesis – [schematic – no structures, but with enzymes and coenzymes]	
	3.3	Disorders of carbohydrate metabolism: • Galactosemia, Fructosemia, • Lactose intolerance	
IV	**4.0**	**Chromatography**	**15**
	4.1 4.1.1 4.2. 4.3	**Chromatography** Principle, Theoretical plates, Technique and Applications of the following kinds of chromatography : Partition chromatography (Paper), Adsorption Chromatography (TLC and column); Ion exchange chromatography and Gel filtration Principle and applications of GLC, HPLC, HPTLC, Affinity chromatography, Numerical problems based on above concept	

T.Y.B.Sc. – BIOCHEMISTRY
USBCH502
ENVIRONMENTAL SCIENCE

Learning objective:

- To familiarize the learners with our environment
- To create awareness about the effect of human activities on the environment and impact of pollution on living organisms.
- To teach the learner to harness alternate ecofriendly sources of energy.
- To acquaint the learner with the tools and techniques employed for environmental monitoring.

Learning outcome:

At the end of the course the learner should be

- aware of our environment
- sensitized to the challenging environmental issues and problems.
- motivated to address the environmental problems and to work towards finding solutions to these problems.

Unit No.	Topic No.	Topics	No. of L
I	**1.0**	**Air**	**15**
	1.1 1.1.1 1.1.2 1.1.3	Atmosphere Composition and structure of atmosphere Particles, ions and radicals in the atmosphere Chemical and photochemical reactions in the atmosphere [reactions of oxygen, ozone, sulphur dioxide, nitrogen oxide and organic compounds]	
	1.2.1	Air Pollutants – CO, Oxides of Nitrogen, SO_2, hydrocarbons and photochemical smog, Greenhouse gases, suspended particulate matter [sources and effect of] , depletion of ozone	
II	**2.0**	**Water & Water treatment**	**15**
	2.1 2.1.1	Water Hydrosphere- characteristics and the water cycle	
	2.2 2.2.1 2.2.2	Water Pollution Organic pollutants [pesticides, insecticides, detergents, oil spills, toxic organic chemicals] Inorganic pollutants [heavy metals – Hg, Pb, As, Cd] Thermal pollution of water	
	2.3 2.3.1 2.3.2	Water treatment: Criteria for water purity, Water purification [preliminary, primary, secondary, tertiary- chlorination, ion exchange]	

III		**Soil & Noise**	**15**
	3.1 3.1.1 3.1.2 3.1.3	Soil Composition of soil, Nitrogen cycle Types of soil pollution – acidification, agrochemical pollution, salinization, and contamination by metalliferous wastes	
	3.2 3.2.1 3.2.2	Noise and its measurement Classification of Noise Causes and consequences of Noise pollution	
IV	**4.0**	**Energy, Industrial Pollutants and Environmental Monitoring**	**15**
	4.1 4.1.1 4.1.2 4.1.3 4.1.4 4.1.5	Energy Conventional Sources: Coal, Coke, Natural gas (CNG), Petroleum products (Petrol, Diesel, Kerosene, Oils, Naphtha) Non-Conventional Sources: Solar, Geothermal, Tidal, Hydroelectric power, Nuclear energy, Biofuels, Natural gas (Synthetic Natural Gas)	
	4.2 4.2.1 4.2.2 4.2.3 4.2.4	Industrial pollutants (Sources and remedial measures) Polymers and Plastics Asbestos Poly Chlorinated Biphenyls Mining – Acid mine drainage	
	4.3 4.3.1 4.3.2	Environmental monitoring Approaches used to monitor the environment-air, water and soil. [Principles and Significance only. Protocols for each factor – not required] Remote Sensing	

T.Y.B.Sc. – BIOCHEMISTRY (6 units)
USBCH503
GENETICS & RECOMBINANT DNA TECHNOLOGY

Learning Objectives:

The main objective of the course will be to understand the concepts genetics, in terms of DNA replication i.e. perpetuation of life, mutation, the changes in the DNA, its implications and the inbuilt repair systems in the cell to prevent the heritable changes.

The learner will also be acquainted with the application based branch, Recombinant DNA Technology with a detailed insight into the various tools and techniques.

Learning outcome

At the end of the course the learner should

- be able to appreciate the experiments carried out by various scientists to prove DNA as the genetic material, understand the mechanism of DNA replication and comprehend how DNA damage can lead to detrimental effects and how DNA repair systems in the cells try to prevent mutations before being inherited.
- understand the mechanisms of DNA transcription and translation in prokaryotes
- understand the basic tools required and know the techniques of recombinant DNA technology, their applications and the use of the technology for the benefit of society.

Unit No.	No.	Topics	No. of L
I	**1.0**	**DNA Replication & Repair**	**15**
	1.1 1.2 1.3	**Replication of DNA (in prokaryotes) -** Models of DNA replication: Semi-conservative, Dispersive & Conservative; Modes of DNA replication: Theta & rolling circle; Enzymes (pol I, II and III) and accessory proteins; Mechanism of semi-conservative replication; **Mutations:** Point and Gross- Structural (Deletion, Duplication, Inversion, Translocation, insertion); Numerical (Euploidy, Aneuploidy) **DNA repair**: Direct, Photoreactivation O6 - methyl guanine DNA methyl transferase, Excision repair, Mismatch repair, Recombination repair, SOS-error prone repair	

II	**2.0**	**Transcription & Translation**	**15**
	2.1	**Transcription** - in prokaryotes, prokaryotic RNA polymerase and promoter; mechanism of RNA transcription: Initiation, elongation and termination; processing of tRNA, rRNA, mRNA (prokaryotes and eukaryotes)- concept of split genes, reverse transcription. Role of Inhibitor- Rifampicin, Actinomycin D	
	2.2	**Translation (protein biosynthesis) in prokaryotes** – Genetic code, mechanism of translation: Activation of amino acids, chain initiation, elongation & termination: Post translational modifications of proteins Inhibitors and mode of action: Puromycin, Chloramphenicol, cycloheximide, tetracycline	
III	**3.0**	**Recombinant DNA Technology I**	**15**
	3.1 3.2 3.3	Introduction to RDT Tools for RDT (a) Enzymes- Restriction endonucleases, ligases, terminal transferases, reverse transcriptase: (b) Cloning and Expression Vectors- Plasmid, pBR 322, PUC-19, Bacteriophage – Lambda phage; Cosmid; Artificial Chromosomes (BAC and YAC); Shuttle vectors; (c) Probes- DNA probes Applications of RDT- Agriculture (Bt Cotton); Medicine (Insulin); GM food	
IV	**4.0**	**Recombinant DNA Technology II**	**15**
	4.1 4.2 4.3 4.4	Isolation of gene: Gene library and c-DNA library; Southern blot; Chimeric DNA Gene Transfer: Transformation, Transfection, Electroporation, Microinjection, Liposome, Microprojectile (in brief) Selection and screening- Antibiotic and colony hybridization DNA Amplification by PCR (Steps, Types, Applications) DNA fingerprinting, DNA sequencing (any one method)	

T.Y.B.Sc. – BIOCHEMISTRY (6 units)
USBCH504
IMMUNOLOGY & PATHOPHYSIOLOGY -I

Learning Objectives:

- Reveal to the learner the understanding of basic immune cells, organs and their characteristics, antigen antibody reactions along with the types of immune responses.
- Guide the learner to develop the skills necessary for the critical analysis of contemporary literature on topics related to diseases and health problems associated with metabolic disorders of the macromolecules including; Carbohydrates, Lipids, proteins and hormones.
- Help the learner understand the basic objective of studying cancer biology to translate basic findings into diagnostics, treatments and ultimate cures.

Learning outcome:

At the end of the course the learner should

- understand the overall organization of the immune system, appreciate the structure and function of antibodies, relationship between innate and adaptive systems and humoral and cell mediated immunity.
- learn the normal and abnormal metabolic pathways of bio-molecules (carbohydrates, proteins, lipids) and diseases related.
- be able to discuss pathophysiology and etiology of different diseases and in born errors.
- understand basic aspects of cancer biology and familiarize with elementary facets of carcinogenesis and types of cancer along with therapy to treat the cancer.

Unit No.	Topic No.	Topics	No. of L
I	**1.0**	**Human immune system**	**15**
	1.1 1.1.1 1.1.2 1.1.3 1.1.4	Types of Immunity Innate immunity – Anatomical barriers, physiological barriers, Characteristics of Inflammation, phagocytosis [no mechanism] Adaptive immunity – Active & Passive Humoral & Cell mediated immunity	
	1.2 1.2.1 1.2.2	Organs of the immune system: Primary lymphoid organs: Thymus, Bone marrow Secondary lymphoid organs: Lymphatic system, Lymph nodes, Spleen, MALT.	
	1.3 1.3.1 1.3.2	Cells of the immune system: Lymphocytes – B cells and T cells, Natural killer cells – Mononuclear phagocytes, Granulocytes, Antigen presenting cells. Clonal selection & immunologic memory.	

	1.3.3	Cytokines: biological functions of IL1, tumor necrosis factor-alpha, interferon –alpha, IL2, interferon-gamma.	
II	**2.0**	**Antigen- Antibody interactions**	**15**
	2.1	Antigens: Antigenicity, immunogenicity, epitope, factors determining immunogenicity, Haptens. Antibodies: Fine structure of immunoglobulin, Antibody-mediated functions, Antibody classes, Monoclonal antibodies (concept, production and applications)	
	2.2	Antibody diversity*:* Multigene organization of immunoglobulin genes – Lambda, kappa & heavy chain Light chain DNA – VJ rearrangements Heavy chain DNA - VDJ rearrangements	
III	**3.0**	**Pathophysiology of metabolic and other disorders**	**15**
	3.1 3.1.1 3.1.2 3.1.3 3.1.4	Metabolic disorder Inborn error: With respect to Etiology and Clinical manifestations Carbohydrate Metabolism: Glycogen storage disease Type I & III. Amino acid Metabolism: Albinism, Phenylketonuria, Maple syrup urine disease, Alkaptonuria Lipid Metabolism: Tay Sach's disease, Niemann–Pick diseases, Fabry's disease	
	3.2 3.2.1 3.2.2 3.2.3 3.2.4 3.2.5	Blood related diseases*:* Iron deficiency anemia. Sickle cell anemia. Thalassemia. Pernicious anemia Hemophilia A and B	
	3.3 3.3.1	Cardio Vascular System and related diseases*:* Hypertension, Arteriosclerosis and Atherosclerosis	
IV	**4.0**	**Cancer**	**15**
	4.1 4.2 4.3 4.4 4.5 4.6 4.7	Biology of Cancer. Physiology of Cancer cells. Causes of cancer Carcinogens: Types (Physical, Chemical and Biological, Environmental Factor); AMES test Oncogenes and activation of oncogenes Genetics of cancer with reference to p53 and Bcl2. Cancer therapy (Chemo – purine, pyrimidine and folate analogs) Cancer and the cell cycle	

PRACTICALS

USBCHP05 (501)

1) Determination of the optimum pH of β-Amylase.
2) Determination of Km of β-Amylase from sweet potato.
3) Determination of the activity and specific activity of β-Amylase from sweet potato.
4) Effect of an inhibitor (eg. EDTA) on Amylase activity.
5) Estimation of glucose by Benedict's method.
6) Separation of sugars by circular paper chromatography

Demonstration Experiments
Separation of plant pigments by adsorption column chromatography (eg. Silica/Alumina)

USBCHP05 (502)

1) Determination of the pH of water/effluent/soil using a pH meter.
2) Determination of the conductance of water / effluent.
3) Estimation of organic content of soil –Diphenylamine method.
4) Estimation of lead by the EDTA method.
5) Estimation of copper by the Isoamyl alcohol method.
6) Determination of salinity of / chlorides in water - Silver nitrate method.
7) Determination of the Chemical Oxygen Demand of water/effluent by the potassium dichromate method

USBCHP06 (503)

1) Estimation of glucose by DNSA method.
2) Estimation of glucose by the Folin Wu method.
3) Determination of the Hemoglobin content by the Sahli's hemoglobinometer.
4) Determination of blood groups.
5) Detection of Ca^{+2} and Mg^{+2} ions in by the Eriochrome Black T-EDTA method.
6) Estimation of phosphorus by Fiske and Subbarao method

USBCHP06 (504)

1) Isolation of starch from sweet potato.
2) Extraction of lipid from oil seeds by the cold percolation method.
3) Estimation of DNA by the Diphenylamine method
4) Isolation and spooling of DNA from onion / moong

SCHEME OF EXAMINATION

Biochemistry, as an interdisciplinary subject, consists of 06 (Six) Units of T.Y.B.Sc. Carrying 400 marks in Fifth Semester, as follows:

COURSE CODE	Title of Paper	Semester end Examination marks	Total Marks
USBCH501	Metabolism & Analytical Techniques	100	100
USBCH502	Environmental Science	100	100
USBCH503	Genetics & Recombinant DNA Technology	100	100
USBCH504	Immunology & Pathophysiology	100	100
	TOTAL		**400**

PRACTICALS:		
COURSE CODE	**Marks per course**	**Total per semester**
USBCHP05	100	
USBCHP06	100	
TOTAL		**200**

SCHEME OF PRACTICAL EXAMINATION
SEMESTER V

Course USBCHP05 & USBCHP06	**Experiments**	**Marks**
Day 1	a. Chromatographic separation	20
	b. Enzymology	30
	c. Volumetric estimation	20
	d. pH and conductance	10
	e. Certified Journal*	10
	f. *Viva voce*	10
	TOTAL	**100**

Course USBCHP05 & USBCHP06	**Experiments**	**Marks**
Day 2	a. Colorimetric estimation	20
	b. Isolation	20
	c. Volumetric estimation	20
	d. Hematology (two experiments)	20
	e. Certified Journal*	10
	f. *Viva voce*	10
	TOTAL	**100**

SCHEME OF EXAMINATION FOR PRACTICAL OF SEMESTER V

1. The Semester V practical examination shall be conducted by respective colleges on behalf of the University
2. There shall be 02 (Two) examiners to conduct the practical examination –one Internal examiner and other external examiner
3. The external examiner shall be on the panel of examiner approved by the University of Mumbai.
4. The college shall invite one such examiner from approved panel as an external examiner
5. Duration for the Practical examination for Semester V
   a) Two days of 02 sessions on each day
   b) Total no. of sessions = 4
   c) Each session: 3½ hours.
   d) Morning session: 9.00 am to 12.30 pm
      Afternoon session: 1.00 pm to 4.30 pm.

* Candidate without duly certified journals SHALL NOT be allowed to appear for the University practical examination.

SEMESTER VI
T.Y.B.Sc. – BIOCHEMISTRY (6 units)
USBCH601
METABOLISM & ANALYTICAL TECHNIQUES - II

Learning objective:

The paper will help to understand the concepts of metabolism and its importance in the proper functioning of each cell. This paper also aims to acquaint the learner with the maintenance of life processes of various biomolecules like lipids and proteins - reactions / pathways involved in oxidation and synthesis of biomolecules.

The Paper aims to teach the learner the action, signal transduction and physiological role of important hormones.

The learner should also comprehend the principle, working and applications of analytical technique of centrifugation, spectrophotometry, electrophoresis, radioactivity that serve important tools in deciphering the structure and function of biomolecules.

Learning outcome

At the end of the course the learner should

- understand breakdown and synthesis of fatty acids and amino acids and appreciate experiments carried out by scientists to enable understand the pathways and cycles of metabolism.
- understand basic concepts related to metabolism, be familiar with the various metabolic pathways and should be able to appreciate the importance of enzymes and coenzymes in pathophysiology of diseases.
- be able to appreciate the various hormones, their actions, regulations and clinical significance.
- have learnt the principle, working and applications of various analytical techniques and be able to appreciate the contribution of these techniques (colorimeter/ spectrophotometer, Centrifuges, electrophoresis and radioisotopes) as tools in understanding the structure and function of biomolecules.

Unit No.	Topic No.	Topics	No. of L
I	**1.0**	**Lipid metabolism**	**15**
	1.1	Lipid metabolism – Catabolism - Knoop's experiment; Beta oxidation of even carbon saturated fatty acids (C4 to C20) Energetics of fatty acid	

		oxidation. Beta oxidation of odd carbon chain fatty acid	
	1.2	Anabolism – FAS complex; Fatty acid biosynthesis (palmitic acid); Ketone body formation, utilization, and the physiological significance of Ketone bodies in Diabetes mellitus, Starvation, Pregnancy and Alcoholism.	
II	**2.0**	**Amino acid & protein metabolism and Hormones & Signal transduction**	**15**
	2.1	Amino acid and protein metabolism – Reactions of amino acids – Transamination [GOT/GPT and mechanism of transamination] ; Decarboxylation [His, Trp, Glu, and mechanism of decarboxylation] , Deamination [oxidative – NAD(P) linked dehydrogenases and D & L - Amino acid oxidases, Non oxidative – Asp, Cys, Ser]	
	2.1.2	Glucogenic and ketogenic amino acids	
	2.1.3	Urea cycle – Cellular location, sequence of reactions, Labeling of N atom, transport of NH_3	
	2.2 2.2.1	**Hormone action and signal transduction** Hormone receptors (membrane and intracellular)	
	2.2.2	Introduction to G protein, G protein coupled receptor, Effect of epinephrine on glycogen synthesis and breakdown: amplification cascade with G proteins, cAMP (as second messenger), adenylate cyclase, kinases	
	2.2.3	IP3 and Calcium as second messenger	
III	**3.0**	**Centrifugation and Spectrophotometry**	**15**
	3. 1 3.1.1 3.1.2 3.1.3 3.1.4	**Centrifugation** RCF, RPM and derivation of an equation relating the two; Nomogram; Sedimentation coefficient and factors affecting; Derivation of sedimentation velocity, Wall effect Types and applications of centrifuges – Clinical, High speed, Ultra centrifuge - preparative and analytical. Types of centrifugation and its applications– Differential, Rate zonal, Isopycnic, Types of rotors Preparation of density gradient, Sample application, choice of rotors, Recovery pf sample Numerical problems based on above concepts	
	3.2 3.2.1. 3.2.2 3.2.3	**Spectrophotometry** Beer-Lambert law, derivation, limitations & applications in the estimation of sugar [DNSA] and protein [Biuret]; concepts of Lambda max; determination of molar extinction coefficient Construction and working of a simple colorimeter and UV/ Vis spectrophotometer Numerical problems based on the above concepts	

IV	**4.0**	**Electrophoresis & Radioactivity**	**15**
	4.1 4.1.1 4.1.2 4.1.3 4.1.4 4.1.5 4.1.6	**Electrophoresis** Principle: Factors affecting the rate of migration of sample in an electric field Moving boundary and Zone electrophoresis; Components of electrophoresis unit/apparatus Various support media - paper, cellulose acetate, agar, agarose and polyacrylamide Technique of electrophoresis with staining/visualization method • agarose electrophoresis for separation of DNA • Native PAGE for separation of proteins • SDS PAGE for molecular weight determination; • Discontinuous electrophoresis • Other applications of electrophoresis: blotting techniques- Southern, Northern, and Western Isoelectric Focusing of protein	
	4.2	**Radioactivity-** Isotopes, Radioactive decay; Decay constant; Half-life; Measurement of radioactivity (principle)	

T.Y.B.Sc. – BIOCHEMISTRY (6 units)
USBCH602
NUTRITION & PHARMACOLOGY

Learning objectives:

- Gain knowledge about proximate principles, nutritional status and balanced diet.
- Assess energy and anthropometric parameters.
- Introduce the concept of diet management, nutrition at various stages of life and diseases related to diet.
- Give basic insights in pharmacology, pharmacokinetics and mechanism of action of therapeutic drugs.

Learning outcomes:

At the end of the course a learner should

- be able to appreciate the role of nutrients in diet to understand nutritional status and concept of balanced diet which will help to identify the overall nutrition to be given to men and women at various age groups.
- be familiarized with dietary management in diseases.
- be able to utilize critical thinking skills in discussing the concept of pharmacokinetics and pharmacotherapy.
- be able to explain various therapeutic drugs in use.

Unit No.	Topic No.	Topics	No. of L
I	**1.0**	**Nutrition**	**15**
	1.1 1.1.1 1.1.2 1.1.3	Principles of nutrition Nutrients [Proximate principles, vitamins and minerals (macro and micro- role of Ca, Mg, Na, K and Fe, Zn)], dietary fibre. Nutritional status [malnutrition (protein energy and protein calorie) and over nutrition] Balanced diet	
	1.2.1 1.2.2 1.2.3	Energy Assessment - RQ, BMR; Anthropometry – BMI, Waist:hip ratio; Protein quality indices: Chemical score of amino acids, Protein Deficiency Corrected Amino Acid Score, Net Protein utilization	
II	**2.0**	**Diet Management**	**15**
	2.1	Concepts like Balanced diet, Meal planning.	
	2.2	Nutrition during pregnancy, lactation, infancy, toddlerhood, preschool stage, school going children, and adolescence, adulthood and geriatric	

	2.3	Dietary Management in :- Obesity, Diabetes Mellitus, Hypertension, Peptic ulcer , Obstructive Jaundice	
III	**3.0**	**Pharmacology**	
	3.1 3.1.1 3.1.2 3.1.3 3.1.4	General pharmacology Pharmacodynamics, Physicochemical properties of drugs, Drug absorption: through-GIT, pulmonary, renal, placental and blood-brain barrier Bioavailability and Bioequivalence Drug Distribution, Metabolism and Excretion	**15**
	3.2	Bioassays: Preclinical and clinical evaluation, Therapeutic drug monitoring	
	3.3	Pharmacokinetics: LD_{50}, ED_{50}, Half Life, Loading dose, Maintenance dose, Therapeutic dose, Therapeutic Index, Drug plasma concentration, Volume of distribution, Clearance	
IV	**4.0**	**Mechanism of Drug Action and Therapeutic drugs**	
	4.1 4.2 4.2.1 4.2.2 4.2.3	Mechanism of action of drugs: i. Specific interaction – receptor mediated ii. Partially specific – drugs via enzymes iii. Nonspecific interactions – antimetabolites and antiseptics iv. Through Antibodies v. Placebo effects Therapeutic drugs: (Mechanism of action and adverse effects) Anti-inflammatory – non steroid anti-inflammatory NSAID [Ibuprofen], Salicylates – [Aspirins] Cardiovascular drugs- CVS [Ca channel blocker-Amlodipine, and Beta blocker – Proprenolol Antibiotic – Penicillin and Sulphonamide Antacid- Proton pump blocker –Omeprazole	**15**

T.Y.B.Sc. – BIOCHEMISTRY (6 units)
USBCH603
BIOSTATISTICS AND BIOINFORMATICS

Learning objectives:

- Introduces fundamental concepts and definitions for biostatistics.
- Explain concept of probability and its distribution.
- Presents hypothesis testing
- To understand basic concepts in bioinformatics which is an interdisciplinary program offering substantial training in both the biological sciences and the physical & mathematical sciences.

Learning outcomes:

At the end of the course the learner should

- understand the basic principles of probability and how they relate to biostatistics
- become familiar with the mathematical and statistical theory underlying the applications of biostatistical methods to interpret statistical results correctly, effectively and in context.
- be able to interpret relationships among living things and analyze and solve biological problems, using basic biological concepts, grounded in foundational theories with the help of bioinformatics tools.
- be able to apply existing software effectively to extract information from large databases and to use this information in biological sciences

Unit No	Topic No	Topics	No. of L
I	**1.0** 1.1.1 1.1.2 1.1.3	**BIOSTATISTICS AND DESCRIPTIVE STATISTICS** Introduction: scope and applications of biostatistics Common statistical terms: Sources, nature and presentation of data; Measurement and scales of measurement Descriptive statistics: Measures of central tendency- Mean, Median and mode	
	1.2	Measures of dispersion- Range, percentiles, variance, SD, Mean deviation,	**15**
	1.3	**Probability** Concept of probability: definition Probability distribution: normal distribution and normal Curve, Asymmetric distribution Statistical problems based on the above concepts	
II	**2.0**	**BIOINFORMATICS**	
	2.1	**Bioinformatics:** Definition, Aims and History of Bioinformatics Applications of Bioinformatics in – Sequence analysis, Molecular modeling and drug designing, Phylogeny/evolution, Ecology &	**15**

		population studies, Medical informatics and agriculture. Introduction to Genomics and Proteomics Databases- Definition & types – Public domain database, Sequence database, Structural database, Motif database, Genome database, Proteome database, Annotated sequence database. Full form & function in brief of - GenBank, EMBL, PIR, SWISS PROT, PDB, GDB. Sequence analysis Tools - Explain the following terms in brief - BLAST, FASTA, L-ALIGN, CLUSTAL- X & W, RASMOL, Software for protein sequencing - PROSPECT, AMMP, COPIA (Explanation of the terms in brief) Micro-array analysis-concept and applications	
III	**3.0** 3.1 3.2 3.3 3.4	**HYPOTHESIS TESTING** - Introduction; Single population mean, difference between population means Type I and Type II errors, One-tailed and two tailed tests Z-test Statistical problems based on the above concepts	
IV	**4.0** 4.1 4.2	**HYPOTHESIS TESTING** t-test- Paired and unpaired Chi-square Statistical problems based on the above concepts	**15**

T.Y.B.Sc. – BIOCHEMISTRY (6 units)
USBCH604-S
IMMUNOLOGY & PATHOPHYSIOLOGY-II

Learning objectives:

- Understand the complement system needed for cytolysis of foreign particles.
- Deal with major histocompatibility molecules which are important for immune responses, also for evoking transplant rejections.
- Explain the structure and pathophysiology of HIV and other viruses
- Understand the disorders of endocrine system and ageing, which include diseases related to endocrine hormones and relation to nonendocrine system.

Learning outcomes:

At the end of the course the learner should

- understand the pathways that activate the complement system
- be familiar with the MHC; its structure and classes, specific role of each class of MHC and importance in immune response and graft rejection.
- grasp a contemporary understanding of classification, structure and mechanism of replication of viruses along with pathophysiology symptoms and preventive measures of AIDS.
- understand the basic concepts of demography and epidemiology of aging and pathophysiology and issues in common diseases of older people.

Unit No	Topic No	Topics	No. of L
I	**1.0**	**Antigen- Antibody interactions & Complement system**	**15**
	1.1 1.1.1 1.1.2 1.1.3 1.1.4 1.1.5	Antigen- Antibody interactions: Forces involved, antibody affinity, antibody avidity. Precipitation reactions – Oudins, Ouchterlony Agglutination reactions: Blood typing, bacterial agglutination, Passive agglutination, agglutination inhibition, Coomb's test. Immunoelectrophoresis; Principles of Radioimmunoassay, ELISA, Immunofluorescence	
	1.2 1.2.1 1.2.2 1.2.3	Complement Components of complement; Complement activation – Classical & alternate pathway; formation of membrane attack complex. Biological consequences of complement activation.[in brief]	
II	**2.0**	**Major histocompatibility complex &Transplant immunology**	**15**
	2.1. 2.1. 1	Major histocompatibility complex: MHC polymorphism & organization of MHC genes- class I &	

	2.1.2	class II; Cellular distribution & structure of class I & II molecules; Self MHC restriction of T cells. Role of antigen presenting cells.	
	2.2	Transplant immunology: Types of transplant; immunological basis of allograft rejection.	
	2.3	Autoimmunity: Organ specific –Myasthenia gravis; Hashimoto's thyroiditis, Insulin dependent diabetes mellitus Systemic – Rheumatoid arthritis, Multiple sclerosis, Systemic lupus erythematosus (immunological basis of these autoimmune diseases)	
III	**3.0**	**Pathophysiology of viral diseases**	**15**
	3.1	Structure and mechanism of replication in: 1. Vaccinia 2. Polio 3. Influenza 4. Hepatitis 5. Rabies or Ebola virus	
	3.2	AIDS: Structure and genetics basis of AIDS virus. Replication of AIDS Virus. Symptoms and Causes of AIDS. AIDS Therapy.	
IV	**4.0**	**Endocrine Diseases & Ageing**	**15**
	4.1 4.1.1 4.1.2 4.1.3	Endocrine diseases*:* Diabetes mellitus. Hyper and Hypothyroidism, Cushing's syndrome, Acromegaly	
	4.2	Diabetes insipidus.	
	4.2	Ageing: Definition of ageing. Molecular changes during ageing. Theories of Ageing.	
	4.3	Alzheimer's disease, Parkinson's diseases	

PRACTICALS - SEMESTER VI

USBCHP07 (601)

1) Separation of amino acids by circular paper chromatography
2) Estimation of Ascorbic acid Iodimetrically.
3) Determination of the optimum pH of Acid phosphatase / Urease.
4) Determination of the Km of Acid phospahatase / Urease.
5) Estimation of lactose by Cole's ferricyanide method
6) Estimation of glucose Iodometrically

Demonstration Experiments

Separation of plant pigments/ Oils by Thin Layer Chromatography

USBCHP07 (602)

1) Estimation of fluoride in water by the Alizarin red method
2) Determination of the Dissolved Oxygen content of water/effluent by the Winkler's Iodometric method - Azide modification.
3) Determination of the Biological Oxygen Demand of water/effluent
4) Determination of the acidity and alkalinity of water/ effluent.
5) Estimation of $CaCO_3$ of soil - Bromothymol Blue method
6) Immunoprecipitation reaction of antigen and antibody.
7) Diagnostic test for typhoid - Widal Qualitative
8) Diagnostic test for typhoid - Widal Quantitative

USBCHP08 (603)

1) Estimation of protein by the Folin-Lowry method.
2) Estimation of iron by Wong's method.
3) Monograph of acetyl salicylate (identification, assay and purity as per IP)
4) Monograph of sucrose (identification, assay and purity as per IP)

Demonstration Experiments

1. Separation of serum proteins by PAGE

USBCHP08 (604)

1) Biostatistics – Problems
2) Isolation of RNA yeast / liver
3) Isolation of casein from milk.
4) Estimation of RNA by Orcinol method.

Demonstration Experiment

1) Isolation of plasmids
2) Agarose gel electrophoresis
3) Chromosomal DNA and Plasmid DNA

SCHEME OF EXAMINATION

Biochemistry, as an interdisciplinary subject, consists of 06 (Six) Units of T.Y.B.Sc. carrying 400 marks in Sixth Semester, as follows :

COURSE CODE	Title of Paper	Semester End Examination marks	Total Marks
USBCH601	Metabolism & Analytical Techniques II	100	100
USBCH602	Nutrition & Pharmacology	100	100
USBCH603	Biostatistics &Bioinformatics	100	100
USBCH604	Immunology & Pathophysiology	100	100
	TOTAL		**400**

PRACTICALS:		
COURSE CODE	**Marks per course**	**Total per semester**
USBCHP07	100	
USBCHP08	100	
TOTAL		**200**

SCHEME OF PRACTICAL EXAMINATION
SEMESTER VI

Course USBCHP07 & USBCHP08	**Experiments**	**Marks**
Day 1	a. Chromatographic separation	20
	b. Enzymology	30
	c. Volumetric estimation	20
	d. Immunology	10
	e. Certified Journal*	10
	f. *Viva voce*	10
	TOTAL	**100**

Course USBCHP07 & USBCHP08	**Experiments**	**Marks**
Day 2	a. Biostatistics	20
	b. Monograph	20
	c. Colorimetric estimation	20
	d. Isolation	20
	e. Certified Journal*	10
	f. *Viva voce*	10
	TOTAL	**100**

Scheme of Examination for practical of Semester VI

1. The Semester VI practical examination shall be conducted by the University of Mumbai
2. There shall be 02 (Two) external examiners appointed by the University from the panel of approved examiners
3. Duration for the Practical examination for Semester VI
   a) Two days of 2 sessions on each day
   b) Total no. of sessions = 4
   c) Each session: 3½ hours.
   d) Morning session: 9.00 am to 12.30 am
      Afternoon session: 1.00 pm to 4.30 pm.

*Candidate without duly certified journals SHALL NOT be allowed to appear for the University practical examination.

Scheme of Examination for Third year Science Undergraduate students

Scheme of Theory examination at T.Y.B.Sc. (Sem V and Sem VI)

1) Each theory paper will be of **100** marks
2) Each theory paper will be of **3** hours duration
3) Each theory paper will contain **05** questions of **20** marks each as follows:

T.Y.B.Sc. theory question paper pattern with marks distribution

Q. No.	Unit/ s	Sub Q.	Type and Choice	Marks	Total marks per question
1.	I	A	Four objective questions – fill in the blanks, match the columns etc.	04	20
		B	Short answers – any one out of two	04	
		C	Long answers – • Any two, out of three of 06 marks each • Any one out of two for 12 / 06+ 06 / 08+ 04 marks	12	
2.	II	A	Four objective questions – fill in the blanks, match the columns etc.	04	20
		B	Short answers – any one, out of two	04	
		C	Long answers – • Any two out of three of 06 marks each • Any one out of two for 12 / 06+ 06 / 08+ 04 marks	12	
3.	III	A	Four objective questions – fill in the blanks, match the columns etc.	04	20

		B	Short answers – any one out of two	04	
		C	Long answers – • Any two out of three of 06 marks each • Any one out of two for 12 / 06+ 06 / 08+ 04 marks	12	
4.	IV	A	Four objective questions – fill in the blanks, match the columns etc.	04	20
		B	Short answers – any one out of two	04	
		C	Long answers – • Any two out of three of 06 marks each • Any one out of two for 12 / 06+ 06 / 08+ 04 marks	12	
5.	I - IV	A	Any four definitions etc. of 02 marks each; a or b from unit I, c or d from unit II, e or f from unit III, g or h from unit IV	08	20
		B	Any six true or false with justification of 02 marks each from units I to IV	12	

External Examination for practical

Sr. No.	Particulars for External Practical Examination		Marks
	Particulars for External Practical Examination Semester End Practical Examination		100 Marks
1	Laboratory Work	80 Marks	
2	Journal	10 Marks	
3	Viva	10 Marks

(NAAC ACCREDITED-'B' Grade, CGPA 2.69)

All HODs/ coordinators are instructed to fill the following as per the academic year. Each subject's program outcome/ Course outcome has to be filled. The new syllabus of all subjects has it which can be used for reference. Please fill for the following academic years and mention it correctly, even if the same syllabus was followed for subsequent academic year you will have to fill it. Following is the example for your reference:

Academic year : 2022- 2023

Name of Department: English

Class: TYBA

Program Outcomes:

- To introduce students to English Literature of the 16th, 17th and 18thcenturies.
- To show them how background influences shaped the writer's thinking.
- To present them to the literary masters who dominated the scene
- To familiarize students with different writing styles that each age adopted.
- To introduce the learners to important critical terms
- To make them aware of the nature and function of literature and criticism
- To impart the technique of close reading of literary texts
- To enable them to understand various literary theories and critical approaches
- To familiarize the learners with the tenets of practical criticism
- To develop amongst learners an insight into the process of word formation and transformation
- To develop amongst them an insight into the sounds, stress patterns and intonations in the English language to improve their speaking skills
- To develop among them an insight into the structure of the English language and to provide knowledge of the rules of grammar
- To help them learn grammatical analysis and description and the skills of sentence transformation
- To introduce the mechanics of writing for effective writing for various domains

Program Specific Outcomes:

- To understand the distinctive features of English literature of the 16th, 17th and 18th centuries
- To comprehend how background influences shaped the writer's thinking.
- To recognize and appreciate the literary masters who dominated the scene.
- To grasp the different writing styles that each age adopted.
- use some important critical terms
- become aware the nature and function of literature and criticism
- impart the technique of close reading of literary texts
- understand the various literary theories and critical approaches
- be familiar with the tenets of practical criticism
- Gain a basic understanding of phonetics, morphology and word transformation

- Have improved speaking skills
- Have developed adequate knowledge of the rules of grammar, grammatical analysis and sentence transformation
- Write effectively in various domains.

SEMESTER - V

Course Code: - UAENG501	**Course Title:** Paper IV- 16th to 18 th Century English Literature –I

Course Outcomes:

- The students would be able :
- 1) To understand the distinctive features of English literature of the 16th, 17th and 18th centuries
- 2) To comprehend how background influences shaped the writer's thinking.
- 3) To recognize and appreciate the literary masters who dominated the scene.
  4) To grasp the different writing styles that each age adopted.
-

Course Code: UAENG502	**Course Title:** Paper V- Literary Criticism-I

Course outcomes:
The students would be able :

- 1) use some important critical terms
- 2) become aware the nature and function of literature and criticism
- 3) impart the technique of close reading of literary texts
- 4) understand the various literary theories and critical approaches
- 5) be familiar with the tenets of practical criticism

Course Code: UAENG503A	**Course Title:** Paper VI -- Grammar and the Art of Writing-I

Course outcomes:
The students would be able :

- 1. Gain a basic understanding of phonetics, morphology and word transformation
- 2. Have improved speaking skills
- 3. Have developed adequate knowledge of the rules of grammar, grammatical analysis and sentence transformation
- 4. Write effectively in various domains.

UNIVERSITY OF MUMBAI

No. UG/ 8 of 2018-19

CIRCULAR:-

Attention of the Principals of the affiliated Colleges and Directors of the recognized Institutions in Science & Technology Faculty is invited to this office Circular Nos. UG/264 of 2017-18, dated 23rd October, 2017, UG/287 of 2017-18, dated 30th October, 2017and UG/263 of 2017-18, dated 23rd October, 2017 relating to syllabus of the Bachelor of Science (B.Sc.) degree course.

They are hereby informed that the recommendations made by the Board of Studies in Physics at its meeting held on 23rd April, 2018 have been accepted by the Academic Council at its meeting held on 5th May, 2018 **vide** item No. 4.26 and that in accordance therewith, the revised syllabus as per the (CBCS) for the T.Y.B.Sc. in Physics including Applied Component - Electronic Instrumentation (EI) & Computer Course (CS) (Sem -V & VI), has been brought into force with effect from the academic year 2018-19, accordingly. (The same is available on the University's website www.mu.ac.in).

(Dr. Dinesh Kamble)

SCHEME OF THEORY, PRACTICALS AND PROJECT EXAMINATION
(SEM- V & VI)

I.	**Theory: External Examination: 100 marks**			
	Each theory paper shall be of **THREE** hours duration.			
	Each paper shall consist of FIVE questions. All questions are compulsory and will have internal options. Choice in papers has to be 1.5 times.			
	Q – I :	From Unit – I		
	Q – II :	From Unit – II		
	Q – III :	From Unit - III		
	Q – IV :	From Unit - IV		
	Q – V :	Will consist of questions from all the FOUR Units with equal weightage of marks allotted to each Unit.		
II.	**Practicals and Project:** The External Practical Examination will be conducted as per the following scheme.			
Sr. No.	**Particulars of External Practical and Project Examination**			**Total Marks**
1	Laboratory Work	Experiment-1= 60 M	Experiment-2 = 60 M	120
2	Journal	10	10	20
3	Viva	10	10	20
			Sub Total =	**160**
III.	**Project**	Internal Examiner (20 M)	External Examiner (20 M)	**40**
			Grand Total	**200**

Passing Criteria:

1. A student should be considered as passed in the practical examination provided he/she fulfills the following passing criteria
    a. Minimum of 20 marks in each practical component - i.e. **USPHP07** and **USPHP08.**
    b. Minimum of 10 marks in Project Component
    c. And cumulatively scoring 80 marks (i.e. 40 % of 200 marks)

Component	Maximum Marks	Minimum Passing Marks
USPHP07	80	20
USPHP08	80	20
Project 2	40	10
Total	**200**	**80**

Scheme of Examination:

1. The University (external) examination for Theory and Practical shall be conducted at the end of each Semester and the evaluation of Project work at the end of the each Semester.
2. The candidate should appear for **THREE** Practical sessions of **three hours each** as part of his/her Practical course examination.
3. The candidates shall appear for external examination of 2 practical courses each carrying 80 marks and presentation of project work carrying 20 marks at the end of each semester.
4. The candidates shall also appear for internal presentation of project work carrying 20 marks at the end of each semester.
5. The candidate shall prepare and submit for practical examination a certified Journal based on the practical course with **6** experiments from each group.
6. The certified journal must contain a minimum of **12** regular experiments (**6** from each group), **with** minimum **5** demonstration experiments in semester VI. A separate index and certificate in journal is must for each semester course.
7. At the time of practical examination, the candidate must also submit the certified Project Report prepared as per the guidelines given in the Syllabus.

A candidate will be allowed to appear for the practical examination only if the candidate submits a certified journal of TYBSc Physics or a certificate from the Head of the Department to the effect that the candidate has completed the

practical course of TYBSc Physics as per the minimum requirements and a project completion report duly certified by the project in-charge and Head of the Department.

III. Visits: Visits to industry, national research laboratories, and scientific exhibitions should be encouraged.

SEMESTER V

Theory Course - USPH501: Mathematical, Thermal and Statistical Physics

Learning outcomes: From this course, the students are expected to learn some mathematical techniques required to understand the physical phenomena at the undergraduate level and get exposure to important ideas of statistical mechanics.

The students are expected to be able to solve simple problems in probability, understand the concept of independent events and work with standard continuous distributions. The students will have idea of the functions of complex variables; solve nonhomogeneous differential equations and partial differential equations using simple methods. The units on statistical mechanics would introduce the students to the concept of microstates, Boltzmann distribution and statistical origins of entropy. It is also expected that the student will understand the difference between different statistics, classical as well as quantum.

Unit - I	**Probability**	(15 lect.)
Review of basic concepts, introduction, sample space, events, independent events, conditional probability, probability theorems, methods of counting (derivation of formulae not expected), random variables, continuous distributions (omit joint distributions), binomial distribution, the normal distribution, the Poisson distribution. Ref: MB – 15.1-15.9 Expected to cover solved problems from each section and solve at least the following problems:		

section 2: 1-5, 11-15, **section 3:** 1, 3, 4, 5, **section 4:** 1, 3, 5,13, 21, **section 5:** 1, 10, 13, **section 6:** 1 to 9, **section 8:** 1 and 3, **section 9:** 2, 3, 4, 9.		
Unit -II	**Complex functions and differential equations**	(15 lect.)
1. Functions of complex variables: The exponential and trigonometric functions, hyperbolic functions, logarithms, complex roots and powers, inverse trigonometric and hyperbolic functions, some applications. Ref.: MB: 2.11 to 2.16 Expected to cover all solved problems. In addition, solve the following problems: **section 2:** 16 – 2, 3, 8, 9, 10.		
2. Second-order nonhomogeneous equations with constant coefficients, partial differential equations, some important partial differential equations in physics, method of separation of variables. Ref : CH :5.2.4, 5.3.1 to 5.3.4 Expected to cover all solved problems. In addition, solve the following problems: 5.17 a to e, 5.23, 5.26, 5.29 to 5.35.		
Unit -III	**Statistical Thermodynamics**	(15 lect.)
Microstates and configurations, derivation of Boltzmann distribution, dominance of Boltzmann distribution, physical meaning of the Boltzmann distribution law, definition of , the canonical ensemble, relating Q to q for an ideal gas, translational partition function, equipartition theorem, energy, entropy ER: 13.1 to 13.5, 14.1, 14.2, 14.4, 14.8, 15.1, 15.4		
Unit -IV	**Classical and Quantum Statistics**	(15 lect.)
The probability of a distribution, The most probable distribution, Maxwell-Boltzmann statistics, Molecular speeds. Bose-Einstein statistics, Black-body radiation, The Rayleigh-Jeans formula,		

The Planck radiation formula, Fermi-Dirac statistics, Comparison of results. AB : 15.2 to 15.5, 16.1 to 16.6

Theory Course - USPH502: Solid State Physics

Learning Outcomes: On successful completion of this course students will be able to:

1. Understand the basics of crystallography, Electrical properties of metals, Band Theory of solids, demarcation among the types of materials, Semiconductor Physics and Superconductivity.
2. Understand the basic concepts of Fermi probability distribution function, Density of states, conduction in semiconductors and BCS theory of superconductivity.
3. Demonstrate quantitative problem solving skills in all the topics covered.

Unit - I	**Crystal Physics**	(15 lect.)

The crystalline state, Basic definitions of crystal lattice, basis vectors, unit cell, primitive and non-primitive cells, The fourteen Bravais lattices and the seven crystal systems, elements of symmetry, nomenclature of crystal directions and crystal planes, Miller Indices, spacing between the planes of the same Miller indices, examples of simple crystal structures, The reciprocal lattice and X-ray diffraction.

Ref: Elementary Solid State Physics-Principles and Applications: M. Ali Omar, Pearson Education, 2012 : (1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 2.6)

Unit -II	**Electrical properties of metals**	(15 lect.)

1. Classical free electron theory of metals, Drawbacks of classical theory, Relaxation time, Collision time and mean free path
2. Quantum theory of free electrons, Fermi Dirac statistics and electronic distribution in solids, Density of energy states and Fermi energy, The Fermi distribution function, Heat capacity of the Electron gas, Mean energy of electron gas at 0 K, Electrical conductivity from quantum mechanical considerations, Failure of Sommerfeld's free electron Theory
3. Thermionic Emission

Ref.: Solid State Physics: S. O. Pillai, New Age International. 6th Ed.

Chapter 6: II, III, IV, V, XIV, XV, XVI, XVII, XVIII, XX, XXXV, XXXI.

Unit -III	**Band Theory of Solids and Conduction in Semiconductors**	(15 lect.)

1. Band theory of solids, The Kronig- Penney model (Omit eq. 6.184 to 6.188), Brillouin zones, Number of wave functions in a band, Motion of electrons in a one-dimensional periodic potential, Distinction between metals, insulators and intrinsic semiconductors.

   Ref.: Solid State Physics: S. O. Pillai, New Age International, 6th Ed.

   Chapter 6: XXXVI, XXXVII, XXXVIII, XXXIX, XXXX, XXXXI

2. Electrons and Holes in an Intrinsic Semiconductor, Conductivity of a Semiconductor, Carrier concentrations in an intrinsic semiconductor, Donor and Acceptor impurities, Charge densities in a semiconductor, Fermi level in extrinsic semiconductors, Diffusion, Carrier lifetime, The continuity equation, Hall Effect.

   Ref.: Electronic Devices and Circuits: Millman, Halkias & Satyabrata Jit. (3rd Ed.) Tata McGraw Hill.: 4.1 to 4.10.

Unit -IV	**Diode Theory and superconductivity**	(15 lect.)

1. Semiconductor-diode Characteristics: Qualitative theory of the p-n junction, The p-n junction as a diode, Band structure of an open-circuit p-n junction, The current components in a p-n junction diode, Quantitative theory of p-n diode currents, The Volt-Ampere characteristics, The temperature dependence of p-n characteristics, Diode resistance.

   Ref.: Electronic Devices and Circuits: Millman, Halkias & Satyabrata Jit. (3rd Ed.) Tata McGraw Hill.: 5.1 to 5.8

2. Superconductivity: Experimental Survey, Occurrence of Superconductivity, destruction of superconductivity by magnetic field, The Meissner effect, London equation, BCS theory of superconductivity, Type I and Type II Superconductors, Vortex state.

   Ref.: Introduction to Solid State Physics-Charles Kittel, 7th Ed. John Wiley &

Sons: Topics from Chapter 12.

Theory Course - USPH503: Atomic and Molecular Physics

Learning Outcome: Upon successful completion of this course, the student will understand

- the application of quantum mechanics in atomic physics
- the importance of electron spin, symmetric and antisymmetric wave functions and vector atom model
- Effect of magnetic field on atoms and its application
- Learn Molecular physics and its applications.

- This course will be useful to get an insight into spectroscopy.

Unit - I		(15 lect.)
1. Hydrogen atom: Schrödinger's equation for Hydrogen atom, Separation of variables, Quantum Numbers: Total quantum number, Orbital quantum number, Magnetic quantum number. Angular momentum, Electron probability density (Radial part). 2. Electron spin: The Stern-Gerlach experiment, Pauli's Exclusion Principle Symmetric and Anti-symmetric wave functions. Ref – Unit – I - B: 9.1 to 9.9, B: 10.1, 10.3. 2		
Unit -II		(15 lect.)
1. Spin orbit coupling, Total angular momentum, Vector atom model, L-S and j-j coupling. Origin of spectral lines, Selection rules. 2. Effect of Magnetic field on atoms, the normal Zeeman effect and its explanation (Classical and Quantum), The Lande g - factor, Anomalous Zeeman effect. Ref – Unit – II - B: 10.2, 10.6, 10.7, 10.8, 10.9. B : 11.1 and 11.2		
Unit -III		(15 lect.)
1. Molecular spectra (Diatomic Molecules): Rotational energy levels, Rotational spectra, Vibrational energy levels, Vibrational-Rotational spectra. Electronic Spectra of Diatomic molecules: The Born-Oppenheimer approximation, Intensity of vibrational-electronic spectra: The Franck-Condon principle. 2. Infrared spectrometer & Microwave spectrometer . Ref – Unit – III - B: 14.1, 14.3, 14.5, 14.7		
Unit -IV		(15 lect.)
1. Raman effect: Quantum Theory of Raman effect, Pure Rotational Raman spectra: Linear molecules, symmetric top molecules, Asymmetric top molecules, Vibrational Raman spectra: Raman activity of vibrations, Experimental set up of Raman Effect. 2. Electron spin resonance: Introduction, Principle of ESR, ESR spectrometer		

3. Nuclear magnetic resonance: Introduction, principle and NMR instrumentation. **Ref – Unit – IV -** 1. BM: 6.11, 6.1.3. 2. BM: 4.1.1, 4.1.2, 4.2.1, 4.2.2, 4.2.3, 4.3.1. GA: 8.6.1 2. GA: 11.1,11.2and 11.3 3. GA: 10.1,10.2,10.3

References:

Theory Course - USPH504: Electrodynamics

Learning outcomes:

On successful completion of this course students will be able to:

1) Understand the laws of electrodynamics and be able to perform calculations using them.
2) Understand Maxwell's electrodynamics and its relation to relativity
3) Understand how optical laws can be derived from electromagnetic principles.
4) Develop quantitative problem solving skills.

Unit - I	**Electrostatics**	(15 lect.)
1. Review of Coulomb & Gauss law, The divergence of **E**, Applications of Gauss'		

law, The curl of **E**. Introduction to potential, Comments on potential, The potential of a localized charge distribution. Poisson's equation and Laplace's equation. Solution and properties of 1D Laplace equation. Properties of 2D and 3D Laplace equation (without proof).

2. Boundary conditions and Uniqueness theorems, Conductors and Second Uniqueness theorem, The classic image problem- point charge and grounded infinite conducting plane and conducting sphere.

DG: 2.1.1 to 2.1.3, 2.2.2 to 2.2.4, 2.3.1 to 2.3.4
DG: 3.1.1 to 3.1.4, 3.1.5, 3.1.6, 3.2.1 to 3.2.4

Unit -II	**Electrostatics in Matter and Magnetostatics**	(15 lect.)

1. Dielectrics, Induced Dipoles, Alignment of polar molecules, Polarization, Bound charges and their physical interpretation, Gauss' law in presence of dielectrics, A deceptive parallel, Susceptibility, Permittivity, Dielectric constant and relation between them, Energy in dielectric systems.

2. Review of Biot-Savart's law and Ampere's law, Straight-line currents, The Divergence and Curl of **B**, Applications of Ampere's Law in the case of a long straight wire and a long solenoid, Comparison of Magnetostatics and Electrostatics, Magnetic Vector Potential.

DG: 4.1.1 to 4.1.4, 4.2.1, 4.2.2, 4.3.1, 4.3.2, 4.4.1, 4.4.3
DG: 5.2.1, 5.3.1 to 5.3.4, 5.4.1

Unit -III	**Magnetostatics in Matter and Electrodynamics**	(15 lect.)

1. Magnetization, Bound currents and their physical interpretation, Ampere's law in magnetized materials, A deceptive parallel, Magnetic susceptibility and permeability.

2. Energy in magnetic fields, Electrodynamics before Maxwell, Maxwell's correction to Ampere's law, Maxwell's equations, Magnetic charge, Maxwell's equations in matter, Boundary conditions.

DG: 6.1.1, 6.1.4, 6.2.1, 6.2.2, 6.2.3, 6.3.1, 6.3.2, 6.4.1
DG: 7.2.4, 7.3.1 to 7.3.6

Unit -IV	**Electromagnetic Waves**	(15 lect.)

1. The continuity equation, Poynting's theorem

2. The wave equation for **E** and **B**, Monochromatic Plane waves, Energy and momentum in electromagnetic waves, Propagation in linear media, Reflection and transmission of EM waves at normal incidence, Reflection and transmission of EM

waves at oblique incidence. DG : 8.1.1, 8.1.2 DG : 9.2.1 to 9.2.3, 9.3.1 to 9.3.3

References

4.	Solutions to Introduction to Electrodynamics: David J. Griffiths (3rd Ed) Prentice Hall of India.

PRACTICALS - SEMESTER V

The T. Y. B. Sc. Syllabus integrates the regular practical work with a series of skill experiments and the project. There will be separate passing head for project work. During the teaching and examination of Physics laboratory work, simple modifications of experimental parameters may be attempted. Attention should be given to basic skills of experimentation which include:

i)	Understanding relevant concepts.
ii)	Planning of the experiments
iii)	Layout and adjustments of the equipments
iv)	Understanding designing of the experiments
v)	Attempts to make the experiments open ended
vi)	Recording of observations and plotting of graphs
vii)	Calculation of results and estimation of possible errors in the observation of results

i) Regular Physics Experiments: A minimum of **06** experiments from each of the course are to be performed and reported in the journal.

ii) Skill Experiments: All the skill experiments are compulsory and must be reported in the journal. Skills will be tested during the examination through viva or practical.

The certified journal must contain a minimum of **12** regular experiments (**06** from each group), **with ALL** Skill experiments in semester V. A separate index and certificate in journal is must for each semester course.

iii) Project Includes:

a)	Review articles/ PC Simulation on any concept in Physics/ Comparative & differentiative study/Improvement in the existing experiment (Design and fabrication concept) /Extension of any regular experiment/Attempt to make experiment open-ended/Thorough survey of existing active components (devices, ICs, methods, means, technologies, generations, applications etc. / any innovative projects having the concept of physics.
b)	Two students (maximum) per project.
c)	For evaluation of project, the following points shall be considered … • Working model (Experimental or Concept based simulation) • Understanding of the project • Data collection • Data Analysis • Innovation/Difficulty • Report

There will be **THREE** turns of **3Hrs each** for the examination of practical courses.

SEMESTER V	
PRACTICAL COURSE: USPHP05	
Sr. No.	**Name of the Experiment**
1	Determination of ‘g’ by Kater’s pendulum

2	Surface tension of soap solution
3	Elastic constants of a rubber tube
4	Determination of dielectric constant
5	Logarithmic decrement
6	Searle's Goniometer
7	Determination of Rydberg's constant
8	Edser's 'A' pattern
9	Determination of wavelength by Step slit
10	Determination of e/m by Thomson's method
11	R. I. by total internal reflection
12	Velocity of sound in air using CRO
PRACTICAL COURSE: USPHP06	
Sr. No.	**Name of the Experiment**
1	Mutual inductance by BG.
2	Capacitance by parallel bridge
3	Hysteresis loop by CRO
4	L/C by Maxwell's bridge
5	Band gap energy of Ge diode
6	Design and study of transistorized astable multivibrator (BB)
7	Design and study of Wien bridge oscillator
8	Design and study of first order active low pass filter circuit (BB)
9	Design and study of first order active high pass filter circuit (BB)
10	Application of IC 555 timer as a ramp generator (BB)
11	LM 317 as constant current source
12	Counters Mod 2, 5, 10 (2 x 5, 5 x 2)
SKILL EXPERIMENTS	
Sr. No.	**Name of the Experiment**
1	Estimation of errors from actual experimental data

2	Soldering and testing of an astable multivibrator (Tr./IC555) circuit on PCB
3	Optical Leveling of Spectrometer
4	Schuster's method
5	Laser beam profile
6	Use of electronic balance: Find the density of a solid cylinder
7	Dual trace CRO: Phase shift measurement
8	C1/C2 by B G
9	Internal resistance of voltage and current source
10	Use of DMM to test diode, transistor and β factor

SEMESTER VI

Theory Course – USPH601: Classical Mechanics

Learning outcomes:

This course will introduce the students to different aspects of classical mechanics. They would understand the kinds of motions that can occur under a central potential and their applications to planetary orbits. The students should also appreciate the effect of moving coordinate system, rectilinear as well as rotating. The students are expected to learn the concepts needed for the important formalism of Lagrange's equations and derive the equations using D'Alembert's principle. They should also be able to solve simple examples using this formalism. The introduction to simple concepts from fluid mechanics and understanding of the dynamics of rigid bodies is also expected. Finally, they should appreciate the drastic effect of adding nonlinear corrections to usual problems of mechanics and nonlinear mechanics can help understand the irregularity we observe around us in nature.

Unit - I	**Central Force**	(15 lect.)
1. Motion under a central force, the central force inversely proportional to the square of the distance, Elliptic orbits, The Kepler problem. 2. Moving origin of coordinates, Rotating coordinate systems, Laws of motion on the rotating earth, The Foucault pendulum, Larmor's theorem. KRS: 3.13 - 3.15, 7.1 - 7.5.		
Unit -II	**Lagrange's equations**	(15 lect.)
1. D'Alembert's principle, Constraints, Examples of holonomic constraints, examples of nonholonomic constraints, degrees of freedom and generalized coordinates, virtual displacement, virtual work, D'Alembert's principle, illustrative problems. 2. Lagrange's equations (using D'Alembert's principle), properties of Lagrange's equations, illustrative problems, canonical momentum, cyclic or ignorable coordinates. PVP: 4.2 to 4.9, 5.2 to 5.4, 7.2, 7.3.		

Unit -III	**Fluid Motion and Rigid body rotation**	(15 lect.)
1. Kinematics of moving fluids, Equation of motion for an ideal fluid, Conservation laws for fluid motion, Steady flow. 2. Rigid dynamics: introduction, degrees of freedom, rotation about an axis: orthogonal matrix, Euler's theorem, Eulerian angles, inertia tensor, angular momentum of rigid body, Euler's equation of motion of rigid body, free motion of rigid body, motion of symmetric top (without notation). KRS : 8.6 to 8.9 PVP: 16.1 to 16.10		
Unit -IV	**Non Linear Mechanics**	(15 lect.)
1. Nonlinear mechanics: Qualitative approach to chaos, The anharmonic oscillator, Numerical solution of Duffing's equation. 2. Transition to chaos: Bifurcations and strange attractors, Aspects of chaotic behavior (Logistic map). BO: 11.1, 11.3 to 11.5		

References	
1.	PVP: Classical Mechanics, P. V. Panat (Narosa).
2.	KRS: Mechanics : Keith R. Symon, (Addision Wesely) 3rd Ed.
3.	BO: Classical Mechanics- a Modern Perspective: V. D. Barger and M. G. Olsson. (Mc Graw Hill International 1995 Ed.)
Additional References	
1.	Classical Mechanics: Herbert Goldstein (Narosa 2nd Ed.).
2.	An Introduction to Mechanics: Daniel Kleppner & Robert Kolenkow Tata Mc Graw Hill (Indian Ed. 2007).
3.	Chaotic Dynamics- an introduction: Baker and Gollub (Cambridge Univ. Press).
4.	Classical Mechanics: J. C. Upadhyaya (Himalaya Publishing House).

Theory Course – USPH602: Electronics

Learning Outcome:

On successful completion of this course students will be able to:

1. Understand the basics of semiconductor devices and their applications.
2. Understand the basic concepts of operational amplifier: its prototype and applications as instrumentation amplifier, active filters, comparators and waveform generation.
3. Understand the basic concepts of timing pulse generation and regulated power supplies
4. Understand the basic electronic circuits for universal logic building blocks and basic concepts of digital communication.
5. Develop quantitative problem solving skills in all the topics covered.

Unit - I		(15 lect.)
1. Field effect transistors: JFET: Basic ideas, Drain curve, The transconductance curve, Biasing in the ohmic region and the active region, Transconductance, JFET common source amplifier, JFET analog switch, multiplexer, voltage controlled resistor, Current sourcing. 2. MOSFET: Depletion and enhancement mode, MOSFET operation and characteristics, digital switching. 3. SCR – construction, static characteristics, Analysis of the operation of SCR, Gate Triggering Characteristics, Variable half wave rectifier and Variable full wave rectifier, Current ratings of SCR. 4. UJT: Construction, Operation, characteristics and application as a relaxation oscillator. 1. MB: 13.1 to 13.9 2. MB: 14.1, 14.2, 14.4, 14.6. 3. AM: 28.1, 28.5		
Unit -II		(15 lect.)
1. Differential Amplifier using transistor: The Differential Amplifier, DC and AC analysis of a differential amplifier, Input characteristic-effect of input bias, offset current and input offset voltage on output, common mode gain, CMRR.		

2. Op Amp Applications: Log amplifier, Instrumentation amplifiers, Voltage controlled current sources (grounded load), First order Active filters, Astable using OP AMP, square wave and triangular wave generator using OP AMP, Wein-bridge oscillator using OP AMP, Comparators with Hysteresis, Window Comparator.

1. MB: 17.1 to 17.5
2. MB: 20.5, 20.8, 21.4, 22.2, 22.3, 22.7, 22.8, 23.

Unit -III		(15 lect.)

1. Transistor Multivibrators: Astable, Monostable and Bistable Multivibrators, Schmitt trigger.

2. 555 Timer: Review Block diagram, Monostable and Astable operation Voltage Controlled Oscillator, Pulse Width modulator, Pulse Position Modulator, Triggered linear ramp generator.

3. Regulated DC power supply: Supply characteristics, series voltage regulator, Short circuit protection (current limit and fold back) Monolithic linear IC voltage Regulators. (LM 78XX, LM 79XX, LM 317, LM337).

1. AM: 18.11
2. KVR: 14.5.2.1, 14.5.2.5, 14.5.2.6, 14.5.4.1
3. MB: 23.8, 23.9
4. MB: 24.1, 24.3, 24.4

Unit -IV		(15 lect.)

1. Logic families: Standard TTL NAND, TTL NOR, Open collector gates, Three state TTL devices, MOS inverters, CMOS NAND and NOR gates, CMOS characteristics.

2. Digital Communication Techniques: Digital Transmission of Data, Benefits of Digital Communication, Disadvantages of Digital Communication, Parallel and Serial Transmission, Pulse Modulation, Comparing Pulse-Modulation Methods (PAM, PWM, PPM), Pulse-Code Modulation.

1. ML: 6.2, 6.4, 6.6, 6.7, 7.2 to 7.4.
2. LF: 7.1, 7.2, 7.4

Theory Course – USPH603: Nuclear Physics

Objectives:

The course is built on exploring the fundamentals of nuclear matter as well as considering some of the important applications of nuclear physics. Topics include decay modes – (alpha, beta & gamma decay), nuclear models (liquid drop model, introduction to shell model), Applications of Nuclear Physics in the field of particle accelerators and energy generation, nuclear forces and elementary particles. The lecture course will be integrated with problem solving.

Learning Outcomes:

- Upon successful completion of this course, the student will be able to understand
  the fundamental principles and concepts governing classical nuclear and particle physics and have a knowledge of their applications interactions of ionizing radiation with matter the key techniques for particle accelerators the physical processes involved in nuclear power generation.
- Knowledge on elementary particles will help students to understand the fundamental constituents of matter and lay foundation for the understanding of unsolved questions about dark matter, antimatter and other research oriented topics.

Unit - I	**Alpha & Beta Decay**	(15 lect.)

1. Alpha decay: Velocity, energy, and Absorption of alpha particles: Range, Ionization and stopping power, Nuclear energy levels. Range of alpha particles, alpha particle spectrum, Fine structure, long range alpha particles, Alpha decay paradox: Barrier penetration (Gamow's theory of alpha decay and Geiger-Nuttal law).

2. Beta decay: Introduction, Velocity and energy of beta particles, Energy levels and decay schemes, Continuous beta ray spectrum-Difficulties encountered to understand it, Pauli's neutrino hypothesis, Detection of neutrino, Energetics of beta decay.

1. IK: 13. 1, 13.2, 13.5, SBP: 4. II. 1, 4. II. 2, 4. II. 3, 1.II.3
2. IK: 14.1, 14.7, SBP: 4. III. 1, 4. III. 2, 4. III. 3, 4. III. 5, SNG : 5.5.

Unit -II	**Gamma Decay & Nuclear Models**	(15 lect.)

1. Gamma decay: Introduction, selection rules, Internal conversion, nuclear isomerism, Mossbauer effect.

2. Nuclear Models: Liquid drop model, Weizsacker's semi-empirical mass formula, Mass parabolas - Prediction of stability against beta decay for members of an isobaric family, Stability limits against spontaneous fission. Shell model (Qualitative), Magic numbers in the nucleus.

1. SBP: 4. IV. 1, 4. IV.2, 4. IV. 3, 4. IV. 4, 9.4
2. SBP: 5.1, 5.3, 5.4, 5.5. AB: 11.6-pages (460,461).

Unit -III	**Nuclear Energy & Particle Accelerators**	(15 lect.)

1. Nuclear energy: Introduction, Asymmetric fission - Mass yield, Emission of delayed neutrons, Nuclear release in fission, Nature of fission fragments, Energy released in the fission of U235, Fission of lighter nuclei, Fission chain reaction, Neutron cycle in a thermal nuclear reactor (Four Factor Formula), Nuclear power and breeder reactors, Natural fusion Possibility of controlled fusion.

2. Particle Accelerators: Van de Graaff Generator, Cyclotron, Synchrotron, Betatron and Idea of Large Hadron Collider.

1. SBP: 6.1, 6.3 to 6.9, 9.6, 9.7, 8.1,8.2,8.3
2. SBP: 1.I.4 (i), 1.I.4 (ii), 1.I.4 (iii), 1.I.4 (iv), 6.9, AB: 13.3

Unit -IV	**Nuclear force & Elementary particles**	(15 lect.)

1. Nuclear force: Introduction, Deuteron problem, Meson theory of Nuclear Force- A qualitative discussion.

2. Elementary particles: Introduction, Classification of elementary particles, Particle interactions, Conservation laws (linear &angular momentum, energy, charge, baryon number & lepton number), particles and antiparticles (Electrons and positrons, Protons and anti-protons, Neutrons and anti-neutrons, Neutrinos and anti-neutrinos), Photons, Mesons, Quark model (Qualitative).

1. SBP: 8.6
2. DCT: 18.1, 18.2,18.3, 18.4 , 18.5 to 18.9 AB: 13.5

Theory Course – USPH604: Special Theory of Relativity

Learning outcomes:

This course introduces students to the essence of special relativity which revolutionized the concept of physics in the last century by unifying space and time, mass and energy, electricity and magnetism. This course also gives a very brief introduction of general relativity. After the completion of the course the student should be able to

1. Understand the significance of Michelson Morley experiment and failure of the existing theories to explain the null result
2. Understand the importance of postulates of special relativity, Lorentz transformation equations and how it changed the way we look at space and time, Absolutism and relativity, Common sense versus Einstein concept of Space and time.
3. Understand the transformation equations for: Space and time, velocity, frequency, mass, momentum, force, Energy, Charge and current density, electric and magnetic fields.
4. Solve problems based on length contraction, time dilation, velocity addition, Doppler effect, mass energy relation and resolve paradoxes in relativity like twin paradox etc.

Unit - I		(15 lect.)

Introduction to Special theory of relativity:
Inertial and Non-inertial frames of reference, Galilean transformations, Newtonian relativity, Electromagnetism and Newtonian relativity. Attempts to locate absolute frame: Michelson- Morley experiment (omit derivation part), Attempts to preserve the concept of a preferred ether frame: Lorentz Fitzgerald contraction and Ether drag hypothesis (conceptual), Stellar aberration, Attempt to modify electrodynamics.

Relativistic Kinematics - I: Postulates of the special theory of relativity, Simultaneity, Derivation of Lorentz transformation equations. Some consequences of the Lorentz transformation equations: length contraction, time dilation and meson experiment, The observer in relativity.

RR: 1.1 to 1.9, 2.1 to 2.5

Unit -II		(15 lect.)
Relativistic Kinematics - II: The relativistic addition of velocities, acceleration transformation equations, Aberration and Doppler effect in relativity, The common sense of special relativity. **The Geometric Representation of Space-Time:** Space-Time Diagrams, Simultaneity, Length contraction and Time dilation, The time order and space separation of events, The twin paradox. RR: 2.6 to 2.8, Supplementary topics A1, A2, A3, B1, B2, B3.		
Unit -III		(15 lect.)
Relativistic Dynamics: Mechanics and Relativity, The need to redefine momentum, Relativistic momentum, Alternative views of mass in relativity, The relativistic force law and the dynamics of a single particle, The equivalence of mass and energy, The transformation properties of momentum, energy and mass. RR: 3.1 to 3.7		
Unit -IV		(15 lect.)
Relativity and Electromagnetism: Introduction, The interdependence of Electric and Magnetic fields, The Transformation for E and B, The field of a uniformly moving point charge, Force and fields near a current-carrying wire, Force between moving charges, The invariance of Maxwell's equations. The principle of equivalence and general relativity, Gravitational red shift. RR: 4.1 to 4.7. Supplementary topic C1, C2, C3, C4. **Note: (A good number of problems to be solved from Resnick).**

5.	Chapter 2: Modern Physics by Kenneth Krane.

SEMESTER VI

The T. Y. B. Sc. Syllabus integrates the regular practical work with a series of demonstration experiments and the project. There will be separate passing head for project work. During the teaching and examination of Physics laboratory work, simple modifications of experimental parameters may be attempted. Attention should be given to basic skills of experimentation which include:

i)	Understanding relevant concepts.
ii)	Planning of the experiments.
iii)	Layout and adjustments of the equipments
iv)	Understanding designing of the experiments
v)	Attempts to make the experiments open ended
vi)	Recording of observations and plotting of graphs
vii)	Calculation of results and estimation of possible errors in the observation of results.

i) Regular Physics Experiments: A minimum of **06** experiments from each of the practical course are to be performed and reported in the journal.

ii) Demonstration Experiments: The demonstration experiments are to be performed by the teacher in the laboratory and students should be encouraged to participate and take observation wherever possible.

Demonstration experiments are designed to bring about interest and excitement in Physics. Students are required to enter details of these 'demonstration' experiments in their journal.

The certified journal must contain a minimum of **12** regular experiments (**06** from each practical course), **MINIMUM 06** demonstration experiments in semester VI. A separate index and certificate in journal is must for each course in each semester.

iii) Project Details:

a)	**Project Includes:** Review articles/Simulation on PC on any concept in Physics/ Comparative & differentiative study/Improvement in the existing experiment (Design and fabrication concept) /Extension of any regular experiment/Attempt to make experiment open-ended/Thorough survey of existing active components (devices, ICs, methods, means, technologies, generations, applications etc. / any innovative projects using the concept of physics.
b)	Students/project : 02 (maximum)
c)	Evaluation of the project: The following points shall be considered. • Working model (Experimental or Concept based simulation) • Understanding of the project • Data collection • Data Analysis • Innovation/difficulty • Report

There will be **THREE** turns of **three hours each** for the examination of practical courses.

SEMESTER VI	
PRACTICAL COURSE: USPHP07	
Sr. No.	**Name of the Experiment**
1	Surface tension of mercury by Quincke's method
2	Thermal conductivity by Lee's method
3	Study of JFET characteristics
4	JFET as a common source amplifier
5	JFET as switch (series and shunt)
6	UJT characteristics and relaxation oscillator
7	Study of Pulse width modulation (BB)

8	Study of Pulse position modulation (BB)
9	Determination of h/e by photocell
10	R. P. of Prism
11	Double refraction
12	Lloyd's single mirror: determination of wavelength
PRACTICAL COURSE: USPHP08	
Sr. No.	**Name of the Experiment**
1	Determination of M/C by using BG
2	Self-inductance by Anderson's bridge
3	Hall effect
4	Solar cell characteristics and determination of V_{oc}, I_{sc} and P_{max}
5	Design and study of transistorized monostable multivibrator (BB)
6	Design and study of transistorized bistable multivibrator (BB)
7	Application of Op-Amp as a window comparator
8	Application of Op-Amp as a Log amplifier
9	Application of IC 555 as a voltage to frequency converter (BB)
10	Application of IC 555 as a voltage to time converter (BB)
11	LM-317 as variable voltage source
12	Shift register
DEMONSTRATION EXPERIMENTS	
Sr. No.	**Name of the Experiment**
1	Open CRO, Power Supply, and Signal Generator: block diagrams
2	Data sheets: Diodes, Transistor, Op-amp & Optoelectronic devices
3	Zeeman Effect
4	Michelson's interferometer
5	Constant deviation spectrometer (CDS)
6	Digital storage oscilloscope (DSO)
7	Determination of Op-Amp parameters (offset voltage, slew rate,

	input impedance, output impedance, A_{CM})
8	Transformer (theory, construction and working), types of transformers and energy losses associated with them.
9	Use of LCR meter
10	Lux meter / Flux meter

UNIVERSITY OF MUMBAI
No. UG/51 of 2018-19

CIRCULAR:-

Attention of the Principals of the affiliated Colleges and Directors of the recognized Institutions in Humanities and Sci. & Tech. Faculty is invited to this office Circular No. UG/107 of 2010, dated 29th May, 2010 and Circular No. UG/108 of 2010 dated 28th May, 2010 relating to syllabus of the B.A./B.Sc. degree course.

They are hereby informed that the recommendations made by the Board of Studies in Statistics at its meeting held on 3rd May, 2018 have been accepted by the Academic Council at its meeting held on 5th May, 2018 **vide** item No. 4.69 and that in accordance therewith, the revised syllabus as per the (CBCS) for the T.Y.B.A./B.Sc. in Statistics (Sem - V & VI), has been brought into force with effect from the academic year 2018-19, accordingly. (The same is available on the University's website www.mu.ac.in).

(Dr. Dinesh Kamble)
I/c REGISTRAR

MUMBAI – 400 032
26th June, 2018

To

The Principals of the affiliated Colleges & Directors of the recognized Institutions in Humanities and Sci. & Tech. Faculty. (Circular No. UG/334 of 2017-18 dated 9th January, 2018.)

	II	NUMPY, PANDAS AND DATA EXPLORATION		15
	III	DESCRIPTIVE STATISTICS AND STATISTICAL METHODS		15
	IV	INFERENTIAL STATISTICS		15

Course	Practicals	Credits	Lectures per week
USSTP05	Practicals of course USST501+USST502	3	8
USSTP06	Practicals of course USST503+USST504	3	8

Course Code	Title	Credits
USST501	**PROBABILITY AND DISTRIBUTION THEORY**	**2.5 Credits (60 Lectures)**
Unit I : PROBABILITY (i) Basic definitions: Random Experiment, Outcome, Event, Sample Space, Complementary, Mutually Exclusive, Exhaustive and Equally Likely Events. (ii) Mathematical, Statistical, Axiomatic and Subjective probability. (iii) Addition Theorem for (a) two (b) three events (iv) Conditional Probability: Multiplication Theorem for two, three events. (v) Bayes' theorem. (vi) Theorems on Probability of realization of : (a) At least one (b) Exactly m (c) At least m of N events A_1, A_2, $A_3 \ldots A_N$. Classical occupancy problems, Matching and Guessing problems. Problems based on them.		**15 Lectures**
Unit II : INEQUALITIES AND LAW OF LARGE NUMBERS (i) Markov Inequality (ii) Tchebyshev's Inequality (iii) Boole's Inequality (iv) Cauchy Schwartz's Inequality (v) Weak law of large numbers. (Ref.9,10)		**15 Lectures**

Unit III: JOINT MOMENT GENERATING FUNCTION, TRINOMAIL DISTRIBUTION AND MULTINOMIAL DISTRIBUTION (i) Definition and properties of Moment Generating Function (MGF) of two random variables of discrete and continuous type. Necessary and Sufficient condition for independence of two random variables. Concept and definition of Bivariate MGF. **(ii) Trinomial distribution** Definition of joint probability distribution of (X, Y). Joint moment generating function, moments μ_{rs} where r=0, 1, 2 and s=0, 1, 2. Marginal & Conditional distributions. Their Means & Variances. Correlation coefficient between (X, Y). Distribution of the Sum X+Y Extension to Multinomial distribution with parameters (n, p1, p2,…pk-1) where p1+ p2,+…pk-1+ pk = 1. Expression for joint MGF. Derivation of: joint probability distribution of (Xi, Xj). Conditional probability distribution of Xi	**15 Lectures**
Unit IV: ORDER STATISTICS (i) Definition of Order Statistics based on a random sample. (ii) Derivation of: (a) Cumulative distribution function of r^{th} order statistic. (b) Probability density functions of the r^{th} order statistic. (c) Joint Probability density function of the r^{th} and the s^{th} order statistic (r<s) (d) Joint Probability density functions of all n ordered statistics. (e) Distribution of Maximum observation (n^{th} order statistic) and Minimum observation (first order statistic) in case of uniform and Exponential distribution . (f) Probability density function of the difference between r^{th} and s^{th} order statistic (r<s) in case of uniform and Exponential distribution (Ref.2,3,4)	**15 Lectures**

Course Code	Title	Credits
USST502	**THEORY OF ESTIMATION**	**2.5 Credits (60 Lectures)**

Unit I : POINT ESTIMATION AND PROPERTIES OF ESTIMATORS — **15 Lectures**

- **Notion of a Parameter and Parameter Space.**
- **Problem of Point estimation.**
- **Definitions : Statistic, Estimator and Estimate.**
- **Properties of a good estimator** :

1. Unbiasedness **:**Definition of an unbiased estimator, Illustrations and examples.
   Proofs of the following results:

(i) Two distinct unbiased estimators of $U(\theta)$ give rise to infinitely many unbiased estimators.

(ii) If T is an unbiased estimator of θ then U(T) is an unbiased estimator of $U(\theta)$ provided $U(\cdot)$ is a linear function.

2. Consistency**:**Definition of Consistency.
Sufficient condition for consistency , proof & Illustrations

3. Sufficiency **:**Concept and Definition of sufficient statistic. Neyman's Factorization theorem (without proof).Exponential family of probability distributions and sufficient statistics.

4. Relative efficiencyof an estimator & illustrative examples.

• **Minimum variance unbiased estimator(MVUE) and Cramer Rao Inequality:** 1.Definition of MVUE 2. Uniqueness property of MVUE (proof). 3. Fisher's information function 4.Regularity conditions. 5. Statement and proof of Cramer-Rao inequality. 6. Cramer-Rao lower bound (CRLB), Efficiency of an estimator using CRLB. 7. Condition when equality is attained in Cramer Rao Inequality and its use in finding MVUE. Ref. 1,3,8	
UNIT II : METHODS OF POINT ESTIMATION • **Method of Maximum Likelihood Estimation (M.L.E.) :** **1.** Definition of likelihood as a function of unknown parameter for a random sample from: Discrete distribution & Continuous distribution. **2.** Derivation of Maximum likelihood estimator (M.L.E.) for parameters of Standard distributions (case of one and two unknown parameters). **3**. Properties of MLE (without proof). • **Method of Moments :** 1. Derivation of Moment estimators for standard distributions (case of one and two unknown parameters) • Illustrations of situations where MLE and Moment Estimators are distinct and their comparison using Mean Square error. • **Method of Minimum Chi-square and Modified Minimum Chi-Square** Ref: 1,2,3	**15 Lectures**

UNIT III: BAYESIAN ESTIMATION METHOD & INTERVAL ESTIMATION • **Bayes Estimation:** 1. Prior distribution, Posterior distribution 2. Loss function, Risk function 3. Types of Loss function: Squared error Loss function (SELF), Absolute error Loss function (AELF) 4. Bayes' risk. 5.Bayes' method of finding Point estimator (assuming SELF) **Examples** : (i) Binomial- Beta (ii) Poisson- Gamma (iii) Gamma-Gamma (iv) Normal-Normal • **Interval Estimation:** 1. Concept of confidence interval & confidence limits. 2. Definition of Pivotal quantity and its use in obtaining confidence limits. 3. Derivation of 100(1-α) % equal tailed confidence interval for : (a)The population mean : $\mu, \mu_1 - \mu_2$ (population variance known/ unknown) (b) the population variance: $\sigma^2, \frac{\sigma_1^2}{\sigma_2^2}$(Normal distribution). Confidence interval for the parameters of Binomial, Poisson and Exponential distributions. Ref. 1,2,3	**15 Lectures**
UNIT IV:INTRODUCTION TO LINEAR MODELS • **Explanation of General Linear Model of full rank with assumptions.** **Model:** $\mathbf{Y} = \mathbf{X}\beta + \underline{\mathbf{e}}$ **where** $\underline{\mathbf{e}} \sim \mathbf{N}(\mathbf{0}, \sigma^2\mathbf{I})$ • **Derivation of** : 1) Least squares estimator of $\underline{\beta}$ 2) $E(\hat{\beta})$ 3) $V(\hat{\beta})$	**15 Lectures**

• **GuassMarkoff theorem for full rank Model: $Y = X\beta + e$.** • **Derivation of :** 1) $E(l'\tilde{\beta})$ 2) $V(l'\tilde{\beta})$. • **Confidence interval for $l'\beta$ when σ^2 is known.** • **Confidence interval of $\hat{\beta}$ when σ^2 is known.** Ref. 9,10.

10. F.A. Graybill; An Introduction to Linear Models

2Course Code	Title	Credits
USST503	**BIOSTATISTICS**	**2.5 Credits (60 lectures)**
Unit I : EPIDEMIC MODELS (i) The features of Epidemic spread. Definitions of various terms involved. Simple mathematical models for epidemics: Deterministic model without removals (for 'a' introductions), Carrier model. (ii) Chain binomial models. Reed-Frost and Greenwood models. Distribution of individual chains and total number of cases. Maximum likelihood estimator of `p' and its asymptotic variance for households of sizes up to 4. (Ref. 1)		**15 Lectures**
Unit II : BIOASSAYS (i) Meaning and scope of bioassays. Relative potency. Direct assays. Fieller's theorem. (ii) Indirect assays. Dose-response relationship. Conditions of similarity and Monotony. Linearizing transformations. Parallel line assays. Symmetrical (2, 2) and (3, 3) parallel line assays. Validity tests using orthogonal contrasts. Point Estimate and Interval Estimate of Relative potency. (iii)Quantal Response assays. Tolerance distribution. Median effective dose ED50 and LD50. Probit and Logit analysis. (Ref.2, 3)		**15 Lectures**
Unit III : CLINICAL TRIALS : Introduction to clinical trials : The need and ethics of clinical trials. Common terminology used in clinical trials. Over view of phases (I-IV). Introduction to ICH E9 guidelines, Study Protocol, Case record/Report form, Blinding (Single/Double) Randomized controlled (Placebo/Active controlled), Study Designs (Parallel, Cross Over). Types of Trials : Inferiority, Superiority and Equivalence, Multicentric		**15 Lectures**

Trial. Inclusion/Exclusion Criteria. Sample size estimation. (Ref. 4, 5, 6, 7, 8)	
Unit IV : CLINICAL TRIALS and BIOEQUIVALENCE : Statistical tools : Analysis of parallel Design using Analysis of Variance. Concept of odds ratio. Concept of Repeated Measures ANOVA. Survival analysis for estimating Median survival time, Kaplan-Meire approach for survival analysis. BIOEQUIVALENCE : Definitions of Generic Drug product. Bioavailability, Bioequivalence, Pharmacokinetic (PK) parameters C_{max}, AUC_t , $AUC_{0-\infty}$, T_{max}, K_{el}, T_{half}. Estimation of PK parameters using `time vs. concentration' profiles. Designs in Bioequivalence: Parallel, Cross over (Concept only). Advantages of Crossover design over Parallel design. Analysis of Parallel design using logarithmic transformation (Summary statistics, ANOVA and 90% confidence interval). Confidence Interval approach to establish bioequivalence (80/125 rule). (Ref. 4, 5, 6, 7, 8, 9)	**15 Lectures**

	Title	Credits
USST504A	**Regression Analysis using R software**	**2.5 Credits (60 lectures)**

Unit I : Fundamentals of R — **15 Lectures**

Introduction to R features of R, installation of R, Starting and ending R session, getting help in R , Value assigning to variables

Basic Operations : +, -, *, ÷, ^, sqrt

Numerical functions : log 10, log , sort, max, unique, range, length, var, prod, sum, summary, dim, sort, five num etc

Data Types : Vector, list, matrices, array and data frame

Variable Type and factor : logical, numeric, integer, complex, character

Data Manipulation : Selecting random N rows, removing duplicate row(s), dropping a variable(s), Renaming variable(s), sub setting data, creating a new variable(s), selecting of random fraction of row(s), appending of row(s) and column(s), simulation of variables.

Data Processing : Data import and export, setting working directory, checking structure of Data :Str(), Class(), Changing type of variable (for eg as.factor, as.numeric)

Data Visualisation using ggplot: Simple bar diagram, subdivided bar diagram, multiple bar diagram pie diagram, Box plot for one and more variables, histogram, frequency polygon, scatter plot

eg plot() (Ref.6, 7, 8, 9,10)	
Unit II : Simple linear regression model Assumptions of the model, Derivation of ordinary least square (OLS) estimators of regression coefficients for simple, Properties of least square estimators (without proof), Coefficient of determination R^2 and adjusted R^2 , Procedure of testing a) Overall significance of the models b) Significance of individual coefficients c) Confidence intervals for the regression coefficients Data Pre-processing: Detection and treatment of missing value(s)and outliers, Variable selection and Model building, Interpretation of output produced by lm command in R. Weighted Least Square Method, Polynomial Regression Models. (Ref. 1,2,3,4,5)	**15 Lectures**
Unit III : Multiple linear regression model Derivation of ordinary least square (OLS) estimators of regression coefficients for multiple regression models, Coefficient of determination R^2 and adjusted R^2 , Procedure of testing a) Overall significance of the models b) Significance of individual coefficients c) Confidence intervals for the regression coefficients Data Pre-processing: Detection and treatment of missing value(s) and outliers, Variable selection and Model building, Interpretation of output produced by lm command in R. (Ref. 1,2,3,4,5)	**15 Lectures**
Unit IV : Validity of Assumptions Residual Diagnostics: Standardized residuals, Studentized residuals, residual plots, Interpretation of four plots of ,Interpretation output produced by plot command in R and corrective measures such as transformation of response variable, testing normality of data . Autocorrelation: Concept and detection using Durbin Watson Test, Interpretation of output produced by DW-test function in R, Heteroscedasticity: Concept and detection using Breusch –Pagan-Godfrey Test, Interpretation of output produced by bptest function in R, Multicollinearity: Concept and detection using R^2 and t-ratios ii) pairwise correlation between repressors iii) Variance Inflation Factor(VIF), Interpretation of output produced by mctest function in R, Consequences of using OLS estimators in presence of Autocorrelation, Heteroscedasticity and Multicollinearity, Remedial measures, Ridge Regression : Concept and case study using R, (Ref. 1,2,3,4,5)	**15 Lectures**

DISRIBUTION OF TOPICS FOR PRACTICALS

SEMESTER V

COURSE CODE USSTPO5 :

Sr. No.	Practical topics from USST501		Sr. No.	Practical topics from USST502
5.1.1	Probability-I		5.2.1	MVUE and MVBUE
5.1.2	Probability-II		5.2.2	Methods of Estimation
5.1.3	Inequalities and WLLN		5.2.3	Baye's Estimaion
5.1.4	Trinomial and Multinomial Distribution		5.2.4	Confidence Interval
5.1.5	Order statistics-I		5.2.5	Linear model
5.1.6	Order statistics-II		5.2.6	Use of R software

COURSE CODE USSTPO6 :

Sr. No.	Practical topics from USST503		Sr. No.	Practical topics from USST504A	Sr. No.	Practical topics from USST504B
5.3.1	Epidemic Models		5.4A.1	Fundamentals of R	5.4B.1	Descriptive statistics
5.3.2	Direct Assays		5.4A.2	Graphs using R	5.4B.2	Correlations and Simple Regression
5.3.3	Parallel Line Assays		5.4A.3	Diagrams using R	5.4B.3	Probability Distributions :Discrete
5.3.4	Quantal Response Assays		5.4A.4	Simple Linear Regression using R	5.4B.4	Probability Distributions :Continuous
5.3.5	Clinical Trials		5.4A.5	Weighted Least Square using R	5.4B.5	Statistical Test: t test Chisquare and F test
5.3.6	Bioequivalance		5.4A.6	Multiple Linear Regression and Ridge Regression using R	5.4B.6	ANOVA

T. Y. B. Sc. STATISTICS SYLLABUS

CREDIT BASED AND CHOICE SYSTEM

TO BE IMPLEMENTED FROM THE ACADEMIC YEAR 2018-19

SEMESTER VI

Theory

COURSE	UNIT	TOPICS	CREDITS	LECTURES
USST601	I	BIVARIATE NORMAL DISTRIBUTION	2.5	15
	II	GENERATING FUNCTIONS		15
	III	STOCHASTIC PROCESSES		15
	IV	QUEUING THEORY		15
USST602	I	MOST POWERFUL TESTS	2.5	15
	II	UNIFORMLY MOST POWERFUL & LIKELIHOOD RATIO TESTS		15
	III	SEQUENTIAL PROBABILITY RATIO TESTS		15
	IV	NON-PARAMETRIC TESTS		15
USST603	I	LINEAR PROGRAMMING PROBLEM	2.5	15
	II	INVENTORY CONTROL		15
	III	REPLACEMENT		15
	IV	SIMULATION AND RELIABILITY		15
USST604A (Elective)	I	MORTALITY TABLES	2.5	15
	II	COMPOUND INTEREST AND ANNUITIES CERTAIN		15
	III	LIFE ANNUITIES		15
	IV	ASSURANCE BENEFITS		15
USST604B (Elective)	I	INTRODUCTION TO BASIC STATISTICS	2.5	15
	II	SIX SIGMA		15
	III	CONTROL CHARTS I		15
	IV	CONTROL CHARTS II		15

Course	Practicals	Credits	Lectures per week
USSTP07	**Practicals of course USST601+USST602**	**3**	**8**
USSTP08	**Practicals of course USST603+USST604**	**3**	**8**

Course Code	Title	Credits
USST601	**DISTRIBUTION THEORY AND STOCHASTIC PROCESSES**	**2.5 Credits (60 lectures)**
Unit I : BIVARIATE NORMAL DISTRIBUTION (i) Definition of joint probability distribution (X, Y). Joint Moment Generating function, moments μ_{rs} where r=0, 1, 2 and s=0, 1, 2. Marginal & Conditional distributions. Their Means & Variances. Correlation coefficient between the random variables. Necessary and sufficient condition for the independence of X and Y. Distribution of aX + bY, where 'a' and 'b' are constants. (ii) Distribution of sample correlation coefficient when $\rho = 0$.Testing the significance of a correlation coefficient. Fisher's z – transformation. Tests for i) H_0: $\rho = \rho_0$ ii) H_0: $\rho_1 = \rho_2$, Confidence interval for ρ. (Ref. 2,3,5,9)		**15 Lectures**
Unit II : GENERATING FUNCTIONS Definitions of generating function and probability generating function. Expression for mean and variance in terms of generating functions. Definition of a convolution of two or more sequences. Generating function of a convolution. Generating functions of the standard discrete distributions. Relation between: i) Bernoulli and Binomial distributions ii) Geometric and Negative Binomial distributions in terms of convolutions. (Ref.1,5)		**15 Lectures**
Unit III : STOCHASTIC PROCESSES Definition of stochastic process. Postulates and difference differential equations for : (i)Pure birth process, (ii)Poisson process with initially 'a' members, for a =0 and a >0, (iii)Yule Furry process, (iv)Pure death process, (v)Death process with $\mu_n=\mu$, (vi) Death process with $\mu_n= n\mu$, (vii)Birth and death process, (viii)Linear growth model. Derivation of P_n (t), mean and variance where ever applicable. (Ref.1,7,9)		**15 Lectures**
Unit IV : QUEUING THEORY Basic elements of the Queuing model. Roles of the Poisson and Exponential distributions. Derivation of Steady state probabilities for birth and death process. Steady state probabilities and various average characteristics for the following models: (i) (M/M/1) : (GD/ ∞ /∞) (ii) (M/M/1) : (GD/ N /∞) (iii) (M/M/c) : (GD/∞/∞) (iv) (M/M/c) : (GD/ N /∞) (v) (M/M/∞) : (GD/ ∞ /∞) (Ref.6)		**15 Lectures**

Course Code	Title	Credits
USST602	**TESTING OF HYPOTHESIS**	**2.5 Credits (60 lectures)**

Unit I : MOST POWERFUL TESTS — **15 Lectures**

- Problem of testing of hypothesis.
- Definitions and illustrations of i) Simple hypothesis ii) Composite hypothesis iii)Null Hypothesis iv) Alternative Hypothesis v)Test of hypothesis vi) Critical region vii) Type I and Type II errors viii) Level of significance ix) p-value x) Size of the test xi) Power of the test xii) Power function of a test xiii) Power curve.
- Definition of most powerful test of size α for a simple hypothesis against a simple alternative hypothesis. Neyman-Pearson fundamental lemma. Randomised test (Ref. 1,2,10)

Unit II :UNIFORMLY MOST POWERFUL& LIKELIHOOD RATIO TESTS — **15 Lectures**

- Definition, Existence and Construction of Uniformly most powerful (UMP) test (Ref. 1,2,10)
- Likelihood ratio principle: Definition of test statistic and its asymptotic distribution (statement only). Construction of LRT for the mean of Normal distribution for (i) Known σ^2 (ii) Unknown σ^2(two sided alternatives).LRT for variance of normal distribution for (i) known μ (ii) unknown μ (two sided alternatives hypothesis) (Ref. 1,2,3,4)

Unit III: SEQUENTIAL PROBABILITY RATIO TESTS — **15 Lectures**

- Sequential test procedure for testing a simple null hypothesis against a simple alternative hypothesis. Its comparison with fixed sample size (Neyman-Pearson) test procedure.
- Definition of Wald's SPRT of strength (α, β). Graphical/Tabular procedure for carrying out SPRT. Problems based on Bernoulli, Binomial. Poisson, Normal & Exponential distributions. (Ref. 1,6,7,8)

Unit IV: NON-PARAMETRIC TESTS — **15 Lectures**

- Need for non parametric tests.
- Distinction between a parametric and a non parametric test.
- Concept of a distribution free statistic. Single sample and two sample Nonparametric tests. (i) Sign test (ii) Wilcoxon's signed rank test (iii) Median test (iv) Mann–Whitney test (v) Run test (vi) Fisher exact test (vii) Kruskal -Wallis test (viii) Friedman test

• Assumptions, justification of the test procedure for small & large samples . (Ref.5,9)

Course Code	Title	Credits
USST603	**OPERATIONS RESEARCH TECHNIQUES**	**2.5 Credits (60 lectures)**
Unit I : LINEAR PROGRAMMING PROBLEM Two-Phase Simplex Method, Algorithm. Dual Simplex Method, Algorithm. Post Optimality Sensitivity Analysis. Effect on optimal solution to the LPP and improvement in the solution due to (i) Change in cost coefficient, (ii)Change in the element of requirement vector, (iii) Addition/deletion of a variable,(iv) Addition/deletion of a constraint. (All expressions without proof) (Ref. 2, 3)		**15 Lectures**
Unit II : INVENTORY CONTROL Introduction to Inventory Problem **Deterministic Models :** Single item static EOQ models for (i) Constant rate of demand with instantaneous replenishment, with and without shortages. (ii) Constant rate of demand with uniform rate of replenishment, with and without shortages. (iii)Constant rate of demand with instantaneous replenishment without shortages, with at most two price breaks. **Probabilistic models :** Single period with (i) Instantaneous demand (discrete and continuous) without setup cost. (ii) Uniform demand (discrete and continuous) without set up cost. (Ref. 1, 2, 3)		**15 Lectures**
Unit III : REPLACEMENT Replacement of items that deteriorate with time and value of money (i) remains constant, (ii) changes with time. Replacement of items that fail completely : Individual replacement and Group replacement policies. (Ref. 3)		**15 Lectures**
Unit IV : SIMULATION AND RELIABILITY Concept and Scope of simulation. Monte Carlo Technique of Simulation.Generation of random numbers using (i) Mid. Square Method and (ii) Multiplicative Congruential Method. Inverse method of generation of random observations from (i) Uniform distribution, (ii) Exponential distribution, (iii) Gamma distribution, (iv) Normal distribution. Simulation techniques applied to inventory and queueing model. (Ref. 1, 4) RELIABILITY: Concept of reliability, Hazard-rate. Bath tub curve. Failure time distributions : (i) Exponential, (ii) Gamma, (iii) Weibull, (iv)		**15 Lectures**

Gumbel, Definitions of increasing (decreasing) failure rate.System Reliability. Reliability of (i) series ; (ii) parallel system of independent components having exponential life distributions. Mean Time to Failure of a system (MTTF).	(Ref. 5,6)

Course Code	Title	Credits
USST604A	**ACTURIAL SCIENCE**	**2.5 Credits (60 lectures)**
Unit I: MORTALITY TABLES Various mortality functions. Probabilities of living and dying. The force of mortality. Estimation of μx from the mortality table. Central Mortality Rate. Laws of mortality: Gompertz's and Makeham's first law. Select, Ultimate and Aggregate mortality tables. Stationary population. Expectation of life and Average life at death. (Ref.2,3)		15 Lectures
Unit II: COMPOUND INTEREST AND ANNUITIES CERTAIN Accumulated value and present value, nominal and effective rates of interest. Varying rates of interest. Equation of value. Equated time of payment. Present and accumulated values of annuity certain (immediate and due) with and without deferment period. Present value for perpetuity (immediate and due) with and without deferment Period. Present and accumulated values of (i) increasing annuity (ii) increasing annuity when successive instalments form arithmetic progression (iii) annuity with frequency different from that with which interest is convertible. Redemption of loan. (Ref.2)		15 Lectures
Unit III: LIFE ANNUITIES Present value in terms of commutation functions of Life annuities and Temporary life annuities (immediate and due) with and without deferment period. Present values of Variable, increasing life annuities and increasing Temporary life annuities (immediate and due). (Ref.1,2)		15 Lectures
Unit IV: ASSURANCE BENEFITS Present value of Assurance benefits in terms of commutation functions of : (i) pure endowment assurance (ii) temporary assurance (iii) endowment assurance (iv) whole life assurance (v) double endowment assurance (vi) special endowment assurance (vii) deferred temporary assurance. Net premiums: Net level annual premiums (including limited period of payment) for various assurance plans .Natural and Office premiums. (Ref.1,2)		15 Lectures

Course Code	Title	Credits
USST604B	**INTRODUCTION TO SIX SIGMA**	**2.5 Credits (60 lectures)**
Unit I : INTRODUCTION TO BASIC STATISTICS Descriptive Statistics, Data Distribution, Skewness, Kurtosis, Box and Whisker plots, Inferential Statistics (Sample, Population, Normal Distribution, CLT theorem, Sampling distribution of mean), Hypothesis testing with Normal and Non-Normal data : [*1 and 2 sample tests, 1 sample variance, One way ANOVA, Mann-Whitney U test, Kruskal-Wallis test, Moods median test, Chi-square test*], Regression analysis, Designed experiments. (Ref. 1,2)		**15 Lectures**
Unit II : SIX SIGMA History and concept, Basic Principles, Goals, six sigma v/s TQM, ISO 9000, Traditional Management, Quality defined, VOC and CTQ, Quality measurement to six sigma, Seven tools of quality and its application: 1) Histogram or Stem and Leaf display. 2) Check sheet. 3) Pareto Chart. 4) Cause and Effect diagram (Fish bone Diagram) 5) Defect concentration diagram. 6) Scatter diagram. 7) Control charts (**Only concept of control chart**), DMAIC with case study, introduction to Lean Six Sigma. (Ref. 3,4,5,6,7,8,9,10)		**15 Lectures**
Unit III : CONTROL CHARTS I Introduction, Chance and assignable causes, Statistical basis of the control chart: Basic principles of control chart (Shewhart control charts), Choice of control limits, Sample size and sampling frequency, Rational subgroups, Analysis of patterns on control charts, Discussion of sensitizing rules for control chart. Introduction to the concept of attribute, Defect. P, np, c and u charts, their uses. p-chart with variable sample size. Operating-Characteristic function, Average run length. Applications of variable control charts.*(In addition problems involving setting up standards for future use is also expected),* Guidelines to implement control charts. *(In addition problems involving setting up standards for future use is also expected)*. Ref. 11,12,13,14,15,16)		**15 Lectures**
Unit IV : CONTROL CHARTS II Control chart for variables variables. X-Bar, R, S [*sample standard deviation*] (Construction, charts based on standard values, Interpretation), Operating-Characteristic function, Average run length. Applications of variable control charts. Introduction to process capability concept, Specification limits, natural		**15 Lectures**

tolerance limits and their comparisons, estimate of percent defectives, Capability ratio and Capability indices(Cp), Capability performance indices Cpk with respect to machine and process interpretation, relationship between i) Cp and Cpk ii) Defective parts per million and Cp (Ref. 11,12,13,14,15,16)

DISRIBUTION OF TOPICS FOR PRACTICALS

SEMESTER VI

COURSE CODE USSTPO7 :

Sr. No.	Practical topics from USST601		Sr. No.	Practical topics from USST602
6.1.1	Bivariate Normal Disribution		6.2.1	Testing of Hypothesis - I
6.1.2	Tests for correlation and Interval estimation		6.2.2	Testing of Hypothesis - II
6.1.3	Generating Function		6.2.3	SPRT
6.1.4	Stochastic Process		6.2.4	Non-parametric Test - I
6.1.5	Queuing Theory - I		6.2.5	Non-parametric Test - II
6.1.6	Queuing Theory - II		6.2.6	Use of R software

COURSE CODE USSTPO8 :

Sr. No.	Practical topics from USST603		Sr. No.	Practical topics from USST604A	Sr. No.	Practical topics from USST604B
6.3.1	L.P.P.		6.4A.1	Mortality table I	6.4B.1	**Descriptive statistics**
6.3.2	Inventory I		6.4A.2	Mortality table II	6.4B.2	**Testing of hypothesis**
6.3.3	Inventory II		6.4A.3	Annuities I	6.4B.3	**Seven Tools of Quality**
6.3.4	Replacement		6.4A.4	Annuities II	6.4B.4	**Attribute control charts**
6.3.5	Simulation		6.4A.5	Life Annuities	6.4B.5	**Variable Control Charts and Capability Analysis**

6.3.6	Reliability		6.4A.6	Assurance benefits	6.4B.6	Practical based on 1,2,3,4,5 using MS-Excel

Semester End Examination:
Theory: At the end of the semester, Theory examination of three hours duration and 100 marks based on the four units shall be held for each course.

Pattern of Theory question paper at the end of the semester for each course:

There shall be Five compulsory questions of twenty marks each with internal option.
Question 1 based on Unit I.
Question 2 based on Unit II.
Question 3 based on Unit III.
Question 4 based on Unit IV.
Question 5 based on all Four Units combined.

Semester End Examination Practicals : At the end of the semester, Practical examination of 3 hours duration and 100 marks (80+10*+10**) shall be held for each course as shown below:

Practical Course	Part A	Part B	Duration	Marks out of
USSTP05	Questions from USST501	Questions from USST502	3 hours	80
USSTP06	Questions from USST503	Questions from USST504	3 hours	80
USSTP07	Questions from USST601	Questions from USST602	3 hours	80
USSTP08	Questions from USST603	Questions from USST604	3 hours	80

*: Practical journal 10 marks, **: Viva 10 marks
Pattern of practical question paper at the end of the semester for each course:
Every paper will consist of two parts A and B. Every part will consist of two questions of 40 marks each. Students to attempt one question from each part.

Guidelines for conducting University examination of Paper on Statistical software at T.Y. B.Sc. Semester V

a. The examination will be conducted in Statistics laboratory on computers.
b. Provision of at least 15 computers with necessary R / Python / MSExcel software installed should be made available by the centre. Battery backup in case of power failure is essential.
c. Duration of examination is one and hal hours.
d. The examination will be conducted batch wise. A batch will consist of at most 15

candidates.

e. The batches examined simultaneously will have same question paper. However there will be separate question paper for each batch in case more (than one) batches are required to be formed.

f. A candidate will solve the question paper given to him/ her on computer and the output of work done by him/her will be evaluated by the examiner.

g. In case of partial power failure proportionate additional time may be given at that centre for the concerned batch.

h. One internal examiner and one external examiner will be appointed for this examination.

Workload Theory: 4 lectures per week per course. Practicals: 4 lecture periods per course per week per batch. All four periods of the practicals shall be conducted in succession together on a single day.

****
