02	3	P's of Service Marketing. 3.1 Product / service mix 3.1.1 Levels of a product and new product development. 3.1.2 Product life cycle 3.1.3 Marketing strategies during the Product Life Cycle 3.1.4 Branding. 3.2 Price Mix. 3.2.1 Pricing objectives (Survival, Profit, Sales Competition, Image – differentiation) 3.2.2 Factors affecting pricing decision. 3.2.3 Skimming and penetration 3.2.4 Creative pricing of hotels and restaurants 3.3 Distribution Mix / Place. 3.3.1 Different Distribution network 3.3.2 Types of distribution channels. 3.3.3 Push and pull strategies 3.3.4 Need & role of distribution channel. 3.4 Promotion / Communication mix 3.4.1 Communication process 3.4.2 Types of media & importance. 3.4.3 Public Relations and publicity 3.4.4 Stages and technique of Personal Selling 3.4.5 In house Merchandising 3.4.6 Sales Promotion types and techniques. 3.5 People	15	15

		3.5.1 Employees 3.5.2 Customers 3.6 Physical Evidence 3.6.1 Ambience 3.6.2 Facility Design 3.6.3 Equipment 3.6.4 Employee Dress 3.6.5 Other Tangibles 3.7 Process / System 3.7.1 Service Blueprint/ Service Delivery (Airlines & Hotels)		

Unit No.	Chapter No.	TOPIC	Hours	Marks
03	4	Consumer behavior : 4.1 Introduction & definition of consumer behavior 4.2 Factors influencing consumer behavior (Social, Cultural, Personal) 4.3 Stages in purchase behavior (5 stage) 4.4 Guests of tomorrow & Guest lifestyles	15	15
	5	E- Marketing for Services : 5.1 Introduction E- Marketing & Objectives 5.2 Ways to conduct on-line Marketing Activities. 5.3 Benefits of E-Marketing[customers stay updated, customers can compare online, clear product information, transparent pricing, e-commerce, online virtual tours)		

ASSIGNMENTS

Sr. No.	Topic for Assignments	Marks
1.	**<u>Any ONE</u>** 1 a) Organizational duties and responsibilities. (Any ONE) 1.1 Sales Executive. 1.2 Sales Manager. 1.3 Director of Sales. 1 b) Organizational structure. (Any ONE) 1.4 Large	10

	1.5 Medium 1.6 Small	
2	**Any ONE** a) Marketing Plan b) Project relating a hotel or restaurant (SWOT) c) Types of Sales call (Good will, damage control, promotion & confirmation). d) Ways to conduct on-line Marketing activities.	

Scheme of Examination (Theory)

(a) Internal assessment- 40 marks

Sr.	Evaluation type	Marks
1	**ONE** class test/ case study / online examination to be conducted in the given semester	20
2	**ONE** assignment based on curriculum to be assessed by the teacher concerned	10
3	Active participation in routine class instructional deliveries	05
4	Overall conduct as a responsible learner, communication and Leadership qualities in organizing related academic actives	05
	Total	**40**

(b) Semester end examination (Pattern of Question Paper):- 60 Marks

Theory

(Duration 2 hrs.)

Questions in Examination Paper	Units	Maximum Marks
Q – 1	1	15
Q – 2	2	15
Q – 3	3	15
Q – 4	1,2,3	15
Total		**60**

- Question 1, 2 & 3 should be from topics mentioned in the table total 3 sub questions to be attempted of 5 marks each out of the choice of 4 sub questions.

- Question no. 4 should be of short answer type questions having six sub questions (2 from each unit) of 3 marks each. Total 5 questions are to be attempted.

USHO605D	Financial Management	03	-	-	45	-	-	45	-	-	45	100	-	02	-	-	02

OBJECTIVES:

- This subject will enhance the knowledge of financial management of the hospitality students.
- It will emphasize on the students to enhance the uses of finance in various segments in hospitality industry.
- This subject will help the students in establishing their own business and also will help them in their further studies.

Contents of syllabus for USHO605D

Unit No.	Chapter No.	TOPIC	Hours	Marks
01	**1**	Financial Management 1.1 Meaning 1.2 Scope 1.3 Objectives of Financial Management	**15**	**15**
	2	Financial Planning 2.1 Meaning of Financial Planning		

		2.2 Meaning & Principles Governing a Financial Plan 2.3 Capitalization – Introduction & Meaning of Cost & Earnings Theory 2.4 Leasing – Concept And Types of Leasing 2.5 Franchising – Types, Merits and Demerits		
	3	Funds Flow & Cash Flow Analysis 3.1 Nature, Importance and Uses 3.2 Simple , Practical Problems on Funds Flow Statements Covering Following Adjustments: 3.2.1 Depreciation 3.2.2 Divided 3.2.3 Taxation 3.2.4 Sale /Purchase of Assets		

Unit No.	**Chapter No.**	**TOPIC**	**Hours**	**Marks**
02	**4**	Verticalization and Ratio Analysis 4.1 Verticalization of Income Statement and Balance Sheet 4.2 Meaning and Importance of Ratio Analysis, Limitation and Uses of Ratios. 4.3 Numerical Problems Covering the following Ratios: 4.3.1 Income Statement Ratios :- 4.3.1.1 Gross Profit Ratio 4.3.1.2 Net Profit Ratio 4.3.1.3 (Pre-Tax & After Tax) 4.3.1.4 Operating Ratio 4.3.1.5 Operating Expenses Ratio 4.3.1.6 Stock Turnover Ratio 4.3.2 Balance Sheet Ratios:- 4.3.2.1 Current Ratio 4.3.2.2 Liquid Ratio 4.3.2.3 Proprietary Ratio 4.3.2.4 Solvency Ratio 4.3.3 Combined Ratios:- 4.3.3.1 Debtors Turnover Ratio 4.3.3.2 Creditors Turnover Ratio 4.3.3.3 Stock Working Capital Ratio 4.3.3.4 Return on Investment Ratio	**15**	**15**
	5	Capital Budgeting 5.1 Importance of Capital Budgeting 5.2 Capital Budgeting Appraising Methods. 5.2.1 Payback Period and Post Payback Profitability 5.2.2 Average Rate of Return 5.2.3 Net Present Value 5.3 Merits and Demerits of Each Method		

		5.4 Practical Problems on the above Four Methods.		

Unit No.	Chapter No.	TOPIC	Hours	Marks
03	6	Cash Budget 6.1 Definition, Characteristics of Budgets & Types of budget 6.2 Practical Problems on Preparation of a Cash Budget	15	15
	7	Working Capital Management 7.1 Concept of Working Capital 7.2 Factors Determining Working Capital 7.3 Simple Practical Problems on Statement of Estimated Working Capital (No. of days working capital / operational cycle)

NOTE: TUTION FEE FOR THE SEMESTER Rs. 65,000/-

UNIVERSITY OF MUMBAI

No. UG/170 of 2017-18

CIRCULAR:-

A reference is invited to the syllabi relating to the Bachelor of Science (B.Sc.) Programme **vide** this office Circular No.UG/47 of 2012-13, dated 27th June, 2012 and the Principals of the affiliated Colleges in Science and the Heads of the recognized Science Institutions concerned are hereby informed that the proposal received from Chairperson, Board of Studies in Statistics has been accepted by the Academic Council at its meeting held on 11th May, 2017 **vide** item No.4.195 and that in accordance therewith, the revised syllabus as per the (CBCS) of S.Y.B.Sc. Statistics (Sem -III & IV), which is available on the University's website (www.mu.ac.in) and that the same has been brought into force with effect from the academic year 2017-18, accordingly.

(Dr.M.A.Khan)

UNIVERSITY OF MUMBAI

Syllabus for the S. Y. B.Sc.
Program: B.Sc.
Course : STATISTICS

(Credit Based Semester and Grading System with effect from the academic year 2017–2018)

S.Y.B.Sc. STATISTICS Syllabus
For Credit Based and Grading System
To be implemented from the Academic year 2017-2018
SEMESTER III

Course Code	UNIT	TOPICS	Credits	L / Week
USST301	I	Univariate Random Variables. (Discrete and Continuous)	2	1
	II	Standard Discrete Probability Distributions.		1
	III	Bivariate Probability Distributions.		1
USST302	I	Concepts of Sampling and Simple Random Sampling.	2	1
	II	Stratified Sampling.		1
	III	Ratio and Regression Estimation.		1
USSTP3				6
USSTP3(A)	Practicals based on USST301		1	3
USSTP3(B)	Practicals based on USST302		1	3

SEMESTER IV

Course Code	UNIT	TOPICS	Credits	L / Week
USST401	I	Standard Continuous Probability Distributions.	2	1
	II	Normal Distribution.		1
	III	Exact Sampling Distributions.		1
USST402	I	Analysis of Variance.	2	1
	II	Design Of Experiments, Completely Randomized design & Randomized Block Design.		1
	III	Latin Square Design & Factorial Experiments.		1
USSTP4				6
USSTP4(A)	Practicals based on USST401		1	3
USSTP4(B)	Practicals based on USST402		1	3

Course Code	Title	Credits
USST301	**PROBABILITY DISTRIBUTIONS**	**2 Credits (45 lectures)**
Unit I	**Univariate Random Variables (Discrete and Continuous):**	15 Lectures

Moment Generating Function(M.G.F.):

Definition

Properties:

- Effect of change of origin and scale,

- M.G.F of sum of two independent random variables X and Y ,

- Extension of this property for n independent random variables and for n i.i.d. random variables.

All above properties with proof,

- Uniqueness Property without proof.

- Raw moments using M.G.F: using expansion method and using derivative method.

Cumulant generating Function(C.G.F.):

Definition

Properties:

- Effect of change and origin and scale ,

- Additive Property of C.G.F. and cumulants

Both properties with proof.

Obtaining Cumulants using C.G.F.

Derivation of relationship between moments and cumulants upto order four.

Characteristic Function:

Definition and properties (without Proof)

Examples of obtaining raw moments and central moments up

to order four using M.G.F. and C.G.F. for continuous and

discrete distributions .

Degenerate distribution(One point distribution) P(X=c) =1

Mean, Variance, Use of Degenerate distribution . Discrete Uniform distribution. Mean, Variance, coefficient of skewness using m.g.f., Bernoulli distribution. Mean, Variance, coefficient of skewness using m.g.f. **Binomial distribution :** Mean, Variance, Measures of skewness and Kurtosis based on moments using M.G.F.and C.G.F. , Nature of probability curve, Mode, Additive property , If X follows Binomial, then to find distribution of n-X. Recurrence relation for moments with proof: $\mu'_{r+1} = npq\ \mu'_r + pq\ \frac{d}{dp}\ \mu'r$ $\mu_{r+1} = pq\ [\ nr\ \mu_{r-1} + \frac{d}{dp}\ \mu r\ ]$ Relation between Bernoulli and Binomial using m.g.f. Transformation of random Variable (Univariate) : examples based on it.		
Unit II	**Standard Discrete Probability Distributions**	15 Lectures
Poisson distribution Mean, Variance, Measures of skewness and Kurtosis based on moments using M.G.F.and C.G.F. , Nature of probability distribution with change in the values of parameters, Mode, Additive property. Recurrence relation for moments with proof for μ'_{r+1} ,μ_{r+1} If X and Y are two independent Poisson variables Conditional distribution of X given X+Y with proof Poisson distribution as limiting distribution of Binomial (with proof) Real life examples of Binomial, Poisson distribution. **Geometric Distribution** Definition in terms of No. of failures and No. of trials. Mean, Variance, M.G.F., Mean and Variance using M.G.F., C.G.F., Mean and Variance,μ_3,μ_4 using C.G.F., Coefficients of skewness and		

Kurtosis and nature of probability distribution. Lack of Memory property with proof. If X and Y are two i.i.d. Geometric variables; Conditional distribution of X given X+Y with proof Distribution of sum of k i.i.d. Geometric variables. **Negative Binomial Distribution** Definition, Mean, Variance, M.G.F., Mean and Variance using M.G.F., C.G.F., Recurrence relation for central moments, Mean, Variance,μ_3,μ_4 using C.G.F., Coefficients of skewness and Kurtosis and nature of probability distribution. Lack of Memory property with proof. Recurrence relation for probabilities, Fitting of distribution. Limiting distribution of Negative Binomial distribution (with proof) **Hyper geometric distribution** Definition,Mean,Variance,Limiting distribution of Hyper geometric distribution (with proof) If X and Y are two independent Binomial variables Conditional distribution of X given X+Y (with proof) **Truncated distribution** Definition Truncated Binomial and Truncated Poisson Distribution: (truncated at 0) Probability mass function, mean and variance. Real life situations of Geometric, Negative Binomial, Hypergeometric distributions		
Unit III	**Bivariate Probability Distributions**	**15 Lectures**
Two dimensional Discrete random variables -Joint Probability mass function and its properties -Distribution function of (X,Y) and its properties -Definition of raw and central moments, covariance, correlation coefficient, Independence and correlation between two variables -Marginal and conditional probability distributions		

-Conditional expectation, conditional variance **Continuous bivariate random variables** -Joint Probability density function and its properties -Distribution function of (X,Y) and its properties -Definition of raw and central moments, covariance, correlation coefficient, Independence and correlation between two variables -Marginal and conditional probability distributions -Conditional expectation, conditional variance - Regression Function. Transformation of Random Variables and Jacobian of transformation with illustrations.

Course Code	Title	Credits
USST302	**THEORY OF SAMPLING**	**2 Credits (45 lectures)**
Unit I : Concepts: Population, Population unit, Sample, Sample unit, Parameter, Statistic,Estimator, Bias, Unbi Mean square error & Standard error.Census survey, Sample Survey. Steps in conducting sample survey with examples on designing appropriate Questionnaire. Concepts of S and Non-sampling errors. NSSO, CSO and their functions.Concepts and methods of Pr and Non-Probability Sampling. **Simple Random Sampling:** (SRS). Definition, Sampling with & without replacement (WR/WOR).Lottery method & use of Random numbers to select . Simple random sample. Estimation of population mean & total. Expectation & Variance of the estimators, Unbiased estimator of variance of these estimators. (WR/WOR). Estimation of population proportion. Expectation & Variance of the estimators, Unbiased estimator of variance of these estimators. (WR/WOR). Estimation of Sample size based on a desired accuracy in case of SRS for variables & attributes. (WR/WOR).		15 Lectures
Unit II : Stratified Sampling: Need for Stratification of population with suitable examples. Definition of Stratified Sample. Advantages of stratified Sampling. **Stratified Random Sampling:** Estimation of population mean & total in case of Stratified Random Sampling (WOR within each strata). Expectation & Variance of the unbiased estimators, Unbiased estimators of variances of these estimators. Proportional allocation, Optimum allocation with and without varying costs. Comparison of Simple Random Sampling, Stratified Random Sampling using Proportional allocation and Neyman allocation.		15 Lectures
Unit III : **a. Ratio & Regression Estimation assuming SRSWOR:** Ratio Estimators for population Ratio, Mean & Total. Expectation & MSE of the Estimators. Estimators of MSE. Uses of Ratio Estimator. Regression Estimators for population Mean & Total. Expectation & Variance of the Estimators assuming known value of regression coefficient 'b'. Estimation of 'b'. Resulting variance of the estimators. Uses of regression Estimator. Comparison of Ratio, Regression & mean per Unit estimators.		15 Lectures

b. Introduction to Systematic sampling, Cluster sampling & Two Stage sampling with suitable illustrations.

DISTRIBUTION OF TOPICS FOR PRACTICALS

SEMESTER-III

COURSE CODE USSTP3

Sr. No	Semester III .Course USSTP3(A)
1	Moment Generating Function, Moments.
2	Cumulant generating Function, Cumulants, Characteristic function.
3	Standard Discrete Distributions.
4	Fitting Standard Discrete Distributions.
5	Bivariate Probability Distributions, Marginal & Conditional distributions, Conditional Mean, Conditional Variance, Correlation.
6	Transformation of discrete & continuous random variables.

Sr. No	Semester III .Course USSTP3(B)
1	Designing of Questionnaire.
2	Simple Random Sampling for Variables.
3	Simple Random Sampling for Attributes.
4	Estimation of Sample Size in Simple Random Sampling.
5	Stratified Random Sampling.
6	Ratio Estimation.
7	Regression Estimation.

USST 303 is a new paper for any student of S.Y.B.Sc. Student must have passed 12th standard with Mathematics. If not then He/She has to complete the required bridge course.

Course Code	Title	Credits
USST303	**OPERATIONS RESEARCH 1**	**2 Credits (45 lectures)**
Unit I : Linear Programming Problem (L.P.P.) : Mathematical Formulation: Maximization & Minimization. Concepts of Solution, Feasible Solution, Basic Feasible Solution, Optimal solution. Graphical Solution for problems with two variables. Simplex method of solving problems with two or more variables. Big M method. Concept of Duality. Its use in solving L.P.P. Relationship between optimum solutions to Primal and Dual. Economic interpretation of Dual.		**15 Lectures**
Unit II : Transportation Problem: Concept, Mathematical Formulation. Concepts of Solution, Feasible Solution. Initial Basic Feasible Solution by North-West Corner Rule, Matrix Minima Method, Vogel's Approximation Method. Optimal Solution by MODI Method. Optimality test, Improvement procedure. Variants in Transportation Problem: Unbalanced, Maximization type.		**15 Lectures**
Unit III :Assignment Problem: Concept. Mathematical Formulation Solution by: Complete Enumeration Method and Hungarian method. Variants in Assignment Problem: Unbalanced, Maximization type. Travelling Salesman Problem **Sequencing :** Processing n Jobs through 2 and 3 Machines & 2 Jobs through m Machines.		**15 Lectures**

PRACTICALS BASED ON USST 303

COURSE CODE USSTP3(C)

Practical Number	Title of Practical
01	Formulation and Graphical Solution of L.P.P.
02	Simplex Method
03	Duality
04	Transportation Problems
05	Assignment Problems
06	Sequencing Problems
07	Problems solving using TORA

SEMESTER IV

Course Code	Title	Credits
USST401	**PROBABILITY AND SAMPLING DISTRIBUTIONS**	**2 Credits (45 lectures)**
Unit I	**Standard Continuous Probability Distributions**	15 Lectures

Rectangular or Continuous Uniform over (a,b) Mean, Median Standard deviation,C.D.F.M.G.F., Mean ,variance,μ_3 using M.G.F., skewness of distribution.

For X following U (0,1), distribution of i) $\frac{X}{1+X}$, ii) $\frac{X}{1-X}$

Triangular distribution

Symmetric and asymmetric over(a, b) with peak at c

-M.G.F. Mean ,Variance , d.f. Median.

Exponential Distribution

Definition, M.G.F.,C.G.F. raw moments and central moments up to order four using M.G.F..and C.G.F.

- Measures of Skewness and Kurtosis ,Nature of Probability curve

- Median and Quartiles and Percentiles

-Forgetfulness Property with proof and examples based on it.

-Distribution of $X_{(1)}$,first order statistic -Distribution of ratio of two i.i.d. Exponential random variables. -Distribution of - $\frac{1}{\lambda}$ ln(1-X) ,if X follows Uniform (0,1). -Distribution of X+Y and $\frac{X}{X+Y}$,for two independent Exponential variables X and Y with mean1.(All with proof.) **Cauchy (with location and scale parameter)** -Properties with proof. Distribution of 1/ x. c.d.f. and percentiles. **Gamma (with Scale and shape parameter)** Expression for r th raw moment Mean, variance, Mode & Standard deviation. M.G.F., Additive property, C.G.F.. raw moments and central moments up to order four using M.G.F.. and C.G.F. Coefficients of skewness and Kurtosis and nature of probability curve. Distribution of sum of independent Exponential random variables. **Beta Distribution: Type I & Type II** Expression for r th raw moment, Mean, Mode and Standard deviation, H.M. If a r.v.X follows Beta of type 1, distribution of 1- X If a r.v. X follows Beta of type 2, distribution of i) $\frac{1}{1+X}$, ii)$\frac{X}{1+X}$ With proof. For two independent Gamma variables X and Y with parameters m and n respectively, distribution of U = $\frac{X}{Y}$ and V= $\frac{X}{X+Y}$ with proof.		
Unit II	**Normal Distribution**	15 lectures
Definition, Derivation of Mean, Median, Mode, Standard deviation, M.G.F. , C,G,F., Moments & Cumulants (up to fourth order). skewness & kurtosis, Nature of Normal curve, Mean absolute deviation. Properties of Normal Distribution. Expression for even order central moments and to show that odd order central moments are zero. Percentiles.		

Distribution of Standard normal variable, Percentiles.

Distribution of linear function of independent Normal variables

(i).aX, (ii). X+b, (iii). aX+bY in particular X+Y and X-Y, (iv) $\sum_{i=1}^{P} a_i x_i$ (all with proof.)

Fitting of Normal Distribution.

Central Limit theorem for i.i.d. random variables.(with proof)

Log Normal Distribution: Derivation of mean & variance.

Mode, Median and relation between them.

Distribution of product of n log normal random variables.

Unit III	**Exact Sampling Distributions**	15 lectures

Chi-Square Distribution:

Derivation of p.d.f. , Concept of degrees of freedom. Mean, Mode & Standard deviation. M.G.F.,C.G.F., Measures of skewness and Kurtosis, Additive property

Distribution of ratio of two independent Chi-square variables

Distribution of $\frac{X}{X+Y}$ if X and Y are two independent Chi-square variables

(All with proof)

Distribution of the sum of squares of independent Standard Normal variables. Sampling distributions of sample mean and sample variance and their independence for a sample drawn from Normal distribution (with proof).

Applications of Chi-Square:

Development of decision criterion with test procedures of

(i) Test of significance for specified value of variance of a Normal population

(ii) Test for goodness of fit,

Test Procedure for independence of attributes.

(i) r × c contingency table,
(ii) 2×2 contingency table, Derivation of test statistic, Yates' correction with proof

Derivation of Confidence interval for the variance of a Normal population when

(i) mean is known, ,
(ii) mean is unknown.

Student's t-distribution:

Derivation of p.d.f. **,** Mean, Median, Mean Deviation & Standard deviation. M.G.F., C.G.F. , Measures of skewness and Kurtosis and Additive property

Limiting distribution of t distribution with proof.

Applications of t:

Development of decision criterion with test procedure of Test of significance for specified value of mean of Normal population.

Test procedure of test of significance for difference between means of

(i) two independent Normal populations with equal variances

(ii) Dependent samples (Paired t test)

Derivation of Confidence intervals for

(i) Mean of Normal population,
(ii) difference between means of two independent Normal populations having the same variance

Snedecor's F-distribution:

Derivation of p.d.f. **,** Expression for r^{th} raw moment, Mean, variance, Mode & Standard deviation

Distribution of Reciprocal of F variable with proof.

Applications of F:

Test procedure for testing equality of variances of two independent Normal populations

i. Mean is known
ii. Mean is unknown

Derivation of confidence interval for ratio of variances of two independent Normal populations.

Course Code	Title	Credits
USST402	**ANALYSIS OF VARIANCE & DESIGN OF EXPERIMENTS**	**2 Credits** **(45 lectures)**
Unit I : Analysis of Variance: Introduction, Uses, Cochran's Theorem (Statement only). One way classification with equal & unequal observations per class, Two way classification with one observation per cell. Mathematical Model, Assumptions, Expectation of various sums of squares, F-test, Analysis of variance table. Least square estimators of the parameters, Variance of the estimators, Estimation of treatment contrasts, Standard Error and Confidence limits for elementary treatment contrasts.		15 Lectures
Unit II : Design Of Experiments: Concepts of Experiments, Experimental unit, Treatment, Yield, Block, Replicate, Experimental Error, Precision. Principles of Design of Experiments: Replication, Randomization & Local Control. Efficiency of design D1 with respect to design D2. Choice of size, shape of plots & blocks in agricultural & non agricultural experiments. **Completely Randomized Design (CRD) & Randomized Block Design (RBD):** Mathematical Model, Assumptions, Expectation of various sums of squares, F-test, Analysis of variance table. Least square estimators of the parameters, Variance of the estimators, Estimation of treatment contrasts, Standard error and Confidence limits for elementary treatment contrasts. Efficiency of RBD relative to a CRD.		15 Lectures
Unit III : Latin Square Design (LSD): Mathematical Model, Assumptions, Expectation of various sums of squares, F-test, Analysis of variance table. Least square estimators of the parameters, Variance of the estimators, Estimation of treatment contrasts, Standard error and Confidence limits for elementary treatment contrasts. Efficiency of the design relative to RBD, CRD. Missing plot technique for one missing observation in case of CRD, RBD & LSD.		15 Lectures

Factorial Experiments: Definition, Purpose & Advantages. 2^2, 2^3 Experiments. Calculation of Main & interaction Effects. Definition of contrast and orthogonal contrast, Yates' method. Analysis of 2^2 & 2^3 factorial Experiments.

Semester End Examination

Theory: At the end of the semester, examination of three (3) hours duration and hundred (100) marks based on the three units shall be held for each course.

Pattern of **Theory question** paper at the end of the semester for ***each course*** will be as follows:
Total number of questions five each of twenty marks.
Question one based on all units. Ten sub-questions of two marks each.
Question two, three, four are based on unit I, unit II and unit III respectively.
Question five based on all units: solve two out of three ten marks each.

Practicals: At the end of the semester, examination of two hours duration and 40 marks shall be held for **each course**. Five marks for journal and Five marks for VIVA. (40+10=50)

Pattern of **Practical question** paper at the end of the semester for **each course**:
There shall be Four questions of ten marks each. Students should attempt all questions.
Question 1 based on Unit 1, Question 2 based on Unit II, Question 3 based on Unit III, Question 4 based on all Three Units combined.
Student should attempt **any two** sub questions out of **three** in each question.

Workload

Theory : 3 lectures per week per course.
Practicals: 3 lecture periods per course per week per batch. All three lecture periods of the practicals shall be conducted in succession together on a single day

Convener: Dr. Ravindra G. Deshmukh

UNIVERSITY OF MUMBAI

Essentials Elements of The Syllabus

1	**Title of Course**	Syllabus for two semester S. Y. B. Sc. course in chemistry
2	**Couse Code**	USCH301, USCH302, USCH303 USCH401, USCH402, USCH404 USCHP1 to USCHP6
3	**Preamble**	Attached
4	**Objective**	• To infuse in the learner a spirit of inquiry into the fundamental aspects of the various core areas of Chemistry. • To make the learner proficient in analysing the various observations and chemical phenomena presented to him during the course. • To make the learner capable of solving problems in the various units of this course • To give the learner an opportunity to get hands on experience of the various concepts and processes in the various branches of chemistry • To impart various skills of handling chemicals, reagents, apparatus, instruments and the care and safety aspects involved in such handling • To make the learner capable of analysing and interpreting results of the experiments he conducts or performs
5	**Eligibility**	Pass F. Y. B. Sc.
6	**Fee Structure**	As Per Guidelines issued from the University
7	**No. of Lectures**	9 lectures per week (three lectures per paper)
8	**No. of Practicals**	9 periods per week (three periods per paper)
9	**Duration of Course**	Two Semester

10	**Notional Hours**	72 hours per paper per semester Theory and 36 hours per paper per semester for laboratory sessions
11	**No of students per batch**	120 students per division (20 Students for laboratory sessions)
12	**Selection**	As per merit.
13	**Assessment**	**End of semester examination of 100 marks per paper for theory and 50 marks per paper for laboratory sessions**
14	**Syllabus Detail**	**Attached**
15	**Title of the Unit**	**As given in the Syllabus text**
16	**Title of the Sub-unit**	**As given in the syllabus text.**
17	**Semester wise Theory**	**As prescribed in the syllabus text**
18	**Semester wise Practicals**	**As prescribed in the syllabus text.**
19	**Question Paper Pattern**	**As prescribed by the Faculty of Science**
20	**Scheme of evaluation of Project**	**N.A.**
21	**List of suggested reading**	**As Attached**
22	**List of websites**	**As Attached**
23	**List of You Tube videos**	**As attached**
24	**List of MOOCs**	**As Attached**

REGULATIONS

1. Preamble and objectives of the Course :

In the first two semseters of the six semester graduation program of B. Sc.(Chemistry) the learner was introduced to some basic aspects in the various core branches of chemistry like Physical Chemistry, Organic chemistry and Inorganic chemistry. Concepts about the structure of atom, distribution of electrons, Thermodynamics, Formation of organic compounds and basic ideas in reactivity of molecules in general and organic compounds in particular were introduced to the learner. He was made inquisitive about why and how should atoms combine to give molecules or ions. The non-orbital approach to appreciating the shapes of polyatomic species in general and molecules in particular.

The story of chemistry is taken further in the coming two semesters of the second year of the B. Sc. (Chemistry) Program. However it is also realised that some students opting for the course on Chemistry may not continue with the subject subsequently as such the syllabus is designed to retain the interest of the serious learner of chemistry as well as be helpful to non-chemistry learners. With such students who would want to pursue other branches of science but would want to acquire a basic appreciation and experience of chemistry a separate paper (Paper-III) is designed. This paper along with the laboratory session unit that goes with it deals with the basics of chemical analysis, separating components from a given sample, basic concepts like pH, experimental techniques like Titrimetry, Gravimetry, using instruments to carry out analysis, the various techniques like chromatography, electrophoresis, Instrumentation in general is felt to be of interest to learners of various branches like physics, botany, zoology, and microbiology.

The major objectives of B.Sc. Chemistry course are

- To infuse in the learner a spirit of inquiry into the fundamental aspects of the various core areas of Chemistry.

- To make the learner proficient in analysing the various observations and chemical phenomena presented to him during the course.
- To make the learner capable of solving problems in the various units of this course
- To give the learner an opportunity to get hands on experience of the various concepts and processes in the various branches of chemistry
- To impart various skills of handling chemicals, reagents, apparatus, instruments and the care and safety aspects involved in such handling
- To make the learner capable of analysing and interpreting results of the experiments he conducts or performs
- To make the learner capable of acquiring or pursuing a source of livelihood like jobs in chemical industry
- To arouse the interest to pursue higher levels of learning in chemistry,

2. Condition for Admission

A candidate who has passed the F.Y.B.Sc. of Mumbai University or an examination of some other university accepted by the syndicate as equivalent there to with Chemistry, Physics, Maths, Botany, Zoology or Life Science shall be eligible for admission into S.Y.B.Sc., course in Chemistry.

To

3. Duration of the Course: one year

4. Course of study:

Draft copy of the proposed revised syllabus for
Choice Based Credit System
S.Y.B.Sc. Chemistry
To be implemented from the Academic year 2017-2018

For the subject of chemistry there shall be three papers for 45 lectures each comprising of three units of 15 L each.

Semester-III

1. Paper-I (General Chemistry) Unit-I Physical Chemistry
   Unit-II Inorganic Chemistry
   Unit-III Organic Chemistry.
2. Paper-II (General Chemistry) Unit-I Physical Chemistry
   Unit-II Inorganic Chemistry
   Unit-III Organic Chemistry.
3. Paper III Basics of Analytical Chemistry

Semester-IV

1. Paper-I (General Chemistry) Unit-I Physical Chemistry
   Unit-II Inorganic Chemistry
   Unit-III Organic Chemistry.
2. Paper-II (General Chemistry) Unit-I Physical Chemistry
   Unit-II Inorganic Chemistry
   Unit-III Organic Chemistry.
   Basics of Analytical Chemistry
3. Paper III

Choice Based Credit System
S. Y. B. Sc.
Chemistry Syllabus
To be implemented from the Academic year 2017-2018

Course Content
Semester III

Course Code	Unit	Topics	Credits	L/Week
USCH301	I	Chemical Thermodynamics-II, Electrochemistry	2	1
	II	Chemical Bonding		1
	III	Reactions and reactivity of halogenated hydrocarbons, alcohols, phenols and epoxides		1
USCH302	I	Chemical Kinetics-II, Solutions	2	1
	II	Selected topics on p block elements		1
	III	Carbonyl Compounds		1
USCH303	I	Intorduction to Analytical Chemistry and Statistical Treatment of analytical data-I	2	1
	II	Classical Methods of Analysis.		1
	III	Instrumental Methods-I		1
USCHP1		Chemistry Practicals I	1	3
USCHP2		Chemistry Practicals II	1	3
USCHP3		Chemistry Practicals III	1	3

Semester IV

Course Code	Unit	Topics	Credits	L/Week
USCH401	I	Electrochemistry-II, Phase Equilibria	2	1
	II	Comparative Chemistry of the transition metals & Coordination Chemistry		1
	III	Carboxylic acids and their derivatives, Sulphonic acids		1
USCH402	I	Solid state, Catalysis	2	1
	II	Ions in aqeous medium & Uses and Environmental Chemistry of volatile Oxides and oxo-acids		1
	III	Amines, Diazonium salts, Heterocyclic compounds		1
USCH403	I	Separation Techniques in Analytical Chemistry	2	1
	II	Instrumental Methods-II		1
	III	Statistical Treatment of analytical data --II		1
USCHP4		Chemistry Practicals I	1	3
USCHP5		Chemistry Practicals II	1	3
USCHP6		Chemistry Practicals III	1	3

Semester III
Paper I
Theory: 45 Lectures

Unit I:Physical Chemistry

1.1 Chemical Thermodynamics-II(8L)

1.1.1 Free Energy Functions: Helmholtz Free Energy, Gibb's Free Energy, Variation of Gibb's
free energy with Pressure and Temperature.
1.1.2 Gibbs-Helmholtz equation, van't Hoff reaction isotherm and van't Hoff reaction isochore.
(Numericals expected).
1.1.3 Thermodynamics of Open System: Partial Molal Properties, Chemical Potential and its variation with Pressure and Temperature, Gibb's Duhem equation.
1.1.4 Concept of Fugacity and Activity

1.2 Electrochemistry: (7L)

1.2.1 Conductivity, equivalent and molar conductivity and their variation with dilution for weak and strong electrolytes.
1.2.2 Kohlrausch law of independent migration of ions.
1.2.3 Applications of conductance measurements: determination of degree of ionization and ionization constant of weak electrolyte, solubility and solubility product of sparingly soluble salts, ionic product of water. (Numericals expected).
1.2.4 Transference number and its experimental determination using Moving boundary method. (Numericals expected). Factors affecting transference number.

Unit-II
Chemical Bonding

2.1 Non-Directional Bonding (4L)

2.1.1 Ionic Bond: Conditions for the Formation of Ionic Bond.
2.1.2 Types of Ionic Crystals
2.1.3 Radius Ratio Rules
2.1.4 Lattice Energy, Borne-Lande Equation
2.1.5 Kapustinski Equation
2.1.6 Born-Haber Cycle and its Application

2.2. Directional Bonding: Orbital Approach. (6L)

2.2.1 Covalent Bonding The Valence Bond Theory- Introduction and basic tenets.

2.2.2 Interaction between two hydrogen atoms and the Potential energy diagram of the resultant system.

2.2.3 Corrections applied to the system of two hydrogen atoms- Formation of H_2

2.2.4 Homonuclear diatomic molecules from He_2 to Ne_2

2.2.5 Resonance and the concept of Formal Charge; Rules for Resonance or Canonical structures.

2.2.6 Bonding in Polyatomic Species: The role of Hybridization. And types of hybrid orbitals-*sp, sp^2, sp^3, sp^3d, $sp^2d^2$and sp^2d sp^3d^2*.

2.2.7 Equivalent and Non-Equivalent hybrid orbitals

2.2.8 Contribution of a given atomic orbital to the hybrid orbitals (with reference to sp^3 hybridisation as in CH_4, NH_3 and H_2O and series like NH_3, PH_3, AsH_3, BiH_3)

2.3 **Molecular Orbital Theory (5L)**

2.3.1. Comparing Atomic Orbitals and Molecular Orbitals.

2.3.2. Linear combination of atomic orbitals. to give molecular orbitals LCAO-MO approach for diatomic homonuclear molecules).

2.3.4. Wave mechanical treatment for molecular orbitals (H_2^+ and H_2)

2.3.4 Molecular orbital Theory and Bond Order and magnetic property: with reference to O_2,O_2^+ O_2^-,O_2^{2-}

(Problems and numerical problems expected wherever possible)

Unit III: Organic Chemistry

3.1.1. Reactions and reactivity of halogenated hydrocarbons: [4L]

3.1.1.**Alkyl halides:** Nucleophilic substitution reactions: S_N1, S_N2 and S_Ni mechanisms with stereochemical aspects and factors affecting nucleophilic substitution reactions-nature of substrate, solvent, nucleophilic reagent and leaving group.

3.1.2.**Aryl halides:** Reactivity of aryl halides towards nucleophilic substitution reactions. Nucleophilic aromatic substitution (S_NAr) addition-elimination mechanism and benzyne mechanism.

3.1.2.**Organomagnesium and organolithium compounds: [3L]**

Nomenclature, nature, type and reactivity of carbon-metal bond. Preparation using alkyl / aryl halide. Structure, stability and reactions with compounds containing acidic hydrogen, carbonyl compounds, CO2, cyanides and epoxides.

3.2 Alcohols, phenols and epoxides: [8L]

3.2.1. **Alcohols:** Nomenclature, Preparation: Hydration of alkenes, hydrolysis of alkyl halides, reduction of aldehydes and ketones, using Grignard reagent. Properties: Hydrogen bonding, types and effect of hydrogen bonding on different properties. Acidity of alcohols, Reactions of alcohols

3.2.2. **Phenols: Pr**eparation, physical properties and acidic character. Comparative acidic strengths of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols.

3.2.3. **Epoxides:** Nomenclature, methods of preparation and reactions of epoxides: reactivity, ring opening reactions by nucleophiles (a) In acidic conditions: hydrolysis, reaction with halogen halide, alcohol, hydrogen cyanide. (b) In neutral or basic conditions: ammonia, amines, Grignard reagents, alkoxides.

Semester III
Paper II

Unit I: Physical Chemistry

1.1 Chemical Kinetics-II (7L)

1.1.1 Types of Complex Chemical reactions: Reversible or opposing, consecutive and parallel reactions (No derivations, only examples expected),

Thermal chain reactions: H. and Br. reaction. (only steps involved, no kinetic expression expected).

1.1.2 Effect of temperature on the rate of reaction, Arrhenius equation, Concept of energy of activation (Ea). (Numericals expected).

1.1.3 Theories of reaction rates: Collision theory and activated complex theory of bimolecular reactions. Comparison between the two theories

(Qualitative treatment only)

1.2 Solutions: (8 L)

1.2.1 Thermodynamics of ideal solutions: Ideal solutions and Raoult's law, deviations from Raoult's law–non-ideal solutions. Vapour pressure-composition and temperature -composition curves of ideal and non-ideal solutions. Distillation of solutions.Lever rule.Azeotropes.

1.2.2 Partial miscibility of liquids: Critical solution temperature; effect of impurity on partial miscibility of liquids with respect to Phenol-Water , Triethanolamine – Water and Nicotine – Water systems

1.2.3 Immiscibility of liquids- Principle of steam distillation.

1.2.4 Nernst distribution law and its applications, solvent extraction.

Unit-II

2. Selected topics on p block elements (15L)

2.1 Chemistry of Boron compounds

2.1.1 Electron deficient compounds – BH_3, BF_3, BCl_3 with respect to Lewis acidity and applications.
2.1.2 Preparation of simple boranes like diborane and tetraborane.
2.1.3 Structure and bonding in diborane and tetraborane (2e-3c bonds)
2.1.4 Synthesis of Borax.

2.2 Chemistry of Silicon and Germanium

2.2.1 Silicon compounds: Occurrence , Structure and inertness of SiO_2
2.2.2 Preparation of structure of $SiCl_4$
2.2.3 Occurrence and extraction of Germanium
2.2.4 Preparation of extra pure Silicon and Germanium

2.3 Chemistry of Nitrogen family

2.3.1 Trends in chemical reactivity - Formation of hydrides, halides, oxides with special reference to oxides of nitrogen.
2.3.2 Oxides of nitrogen with respect to preparation and structure of NO, NO_2, N_2O and N_2O_4.
2.3.3 Synthesis of ammonia by Bosch – Haber process.

Unit III: Organic Chemistry

Carbonyl Compounds: [15L]

3.1 Nomenclature of aliphatic, alicyclic and aromatic carbonyl compounds. Structure, reactivity of aldehydes and ketones and methods of preparation; Oxidation of primary and secondary alcohols using PCC, hydration of alkynes, action of Grignard reagent on esters, Rosenmund reduction, Gattermann – Koch formylation and Friedel Craft acylation of arenes

3.2 General mechanism of nucleophilic addition, and acid catalyzed nucleophilic addition reactions.

3.3 Reactions of aldehydes and ketones with $NaHSO_3$, HCN, RMgX, alcohol, amine, phenyl hydrazine, 2,4-Dinitrophenyl hydrazine, $LiAlH_4$ and $NaBH_4$.

3.4 Mechanisms of following reactions: Benzoin condensation, Knoevenagel condensation, Claisen-Schmidt and Cannizzaro reaction.

3.5 Keto-enol tautomerism: Mechanism of acid and base catalysed enolization

3.6 Active methylene compounds: Acetylacetone, ethyl acetoacetate diethyl malonate, stabilised enols. Reactions of Acetylacetone and ethyl acetoacetate (alkylation, conversion to ketone, mono- and dicarboxylic acid)

Semester IV
Paper I

Unit I: Physical Chemistry

1.1Electrochemistry-II: (8 L)

1.1.1 Electrochemical conventions, Reversible and irreversible cells.

1.1.2 Nernst equation and its importance, Types of electrodes, Standard electrode potential, Electrochemical series (Numericals expected).

1.1.3 Thermodynamics of a reversible cell, calculation of thermodynamic properties: ΔG, ΔH and ΔS from EMF data. (Numericals expected)

1.1.4 Calculation of equilibrium constant from EMF data. (Numericals expected)

1.1.5 Concentration cells with transference and without transference. Liquid junction potential and salt bridge.

1.1.6 pH determination using hydrogen electrode and quinhydrone electrode.(Numericals expected)

1.2 Phase Equilibria: (7L)

1.2.1 Phases, components and degrees of freedom of a system, criteria of phase equilibrium. Gibbs Phase Rule and its thermodynamic derivation.

1.2.2 Derivation of Clausius – Clapeyron equation and its importance in phase equilibria. (numericals expected)

1.2.3 Phase diagrams of one-component systems (water and sulphur).

1.2.4 Two component systems involving eutectics, congruent and incongruent melting points (lead-silver system).

Unit-II

2.1 Comparative Chemistry of the transition metals (9 L)

2.1.1 Position in the periodic table; Natural occurrence principal ores and minerals;

2.1.2 Significance of special stability of d^0, d^5 and d^{10} leading to variable oxidation states; Unusual oxidation states and their stabilities in aqueous solutions (with special reference to vanadium, and chromium.)

2.1.3 Origin of colour for transition metals and their compounds: such as reflectivity, surface coatings, particle size, packing density for metals and nature of d-orbitals, number of electrons in the d-orbitals, geometry, and ability for charge transfer).

2.1.4 Magnetic properties of transition metal compounds: Origin of magnetism-spin and orbital motion of electrons; equation for spin only and spin-orbital magnetism in terms of Bohr magnetons (No derivation of relevant equations expected); Reasons for quenching of orbital moments.

2.1.5 Chemistry of Titanium and vanadium: properties of Oxides and chlorides; use in titrimetric analysis

2.1.6 Qualitative tests for transition metal ions: General considerations in devising tests (with reference to Chromium, Manganese, iron, Cobalt Nickel and Copper)

2.2 Coordination Chemistry : (6 L)

2.2.1 Introduction to Chemistry of Coordination Compounds

i. Historical perspectives: Early ideas on coordination compounds
ii. Basic terms and nomenclature.
iii. Types of ligands
iv. Isomerism :General Types with special reference to stereoisomerism of coordination compounds (C.N=6)
v. Evidence for the formation of coordination compounds,

2.2.2. Theories of coordination compounds

i. Werner's Theory of coordination compounds,
ii. Effective atomic number rule.
iii. Eighteen electron Rule

2.2.3. Nature of the Metal-Ligand Bond:

i. Valence Bond Theory; Hybridisation of the central metal orbitals-sp^3, sd^3/d^3s sp^3d^2/d^2sp^3, sp^2d,
ii. Inner and outer orbital complexes of .(suitable examples of Mn(II) Fe(II),Fe(III),Co(II)/Co(III),Ni(II), Cu(II) Zn(II) complexes with ligands like aqua, ammonia CN^- and halides may be used)
iii. Limitations of V.B.T

2.2.4. Application of coordination compounds.

Unit III: Organic Chemistry

3.1 Carboxylic Acids and their Derivatives :(11 Lectures)

3.1.1. Nomenclature, structure and physical properties, acidity of carboxylic acids, effects of substituents on acid strength of aliphatic and aromatic carboxylic acids.

3.1.2. Preparation of carboxylic acids: oxidation of alcohols and alkyl benzene, carbonation of Grignard and hydrolysis of nitriles.

3.1.3. Reactions: Acidity, salt formation, decarboxylation, Reduction of carboxylic acids with $LiAlH_4$, diborane, Hell-Volhard-Zelinsky reaction,Conversion of carboxylic acid to acid chlorides, esters, amides and acid anhydrides and their relative reactivity.

3.1.4. Mechanism of nucleophilic acyl substitution and acid-catalysed nucleophilic acyl substitution. Interconversion of acid derivatives by nucleophilic acyl substitution.
3.1.5. Mechanism of Claisen condensation and Dieckmann condensation.

3.2 Sulphonic acids: [4L]

Nomenclature, preparation of aromatic sulphonic acids by sulphonation of benzene (with mechanism), toluene and naphthalene, Reactions: Acidity of arene sulfonic acid, Comparative acidity of carboxylic acid and sulfonic acids. Salt formation, desulphonation.Reaction with alcohol, phosphorous pentachloride, IPSO substitution.

Semester IV
Paper II

Unit I: Physical Chemistry

1.1 Solid State: (7L)

1.1.1 Recapitulation of laws of crystallography and types of crystals

1.1.2 Characteristics of simple cubic, face centered cubic and body centered cubic systems, interplanar distance in cubic lattice (only expression for ratio of interplanar distances are expected)

1.1.3 Use of X-rays in the study of crystal structure, Bragg's equation (derivation expected), X-rays diffraction method of studying crystal lattice structure, structure of NaCl and KCl. Determination of Avogadro's number (Numericals expected)

1.2 Catalysis: (8 L)

1.2.1 Types of catalysis, catalytic activity, specificity and selectivity, inhibitors, catalyst poisoning and deactivation

1.2.2 Mechanisms and kinetics of acid-base catalyzed reactions, effect of pH.

1.2.3 Mechanisms and kinetics of enzyme catalyzed reactions (Michaelis-Menten equation)

1.2.4 Effect of particle size and efficiency of nanoparticles as catalyst.

Unit-II

2 Ions in aqeous medium

2.1. Acidity of Cations and Basicity of Anions

i. Hydration of Cations; Hydrolysis of Cations predicting degree of hydrolysis of Cations-effect of Charge and Radious.

ii. Latimer Equation. Relationship between pKa, acidity and z^2/r ratios of metal ions graphical Presentation

iii. Classification of cations on the basis of acidity category – Non acidic, Moderately acidic, strongly acidic, very strongly acidic with pKa values range and examples

iv. Hydration of Anions; Effect of Charge and Radius; Hydration of anions-concept, diagram classification on the basis of basicity

2.2. Uses and Environmental Chemistry of volatile Oxides and oxo-acids

i. Physical properties of concentrated oxo-acids like sulfuric, Nitric and Phosphoric acid

ii. Uses and environments aspects of these acids

Unit III: Organic Chemistry

Nitrogen containing compounds and heterocyclic compounds:

3.1 Amines: Nomenclature, effect of substituent on basicity of aliphatic and aromatic amines;

3.1.1. Preparation: Reduction ofaromaticnitro compounds using catalytic hydrogenation,chemical reduction using Fe-HCI, Sn-HCl, Zn-acetic acid, reduction of nitriles, ammonolysis of halides, reductive amination , Hofmann bromamide reaction.

3.1.2. Reactions- Salt Formation, N-acylation, N-alkylation, Hofmann's exhaustive methylation (HEM),Hofmann-elimination reaction, reaction with nitrous acid, carbylamine reaction, Electrophilic substitution in aromatic amines: bromination, nitration and sulphonation.

3.2 Diazonium Salts: **(7 Lectures)**

Preparation and their reactions/synthetic application - Sandmeyer reaction, Gattermann reaction, Gomberg reaction, Replacement of diazo group by -H,-OH. Azo coupling with phenols, naphthols and aromatic amines, reduction of diazonium salt to aryl hydrazine and hydroazobenzene

3.3 Heterocyclic Compounds: (8 Lectures)

3.3.1. Classification, nomenclature, electronic structure, aromaticity in 5-numbered and 6-membered rings containing one heteroatom;

3.3.2. Synthesis of Furan, Pyrrole (Paal-Knorr synthesis, Knorr pyrrole synthesis, and Hantzsch synthesis), Thiophene, Pyridine (Hantzsch synthesis),

3.3.3. Reactivity of furan, pyrrole and thiophene towards electrophilic substitution reactions on the basis of stability of intermediate and of pyridine on the basis of electron distribution. Reactivity of pyridine towards nucleophilic substitution on the basis of electron distribution.

3.3.4. Reactions of furan, pyrrole and thiophene: halogenation, nitration, sulphonation, Vilsmeier-Haack reaction, Friedel-Crafts reaction. Furan: Diels-Alder reaction, Ring opening. Pyrrole: Acidity and basicity of pyrrole. Comparison of basicity of pyrrole and pyrrolidine.

3.3.5. Pyridine: Basicity. Comparison of basicity of pyridine, pyrrole and piperidine. Sulphonation of pyridine (with and without catalyst), reduction and action of sodamide (Chichibabin reaction).

Semester III
Chemistry Practicals:

Unit I: Physical Chemistry

1. To verify Ostwald's dilution law for weak acid conductometrically.
2. To determine dissociation constant of weak acid conductometrically.
3. To determine the critical solution temperature (CST) of phenol - Water System.
4. Determination of energy of activation of acid catalyzed hydrolysis of methyl acetate.
5. To investigate the reaction between $K_2S_2O_8$ and KI with equal initial concentrations of the reactants
6. To determine solubility of sparingly soluble salts (anytwo) conductometrically.

Unit II: Inorganic Chemistry

1. Identification of cations in a given mixture and Analytically separating them [From a mixture containing not more than two of the following: Pb(II), Ba(II), Ca(II), Sr (II), Cu(II), Cd(II), Mg(II), Zn(II), Fe(II), Fe(III), Ni(II), Co(II) Al(III), Cr(III)]
2. Crystallisation of potassium iodate and to estimate its purity before and after the separation.
3. Estimation of total hardness
4. Investigation of the raction between Copper supfate and Sodium Hydroxide (Standard EDTA solution to be provided to the learner).

Unit III: Organic Chemistry

Short organic preparation and their purification: Use 0.5-1.0g of the organic compound. Purify the product by recrystallization. Report theoretical yield, percentage yield and melting point of the purified product.

Preparation of:

1. Cyclohexanone oxime from cyclohexanone.
2. Glucosazone from dextrose or fructose
3. Tribromoaniline from aniline.
4. β-Naphthylbenzoate
5. m-Dinitrobenzene from nitrobenzene

6. Phthalic anhydride from phthalic acid by sublimation
7. Acetanilide from aniline
8. p-Bromoacetanilide from acetanilide
9. Iodoform from acetone

(Any eight preparations)

Semester IV
Chemistry Practicals:

Unit I: Physical Chemistry

1. To determine standard EMF and the standard free energy change of Daniel cell potentiometrically .
2. To determine the amount of HCl in the given sample potentiometrically.
3. Compare the strengths of HCl and H_2SO_4 by studying kinetics of acid hydrolysis of methyl acetate.
6. Industrial visit report.

Unit II: Inorganic Chemistry

1. Inorganic preparation – Nickel dimethyl glyoxime using microscale method.
2. Complex cation – *Tris* (ethylene diamine) nickel (II) thiosulphate.
3. Complex anion – Sodium Hexanitrocobaltate (III) The aim of this experiment is to understand the preparation of a soluble cation (sodium)and a large anion hexanitrocobaltate(III) and its use to precipitate a large cation (potassium)
4. Inorganic salt – Calcium or magnesium oxalate using PFHS technique

Unit III: Organic Chemistry

Qualitative Analysis of bi-functional organic compounds on the basis of

1. **Prelimenary examination**
2. **Solubility profile**
3. **Detection of elements C, H, (O), N, S, X.**
4. **Detection of functional groups**
5. **Determination of physical constants (M.P/B.P)**

Solid or liquid Compounds containing not more than two functional groups from among the following classes may be given for analysisto be given: Carboxylic acids, phenol, carbohydrates, aldehydes, ketones, ester, amides, nitro, anilides, amines, alkyl and aryl halides.

Students are expected to write balanced chemical reactions wherever necessary. (Minimum 6 compounds to be analyzed)

Semester III
Paper III
Basics in analytical Chemistry
Theory: 45 Lectures

The Role of Analytical chemistry in various fields including non-chemistry fields such as Environmental Science, Pharmacy, Medicine, Life Sciences, Petrochemicals, Arts (like Painting) Forensic sciences and so on can never be underestimated. This course is expected to introduce the learner to this interesting field of Analytical Chemistry.

It is expected to provide the learner an overview of this very important branch of chemistry. After successful completion of this course the learner is expected to be familiar with the question of what is analysis, why it is required and the methods, techniques, procedures and protocols that may be used or required in the course of a given problem of analysis. The learner is also expected to appreciate the role of an Analytical Chemist and a Chemical Analyst.

Correctness or acceptability of the results of a given analysis and how to deal with wrong or erroneous results: when to reject them and when and how to retain them to be meaningful and/or acceptable are some other attributes expected as outcomes of learning this paper.

As such it is felt that this paper will be a subject of choice and interest for learners preferring a specialisation in Chemistry as well as to those who may have interests in other science fields as Physics, Botany, Zoology, Microbiology, Geochemistry and so on.

Goal:

To introduce the learner to an area of learning that is vital for the inherent nature of the subject itself but also is important and irreplaceable irrespective of the long term interest of specialisation or subject of interest of the learner.

Unit **I- Intorduction to Analytical Chemistry and Statistical Treatment of analytical data-I (15 L)**

Scope/ Objectives:

Learners should be able to

1. Select a method of analysis
2. Decide how to identify a sample and prepare it for analysis
3. Select a procedure for analysis
4. Identify sources of possible errors in the results obtained.

(Problems including numericals expected wherever necessary)

1.1. Role of Analytical Chemistry (9 L)

1.1.1. Language of analytical chemistry: important terms and their significance in Analytical Chemistry.

1.1.2. Purpose of Chemical Analysis; Analysis Based (i) On the nature of information required: (Proximate, Partial, Trace, Complete Analysis) and (ii) On the size of the sample used (Macro, semi-micro and micro analysis)

1.1.3. Classical and Non-Classical Methods of Analysis; their types and importance.

1.2. Significance of Sampling in Analytical Chemistry

1.2.1. Terms involved in Sampling

1.2.2. Types of Sampling

1.2.3. Sampling techniques

1.3. Results of Analysis. (6L)

1.3.1. Errors in Analysis and their types

1.3.2. Precision and Accuracy in Analysis

1.3.3. Corrections for Determinate Errors

(Problems including Numericals expected wherever required)

2. Instrumental methods of analysis by Willard, H.H.; Merritt, L.L. Jr.;
Dean, J.A.; Settle,7th Edition

3. Fundamental of Analytical Chemistry by Douglas A. Skoog, West, F. James Holler,
S. R. Crouch

4. Modern Analytical Chemistry by David Harvey, McGraw-Hill Higher Education

Unit II- Classical Methods of Analysis(15 L)

Objectives:

The main objectives of this unit is to

- Introduce classical methods of chemical analysis.
- Appreciate the various terms and types of titrimetric analysis.
- Ability to select proper titrimetric method
- Appreciate the usefulness of the gravimetric method of analysis
- Identify a suitable gravimetric method
- Perform the required calculations involved in the analysis by titrimetry as well as gravimetry.

2. Classical Methods of Analysis. (04L)

2.1. Titrimetric Methods

2.1.1. Terms involved in Titrimetric methods of analysis. Comparing volumetry and Titrimetry

2.1.2. The Conditions suitable for titrimetry

2.1.3. Types of titrimetry – Neutralisation (Acidimetry, alkalimetry), Redox, (Iodometry, Iodimetry,) Precipitation and Complexometric titrations and indicators used in these titrations

2.1.4. Tools of Titrimetry: Graduated glasswares and Callibration

2.2. Standard solutions (Primary and Secondary standards in Titrimetry) and Calculations in Titrimetry.

2.3. Neutralisation Titrations (04L)

2.3.1. Concept of pH and its importance in Neutralisation Titrations

2.3.2. End point and Equivalence point of Neutralisation titrations

2.3.3. Determination of End point by using

i. Indicators causing colour change
ii. Change in potential, (by potentiometry)
iii. Change in conductance (by conductometry)

2.3.4. Construction of titration curve (on the basis of change in pH)of a titration of

i. Strong acid-weak base
ii. Strong base-weak acid

2.4. Gravimetric analysis (06 L)

2.4.1. General Introduction to Gravimetry.

2.4.2. Types of Gravimetric Methods –

2.4.3. Precipitation Gravimetry:

i. Steps involved in precipitation gravimetry analysis
ii. Conditions for precipitation
iii. Completion of precipitation,
iv. Role of Digestion, Filtration, Washing, Drying Ignition of precipitate.

v. Applications of Gravimetric Analysis: Determination of sulfur in organic compounds; Estimation of Nickel in Cu-Ni alloy using dimethyl glyoxime; Determination of Aluminum by converting it to its oxide.

Unit III: Instrumental Methods-I [15 L]

Objectives:

On completing the learning of this unit the learner is expected to

- Know the various instrumental methods of analysis
- Advantages of using instruments to make measurements
- The various observable properties of a given analyte and the stimulus best suited for its analysis
- Know about a generalized diagram of an analytical instrument
- Select a suitable instrumental method for analysis
- Appreciate the basic terms in spectrometry
- Use the relationship between absorbance (and its variations) and concentration of the analyte.
- Chose a suitable method foe photometric titrations.

3. Basic Concepts in Instrumental methods (03)

3.1. Relation between the Analyte, Stimulus and measurement of change in the observable property.

3.2. Block Diagram of an Analytical instrument.

3.3. Types of Analytical Instrumental methods based on

i. Optical interactions (eg. Spectrometry: uv-visible, Polarimetry)
ii. Electrochemical interactions (eg. Potentiometry, Conductometry,)
iii. Thermal interactions (eg. Thermogravimetry)

3.4. Spectrometry (07 L)

3.4.1. Interaction of electromagnetic radiation with matter: Absorption and Emission spectroscopy

3.4.2. Basic Terms: Radiant Power, Absorbance, Transmittance, Monochromatic

light, Polychromatic light, Wavelength of maximum absorbance, Absorptivity and Molar Absorbtivity

3.4.3. Statement of Beer's Law and Lambert's Law, Combined Mathematical Expression of Beer -Lambert's Law, Validity of Beer-Lambert's Law, Deviations from Beer-Lambert's Law ((Real deviations, Instrumental deviations and Chemical deviations)
(Numerical problems based on Beer-Lambert's Law)

3.4.4. Instrumentation for absorption spectroscopy: Colorimeters and Spectrophotometers

3.4.5. Block Diagrams for Single beam and Colorimeter, and Spectrophotometer (Principles, Construction and working-Details of Components expected i.e , source ,Sample holder , Filters/Monochromators, Detectors such as Photomultiplier tube)

3.4.6. Applications of UV-Visible Spectrophotometry **(02 L)**

(a) Qualitative analysis such as Identification of functional groups in Organic compounds ,Chromophores and Auxochrome,*cis* and *trans* isomers

(b) Quantitative analysis by Calibration curve method and

3.4.7. Photometric Titrations: Principle ,Instrumentation, Types of Photometric titration Curves with examples. **(03L)**

3. Instrumental Methods of Analysis by Willard, Merritt, Dean, Settle 7th Edition pp 118-181.

Semester III
Chemistry Practicals:
Paper III
Basics in Analytical Chemistry

1. **Tools of Analytical Chemistry-I:**
   a) Analytical glass wares like burettes, pipettes, Standard flasks, Separating funnels.
   b) Weighing tools such as two pan balance and monopan balance, digital balances:
   c) Incineration devices: Burners, Electrical Incinerators, Muffle Furnace,
   d) Drying Devices: Hot Air Oven, Microwave Oven, Descicators, Vacuum descicators
   e) Monochromators, Filters, Sample holders, Prisms, Diffraction Gratings, Photoemissive cells, Photomultiplier tubes

(The learner should draw diagrams and write-ups providing uses, care and maintenance of the items mentioned in (a) and principle, construction and uses of items (b) to (e) in his journal.

2. Gravimetric estimation of Nickel (II) as Ni-DMG and calculation of % error.
   (The learner is expected to know the role of the various reagents/chemicals used In the estimation, various steps involved. They should write the complete and Balanced chemical reaction for the formation of the $Ni(DMG)_2$ complex.
3. Colorimetric Determination of Copper Ions in given Solution by using calibration curve method and calculation of % error.
   (The learner is expected to learn the relation between concentration and Absorbance, to draw a calibration curve, use the slope of the calibration curve and compare it with the calculated slope. They are also expected to state the error estimate of their results).
4. Determination of buffer capacity of acid buffer and basic buffer.
   (The learner is expected to learn the use pH meter, standardization of pH meter, use of Henderson's equation and calculation of buffer capacity)
5. Estimation of Aspirin
6. Gravimetric estimation of barium ions using K_2CrO_4 as precipitant calculation of % error.
   (The learner is expected to learn the skills of using the counterpoise technique used in this gravimetric estimation; Using counterpoise method whatman No.42 for filtration. In such a case no incineration or use of silica crucible is required. They are also expected to state the error estimate of their results)

Semester IV

Paper III Basics in Analytical Chemistry -II

Theory: 45 Lectures

Unit –I -Methods of separation (15 L)

Objectives:

The learner is expected to understand

- The importance of separation in sample treatment
- Various methods of separations
- How to select a method of separation of an analyte from the matrix
- How a solute gets distributed between two immiscible phases
- Principle of solvent extraction and various terms involved therein
- Effect of various parameters on solvent extraction of a solute
- Classification of Chromatographic methods
- Paper and thin layer chromatography and using them in practice.

1. Separation Techniques in Analytical Chemistry (02 L)

1.1. An Introduction to Analytical Separations and its importance in analysis.

1.2. Estimation of an analyte without effecting separation.

1.3. Types of separation methods

1.3.1. Based on Solubilities (Precipitation, Filtration Crystallisation)

1.3.2. Based on Gravity- Centrifugation

1.3.3. Based on volatility-Distillation ;

1.3.4. Based on Electrical effects-Electrophoresis
1.3.5. Based on retention capacity of a Stationary Phase -Chromatography;
1.3.6. Based on distribution in two immiscible phases-Solvent Extraction;
1.3.7. Based on capacity to exchange with a resin-Ion Exchange;

1.4. **Electrophoresis:** Principles, Basic Instrumentation, Working and Application in separation of biomolecules like enzymes and DNA. (02L)

1.5. Solvent extraction (06 L)

1.5.1. Introduction, Nernst distribution Law, Distribution Ratio, Partition Coefficient.
1.5.2. Conditions of extraction: Equilibration time, Solvent volumes, temperature, pH.
1.5.3. Single step and multi step extraction, Percentage extraction for single step and multistep extraction. Separation factor.
1.5.4. Batch and continuous extraction

1.6. Chromatography : **(05L)**

1.6.1. Introduction to Chromatography
1.6.2. Classification of chromatographic methods based on stationary and mobile phase
1.6.3. Paper Chromatography: Principle, techniques and applications of Paper Chromatography in separation of cations.
1.6.4. Thin layer Chromatography Principle, technique and Applications in determining the purity of a given solute; Following progress of a given reaction .

4. Modern Analytical Chemistry , David Harvey (page numbers 596 -606)
5. Modern Analytical Chemistry , David Harvey (page numbers 215 -217)

Unit –II - Instrumental Methods-II (15 L)

Objectives
On completing this unit the learner is

- Expected to appreciate the nature of interaction between applied electrical potential and the concentration of the analyte.
- The nature of chemical reactions that influence potential of a given cell.
- Familiar with the various types of electrodes or half cells.
- Appreciate the nature, need and importance of pH
- Expected to know the applications of the various instrumental methods dealt with in this unit.

2. Instruments based on the electrochemical properties of the analytes

2.1. Potentiometry: **(05 L)**

2.1.1. Principle.
2.1.2. Role of Reference and indicator electrodes

2.1.3. Applications in Neutralisation reactions with reference to the titration of a Strong acid against a Strong Base (using quinhydrone electrode)

2.1.4. Graphical methods for detection of end points

2.2. pHmetry: **(04 L)**

2.2.1. Principle

2.2.2. Types of pH meters.

2.2.3. Principle, Construction Working and Care of Combined Glass electrode

2.2.4. Applications in Titrimetry (Strtong acid-Strong Base) biological and environmental analysis.

2.3. Conductometry: **(06 L)**

2.3.1. Principle

2.3.2. Conductivity cell its construction and care

2.3.3. Applications in Neutralisation Titrimetry with respect to

i. Strong Acid-Strong Base
ii. Strong Acid-Weak Base
iii. Strong Base-weak Acid
iv. Weak Acid- Weak Base**.**

2.3.4. Advantages & limitations of conductometric titrations.

Unit III- Statistical Treatment of analytical data --II (15 L)

Objectives:

On completing this unit the learner is expected to understand

i) The use of statistical methods in chemical analysis.
ii) The nature of indeterminate errors
iii) The randomness of such errors and its distribution around a correct or acceptable result
iv) Computation of Confidence limits and confidence interval
v) Test for rejection of doubtful result
vi) Method to draw best fitting straight line

3.1.**Nature of Indeterminate Errors: (03L)**

3.1.1. The true and acceptable value of a result of analysis

3.1.2. Measures of central tendency: mean, median. mode, average

3.1.3. Measures of dispersion: Absolute deviation, relative deviation, relative average deviation, standard deviation,(s,sigma) variance, coefficient of variation

3.2.**Distribution of random errors: (02L)**

3.2.1. Gaussian distribution curve.

3.2.2. Equation and salient features of Gaussian distribution curve

3.3.Concept of Confidence limits and confidence interval and its computation using (03 L)

(i) Population standard deviation

(ii) Student's *t* test

(iii) Range

3.4.Criteria for rejection of doubtful result (02 L)

(i) 2.5 d rule

(ii) 4.0 d rule

(iii) Q test

3.5.Test of Significance (02 L)

(i) Null hypothesis

(ii) F-test (variance ratio test)

3.6. Graphical representation of data and obtaining best fitting straight line (03 L)

(a) For line passing through origin

(b) For line not passing through origin

[Numerical problems wherever possible, expected]

References:

1. Modern Analytical Chemistry , David Harvey (page numbers 53 -84)
2. Fundamentals of analytical chemistry – Skoog and West

Semester IV
Chemistry Practicals:
Paper III Elective
(Basics in analytical Chemistry)

1. Tools of Analytical Chemistry-II

a. Filtration Flasks, Funnels, Separating Funnels, Distillation apparatus, Vacuum Distillation assembly, Centrifuge machine, Electrophoresis apparatus.

b. Development chamber for chromatography

c. Electrodes like Reference Electrodes and Indicator Electrodes (with respect to care and maintenance.)

d. Conductivity cell (with respect to care and maintenance.)

e. Combined Glass electrode (with respect to care and maintenance.)

f. Types of Salt Bridges and preparation of any one or use of salt bridge, its effect on the potential of a given electrode/cell

(The learner should draw diagrams and write-ups providing uses of the items mentioned in (a and b) and Principle, Construction care and Uses of items (c) to (f) in his journal.)

2. **Paper chromatography:** Separation of cations like Fe(III), Ni(II) and Cu(II) in a sample.

3. Separation of a solute between two immiscible solvents to determine the distribution ratio and/or extraction efficiency. (Solutes could be as their aqueous solutions and the organic solvent ethyl acetate) Suggested solute for the distribution study: Fe (III) in aqueous solutions.
   (The learner is expected to learn the technique of solvent extraction by using separating funnel, method to estimate the concentrations of the solute distributed in the two immiscible phases, determination of the extraction efficiency)
4. Conductometric titration: Estimation of given acid by conductometric titration with strong base and calculation of % error. (The learner is expected to learn the handling of the conductometer and the conductivity cell, determination of end point by plotting a graph. They are also expected to state the error estimate of their results).
5. Estimation of Fe(II) in the given solution by titrating against $K_2Cr_2O_7$ potentiometrically and calculation of % error. (The learner is expected to learn the handling of the potentiometer, use of Platinum electrode and reference electrode like SCE. They will learn to determine end point by plotting a graph. They are also expected to state the error estimate of their results).
6. Gravimetric estimation of Sulfate as $BaSO_4$ and calculation of % error. (The learner is expected to write a balanced chemical reaction, need for digestion of the precipitate and the skill required to carry out the incineration and to estimate the % error.)
   (The learner is expected to write a balanced chemical reaction, need for digestion of the precipitate and the skill required to carry out the incineration and to estimate the % error.)

Item No. 4.282

PREFACE

Applied Component was introduced for T. Y. B. Sc. class in the academic year 1979-80 with a view to enhance the essence for employability. The syllabus is a blend of concepts with four electives. It gives me immense pleasure to present these four applied component courses namely Marine Science, Fishery Biology, Economic Entomology and Environmental Science under the umbrella of BOS in Zoology.

In the syllabi of these applied components, applied topics having commercial propositions have been incorporated that further ads to the enhancement of entrepreneurial potential and skills amongst the learners. In the past our syllabus focused mainly on theory as a way of providing knowledge base and preparation for students. We have attempted to go beyond this tradition, while doing so, equal emphasis is laid on theory and corroborative practicals. From the academic year 2011-12, the University has introduced Credit Based Semester and Grading System (CBSGS). Accordingly the existing syllabi of these applied components were restructured to fit into the CBSGS pattern. The concept of flexi syllabus was introduced offering opportunity to learners to study any four out of a total of eight units in each course. Now that the syllabus is restructured and to be introduced from the academic year 2017-2018, we have included a novel concept of open unit and case studies. This approach, I'm sure will enhance the critical and analytical thinking abilities of the students.

I take this opportunity to thank the experts in various field for giving valuable, beneficial and constructive suggestions during framing of the syllabus. The syllabus committee under the convenorship of Mr. Vinayak Dalvie has done a commendable job of timely framing the syllabus with a highest degree of precision and accuracy. While appreciating the efforts, I also express my thanks and heartfelt gratitude to the entire team.

– Dr. Anita Jadhav
Chairperson
Ad-hoc, BOS in Zoology

AC - 11th May, 2017
Item No. 4.282

PREAMBLE

As a convener when I mooted the concept of flexi-syllabus, first of its kind, in the academic year 2009-10 it was grossly misconstrued. To add to it I also placed an idea of including case studies and introducing a new concept of "Open Unit". Both were rejected then. I had also proposed a new subject "Entrepreneurial and Industrial Biology" in place of the existing Applied Components usually offered by the students of Biological Sciences. 20 workshops in different districts with teachers and students of various subjects were conducted to explain these four concepts. A twenty one days refresher course for teachers, sponsored by UGC was also conducted in the new subject of "Entrepreneurial and Industrial Biology" which was much appreciated by the then Director of NAAC, Prof H. A. Ranganath, who is from Biological Sciences, understanding the potential of the subject. However, implementation was postponed for technical reasons thus permitting innovation limited to the flexi-syllabus, implemented in 2010-11, which has inherent capacity to cater to the diverse needs of the region and the industry by allowing students and teachers to choose a desired capsule of eight topics, with various permutations and combinations from the menu of sixteen based on the interest, resources, expertise and need. It took care of a range of students by also providing learners' space to high IQ students. Yet the possibility of exclusion of some important topics cannot be ruled out apart from some new avenues developed during the lag phase of revision of syllabi. Open unit will permit a good teacher to keep pace with the development and adopt latest topics instantly without waiting till it becomes obsolete in the gap of 5 years that the University generally takes to revise the syllabus. It may also allow students to learn the existing topic in more details and depth under the open unit thus making them specialized in need based areas enhancing employability. Assignments would add to their understanding of Government schemes, regulations and market, while projects will augment Business Sense or Scientific Acumen, as the case may be. Case studies and simulations, introduced for the first time in Zoology, would pose challenge for true application of knowledge to real life situations with thought provoking questions demanding analytical solutions. Pedagogy of such dynamic syllabus will range from use of ICT in the class to teaching directly in the field with a blend of participative and experiential learning with group dynamics gaining true knowledge apart from developing personality of the students and above all making them apply ‘Common Sense’ which is the essence of life. I am sure dedicated team of Zoologists which has placed the subject on top in the past 5 years is poised to make it a success in every college befitting the purpose of introducing applied component by the University in the academic year 1979-80.

– VINAYAK DALVIE
Convenor,
Syllabus Committee

AC - 11th May, 2017
Item No. 4.282

Pedagogy

Applied Component Syllabus of Fishery Biology is flexi-syllabus designed in such a way that students can carve their future in Fishery Biology. To understand the potential of this flexi-syllabus it is important to select four units in each semester systematically in such a way that they have relevance with each other. Different capsules may be developed through permutations and combinations and each capsule being a subject in itself. For example selecting units III, IV, VII and VIII in semester V and Units III, IV V and VII in semester VI will ensure specialization in Freshwater Fishery. Of course teacher is at liberty to choose any four units in each semester in consultation with students based on the need, expertise and resources available.

It is recommended to use ICT, films, YouTube clippings, etc., regularly in the classroom. However, field trips, study tours and industrial visits both short and long are recommended relevant to the units prescribed, whether selected for teaching or not, to provide desired outcome. It is highly recommended that units such as III and V in semester V and Unit VII of semester VI are to be taught in field for experiential learning and not in the classroom. Case studies are to be taught through group discussion, each group consisting of ten students for each case, which will be developed and presented by the teacher with thought provoking approach. The students are expected to do analytical thinking deriving solutions after critical evaluation in the group.

For a creative teacher the open unit can be a most effective tool. The teacher can coin topics giving further in-depth knowledge on need-based topics covered in the syllabus. Teacher also has the liberty to include newly developed area or arriving need in the vicinity under open unit with consent of the Head and the Principal of the Institution.

This syllabus has a few theoretical topics, though most of the topics otherwise are applied.

With Fishery Biology Syllabus focused both on Freshwater and Marine fisheries, a student can choose his or her stream accordingly to ensure better prospects in the career.

.

Co-Convenors,
Syllabus Committee.

Semester V: Theory
Oceanography, Aquaculture Practices, Marketing and Finance
Course code: USACFBIO501

(Any four units to be opted)

Lectures 60
Credits 2

Unit 1: Oceanography

***Objective*:**

- *To study different instruments and equipments in navigation and oceanography*
- *To introduce physical, chemical and biological oceanography*

Desired *outcome:*

- *Learner shall understand and learn about the use of sea safety, navigational equipments and oceanographic instruments*
- *Learner shall understand basic physical, chemical and biological oceanography*

1.1 Navigational and sea safety equipments
i) Life saving devices
ii) Global Positioning System (GPS)
iii) Rudder
iv) Signaling devices

1.2 Oceanographic Instruments
i) Niskin water sampler
ii) Peterson's grab
iii) Dredges
iv) Fish finding instruments / Methods
v) Remote sensing

1.3 Introduction to basic physical, chemical and biological oceanography

Unit 2: Crafts and Gear

Objective:

- *To study the process of boat building, materials used and various types of diesel engines*
- *To study various types of nets used in fishery*

Desired *outcome:*

- *Learner shall comprehend boat building techniques and design of engines used in mechanized boats*
- *Learner shall understand the operations of various types of nets and fishing method*

2.1 Basic boat building (parts, design, material used), methods of protection from foulers and borers

2.2 Basic studies of marine engines:

i) Outboard and Inboard Engines
ii) Sectional View of 2-stroke and 4-stroke Diesel engines
iii) Winch and Deck Side Equipment

2.3 Operations:
i) Gill, Trawl, Purse seine Nets
ii) Hooks and Lines
iii) Non-conventional Fishing Methods such as
- Light Fishing
- Hose Pipe Fishing
- Electric Fishing

Unit 3: Farming of major carps

***Objective*:**
- *To study and develop skills in breeding techniques, hatchery, nursery and management of various carps*
- *To study and explore various techniques used in fishery and poly culture practices*

Desired *outcome*:
- *Learner will understand breeding techniques and skills for culture of major carps*
- *Learner will comprehend hatchery and nursery management of major carps*

3.1 Breeding techniques of major carps and common carp
3.2 Hatchery and nursery management of:
- Major carps:

i) IMCs: *Labeo rohita* (Rohu), *Catla catla* (Catla), *Cirrhinus mrigala* (Mrigal)
ii) Exotic carps: *Hypophthalmichthys molitrix* (Silver carp), *Ctenopharyngodon idella* (Grass carp)
iii) *Cyprinus carpio* (Common carp)

3.3 Mono-culture and polyculture practices:
i) Extensive
ii) Semi-intensive
iii) Intensive

Unit 4: Introduction to other commercial aquaculture practices in fresh water

***Objective*:**
- *To develop skills and understanding of breeding and rearing of sewage-fed fishery, Basa cat fish and Tilapia by novel ways*

Desired *outcome:*
- *Learner will be equipped to carry out entrepreneurial operations or gain confidence to work in freshwater prawn unit*
- *Learner will gain knowledge about how to breed and rear ornamental fishes and commercially viable fish species*

4.1 *Macrobrachium rosenbergii* (Freshwater prawn)

i) Breeding, life cycle, hatchery management
ii) Monoculture of *Macrobrachium rosenbergii*
iii) Composite culture of major carps and *Macrobrachium rosenbergii*

4.2 Ornamental fishes – breeding and rearing:

i) Egg layers:
- *Danio spp.* (Danio)
- *Pterophyllum spp.* (Angel)
- *Symphysodon spp.* (Discus)
- *Paracheirodon innesi* (Neon tetra)
- Flower horn (Hybrid variety)
- *Betta splendens* (Siamese fighter)

ii) Live bearers:
- *Poecilia reticulate* (Guppy)
- *Xiphophorus hellerii* (Swordtail)
- *Poecilia velifera* (Tangerine)
- *Poecilia sphenops* (Molly)
- *Xiphophorus maculatus* (Platy)

4.3 Breeding and rearing of:

- Sewage-fed fishery of air breathing fish: *Pangasianodon hypophthalmus* (Striped catfish), *Clarius spp.*, *Heteropneustes spp.* and *Anabas spp.*
- *Pangasius bocourti* (Basa Catfish)
- All meal (Less bones) *Tilapia* – GIFT (Genetically Improved Farmed *Tilapia)*

Unit 5: Culture of shell fishes and fin-fish

***Objective*:**

- *To study breeding techniques, hatchery and management of fin-fish and shell fishes*
- *To study rearing practices of fin-fish and shell fishes*
- *To study culture of brackish water shrimp*

Desired *outcome:*

- *Learner shall understand breeding techniques, hatchery and management of fin-fish and shell fishes*
- *Learner shall understand the rearing techniques*

5.1 Breeding, hatchery, nursery management and rearing (extensive, semi-intensive, intensive)

i) Fin-fish – *Lates calcarifer* (Sea bass)
ii) *Litopenaeus vannamei* (Brackish water prawn or Pacific white shrimp)
iii) *Scylla serrata* (Giant mud Crab)
iv) *Pinctada vulgaris* (Pearl)

Unit 6: Quality control and packaging

***Objective*:**

- *To comprehend various aspects of quality control and packaging involved in fish processing and marketing*

Desired *outcome:*

- *Learner will be oriented towards understanding the various stages of quality control*
- *Learner will gain knowledge about the postmortem changes, spoilage mechanisms and methods involved in evaluating the freshness and quality of fishes and prawns / shrimps*
- *Learner shall comprehend the value of maintaining and taking sanitary precautions during the processing and packaging operations*

6.1 Post mortem changes and mechanism of spoilage:

i) Hyperaemia
ii) Rigor mortis
iii) Autolysis
iv) Rancidity

6.2 Brief methods for evaluating freshness and quality of fish and prawns / shrimps

i) Organoleptic
ii) Microbial
iii) Chemical

6.3 Sanitary operations

i) Maintenance of hygiene of food contact surfaces, storage and equipment
ii) Water quality, ice, sewage and waste water disposal and effluent treatment plant

6.4 Various packaging materials used in freezing and canning industry

i) Polyolefin
ii) Wax duplex carton
iii) Master carton
iv) Can
v) Lacquered can
vi) Retort
vii) Freezing procedures including hygienic washing, dressing

6.5 Quality Policy and Quality Analysis: ISO 22000/HACCP/ BRC/IFS

Unit 7: Marketing and finance

***Objective*:**

- *To acquaint and instill knowledge of the fundamentals of marketing and finance required for entrepreneurship in fishery related enterprises and co-operatives*

Desired outcome:

- *Learner shall acquire knowledge about traditional marketing practices and role of co-operatives in selling fish*
- *Learner shall be exposed to the avenues and procedure for raising funds for*

fishery related entrepreneurial practices

7.1 Traditional marketing vis-a-vis role of fishery co-operatives with reference to operations at Satpati, Sasoon dock and Karanja
7.2 Global marketing and Export-Import procedures and role of Marine Products Exports Development Authority (MPEDA)
7.3 i) Fund raising:

- Financial institutions
- Schemes and subsidies
- Basic accounting
- Costing and feasibility report

ii) Role of NABARD (National Bank for Agriculture and Rural Development) for refinancing and NFDB (National Fishery Development Board, Hyderabad) for funding through the State Government

Unit 8: Case Study and Simulation

Case Study and Simulation is one of the eight units and hence may or may not be opted by the college. If opted, teachers in consultation with the students shall select the case studies for this unit every year, if required, and shall seek endorsement of the Head and the Principal.
Colleges/ Institutes have to select the topics as per their needs and available resources. It is pertinent to note that the case studies and simulations shall be operational and available in the syllabus only till it comes under the scope of internal assessment.

Objective:

- *To inculcate entrepreneurial abilities and skills so as to make the learner confident and prepare them to raise new projects and venture in the realm of fishery biology*
- *To understand the concepts and to develop the acumen of the learner in a better way*
- *To assess varying dimensions while taking decisions in fishery biology*

Desired outcome:

- *Learner will gain technical and financial knowledge in fishery biology business ventures*
- *Learner will develop better acumen so as to take wise and necessary decisions while participating in fishery biology related projects*

(Any eight from suggested below or more, developed by teacher)

a) Sawantwadi New Fish Market developed through NFDB funding
b) Trilok foods, an RTE industry established as PPP through DST funding
c) Sewage-fed fishery; Kolkata model
d) Pancham Aquaculture
e) Naik Oceanic
f) Aquaponics, Hydroponics
g) Mahseer Ranching at Dehu

h) Integrated fish farm goatery, piggery, poultry, dairy, etc.
i) Juchandra Village

AC - 11th May, 2017
Item No. 4.282

Semester V Practicals
Course code: USACFBIO5P1

2 Credits

1) Identification and functioning of oceanographic instruments:
    - Niskin water sampler
    - Peterson's Grab
    - Dredge

2) Layout of fishing vessels and sectional view of 2 stroke and 4 stroke diesel engines, lifesaving equipment, winch and deck side equipment.

3) Identification of various stages of development of carps and study of sexual dimorphism in adults.
   Indian major carps:
    - *Labeo rohita* (Rohu)
    - *Catla catla* (Catla)
    - *Cirrhinus mrigala* (Mrigal)

   Exotic carps:
    - *Cyprinus carpio* (Common Carp)
    - *Hypophthalmichthys molitrix* (Silver Carp)
    - *Ctenopharyngodon idella* (Grass Carp)

4) a) Identification of *Litopenaeus vannamei* (Pacific white shrimp) and *Macrobrachium rosenbergii* (Freshwater prawn)
   b) Study of sexual dimorphism in adults.

5) Identification of fishes:
    - *Anabas testudineus* (Climbing perch)
    - *Clarius batrachus* (Walking catfish)
    - *Boleophthalmus spp.* (Mudskipper)
    - *Pangasianodon hypophthalmus* (Iridescent shark)
    - *Pangasius bocourti* (Basa catfish)
    - *Tilapia*(GIFT)

6) Identification of:
   A) Ornamental fishes:
        - *Pterophyllum spp.* (Angel)
        - *Xiphophorus hellerii* (Swordtail)
        - *Paracheirodon innesi* (Neon tetra)
        - *Betta splendens* (Siamese fighter)
        - *Danio spp.* (Danio)
        - *Symphysodon spp.* (Discus)

- Flower Horn (Hybrid variety)

B) Aquatic plants:
- Ludwigia
- Cabomba
- Corkscrew *Vallisneria*
- Aquarose
- Amazon Sword plant

C) Aquarium accessories:
- Aerator
- Under Gravel Filter
- Internal Filter
- External / Canister Filter
- Food dispensers

7) Study of models and functioning of D 81 hatchery, Shirgur's hatcheries and Chinese hatchery.

8) Microbial studies:
   i. Dilution of sample
   ii. Gram staining technique
   iii. Identification of Bacilli, Cocci, Vibrio bacteria

9) Organoleptic tests for fish and prawn / shrimp

10) Total Plate Count (TPC) of bacteria from fish.

11) Identification of packaging materials:
- Waxed duplex carton
- Master carton
- Simple cans
- Coated [Lacquered] cans
- Polyolefin
- Retort

12) Estimation of toxins and moulting retardant
- H_2S (qualitative)
- Ammonia (qualitative)
- Ca (quantitative)
- Mg (quantitative)

13) Photographic documentation of fishery biology related topics.

Submission of ~~5~~ hard and soft copies of 5 original photographs taken by the learner (exif details required).

14) Assignment (may be submitted in a group not exceeding three students)

Please refer the Annexure I for the suggested topics for assignment for Course code USACFBIO5P1.

***Note – The practicals may be conducted by using specimens authorized by the wild life and such other regulating authorities though it is strongly recommended that the same should be taught by using photographs/audio-visual aids/simulations/ models etc. as recommended by the UGC and as envisaged in the regulation of the relevant monitoring bodies. No new specimens, however, shall be procured for the purpose of conducting practicals mentioned here-in above.**

N.B:

I) It is pertinent to note that we have to adhere strictly to the directions as given in the UGC Circular F14-4/2006 (CPP-II).

II) Apart from the Institutional Animal Ethics Committee (IAEC) and any other Committee appointed by a Competent Authority / Body from time to time, every college should constitute the following Committees:

1) A Committee for the Purpose of Care and Supervision of Experimental Animals (CPCSEA) and

2) A Dissection Monitoring Committee (DMC) to ensure that no dissections or mountings are done using animals.

Composition of DMC shall be as follows:

i) Head of the Concerned Department (Convener / Chairperson)
ii) Two Senior Faculty Members of the concerned Department
iii) One Faculty of related department from the same College
iv) One or two members of related department from neighbouring colleges.

USE OF ANIMALS FOR ANY EXPERIMENT /DISSECTION /MOUNTING IS BANNED. SIMULATIONS, AUTHORIZED PERMANENT SPECIMENS/SLIDES, CHARTS, MODELS AND OTHER INNOVATIVE METHODS ARE ENCOURAGED.

AC - 11th May, 2017
Item No. 4.282

Semester VI: Theory
Marine resources, Post-harvest and Farm Engineering
Course code: USACFBIO601

(Any four units to be opted)

Lectures 60
Credits 2

Unit 1: Marine Fin-fish of India

***Objective*:**

- *To study coastal and deep sea fishes*
- *To study commercial potential and major landing centres*

Desired *outcome:*

- *Learner shall understand deep sea and coastal fishes.*
- *Learner shall understand commercial potential and know about the major landing centres of the fishes*

1.1 Coastal fisheries:

i) *Stromateus cinereus* (Silver pomfret)
ii) *Stromateus niger* (Black pomfret)
iii) *Polynemus tetradactylus* (Threadfin)
iv) *Pseudosciaena diacanthus* (Two-spined Jewfish or Ghol)
v) *Synagris japonicus* (Blackmouth splitfin)
vi) *Scomber microlepidotus* (Mackerel)
vii) *Cybium guttatum* (Seerfish or Surmai)
viii) *Sardinellal ongiceps* Indian Oil Sardine

1.2 Deep sea fisheries (more than 45 fathoms) of Indian exclusive economic zone

- *Thunnus alalunga* (Longfin tuna)
- *Sarda orientalis* (Striped bonito)

1.3 Commercial potential and major landing centres of the above fishes

Unit 2: Marine shell fish of India

***Objective*:**

- *To develop an in-depth understanding of crustacean and molluscan fisheries*

Desired outcome:

- *Learner shall understand crustacean and molluscan fisheries*
- *Learner shall understand the performance of landing centres of above fisheries*

2.1 Crustacean fisheries

i) *Penaeus monodon* (Giant tiger prawn)
ii) *Penaeusn ndicus* (Indian prawn)
iii) *Metapenaeus affinis* (Jinga shrimp)
iv) *Parapenaeopsis stylifera* (Kiddi shrimp)

v) Acetes indicus (Jawala paste shrimp)
vi) Panulirus polyphagus (Mud spiny lobster)
vii) Scylla serrata (Giant mud crab)

2.2 Molluscan fisheries
i) Crassostrea spp. (Oyster)
ii) Sepia pharaonis (Pharaoh cuttlefish)
iii) Loligo duvaucelii (Indian squid)

2.3 Commercial potential and major landing centres of the above shell fishes

Unit 3: Nutrition

***Objective*:**

- *To study, acquaint and discover the growing market for fish nutrition*

Desired *outcome:*

- *Learner will get acquainted with basics of nutritional requirements at various developmental stages of fish and crustaceans*

3.1 Nutritional requirements at various stages of development of fish and crustaceans
3.2 Culture of natural feed:
i) *Chaetoceros*
ii) *Infusoria*
iii) Artemia
iv) Brachionus
v) Daphnia / *Moina spp.*
3.3 Algology – Identification and culture of commercially important nutritious algae and its products
3.4 Formulated / Pelleted feed – Understanding the composition and use of formulated feed for fish and prawns / shrimps at various stages

Unit 4: Diseases

***Objective*:**

- *To acquire knowledge of the various aspects of diseases affecting fishes*

Desired *outcome:*

- *Learner will be oriented towards understanding causes, pathogenicity, prophylaxis and preventive measures of various fish diseases and physiological disorders*

4.1 Viral diseases, prophylaxis and preventive measures
4.2 Bacterial, fungal, protozoan infections and treatment
4.3 Crustacean infections and treatment
4.4 Physiological disorders (Dropsy) / diseases and treatment

Unit 5: Preservation and Processing

***Objective*:**

- *To derive knowledge about various fish preservation and processing methods*

Desired *outcome:*

- *Learners will acquire the knowledge and would put in to practice the preservation and processing techniques for commercial ventures*

5.1 Traditional methods and their modifications:
i) Icing
ii) Drying
iii) Salting
5.2 i) Introduction to refrigeration: Types and properties of refrigerants
i) Types of freezers:
a. Brine
b. Air blast
c. Tunnel
d. Contact plate
e. Cryo-quick
f. IQF: Individual Quick Freezing
ii) Freezing Procedures:
a. PUD (Peeled and Un-deveined)
b. DV (Deveined)
5.3 Principle and steps involved in can reform and canning of fish and shrimp in various media.
5.4 Equipment and utensils used in seafood processing

Unit 6: By-products and Value Added Products

***Objective*:**

- *To acquire knowledge of fish by-products, value-added products and good manufacturing practices*

Desired *outcome:*

- *Learner will gain sound knowledge about the fish by-products and value-added products*
- *Learner will explore good manufacturing practices while manufacturing these products*

6.1 Proximate composition of fish meat and products
6.2 Introduction to by-products
i) Fish protein concentrate
ii) Fish maws / Isinglass
iii) Fish hydrolysates
iv) Chitin, Chitosan
v) Glucosamine hydrochloride
vi) Gelatin
vii) Fish silage

viii) Surimi and imitation products
ix) Pearl essence

6.3 Different types of value added products from fish and shell fish
i) Fish / Prawn / Shrimp pickle
ii) Fish wafers
iii) *Acetes indicus* (Prawn) chutney
iv) Fish soup powder
v) Fish / Crab steaks
vi) RTE (Ready To Eat)
vii) Battered and breaded products
viii) Marinated tandoori prawns
ix) Prawn curry

6.4 Good manufacturing practices: Health and training of personnel, hygiene

Unit 7: Farm engineering

***Objective*:**

- *To acquire knowledge about farm engineering and novel fish culture practices*

Desired *outcome:*

- *Learner will understand the selection process of hatchery sites and various types of designs and construction of aquaculture farm practices*
- *Learners will comprehend the uses of equipment and accessories involved in aquaculture farms*

7.1 Site selection, designing and construction of hatchery and farms for extensive, semi-intensive and intensive freshwater / brackish-water aquaculture

7.2 i) Raft culture
ii) Rope culture
iii) Pen culture
iv) Cage culture with special reference to *Rachycentron canadum* (Cobia)

7.3 Equipment and accessories used in various aqua farms

Unit 8: Open Unit

Open unit is one of the eight units which may or may not be opted by the college. Teachers in consultation with the students shall define syllabus under this unit every year, if required, and shall seek endorsement of the Head and the Principal.

Colleges/institutes have to select the topics as per their needs and available resources. It is pertinent to note that the open unit shall be operational and available in the syllabus only till it comes under the scope of internal assessment.

Objective:

- *To teach any one of the units prescribed in the syllabus with more details and in-depth knowledge leading to specialization in the capsule of units selected.*
- *To incorporate the topics of special need of the area which are otherwise not covered in the syllabus.*

- *To give scope to creativity and wisdom of a teacher who wants to deal with the latest developments in the subject without waiting for the university to revise the syllabus.*

AC - 11th May, 2017
Item No. 4.282

Semester VI Practicals
Course code: USACFBIO6P1

Credits 2

1) Identification of marine fishes.
    - *Stromateus cinereus* (Silver pomfret)
    - *Stromateus niger* (Black pomfret)
    - *Polynemus tetradactylus* (Threadfin)
    - *Pseudosciaena diacanthus* (Two-spinned jewfish or Ghol)
    - *Trichiurus haumela* (Ribbon fish)
    - *Synagris japonicus* (Blackmouth splitfin)
    - *Scomber microlepeidotus* (Mackerel)
    - *Cybium guttatum* (Seerfish or Surmai)
    - *Sardinella longiceps* (Indian Oil Sardine)
    - *Thunnus alalunga* (Longfin tuna)

2) Identification of Crustaceans and Molluscs.
    - *Penaeus monodon* (Giant Tiger Prawn)
    - *Metapenaeus affinis* (Jinga shrimp)
    - *Parapenaeopsis stylifera* (Kiddi shrimp)
    - *Acetes indicus* (Jawala paste shrimp)
    - *Panulirus polyphagus* (Mud spiny lobster)
    - *Scylla serrata* (Giant mud crab)
    - *Crassostrea spp.* (Oyster)
    - *Sepia pharaonis* (Pharaoh cuttlefish)
    - *Loligo duvaucelii* (Indian squid)

3) Preparation of formulated feed for fish and prawn.

4) Identification of parasitic infections in aquatic organisms.
    - Fungal – Dermatomycosis
    - Bacterial – Fin/Tail rot and Dropsy
    - Protozoan – Costiasisand White Spot
    - Crustacean – Argulosis

5) Fish dressing, filleting, prawn peeling – PUD, DV and grading.

6) Fish morphometry – Length weight relationship of a suitable fish.

7) Preparation of Surimi, Fish protein concentrate.

8) Preparations of fish burger, fish fingers, fish/prawn pickle, fish chutney, fish curry.

9) Preparation of Chitin – Chitosan, Pearl essence.

10) Identification of various farm equipment such as:
- Feeding cups / Trays
- Paddle wheel aerator
- Fountains
- Sluice gate models
- Elbow pipe outlets

11) Study of models of raft, pen, cage culture and materials used in rope culture.

12) Project – Feasibility / Scientific.

13) Field Visit Report.

Please refer the Annexure II for the suggested field visits and Annexure – III for suggested topics for projects for Course code USACFBIO6P1.

***Note – The practicals may be conducted by using specimens authorized by the wild life and such other regulating authorities though it is strongly recommended that the same should be taught by using photographs/audio-visual aids/simulations/ models etc. as recommended by the UGC and as envisaged in the regulation of the relevant monitoring bodies. No new specimens, however, shall be procured for the purpose of conducting practical mentioned here-in above.**

N.B:
I) It is pertinent to note that we have to adhere strictly to the directions as given in the UGC Circular F14-4/2006 (CPP-II).
II) Apart from the Institutional Animal Ethics Committee (IAEC) and any other Committee appointed by a Competent Authority / Body from time to time, every college should constitute the following Committees:

1) A Committee for the Purpose of Care and Supervision of Experimental Animals (CPCSEA) and
2) A Dissection Monitoring Committee (DMC) to ensure that no dissections or mountings are done using animals.

Composition of DMC shall be as follows:

i) Head of the Concerned Department (Convener / Chairperson)
ii) Two Senior Faculty Members of the concerned Department
iii) One Faculty of related department from the same College
iv) One or two members of related department from neighbouring colleges.

AC - 11th May, 2017
Item No. 4.282

USE OF ANIMALS FOR ANY EXPERIMENT /DISSECTION /MOUNTING IS BANNED. SIMULATIONS, AUTHORIZED PERMANENT SPECIMENS/SLIDES, CHARTS, MODELS AND OTHER INNOVATIVE METHODS ARE ENCOURAGED.

AC - 11th May, 2017
Item No. 4.282

SCHEME OF EXAMINATION (THEORY & PRACTICAL)

a) Internal assessment of twenty five (25) marks per course per semester should be conducted according to the guidelines given by University of Mumbai vide circular number UG/04 of 2014 Dated 5th June 2014 to be implemented from academic year 2014-15.

b) External assessment of seventy five (75) marks per course per semester should be conducted as per the following skeleton question paper pattern.

c) One practical examination of one hundred (100) marks per course each should be conducted at the end of every semester.

Modality of Assessment:
Theory Examination Pattern:

A) Internal Assessment - 25% **25 marks**
Internal Assessment: Theory 25 marks

Sr No	Evaluation type	Marks
1	Class test to be conducted as per following pattern a) Match the column/Fill in the blanks/Multiple Choice Questions(1/2 mark each) (5 marks) b) Five questions of answer in 1 or 2 lines(Concept based questions) (5 marks) c) Answer in brief (Attempt any 2 out of the 3) (10 marks)	20
2	Overall conduct as a responsible student, manners, skill in articulation, leadership qualities demonstrated through organizing co-curricular activities, etc.	05

B) External examination - 75 %
Semester End Theory Assessment - 75% **75 marks**

1) Duration - These examinations shall be of two and half hours duration.
2) Theory question paper pattern:
   i. Q. 1 shall comprises 16 short notes (14 if case studies/open unit is not opted) representing all the units in the syllabus equally, of which students are expected to solve any five.
   ii. All questions carry equal marks i.e. 15 marks each with an internal option of 30 marks.
   iii. Each question from Q2 to Q9 (Q8 if case studies/ open unit is not opted) shall have the following pattern.

Q2 to Q9 A) **(15)**

OR

Q2 to Q9 B)
i) **(7)**
ii) **(8)**

AC - 11th May, 2017
Item No. 4.282

AC - 11th May, 2017
Item No. 4.282

Practical Skeleton Paper Course code: USACFBIO5P1

Time: 4 hours **Total Marks: 100**

Q. 1 Identification **20**

Identify spots 'a' to 'e' as per instructions

a) Identify and describe the oceanographic instrument / 2-stroke / 4-stroke engine.
b) Identify and describe lifesaving equipment / deck side equipment
c) Identify and describe accessory respiratory organ / ornamental fish / aquarium plant.
d) Identify and describe the aquarium accessory.
e) Identify and describe the packaging material.

Major Experiment

Q. 2 Perform organoleptic tests to differentiate fresh and stale fish and prawn. **25**

Minor Experiment

Q. 3 Prepare various dilutions of the given sample of bacteria. **15**
OR
Q. 3 Quantitative estimation of Calcium / Magnesium from the given water sample. **15**
OR
Q. 3 Qualitative estimation of NH_3 and H_2S from the given water sample. **15**
OR
Q. 3 Identify the given bacteria with the help of Gram's Staining technique. **15**

Q. 4 a. Submission of five photographs on relevant topics of fishery biology. **10**
b. Submission of assignment and viva based on it. **20**

Q. 5 Certified journal. **10**

AC - 11th May, 2017
Item No. 4.282

Practical Skeleton Paper Course code: USACFBIO6P1

Time: 4 Hours **Total Marks: 100**

Q.1Identification **20**

Identify spots ‘a’ to ‘e’ as per instructions

a) Identify and describe the given fish w.r.t. fishery
b) Identify and describe the given crustacean / mollusc w.r.t. fishery
c) Identify and describe the pathogen and its prevention and treatment of the given specimen.
d) Identify and describe farm equipment / model / material.
e) Identify and describe byproducts chitosan / chitin / pearl essence.

Major Experiment

Q. 2 Prepare the marked by-product / value-added product with suitable method: Surimi / Fish Protein Concentrate / Fish Burger / Fish or Shrimp Pickle / Chitin / Chitosan. **25**

Minor Experiment

Q. 3 Determine the fish morphometry – Length weight relationship of a suitable fish. **15**

OR

Q. 3 Demonstrate the technique of fish dressing and filleting. **15**

Q. 4 Project and viva based on it. **20**

Q. 5 Field report **10**

Q. 6 Certified journal **10**

Item No. 4.282

Annexures
Annexure -I

Suggested Topics for Assignment USACFBIO5P1 (Teachers are expected to develop additional innovative topics, varying every year, to be assigned to the students)

1) Market survey for various preserved and processed fish / prawns.
2) Observation on handling of fish on board, at landing centre, in secondary market and at consumer level.
3) Survey of the local market for the availability of various by-products / value added products and its price.
4) Comparative study of the shelf life of various fishes / fish by-products / value added products in relation to their cost.
5) Study of economics of brackish water pond culture.
6) Study of working of fisheries co-operative societies in your area.
7) Study of cost of construction of fishing vessel and subsidies available for the same.
8) Study of cost of gear manufacturing with different materials and subsidies available for the same.
9) Study of cost and profit analysis of any one of the following methods – Trawler / Gill netter / Purse seiner /hooks and lines and Non-mechanized fishing units.
10) Survey of various packaging materials used in fish processing industries.
11) Survey of various feeds used in local aqua farms.
12) Study of economics of pond culture from nearby area.
13) Comparative cost analysis of fingerlings of major carps from your area.
14) Setting up of marine / fresh water aquarium with various accessories and its costing.
15) Survey of costing of aquaria of different sizes and shape.
16) Study of various courses run by Institutes in your area in relation to fisheries.
17) Survey of aquarium shops to compare the costs of various aquarium fishes.
18) Study of economics involved in breeding / rearing of aquarium fishes.
19) Review of different marketing strategy (w.r.t. attracting target clients) used by manufacturers of fish products / byproducts / value added products.

20) Survey of target clients of manufacturers of fish products / byproducts / value added products.
21) Study of working of financial institutions involved in funding fishing industry.
22) Review of export import procedures followed by the fishing industry in your area.

All the topics mentioned above are suggestive in nature and more creative and innovative topics are expected from the students under the able guidance of concerned teachers, to suit the expertise, human resources, infrastructure and local needs as also the interest of the students.
The assignment may be submitted in a group not exceeding three students.

AC - 11th May, 2017
Item No. 4.282

Annexure - II

Suggested Field Visits USACFBIO6P1

- There shall be various short and long excursions / study tours / field visits / industrial visits in every semester, at least one of which shall be financially affordable to every student in the class; and that assessment and marks of field trips shall be solely based upon such where no student was restrained for financial limitations.

- Field visits are to be organized to facilitate students to have firsthand experience and exposure to technology / production / functioning of an organization / unit or witness a relevant activity.

- Each student must make at least 01 (one) such visits to the units/markets/sea shores out of 2 to 3 such visits organized by the college.

- **The list is suggestive and not exhaustive**

I) Visit to one of the units with one or multiple activities such as:
- Ornamental / Brackish water / Fresh water fish farm / hatchery

II) Visit to witness one of the activities such as
- Fish angling / trawling / purse seining / gill netting
- Fish finding operations, etc. (Echo Sounder / Sonar / Fish Magnifier)

III) Visit any production units such as
- Food / Fish processing and preservation
- Ornamental articles

IV) Hi-tech and multinational total export oriented units such as
- IQF plant
- Surimi plant
- Fishery plant
- Microbiological units
- Hi–tech fish / prawn / chick hatcheries
- Fish consumer product industries

V) Others –
- Self-Sale Groups
- Co-operative Societies

VI) Govt. Offices such as
- Fishery Department
- MPEDA
- Wild-life Authority

- CITES
- JDEI (Jt. Director-Export and Import)
- Sales Tax
- Income Tax
- Excise Department
- Customs Authority of India
- Local Self Govt. (BMC)
- Clearing Agencies / Agents
- FDA
- ISI
- Agmark, etc.

VII) Visit any ancillary unit such as

- Ice plant
- Can reforming
- Packaging
- Cold storage

VIII) Visit to National Laboratories, National Research Labs and Training Institutes such as NIO, CIFE, CMFRI, CIFT, FSI, IFP, CIFI, CIFNET, NBFGR, etc.

IX) Following places may be considered for short/long excursions:

MUMBAI DISTRICT:

- Versova Beach/Fish landing centre
- Girgaum Chowpatty
- Sassoon Dock, Colaba
- Ferry Wharf (Bhaucha Dhakka)
- Taraporevala Marine Biological Research Station, Bandra (East)
- Manori beach

THANE DISTRICT:

- Uttan

PALGHAR DISTRICT:

- Arnala Beach and Fishermen co-op. society
- Satpati (also multipurpose fisherman co-operative society)
- Kelwa beach (Datiware / Tembhi)
- Rangaon fish landing centre (Vasai)
- Dahanu (Narpad / Varor fish landing centre)

RAIGAD DISTRICT:

- Alibaug
- Karanja
- Shriwardhan

- Uran creek
- NhavaSheva Port (JNPT) / Jawaharlal Nehru Custom House

RATNAGIRI DISTRICT:

- Ganpatipule beach
- Dapoli (Harnai / Harne Port Fish Auctioning)/ Dabhol / Burondi
- Mirkarwada Harbour (Major fish landing and assembling centre, Ratnagiri)
- Rajiwada (Satellite landing centre, Ratnagiri town)
- Guhagar beach (Use of Solunar Clock for fishing)
- Karla (Ratnagiri) – First Fisherman co-operative society of India (Estd. 1913)
- Marine Biological Research Station, Zadgaon, Ratnagiri (Aquarium Management Training Programme)
- Sangameshwar, Lanja, Rajapur

SINDHUDURG DISTRICT:

- Vengurla
- Malvan
- Deogad
- Anandwadi fish landing centre
- Sawantwadi
- Kankavali
- Sarjekot
- Tarkarli beach

Outside Maharashtra:

- Pirotan Island Marine Park (Jamnagar, Gujarat)
- Lakshwadeep Islands
- Andaman and Nicobar Islands
- The Cochin Fisheries Harbour (Cochin, Kerala)
- Veraval
- Maldives

AC - 11th May, 2017
Item No. 4.282

Annexure III

Suggested Topics for Project USACFBIO6P1 (Teachers are expected to develop additional innovative topics, varying every year, to be assigned to the students)

1) Feasibility report of the maintenance of aquarium fishes in high profile residences.
2) Feasibility report of fresh water / brackish water fish / prawn culture for extensive, semi intensive and intensive.
3) Probability report of maintenance of a culture of *Chaetopteros*and*Artemia* by the fish farmers.
4) Project report for the establishment of small / medium / large scale ice factory, freezing and canning industry.
5) Feasibility report of various packaging materials in freezing / canning industry.
6) Feasibility report for establishing an aquarium shop.
7) Feasibility report for establishing a fish feed industry.
8) Monitoring various physico-chemical parameters of an aquarium / pond / lake / river / sea.
9) Feasibility report for establishing value added products of fish / shell fish.
10) Project report for culture of commercially important nutritious algae and its products.
11) Project report on survey of fish markets for fluctuation in the availability and price of fishes.

The project may be submitted in a group not exceeding three students.

AC - 11th May, 2017
Item No. 4.282

Annexure IV
Learners' space

When education system today has identified special needs of slow learners we are still silent about needs of high IQ students. Teachers are therefore recommended to identify and encourage such students to undertake research with a view to publish paper/s in peer reviewed International Indexed Journals with high impact factor thus providing 'learners' space'.

Some of the suggestive avenues are listed below which can certainly be not exhaustive since the said students under the guidance of teachers can identify latest areas of research. Needless to say that 'learners' space" is optional additional activity which may not be undertaken by college if not befitting.

1. Developing statistical model for forecasting fish landing of prominent fishes.
2. Undertaking physicochemical oceanographic research at the established centres in the deep sea preferably in collaboration with reputed research institutes.
3. Addressing issues of marine oil pollution.

AC - 11th May, 2017
Item No. 4.282

Annexure – V
Play and Ponder

While learner's space is for high IQ Students, play and ponder could be a general activity creating interest in the subject and could also be a part of pedagogy wherein it may be considered as innovative teaching methodology.

Following are some of the suggestive activities though of course teachers can creatively develop more in the years to develop.

1. Making different fishery gears (nets).
2. Setting up an aquarium in laboratory.
3. Preparation of Prawn pickle and Fish pickle and obtaining feedback from 10 students and 5 teachers.
4. Preparation of fish poultry feed using waste from fish market (fish scales, crab shell, prawn shell, viscera, gills, operculum etc.)

AC - 11th May, 2017
Item No. 4.282

Model Question Paper USACFBIO501

Duration: 2.5 Hours **Total marks: 75**

N.B.: 1) Question No. 1 is compulsory.
2) Attempt any four questions from question No. 2 to question No. 9.
3) Draw neat and labelled diagrams wherever necessary.

Q. 1] Write notes on <u>any 5</u> of the following (Mixed questions from all units): 15

a) Niskin water sampler
b) Dredges
c) Gill net
d) Hooks and lines
e) IMC
f) Advantages of induced breeding in carps
g) Monoculture of Giant freshwater prawn
h) GIFT
i) Physical features of *Lates calcarifer*
j) Pearl bank in India
k) Master carton
l) Polyolefin
m) Feasibility report.
n) Major export markets of sea-food
o) _____ (if case study is opted)
p) _____ (if case study is opted)

Q. 2 Question based on Unit 1

Q. 2 A] With reference to oceanography describe working of GPS. Add a note on Life Saving Devices. **15**

OR

Q. 2 B] Explain the following:

(i) Rudder **7**
(ii) Peterson's grab **8**

Q. 3 Question based on Unit 2

Q. 3 A] Give an account on Wood as a Boat-Building material. Add a note on 4-stroke engine. **15**

OR

Q. 3 B] Explain the following:

(i) Structure and operation of trawl net **7**
(ii) Non-conventional methods of fishing **8**

Q. 4 Question based on Unit 3

Q. 4 A] Write an account on Semi intensive polyculture practice in India. Add a note on extensive fish farming. **15**

OR

Q. 4 B] Explain:

(i) Nursery management of *Cirrhinus mrigala* **7**

(ii) Breeding techniques in Indian Major Carps **8**

Q. 5 Question based on Unit 4

Q. 5 A] Describe the Breeding of Neon tetra and Flower Horn. **15**

OR

Q. 5 B] Describe breeding and rearing of:

(i) Air breathing fishes **7**

(ii) *Macrobrachium rosenbergii* **8**

Q. 6 Question based on Unit 5

Q. 6 A] Discuss the following w.r.t. commercial aquaculture cultures of *Litopenaeus vannamei and Scylla serrata* **15**

OR

Q. 6 B] Discuss the following:

(i) Food and Feeding habit of *Lates calcarifer* **7**

(ii) Pearl culture **8**

Q. 7 Question based on Unit 6

Q. 7 A] Explain Organoleptic tests to detect quality of fish along with Chemical methods to detect freshness of fish **15**

OR

Q. 7 B] Explain the following:

(i) Autolysis and Hyperaemia **7**

(ii) Rigor mortis in fish **8**

Q. 8 Question based on Unit 7

Q. 8 A] With reference to marketing and finance discuss operation of fishery cooperative society in your district. Add a note on basic accounting and costing in fisheries. **15**

OR

Q. 8 B] With reference to fishery sector describe:

(i) Global fish marketing strategies **7**

(ii) Role of MPEDA **8**

Q. 9 Question based on Unit 8

Q. 9 A] Question based on case study / simulation (if opted).
15

Case Study: Cage Culture of *Tor khudree in* River Indrayani at Dehu, Pune, India.

Dehu is an ancient town located near Pune, on the banks of the Indravati River and is famous as the birth place of the poet Saint Tukaram. At Dehu just behind the Gatha

Mandir there was a *Matsya doha.* It was like a fish sanctuary where pilgrims enjoyed feeding the Mahseer.

Mahseer is a world famous, outstanding game fish found all along the Himalayan Belt inhabiting different rivers throughout the length and breadth in India, Pakistan, Bangladesh, Sri Lanka and even Thailand. Despite of their abundance at one time, the Mahseer population has been declining in number and size in natural waters and is in serious danger of extinction in India. Six valid species and three subspecies of Mahseer are found in various river systems of India. Out of these, three species are declared as endangered by IUCN. Due to water pollution and river valley projects in Maharashtra, the Deccan Mahseer (*Tor khudree and T. musselah*) have been decimated from Bhima, Krishna and Koyna river systems.

Mahseer fish has religious touch. The villagers of Dehu call Mahseer as ~~a~~ God-fish. In 1982, because of decreased water levels due to indiscriminate pumping and illegal release of obnoxious industrial effluents into the river, the entire population of fish in the river got wiped out. According to villagers in one week 17 truckloads (Approx. 25.5 tonnes) of dead Mahseer were taken in procession and their last rites were performed according to Hindu tradition. According to the local fishermen at Dehu, the dead Mahseer fish were about the size of a buffalo. It was one of the fish species which supported the livelihood of tribals in that area. Therefore, there was an urgent need of restoration and conservation of Mahseer in this stretch of Indrayani River.

Friends of Nature Association (FoNA), an NGO made efforts and ultimately succeeded in bringing the fish back from the brink of extinction. Shashank Ogale, a senior fisheries scientist and head of corporate social responsibility and environment at Tata Power gave expert advice on the project. It was funded by the Central Institute of Fisheries Education and sanctioned by the National Fisheries Development Board. The fish were bred in artificial tanks, till they were two-three inches long. They were then put in cages and immersed in the river. When they were acquainted with the pressure and temperature of the polluted waters, they were released. The process ~~is~~ was repeated periodically.

Culture of *Tor khudree* in cages was carried out in the Indrayani River. Initially, a survey of the water quality parameters and flow of the river from Dehu to downtown to ascertain its suitability was conducted. Based on the survey and availability of water level, the site was finalized behind the Gatha Mandir at Dehu (18.72°N 73.77°E), where the cages could be installed. This experiment was conducted in floating net cages made up of HDPE with 3m X 3m X 3m dimensions having mesh size of 15 mm. In the beginning two cages were installed. The number of cages was raised to 10 in a span of six months in the year 2011 where in all 34508 *Tor khudree* were raised in 24 batches. The cages were suspended in river by air tight floating plastic barrels and frames were supported with angles of iron and wooden blocks. Cages were stocked with the fingerlings ranging from 3 cm to 5 cm in length; & weighing 20 g to 70 g of *Tor khudree* at a stocking density of 50 nos/m^2 of surface. The fish were supplemented twice a day at 2-5% body weight, with a formulated diet containing 34% protein. The experiment lasted for 3 years and periodic samples were taken every month for fish growth.

The fish generally does not breed naturally in captivity and requires to be stripped. Being an endangered species the risk of releasing the spawn enhances mortality and

hence even as an attempt of conservation, rearing in cages for six months for acclimatizing and training for survival in the natural habitat became essential allowing them to be a sizable fish sustaining the challenges of the natural habitat. Mr. Rohit Nagalgaon has continued the work with more scientific approach under the guidance of Vinayak Dalvie, Academic Coordinator of Sindhu Swaddhyay Sanstha where Mr. Ogale is the Co-guide. Rohit under the guidance of Vinayak Dalvie recently got second prize in poster presentation at the National Youth Science Congress organised by the University of Mumbai in collaboration with Swaminarayan Foundation. Today about 35,000 fully grown Mahseer are seen in the River Indrayani near Gatha Mandir and are breeding naturally.

1) What research aspects Rohit can consider in this work?
2) Can this attempt of ex-situ conservation be commercially explored in future?
3) If so how?

OR

Q. 9 B] Questions based on case study / simulation.

Simulation: Development of Integrated Fish Farm

Village Juchandra is located in between Naigaon station on Western Railway and Western Express Highway each at a distance of 2.5 km. Juchandra has Bhayander Creek in the south with the backwaters flowing in the fields at high tides. Bhayander Creek is one of the last creeks in the vicinity of Mumbai which has fairly good water quality supporting brackish water ecosystem. Evident from the salt pans which exists on its northern side though domestic pollution of Mira-Bhayander townships is imposing increasing load from the south. The Creek is divided into two by some islands one having inhabited called 'Panju bet' a village having no road access. By virtue of this breadth and depth water quality is sustained to some extent though with the rapid urbanization it is being challenged.

Government of Maharashtra State Department of Fisheries has a scheme to lend a land on lease for promoting prawn culture. Accordingly five hectares land can be allotted to an individual while up to 50 hectares to Private Limited Company for 30 years at a lease rent of Rs. 1000/- per hectare per year (with an increase in Rs. 1000/- every five years per hectare) and Rs. 2000/- per hectare (with an increase in Rs. 2000/- every five years per hectare) respectively.

1) As budding entrepreneur how do you assess this opportunity? **7**
2) Provide your plans for developing integrated aquafarm. **8**

Note: Questions of the model question paper are not exhaustive, but suggestive, and teachers have liberty to reframe, modify and add other questions as deemed fit.

AC - 11th May, 2017
Item No. 4.282

AC - 11th May, 2017
Item No. 4.282

Model Question Paper USACFBIO601

Duration: 2.5 Hours **Total marks: 75**

N.B.: 1) Question No. 1 is compulsory.
2) Attempt any four questions from question No. 2 to question No. 9.
3) Draw neat and labelled diagrams wherever necessary.

Q. 1] Write notes on <u>any 5</u> of the following (Mixed questions from all units): 15

a) Commercial importance of ribbon fish
b) Major fish landing centers of oil sardine
c) Economic importance of *Crassostrea spp*.
d) Economic importance of lobsters
e) Preservatives used in feed.
f) Nutritional requirement at larval stage of crustaceans
g) Costiasis
h) White spots.
i) Packaging of fishes
j) Fish dressing
k) Prawn chutney
l) Chitin
m) Paddle wheels
n) Feeding cups
o) _____ (if open unit is opted)
p) _____ (if open unit is opted)

Q. 2 Question based on Unit 1

Q. 2 A] Discuss the fisheries of *Stromateus cinereus* and *Cybium guttatum* **15**

OR

Q. 2 B] Give an account of the following:

(i) Major fish landing centers of deep sea fishes **7**
(ii) *Polynemus tetradactylus* fishery **8**

Q. 3 Question based on Unit 2

Q. 3 A] Discuss the fisheries of *Sepia* and *Penaeus monodon*. **15**

OR

Q. 3 B] Explain the following:

(i) Major landing centers for shell fishes. **7**
(ii) *Scylla serrata* fishery **8**

Q. 4 Question based on Unit 3

Q. 4 A] Write an account on Nutritional requirements at various stages of development of fish and add a note on formulated feeds. **15**

OR

Q. 4 B] Describe the following:

(i) Culture of natural feed: *Artemia* **7**
(ii) Major constituents of pelleted feed **8**

Q. 5 Question based on Unit 4
Q. 5 A] Discuss diseases caused by bacteria and crustacean. Add a note on their treatment. **15**

OR

Q. 5 B] Give an account of the following w.r.t. fish pathology:
(i) Physiological disorders and diseases in fishes **7**
(ii) Fungal diseases and their treatment **8**

Q. 6 Question based on Unit 5
Q. 6 A] Describe the following w.r.t. preservation and processing –Salting method and Freezing method**.** **15**

OR

Q. 6 B] Explain the following w.r.t. preservation and processing:
(i) Types of freezers **7**
(ii) Icing method **8**

Q. 7 Question based on Unit 6
Q. 7 A] Describe the following fishery by-products **–**Fish Protein Concentrate, Pearl Essence and Gelatin **15**

OR

Q. 7 B] Write elaborate notes on the following:
(i) Proximate composition of fish meat **7**
(ii) Prawn pickle and fish wafers **8**

Q. 8 Question based on Unit 7
Q. 8 A] Write an account on pen culture and rope culture. **15**

OR

Q. 8 B] Describe the following fishes w.r.t. farm engineering:
(i) Site selection criterion for semi-intensive freshwater **7**
(ii) Construction of hatchery for semi-intensive freshwater fishes **8**

Q. 9 Question based on Unit 8
Q. 9 A] Question based on open unit.(if opted)
15

OR

Q. 9 B] Questions based on open unit.
(b) _____ **7**
(b) _____ **8**

Note: Questions of the model question paper are not exhaustive, but suggestive, and teachers have liberty to reframe, modify and add other questions as deemed fit.

1. Elective Courses (EC)

Financial Management - I
Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Finance and Financial Management	15
2	Financial Goal Setting & Time value of Money	10
3	Investment Decisions: Capital Budgeting	15
4	Financial Decisions	20
	Total	60

Sr. No.	Modules / Units
1	**Introduction of Finance and Financial Management**
	A) Introduction to Finance • Meaning and definition of finance • Importance of finance • Types of Finance: Public and Private • Sources of finance Long term Sources : Term Loans, Debentures, Bonds, Zero Coupon bonds, Convertible Bonds, Equity shares, Preference shares, CD, CP, Public Deposits Short Term sources**:** Bank Finance, Trade Credit ,Other Short Term Sources Venture Capital and Hybrid Financing **B) Financial Management** • Meaning and Importance of Financial Management • Scope of Financial Management • Functions and Objectives of Financial Management • Primary Objective of Corporate Management • Agency Problem • Organization of Finance Function Emerging role of Finance Managers in India **C) Objectives of the Firm** • Profit Maximization and Shareholders Wealth Maximization • Profit V/s Value Maximization
2	**Financial Goal Setting & Time value of Money**
	A) Financial Goal Setting • Introduction • Financial Forecasting – Meaning, Techniques, Benefits • Approaches to Financial Planning • Economic Value Added (EVA)– Measurement & Components • Free Cash Flow (FCF) **B) Time Value of Money** • Concept • Present Value • Annuity • Techniques of Discounting • Techniques of Compounding.
3	**Investment Decisions**: **Capital Budgeting**
	A) Capital Budgeting • Nature of Capital Budgeting • Purpose of Capital Budgeting • Capital Budgeting Process • Types of Capital Investment • Basic Principle of Measuring Project Cash Flows • Increment Principle, Long Term Funds Principle, Exclusion of Financial Cost Principle, Post Tax Principle • Probability technique for measurement of cash flow • Capital Budgeting Techniques: Net Present Value Profitability Index and Discounted Pay Back Method. • A Comparison; Project Selection Under Capital Rationing (Note: Problems on computation of cash flow, ranking of projects on various

	techniques, selection and analysis with / without capital rationing)
Sr. No.	**Modules / Units**
4	**Financial Decisions**
	A) Cost of Capital : • Introduction and Definition of Cost of Capital • Measurement of Cost of Capital • Measurement of WACC using book value and market value method. • Measuring Marginal Cost of Capital **B) Capital Structure Decisions**: • Meaning and Choice of Capital Structure • Importance of Optimal Capital Structure • EBIT -EPS Analysis • Capital Structure Theories • Dividend Policies (Walter & Gordon)

1. Elective Courses (EC)

Cost and Management Accounting

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Unit Costing and Reconciliation of cost and financial accounts	15
2	Job Costing and Process Costing	15
3	Marginal Costing	15
4	Introduction to Standard Costing	15
	Total	60

Sr. No.	Modules / Units
1	**Unit Costing and Reconciliation of cost and financial accounts**
	A) Introduction to Costing • Meaning, Nature, Scope, Objective of Cost Accounting • Financial Accounting v/s Cost Accounting • Advantages and Disadvantages of Cost Accounting • Elements of Costs-Cost classification • Installation of Cost Accounting System **B) Unit costing and Reconciliation of cost and financial accounts.** Note- Practical problems based on preparation of cost sheet reconciliation of cost and financial accounts.
2	**Job Costing and Process Costing**
	A) Job Costing • Job cost cards and databases • Collecting direct costs of each job • Attributing overhead costs to jobs • Applications of job costing **B) Process Costing** • Introduction, Meaning, Scope and Objectives • Measurement of Process loss, Abnormal gains and losses • Joint products and by products. **(**Excluding Equivalent units and Inter-process profit)
3	**Marginal Costing**
	A) Marginal Costing • Meaning, Application, Advantages, Limitations • Calculation of Contribution, Breakeven analysis , Profit-Volume Ratio, Margin of Safety and Required Sales to earn desired Profits. Note Simple Practical problems based on Marginal Costing excluding decision making
4	**Introduction to Standard Costing**
	A) Introduction to Standard Costing • Various types of standards and Setting of standards • Basic concepts of Material and Labour variance analysis. Note:-Simple Practical problems based on Material and Labour variances excluding sub variances and overhead variances

Projects / Assignments (for Internal Assessment)

i. Projects/Assignments should be drawn for the component on Internal Assessment from the topics in **Module 1 to Module 4**.

ii. Students should be given a list of possible topics - at least 3 from each Module at the beginning of the semester.

iii. The Project/Assignment can take the form of Street-Plays / Power-Point Presentations / Poster Exhibitions and similar other modes of presentation appropriate to the topic.

iv. Students can work in groups of not more than 8 per topic.

v. Students must submit a hard / soft copy of the Project / Assignment before appearing for the semester end examination.

QUESTION PAPER PATTERN (Semester III)

The Question Paper Pattern for Semester End Examination shall be as follows:

TOTAL MARKS: 75 **DURATION: 150 MINUTES**

QUESTION NUMBER	DESCRIPTION	MARKS ASSIGNED
1	**i.** Question 1 A will be asked on the meaning / definition of concepts / terms from all Modules. **ii.** Question 1 B will be asked on the topic of the Project / Assignment done by the student during the Semester **iii.** In all 8 Questions will be asked out of which 5 have to be attempted.	**a)** Total marks: 15 **b)** For 1 A, there will be 3 marks for each sub-question. **c)** For 1 B there will be 15 marks without any break-up.
2	Descriptive Question with internal option (A or B) on Module 1	15
3	Descriptive Question with internal option (A or B) on Module 2	15
4	Descriptive Question with internal option (A or B) on Module 3	15
5	Descriptive Question with internal option (A or B) on Module 4	15

2B. Skill Enhancement Courses (SEC)

Foundation Course in NCC - III

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	National Integration & Awareness	10
2	Drill: Foot Drill	10
3	Adventure Training and Environment Awareness and Conservation	05
4	Personality Development and Leadership	10
5	Specialized subject (ARMY)	10
	Total	**45**

Sr. No.	Modules / Units
1	**National Integration & Awareness**
	Desired outcome: The students will display sense of patriotism, secular values and shall be transformed into motivated youth who will contribute towards nation building through national unity and social cohesion. The students shall enrich themselves about the history of our beloved country and will look forward for the solutions based on strengths to the challenges to the country for its development. • Freedom Struggle and nationalist movement in India. • National interests, Objectives, Threats and Opportunities. • Problems/ Challenges of National Integration. • Unity in Diversity
2	**Drill: Foot Drill**
	Desired outcome: The students will demonstrate the sense of discipline, improve bearing, smartness, turnout, develop the quality of immediate and implicit obedience of orders, with good reflexes. • Side pace, pace forward and to the rear • Turning on the march and whiling • Saluting on the march • Marking time, forward march and halt in quick time • Changing step • Formation of squad and squad drill
3	**Adventure Training, Environment Awareness and Conservation**
3A	**Adventure Training**
	Desired outcome: The students will overcome fear & inculcate within them the sense of adventure, sportsmanship, espirit-d-corp and develop confidence, courage, determination, diligence and quest for excellence. • Any Two such as – Obstacle course, Slithering, Trekking, Cycling, Rock Climbing, Para Sailing, Sailing, Scuba Diving etc.
3B	**Environment Awareness and Conservation**
	Desired outcome: The student will be made aware of the modern techniques of waste management and pollution control. • Waste management • Pollution control, water, Air, Noise and Soil
4	**Personality Development and Leadership**
	Desired outcome: The student will inculcate officer like qualities with desired ability to take right decisions. • Time management • Effect of Leadership with historical examples • Interview Skills • Conflict Motives- Resolution

Sr. No.	Modules / Units
5	**Specialized Subject: Army Or Navy Or Air**
	<u>Army</u> **Desired outcome:** It will acquaint, expose & provide knowledge about Army/ Navy/ Air force and to acquire information about expanse of Armed Forces ,service subjects and important battles **A. Armed Force** • Task and Role of Fighting Arms • Modes of Entry to Army • Honors and Awards **B. Introduction to Infantry and weapons and equipments** • Characteristics of 5.56mm INSAS Rifle, Ammunition, Fire power, Stripping, Assembling and Cleaning • Organization of Infantry Battalion. **C. Military history** • Study of battles of Indo-Pak War 1965,1971 and Kargil • War Movies **D. Communication** • Characteristics of Walkie-Talkies • Basic RT Procedure • Latest trends and Development (Multi Media, Video Conferencing, IT) ***OR*** **<u>Navy</u>** **A. Naval orientation and service subjects** • Organization of Ship- Introduction on Onboard Organization • Naval Customs and Traditions • Mode of Entry into Indian Navy • Branches of the Navy and their functions • Naval Campaign (Battle of Atlantic, Pearl Harbour, Falkland War/Fleet Review/ PFR/ IFR)s **B. Ship and Boat Modelling** • Types of Models • Introduction of Ship Model- Competition Types of Model Prepare in NSC and RDC • Care and handling of power-tools used- maintenance and purpose of tools

Sr. No.	Modules / Units
	C. Search and Rescue • Role of Indian Coast Guard related to SAR **D. Swimming** • Floating and Breathing Techniques- Precautions while Swimming ***OR*** **AIR** **A. General Service Knowledge** • Organization Of Air Force • Branches of the IAF. **B. Principles of Flight** • Venturi Effect • Aerofoil • Forces on an Aircraft • Lift and Drag **C. Airmanship** • ATC/RT Procedures • Aviation Medicine **D. Aero- Engines** • Types of Engines • Piston Engines • Jet Engines • Turboprop Engines

2B. Skill Enhancement Courses (SEC)

Foundation Course in NCC - IV

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Disaster Management, Social Awareness and Community Development	10
2	Health and Hygiene	10
3	Drill with Arms	05
4	Weapon Training	10
5	Specialized Subject: Army Or Navy Or Air	10
	Total	**45**

Sr. No.	Modules / Units
1	**Disaster Management, Social Awareness and Community Development**
	Disaster Management: **Desired outcome:** The student shall gain basic information about civil defence organisation / NDMA & shall provide assistance to civil administration in various types of emergencies during natural / manmade disasters • Fire Services & Fire fighting • Assistance during Natural / Other Calamities: Flood / Cyclone/ Earth Quake/ Accident etc. **Social Awareness and Community Development:** **Desired outcome:** The student shall have an understanding about social evils and shall inculcate sense of whistle blowing against such evils and ways to eradicate such evils. • NGOs: Role & Contribution • Drug Abuse & Trafficking • Corruption • Social Evil viz. Dowry/ Female Foeticide/Child Abuse & trafficking etc. • Traffic Control Org. & Anti drunken Driving
2	**Health and Hygiene**
	Desired outcome: The student shall be fully aware about personal health and hygiene lead a healthy life style and foster habits of restraint and self awareness. • Hygiene and Sanitation (Personal and Food Hygiene) • Basics of Home Nursing & First-Aid in common medical emergencies • Wound & Fractures
3	**Drill with Arms**
	Desired outcome: The students will demonstrate the sense of discipline, improve bearing, smartness, and turnout, and develop the quality of immediate and implicit obedience of orders, with good reflexes. • Getting on Parade with Rifle and Dressing at the Order • Dismissing and Falling Out • General Salute, Salami Shastra • Squad Drill • Short/Long tail from the order and vice-versa • Examine Arms
4	**Weapon Training**
	Desired outcome: The student shall have basic knowledge of weapons and their use and handling. • The lying position, Holding and Aiming- I • Trigger control and firing a shot • Range procedure and safety precautions • Theory of Group and Snap Shooting • Short range firing, Aiming- II -Alteration of sight

Sr. No.	Modules / Units
5	**Specialized Subject: Army Or Navy Or Air**
	Army **Desired outcome:** The training shall instill patriotism, commitment and passion to serve the nation motivating the youth to join the defence forces. It will also acquaint, expose & provide basic knowledge about armed, naval and air-force subjects **A. Map reading** • Setting a Map, finding North and own position • Map to ground, Ground to Map • Point to Point March **B. Field Craft and Battle Craft** • Observation, Camouflage and Concealment • Field Signals • Types of Knots and Lashing **C. Introduction to advanced weapons and role of technology (To be covered by the guest lecturers)** ***OR*** **Navy** **A. Naval Communication** • Semaphore ▪ Phonetic Alphabets ▪ Radio Telephony Procedure ▪ Wearing of National Flag, Ensign and Admiral's Flag. **B. Seamanship** • **Anchor work** ▪ Types of Anchor, Purpose and Holding ground • **Boat work** ▪ Demonstrate Rigging a whaler and enterprise boat- Parts of Sail and Sailing Terms ▪ Instructions in Enterprise Class Board including theory of Sailing, Elementary Sailing Tools ▪ Types of Power Boats Used in the Navy and their uses, Knowledge of Anchoring, Securing and Towing a Boat **C. Introduction to advanced weapons and role of technology (To be covered by the guest lecturers)**

Sr. No.	Modules / Units
	OR **Air** **A. Air frames** • Fuselage • Main and Tail Plain **B. Instruments** • Introduction to RADAR **C. Aero modelling** • Flying/ Building of Aero models **D. Introduction to advanced weapons and role of technology (To be covered by the guest lecturers)**

(As Per CBCS
With effect from the academic year 2017-18 for
Semester I to VI)

REVISED SYLLABUS INCLUDING SCHEME OF COURSES, SCHEME OF EXAMINATION, AND MEDIUM OF INSTRUCTION FOR THE BACHELOR OF ARTS (Film, Television and New Media Production).

Objectives :

Bachelor of Arts (Film, Television & New Media Production) programme

1. To prepare students in the production aspects of Film Television & New Media, as required by the present media environment all across globe.

2. To empower the students in the production & managerial aspects of the media business with due emphasis on latest production techniques, along with marketing and branding management of various media products and associated services.

3. To develop creative temperament and mindset needed in the content production segment of media industry.

4. To inculcate competencies thereby enabling to undertake professional work.

5. To provide an active industry interface by way of co-learning.

6. To take the students through the entire pipe line of production process with regards to the content creation for various media pads, providing the students an insight in to the correlation that exists between content creation and associated commercial aspects of media business.

Ordinances & Regulations

O 6078 Bachelor of Arts (Film, Television & New Media Production)

1. General Guidelines

The Credits are defined in terms of the learner's hours which are divided into two parts such as Actual and Notional. The value of a particular course can be measured in number of Credit Points. The value of One (01) Credit is equal to 30 Hours of learners load.

The scheme of Examination shall be divided into two parts i.e. Internal Assessment includes Assignments, Seminars, Case Studies and Unit Tests which will be of 40 marks and the Semester End Examinations which will be of 60 marks. The semester wise Credit Points will be varied from program to program but the value of Credits for Under Graduate Programmes shall be of 120 Credits and for Post graduate Degree programmes it will be 96 credits in the Faculty of Arts.

3. Credit Based Evaluation System

Scheme of Examination

For all 6 semesters, the performance of the learners shall be evaluated into two components. The first component shall carry 40% marks which will be an internal assessment while the second component shall carry 60% marks at semester end examination.

The allocation of marks for the Internal Assessment 40% and Semester End Examinations 60% are as shown below:

a) Structure of Internal Assessment = 40% =40 marks

Sr. No. Particulars Marks

1. One periodical class test held in the given semester **10 Marks**
2. Subject specific Term Work Module/assessment modes –at least two as decided by the department in the beginning of the semester (like Extension/field/experimental work, Short Quiz; Objective test, lab practical, open book test etc and written assignments, Case study, Projects, Posters and exhibits etc for which the assessment is to be based on class presentations wherever applicable) to be selflessly assessed by the teacher/s concerned **20 Marks.**
3. Active participation in routine class instructional deliveries (and in practical work, tutorial, field work etc as the case may be) **05 Marks.**
4. Overall conduct as a responsible learner, mannerism and articulation and exhibit of leadership qualities in organizing related academic activities **05 Marks.**

b) Semester End Examinations – 60% **60 Marks**

i. Duration – These examinations shall be of 2 Hours duration.
ii. Theory Question Paper Pattern:

1. There shall be four questions each of 15 marks.
2. All questions shall be compulsory with internal choice within the questions.
3. Question may be subdivided into sub-questions a, b, c… and the allocation of marks depends on the weight-age of the topic.

The assessment of Part 'A' i.e. Internal Assessment and Part 'B' i.e. Semester End Examination as mentioned above for the Semesters I to IV shall be processed by the Colleges- 'Institutions of their learners' and issue the grade cards to them after the conversion of marks into grade as per the procedure mentioned bellow.

The assessment of Part 'A' i.e. Internal Assessment as mentioned above for the Semesters V & VI shall be processed by the Colleges /'Institutions of their learners' admitted for the programme.

For part B that is semester end examination of the semesters V & VI, the University shall conduct the assessment. The Internal Assessment marks of learners appearing for Semesters V & VI shall be submitted to the University by the respective colleges/ Institutions before the commencement of respective Semester End Examinations. The Semester End Examinations for Semesters V & VI shall be conducted by the University and the results shall be declared after processing the internal assessment and the marks awarded to the learners. The grade card shall be issued by the University after converting the marks into grades.

R 8720 Passing Standard

The learners to pass a course shall have to obtain a minimum of 40% marks in aggregate for each course where the course consists of Internal Assessment & Semester End Examination. The learners shall obtain minimum of 40% marks (i.e. 16 out of 40) in the Internal Assessment and 40% marks in Semester End Examination (i.e. 24 Out of 60) separately, to pass the course and minimum of Grade E in each project, wherever applicable, to pass a particular semester. A learner will be said to have passed the course if the learner passes the Internal Assessment & Semester End Examination together.

CARRY FORWARD OF THE MARKS IN CASE IF THE LEARNER GETS 'F' GRADE IN ONE OR MORE SUBJECTS:

1. A learner who PASSES in the Internal Examination but FAILS in the Semester End Examination of the course shall reappear for the Semester End Examination of that course. However his/her marks of the Internal Examinations shall be carried over and he/she shall be entitled for grade obtained by him/her on passing.
2. A learner who PASSES in the Semester End Examination but FAILS in the Internal Assessment of the course
shall reappear for the Internal Examination of that course. However his/her marks of the Semester End
Examination shall be carried over and he/she shall be entitled for grade obtained by him/her on passing.
3. For Courses without practical: In case of a learner who is reappearing for the Internal Examination, the examination will consist of one project of 40 marks which will be divided into 20 marks for the documentation of the project, 10 marks for the presentation and 10 marks for the viva and the interaction.

1) Natya Shastra by Bharata Muni.
2) Melodrama and Popular Culture: Ira Bhaskar.
3) History of Art – Bernard .S. Myers, Trawin Copplestone.
4) Framing Film- Cinema and the Visual Arts, **EDITED BY STEVEN ALLEN AND LAURA HUBNER.**

Reference Books:

1. Dancing: The Pleasure, Power, and Art of Movement; by Gerald Jonas. Harry N. Abrams in association with Thirteen/WNET 1992.
2. History of Dance: An Interactive Arts Approach; by Gayle Kassing.

BAFTNMP -103 : Initiation to Literature & Creative Writing :

Objectives :

To introduce basic tenets of Indian literature including regional literature
To introduce and appreciate various forms of literature (Novel, Poetry, Drama, Essay)
To help build skills for creative writing
To help understand the structure of Story, poetry and drama
To introduce writing for internet

Unit- I :
Introduction to Indian Writers – Hindi/Marathi/Urdu & other regional languages: History of Indian literature, prominent writes, important works, cultural significance.

Unit –II :
A Brief Introduction to Creative Writing: What is creative writing, various forms of writing, various form of writing styles, how to build creative writing skills.

Unit –III :
Formal structure of the short story: Various forms of writing styles, Genres of story, how to develop an engaging idea, Prominent writers, Pick your style.

Unit -IV – Formal aspects of Poetry: Elements of poetry, types of Poetry, Difference between various styles, Famous poets and their works, Study of the Epic Ballad - Mahabharata.

Unit – V :
Formal aspects of Drama: Structure of drama, one act-two act-three act play, Characterization, Freytag's triangle, Subject specific drama

Unit -VI :
Writing for the internet: How internet writing is different from conventional writing, Blogging, Reputation management, Development of Blogs, writing for social media, writing for SEO & SMO.

Textbooks:

1.) A Concise History of Indian Literature in English by Arvind Mehrotra.

2) The Creative Writing Course book: Forty Authors Share Advice and Exercises for Fiction and Poetry.

3) Creative Writing By Adele Ramet.
4) Creative Writing for People Who Can't Not Write By Kathryn Lindskoog.

Reference Books:

1. Creative Writing: A Workbook with Readings By Linda Anderson.
2. Teaching Creative Writing By Graeme Harper.
3. The Everything Creative Writing Book By Wendy Burt-Thomas.
4. The Soul of Creative Writing By Richard Goodman, Goodman, Chong.

BAFTNMP -104 : Basics of Photography :

Objectives:

To learn the basics of art of Photography.
To understand the basic intricacies involved in taking a photograph.
To understand what makes a good picture.
To develop basic photographic sense and knowledge.

Unit- I :
Development of Photography over the years: Brief History of Photography, early photography methods, switch from film to digital, difference between film and digital photography, formats of images in digital.

Unit- II :
Cameras & Techniques: Types of camera, film cameras V/S digital cameras, lenses and their importance, Story Design and Development, Laws of Composition, Gestalt Law and Visual Perception, Semiotic photography.

Unit III
Lighting - Theory & practice: Sources of Lighting, 2 point lighting, 3 point lighting, creating contrast, outdoor natural lighting, related accessories for lighting.

Unit -IV :
Post production of Photos, Digital Image Editing – Photoshop: Processing of Raw images, Introduction to Adobe Photoshop and image ready software, how to enhance the photo digitally.

Textbooks:
1. The Art of Photography; by Bruce Barnbaum.
2. Creative Nature & Outdoor Photography; Brenda Tharp.
3. Chasing the Light by Ibarionex Perello.

Reference Books:

1. The Camera by Larry Hills.

2. The Creative Black Book.
3. The Print by Ansel Adams, Robert Baker.
4. 500 poses for Photographing Women by Michelle Perkins.
5. Creative Landscapes: Digital Photography Tips & Techniques by Author: Davis, Harold.

BAFTNMP- 105 : Film Appreciation – Genres :

What is cinema, Film theory – form and function, Film analysis, Auteur Theory,
effect of auteur, Contributions of D W, Griffith, Alfred Hitchcock, Jean Du Godard, Digital Aesthetics, Music and choreography, film genre.
Cinema and society, History of Cinema, Hollywood cinema, early cinema and film form
the studio system, rise and decline of the studio system.

Indian Cinema

History of Indian cinema, history of regional cinema, legends of Indian cinema, Hindi film industry, the Hindi film industry, music and choreography in Indian cinema, contemporary cinema.

Textbooks :

1) The Oxford History of World Cinema.
2) The Cinematic ImagiNation : Indian Popular Films as Social History by Jyotika Virdi.
3) History of Indian Cinema by Renu Saran.

BAFTNMP- 106 : Graphic Designing (Photoshop, Illustrator, etc.)

Objectives :

The learners are exposed to the industry of graphic design. The domain of skills and tools is largely devoted to learning graphic reproduction methods using both modern, that is electronic, as well as old school techniques. These inputs enable learners to solve simple problems of visual communication related to corporate identity or social communication. Learners use software like Adobe Photoshop and Adobe Illustrator.

Unit –I :

COLOUR THEORY : Colour psychology, Colour schemes, Colour wheel, Colour combination, Hue.

Unit –II :

PERSPECTIVE STUDY : 1-point perspective, 2-point perspective, 3-point perspective, Mixed perspective.

Unit –III :

STILL LIFE : Sketching & rendering, Light study, Photography.

Unit –IV :

TEXTURE STUDY : Texture creation, mixed media, Water/Pastel painting.

Unit –V :
PORTRAIT PAINTING : Portrait Caricature, Cartoon.

Unit –VI :
PHOTOSHOP : Basic tools in Photoshop, Photo editing, Colour correction.

Unit –VII :
ILLUSTRATOR : Basic tools in Illustrator, Vector graphics, Graphics design.

Unit –VIII :
COMIC BOOKS : Understanding storyboards, Styles of contemporary comics, Colour tones.

Unit- IX :
COMPOSITION : Basic composition skills, Rule of thirds, Understanding of subject and its relation to light and depth of field, Application in comic books.

Unit –X :
TYPOGRAPHY : Understanding of typos & fonts, Application of appropriate typos on art works.

Semester- II :

BAFTNMP 207 Basics of Post Production

Objectives:

An editor's job is to decide, 24/25/30 times a second, where the audience needs to be. Do we stay in a shot or transition to another, and if so, what shot and how do we get there? Working side-by-side with the director to craft the movie that ultimately hits the screen – or your phone – editing is really about manipulating the audience, in the best possible way, all in the service of storytelling.
In this class, we will study terminology and concepts, learning both the rules and how to break them, as we look at the aesthetics choices and the technological workflow for both picture and sound editing. We will examine the historical role of editing, from the earliest silent film through the digital revolution that has transformed moviemaking today.

INTRO TO EDITING THEORY
Introduction to the history of film editing. Lumiere Brothers, Thomas Edison, Edwin Porter, DW Griffith); the manipulation of editing; Lev Kuleshov's experiment; the language of cinema; introduction to the editor as storyteller and understanding the narrative structure.

INTRO TO PREMIERE PRO
Screening of Examples. The Premiere Pro interface features and functions, how to import and organize footage, basic editing techniques

EDITING EXERCISE
Watch the work of a Master Editor, Basic Production techniques, Practicing/Reviewing skills
PROJECT: Interview and Film a classmate telling a story for 10 minutes or talking about something they're excited about. Edit together a two minute version of this.

Unit 1
Effective Editing
Bird's-eye view of the modern process of editing, Setting Up for Editing
Efficient editing habits to work faster, Thinking creatively. Efficient workflow, Configure factory-standard systems, Optimal media management from ingest through to final output. Non Linear Editing Concepts Interface of NLE system, The Three-Point Edit, Additional Edits

Unit II
Working in the Timeline, Transitions, Keyframing, Filters, Ingesting

Unit III
Compositing, Color Correction, Audio, Titling, Review and Look Forward

Textbook:
Grammar of the Edit
Roy Thompson, Christopher J. Bowen - Focal Press, 2013. ISBN: 978-0240526003

SUGGESTED TEXTS:
Film Art: An Introduction, David Bordwell and Kristin Thompson
The Invisible Cut: How Editors Make Movie Magic, Bobbie O'Steen
Cut By Cut: Editing Your Film or Video, Gael Chandler
In the Blink of an Eye: A Perspective on Film Editing, Walter Murch
The History of Film Editing, Karel Reisz, Gavin Miller
On Film Editing, Edward Dmytrk
Film Editing: Great Cuts Every Filmmaker Should Know, Gael Chandler
First Cut: Conversations with Film Editors, Gabriella Oldham

BAFTNMP 208 History of Non- fiction Film

Objectives

This course explores the history and theory of non-fiction film and video, with an emphasis on work that falls under the rubric of "documentary."

Documentary is a unique form of non-fiction moving image media that claims a special relationship to reality and truth. Through screenings, readings and class discussion, we will explore such questions as:

- How does documentary relate to narrative fiction filmmaking? To other non-fiction forms of television like reality TV or news reports?
- How "real" are documentary representations, and how much does it matter?
- What are some different formal approaches documentary, and how does each mediate the representation of real life it offers?
- How has documentary image-making changed over time? What can we learn from this history that is relevant to media-making today?
- What are the particular ethics of representing others in a medium like video or film?
- What responsibility do documentarians have to their subjects, to the form, and to society at large?
- How do people watch documentaries, and what is the impact of these films on the world they aim to represent?

Screen and analyze a wide range of documentaries, exploring the genre as narrative, journalism, propaganda, rhetoric, activism, diary, art, archive, and entertainment.

Course Objectives
By the end of the semester, you should:

Be familiar with key periods in the history of non-fiction film and video from 1895 to the present.
Be able to recognize and write about various forms and conventions of documentary storytelling, including the basic grammar of documentary moving images.
Explore central questions surrounding the representation of reality and truth, including voice, authority, evidence and point of view.
Explore key issues in the ethics of documentary representation, including maker-subject relationships, informed consent, fairness, and evidence.
Be familiar with efforts to create more democratic systems of media production and distribution.
Learn how to watch earlier films both as an audience THEN (with understanding of the film's social, cultural, historical context), and NOW (with understanding of your own future goals and with critical, analytical eyes to study history).
Be able to think – and write — critically about non-fiction media.

Textbooks
The texts for this class Documentary: A History of the Non-Fiction Film (2nd Edition) by Erik Barnouw (available at Shakespeare and Co) and Crafting Truth: Documentary Form and Meaning, by Louise Spence and Vinicius Navarro (available at Shakespeare and Co.). Additional readings will be available through e-res.

As some readings will be accessed electronically, please bring either a printed version of the article (preferred) OR a digital version of the article to class.

BAFTNMP 209 Writing for Visual Media

Objectives:
To understand the basic structure of screenplay
To introduce to the basic skills for screen writing
To understand the intricacies of screen writing
To learn the build characters and write meaning full dialogues

Unit I
Preparing to Think Visually: Diving In to the Screenwriter's Mind, Approaching Screenwriting as a Craft, Breaking Down the Elements of a Story, Unpacking Your Idea

Unit II
Structure of Story & Screenplay: Plot Part I: Beginnings, Plot Part II: Middles, Plot Part III: Endings

Unit III
Dynamics of Characterization: Character Building, Constructing Dynamic Dialogues, Non – traditional Film

Unit IV
Finalizing the Script: Maintaining an Audience's Trust, Turning Your Story into a Script, Take Two: Rewriting Your Script, Adaptation and Collaboration: Two Alternate Ways to Work

Textbooks:

1. How not to write a screenplay: 101 common mistakes most screenwriters make by Denny Martin Flinn
2. Screen Adaptation: A Scriptwriting Handbook by Kenneth Portnoy
3. Screenplay: The Foundations Of Screenwriting By Syd Field

Reference Books:

1. The Screenwriter's Bible By David Trottier
2. The Bare Bones Book of Screenwriting: The Definitive Beginner's Guide to ... By J. T. Clark
3. Screenwriting for a Global Market: Selling Your Scripts from Hollywood to ... By Andrew Horton

4. Screenwriting For Dummies By Laura Schellhardt
5. Screenwriting: The Sequence Approach By Paul Joseph Gulino
6. The Tools of Screenwriting By David Howard, Edward Mabley
7. The Art of Screenwriting: An A to Z Guide to Writing a Successful Screenplay By William Packard
8. Writing the Character-Centered Screenplay By Andrew Horton

BAFTNMP 210 Importance of Sound and Sound SFX

Objectives:
To learn about the basic of sound |To understand the nature of sound and recording devices | To learn the basics of sync sound, mixing console, analog v/s digital workflow | To understand the need for sound and importance of sound in film | To learn to record a song

Unit I – Basics of Sound: Nature of acoustical waves; concepts of amplitude and frequency - wavelength and harmonics.Psycho-acoustics: Nature of hearing and perception of sound, including concepts of pitch, loudness, and timbre; the precedence effect; localization in rooms; equal loudness contours; and other mysteries of hearing.Principles of Stereophony | **Unit II – Sound for Film and Video:** The sound track – its importance in an AV medium, Different elements of a sound track, Explanation of how sound is put to the film | **Unit III – Sync Sound:** The size of the role sound should play in your film will vary depending on your professor's requests, but when it comes to the technical side of things, you are at least required to know how to achieve synchronized sound and picture with film.**Interconnectivity of Analog & Digital Equipment:** Basic analog connectors, cabling, patch – bay, interconnectivity between various recording studio equipment.Various Digital interconnects and their sockets on the digital equipment. **Microphones Types:** Dynamic, Condenser, Ribbon, Polar Pattern, Sensitivity. Microphone designs for special applications**Acoustics I (Fundamentals):** The behavior of sound in outdoors and in closed spaces; Absorption, reflection, diffraction, refraction, reverberation. | **Unit IV – Mixing Console Basics**
The signal flow and various auxiliary systems.**Digital Audio:** Analog to Digital to Analog conversion. Sampling Frequency, Bit Rates. Problems in digital audio.Different digital media, Standard digital recording & mastering formats. Audio file formats, storage mediums – optical, magnetic, Jitter etc.**Computers in Audio:** Different platforms – different operating systems, Configuration of a PC for sound recording.Mother Boards, Processor, Sound Card, Graphic card, Monitors**Recorders:** Analog, Digital, Tape Based & Tapeless. Digital Audio Workstations (DAW's) | **Unit V – Film Showcase:** Case studies of famous Indian as well as foreign films | **Unit VI – Microphone Techniques:** Placement, Applications, Proximity effects etc. microphones and placement techniques for stereo recording. **Monitoring Systems:** Active & Passive types, Domestic and professional listening environment, Stereo and surround monitoring. |**Unit VII – The Production Process of a Song:** Music Basics. – Types of Music, Concepts of Melody, Harmony, Rhythm & counter melody etc. Format of a song. Preproduction, Tracking, Overdubbing, Editing, Mixing and Mastering. **Processors:** Theory of Tonal, Dynamic & Spatial processors. Equalizers – types and their application, Compressors & Limiters - theory and

application, Effects processors - Reverberation and Delay devices and their plug in counterparts. | **Unit VIII – Sound for film:** Location sound , Radio mics - uses and potential difficulties. Boom operation for sync sound, Hands-on training in location sound recording for video. **Nuendo Basic:** Basic principles, understanding the process from initial set up to completion of a project. To set up for a vocal/instruments dub. Hands-on training - You will share a Nuendo workstation during the class. **Principles of Mixing:** The basic techniques of mixing and the fundamental approach. The Building Blocks of Mixing
Setting the sound stage, and the sonic implications of panning and of placing instruments at varying distances from the listener;Consideration of different approaches to getting desired results from EQ; A comprehensive review of the uses of dynamic processor; on Individual channels and Mix master. Finishing a mix with automation.
"Mixing in the box." And “Mixing through the board.”**Production of the Sound Track for the student project film:** Discussing sound design strategy with the director of the film at pre production stage.Attending film sync shoots.Video File formats, Acquiring picture for post production from edit suite.Dubbing the dialogues wherever necessary, Selecting SFX and BG music from the library, recording Foley and music as per the demand of the script.Mixing the final track. Export it to the editor, supervise the final assembly of the film.

Textbooks:

1. Pro Tools 9: Music Production, Recording, Editing and Mixing By Mike Collins
2. Pro Tools All-in-One Desk Reference For Dummies By Jeff Strong
3. Sound for Film and Television By Tomlinson Holman

Reference Books:

1. Sound For Digital Video By Tomlinson Holman
2. Producing for TV And Video: A Real-world Approach By Cathrine Kellison
3. Sound for picture: an inside look at audio production for film and television By Jeff Forlenza, Terri Stone
4. Audio in Media By Stanley R. Alten
5. Master Handbook of AcousticsByF.Alton Everest
6. Modern Recording Techniques By David Miles Huber
7. Mastering Audio By Bob Katz
8. Mixing Audio By Roey Izhaki
9. Practical Recording Techniques By Jenny Bartlett
10. Critical Listening Skills for Audio Professionals By F.Alton Everest
11. The Audible Past By Jonathan Sterne

BAFTNMP 211 Basics of Cinematography-1

Objectives:

To understand the importance of cinematography in film making | To enhance the basic knowledge about lighting and its use | To understand various equipments required for various form of lighting | To understand the basics of various camera, lenses and digital cinematography

Unit I – Power of a Picture: Power of a still picture | Shooting a good Still picture | Composition-Framing | Understanding & Use of color | Capturing the Drama | Black and white Photography; **Unit II – Light:** Role of light | Lighting techniques | Concept of lighting various planes | Understanding Various types: Tungsten lamps, Cool Lights, HMI, Cyclorama/background lights, Soft Box lights. | Use of cutter stand, black cloth and Camera filters | barn doors | use of reflectors | Three point lighting | Ratio lighting: 1:2, 1:3, 1:4 | Creating various Background patterns and types | Lighting – Situations | Studio lighting for three cameras set up: Talk Show, Game Show | Available day light situations | Shooting for Documentary style | Face lighting. Key, fill, back light | Depth of field Exercise | High key lighting | Low key lighting; **Unit III –Lenses:** Type of Lenses | Power of Lenses | Understanding the shot requirement and usage of a lens | Idea of perspective: Depth Of Field, Depth of focus, Critical understanding of Fixed Lens Vs. Zoom Lens | Focus pulling | 18% grey card | Metering | Color temperature meter; **Unit IV – Camera Movements:** Basic grammar of shots | Primary Camera Movement: Pan, Tilt, Zoom, Character Movement | Usage and need of Track and trolly, Crane, jimy gip, Poll Cam | Managing Movements | Single camera Setup | Multi camera setup | Continuity Exercise | Do's and don'ts of camera movements | Aesthetics and Psychological Impact of Moving Images | Various parts of Motion picture cameras | Moving Image-Motion Picture | Impact of collective moving Images | Motion Picture Dynamics; **Unit V – Understanding digital video recording**
Principle of video recording | Digital Recording Formats | Editing and compression | Digital sampling and storage | Technical formats of video- PAL, NTSC | "Time Code" in Video Recording | Film Stock and Processing

Textbooks:

1. Camera Terms and Concepts by David Elkins
2. The Camera Assistant by Doug Hart
3. Motion Picture Camera and Lighting Equipment by David Samuelson

Reference Books:

1. Motion Picture Camera Techniques by David Samuelson
2. The 16mm Camera Book by Douglas Underdahl
3. The Hands On Manual for Cinematographers by David Samuelson
4. The Professional Lighting Handbook by Verne Carlson
5. The Filmmakers Pocket Reference by Blain Brown
6. American Cinematographer ASC Manual
7. The Zone System for Photographers by Carson Graves
8. Cinematography: Screencraft by Peter Ettedgui
9. Contemporary Cinematographers-On Their Art by Pauline Rodgers

10. Operating Cinematography for Film and Video by William Hines
11. Cinematography-A Guide for Filmmakers and Film Teachersby Kris Malkeiwicz
12. Film Lighting: Talks with Hollywood's Cinematographers and Gaffersby Kris Malkiewicz
13. The Five C's of Cinematography: Motion Picture Filming Techniquesby Joseph V. Mascelli
14. The Art of the Cinematographer: A Survey and Interviews with Five Mastersby Leonard Maltin
15. Anton Wilson's Cinema Workshop by Anton Wilson
16. Image Control-Motion Picture and Video Camera Filtersand Lab Techniquesby Gerald Hirschfeld
17. Lighting for Film and Electronic Cinematographyby John David Viera and Dave Viera
18. Painting with Light by John Alton
19. Picture Composition for Film and Television by Peter Ward
20. Matters of Light and Depth-Creating Memorable Images for Video, Film and Stills Through Lighting by Ross Lowell
21. Lighting Technology by Fitt and Thornley Set Lighting Technician's Handbookby Harry C. Box
22. Digital Cinematography by Ben De Leeuw
23. If It's Purple, Someone's Gonna Die: The Power Of Color In Visual Storytelling By Patti Bellantoni
24. High Definition Cinematography By Paul Wheeler

BAFTNMP 212 Practical Film Making 1 (Only non-fiction film)

Objectives:
To understand the film making process for multiple locations in non fiction films
To understand the entire workflow
To gain exposure on various cameras and software used for production

The students will undergo the process of making a non-fiction film.
The students will be exposed to Semi professional camera cameras & software. The students will also undergo same basic exercises such as 3 shot and 6 shot to give them a basic sense of framing, composition, movement and editing. The final project will be a non-fiction film with the duration of 5-10 minutes.

Semester III

BAFTNMP 313 Introduction to Direction for Television

Direction for Television:

Understanding Television Culture & Semiotics.

Understanding Space & Time, Ideology, Aesthetics, Stylistics & Setting.
Construction: mise-en-scene & technical codes -1
Writing For Television**:** Research, Ideation and Conceptualization, Understanding The IV Act Structure for TV, Elements of a TV Program
Constructing a plot w.r.t a family tree for serials.
Constructing Character biography
Writing for Humour
Popular Indian TV Discourse- eg.: Aahat (Horror), Daily Soap (any) & Tarak Mehta (comedy)
Syntagmatic & Paradigmatic analysis
Polysemy
Popular TV Discourse- Friends
Principles of Affinity & Contrast
Director's Role in Television
Inter-textuality & Role and Impression of Women
Exploring Non-fiction Reality TV
Exploring Non-fiction AD Filmmaking -1
Linear Motif in TV
Creating content for TV- Directing for a Webisode

The course aims to develop the sensibilities and sensitivities of the taughtto comprehend the process of direction for television that entails understanding and analysis of different genres of television.

The learning includes understanding the television medium vis-à-vis the film, ideating, plotting and writing for different genres followed by inspecting the Director's role. Analyzing the present day scenario. Experimenting by devising for short versions.

The sessions could be designed to give a thorough understanding of both – theory as well as practicals. All lectures will be in the form of interactive sessions and it is expected that the student reads/watches television as directed before attending lectures.

Learning outcomes:

1. Understanding of the process of Direction for Television
2. Theoretical framework and practical approach to Direction
3. Creating Ads for various categories

BAFTNMP 314 Basics of Cinematography-2

Objectives:
To understand the basic structure of film and digital camera | To enhance the basic knowledge about lighting and its use | To understand various equipments required for various form of mood lighting | To understand basics of various digital cameras, lenses and digital

cinematography | To learn the basics of special effects cinematography |To understand the needs of co-creators

Unit I – Structure of Film and Digital Camera: Understanding the internal structure of camera | perforation loop | pressure plate | Pull down claw | Magazine: Types of magazine | Threading of film | Intermittent Movement | Analysis of Claw motion | Registration pin | Sprocket wheel | Frames per sec | Camera Motors | Slow motion and Fast motion | Reverse Movement | Lens Mount Flange Depth | Magazine Cover/rain cover | Digital Process of Image capturing | Latitude of film Camera format | Latitude of digital format | Shooting Format-16-mm/35-mm/70-mm/super.16/I-max/3-D | Convenience of Digital format | The Future of Film Formats ; **Unit II – Special Effects and Cinematography:** Chrome key Concept | Preparation for chrome key | Compositing a digital Picture | Digital matte painting; **Unit III – Mood Lighting & Colour Lighting Theory & Practice:** Red, Blue, Green , Purple & Orange lights and Treatments for Various Scenes | Colour and Cultural; **Unit IV – Image formation (Understanding requirements of a director):** Understanding a Screenplay writing | Writing for visuals- STORY BOARDING | Capturing the drama on the camera | How to create packets of emotional experience-Scene | Creation of Drama-Ingredients of a Drama; **Unit V – Understanding the needs of Co- creators (Director, Editor, Sound Recordist...)**
Working in team | Team Building | Conflict formation | Conflict Resolution

Textbooks:

1. Camera Terms and Concepts by David Elkins
2. The Camera Assistant by Doug Hart
3. Motion Picture Camera and Lighting Equipment by David Samuelson

Reference Books:

1. Motion Picture Camera Techniques by David Samuelson
2. The 16mm Camera Book by Douglas Underdahl
3. The Hands On Manual for Cinematographers by David Samuelson
4. The Professional Lighting Handbook by Verne Carlson
5. The Filmmakers Pocket Reference by Blain Brown
6. American Cinematographer ASC Manual
7. The Zone System for Photographers by Carson Graves
8. Cinematography: Screencraft by Peter Ettedgui
9. Contemporary Cinematographers-On Their Art by Pauline Rodgers
10. Operating Cinematography for Film and Video by William Hines
11. Cinematography-A Guide for Filmmakers and Film Teachersby Kris Malkeiwicz
12. Film Lighting: Talks with Hollywood's Cinematographers and Gaffersby Kris Malkiewicz
13. The Five C's of Cinematography: Motion Picture Filming Techniquesby Joseph V. Mascelli
14. The Art of the Cinematographer: A Survey and Interviews with Five Mastersby Leonard Maltin
15. Anton Wilson's Cinema Workshop by Anton Wilson

16. Image Control-Motion Picture and Video Camera Filtersand Lab Techniquesby Gerald Hirschfeld
17. Lighting for Film and Electronic Cinematographyby John David Viera and Dave Viera
18. Painting with Light by John Alton
19. Picture Composition for Film and Television by Peter Ward
20. Matters of Light and Depth-Creating Memorable Images for Video, Film and Stills Through Lighting by Ross Lowell
21. Lighting Technology by Fitt and Thornley Set Lighting Technician's Handbookby Harry C. Box
22. Digital Cinematography by Ben De Leeuw
23. If It's Purple, Someone's Gonna Die: The Power Of Color In Visual Storytelling By Patti Bellantoni
24. High Definition Cinematography By Paul Wheeler

BAFTNMP 315 Understanding TV formats & Genres

Objectives:

To understand how television programming works | To learn about TRPs and drama creation | To study the impact of niche programming | To learn about various genres of television programming

Unit I – Nature of drama in television: Various shows, formats and genres, telecast patterns, audience viewership performance | **Unit II – Creating Drama for TRPs:** Building the story, herd culture existing in current times, breaking the barriers | **Unit III – Creating niche television programming:** Importance of niche content, niche content channels, producing niche content in wake of DTH connections | **Unit IV – Differentiation of infotainment, edutainment, entertainment, lifestyle genres:** Differentiation of genres, Specialty of different genres, popularity of genres, content on demand, Study of BBC & Discovery, Study of GECs

Textbooks:

1. Fundamentals of Film Directing By David K. Irving
2. Writing, Directing, and Producing Documentary Films and Videos By Alan Rosenthal
3. Breaking into Film by Kenna McHugh
4. Before You Shoot : A Guide to Low Budget Film and Video Production by Helen Garvey

Reference Books:

1. Film Directing Cinematic Motion: A Workshop for Staging Scenes By Steven Douglas Katz
2. Film Directing Fundamentals: See Your Film Before Shooting By Nicholas T. Proferes
3. Problems Of Film Direction By Sergei Eisenstein

BAFTNMP 316 Concepts of Story Boarding

Objectives:

To understand the need for storyboarding | To learn the fundamentals of shoot taking and division | To understand various storyboarding techniques | To understand the importance of perspective and lighting while storyboarding

Unit I – Intro to Storyboarding/Visual Story telling & Storyboards: Origins of Story boards and aspect ratio | **Unit II – Fundamentals of Shots:** Terminology of Shoots, Camera Framing, Camera Angles and Movements | **Unit III – Storyboarding Techniques:** · Concept- what the story is about, Drawing the components of the storyboard
· Indicating motion in the storyboard, Increased reality- perspective and lighting | **Unit IV – Composition, Perspective & Lighting:** Compositional Elements, line-shape-contrast, creating meaning within image, Creation of depth through lens choice and linear, atmospheric and size perspective, High- Key Lighting, Low key Lighting, 3 point Lighting, Tonal quality of lighting. | **Unit V – Continuity:** Basic Rules of continuity, 180 – Degree rule, screen direction, Cutaways & Cut-ins | **Unit VI – Story Boards for Animations & Special Effects Films:** Structure of animation films, Special effects breakdown, creating the environment | **Unit VII – Story Boarding for Commercials and New Media:** Structure of commercials, elements of brand building to be implemented, special colour scheme for brands and products

Text Books:

1. Exploring Storyboarding By Wendy Tumminello
2. The Art of the Storyboard: Storyboarding for Film, Tv, and Animation By John Hart
3. Directing the StoryBy Francis Glebas

Reference Books:

1. Beginning Illustration And Storyboarding For Games By Les Pardew
2. Storyboards: Motion In Art By Mark Simon
3. From Word to Image: Storyboarding and the Filmmaking Process By Marcie Begleiter
4. Prepare to board! By Nancy Beiman
5. Storyboarding 101: A Crash Course in Professional Storyboarding By James O. Fraioli
6. Writing with pictures: how to write and illustrate children's books By Uri Shulevitz

BAFTNMP 317 Graphics and Post production (Flash, Editing software, After effects)

Basics of 2D animation, Vector and Raster Graphics, Basic Animation in Flash, Advanced editing using Flash Elements in the film, Using After Effects, The interface of After Effects, Importing graphics and film, Keyframes, After effects and timeline, Animating using after effects, Compositing

BAFTNMP 318 TV Production / Ad film making

To introduce the process of 25 mins Television series making
To understand the production pipeline of 25 mins Television series making process |
To understand the entire workflow 25 mins Television series making process

To gain exposure on various cameras and software used for production of 25 mins Television series making

The students will undergo the process of 25 mins Television series. The students will be exposed to professional HD cameras & software and will work on projects ranging from 5Mins-25mins. The students will be exposed to the entire process of film making and the production workflow in television Series. The students can also work on an Ad film for about 60 seconds depending on the kind of TV series they are making.

Semester IV

BAFTNMP 419 Introduction to Direction for Film

Introduction to Direction for Films

Objectives:
To understand the need for direction in films | To understand the role played by a director | To understand the Qualities required to be a director | To learn how to manage creativity and creative team | To learn about drama and continuity for films | To learn the details involve in the production of a feature films
Unit I – ARTISTIC IDENTITY AND DRAMA: The World of the Film Director, Identifying Your Themes | **Unit II – SCREENCRAFT:** A Director's Screen Grammar, Seeing with a Moviemaker's Eye, Shooting Projects | **Unit III – THE STORY AND ITS DEVELOPMENT:** Recognizing the Superior Screenplay –How to create drama, Analyzing a Screenplay, Director's Development Strategies, Alternative Story Sources, Setting Creative Limitations | **Unit IV – AESTHETICS AND AUTHORSHIP:** Point of View, Subtext, Genre, and Archetypes, Time, Structure, and Plot, Space, Stylized Environments, and Performances, Form and Style | **Unit V – PRODUCTION:** Developing a Crew, Mise-en-Scéne, Producing a Shooting Script, Before the Camera Rolls, Roll Camera, Location Sound, Continuity, Directing the Actors, Directing the Crew, Monitoring Progress | **Unit VI – ORGANIZING ACTION IN AN ACTION SCENE:** Staging and Camera for *Over Easy* Action Scene, Development of Screenplay, Director's Preparation for Directing an Action Scene, *Over Easy* Action Scene/Staging and Camera Angles for - Storyboard Artist | **Unit VII – ORGANIZING ACTION IN A NARRATIVE SCENE:** Staging and Camera for Narrative Scene, Choosing a Location, Staging, Camera Style | **Unit VIII - Styles And Dramatic Structures:** Style, Narrative, Dramatic, and Poetic Visual Styles, The Variety of Dramatic Structures,
Textbooks:

1. Film Directing Cinematic Motion: A Workshop for Staging Scenes By Steven Douglas Katz
2. Film Directing Fundamentals: See Your Film Before Shooting By Nicholas T. Proferes
3. Problems Of Film Direction By Sergei Eisenstein

Reference Books:

BAFTNMP 420 Basics of Visual Communication

Basics of Visual Communication

Aesthetics, Perception, Representation, Visual Rhetoric, Cognition, Semiotics, Reception Theory, Narrative, Media Aesthetics, Ethics, Visual Literacy, Cultural Studies.

BAFTNMP 21 Convergence and Basics of Web Designing

Convergence and Basics of Web Designing

Concept of Convergence, Internet Key Terms, New Media. Web Designing, HTML programming, Basic Java Script, Designing your own website, uploading the website, links and navigation

BAFTNMP 22 Concepts of Post Production & Computer Graphics (including VFX)

Concepts of Post Production & Computer Graphics (including VFX)

Objectives:

To understand the basics of visual effects | To understand the basic process of visual effects | To learn about GUI

and CG | To understand the basics of 3D and creating real world in the digital world | To learn about compositing and camera tracking | To understand the process of vfx and final rendering

Unit I – Introduction to pre-production, production and post-production: Visual effects' a relatively new term describes what used to be more appropriately called 'special photographic effects'. What makes an effect

'special'? The decision as to which medium and format VFX elements are going to be shot with is directly dependent on how they shall be employed and what the specifications are for their final resting place. Methods of creating visual effects, Implementation | Unit II – Introduction to the User Interface (GUI): Introduction to 3D Space and the GUI, Introduction to Modeling, Introduction to Polygonal Box Modeling, Introduction to Shell Modeling | Unit III – CG Basics: Animation Basics, Animation Hierarchies and Deformation, Joints Hierarchies and Constraints, Cameras, Rendering and Path Animation | Unit III – Understanding Pipeline and integration: Digital image manipulation, 2D digital image manipulation, Compositing software, New life into old methods, Perfecting the illusion, 3D computer-generated imaging (CGI), Digitizing (getting information into the computer) | Unit IV – Introduction to Lighting and Rendering: Light Properties, Defining Shadows, Defining Highlights and Specular, Diffuse

Inter-reflection and Global Illumination, Render Layers, Rendering Engines and methods | Unit V – Introduction to Compositing: Camera Staging and Composition, Renderers and Algorithms Benefits/Disadvantages, Rendering Passes, Introduction to Specific Compositing Software, Compositing 3D | Unit VI – Study of VFX and Camera Tracking: Overview of Production Pipelines, Rendering Utility Nodes, Camera Tracking Foundation 2D and 3D | Unit VII – Introduction to FX (Effects): Overview of Dynamics, Rigid Body and Fluids, Introduction to Particles, Expressions, Introduction to Fields, Project Work | Unit VIII – Compositing and Rendering: The Interface, Keying, Rotoscoping, Color Correction, Keying, Multi-Pass Compositing

7. The Visual Effects Arsenal: VFX Solutions for the Independent Filmmaker By Bill Byrne
8. Encyclopedia of Color Correction by Alexis Van Hurkman
9. The Art And Science Of Digital Compositing by Ronald Brinkman
10. Creating Motion Graphics with After Effects, Vol. 2 by Chris Meyer

BAFTNMP 421 Drama Production

Drama Production

The module is intended to provide an introduction to the process of digital short film production for the purpose of making works of drama and fiction. The focus will therefore be on enabling the development of the practical and theoretical skills in pitching, planning, writing, shooting and editing necessary to produce a coherent and competent fictional moving image project.

The module will seek to introduce the student to a range of creative and scheduling skills which will assist them in the production of their projects. It will foreground the inherently collaborative and collective aspects of the production process by aiding the student to refine a range of communication and inter-personal skills to accomplish a broad range of tasks, including identification and planning of a suitable production idea; Allocation of roles for the pre-production, shooting and editing phases, as well as encouraging collective responsibility and accountability which is absolutely essential to the completion of any professional or team production. The module will also build upon the more technical grounding offered in Techniques 2 in order to develop the practical vocabulary and skills required to produce moving image projects. Students will be encouraged to investigate and undertake a role throughout their productions. In crews, they will produce two shorts for inclusion in their personal practice portfolio.

Curriculum content

- Examine a range of current short fiction films
- Pitching fiction ideas to peers
- Researching locations and production demands
- Work with a range of production skills
- Work within a specific role
- Negotiate team and group work
- Undertaking the three stages of fiction production
- Basic ideas and concepts around screen writing
- Direction and team interplay

BAFTNMP 422 Intermediate Practical Film Making (Ad and Short Fiction Film)

Objectives:
To understand the production pipeline of film making process in advertisement film making | To introduce the process of Advertisement Film (product as well as PSU) Corporate AV and In-depth Multiple Characters Single Multiple Location Short Film making | To understand the entire workflow in Advertisement Film (product as well as PSU) Corporate AV and In-depth Multiple Characters Single Multiple Location Short Film | To gain exposure on various cameras and software used for production of Advertisement Film (product as well as PSU) Corporate AV and In-depth Multiple Characters Single Multiple Location Short Film

The students will undergo the process of Advertisement Film (product as well as PSU), Corporate AV and In-depth Multiple Characters Single Multiple Location Short Film. The students will be exposed to professional HD cameras & software and will work on projects ranging from 30Seconds-15mins. The students will be exposed to the entire process of film making and the production workflow in Advertisement and Multiple Character multiple location Short Film production.

Semester V

BAFTNMP 525 Laws related to Films, TV and Internet

To understand the various laws pertaining to media | To understand the need and importance of Copyright |To learn about intellectual property rights | To understand about media business ethics and issues pertaining to it

Unit I – Indian Contract Act, 1872: Essentials of valid contract
discharge of contract, remedies for breach of contract. Contracts of Indemnity, Guarantee, Bailment, Pledge and Agency. |Unit II – The Negotiable Instruments Act 1881: Essentials of a Negotiable instruments, Kindsof Negotiable Instrument Holder and Holder in Due Course, Negotiation byendorsements, crossing of a cheque and Dishonour of a cheque. | Unit III – Media Law, Copyright and Intellectual Property: IPR & copyright laws, Copyright Agreements : Short-Term vs. Long-Term Agreements, Media Law and Infringements : Case Studies, Menace of piracy and remedies to counter piracy, Statutory and non-statutory bodies formed to fight piracy |
Unit IV – Role and importance of Business Ethics and Values in Business - Definition of Business, Ethics Impact on
Business Policy and Business Strategy - Role of CEO - Impact on the Business Culture. | Unit V – Types of Ethical issues - Bribes - Coercion - Deception - Theft - Unfair Discrimination. | Unit VI – Vendors, Government, & Social Audit. | CSR- Definition and Importance, examples of various initiatives taken by various business groups like TATAs, Infosys, Birla and others | Difference between Cause Related Marketing (CRM) and CSR Case Studies: Reliance WLL license, 2G Scam, Satyam Scam and PWC's role in the scam!!! | Role of bodies like Competition Commission of India, SEC, SEBI, TRAI, etc in curbing unethical practices

BAFTNMP 526 New Media Theory and Practice (With advanced Web design and app making)

Web Designing – Adobe Dreamweaver, Designing a web page without the graphic user interface (HTML using notepad), Frames, Layers, Search Engine Optimization, HTML and DHTML, Using JavaScript, Embedding Java Applets, Using Activex Controls, Embedding Video and Audio into web pages, Streaming media, Using YouTube, Creating Forms, Learning basic PHP and MYSQL, Creating Database and using it in the web design, Creating a website for Mobile phones, Creating a news site, creating a brochure site, designing a portal interface, using vernacular language in web sites, dynamic fonts, creating a vernacular medium website, New media and popular culture, social networking, emerging identities, games as advanced new media, mobile journalism, new media as a pedagogical tool.

BAFTNMP 527 Understanding Indian Contemporary Cinema

Exploring the changing trends in Hindi Popular cinema in terms of storytelling, performances technological and production aspects. Emergence of Film Festivals as a mode of exhibition and the kind of films selected for such prestigious film festivals. Focus on the changing aesthetic trends of regional films, popular films and festival films. Looking at the emergence of digital media and internet being a source of exhibition for films.

BAFTNMP 528 Introduction to Media Project Management

Objectives:

To educate about the basics involved in a media project management | To educate about the basic project

production workflow and management | To educate about the role of a project manager | To help understand the details involving a new business project or proposal

Unit I – Production Management: The production Manager's job, The process of Production Management, The Business of Film-Pre production, production & post production, Preparing for production, Special Low Budget Indie productions, Locations & unions Management, Cast & Crew – Selection, contracts, agreements, work permits, etc.,

Budget preparation and budget forms, Insurance & competition bonds | Unit II – Business Creation: Business Plans and Ideation: Entrepreneurship Routes, Case Studies (Relevant and time specific), Introduction to Company Creation, Processes of Registration and Incorporation, Company Law, Introduction to Company Law, Registration Procedures and Exceptions, Company Procedure and Ethics | Unit III – Contracts and Negotiations: Revenue sharing model, Minimum guarantee model, Share in profits model | Unit IV – Conflict Resolutions: Negotiations and Bargaining : Role Play Exercise, Research Methodology for Business Planning | Unit V –

Scouting for business opportunities: Investor Pitch Exercises, Business Plan Formulation and Redesign, Financial Projections for Businesses

Textbooks:

10. Marketing Services: Competing Through Quality By Parasuraman & Leonard L. Berry.
11. Marketing Management (12th Edition) (Marketing Management) By Philip Kotler.
12. Consumer Behavior: Building Marketing Strategy, 9/e, (with DDB Needham Data Disk) By Hawkins, Best, & Coney.
13. Crossing the Chasm: Marketing and Selling High-Tech Products to Mainstream Customers By Geoffrey A. Moore.
14. Mind and Heart of the Negotiator, The (3rd Edition) By Leigh Thompson.
15. Radically Transparent By Andy Beal & Judy Strauss.

BAFTNMP 530 Advanced Practical Film Making - Music Videos

Objectives:

To introduce the process of Music Video

To understand the production pipeline of Music Video

To understand the entire workflow in Music Video making process

To gain exposure on various cameras and software used for production of Music Video

The students will undergo the process of Music Video. The students will be exposed to professional HD cameras & software and will work on projects ranging from 5Mins-8mins. The students will be exposed to the production workflow in music Video.

Semester VI

BAFTNMP 631 Final Project- Short Film (30 minutes)

Comprehensive, which will include writing an original story to production and distribution of film in the national and international circuit. It will also involve creating a blog, FB page, website for the film. Write a report on the roles performed by each student. The students will have to make a 30 minute short fiction project.

Program: B.A.

Course: Optional English: Introduction to Drama

Paper II

(Choice Based Credit System with effect from the Academic Year 2022- 2023)

1. Syllabus as per Choice Based Credit System (CBCS):

i)	**Name of the Program**	**:** S.Y.B.A. English (Ancillary)
ii)	**Course Code**	**:** Semester III UAENG301 & Semester IV UAENG401
iii)	**Course Title**	**: Optional English: Introduction to Drama Paper II**
iv)	**Semester wise Course Contents**	**:** Enclosed the copy of the syllabus
v)	**References and Additional References:**	Enclosed in the Syllabus
vi)	**Credit Structure**	03
vii)	**No. of lectures per Unit**	15
viii)	**No. of lectures per week**	03
2.	**Scheme of Examination**	**:** 5 Questions of 20 marks each
3.	**Special notes, if any**	**:** No
4.	**Eligibility, if any**	**:** No
5.	**Fee Structure**	**:** As per University Structure

6. Special Ordinances / Resolutions if any: No.

SYBA English (Ancillary) Course Title

Optional English: Introduction to Drama

Paper II

(100 Marks Examination Pattern)

Objectives of the Course:

- To create interest and develop passion amongst learners towards drama (and theatre)
- To familiarize learners with the salient elements and characteristics of drama
- To introduce learners to different forms and types of drama
- To introduce learners to the trends and characteristics of significant dramatic movements through representative dramas
- To equip the learners with the tools and techniques to critically appreciate drama
- To inculcate and propagate human values reflected in the plays among learners
- To demonstrate that drama is reflection / representation of life
- To Develop analytical skills and critical thinking through close reading of drama

Course Outcomes:
By the end of the course, a learner will:

- develop interest and passion for drama (and theatre).
- be familiarized with the salient elements and characteristics of drama.
- be able to identify the different forms and types of drama.
- be capable to identify the various trends and characteristics of significant dramatic movements through the representative dramas.
- be equipped with the tools and techniques to critically appreciate drama.
- imbibe human values reflected in the selected plays.
- justify that drama is reflection / representation of life.
- develop analytical skills and critical thinking through close reading of the represnttative dramas.

Semester III:	**Paper II**	**Total Credits: 03**
Course Title: Optional English: Introduction to Drama		

Total Lectures: 45

Course Content

Unit 1: **No. of lectures: 15**

Definition, Concept and Significance of Drama

Origin and Development of Drama

Terms and Concepts associated with Drama:

Plot (Main Plot, Sub-plot, Simple, Complex, Peripeteia and Anagnorisis, Exposition, Complication, Resolution, Denouement, Climax, Anti-climax)

Character (Hero, Villain, Confidante, Foil)

Act and Scene,

Soliloquy and Aside,

Music, Chorus Lights, Masks, Proscenium Arch, Play within Play, Subtext, Catharsis, Hamartia, Comic relief, Unity of action, time and place, Narrator and Sutradhar, etc.

Unit 2: **No. of lectures: 15**

Sophocles : *Oedipus Rex / Oedipus, The King*

OR

John Galsworthy : *Strife*

Unit 3: **No. of lectures: 15**

Girish Karnad : *Flowers*

OR

Mohan Rakesh : *Half-way House (Adhe Adhure)*

Evaluation: First Semester End Examination Pattern 100 Marks: 3 Hours

Question 1	:	Short Notes on Unit 1 (4 out of 6)	:	20 Marks
Question 2	:	Essay on Unit 2 (1 out of 2)	:	20 Marks
Question 3	:	Essay on Unit 3 (1 out of 2)	:	20 Marks
Question 4	:	Short Notes on Unit 2 (2 out of 4)	:	20 Marks
Question 5	:	Short Notes on Unit 3 (2 out of 4)	:	20 Marks

Semester IV:	**Paper II**	**Total Credits: 03**
Course Title: Optional English: Introduction to Drama		

Total Lectures: 45

Course Content

Unit 1: **No. of lectures: 15**

Types of Drama (based on form, content, function, theme, style, etc.):

Interlude, Chronicle Plays, Mystery Plays, Miracle Plays, Morality Plays, Romantic Comedy, Comedy of Humours, Restoration Comedy of Manners, Sentimental Comedy, Senecan Plays or Revenge Plays, History Plays, Heroic Drama, Blank Verse Drama, Poetic Drama / Verse Drama, Drama of Ideas / Problem Play, Expressionist Plays, Epic Theatre, Absurd Plays, Plays by Angry Young Men, Kitchen Sink Drama, Theatre of Cruelty, Comedy of Menace, etc.

Unit 2: **No. of lectures: 15**

Eugene O'Neil : *The Hairy Ape*

OR

Lorraine Hansberry : *A Raisin in the Sun*

Unit 3: **No. of lectures: 15**

Wole Soyinka : *The Lion and the Jewel*

OR

David Williamson : *The Removalists*

Evaluation: Second Semester End Examination Pattern 100 Marks: 3 Hours

Question 1	:	Short Notes on Unit 1 (4 out of 6)	:	20 Marks
Question 2	:	Essay on Unit 2 (1 out of 2)	:	20 Marks
Question 3	:	Essay on Unit 3 (1 out of 2)	:	20 Marks
Question 4	:	Short Notes on Unit 2 (2 out of 4)	:	20 Marks
Question 5	:	Short Notes on Unit 3 (2 out of 4)	:	20 Marks

3. Financial Reporting

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Corporate Financial Reporting	15
2	Accounting and Reporting of Financial Instruments	15
3	Financial Reporting by Special Entities	15
4	Developments in Financial Reporting	15
	Total	**60**

Sr. No.	Modules/Units
1	**Corporate Financial Reporting**
	Meaning, Concepts, Objectives, Characteristics, Theories of disclosure, Issues and problems with special reference to published financial statements.
2	**Accounting and Reporting of Financial Instruments**
	(a) Meaning, recognition, De-recognition and offset (b) Compound financial instruments, Measurement of financial instruments (c) Disclosures
3	**Financial Reporting by Special Entities**
	(a) Mutual funds (b) Non-banking finance companies (c) Merchant bankers (d) Stock and commodity market intermediaries
4	**Developments in Financial Reporting**
	(a) Value Added Statement (b) Economic Value Added (c) Market Value Added (d) Shareholders' Value Added (e) Human Resource Reporting

1. Elective Courses (EC)

4. Organisational Behaviour

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Organisation Behaviour	15
2	Understanding Others: Interpersonal relationships	15
3	Group Behaviour and Team Behaviour	15
4	Stress Management and Change	15
	Total	**60**

Sr. No.	Modules/Units
1	**Introduction to Organisation Behaviour**
	• Organisational Behaviour- Organisational Behaviour Multidiscipline- Different model of Organisational Behaviour- Individual behaviour is studied through Perception- Personality - Values- Attitudes- Job satisfaction- Motivation- Learning • Understanding self-studied through- Perception and Personality • Understanding self-studied through- Values and Attitudes
2	**Understanding Others: Interpersonal relationships**
	• Conflict Management –Nature of Conflict- Level of Conflict- Source of Conflict- Effects of Conflict- Process of Conflict- Stages of Conflict- Conflict Handling Orientations • Power and Organisational Politics-Sources of Power-Organisational Politics-Influence and Political Power
3	**Group Behaviour and Team Behaviour**
	• Group Behaviour, Informal Groups – Group Dynamics- Types of Groups-Nature and effects of Informal groups-Benefits of Informal groups-Formal groups –Monitoring informal organisation- Identifying and Rewarding Informal leader-Key Roles of Informal leader –Are there multiple informal leaders? Formal Groups- Potential Outcomes of Informal Group Processes • Team and Team Building- Modern organisation- Outcomes of Modern Organisation- Team work – Task team- Difference Between Groups and Teams-Life cycle of Team –Major Factors for Effective Teams- Team Building- Need for Team building- Team Building Process- Skills Useful in Team Building
4	**Stress Management and Change**
	• Stress Management and Counselling- How it Comes About –How it Affects Various Elements of Job Performance- Extreme Product of Stress- Stress and Job Performance-Approaches to Stress Management-Characteristic of Counselling-Types of Counselling • Change and its Effects- Nature of Change – Effect of Change – Response to Change – Resistance to change – Reasons for Resistance to Change-Transformational Leadership and Change-What are Elements of Transformational Leadership- Three stage model of changes Process

5. Econometrics for Finance

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction	10
2	Overview of the Classical Linear Regression Model	15
3	Univariate Times Series Modelling and Forecasting	20
4	Modelling Volatility and Correlation	15
	Total	**60**

Sr. No.	Modules/Units
1	**Introduction**
	Meaning, Different forms of econometrics, some characteristics of financial data, Types of Data, Return in Financial Modelling, Steps in formulating econometric model.
2	Overview of the Classical Linear Regression Model
	Meaning of regression, Regression v/s correlation, assumptions of the classical linear regression model, properties of OLS estimator, precision and standard errors, generalizing the simple model to multiple linear regression.
3	**Univariate Times Series Modelling and Forecasting**
	Introduction, some notation and concepts, moving average processes, Autoregressive processes, partial autocorrelation functions, examples of time series Modelling in finance, forecasting in econometrics.
4	**Modelling Volatility and Correlation**
	Models for volatility, Historical Volatility, Implied volatility models, Exponentially weighted moving average models, Autoregressive volatility models, Stochastic volatility models, forecasting covariance and correlation in finance with examples, Multivariate GARCH model for the CAPM with time-varying covariances.

1. Elective Courses (EC)

6. Security Analysis and Portfolio Management

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Portfolio Management – An Introduction & Process	15
2	Portfolio Management – Valuation	15
3	Fundamental Analysis and Technical Analysis	15
4	Efficient Market Theory & CAPM	15
	Total	**60**

Sr. No.	Modules/Units
1	**Portfolio Management – An Introduction & Process**
	Investment, Meaning, Characteristics, Objectives, Investment V/s Speculation, Investment V/s Gambling and Types of Investors. **Portfolio Management** – Meaning, Evolution, Phases, Role of Portfolio Managers, Advantages of Portfolio Management. Investment Environment in India and Factors Conducive for Investment in India. **Portfolio Analysis** – Meaning and its Components, Calculation of Expected Return and Risk, Calculation of Covariance, Risk – Return Trade off. **Portfolio Selection** – Meaning, Feasible Set of Portfolios, Efficient Set of Portfolios, Selection of Optimal Portfolio, Markowitz Model, Limitations of Markowitz Model, Measuring Security Return and Portfolio Return and Risk under Single Index Model and Multi Index Model.
2	**Portfolio Management – Valuation**
	Portfolio Revision – Meaning, Need, Constraints and Strategies. Portfolio Evaluation – Meaning, Need, Measuring Returns (Sharpe, Treynor and Jensen Ratios) and Decomposition of Performance. Bond Valuation – Meaning, Measuring Bond Returns, Yield to Maturity, Yield to Call and Bond Pricing. Bond Pricing Theorems, Bond Risks and Bond Duration.
3	**Fundamental Analysis and Technical Analysis**
	Economy Analysis – Meaning, Framework, Economic Analysis, Forecasting, Barometric or Indicator Approach, Econometric Model Building and Opportunistic Model Building. **Industry Analysis** – Concept of Analysis, Industry Life Cycle, Industry Characteristics **Company Analysis** – Financial Statements, Analysis of Financial Statements, (Practical questions on Debt Equity Ratios, Total Debt Ratio, Proprietary ratios, interest coverage ratio, Profitability ratios related to sales, investment and equity shares Efficiency or Activity Ratios) and Assessment of Risk(Leverages) Meaning and Principles of Technical Analysis, Price Chart, Line Chart, Bar Chart, Japanese Candlestick Chart, Trends and Trend Reversals, Chart Patterns, Support and Resistance, Reversal Patterns, Continuation Patterns and Elliot Wave Theory, Dow Theory , Mathematical Indicators – Calculation of Moving Averages (Simple and Exponential Moving Average), Oscillators and Relative Strength Index Market Indicators, Fundamental Analysis V/s Technical Analysis
4	**Efficient Market Theory & CAPM**
	Random Walk Theory, The Efficient Market Hypothesis, Forms of Market Efficiency, Competitive Market Hypothesis CAPM – Fundamental Notions of Portfolio Theory, Assumption of CAPM, Efficient Frontier with Riskless Lending and Borrowing, Capital Market Line, Security Market Line and Pricing of Securities with CAPM. Arbitrage Pricing Theory (APT) – The Return Generating Model, Factors Affecting Stock Return, Expected Return on Stock, APT V/s CAPM.

2. Core Courses (CC)

1. Financial Management-II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Risk and Return	15
2	Capital Structure Decisions	15
3	Cash Management	15
4	Receivable Management	15
	Total	**60**

Sr. No.	Modules/Units
1	**Risk and Return**
	Introduction, Meaning of Return, Types of Return- Holding Period Return, Annualized Return, Expected Return. Meaning of Risk, Types of Risk- Business Risk, Financial Risk, Interest Rate risk, Market Risk and Liquidity Risk (Including Practical Problems)
2	**Capital Structure Decisions**
	Meaning, Choice of Capital Structure. Importance Optimal capital Structure Introduction to leverage, Types of Leverages: Operating Leverage, Financial Leverage & Composite Leverage Relationship between Operating Leverage and Financial Leverage EBIT-EPS Analysis Cost of Capital, Capital structure and Market Price of Share Capital Structure Theories Dividend Policy - Payout Ratio (Including Practical Problems)
3	**Cash Management**
	Introduction Motives for holding cash Aspects of cash management Long terms cash forecasting Reason for cash surplus Cash management: Basic strategies, Cash Management Techniques/Processes, Marketable Securities (Including Practical Problems)
4	**Receivable Management**
	Introduction Aspects of Receivable Management Credit Policy, Credit Evaluation, Credit Granting decision, Control on Accounts Receivable (Including Practical Problems)

Project Work

Inclusion of project work in the course curriculum of the B.Com. (Financial Markets) program me is one of the ambitious aspects in the programme structure. The main objective of inclusion of project work is to inculcate the element of research analyse and scientific temperament challenging the potential of learner as regards to his/ her eager to enquire and ability to interpret particular aspect of the study. It is expected that the guiding teacher should undertake the counselling sessions and make the awareness among the learners about the methodology of formulation, preparation and evaluation pattern of the project work.

- There are two modes of preparation of project work
  1. Project work based on research methodology in the study area
  2. Project work based on internship in the study area

Guidelines for preparation of Project Work

1. General guidelines for preparation of project work based on Research Methodology

- The project topic may be undertaken in any area of Elective Courses.
- Each of the learner has to undertake a Project individually under the supervision of a teacher-guide.
- The learner shall decide the topic and title which should be specific, clear and with definite scope in consultation with the teacher-guide concerned.
- University/college shall allot a guiding teacher for guidance to the students based on her /his specialization.
- The project report shall be prepared as per the broad guidelines given below:
  - Font type: Times New Roman
  - Font size: 12-For content, 14-for Title
  - Line Space : 1.5-for content and 1-for in table work
  - Paper Size: A4
  - Margin : in Left-1.5, Up-Down-Right-1
  - The Project Report shall be bounded.
  - The project report should be 80 to 100 pages

Format

Structure to be followed to maintain the uniformity in formulation and presentation of Project Work

(Model Structure of the Project Work)

- **Chapter No. 1: Introduction**

In this chapter Selection and relevance of the problem, historical background of the problem, brief profile of the study area, definition/s of related aspects, characteristics, different concepts pertaining to the problem etc can be incorporated by the learner.

- **Chapter No. 2: Research Methodology**

This chapter will include Objectives, Hypothesis, Scope of the study, limitations of the study, significance of the study, Selection of the problem, Sample size, Data collection, Tabulation of data, Techniques and tools to be used, etc can be incorporated by the learner.

- **Chapter No. 3: Literature Review**

This chapter will provide information about studies done on the respective issue. This would specify how the study undertaken is relevant and contribute for value addition in information/ knowledge/ application of study area which ultimately helps the learner to undertake further study on same issue.

- **Chapter No. 4: Data Analysis, Interpretation and Presentation**

This chapter is the core part of the study. The analysis pertaining to collected data will be done by the learner. The application of selected tools or techniques will be used to arrive at findings. In this, table of information's, presentation of graphs etc. can be provided with interpretation by the learner.

- **Chapter No. 5: Conclusions and Suggestions**

In this chapter of project work, findings of work will be covered and suggestion will be enlisted to validate the objectives and hypotheses.

Note: If required more chapters of data analysis can be added.

Acknowledgment

(Model structure of the acknowledgement)

To list who all have helped me is difficult because they are so numerous and the depth is so enormous.

I would like to acknowledge the following as being idealistic channels and fresh dimensions in the completion of this project.

I take this opportunity to thank the **University of Mumbai** for giving me chance to do this project.

I would like to thank my **Principal, _____ _____** for providing the necessary facilities required for completion of this project.

I take this opportunity to thank our **Coordinator_____ _____**, for her moral support and guidance.

I would also like to express my sincere gratitude towards my project guide _____ whose guidance and care made the project successful.

I would like to thank my **College Library**, for having provided various reference books and magazines related to my project.

Lastly, I would like to thank each and every person who directly or indirectly helped me in the completion of the project especially **my Parents and Peers** who supported me throughout my project.

2. Guidelines for Internship based project work

- Minimum 20 days/ 100 hours of Internship with an Organisation/ NGO/ Charitable
- Organisation/ Private firm.
- The theme of the internship should be based on any study area of the elective courses
- Experience Certificate is Mandatory
- A project report has to be brief in content and must include the following aspects:
    - **Executive Summary:**
      A bird's eye view of your entire presentation has to be precisely offered under this category.
    - **Introduction on the Company:**
      A Concise representation of company/ organization defining its scope, products/ services and its SWOT analysis.
    - **Statement and Objectives:**
      The mission and vision of the organization need to be stated enshrining its broad strategies.
    - **Your Role in the Organisation during the internship:**
      The key aspects handled, the department under which you were deployed and brief summary report duly acknowledged by the reporting head.
    - **Challenges:**
      The challenges confronted while churning out theoretical knowledge into practical world.
    - **Conclusion:**
      A brief overview of your experience and suggestions to bridge the gap between theory and practice.

    - The project report based on internship shall be prepared as per the broad guidelines given below:
        - Font type: Times New Roman
        - Font size: 12-For content, 14-for Title
        - Line Space : 1.5-for content and 1-for in table work
        - Paper Size: A4
        - Margin : in Left-1.5, Up-Down-Right-1
        - The Project Report shall be bounded.
        - The project report should be of minimum 50 pages

Evaluation pattern of the project work

The Project Report shall be evaluated in two stages viz.	
➢ **Evaluation of Project Report (Bound Copy)**	**60 Marks**
• Introduction and other areas covered	20 arks
• Research Methodology, Presentation, Analysis and interpretation of data	30 Marks
• Conclusion & Recommendations	10 Marks
➢ **Conduct of Viva-voce**	**40 Marks**
• In the course of Viva-voce, the questions may be asked such as importance / relevance of the study, objective of the study, methodology of the study/ mode of Enquiry (question responses)	10 Marks
• Ability to explain the analysis, findings, concluding observations, recommendation, limitations of the Study	20 Marks
• Overall Impression (including Communication Skill)	10 Marks

Note:
The guiding teacher along with the external evaluator appointed by the University/ College for the evaluation of project shall conduct the viva-voce examination as per the evaluation pattern.

Passing Standard

- Minimum of Grade E in the project component
- In case of failing in the project work, the same project can be revised for ATKT
- examination.
- Absence of student for viva voce: If any student fails to appear for the viva voce on the date and time fixed by the department such student shall appear for the viva voce on the date and time fixed by the Department, such student shall appear for the viva voce only along with students of the next batch.

Scheme of Evaluation

The performance of the learners will be evaluated in two Components. One component will be the Internal Assessment component carrying 25% marks and the second component will be the Semester-wise End Examination component carrying 75% marks. The allocation of marks for the Internal Assessment and Semester End Examinations will be as shown below:

A) Internal Assessment: 25 %

Question Paper Pattern

(Internal Assessment- Courses without Practical Courses)

Sr. No.	Particular	Marks
1	**One class test (20 Marks)**	
	Match the Column/ Fill in the Blanks/ Multiple Choice Questions ***(½ Mark each)***	05 Marks
	Answer in One or Two Lines (Concept based Questions) ***(01 Mark each)***	05 Marks
	Answer in Brief (Attempt Any Two of the Three) ***(05 Marks each)***	10 Marks
2	Active participation in routine class instructional deliveries and overall conduct as a responsible learner, mannerism and articulation and exhibit of leadership qualities in organizing related academic activities	05 Marks

B) Semester End Examination: 75 %

i. Duration: The examination shall be of 2 ½ Hours duration

ii. Theory question paper pattern

- There shall be five questions each of 15 marks.
- All questions shall be compulsory with internal choice within the questions.
- Question may be subdivided into sub-questions a, b, c… and the allocation of marks depends on the weightage of the topic.

(Detail question paper pattern has been given separately)

--Passing Standard

The learners to pass a course shall have to obtain a minimum of 40% marks in aggregate for each course where the course consists of Internal Assessment and Semester End Examination. The learners shall obtain minimum of 40% marks (i.e. 10 out of 25) in the Internal Assessment and 40% marks in Semester End Examination (i.e. 30 Out of 75) separately, to pass the course and minimum of Grade E to pass a particular semester A learner will be said to have passed the course if the learner passes the Internal Assessment and Semester End Examination together.

Question Paper Pattern

(Practical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 1/2 Hrs.

All Questions are Compulsory Carrying 15 Marks each

Question No	Particular	Marks
Q-1	Objective Questions A. Sub Questions to be asked 10 and to be answered any 08 B. Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks
Q-2 Q-2	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-3 Q-3	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-4 Q-4	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-5 Q-5	A) Theory questions B) Theory questions ***OR*** Short Notes To be asked 05 To be answered 03	08 Marks 07 Marks 15 Marks

Note:
Practical question of 15 marks may be divided into two sub questions of 7/8 and 10/5Marks. If the topic demands, instead of practical questions, appropriate theory question may be asked.

Question Paper Pattern

(Theoretical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 1/2 Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Objective Questions A) Sub Questions to be asked 10 and to be answered any 08 B) Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks
Q-2 Q-2	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-3 Q-3	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-4 Q-4	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-5 Q-5	A) Theory questions B) Theory questions ***OR*** Short Notes To be asked 05 To be answered 03	08 Marks 07 Marks 15 Marks

Note:
Theory question of 15 marks may be divided into two sub questions of 7/8 and 10/5Marks.

	For shares (variable income bearing securities) For debentures/Preference. shares (fixed income bearing securities) Accounting for transactions of purchase and sale of investments with ex and cum interest prices and finding cost of investment sold and carrying cost as per weighted average method (Excl. brokerage). Columnar format for investment account.
4	**Accounting for Foreign Currency Transaction**
	In relation to purchase and sale of goods, services and assets and loan and credit transactions. Computation and treatment of exchange rate differences

1. Elective Courses (EC)

2. Auditing- I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Auditing	15
2	Audit Planning, Procedures and Documentation	15
3	Auditing Techniques	15
4	Internal Audit	15
	Total	**60**

Sr. No.	Modules/Units
1	**Introduction to Auditing**
	• Basics Financial Statements, Users of Financial Information, Definition of Auditing, Objectives of Auditing - Primary and Secondary, Expression of Opinion, Detection of Frauds and Errors, Inherent Limitations of Audit • Errors and Frauds Concepts, Reasons and Circumstances, Types of Errors - Commission, Omission, Principle and Compensating, Types of Frauds, Risk of Fraud and Error in Audit, Auditor's Duties and Responsibilities in Respect of Fraud • Principles of Audit Integrity, Objectivity, Independence, Confidentiality, Skills and Competence, Materiality and Work Performed by Others, Documentation, Planning, Audit Evidence, Accounting System and Internal Control, Audit Conclusions and Reporting • Types of Audit Meaning, Advantages and Disadvantages of Balance Sheet Audit, Interim Audit, Continuous Audit, Concurrent Audit, Annual Audit • Miscellaneous Advantages of Independent Audit, Qualities of Auditors, Auditing Vs Accounting, Auditing V/s Investigation, View the Concept True and Fair • Accounting Concepts Relevant to Auditing Materiality, Going Concern
2	**Audit Planning, Procedures and Documentation**
	• Audit Planning Meaning, Objectives, Factors to be Considered, Sources of Obtaining Information, Discussions with Client, Overall Audit Plan • Audit Programme Meaning, Factors to be Considered, Advantages, Disadvantages, Overcoming Disadvantages, Methods of Work, Instruction before Commencing Works of Audit, Overall Audit Approach • Audit working Papers Meaning, Importance, Factors Determining Form and Contents, Main Functions / Importance, Features, Contents of Permanent Audit File, Temporary Audit File, Ownership, Custody, Access of Other Parties to Audit Working Papers, Auditors Lien on Working Papers, Auditors Lien on Client's Books • Audit Notebook Meaning, Structure, Contents, General Information, Current Information and Importance
3	**Auditing Techniques**
	• Test Check Test Checking Vs Routing Checking, Test Check Meaning, Features, Factors to be Considered, When Test Checks can be Used, Advantages, Disadvantages and Precautions. • Audit Sampling Audit Sampling, Meaning, Purpose, Factors in Determining Sample Size - Sampling Risk, Tolerable Error and Expected Error, Methods of Selecting Sample Items Evaluation of Sample Results Auditors Liability in Conducting Audit based on Sample • Internal Control Meaning and Purpose, Review of Internal Control, Advantages, Auditors Duties, Review of Internal Control, Inherent Limitations of Internal Control, Internal Control Samples for Sales & Debtors, Purchases & Creditors, Wages & Salaries • Internal Checks Vs Internal Control, Internal Checks Vs Test Checks
4	**Internal Audit**
	Meaning, Basic Principles of Establishing Internal Audit, Objectives, Evaluation of Internal Audit by Statutory Auditor, Usefulness of Internal Audit Internal Audit Vs External Audit, Internal Checks Vs Internal Audit

1. Elective Courses (EC)

3. Management Information Systems

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Management Information Systems	15
2	Information, Management and Decision Making	15
3	Systems Analysis and Design and Decision Support Systems	15
4	Management Issues in MIS	15
	Total	**60**

SN	Modules/Units
1	**Management Information Systems**
	(a) Need, Purpose and Objectives (b) Contemporary Approaches to Management Information Systems (MIS) (c) Information as a strategic resource, Use of information for competitive advantage (d) Management Information Systems as an instrument for the organizational change.
2	**Information, Management and Decision Making**
	(a) Models of Decision Making: Classical, Administrative and Herbert Simon's Models (b) Attributes of information and its relevance to Decision Making (c) Types of information.
3	**Systems Analysis and Design and Decision Support Systems**
	(a) Systems Development Life Cycle, Alternative System Building Approaches, Prototyping model Spiral Model, Rapid Development Tools, CASE Tools. (b) Decision Support Systems: Group Decision Support Systems, Executive Information Systems, Executive Support Systems, Expert Systems and Knowledge Based Expert Systems, Artificial Intelligence.
4	**Management Issues in MIS**
	(a) Information Security and Control, Quality Assurance (b) Ethical and Social Dimensions (c) Intellectual Property Rights as related to IT Services /IT Products Managing Global Information Systems.

1. Elective Courses (EC)

4. Business Ethics

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Ethics and Area of Business Ethics	15
2	Business Ethics in Global Economy	15
3	Corporate Social Responsibility	15
4	Functional Ethics	15
	Total	**60**

Sr.No.	Modules/Units
1	**Introduction to ethics and area of Business Ethics**
	➢ Meaning of ethics, Moral and values ➢ Importance of Ethics ➢ Types of Ethics ➢ Theories of Ethics ➢ Business Ethics Meaning, Definition ➢ Nature and Importance of Business Ethics ➢ Types of Business Ethics ➢ Causes of Unethical behaviour ➢ Factors influencing business ethics ➢ Corporate Ethics, Individual ethics, Professional Ethics ➢ Gandhian Philosophy of ethical behaviour ➢ Ethical Challenges for managers in the 21st Century
2	**Business Ethics in Global Economy**
	➢ Concept of Globalization ➢ Global Business Network ➢ Relationship among Business, Business Ethics and Business Development ➢ Developing Business ethics in Global Economy ➢ Marketing ethics in foreign trade ➢ Role of Business Ethics in business ➢ Ethical Issues in e-commerce ➢ Measures to prevent unethical practices in e-commerce
3	**Corporate Social Responsibility**
	➢ Concept of Corporate Social Responsibility ➢ Various CSR of Business ➢ Relationship between C.S.R. and Business Ethics ➢ Business Ethics and Environment Protection ➢ Business Ethics and Consumer Protection ➢ Business Ethics and Social Justice ➢ Arguments for and against Corporate Social Responsibility
4	**Functional Ethics**
	➢ Meaning of Functional Ethics ➢ Types of Ethics according to Functions of Business, (Marketing, HRM & Finance) ➢ Patents, ➢ Copy-rights ➢ Intellectual Property Rights ➢ Trade Marks ➢ Ethical Issues in patents, copy-rights, Intellectual Property Rights and Trade Mark

1. Elective Courses (EC)

5. Personal Financial Planning

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Financial Plan and Budgeting	15
2	Managing your money and Career Planning	15
3	Financial Assets and Protection of Assets	15
4	Retirement planning and You	15
	Total	**60**

Sr. No.	Modules/Units
1	**Financial Plan and Budgeting**
	Meaning of Financial Plan, Need, Financial Literacy, Components of Financial Plan, Building Financial plans, Meaning of Budgeting, Cash inflow and outflow, Cash Flow Analysis, Importance of Budgeting. Simple practical problems
2	**Managing your money and Career Planning**
	Factors considered to manage your money, Interest Rate, Yield Curves, Real Return, Key Indicators – Leading, Lagging & Concurrent, Financial Goals and Career Planning, Life Cycle Management
3	**Financing Assets and Protection of Assets**
	Types of Investment, Risk and Return of investors, Asset Allocation Strategies – Strategic, Tactical & Life-Cycle based. Goal Based Finance, Active and Passive Investment Strategies. Meaning of Insurance, Life Insurance and General Insurance Policies, Calculation of Human Life Value- Belth Method /CPT, Return Calculation (CAGR, Post-Tax Returns), Net worth Calculation
4	**Retirement planning and You**
	Different Salary Component, Meaning of Retirement Planning, Types, Need and Purpose, Financial objective of retirement planning, Different factors and Principles for Wealth Creation, Life Cycle Planning, Evaluation and planning for retirement, Pre and Post Retirement Strategies. Pension Schemes, Tax Saving Schemes and Types of Annuity Simple Practical questions

1. Elective Courses (EC)

6. Financial Planning and Business Valuation

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Analysis of Financial Statement and Statement of Shareholder's Equity	15
2	Analysis of Income, Profitability, Growth and Sustainable Earning	15
3	Business Valuation and Models	15
4	Valuation of Business for Mergers & Acquisitions and Valuation of Intellectual Property	15
	Total	**60**

Sr. No.	Modules/Units
1	**Analysis of Financial Statement and Statement of Shareholder's Equity**
	Meaning, Importance and Types of Financial Analysis, Financial Statement Analysis and its importance and Limitations, Analysis and Interpretation – Benefits, Limitations and types, Financial Statement Analysis - Traditional Approach vs. Modern Approach Reformulating the Statement of Owner's Equity, Comprehensive Income Reporting – Simple Practical problem based on Comprehensive Income reporting
2	**Analysis of Income, Profitability, Growth and Sustainable Earning**
	Analysis of Changes in income, Bond Analysis, Profitability Analysis – Sales Variance, Leverages, Theory of Growth analysis and Analysis of changes in profitability & sustainable growth Simple Practical Problems excluding Growth and Sustainable Analysis
3	**Business Valuation and Models**
	Meaning, Principles, Techniques and Role of Valuation, Free Cash Flow Valuation, Valuation of Firm (CVA & EVA), Contingent Claim Valuation. Simple Practical Problems based on EVA.
4	**Valuation of Business for Mergers & Acquisitions and Valuation of Intellectual Property**
	Basics of Merger and Acquisitions, Approaches to Valuations in case of M & A, Selection of Appropriate Cost of Capital for valuation, Forms of Consideration and Terms of Acquisition, Exchange Ratio Based used for Computation. Theory of Intellectual Property and Methods of Valuation, Valuation of Brands, Valuations of Real Estate Simple practical problems based on Consideration and Terms of Acquisition, Exchange Ratio Based used for Computation, Valuation of Brands and Real Estate

2. Core Courses (CC)

1. Financial Management -I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Financial Management	15
2	Investment Decisions	15
3	Types of Financing	15
4	Cost of Capital	15
	Total	**60**

Sr.No.	Modules/Units
1	**Introduction to Financial Management**
	(a) Introduction (b) Meaning (c) Importance (d) Scope and Objectives (e) Profit v/s Value Maximization (f) The Time Value of Money (g) Present Value (h) Internal Rate of Return (i) Bonds Returns (j) The Returns from Stocks (k) Annuity (l) Techniques of Discounting (m) Techniques of Compounding
2	**Investment Decisions**
	(a) Introduction (b) Purpose of Capital Budgeting (c) Capital Budgeting Process (d) Types of Capital Investment Decisions (e) Project Cash Flows and Net Profit Approval (f) Basic Principle of Measuring Project Cash Flows: Increment Principle, Long Term Funds Principle, Exclusion of Financial Cost Principle, Post Tax Principle, Probability Technique for Measurement of Cash Flow (g) Capital Budgeting Techniques(Only Time Adjusted/Discounted Cash Flows) Net Present Value, PI, IRR, Discounted Pay Back (h) Capital Rationing *(**Note**: Problems on Computation of Cash Inflow, Ranking of Projects on Various Techniques, Selection and Analysis with/without Capital Rationing.(Excluding Comparison of IRR with Required Rate of Return i.e. Cut off Rate, IRR and Mutually Exclusive Projects with Unequal Lives, Multiple IRR)*
3	**Types of Financing**
	(a) Introduction (b) Needs of Finance and Sources: Long Term, Medium Term, Short Term (c) Long Term Sources of Finance (d) Short Term Sources of Finance
4	**Cost of Capital**
	(a) Introduction (b) Definition and Importance of Cost of Capital (c) Measurement of Cost of Capital (d) WACC

2. Core Courses (CC)

2. Research Methodology in Financial Management

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Research	15
2	Data Collection and Processing	15
3	Data Analysis and Interpretation	20
4	Research Report	10
	Total	**60**

No.	Modules/Units
1	**Introduction to Research**
	• Meaning, Objectives and Importance of Research • Types of Research • Research Process • Characteristics of Good Research • Hypothesis-Meaning, Nature, Significance, • Types of hypothesis and Sources • Research Design– Meaning, Definition, Need and Importance, Steps, Scope and Essentials of a Good Research Design • Sampling– a) Meaning of Sample and Sampling, b)Methods of Sampling i) Non-Probability Sampling–Convenient, Judgment, Quota, Snow ball ii) Probability– Simple Random, Stratified, Cluster, Multi Stage.
2	**Data Collection and Processing**
	• Types of Data and Sources-Primary and Secondary Data Sources • Methods of Collection of Primary data: a. Observation- i) structured and unstructured, ii) disguised and undisguised, iii) mechanical observations (use of gadgets) b. Experimental i) Field ii) Laboratory c. Interview – i) Personal Interview ii) focused group, iii) in- depth interviews Method d. Survey– Telephonic survey, Mail, E-mail, Internet survey, Social media, and Media listening. e. Survey instrument– i) Questionnaire designing. a. Types of questions–i) structured/close ended and ii) unstructured/ open ended, iii) Dichotomous, iv) Multiple Choice Questions f. Scaling techniques- i) Likert scale, ii) Semantic Differential scale.
3	**Data Analysis and Interpretation**
	• Processing of Data– Meaning & Essentials of i) Editing ii) Coding iii) Tabulation • Analysis of Data-Meaning, Purpose, Types. • Interpretation of Data-Essentials, Importance, Significance and Descriptive Analysis, Measures of Central Tendency, Measures of Dispersion, Correlation and Regression Analysis • Testing of hypothesis– One Sample T- Test, Chi Square and Paired Sample Test
4	**Research Report**
	Report writing – i) Meaning, Importance, Structure, Types, Process and Essentials of a Good Report

B.Com. (Financial Management) Programme

Under Choice Based Credit, Grading and Semester System

Courses Structure

(To be implemented from Academic Year 2018-2019)

Semester VI

No. of Courses	Semester IV	Credits
1	***Elective Courses (EC)***	
1, 2, 3 & 4	*Any four courses from the following list of the courses	**12**
2	***Core Courses (CC)***	
5	Financial Management-II	**04**
6	Project Work	**04**
Total Credits		**20**

****List of Elective Courses for Semester VI (Any Four)***	
1	Corporate Accounting –IV
2	Auditing-II
3	Financial Reporting
4	Organisational Behaviour
5	Econometrics in Finance
6	Security Analysis & Portfolio Management

1. Elective Courses (EC)

1. Corporate Accounting- IV

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Consolidated Financial Statement	15
2	Internal Reconstruction	15
3	AS – 14 - Amalgamation, Absorption (excluding inter – company holding)	15
4	External Reconstruction	15
	Total	60

Sr. No.	Modules/Units
1	**Consolidated Financial Statement**
	Meaning, Stand Alone Financial Statements Consolidated Financial statements – Applicability, Advantages & Disadvantages Procedure of Consolidation of Balance-sheet & Profit & Loss Account (Excluding cross holding, Chain Holding & Foreign Subsidiary). **Practical Problem on Preparation of Consolidated Balance sheet)**
2	**Internal Reconstruction**
	Need for reconstruction and company law provisions Methods including alteration of share capital, variation of shareholder rights, sub division, consolidation, surrender and reissue / cancellation, reduction of share capital with relevant legal provisions and accounting treatment for same. **Practical Problem on Internal Reconstruction, Journal entry, preparation of Capital Reduction A/C and Preparation of Balance sheet in vertical form)**
3	**AS – 14 - Amalgamation, Absorption (excluding inter – company holding)**
	In the nature of merger and purchase with corresponding accounting treatments of pooling of interests and purchase method respectively. Meaning and Computation of purchase consideration. Inter-company debtors, creditors, loan, bills, loading in stock. **Practical Problem on Amalgamation and Absorption (only Purchase Method)**
4	**External Reconstruction**
	Meaning of External Reconstruction, Distinction between internal and external reconstructions. **Practical Problem related to Journal entry and preparation of ledger account, calculation of Purchase consideration, Journal entry in New company, and Preparation of Balance sheet in vertical form for new company as per AS-14**

1. Elective Courses (EC)

2. Auditing- II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Vouching	15
2	Verification	15
3	Auditing Standards	15
4	Audit of Companies	15
	Total	**60**

Sr. No.	Modules/Units
1	**Vouching**
	• Audit of Income : Revenue from Sales and Services, Rental Income, Interest & Dividends Income, Royalties Income, Recovery of Bad debts written off, Commission Received • Audit of Expenditure : Purchases, Salaries & Wages, Rent, Insurance Premium, Telephone expense , Petty cash payment, Advertisement, Travelling Salesmen's Commission, Freight Carriage and Custom Duties
2	**Verification**
	• Audit of assets : Plant & Machinery, Furniture and fixtures, Accounts Receivable, Investments, Inventory, Goodwill, Patent Rights • Audit of Liabilities: Outstanding Expenses, Accounts Payable, Secured loans, Unsecured Loans, Contingent Liabilities, Public Deposits
3	**Auditing Standards**
	• Meaning Procedure of issuing Auditing Standards in India Brief overview of Auditing Standards in India Scope of SAs Significance of the Auditing Standards Responsibility of auditor for auditing standards • Understanding of following standards SA 200. SA210, SA230, SA240, SA 250, SA300,SA315, SA320, SA505
4	**Audit of Companies**
	Qualifications, Disqualifications, Appointments, Reappointment, Removal of auditors. Special auditors Branch auditors Rights and duties of company auditors

1. Elective Courses (EC)

3. Financial Reporting

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Corporate Financial Reporting	15
2	Accounting and Reporting of Financial Instruments	15
3	Financial Reporting by Special Entities	15
4	Developments in Financial Reporting	15
	Total	**60**

Sr. No.	Modules/Units
1	**Corporate Financial Reporting**
	Meaning, Concepts, Objectives, Characteristics, Theories of disclosure, Issues and problems with special reference to published financial statements.
2	**Accounting and Reporting of Financial Instruments**
	(a) Meaning, recognition, De-recognition and offset (b) Compound financial instruments, Measurement of financial instruments (c) Disclosures
3	**Financial Reporting by Special Entities**
	(a) Mutual funds (b) Non-banking finance companies (c) Merchant bankers (d) Stock and commodity market intermediaries
4	**Developments in Financial Reporting**
	(a) Value Added Statement (b) Economic Value Added (c) Market Value Added (d) Shareholders' Value Added (e) Human Resource Reporting

1. Elective Courses (EC)

4. Organisational Behaviour

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Organisation Behaviour	15
2	Understanding Others: Interpersonal relationships	15
3	Group Behaviour and Team Behaviour	15
4	Stress Management and Change	15
	Total	**60**

Sr. No.	Modules/Units
1	**Introduction to Organisation Behaviour**
	• Organisational Behaviour- Organisational Behaviour Multidiscipline- Different model of Organisational Behaviour- Individual behaviour is studied through Perception- Personality - Values- Attitudes- Job satisfaction- Motivation- Learning • Understanding self-studied through- Perception and Personality • Understanding self-studied through- Values and Attitudes
2	**Understanding Others: Interpersonal relationships**
	• Conflict Management –Nature of Conflict- Level of Conflict- Source of Conflict- Effects of Conflict- Process of Conflict- Stages of Conflict- Conflict Handling Orientations • Power and Organisational Politics-Sources of Power-Organisational Politics-Influence and Political Power
3	**Group Behaviour and Team Behaviour**
	• Group Behaviour, Informal Groups – Group Dynamics- Types of Groups-Nature and effects of Informal groups-Benefits of Informal groups-Formal groups –Monitoring informal organisation- Identifying and Rewarding Informal leader-Key Roles of Informal leader –Are there multiple informal leaders? Formal Groups- Potential Outcomes of Informal Group Processes • Team and Team Building- Modern organisation- Outcomes of Modern Organisation- Team work – Task team- Difference Between Groups and Teams-Life cycle of Team –Major Factors for Effective Teams- Team Building- Need for Team building- Team Building Process- Skills Useful in Team Building
4	**Stress Management and Change**
	• Stress Management and Counselling- How it Comes About –How it Affects Various Elements of Job Performance- Extreme Product of Stress- Stress and Job Performance-Approaches to Stress Management-Characteristic of Counselling-Types of Counselling • Change and its Effects- Nature of Change – Effect of Change – Response to Change – Resistance to change – Reasons for Resistance to Change-Transformational Leadership and Change-What are Elements of Transformational Leadership- Three stage model of changes Process

1. Elective Courses (EC)

5. Econometrics for Finance

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction	10
2	Overview of the Classical Linear Regression Model	15
3	Univariate Times Series Modelling and Forecasting	20
4	Modelling Volatility and Correlation	15
	Total	**60**

Sr. No.	Modules/Units
1	**Introduction**
	Meaning, Different forms of econometrics, some characteristics of financial data, Types of Data, Return in Financial Modelling, Steps in formulating econometric model.
2	Overview of the Classical Linear Regression Model
	Meaning of regression, Regression v/s correlation, assumptions of the classical linear regression model, properties of OLS estimator, precision and standard errors, generalizing the simple model to multiple linear regression.
3	**Univariate Times Series Modelling and Forecasting**
	Introduction, some notation and concepts, moving average processes, Autoregressive processes, partial autocorrelation functions, examples of time series Modelling in finance, forecasting in econometrics.
4	**Modelling Volatility and Correlation**
	Models for volatility, Historical Volatility, Implied volatility models, Exponentially weighted moving average models, Autoregressive volatility models, Stochastic volatility models, forecasting covariance and correlation in finance with examples, Multivariate GARCH model for the CAPM with time-varying covariances.

1. Elective Courses (EC)

6. Security Analysis and Portfolio Management

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Portfolio Management – An Introduction & Process	15
2	Portfolio Management – Valuation	15
3	Fundamental Analysis and Technical Analysis	15
4	Efficient Market Theory & CAPM	15
	Total	**60**

Sr. No.	Modules/Units
1	**Portfolio Management – An Introduction & Process**
	Investment, Meaning, Characteristics, Objectives, Investment V/s Speculation, Investment V/s Gambling and Types of Investors. **Portfolio Management** – Meaning, Evolution, Phases, Role of Portfolio Managers, Advantages of Portfolio Management. Investment Environment in India and Factors Conducive for Investment in India. **Portfolio Analysis** – Meaning and its Components, Calculation of Expected Return and Risk, Calculation of Covariance, Risk – Return Trade off. **Portfolio Selection** – Meaning, Feasible Set of Portfolios, Efficient Set of Portfolios, Selection of Optimal Portfolio, Markowitz Model, Limitations of Markowitz Model, Measuring Security Return and Portfolio Return and Risk under Single Index Model and Multi Index Model.
2	**Portfolio Management – Valuation**
	Portfolio Revision – Meaning, Need, Constraints and Strategies. Portfolio Evaluation – Meaning, Need, Measuring Returns (Sharpe, Treynor and Jensen Ratios) and Decomposition of Performance. Bond Valuation – Meaning, Measuring Bond Returns, Yield to Maturity, Yield to Call and Bond Pricing. Bond Pricing Theorems, Bond Risks and Bond Duration.
3	**Fundamental Analysis and Technical Analysis**
	Economy Analysis – Meaning, Framework, Economic Analysis, Forecasting, Barometric or Indicator Approach, Econometric Model Building and Opportunistic Model Building. **Industry Analysis** – Concept of Analysis, Industry Life Cycle, Industry Characteristics **Company Analysis** – Financial Statements, Analysis of Financial Statements, (Practical questions on Debt Equity Ratios, Total Debt Ratio, Proprietary ratios, interest coverage ratio, Profitability ratios related to sales, investment and equity shares Efficiency or Activity Ratios) and Assessment of Risk(Leverages) Meaning and Principles of Technical Analysis, Price Chart, Line Chart, Bar Chart, Japanese Candlestick Chart, Trends and Trend Reversals, Chart Patterns, Support and Resistance, Reversal Patterns, Continuation Patterns and Elliot Wave Theory, Dow Theory , Mathematical Indicators – Calculation of Moving Averages (Simple and Exponential Moving Average), Oscillators and Relative Strength Index Market Indicators, Fundamental Analysis V/s Technical Analysis
4	**Efficient Market Theory & CAPM**
	Random Walk Theory, The Efficient Market Hypothesis, Forms of Market Efficiency, Competitive Market Hypothesis CAPM – Fundamental Notions of Portfolio Theory, Assumption of CAPM, Efficient Frontier with Riskless Lending and Borrowing, Capital Market Line, Security Market Line and Pricing of Securities with CAPM. Arbitrage Pricing Theory (APT) – The Return Generating Model, Factors Affecting Stock Return, Expected Return on Stock, APT V/s CAPM.

2. Core Courses (CC)

1. Financial Management-II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Risk and Return	15
2	Capital Structure Decisions	15
3	Cash Management	15
4	Receivable Management	15
	Total	**60**

Sr. No.	Modules/Units
1	**Risk and Return**
	Introduction, Meaning of Return, Types of Return- Holding Period Return, Annualized Return, Expected Return. Meaning of Risk, Types of Risk- Business Risk, Financial Risk, Interest Rate risk, Market Risk and Liquidity Risk (Including Practical Problems)
2	**Capital Structure Decisions**
	Meaning, Choice of Capital Structure. Importance Optimal capital Structure Introduction to leverage, Types of Leverages: Operating Leverage, Financial Leverage & Composite Leverage Relationship between Operating Leverage and Financial Leverage EBIT-EPS Analysis Cost of Capital, Capital structure and Market Price of Share Capital Structure Theories Dividend Policy - Payout Ratio (Including Practical Problems)
3	**Cash Management**
	Introduction Motives for holding cash Aspects of cash management Long terms cash forecasting Reason for cash surplus Cash management: Basic strategies, Cash Management Techniques/Processes, Marketable Securities (Including Practical Problems)
4	**Receivable Management**
	Introduction Aspects of Receivable Management Credit Policy, Credit Evaluation, Credit Granting decision, Control on Accounts Receivable (Including Practical Problems)

Project Work

Inclusion of project work in the course curriculum of the B.Com. (Financial Markets) program me is one of the ambitious aspects in the programme structure. The main objective of inclusion of project work is to inculcate the element of research analyse and scientific temperament challenging the potential of learner as regards to his/ her eager to enquire and ability to interpret particular aspect of the study. It is expected that the guiding teacher should undertake the counselling sessions and make the awareness among the learners about the methodology of formulation, preparation and evaluation pattern of the project work.

- There are two modes of preparation of project work
  1. Project work based on research methodology in the study area
  2. Project work based on internship in the study area

Guidelines for preparation of Project Work

1. General guidelines for preparation of project work based on Research Methodology

- The project topic may be undertaken in any area of Elective Courses.
- Each of the learner has to undertake a Project individually under the supervision of a teacher-guide.
- The learner shall decide the topic and title which should be specific, clear and with definite scope in consultation with the teacher-guide concerned.
- University/college shall allot a guiding teacher for guidance to the students based on her /his specialization.
- The project report shall be prepared as per the broad guidelines given below:
  - Font type: Times New Roman
  - Font size: 12-For content, 14-for Title
  - Line Space : 1.5-for content and 1-for in table work
  - Paper Size: A4
  - Margin : in Left-1.5, Up-Down-Right-1
  - The Project Report shall be bounded.
  - The project report should be 80 to 100 pages

Structure to be followed to maintain the uniformity in formulation and presentation of Project Work

(Model Structure of the Project Work)

- **Chapter No. 1: Introduction**

In this chapter Selection and relevance of the problem, historical background of the problem, brief profile of the study area, definition/s of related aspects, characteristics, different concepts pertaining to the problem etc can be incorporated by the learner.

- **Chapter No. 2: Research Methodology**

This chapter will include Objectives, Hypothesis, Scope of the study, limitations of the study, significance of the study, Selection of the problem, Sample size, Data collection, Tabulation of data, Techniques and tools to be used, etc can be incorporated by the learner.

- **Chapter No. 3: Literature Review**

This chapter will provide information about studies done on the respective issue. This would specify how the study undertaken is relevant and contribute for value addition in information/ knowledge/ application of study area which ultimately helps the learner to undertake further study on same issue.

- **Chapter No. 4: Data Analysis, Interpretation and Presentation**

This chapter is the core part of the study. The analysis pertaining to collected data will be done by the learner. The application of selected tools or techniques will be used to arrive at findings. In this, table of information's, presentation of graphs etc. can be provided with interpretation by the learner.

- **Chapter No. 5: Conclusions and Suggestions**

In this chapter of project work, findings of work will be covered and suggestion will be enlisted to validate the objectives and hypotheses.

Note: If required more chapters of data analysis can be added.

Acknowledgment

(Model structure of the acknowledgement)

To list who all have helped me is difficult because they are so numerous and the depth is so enormous.

I would like to acknowledge the following as being idealistic channels and fresh dimensions in the completion of this project.

I take this opportunity to thank the **University of Mumbai** for giving me chance to do this project.

I would like to thank my **Principal, _____ _____** for providing the necessary facilities required for completion of this project.

I take this opportunity to thank our **Coordinator_____ _____**, for her moral support and guidance.

I would also like to express my sincere gratitude towards my project guide _____ whose guidance and care made the project successful.

I would like to thank my **College Library**, for having provided various reference books and magazines related to my project.

Lastly, I would like to thank each and every person who directly or indirectly helped me in the completion of the project especially **my Parents and Peers** who supported me throughout my project.

2. Guidelines for Internship based project work

- Minimum 20 days/ 100 hours of Internship with an Organisation/ NGO/ Charitable
- Organisation/ Private firm.
- The theme of the internship should be based on any study area of the elective courses
- Experience Certificate is Mandatory
- A project report has to be brief in content and must include the following aspects:
    - **Executive Summary:**
      A bird's eye view of your entire presentation has to be precisely offered under this category.
    - **Introduction on the Company:**
      A Concise representation of company/ organization defining its scope, products/ services and its SWOT analysis.
    - **Statement and Objectives:**
      The mission and vision of the organization need to be stated enshrining its broad strategies.
    - **Your Role in the Organisation during the internship:**
      The key aspects handled, the department under which you were deployed and brief summary report duly acknowledged by the reporting head.
    - **Challenges:**
      The challenges confronted while churning out theoretical knowledge into practical world.
    - **Conclusion:**
      A brief overview of your experience and suggestions to bridge the gap between theory and practice.

    - The project report based on internship shall be prepared as per the broad guidelines given below:
        - Font type: Times New Roman
        - Font size: 12-For content, 14-for Title
        - Line Space : 1.5-for content and 1-for in table work
        - Paper Size: A4
        - Margin : in Left-1.5, Up-Down-Right-1
        - The Project Report shall be bounded.
        - The project report should be of minimum 50 pages

Evaluation pattern of the project work

The Project Report shall be evaluated in two stages viz.	
➢ **Evaluation of Project Report (Bound Copy)**	**60 Marks**
• Introduction and other areas covered	20 arks
• Research Methodology, Presentation, Analysis and interpretation of data	30 Marks
• Conclusion & Recommendations	10 Marks
➢ **Conduct of Viva-voce**	**40 Marks**
• In the course of Viva-voce, the questions may be asked such as importance / relevance of the study, objective of the study, methodology of the study/ mode of Enquiry (question responses)	10 Marks
• Ability to explain the analysis, findings, concluding observations, recommendation, limitations of the Study	20 Marks
• Overall Impression (including Communication Skill)	10 Marks

Note:
The guiding teacher along with the external evaluator appointed by the University/ College for the evaluation of project shall conduct the viva-voce examination as per the evaluation pattern.

Passing Standard

- Minimum of Grade E in the project component
- In case of failing in the project work, the same project can be revised for ATKT
- examination.
- Absence of student for viva voce: If any student fails to appear for the viva voce on the date and time fixed by the department such student shall appear for the viva voce on the date and time fixed by the Department, such student shall appear for the viva voce only along with students of the next batch.

Scheme of Evaluation

The performance of the learners will be evaluated in two Components. One component will be the Internal Assessment component carrying 25% marks and the second component will be the Semester-wise End Examination component carrying 75% marks. The allocation of marks for the Internal Assessment and Semester End Examinations will be as shown below:

A) Internal Assessment: 25 %

Question Paper Pattern

(Internal Assessment- Courses without Practical Courses)

Sr. No.	Particular	Marks
1	**One class test (20 Marks)**	
	Match the Column/ Fill in the Blanks/ Multiple Choice Questions ***(½ Mark each)***	05 Marks
	Answer in One or Two Lines (Concept based Questions) ***(01 Mark each)***	05 Marks
	Answer in Brief (Attempt Any Two of the Three) ***(05 Marks each)***	10 Marks
2	Active participation in routine class instructional deliveries and overall conduct as a responsible learner, mannerism and articulation and exhibit of leadership qualities in organizing related academic activities	05 Marks

B) Semester End Examination: 75 %

i. Duration: The examination shall be of 2 ½ Hours duration

ii. Theory question paper pattern

- There shall be five questions each of 15 marks.
- All questions shall be compulsory with internal choice within the questions.
- Question may be subdivided into sub-questions a, b, c… and the allocation of marks depends on the weightage of the topic.

(Detail question paper pattern has been given separately)

--Passing Standard

The learners to pass a course shall have to obtain a minimum of 40% marks in aggregate for each course where the course consists of Internal Assessment and Semester End Examination. The learners shall obtain minimum of 40% marks (i.e. 10 out of 25) in the Internal Assessment and 40% marks in Semester End Examination (i.e. 30 Out of 75) separately, to pass the course and minimum of Grade E to pass a particular semester A learner will be said to have passed the course if the learner passes the Internal Assessment and Semester End Examination together.

Question Paper Pattern

(Practical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 1/2 Hrs.

All Questions are Compulsory Carrying 15 Marks each

Question No	Particular	Marks
Q-1	Objective Questions A. Sub Questions to be asked 10 and to be answered any 08 B. Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks
Q-2 Q-2	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-3 Q-3	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-4 Q-4	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-5 Q-5	A) Theory questions B) Theory questions ***OR*** Short Notes To be asked 05 To be answered 03	08 Marks 07 Marks 15 Marks

Note:
Practical question of 15 marks may be divided into two sub questions of 7/8 and 10/5Marks. If the topic demands, instead of practical questions, appropriate theory question may be asked.

Question Paper Pattern

(Theoretical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 1/2 Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Objective Questions A) Sub Questions to be asked 10 and to be answered any 08 B) Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks

Organisational Behaviour Sem I

Chapter – 1

- Fundamentals of Organizational Behavior
- Individual differences in people
- Role of Hereditary in Environment
- Pre-natal & Post-natal Environment

Chapter – 2

- Learning – Theories & Mechanism
- Intelligence
  - Types
  - Individual verses Group Test of Intelligence, Sixth thinking hats
  - Normal distribution curve of Intelligence
  - Theories & models of Motivation
  - Motivation Cycles
  - Leadership Styles
  - Theories of Leadership
- Performance Appraisal
- Empowerment

Chapter – 3

- Dimensions & Interaction in Society
- Different types of Groups
- Team Building
- Conflict resolution strategies
- Group decision making verses Individual decision making

Chapter – 4

- Organizational Culture
- Characteristics & Techniques of Organizational Development

- Resistance to Change
- Overcoming resistance
- Stress & Counseling
- Time Management

Managerial Economics Sem I

Unit No. I

Introduction

Meaning and Scope of managerial economics relationship to economic theory relationship with decision theory role of managerial economics objectives and constraints of the firm introduction to risk, asymmetric information and game theory.

Unit No. II

Demand Analysis

Meaning of demandMarket demand function Demand curve, factors affecting demand Variation and increase/decrease in demand Elasticity of demandGraphical representation of price elasticity of demand Price income and cross elasticity of demand.
Estimation of demandNumerical problems for measurement of elasticity.

Unit No. III

Production and Costs

Meaning of production Types of production functionImportance of production function in managerial decisionmaking Application of production function in productive sectors (service and manufacturing) Economics of scale and scope.
Importance of cost in managerial decisionmaking Economic concepts of cost Functional form of short run and long run cost Estimation and alternative methods of estimation of cost LAC as a decision making tool Impact of learning curve.

Unit No. IV

Market Structures

Meaning of market structure, need for analyzing market structure, types of market

A. Perfect competition and Monopoly

Features Representative firm, and industryEquilibrium in short and long runPrice and output determination using diagramsNormal profits, losses and supernormal profits in short runLong run and normal profitMerits and limitations of perfect markets.

B. Oligopoly and Monopolistic Competition

Oligopolydefinition and characteristicsCollusion and cartelNonprice competition Price stickiness and kinked demand
Monopolistic competition definition and characteristicsEquilibriumPrice & determination.

Financial Accounting Sem I

Unit No. I

A. Meaning and Scope of Accounting : Need, development and definition; Book keeping and accounting; Persons interested in accounting; Disclosures; Branches of accounting; Objectives of accounting.

B. Accounting Transactions : Accounting cycle, journal, journal proper, Opening and closing entries, Relationship between journal & ledger; Rules regarding posting; Trial balance; Subsidiary books; Bank reconciliation statement.

C. Accounting Standards

AS 1 : Disclosures of accounting policies : Meaning of accounting policies ▪ Purpose ▪ Different policies ▪ Areas of policies ▪ Disclosure of policies ▪ Disclosure of change in policies ▪ Simple illustrations.

AS 6 : Depreciation accounting : Meaning ▪ Definitions ▪ Importance ▪ Factors ▪ Useful life of a depreciable asset ▪ Estimating useful life ▪ Additions ▪ Residual value ▪ Methods ▪ Disclosure of surplus ▪ change in method ▪ Simple illustrations.

AS 9 : Revenue recognition : Meaning and scope ▪ Transactions excluded ▪ Sale of goods ▪ Rendering of services ▪ Effect of uncertainties ▪ Disclosure ▪ Simple illustrations.

AS10: Accounting for fixed assets : Meaning ▪ Definitions ▪ Importance ▪ Cost of fixed assets ▪ Self constructed fixed assets ▪ Non-monetary consideration ▪ Improvements, repairs, additions and extensions ▪ Revaluation ▪ Sale or retirement ▪ Valuation of fixed assets in special cases ▪ Special types of fixed assets ▪ Disclosure.

Unit No. II

A.

1) Expenditure : Classification of Expenditure Capital, Revenue and Deferred Revenue Expenditure : Distinction between capital expenditure and revenue expenses : Unusual expenses : Effect of error; Critical tests
2) Receipts : Capital receipt, Revenue receipt, Distinction between capital receipts and revenue receipts.
3) Profit or Loss : Revenue profit or loss, Capital profit or loss

B. Depreciation Accounting :

Practical problem based on accounting treatment by provision for depreciation using SLM and RBM methods.

Unit No. III

Trial Balance and Final Accounts of a Sole Proprietor

Introduction to trial balance and final accounts of a sole proprietor.
Rectification of errors.
Preparation and Presentation of Final Accounts in Horizontal Form :
Manufacturing Account : Trading Account : Profit and Loss Account :
Balance Sheet

Unit No. IV

Accounting in Computerised Environment

An overview of computerised environment.
Features of computerised accounting system.
Concept of grouping of accounts
Codification of accounts.
Maintaining the hierarchy and ledgers.
Accounting packages and consideration of them in selection

Reference Books

Business Communication Sem I

Unit No. I

Fundamentals of Communication

Definition, Meaning Types, process and importance

Unit No. II

Effective Communication

Concept and Practice of Effective Communication
Barriers to Effective Communication
Methods to Improve Communication Skills

Unit No. III

Written Communication Skills

Report Writing

Letter Writing

Preparation of Promotional Material
with special reference to banks, Insurance companies and Joint stock companies

Unit No. IV (No. of Lectures 15)

Oral Communication Skills

Understanding Audience
Use of Language
Use of Tone
Understanding Body Language

Reference Books

SEMESTER II

Ecology and Environment Sem – II

MODULE – I

Ecology – Meaning - Environmental Science – History of Ecology – Ecology Today – Scope of Ecology – The Subdivisions of Ecology – Models in Ecology – Fundamental Concepts – Environmentalism – Conservation Ethics – Air pollution- Water pollution -Noise pollution , Radioactive pollution - Solid waste pollution - Land pollution

MODULE – II

Origin of Atmosphere – Vertical Structure of the Atmosphere – Ecological Significance of Air – Horizontal Motion of Atmosphere – vertical Movements – Upper Air Circulation (Jet Streams) – Air Masses – Important Properties of the Atmosphere – Acid Rain

MODULE – III

Zonal Structure of the Earth – The Geologic Cycle – Minerals and Rocks – Soil – Pedogenesis – Soil Types – Soil Classification – Types of Rocks and Minerals – Soil profile – Soil Erosion in India – Soil Conservation – Biota of the Soil – Soil Adaptations in Animals

MODULE – IV

Hydrologic – Water Budget – Fresh Water Environment – Lakes – Eutrophication of Lakes – Reservoirs – Running Water – The Open Ocean – Physico-chemical Aspects of Marine Environment – Wetlands and Coastal Environment – Antarctic Research Programme – Coral Reef – Exclusive Economic Zone (EEZ) – Estuaries – Biosphere -Introduction – concept of Biome – Evolution and Diversity in Biomes – Major Biomes of Earth – Landforms

MODULE – V

Ecosystem Biodiversity – Species Diversity – Genetic Diversity – Global Diversity – The Value of Biodiversity – Biodiversity and Ecosystem function – Biodiversity – Hot Spots – Bio-wealth – Biotic Impoverishment – Biodiversity conservation – Biotechnology and Biodiversity – Milestones of Convention of Biodiversity (CBD) – Main Players in CBD.

MODULE – VI

Resource Cycle – Mineral Resources – Marine Resources – Mineral Resources of Antarctica – Energy Resources – Renewable Sources of Energy – Energy from Biomass – Nonrenewable Sources of Energy – Nuclear Energy – Geothermal Energy – Ocean Thermal Energy – Energy for the Future – Forest Resources – Deforestation – Water A Vital Resources – India’s Water Budget

TEXT BOOK: S.V.S.Rana – Essentials of Ecology and Environmental Science – Prentice – Hall of India – Third Edition – 2007.

Human Resource Management Sem II

Introduction to HRM

Definition, Features, Scope/Functions of HRM, Definition of Personnel Management.

Evolution of HRM/ Trends in HRM,

Difference between HRM and PM ,

Challenges before the HR manager,

Role of HR Manager,

Traits/Characteristics of the workforce,

Personnel Philosophy,

Personnel Manual.

Human Resource Planning

Definition of HRP

Process of HRP along with brief coverage of personnel demand and supply forecasting techniques

Factors affecting HRP

Human Resource Information System (HRIS),

VRS, Outsourcing, Pink slip/ termination/ retrenchment/ downsizing/ separation

Contracting and Sub- contracting

Promotions and Transfers

Job Analysis, Job Design and Job Evaluation

Job Analysis – Definition, methods of collecting job data, merits and demerits/limitations

Job Design – Definition, Factors affecting Job Design, Approaches to Job Design

Job Evaluation – Definition, methods of job evaluation, process of Job Evaluation.

Recruitment, Selection and Induction

Recruitment – Definition, sources of recruitment , merits and demerits

Selection – Definition, process of selection, types of selection tests, types of interviews

Induction/Orientation – definition, methods, process

Placement

Training and Development

Definition of Training and Development,

Methods of training managers,

Process/ procedure of conducting training programme,

How to evaluate effectiveness of training programmes,

Advantages of T&D

Performance Appraisal

Definition of Performance Appraisal,

Methods of Appraisal for managers – traditional and modern

Process / procedure of conducting performance appraisal

Advantages of performance appraisal

Limitations of Appraisal

Compensation Management

Definition of compensation,

Components of Salary / Salary slip,

Fringe Benefits – definition and types,

Performance linked incentives/ incentives- definition, advantages and disadvantages.

Career Planning And Development

Definition of Career Planning and Career Development,

Process/ Procedure of Career Planning,

Career Stages/ Career Life Cycle and how to handle personnel at each stage,

Essentials to make career planning successful,

Career Counselling,

Employee Retention techniques,

Succession planning

Participative Management

Definition of Participative Management,

Levels of participation

Trends in Participative Management

Factors essential for successful participative management

Forms of participation

Participation through Quality Circles

Empowered Teams

Industrial Relations

Definition of Industrial Relations,

Features of Industrial Relations,

Importance of Industrial Relations,

Approaches to Industrial Relations,

Parties to Industrial Relations

Trade Unions

Definition of Trade Union,

Features of Trade unions,

Trade union movement in India/ Trends in the Trade Union

Recommended Books:

Introduction to Cost Accounting Sem II

Unit No. I

Introduction & Importance of Cost Accounting :

Cost, costing, cost accounting; Cost ascertainment : Cost control; Cost classification; Reporting : Distinction between cost and financial accountancy; Advantages of cost accounting; Objectives of cost accounting.

Unit No. II

A. Elements of cost :

Material-labour; overheads.

B. Bases of cost classification :
On the basis of :
Behavior / Variability
Element of cost including direct and indirect concept.
Functions.

C. Determination of Total cost :
Cost structure
Cost sheets
Composition of selling price

Unit No. III

Reconciliation between cost and financial records :

Meaning and definition Need for reconciliation Causes of disagreement Procedure and preparation of statement of reconciliation.

Unit No. IV

Elementary Principles and Techniques of Marginal costing
(Excluding Problems on Managerial Decisions)
A. Elementary principles of marginal costing :

Meaning features of marginal costing Advantages of marginal costing

Limitations of marginal costing concept of profit.

B. Techniques of Marginal Costing :

Contribution Profit / volume ratio Break even point Margin of safety Cost volume profit analysis.

Reference Books :

No.	Title	Author	Publisher

Economic Environment of Business Sem II

Introduction to Macro Economics.

Macro economic aggregates and concepts

Circular flow of income.
National income and related concepts, calculation of National income, National income and social welfare, concept of Human Development Index. Supply of money, demand for money, price level. Inflation and Stagflation.

Determination of Income and Employment

Overview of classical and Keynesian analysis. Business cycles – features, causes and remedial Measures. Equilibrium in the Goods and Money markets (IS-LM)

Policy Environment

Role of state in different economic systems.
Theory of economic policy
Monetary policy – objectives and instruments.
Fiscal policy – objectives and instruments, , impact on business, concept of inclusive growth.
Economic stabilization – Fiscal v/s Monetary policy and Structural policy.
Trade policy – Protection v/s Free trade

International Trade

Overview of International trade.
Distinction between domestic and international trade.
Basis of trade – comparative cost difference, factor endowment and factor intensity.
Balance of payments – accounting structure, disequilibrium (types, causes and remedial measures), trends in India's Balance of payments.
Mechanism for international payments.
Flexible v/s Managed exchange rate systems.

Globalization

Globalization – meaning and effects (gains and problems), role of IMF and World Bank, concept of global recession with contagion effects.
World Trade Organization – agreement s and implications for India, contentious issues, disputes settlement mechanism.
Foreign Capital – need for foreign capital, role of MNCs,

FDI v/s Portfolio investment, causes of rising FDI in India.

Production Management & Materials Management Sem II

UNIT – I

- Introduction to the concept of operations and Operation Management
- Development of Production Function. Relation of Production with other Functions like design function, purchase function, plant layout, maintenance etc.
- Production classification, product selection (steps in identifying the product for manufacturing), Product development (market pull, technology push, inter functional approach).
- Brief description/importance of research development and design of a product

UNIT – II

- Facilities planning (how much to produce, level of automation, facilities required for manufacturing , where to produce, arranging required facilities, how to produce etc.) production systems
- Plant layout: difference between various types of layout (Product layout, process layout, Cellular layout, static layout etc)
- Various types of material Handling systems: their guidelines/principles, distinguishing features, uses
- Overview of various types of maintenance systems
- Meaning/functions/ nature of production, planning and control

UNIT – III

- Importance of materials management (corporate policy, organisation, research, planning, source selection)
- Value Analysis and Value Engineering
- Purchase Management, importance of purchasing, various R's of Purchasing, purchasing systems
- Need for forecasting price/policy on seasonal commodities and capital equipments. Simple problems on various types of forecasting including exponential smoothing
- Inventory management, its prime importance in our country today.
- Inventory control techniques- ABC, FSN, GOLF, VED, SOS, HML
- Make or Buy Decisions: Problems on inventory Management

UNIT – IV

- Warehousing and stored management- centralised and de-centralised stores. Brief introduction to various methods of stores accounting.
- Need for stock verification
- Management of scrap, waste, surplus, obsolete materials.
- JIT, KANBAN, KAIZEN, Push vs. Pull concept, MRP
- Explanation of EOQ – its advantages and disadvantages. Types of inventory systems (P-Systems and – Systems). Need for safety stock/reserve stock. Simple problems on these topics.
- SQC – techniques, Control Charts, X- Bar chart, R- chart, P- chart, C- chart. Graphical representation. Direct problems on these topics

Business Statistics Sem II

Unit No. I

Descriptive Statistics for Univariate Data :

Introduction to Statistics : Types of data. Data collection methods Census and Sample Survey :
Presentation of data : Tabular (Frequency distribution) and Graphical (Frequency Curve Ogives. Histogram).
Measures of Central Tendency : Arithmetic mean, median, mode, geometric mean – their properties and applications.

Measures of Dispersion : Absolute measures Range, Quartile deviation, Standard deviation, Variance and Relative measures coefficient of quartile range, coefficient of deviation, coefficient of variation.

Unit No. II

Forecasting Techniques

Correlation and Regression : Karl Pearson's coefficient of correlation (Properties and calculation); Spearman's Rank Correlation coefficient, Regression equation Statement and use.
Time Series : Components. Additive and multiplicative models,
Estimation of linear trend by (i) least squares method
(ii) moving average method
Determination of seasonal trend using simple average method.

Index Numbers : Meaning and uses, Simple and composite index number.
Aggregative and average of price relatives simple and weighted index number.
Construction of index number fixed and chain base.
Laspayre's Paasche's Kelly's and Fisher's index numbers.
Construction of (i) consumer price index
(ii) Cost of living index numbers
Deflating, Splicing, Shifting of Base Year, Conversion from fixed base to chain base index numbers and vice-a-versa.

Unit No. III

Probability and Probability Distribution :

Probability : Sample space as a concept, different types of events.
Definition of probability.
Addition and Multiplication Laws of probability (Statements and use only) conditional probability, Bayes' Theorem (concept only).
Random Variable, Expectation and Variance. Probability distributions – Binomial and Normal.

Unit No. IV

Testing of Hypotheses

Sampling distribution : Sample mean and sample proportion.
Determination of sample size. Central Limit Theorem (Statement only).

Hypothesis : Simple and composite, null and alternative. Two types of errors, level of significance (concepts only Large sample test. Tests based on Normal distribution (Tests for mean and difference in two means, proportion and difference in two proportions). Internal estimation, t-test (concept only).

SEMESTER III

Environmental Economics – I Sem III

- Introductory micro-economic theory such as: supply and demand; price formulation; political means of control; environmental economic theories;

- Valuation methods; political means of control (administrative and incentive based) and their applicability on environmental problems;

- Natural resourse economics; renewable and non-renewable resources resource management regimes;

- Ecological economics; the ecological system; technological pessimism vs technological optimism;

- International trade and the environment; Economic growth and the environment; and

- Case Studies

xxxxxxxxxx

Marketing Management Sem III

Introduction to Marketing-

(a) The 4 Ps and 3Cs of Marketing
(b) Marketing as an activity, function, and philosophy
(c) Needs, wants and demands; transactions, transfers & exchanges
(d)Orientation of a firm: Production concept; product concept; selling concept; and marketing concept.
New Trends in Marketing: E-Marketing, Internet Marketing, and Marketing using social networks
Societal Marketing/Relationship Marketing

Marketing Research; MIS; & Consumer Behaviour
The micro environment of business (management structure; marketing channels: markets in which a firm operates; competitors and stakeholders.
Macro Environment: political factors; economic factors; socio-cultural factors; technological factors (pest analysis)

Marketing Research:

Importance of Marketing Research
Types of Marketing Research:
Product research; sales research; consumer/customer research; promotion research.

Consumer Behaviour:

Basic stimulus response model
Influence on consumers decision-making process
High involvement and low involvement products
Influences on buying behaviour: cultural factors, social factors, personal factors and psychological factors (Maslow's Hierarchy)
Methods of sales forecasting

Industrial Buying Behaviour; Product & Brand Management; STP
Industrial buying behaviour
Decision making process
DMUs and its composition Factors influencing purchasing: economic environment; organizational factors; inter-personal characteristics; and individual buyer characteristics
Key differences between Consumer and Organizational Buying

Product and Brand Management

(a) Products: core, tangible and augmented products
Product mixed decisions: product line decisions; strategic filling, line modernization decisions
New product development process: idea generation, screening, concept development and testing, marketing strategy, product development, market testing, test marketing, and commercialization.
product life cycle: Introduction growth, marketing decline,

(b) **Brand Management**

Brand equity; branding decisions; brand extensions; brand portfolios
Segmentation, Targeting and Positioning (STP):

Segmentation variables for consumer markets:

Geographic, demographic, psychographic, behavioural
Segmentation variable for industrial markets: customer location, type of industry, size of the firm, purchase criteria, etc.

Targeting: undifferentiated marketing; single segment and multi segment structures; guidelines for selecting target markets

Positioning:
Identifying frame of reference; points of parity and points of difference; choosing category membership; product and brand differentiation for identifying of position

Pricing Decisions, Channel Decisions; Promotion Mix; Strategies; Integrated Marketing; Communications; Marketing Services; & Ethics in Marketing

Pricing Decisions

Pricing objectives; factors influencing pricing decisions
Ttypes of pricing: Mark up/cost plus pricing; perceived value pricing; value pricing; geographic pricing; etc.
Responding to competitors
Action through price and non price variables.
Impact of the products: stage in the PLC on pricing decisions.

Channel Decisions:

Types of channels: Intensity of distribution, channel conflict and channel management.
Retailing importance, and types of retail formats, Indian Retail Scenario
Promotion mix
Advertising: Importance and scope
Sales promotion: objectives; consumer promotions
PR and publicity
Personal Selling: recruitment, selection, training, motivation and evaluation of sales reps.

Integrated Marketing Communication:

Definition of target audience; determining communication objectives; designing communication and selection of channels

Marketing Services:

Characteristics of services; ways of improving services, delivery, managing service maturity.

Ethics in Marketing

Advertising Standards Council of India code of ethics in advertising; promotion to children; unfair practices in marketing

Research Methods in Business Sem III

Fundamentals of Research: - Meaning, Objectives and Significance.
Types of Research: - Basic research, Applied, Descriptive, historical, Exploratory, Experimental, Ex-post-factor and Case study approach.

Approaches to Research: -
a. Quantitative approach: -
i Inferential
ii Experimental
iii Simulation
b. Qualitative approach: -
i Ethnographic
ii Phenomenological
iii Field Research
Importance of research in management decisions: -
Various areas of research in business:
a) Marketing Research
b) Government policies and economic systems
c) Social relationship
d) Planning and operational problems of research in business

2 **Research process: -**
Selecting the topic, defining the research problem, objectives of research, literature survey, sample design, data collection, execution of project, analysis of data and hypothesis testing, generalization and interpretation and preparation of research report.
Features of good research
Research design – Meaning, need, features of good research design, types of research design –
a) For exploratory research b) For descriptive research
b) For causal research studies

3 **Hypothesis: -**

Meaning, importance and types. Formulation of hypothesis and testing of hypothesis.
Chi-square test, Correlation Co-efficient, Regression analysis.

Sampling: -
Meaning , Sample and sampling, essentials of good sample. Sample size, methods of sampling: -
a) Probability sampling – cluster sampling, stratified sampling, multi stage sampling.
b) Non-probability sampling: - Purposive sampling, Quota sampling, Convenience sampling.

4 **Sources and Methods of data collection: -**
Primary and Secondary data.
a) Primary sources: -
i. Observation
ii. Interview
iii. Questionnaire
iv. Interview schedules
b) Secondary sources
Data processing – Tabulation - Data analysis and Interpretation
Report writing – layout of research report

Global warming and climate change Sem III

UNIT-I

Role of ozone in environment-ozone layer-ozone depleting gases-Green House Effect

UNIT-II

Temperature profile of the atmosphere- Laps rates-Temperature inversion- effects of inversion on pollution dispersion.

UNIT-III

Causes o f Climate change : Change of Temperature in the environment-melting of ice Pole-sea level rise-role of fossil fuels

UNIT-IV

Mitigation Measures- Cleaner production-alternative fuel measures

UNIT – V

Kyoto Protocol-Intergovernmental Panel on Climate change (IPCC)-

Natural Resources and Management Sem III

UNIT-I

Introduction to Natural Resources – Classification of natural resources – List of natural resources – Values of natural resources - Demands on Natural Resources - Population, lifestyle and natural resources - Impact of poor natural resource management.

UNIT-II

Land resources – Land: Definition - Land use pattern in India. Waste Land: Types. Desertification: Definition - Causes and impacts.

UNIT-III

Water resources – Hydrological cycle – Surface water - Ground water:. Dams: Uses and impacts on environment. Marine resources: Biotic and abiotic resources.

UNIT-IV

Living Resources-Agriculture-types of cultivation-high yielding varieties –HYV chemicals fertilizers& their impacts-Microbes-useful& harmful bacteria in soil , water ,Air – fungi beneficial & harmful.

UNIT-V

Forest and Mineral Resources forest produce – food- fodder – fuel wood. Fiber – Timber – Minerals –Metal & non metal resources, non – conventional energy resources

Financial Management Sem III

Introduction:

Meaning and Scope of Financial Management

Functions and Objectives of Financial Management

Changing Role of Finance Managers

Working Capital Management

Definition - GWC & NWC (Explain Core Assets & Non Core Assets)

Components of Working Capital

Factors Determining Working capital

Receivables Management

Meaning and Importance

Credit Policy Variables

Case Study on Credit Evaluation

Methods of Credit Evaluation

- Traditional and Numerical Credit Scoring

Monitoring the Debtors – Techniques

- DSO, Ageing Schedule, Collection Matrix

Cash Management

Motives Of Holding Cash

Strategies Of Cash Management

Cash Budget: Meaning and objectives

Budgeting of receipts and payments- Trading, non trading and capital

Preparation of monthly budget and finding out closing cash Balance (Excl. Financial Statements to be made From the Working Capital Estimation)

Cost Of Capital & Capital Structures:

Types of capital

Debt

Equity

Retained Earnings

Preference

Cost of Capital for each type of capital

Weighted Cost of Capital

Marginal Cost of Capital (w.r.t. Expansion).

Designing Capital Structure Alternatives

Types of Leverages (Combined , Operating , Financial)

Capital Budgeting:

Introduction, types of capital, sources of capital

Evaluation of capital expenditure proposal from given cash flow, concept of present value

Techniques of appraisal of investment proposal

Payback period method, Average rate of return method

Net present value method

Profitability index method

Business Restructuring

Importance

Financial Implication

Valuation

Types of Business Restructuring

Merger

Amalgamation

De-Merger

Other Restructurings

(Elementary accounting problems – testing fundamental knowledge only)

Long Term & Short Term Sources Of Finance

Traditional & Modern instruments of Finance Including Securitizations.

SEMESTER IV

Environmental Safety, health and Management (B.Sc. Environment Management Sem IV

UNIT-I

Definition- need for good health- factors affecting health. Types of diseases {deficiency, infection, pollution diseases}. Personal hygiene- food (balanced diet). Food habits & cleanliness, food adulterants, avoiding smoking, drugs & alcohols.

UNIT-II

Public health: communicable diseases, mode of transmission (epidemic and endemic diseases). Management of hygiene in public places (railway stations, bus stands and other public places).

UNIT-III

Occupational health and safety. Occupational health and hazards-physical-chemical and biological. Occupational diseases- prevention and control.

UNIT-IV

Industrial safety and management techniques: Industrial safety standards and regulations. Accidents-definitions-prevention and control.

UNIT-V

Safety management system- concepts of safety management systems- EMS ISO 14000 and 14001. OSHA. PUBLIC LIABILITY INSURANCE ACT- MINING ACT.

REFERENCES

5. Khan M.A.O., John.P, Bederka.S. , 1974. Survival in toxic environment, Academic Press, New York .

Environmental Pollution and Management (B.Sc. Environment Management) Sem IV

UNIT-I

Water pollution – sources & types of water pollution – physical, chemical & biological – effect of water pollution. Drinking water quality standards waste water treatment – primary, secondary, tertiary-water pollution prevention & control act – 1974.

UNIT-II

Air pollution –structure and composition of atmosphere – classification, sources & effects of air pollution – Acid rain –green house effect – global warming – Ozone depletion.

UNIT-III

Prevention and control of air pollution particulate control – settling chamber, scrubber, bag filter, cyclones electrostatic precipitators. Gaseous emission control methods. Air pollution prevention and control Act 1981.

UNIT-IV

Soil Pollution – soil pollutants – types – sources, effects & Control. Noise Pollution – sources effects & Control.

UNIT-V

Government Agencies & Programs – The Tiwari committee – creation of NCEPC, Department of Environment & Forest – Function of State Pollution Control Board.

Environmental Economics – II Sem IV

Social Choice: Individual Preferences Regarding Environmental Protection; Biocentrism; Anthropocentrism; Sustainability; Pareto Criterion; Potential Pareto Improvement; Social Welfare Functions; Arrows Impoossibility Theorem; Criticism of Utilitariasm

- Efficiency and Markets: Efficiency in the Exchange of Goods and Bads; Efficiency in Production; First Welfare Theorem; Second Welfare Theorem; Consumer and Producer Surplus; Cost Benefit Analysis

- Market Failure: Public Bads and Externalities - Public Goods and Bads; Pricing of Private versus Public Goods and Bads; Lindahl Prices and free riding; Externalities

- Methods to derive the Demand for Environmental Goods: Hedonic Price Method; Property Values; Wage Regressions and Value of Statistical Life; Household Production; Defensive Expenditures; Travel Cost Method; Stated Preferences via Contingent Valuation;
- Use versus Non-use values; Willingness to Pay versus Willingness to Accept

- Regulating Pollution: Command and Control vs.Environmental Taxes vs.Cap and Trade vs.Liability

- Pigouvian Fees: Single Polluter single damage; Single Polluter multiple damages; Multiple Polluter and the Equimarginal Principle; Fees Versus Subsidies; Fees and Imperfect Competition

- Regulation with Unknown Control Costs: Prices versus Quantities (Environmental Taxes versus Cap and Trade); Coase Theorem and Allocation of Property Rights.

Customer relationship management Sem IV

MODULE I

Changing Nature of Marketing and Customer Service – Marketing – An Introduction –The Marketing Orientation – Factors Necessitating a Re-look at Marketing Methods – Changing Social Trends – Lesser Government Controls Rising Income Levels – Threats from New Forms – Character tics of the Empowered Customer – Increased Demand –Easy Access to Information – Emerging Trends in Marketing –Shorter Product Life Cycles.

MODULE II

Emergence of Permission Marketing – Experimental Marketing – Offering Complete Solution – Rewarding Loyal Customers- Disruptive Innovations – The Changing Nature of Customer Service – Challenges In Modern Day Customer Service -Emerging Trends in Services Marketing Mix –Customer Experience –The New Differentiator – Managing Service Better – Emergence of CRM –Economics of Building Customer Relationship – Customer Lifetime Value – Benefits of Customer Loyalty – Benefits of Choosing The Right Customers – Customer Value and Customer Satisfaction:Precursors to CRM – Customer Value.

MODULE III

Enhancing Value of Products and Services – Customer Satisfaction – CRM and Customer Satisfaction – Delighting the Customer – Measuring Relationship at Risk Effects on Customer Loyalty – Role of CRM on Various Stages of the Studies – The Customer Lifecycle – Role of CRM in Pre-purchase Stage – Role of CRM in Purchase Stage – Role of CRM in Usage Stage - Role of CRM In Re-purchase Stage – Role of CRM in Winning Back Lost Customers – CRM – The Basis Concepts – Consideration to Decide the Key Customers – Strategies for Key Customers

MODULE IV

Segmentations Campaign Management – Cross-selling and Up-selling – Multi – Channels – Sales Force Automation – Operational and Analytical CRM – Planning for CRM – Building Customer Centricity – Setting CRM Objectives – Defining Data Requirements – Planning The Requirements Elements in the CRM Plan – Revalant Issues in the CRM Plan - CRM Strategy – Strategic Orientation for CRM - Extending the Concept of Relationship

MODULE V

The Technology Orientation - A Strategic F5rame work for CRM - Planning for Success – Change Management – Selling Change –Training – Role of IT and Tools for CRM – CRM Strategy and Technology – Capturing Data – Steps in Preparing the IT Systems for CRM – Choosing The CRM Tool – Using IT Systems for Better CRM – Isuses for Consideration In CRM Tools Selection – Tools for CRM – e CRM – Basic Concepts of e CRM – Benefits of e CRM.

MODULE VI

Steps in e CRM – Success Factors in e CRM – Establishing Customer Relationship on the Internet – Complete Information for Customers – CRM Implementations – Preparing for CRM Implementation – Dimensions of CRM Implementations – Technology Issues in CRM Implementation – Steps in CRM Implementations – Expected Benefits of CRM Implementations – CRM Implementations –Best Practices - Guarding against CRM Failures – A Clearly defined CRM Stratergy – Creating the Right Culture – Proper use of Knowledge Management – Ensuring that the CRM Implementation is Done Right – CRM In Practice – CRM In Manufacturing –CRM in Insurance – CRM In Airlines – CRM IN Hotels – CRM in Telecom – CRM in SMB Segment

TEXT BOOK:

Kaushik Mukerjee, "Customer Relationship Management", PHI, New Delhi, 2007.

Occupational Health & Safety Sem IV

- Health and safety foundations, Policy, Organizing for health and safety, Promoting a positive Health and Safety Culture;
- Risk assessment, Principles of control, Incident investigation, Recording and Reporting;
- Movement of people and vehicles, Hazards and Control, Manual and Mechanical Handling Hazards and Control;
- Work Equipment Hazards and Control, Electrical hazards and control, Fire Hazards and Control;
- Chemical and Biological Health Hazards and Control;
- Physical and Psychological Health Hazards and Control;
- Construction activities - Hazards and Control;
- Monitoring, Review and Audit; and
- Cases, presentations and exercises.

Management Information Systems Sem IV

1	❖ Basic Information Concepts and Definitions ❖ Need for Information and Information Systems (IS) in an organization ❖ Characteristics of Information and Organisation with respect to organization form, structure , philosophy, hierarchy etc
2	❖ Types of IS – Transaction ❖ Operational Control ❖ Management Control ❖ Decision Support ❖ Executive Information Systems
3	❖ Determining Information Needs for an Organisation/Individual Manager ❖ Overview of use of data flow method, analysis of information for decision processes etc.
4	❖ Strategic use of Information and IS – Use of Information for Customer Bonding ❖ For Knowledge Management ❖ For innovation, ❖ For Managing Business Risks ❖ For Creating a new business models and new business reality.
5	❖ Information Security – ❖ Sensitize students to the need for information security ❖ Concepts such as confidentiality, Integrity and Availability. Types of threats and risk, overview of some of the manual, procedural and automated controls in real life IT environments.
6	❖ Case Studies and Presentations

7. L. M. Prasad : Management Information Systems (Sultan Chand)

Project Submission – I

SEMESTER V

Environmental Impact Assessment Sem V

UNIT-I

EIA – Introduction – Concept of EIA- Scope and object of EIA – Organization responsible for EIA – Site selection and area classification- Siting and setting criteria for EIA projects.

UNIT-II

Description of the environmental setting – Inclusion or Exclusion of environmental Items – Some suggested approaches for developing a list of environmental Factors – Informational Sources for Environmental factors.

UNIT-III

Various steps of EIA – Content of EIA – Assessment methodology- Ad-hoc, Overlay, Network, Matrix and checklist . Cost benefit analysis - Case studies, Hydroelectric projects , Mining, Power plant Roads and airports.

UNIT-IV

Environmental Impact Assessment Notification (1994): Procedure for Environmental Clearance, List of the projects requiring Environmental Clearance, Composition of Expert Committee for Impact Assessment, Public hearing Committee, Procedure for public hearing - Project clearance.

UNIT-V

Detailed content of EIS – Use of visual display methods – Statement documentation – general writing suggestion.

Strategic Management Sem V

Introduction to Strategic Management
Definitions & concepts
(Company / Business / Management levels)
Nature, importance & benefits of Strategic Management Strategic Management models & guidelines for effective Strategic Management
Overview of Strategic Management Process

Strategy Formulation
 Setting objectives (Vision, Mission, goals)
 Analysing internal and external environment (SWOT)
 Strategy making
 Entrepreneurial Model
 Adaptive Model
 Planning Model
Types of strategies
Analysing and choosing the right strategy

Strategy Implementation

Implementation of strategy to functional areas
 Production
 Operations
 Marketing
 Finance
 Human Resource Management
 Others (R & D, Innovation, Quality enhancement etc)

Strategy Evaluation
 Review
 Feedback
 Control
General Characteristics of an effective Evaluation System
Contingency planning and Auditing

Entrepreneurship Management Sem V

Unit – 1

- Concept, meaning and definition of entrepreneur and entrepreneurship.
- Importance and significance of growth of entrepreneurial activity.
- Concept of intrapreneur.
- Characteristics and qualities of entrepreneurs
- Classification and types of entrepreneurs.
- Women entrepreneurs
- Theories of entrepreneurship
- Contribution of Mc Clelland and Joseph Schumpeter

Unit – 2

- Factors influencing entrepreneurial development and motivation.
- Role of culture in entrepreneurial development.
- Entrepreneurial development programme (EDP), **Managing the problems faced by entrepreneurs**
- Development of women entrepreneurs-with reference to SHGs
- Options available to entrepreneurs,-ancillarisation franchising and
- outsourcing. **Cases on takeover, mergers and acquisitions in India and at global level.**
- Social Entrepreneurship-Definition,importance and social responsibilities- NGOs

Unit – 3

Entrepreneurial Project Development

- Idea generation – sources and methods
- Identification and classification of ideas.
- Environmental Scanning and SWOT analysis
- Preparation of project plan –Points to be considered
- Components of an ideal business plan – market plan, financial plan,
- operational plan, and HR plan.
- Project formulation –project report significance and contents
- Project appraisal –Aspects and methods :
- Economic oriented appraisal
- Financial appraisal
- Market oriented appraisal
- Technological feasibility
- Managerial competency

Environmental Legislation Sem V

1. Constitutional Provisions for Environmental Protection: Specific Provisions for Environmental Protection in the Constitution of India, Provisions in the Directive Principles of State Policy.

2. Environmental Acts, Rules and Notifications:
The following environmental Acts/Rules will be discussed in details; the rest of the acts, rules and
notifications will be referred to:
a) Water (Prevention & Control of Pollution) Act and the corresponding Rule
b) Water (Prevention & Control of Pollution) Cess Act and the corresponding Rule
c) Air (Prevention & Control of Pollution) Act and the corresponding Rule
d) Environment (Protection) Act and Rule
e) Hazardous Waste (Management & Handling) Rules
f) Manufacture, Storage and Import of Hazardous Chemicals Rules
g) Public Liability Insurance Act and Rule

Refer to MoEF Website (http://envfor.nic.in) for the latest revisions, amendments etc.

3. Important Judgments and Cases: Discussion on landmark cases: Sriram Chemicals Oleum Leak Case, Bhopal Gas Leak case, Ganga Action Plan case etc. Green Benches.

Reference books

1. R. K. Trivedy – Handbook of Environmental Laws, Guidelines, Compliance & Standards, Vol. 1 & 2 Environ – Media karad, India
2. Mhaskar A. K. Environmental Laws

PROJECT MANAGEMENT Sem V

MODULE I

Project Definition – Project Life Cycle – Project objectives – purpose of Project Management – Project Management Maturity – Project Selection and Choice – Types of Project – Selection Models – Analysis under Uncertainty and Rise – Project Portfolio Process.

MODULE II

Functional Manager vs. Project Manager – Project Responsibilities – Demands on the Project Manager – Project Manger Selection – Culture and the Project impact of Institutional Environments – Need for Multicultural Communications.

MODULE III

Project Organization – Pure Project Organization – Matrix – Mixed Organizational Systems – choosing a Firm – Risk Management – Project Management Office – The Project Team – Human Factors and the Project Team – Sources of Conflict.

MODULE IV

Project Planning and Coordination – Systems Integration – Action Plan – Work Breakdown Structure – Partnering - Chartering – Categories of Conflict – Principles of Negotiation – Top Down and Bottom Up Budgeting – Activity vs. Program Budgeting.

MODULE V

Network Techniques PERT and CPM – Precedence Programming – Resource Loading – Leveling – Goldratts' Critical Chain – Monitoring System Design – Reporting Process – Project Management Information Systems (PMIS).

MODULE VI

Project Control – Purposes, Types – Three Types of Control Processes – Post Control – critical Ratio and Control Charts – Balance in Control System – Project Auditing – Purpose of Evaluation – use of Audit Report Product Audit Life Cycle – Measurement varieties of Project Termination.

TEXTBOOK

Jack.R Meredith and Samuel J.Mantel Jr, "Project Management, A Managerial Approach",

Business Ethics Sem V

Introduction to Business Ethics

- Normative ethics, Prescriptive ethics and Applied ethics
- Ethics, Morality and Legality
- Concept of Right and Duty : Business – Western and Indian
- Perspectives, Definition and Scope Relevance in social changes
- Ethical organism and corporate code of conduct

Business Ethics – Conceptual Background

- Conceptual Approaches to Business Ethics
- Egoism vs. Altruism
- Entrepreneur and Manager – Role and Responsibilities
- Responsibilities towards stakeholders: an overview
- Profit – making; An Objective with an ethical dimension

Indian Perspective of Ethics

- Purusharthas: Dharma, Artha, Kama, Moksha
- Concept of Dharma

Ethics: A Global Perspective:

- Ethics in Global Marketing & Advertising
- Ethical perspective in Employment including in the international labour Organization Standards.
- Ethics and IT : E-commerce, Privacy Codes.
- Environmental Ethics: Indian and Western perspectives
- Ethics and Cross- culture influences
- Ethical issues and functional aspects of business

SEMESTER VI

Corporate Social Responsibility (CSR) Sem VI

I. Building Blocks of CSR / Sustainability

1. Overview of
CSR/Sustainability
2. The Triple Bottom-line Approach
3. Philanthropy – Conventional and Strategic
4. Environmental issues
5. Social issues
6. Labour and related issues
7. Ethical and Governance issues
8. Human Rights – UN Charter

II. Standards and Codes

1. ISO – 14001
2. OHSAS – 18001
3. SA – 8000
4. OECD Guidelines for Multinational Companies
5. Global Compact
6. AA – 1000
7. BS / ISO Guideline on CSR Management (ISO-26000)

III. Engaging the stakeholder

1. Global Reporting Initiative Guideline G-3
2. NGO and CSR
3. Programmes for the neighborhood
4. Markets at the BOP
5. Communication
6. Dilemmas
7. Dow Jones Sustainability Index / FTSE4GOOD Index

IV. Cases and Papers

1. What is a Business for? Charles Handy, Harvard Business Review, December 2002
2. The Competitive Advantage of Corporate Philanthropy, Michael E Porter and Mark R Kramer,
Harvard Business Review, pp 6-16, December 2002

3.The fortune at the Bottom of the Pyramid, C.K. Prahalad, Wharton School Publishing, 2005
4.The Skeptical Environmentalist: Measuring the real estate of the World, Bjorn Lomborg, Cambridge University Press, 2001
5.Cradle to Cradle: Remarking the Way We Make things, William KcDonough and Michael Braungart, North Point Press, 2002
6.Natural Capitalism: Creating the next Industrial Revolution, Paul Hawken, Amory Lovins & L.
Hunter Lovins, 1999
7. The Sustainability Wave: Building Boardroom Buy-in (Conscientious Commerce), Bob Willard,
2007.

Solid & Hazardous waste management Sem VI

UNIT I SOLID WASTE:

Definition of solid wastes – types of solid wastes – Sources - Industrial, mining, agricultural and domestic – Characteristics. Solid waste Problems - impact on environmental health – Concepts of waste reduction, recycling and reuse.

UNIT II COLLECTION, SEGREGATION AND TRANSPORT OF MUNICIPAL SOLID WASTES:

Handling and segregation of wastes at source. Collection and storage of municipal solid wastes;
analysis of Collection systems. Transfer stations – labeling and handling of hazardous wastes.

UNIT III MUNICIPAL SOLID WASTE MANAGEMENT :

Solid waste processing technologies. Mechanical and thermal volume reduction. Biological and
chemical techniques for energy and other resource recovery: composting, vermicomposting, termigradation, fermentation. Incineration of solid wastes. Disposal in landfills: site selection, design, and operation of sanitary landfills; Leachate and landfill gas management; landfill closure and post-closure environmental monitoring; landfill remediation. Regulatory aspects of
municipal solid waste management.

UNIT IV HAZARDOUS WASTES:

Hazardous waste definition. Physical and biological routes of transport of hazardous substances – sources and characterization categories and control. Sampling and analysis of hazardous wastes – analytical approach for hazardous waste characterization – proximate analysis – survey analysis – directed analysis – analytical methods.

UNIT V HAZARDOUS WASTES MANAGEMENT:

Sources and characteristics: handling, collection, storage and transport, TSDF concept. Hazardous waste treatment technologies - Physical, chemical and thermal treatment of hazardous waste: solidification, chemical fixation, encapsulation, pyrolysis and incineration. Hazardous waste land fills - Site selections, design and operation. HW reduction, recycling and
reuse, Regulatory aspects of HWM.

UNIT VI BIOMEDICAL WASTE MANAGEMENT:

Biomedical waste: Definition, sources, classification, collection, segregation Treatment and disposal.

UNIT VII RADIOACTIVE WASTE MANAGEMENT:

Radioactive waste: Definition, Sources, Low level and high level radioactive wastes and their management, Radiation standard by ICRP and AERB

UNIT VIII E-WASTE MANAGEMENT:

Waste characteristics, generation, collection, transport and disposal.

Book Recommended

1. Hazardous waste management Charles A. Wentz. Second edition 1995. McGraw Hill International.
2. Integrated solid waste management George Tchobanoglous, Hilary Theisen & Sammuel A. Vigil.
3. Criteria for hazardous waste landfills – CPCB guidelines 2000.
4. Hazardous waste management by Prof. Anjaneyulu.
5. Environmental Sciences by Daniel B. Botkin and Edward A. Keller, Wiley student, 6th edition- 2009.
6. Standard handbook of Hazardous waste treatment and disposal by Harry M. Freeman, McGraw Hill 1997.
7. Management of Solid waste in developing countries by FrankFlintoff , WHO regional publications 1976.

Environment and eco tourism Sem VI

UNIT-I

Agriculture – Contribution to Economic development – food problem – land reforms in India, Bhoodan movement – Green revolution – Panchayat Raj – Community development Projects – Co – Operative movement.

UNIT-II

Rural social structure – caste system, joint family- religion caste, cultural social & psychological barriers to economic development – over coming – resistance to change.

UNIT-III

Concepts of Tourism – Classification – Religious tourism – Cultural tourism – Heritage tourism – Monumental tourism – Adventure tourism – Mars tourism – Sustainable tourism – Consumptive & non consumptive tourism.

UNIT-IV

Principles of Ecotourism – Types of Ecotourism – Concepts of Ecotourism – Objectives of Ecotourism – benefits of Ecotourism – trends affecting ecotourism.

UNIT-V

Impact of Ecotourism – Economic impacts (fiscal impacts, concepts & Methods) – Types and degree of impacts from Ecotourism activities – Socio cultural impacts – Eco tourism related organization – Ecotourism Research disasters & Ecotourism.

References

1. Agarwal, A. N (1980) Indian Agriculture, Vikas publishing House, New Delhi,

4. Bhatia, A. K (1978) Tourism in India

Disaster Management Sem VI

UNIT 1

Disaster – Introduction –Types of natural calamities, major and minor calamities – impact of calamities.

UNIT II

Natural disaster – cyclone – Tsunami – flood – Landslides – earth quake.

UNIT III

Manmade disaster – Wars – Biological war (introduction of pathogens) – misuse of atomic bombs –major accidents from industries e.g. Bhopal. Lov canal disaster – London Smog.

UNIT IV

Medical Management of disaster – Disaster Impacts and response – Identification of dead – Search rescue –first and relief phase – Vaccination, basic sanitation and personal hygiene.

UNIT V

Environmental Disaster – Assessment, Planning – mitigation program – preparedness – resettlement rehabilitation – role of NGOS, Gos (relief camp), Psychotherapy – simplified yoga and meditation, stress management.

Environmental Problems, Hazards and Mitigation Sem VI

Unit 1: Natural and Man made Environmental Problems:

Environmental problems associated with urbanization, industrialization, modernization of agriculture

Unit 2: Global and Regional Environmental Issues:

Green House effect – causes and associated hazards, Ozone layer depletion – causes and associated hazards, Acid rain, Deforestation and loss of bio-diversity; Major environmental problems in India

Unit 3: Problems of Urban Environment:

Municipal waste, domestic waste, industrial waste; Biomedical wastes; Road traffic and noise pollution problem, Air pollution problem, Problem of housing, drinking water and sanitation, slum areas

Unit 4: Problems of Rural Environment:

Drinking water, Domestic fuel, Food and Fodder, Sanitation, Health and Hygiene, Land degradation

Unit 5: Environmental problems related to forest and wetlands:

Human intervention, Degradation, encroachment, loss of habitats and biodiversity

Corporate Governance Sem VI

- Corporate Governance: Meaning scope & Reporting
- The Agency Theory : Principal – Agent Relationship
- Role of CEO, Board and Senior Executives
- Right of Investors and Shareholders
- Financial Regulations and their scope in CG
- Corporate governance from Cadbury committee to Narayan Murthy
- committee

Project Submission II

University of Mumbai

No. UG/ 59 of 2021

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges and Directors of the recognized Institutions in Faculty of Science & Technology.

They are hereby informed that the recommendations made by the Ad-hoc Board of Studies in **Computer Science** at its meeting held on 13th July, 2020 and subsequently approved by the Board of Deans at its meeting held on 20th July, 2020 **vide** item No. **39** have been accepted by the Academic Council at its meeting held on 23rd July, 2020 **vide** item No. **4.115** and subsequently approved by the Management Council at its online meeting held on 28th August, 2020 **vide** item No. **2** and that in accordance therewith, in exercise of the powers conferred upon the Management Council under Section 74(4) of the Maharashtra Public Universities Act, 2016 (Mah. Act No. VI of 2017) the Ordinance **6605 & 6606** Regulations **9350 & 9350-A** and the syllabus of **B.Sc Data Science (Sem I & II)** has been introduced and the same have been brought into force with effect from the academic year **2020-21**. (The said course might be introduced from the academic year 2021-2022 in the wake of prolonged Covid-19 pandemic situation in the country and subsequent delay in the commencement of the new academic year) accordingly. (The same is available on the University's website www.mu.ac.in).

MUMBAI – 400 032
21st January, 2021

(Dr. B.N.Gaikwad)
I/c. REGISTRAR

To ,

The Principals of the affiliated Colleges and Directors of the recognized Institutions in Faculty of Humanities. (Circular No. UG/334 of 2017-18 dated 9th January, 2018.)

A.C/4.115/23/07/2020
M.C/2/28/08/2020

****

No. UG/ 59-A of 2021 MUMBAI-400 032 21st January, 2021

Copy forwarded with Compliments for information to:-

1) The Dean Faculty of Science & Technology,
2) The Chairman, Ad-hoc Board of Studies in Computer Science,
3) The Director, Board of Examinations and Evaluation,
4) The Director, Board of Students Development,
5) The Co-ordinator, University Computerization Centre,

(Dr. B.N.Gaikwad)
I/c. REGISTRAR

Copy to :-

1. **The Director of Board of Student Development.,**
2. **The Deputy Registrar (Admissions, Enrolment, Eligibility and Migration Department (AEM)**
3. **The Director of Students Welfare,**
4. **The Executive Secretary to the to the Vice-Chancellor,**
5. **The Pro-Vice-Chancellor**
6. **The Registrar and**
7. **The Assistant Registrar, Administrative sub-centers, Ratnagiri, Thane & Kalyan**
8. **The Deputy Registrar Research Administration & Promotion Department (RAPC) for information.**

1. **The Director of Board of Examinations and Evaluation**
2. **The Finance and Accounts Officers**
3. **Record Section**
4. **Publications Section**
5. **The Deputy Registrar, (Admissions, Enrolment, Eligibility and Migration Department (AEM)**
6. **The Deputy Registrar (Accounts Section), Vidyanagari**
7. **The Deputy Registrar, College Affiliation & Development Department (CAD).**
8. **The Professor-cum- Director, Institute of Distance and Open Learning Education,**
9. **The Director University Computer Center (IDOL Building), Vidyanagari,**
10. **The Deputy Registrar (Special Cell),**
11. **The Deputy Registrar, (PRO)**
12. **The Deputy Registrar, Academic Authorities Meetings and Services (AAMS) (1 copy) and**
13. **The Deputy Registrar, Executive Authorities Unit**

They are requested to treat this as action taken report on the concerned resolution adopted by the Academic Council referred to in the above circular and that on separate Action Taken Report will be sent in this connection.

1. **The Assistant Registrar Constituent Colleges Unit**
2. **BUCTU**
3. **The Deputy Accountant, Unit V**
4. **The In-charge Director, Centralize Computing Facility**
5. **The Receptionist**
6. **The Telephone Operator**
7. **The Secretary MUASA**
8. **The Deputy Registrar Research Administration & Promotion Department (RAPC)**

for information.

UNIVERSITY OF MUMBAI

Syllabus for B.Sc. Data Science First Year Semester I and II Programme: B.Sc. Subject: Data Science CHOICE BASED(REVISED) with effect from the academic year 2020 – 2021

B.Sc. Data Science under Computer Science

1. **Necessity of starting the course.**

   Data science can be defined as a blend of mathematics, business acumen, tools, algorithms and machine learning techniques, all of which help us in finding out the hidden insights or patterns from raw data which can be of major use in the formation of big business decisions.

   In data science, one deals with both structured and unstructured data. The algorithms also involve predictive analytics in them. Thus, data science is all about the present and future. That is, finding out the trends based on historical data which can be useful for present decisions and finding patterns which can be modelled and can be used for predictions to see what things may look like in the future.

   Data Science is an amalgamation of Statistics, Tools and Business knowledge. So, it becomes imperative for a Data Scientist to have good knowledge and understanding of these.

   With the amount of data that is being generated and the evolution in the field of Analytics, Data Science has turned out to be a necessity for companies. To make most out of their data, companies from all domains, be it Finance, Marketing, Retail, IT or Bank. All are looking for Data Scientists. This has led to a huge demand for Data Scientists all over the globe. With the kind of salary that a company has to offer and IBM is declaring it as trending job of 21st century, it is a lucrative job for many. This field is such that anyone from any background can make a career as a Data Scientist.

2. **Whether UGC has recommended to start the said course?**
   Yes, UGC in its recommendation and curriculum design mentions about the data science programme.

3. **Whether all the courses have commenced from the academic year 2019-20?**
   The B.Sc. in Data Science course has commenced from the academic year 2020 – 21.

4. **The courses started by University are self-financed, whether adequate number of permanent faculties are available.**
   The field being very new, there are faculties available in various colleges and as the Data Science is amalgamation of various fields, many of the permanent faculties are available for the course.

5. **To give details regarding the duration of the course and is it possible to compress the course?**
   Present Duration: 3 years (Six semesters)
   To give proper justice to the teaching learning, it is essential to have 3-year, 6-semester course. The contents cannot be compressed nor the duration can be reduced. Lot of practical exposure is needed ad hence it cannot be compressed.

6. **Intake capacity of the course and the number of admissions given in the current academic year 2020 – 21**
   The intake capacity per batch in any college is 60. The number of admissions given during the current academic year (2020 – 21) is _____.

7. **Opportunities of Employability / Employment available after undertaking these courses.**
   The course has extensive hands-on practical training and various job roles and recruiters are as follows:

Business Analytics Professional

A business analytics professional has the skills to make use of the information from the data to generate insights about the business. To be a data focused business analytics professional, you must know the technical components related to managing and manipulating data.

Recruiters: Walmart, Conduent, Genpact etc.

Business Intelligence Professional

A Business Intelligence Professional analyse the past trends using Data Visualization tools like Tableau, Power BI etc to develop and implement business strategies. They also monitor all the performance metrics of the company and provide insight to the respective department.

Recruiters: Accenture, ZS Associates, Sun Pharma etc.

Data Scientist

Data Scientists help build complicated data models and simulations in a Big Data environment. Focusing more on math and statistics, these data scientists have a particular interest in reading statistics and building & deploying machine learning models.

Recruiters: HDFC Bank, Amdocs, Oyo etc.

Big Data Analysts

Job responsibilities of a Big Data Analyst include collaborating with data scientists and data architects to ensure streamlined implementation of services and executing big data processes.

Recruiters: Novartis, Allerin Tech, Amazon AWS etc.

HR Analytics Professionals

HR Analytics is the hottest trends in the Industry. HR Analytics professionals are working on how to reduce employee attrition rate, finding out the best recruitment channels and solving appalling problems related to HR Function.

Recruiters: Lenskart, Mearsk, Ericsson etc.

Marketing Analytics Professionals

Due to the abundance of data in all the marketing campaign., Analytics enable the marketing professionals to evaluate the success of their marketing initiatives. This is accomplished by measuring performance.

Recruiters: Microsoft, Deloitte, Reliance etc.

hree Year Bachelor of Science Degree in Data Science

Preamble

Data Science refers to extraction of knowledge from large volumes of data that are structured or unstructured, which is continuation of data mining and predictive analytics. It involves different categories of analytical approaches for modelling various types of business scenarios and arriving at solution and strategies for optimal decision-making in marketing, finance, operations, organizational behaviour and other managerial aspects. This new field of study breaks down into a number of different areas, from constructing big data infrastructure and configuring the various server tools that sit on top of the hardware, to performing the analysis and developing the right transformations to generate useful results.

Data Science is an interdisciplinary field that combines the magic of programming, mathematics and business. Combined with Machine Learning, it helps to identify a future trend which can be used to derive actionable insights for creating future impact. These skills will help for the role of a Data Scientist. As a Data Science aspirant, learner will be emphasising of the knowledge to share from the quantitative analysis to programming concept and extended to business intelligence. Data science can add value to any business which can use the data well.

Data Science consists of 3 parts namely:

Machine Learning: Machine Learning involves algorithms and mathematical models, chiefly employed to make machines learn and prepare them to adapt to everyday advancements.

Big Data: Everyday, we are producing so much of data in the form of clicks, orders, videos, images, comments, articles, RSS Feeds etc. These data is generally unstructured and is often called as Big Data. Big Data tools and techniques mainly help in converting this unstructured data into a structured form.

Business Intelligence: Each business has and produces too much data every day. This data when analysed carefully and then presented in visual reports involving graphs, can bring good decision making to life. This can help the management in taking the best decision after carefully delving into patterns and details the reports bring to life.

What Does a Data Scientist Do?

- Empower the management and controlling officers to make better decisions
- Direct actions based on trends, which in turn help to define new goals
- Identify opportunities
- Making decisions with quantifiable, data-driven evidence
- Test the decisions taken
- Identify and refine the target audiences
- Recruit the right talent for the organisation

Programme Specific Outcomes

- Build a strong foundation of statistics for data science.
- Use all the features and new updates of Python and R for data science.
- Perform scientific and technical computing using the Python SciPy package and its sub-packages Integrate, Optimize, Statistics, IO, and Weave.
- Gain expertise in mathematical computing using the NumPy and Scikit-Learn package
- Gain an in-depth understanding of data structure and data manipulation
- Understand and use linear and non-linear regression models and classification techniques for data analysis
- Obtain a comprehensive knowledge of supervised and unsupervised learning models such as linear regression, logistic regression, clustering, dimensionality reduction, K-NN and pipeline
- Master the concepts recommendation engine, time series modelling, gain practical mastery over principles, algorithms, and applications of Machine Learning
- Learn to analyse data using Tableau and Power BI and become proficient in building interactive dashboards
- Understand deep reinforcement learning techniques applied in Natural Language Processing
- Understand the different components of the Hadoop ecosystem and learn to work with HBase, its architecture and data storage, learning the difference between HBase and RDBMS, and use Hive and Impala for partitioning
- Understand MapReduce and its characteristics and learn how to ingest data using Sqoop and Flume

Courses

SEMESTER 1				
Course Code	**Course Type**	**Course Name**	**Credits**	**Marks**
USDS101	**DSC**	Descriptive Statistics	**2**	**100**
USDS1P1	**DSC**	Descriptive Statistics Practical	**2**	**50**
USDS102	**DSC**	Introduction to Programming	**2**	**100**
USDS1P2	**DSC**	Introduction to Programming Practical	**2**	**50**
USDS103	**DSC**	Web Technology	**2**	**100**
USDS1P3	**DSC**	Web Technology Practical	**2**	**50**
USDS104	**AECC**	Business Communication and Information Ethics	**2**	**100**
USDS1P4	**AECC**	ICT Practical	**2**	**50**
USDS105	**DSC**	Precalculus	**2**	**100**
USDS1P5	**DSC**	Precalculus Tutorials	**2**	**50**
		Total	**20**	**750**

SEMESTER 2				
Course Code	**Course Type**	**Course Name**	**Credits**	**Marks**
USDS201	**DSC**	Probability and Distributions	**2**	**100**
USDS2P1	**DSC**	Probability and Distributions Practical	**2**	**50**
USDS202	**DSC**	Database Management	**2**	**100**
USDS2P2	**DSC**	Database Management Practical	**2**	**50**
USDS203	**DSC**	R Programming	**2**	**100**
USDS2P3	**DSC**	R Programming Practical	**2**	**50**
USDS204	**AECC**	Environmental Science	**2**	**100**
USDS2P4	**AECC**	Project Presentation on Data Science in Environmental Science.	**2**	**50**
USDS205	**DSC**	Calculus	**2**	**100**
USDS2P5	**DSC**	Calculus Tutorials	**2**	**50**
		Total	**20**	**750**

Proposed Courses in Semester 3, 4, 5 and 6 (Subject to change)

SEMESTER 3

Course Code	Course Type	Course Name	Credits	Marks
USDS301	**DSC**	Testing of Hypothesis	**2**	**100**
USDS3P1	**DSC**	SPSS Practical	**2**	**50**
USDS302	**DSC**	Data Structures	**2**	**100**
USDS3P2	**DSC**	Data Structures Practical	**2**	**50**
USDS303	**SEC**	Microeconomics / Principles of Management	**2**	**100**
USDS3P3	**SEC**	Case Studies on Microeconomics	**2**	**50**
USDS304	**DSC**	Data Warehousing	**2**	**100**
USDS3P4	**DSC**	Data Warehousing Practical	**2**	**50**
USDS305	**DSC**	Linear Algebra and Discrete Mathematics	**2**	**100**
USDS3P5	**DSC**	Tutorials on Linear Algebra and Discrete Mathematics	**2**	**50**
		Total	**20**	**750**

SEMESTER 4

Course Code	Course Type	Course Name	Credits	Marks
USDS401	**DSC**	Optimization Techniques	**2**	**100**
USDS4P1	**DSC**	Optimization Techniques Practical	**2**	**50**
USDS402	**DSC**	Big Data	**2**	**100**
USDS4P2	**DSC**	Big Data Practical	**2**	**50**
USDS403	**SEC**	E-Commerce and Business Ethics / Fundamentals of Accounting	**2**	**100**
USDS4P3	**SEC**	MATLAB Practical	**2**	**50**
USDS404	**DSC**	Algorithms in Data Science	**2**	**100**
USDS4P4	**DSC**	Algorithms in Data Science Practical	**2**	**50**
USDS405	**DSC**	Numerical Methods	**2**	**100**
USDS4P5	**DSC**	Numerical Methods Practical	**2**	**50**
		Total	**20**	**750**

SEMESTER 5

Course Code	Course Type	Course Name	Credits	Marks
USDS501	**DSC**	Artificial Intelligence	**2**	**100**
USDS5P1	**DSC**	Artificial Intelligence Practical	**2**	**50**
USDS502	**DSC**	Business Research Methods	**2**	**100**
USDS5P2	**DSC**	Business Research Methods Practical	**2**	**50**
USDS503	**DSC**	Data Mining	**2**	**100**
USDS5P3	**DSC**	Data Mining Practical	**2**	**50**
USDS504	**SEC**	Campus to Corporate	**2**	**100**
USDS5P4	**DSC**	Project Dissertation	**2**	**50**
Elective 1 (Select Any one of the following)				
USDS505a	**DSE**	Reinforcement Learning	**2**	**100**
USDS505b	**DSE**	Marketing and Retail Analytics		
USDS505c	**DSE**	Supply Chain and Logistics Analytics		
USDS505d	**DSE**	Robotic Process Automation		
Compulsory Practical				
USDS5P5	**DSC**	Data Visualisation with Power BI / Tableau	**2**	**50**
		Total	**20**	**750**

SEMESTER 6

Course Code	Course Type	Course Name	Credits	Marks
USDS601	**DSC**	Machine Learning	**2**	**100**
USDS6P1	**DSC**	Machine Learning Practical	**2**	**50**
USDS602	**DSC**	Cloud Computing	**2**	**100**

Semester I

USDS101: Descriptive Statistics

B. Sc. (Data Science)		Semester – I	
Course Name: Descriptive Statistics		**Course Code: USDS101**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives:

- To understand the use of data for tabulating and analyze statistical information given in descriptive form with attributes.
- To use graphical techniques as well as to compute various measures of central tendency.
- To compute various measures of dispersion, skewness and kurtosis and to calculate range of variables and the deviation of specific data point.
- To compute the correlation coefficient for bivariate data and Calculate the simple linear regression equation for a set of data.
- To Describe and verify mathematical considerations for analyzing time series.

Unit	Details	Lectures
I	**1. Introduction to Statistics and Use in Business:** a) Meaning of Statistics as a Science, Importance of Statistics, b) Scope of Statistics : In the field of Industry, Biological Sciences, Medical Sciences, Economics Sciences, Social, Sciences, Management Sciences, Agriculture, Insurance, Information Technology, Education and Psychology. c) Statistical organizations in India and their functions: CSO, ISI, NSS, IIPS (Devnar, Mumbai), Bureau of Economics and statistics. d) Case Study **2. Types of Data and Data Condensation:** a) Method of sampling: Concept of population and sample. Finite ,Infinite population ,Notion of SRS,SRSWOR and SRSWR b) Types of Characteristics, Different types of scales: nominal, ordinal, interval and ratio scale. Linear and circular scale. c) Types of Data: Primary data, Secondary data, Collection of data and concept of a questionnaire and a schedule, Cross-sectional data, time series data, failure data, industrial data, and directional data. d) Tabulation. e) Dichotomous classification- for two and three attributes, Verification for consistency. f) Association of attributes: Yule's coefficient of association Q. Yule's coefficient of Colligation, g) Notion of a statistical population: Finite population infinite population, homogeneous population and heterogeneous population. Notion of sample, random sample and non-random sample.	**12**

	3. Presentation of Data a) Univariate frequency distribution of discrete and continuous variables. Cumulative frequency distribution and relative frequency distribution. b) Graphical representation of frequency distribution by Histogram, frequency polygon, Cumulative frequency curve. Stem and leaf diagram c) Check sheet, Parato diagram	
II	**4. Measures of central tendencies** a) Concept of central tendency of data. Requirements of good measure b) Locational averages: Median, Mode, and Partition Values: Quartiles, Deciles, and Percentiles, Box Plot, Percentile ranks c) Mathematical averages Arithmetic mean (Simple, weighted mean, combined mean), Geometric mean, Harmonic mean d) Empirical relation between mean, median and mode e) Merits and demerits of using different measures &their applicability f) Partition Values : Quartiles, Deciles and Percentiles, Box Plot, Percentile ranks **5. Measures of Dispersion, Skewness & Kurtosis** a) Concept of dispersion. Requirements of good measure. b) Absolute and Relative measures of dispersion: Range, Quartile Deviation, Mean absolute deviation, Standard deviation. c) Variance and Combined variance, raw moments and central moments and relations between them. Their properties d) Concept of Skewness and Kurtosis: Measures of Skewness: Karl Pearson's, Bowley's and Coefficient of skewness based on moments. Measure of Kurtosis	**12**
III	**6. Mean square deviation**: a) Definition, minimality property of mean square deviation (with proof), b) Variance and standard deviation: Definition, merits and demerits, effect of change of origin and scale, combined variance (derivation for 2 groups), combined standard deviation, generalization for *n* groups. c) Measures of dispersion for comparison: coefficient of range, coefficient of quartile deviation and coefficient of mean deviation, coefficient of variation (C.V.)	**12**
IV	**7. Correlation and regression analysis** a) Scatter Diagram, Product moment correlation coefficient and its properties. Spearman's Rank correlation. (With and without ties) b) Concept of linear regression. Principle of least squares. Fitting a straight line by method of least squares. c) Relation between regression coefficients and correlation coefficient. d) Fitting of curves reducible to linear form by transformation. Concept and use of coefficient of determination (R^2).	**12**

	e) Fitting a quadratic curve by method of least squares. f) Case study	
V	**Time Series** a) Definition of time series .Its component. Models of time series. b) Estimation of trend by: **i)** method of Freehand curve **ii)** method of semi average **iii)** Method of Moving average iv) Method of least squares (linear trend only) c) Estimation of seasonal component by **i)** method of simple average **ii)** Ratio to moving average **iii)** Ratio to trend method d) Case Study	**12**

Books and References:					
Sr. No.	**Title**	**Author/s**	**Publisher**	**Edition**	**Year**
1.	Statistical Methods, An Introductory Text,	Medhi J.	New Age International Ltd.	Second Edition	
2.	Basic Statistics	Agarwal B.L.	New Age International Ltd.		
3.	Theory and Problems of Statistics,	Spiegel M.R.	Tata McGraw-Hill.		
4.	Fundamentals of Statistics, Volume II	Goon A.M., Gupta M.K., Dasgupta B.	The World Press Private Limited, Calcutta.		
5.	Complete Business statistics	Aczel Sounderpandian	Tata McGraw Hill		
6.	Excel Data Analysis Modeling and simulation	Hector Gurrero	Springer	Second Edition	
7.	Data Analysis and Decision Making	Albright,Wilston,Zappe	Thomson		

Course Outcomes:
After completion of the course, a student should be able to:

- To understand the use and importance of statistical data by tabulating and implementing sampling methods.
- Able to identify association between the variables as well as computing consistent and inconsistent data.
- Able to compute level of measures and apply as well as interpret data into graphs.
- Apply measure of central tendency to minimize the sum of squared deviation.
- Able to understand the basic assumption behind regression analysis and determine the model is significance as well as able to apply various techniques for the modelling.

USDS1P1: Descriptive Statistics Practical

B. Sc (Data Science)		**Semester – I**	
Course Name: Descriptive Statistics Practical		**Course Code: USDS1P1**	
Periods per week (1 Period of 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

- To enhance excel based data modeling skills.
- To understand Data Conversion, data categorization, selection of appropriate data category and Collection and to utilize excel based data modeling skills.
- To compute Logical and Mathematical Averages, measures of dispersion, compute skewness, moments and kutosis and to use graph from graphical tool.
- To represent data on the graph, Cumulative frequency, subgroup of data with Histogram and subgroup of data with Histogram as well as with bar chart.
- To analyze data about the frequency of problems /Cause of problem and to use financial function.
- To compute variance, coefficient of variation, standard deviation two subgroups, correlation and co-variance.
- To implement statistical function on series of data and forecasting techniques.

List of Practical: (Can be done in MS-Excel-or any Spreadsheet)	
1.	**Introduction to Excel**
a.	Understanding Data Tools
b.	Understanding Formula Tools, insert functional library using insert function
c.	Add-Ins Analysis Tool packs
2.	**Using Formulae and Charts**
a.	Formula writing, Functions, using Cell reference
b.	Understanding Insert Tool: Chart Tools, Different types of charts and their use
3.	**Data Entry and manipulation**
a.	Tools for data entry and accuracy: Quick Access Toolbar customization, Form tool.
b.	Data Transposition to Fit Excel (as An Array).
c.	Data Conversion with the Logical IF, VLOOKUP, HLOOKUP. Pivot table, Pivot chart.
d.	Data Conversion of Text from Non–Excel Sources, Using Text To Column(From Data tool)
e.	Data Queries with Sort, Filter, and Advanced Filter Exact function data entry comparison
4.	**Data Validation**
a.	Specifying a valid range of values for a cell
b.	Specifying a list of valid values for a cell
c.	Specifying custom validations based on formula for a cell

5.	**Measures of central tendency**
a.	Calculating Mean, Median, Mode, Minimum, Maximum, range with cell reference
b.	Using Summary statistics
c.	Calculate A.M., G.M., H.M.
d.	State the Findings of all above exercise.
6.	**Measures of Dispersion, Skewness & Kurtosis**
a.	Calculate Range, Quartile Deviation, Mean absolute deviation, Standard deviation with cell reference
b.	Using summary statistics Measures of Skewness Coefficient of skewness based on moments. Measure of Kurtosis.
c.	Graphical representation of Skewness.
d.	State the Finding of exercise.
7.	**Graphical Presentation with Excel -1**
a.	Producing a Histogram
b.	Improving the Graph
c.	Producing a Cumulative Frequency Diagram
d.	Producing a Histogram of subgroups of data
8.	**Graphical Presentation with Excel – 2**
a.	Producing a bar chart of subgroups of data
b.	Perato chart
c.	Combined variance (derivation for 2 groups), Combined standard deviation.
d.	Coefficient of variation (C.V.).
9.	**Correlation**
a.	Use of formula for calculating correlation and Co-variance.
b.	Use of error checking (Using Exact( ), IF)
c.	Use of frequently used financial functions (e.g. NPV) with suitable example of correlation.
d.	State the Findings of all above exercise.
10.	**Regression analysis**
a.	Using Summary statistics/Cross sectional Data: Descriptive Statistic
b.	Linear Regression and visual analysis(Chart)
c.	Multiple Regression equation with coefficient standard error and visual chart
d.	State the Findings of all above exercise.

Course Outcomes:
After completion of the course, a student should be able to:

- Use Microsoft Excel for business and data analytics, applying insert function library, make use of "Add-Ins Tool pack" for different statistical and mathematical function, learn to use formula and function with cell reference and able to use different types of chart suitable to the data.
- Do Data Entry and manipulation using data context, to transpose the tabular data, convert data in to tabular format and able to use the excel tools for data categorization.
- Discover Measures of central tendency by using analysis tools and formula and able state the conclusion.

- Find Measures of Dispersion, Skewness & Kurtosis by using formula, calculate statistics measures using add-ins analytical tools, Able to use graph/chart from chart tool and deriving the conclusion of the experiment.
- Display Graphical Presentation with Excel by using graph/Chart, templates to improve presentation of data, represent cumulative frequency, data analysis, understand “cause analysis”, make use of formula and analytical tools to compute combined variance and Standard Deviation and compute coefficient of variation.
- Find Correlation by applying statistical formula and analytical tool, identifying wrong data entries, make use of financial function using insert and deriving conclusion of the experiment.
- Do Regression analysis by predicting using data analysis tools, make use of forecasting techniques, Able to use multiple regression using time series data and deriving conclusion of the experiment.

USDS102: Introduction to Programming

B. Sc (Data Science)		Semester – I	
Course Name: Introduction to Programming		**Course Code: USDS102**	
Periods per week (1 Period is 50 minutes)		**5**	
Credit		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives:

- Learn Programming fundamentals using Python
- Understand the concepts and usage data types, variables and other basic elements
- Learn about using operators and control statements in Python
- Learn about using arrays and strings in Python.
- Learn about using IPython architecture for Python.
- Introduce data Science Tools and plot data using appropriate Python visualization libraries

Unit	Details	Lectures
I	**Introduction to Python Language**: Overview, Features of Python, Execution of a Python Program, Innards of Python, Frozen Binaries, Python Interpreter, Comparison of Python with C and Java, Installing Python, Writing & Executing, IDLE **Data Types, Variables And Other Basic Elements**: Comments, Docstrings, Data types-Numeric, Compound, Boolean, Dictionary, Sets, Mapping, Basic Elements of Python, Variables **Input and Output Operations**: Input Function, Output Statements, Command Line Arguments **Control Statements:** Control Statements- Loop Statement, The else Suite, break Statement, continue Statement, pass Statement, assert Statement, return Statement	**12**
II	**Functions**: Defining & Calling a Function, Returning Results, Returning Multiple Values, Built-in Functions, Parameters and Arguments, Recursive Functions, Anonymous or Lambda Functions **Operators**: Arithmetic operators, Assignment operators, Unary minus operator, Relational operators, Logical operators, Bitwise operators, Membership operators, Identity operators, Precedence of Operators, Associativity of Operators **Arrays**: Creating Arrays, Indexing and Slicing, Basic Array Operations, Arrays Processing, Mathematical Operations on Array, Aliasing Arrays, Slicing and Indexing in NumPy Arrays, Basic Slicing. Advanced Indexing. Dimensions of Arrays, Attributes of an Array	**12**

	Strings: Creating Strings, Functions of Strings, Working with Strings, Length of a String, Indexing & Slicing, Repeating & Concatenation of Strings, Checking Membership, Comparing Strings, Removing Spaces, Finding Substrings, Counting Substrings, Strings are Immutable, Splitting and Joining Strings, Changing Case, Checking Starting and Ending of a String, Sorting & Searching in the Strings, Formatting the Strings, Working with Characters	
III	**Lists and Tuples**: Lists, List Functions and Methods, List Operations, Tuples **Dictionaries**: Creating a Dictionary, Operators in Dictionary, Dictionary Methods, Using for Loop with Dictionaries, Operations on Dictionaries, Ordered Dictionaries **Regular Expressions**: What is a Regular Expression? Sequence Characters in Regular Expressions, Quantifiers in Regular Expressions, Special Characters in Regular Expressions, Using Regular Expression on Files, Retrieving Information from an HTML File **Date and Time in Python:** Date and Time, Date and Time Now, Combining Date and Time, Formatting Dates and Times, Finding Durations using "timedelta", Comparing Two Dates, Sorting Dates, Stopping Execution Temporarily, Knowing the Time taken by a Program, Working with Calendar Module	**12**
IV	**IPython:** Beyond Normal Python, Help and Documentation in IPython, Keyboard Shortcuts in the IPython Shell, IPython Magic Commands, Input and Output History, IPython and Shell Commands, Errors and Debugging, Profiling and Timing Code **Introduction to NumPy**: Understanding Data Types in Python, The Basics of NumPy Arrays, Computation on NumPy Arrays: Universal Functions, Aggregations: Min, Max, and Everything In Between, Computation on Arrays: Broadcasting, Comparisons, Masks, and Boolean Logic, Fancy Indexing, Sorting Arrays, Structured Data: NumPy's Structured Arrays	**12**
V	**Data Manipulation with Pandas**: Introducing Pandas Objects, Data Indexing and Selection, Operating on Data in Pandas, Handling Missing Data, Hierarchical Indexing, Combining Datasets: Concat and Append, Combining Datasets: Merge and Join, Aggregation and Grouping, Pivot Tables, Vectorized String Operations, Working with Time Series. High-Performance Pandas: eval( ) and query( ) **Visualization with Matplotlib**: Simple Line Plots, Simple Scatter Plots, Visualizing Errors, Density and Contour Plots, Histograms, Binnings, and Density, Customizing Plot Legends, Customizing Colorbars, Multiple Subplots, Text and Annotation, Customizing Ticks, Customizing Matplotlib: Configurations and Stylesheets, Three-Dimensional Plotting in Matplotlib, Geographic Data with Basemap, Visualization with Seaborn	**12**

Books and References:					
Sr. No.	**Title**	**Author/s**	**Publisher**	**Edition**	**Year**
1.	Programming through Python	M. T. Savaliya, R.K Maurya, G.M Magar	Staredu Solutions	1st	2018
2.	Python Data Science Handbook	Jake VanderPlas	O'Reilly Media	1st	2016
3.	Let Us Python	Y. Kanetkar,	BPB	1st	2019
4.	Programming in Python 3	Mark Summerfield	Pearson Education	2nd	2018
5.	Learning Python	Lutz M	O'Reilly-Shroff	5th	2013
6.	Beginning Python	Magnus Lie Hetland	Apress	2nd	2009
7.	Star Python	Star Certification	Star Certification	1st	2018

Course Outcome:

Upon the successful completion of this course, the student will be able to achive:

- Proficiency in using and applying various data types including, string, array list, tuple and dictionary.
- Ability to use regular expressions to perform complex operations in less code.
- Learning to make use of date and time in Python for various applications.
- Proficiency in using IPython architecture for Data Science Applications.
- Knowledge about use of various data science tools

USDS1P2: Introduction to Programming Practical

B. Sc (Data Science)		Semester – I	
Course Name: Introduction to Programming Practical		**Course Code: USDS1P2**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

- To explore Python Programming elements for developing interactive programs.
- To gain insight about the concept of functions and to explore the data storage of similar types with their features.
- To learn about special operators, Arrays and lists and operation on them in Python.
- To explore Dictionaries, Sets, Text processing and operation on them.
- To learn about date and time module in Python
- To explore popular data science tool, packages for data visualization.

List of Practical:	
1.	**Introduction to Python Language**
a.	Write a Python program to explore various data types including numeric types, Boolean types and compound types.
b.	Write a Python program to perform Input and Output Operations.
c.	Write a Python program to demonstrate looping in python and use of break statement and continue statement
2.	**Functions**
a.	Write a Python program to define and use functions
b.	Write a Python program to demonstrate the use of Built-in Functions.
c.	Write a Python Program to implement Lambda Functions.
3.	**Arrays and String**
a.	Write a Python Program to implement arrays for storing homogeneous data items. Apply indexing and slicing operations to access elements of array.
b.	Write a Python Program to demonstrate operations and properties of string data types.
c.	Write a Python Program implement and demonstrate the use of Membership operators and Identity operators
d.	Write a Python Program to implement Numpy for handling multidimensional arrays.
4.	**List and Tuples**
a.	Write a Python Program to create list, apply various functions to it.
b.	Write a Python Program to demonstrate concept of aliasing and cloning.
c.	Write a Python Program to implement tuples for storing data. Verify the immutability property on tuples.

5.	**Dictionaries and Sets**
a.	Write a Python Program to implement Dictionary and operations on dictionaries
b.	Write a Python Program to create sets and various operations on it.
6.	**Regular Expressions**
a.	Write a Python Program for implementing various methods for searching and replacing operations.
b.	Write a Python Program for Retrieving Information from an HTML File
7.	**Date and Time**
a.	Write a Python Program to compare dates and implement calendar module
8.	**Using IPython**
a.	Using IPython and Jupyter notebook
b.	Debugging errors in IPython.
9.	**Using the NumPy Package**
a.	Programs using NumPy Package and different functions available in it.
10.	**Using the pandas package**
a.	Programs using Pandas Package and different functions available in it.

Course Outcomes:

After completion of the course, a student should be able to:

- Knowledge about input and output functions in python and have ability to use loops and control their execution.
- Ability to develop modular Programs using functions and data types like string, array and list of Python.
- Ability to develop modular Programs using Date and Time of Python.
- Interact with IPython and Jupyter notebook.
- Make use of NumPy Package and different functions available in it.
- Able to write code using Pandas Package and different functions available in it.

USDS103: Web Technology

B. Sc (Data Science)		Semester – I	
Course Name: Web Technology		**Course Code: USDS103**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives:

- Introducing the basic concepts of Internet and web design to learners.
- Providing brief knowledge about HTML5 concepts.
- Giving insight of the Page layout and navigation with HTML5.
- Making students aware about use of Tables, Forms and Media with HTML5.
- Providing knowledge of web page design using CSS.
- Teaching data validation using Java Script.
- Giving knowledge about transmission of data on web page using JSON object.

Unit	Details	Lectures
I	**Internet and the World Wide Web:** What is Internet? Introduction to internet and its applications, E-mail, telnet, FTP, e-commerce, video conferencing, e-business. Internet service providers, domain name server, internet address, **World Wide Web (WWW):** World Wide Web and its evolution, uniform resource locator (URL), browsers – internet explorer, Netscape navigator, opera, Firefox, chrome, Mozilla. search engine, web saver – apache, IIS, proxy server, HTTP protocol **What Is Web Design?:** Defining Web Design, Web Design Themes, Learning Web Design. **User-Centered Design:** Usability, Who Are Web Users? Common User Characteristics, Memory, Response and Reaction Times, Dealing with Stimulus, Movement Capabilities, The User's World, General Types of Users, Web Conventions, Accessibility, Building a Usable Site **HTML5:** Introduction, Why HTML5? Formatting text by using tags, using lists and backgrounds, Creating hyperlinks and anchors.	**12**
II	**HTML5 Page layout and navigation:** Creating navigational aids: planning site organization, creating text based navigation bar, creating graphics based navigation bar, creating graphical navigation bar, creating image map, redirecting to another URL, creating division based layouts: HTML5 semantic tags, creating divisions, creating HTML5 semantic layout, positioning and formatting divisions. **HTML5 Tables, Forms and Media:** Creating tables: creating simple table, specifying the size of the table, specifying the width of the column, merging table cells, using tables for page layout, formatting tables: applying table borders, applying background and foreground fills, changing cell padding, spacing and alignment, creating user forms:	**12**

	creating basic form, using check boxes and option buttons, creating lists, additional input types in HTML5, Incorporating sound and video: audio and video in HTML5, HTML multimedia basics, embedding video clips, incorporating audio on web page.	
III	**Introduction to Style Sheets** : Understanding Styles, Constructing Style Rules, Creating Styles for Nested Tags, Creating Classes and IDs for Applying Styles, Applying Styles to Hyperlinks, Creating and Linking to External Style Sheets **Formatting Text by Using Style Sheets:** Specifying a Font Family, Specifying a Font Size and Color, Applying Bold and Italics, Applying Strikethrough and Underlining, Creating Inline Spans , Adjusting Spacing Between Letters **Formatting Paragraphs by Using Style Sheets:** Indenting Paragraphs, Applying a Border to a Paragraph, Specifying a Border Style, Setting Border Padding, Specifying Border Width and Color, Formatting Border Sides Individually, Setting All Border Attributes at Once, Specifying the Horizontal Alignment of a Paragraph, Specifying Vertical Space within a Paragraph **Displaying Graphics:** Selecting a Graphics Format, Preparing Graphics for Web Use, Inserting Graphics, Arranging Elements on the Page, Controlling Image Size and Padding, Hyperlinking from Graphics, Using Thumbnail Graphics, Including Alternate Text for Graphics, Adding Figure Captions	**12**
IV	**Java Script:** Introduction, Client-Side JavaScript, Server-Side JavaScript, JavaScript Objects, JavaScript Security Core JavaScript (Properties and Methods of Each) : Array, Boolean, Date, Function, Math, Number, Object, String, regExp **Document and its associated objects:** document, document object methods, Link, Area, Anchor, Image, Layer **Events and Event Handlers** : General Information about Events, Defining Event Handlers, event, onAbort, onBlur, onChange, onClick, onDblClick, onDragDrop, onError, onFocus, onKeyDown, onKeyPress, onKeyUp, onLoad, onMouseDown, onMouseMove, onMouseOut, onMouseOver, onMouseUp, onMove, onReset, onResize, onSelect, onSubmit, onUnload	**12**
V	**JSON**: Introduction, JSON Grammar, JSON Values, JSON Tokens, Syntax, JSON vs XML, Data Types, Objects, Arrays, Creating JSON, JSON Object, Parsing JSON, Persisting JSON, Data Interchange, JSON HTML, JSONP	**12**

Books and References:

Sr. No.	**Title**	**Author/s**	**Publisher**	**Edi^{n}**	**Year**
1.	HTML5 Step by Step	Faithe Wempen	Microsoft Press		2011
2.	Web Design The Complete Reference	Thomas Powell	TMH		2009
3.	Head First HTML 5 programming	Eric Freeman	O'Reilly		2013

4.	JavaScript 2.0: The Complete Reference	Thomas Powell and Fritz Schneider	TMH	2nd	2004
5.	Beginning JSON	Ben Smith	Apress	1st	2015

Course Outcomes:

After completion of the course, a student should be able to:

- Understand the meaning of the basic terminologies of web technology and explore, use the HTML5 concepts. Understand the basic requirement of web design.
- Understand and use the Page layout, Navigation, Tables, Forms and Media features of HTML5.
- Understand and use Cascading Style sheet for beatifying the web pages.
- Understand and use the Java Script for validation of user forms in web pages.
- Understand and use the technique of transmitting data between a server and web application using JSON.

USDS1P3: Web Technology Practical

B. Sc (Data Science)		Semester – I	
Course Name: Web Technology Practical		**Course Code: USDS1P3**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

Provide the hands on the HTML5, CSS, JavaScript and JSON technologies for designing the attractive webpages with dealing user data validation and transferring the values among the web pages and servers.

- Introducing basics of HTML5 to learners.
- Giving insight of the Page layout and navigation with HTML5.
- Making students aware about use of Tables, Forms and Media with HTML5.
- Providing knowledge of web page design using CSS.
- Teaching data validation using Java Script.
- Giving knowledge about transmission of data on web page using JSON object.

List of Practical:	
1.	**Use of Basic Tags:**
a.	Design a web page using different text formatting tags.
b.	Demonstrate use of Font tag with its attributes and HTML various color options in web page.
c.	Design a web page with links to different pages and allow navigation between web pages.
2.	**Navigation, list and paragraph:**
a.	Design a web page to demonstrate text-based navigation bar.
b.	Demonstrate use of lists and backgrounds in web page.
c.	Demonstrate use of paragraph and its associated tags in web page.
3.	**Lists, images and semantics:**
a.	Demonstrate use of multiple image tag in web page.
b.	Design a web page with Imagemaps.
c.	Design a web page demonstrating use of various semantics tags
4.	**Multimedia and User controls:**
a.	Design a web page with a form that uses all types of user controls.
b.	Design a web page embedding with multimedia features.
c.	Design a 3 page static website with appropriate tags and attributes.
5.	**CSS with list, links and table:**
a.	Create and use different style rules with available types of lists.
b.	Create and use different style rules with hyperlinks.
c.	Create and use different style rules with tables.

6.	**CSS with font, paragraph and types:**
a.	Create and use different style rules with font elements.
b.	Create and use different style rules with Paragraph elements.
c.	Demonstrate the use of inline, internal and external CSS in one web page.
7.	**Java Script: Validating User fields**
a.	Demonstrate the use of Document object methods.
b.	Using java script, demonstrate validating Text Input Fields, Drop-down Lists and Checkboxes.
c.	Using java script, demonstrate validating Radio buttons and Validating Multi-Select Boxes.
8.	**Java Script : Handling the events**
a.	Using java script, demonstrate the use of onAbort, onBlur, onChange, onClick, onDblClick events.
b.	Using java script, demonstrate the use of onDragDrop, onError, onFocus events.
c.	Using java script, demonstrate the use of onKeyDown, onKeyPress, onKeyUp, onLoad, onReset, onResize, onSelect, onSubmit, onUnload events.
d.	Using java script, demonstrate the use of onMouseDown, onMouseMove, onMouseOut, onMouseOver, onMouseUp, onMove events.
e.	Using java script, demonstrate the use of onKeyDown, onKeyPress, onKeyUp, onLoad, onReset, onResize, onSelect, onSubmit, onUnload events.
f.	Demonstrate complete validation of User Registration form using appropriate fields of html and events of java script.
9.	**JSON Basics**
a.	Creating JSON
b.	Parsing JSON
c.	Persisting JSON
10.	**Working with JSON**
a.	Demonstrate use of JSON objects in array, print array on web page using document object.
b.	Read data from json file and convert it into a JavaScript object and display the data in web page using document object.
c.	Demonstrate messages formatting using JSON.

Course Outcomes:
After completion of the course, a student should be able to:

- Use basic tags such as font, link and text formatting tags.
- Use and apply Navigation, lists, images etc in web pages.
- Use User controls and embed Multimedia in web page.
- Use and apply CSS with list, links, fonts table etc. in web page.
- Use and apply Java Script for Validating User fields on web page.
- Create, parse and persist the JSON object and extract and use its values on web page.
- Use JSON object with arrays and message formatting on web page.

USDS104: Business Communication and Information Ethics

B. Sc (Data Science)		Semester – I	
Course Name: Business Communication and Information Ethics		**Course Code: USDS104**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives:

- To discuss various components of communication, explain how non-verbal communication techniques enhance communication and explain the barriers to communication.
- To discuss various business activities which are essential at workplace. To explain business communication covering the structure and layout of a letter, planning of a letter and use of language.
- To explain the use of agenda and minutes for effective functioning of any organisation.
- To direct the learners' attention to the significance of effective writing and the importance and structure of reports.
- To explain to interpret information ethics (IE) as the branch of the philosophy of information that investigates, in a broad sense, the ethical impact of Information and Communication Technologies (ICTs) on human life and society.

Unit	Details	Lectures
I	**Interpretation of Communication** Basics of communication, Non-verbal communication, Barriers to communication. **Business communication at workplace** Letter components and layout, Planning a letter, Process of letter writing.	**12**
II	**Business communication at workplace** Email communication, Memos and memo reports, Employment communication. Notice, Agenda and minutes of meeting, Brochures.	**12**
III	**Report Writing:** Effective writing, Types of business reports, Structure of reports, Gathering Information.	**12**
IV	**Report Writing:** Organisation of material, writing abstracts and summaries, Writing definitions, Visual aids, User Instruction Manual.	**12**
V	**Information Ethics** Ethics after the information revolution, what is information ethics? The method of abstraction.	**12**

Books and References:					
Sr. No.	**Title**	**Author/s**	**Publisher**	**Edition**	**Year**
1.	Professional Communication	Aruna Koneru	Tata McGraw Hill	--	2008
2.	The Ethics of Information	Luciano Floridi	Oxford University Press	--	2013
3.	Business Communication	A. C.“Buddy” Krizan, Patricia Merrier, Joyce Logan, Karen Williams	Thomson	7e	2008

Course Outcomes:

After completion of the course, a student should be able to:

- Communicate effectively in non-verbal way, draft and write effective business letters.
- Effectively carryout communication activities of business by following email etiquettes, drafting memos
- Write elegant business reports and prepare user instruction manual.
- Apply the information ethics in all walks of life.
- Become a good communicator in life.

USDS1P4: ICT Practical

B. Sc (Data Science)		Semester – I	
Course Name: ICT Practical		**Course Code: USDS1P4**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Objectives:

- To help the learners become competent and confident users of ICT who can make efficient, effective and creative use of basic application software in their everyday activities.
- To encourage the learners to become critical and reflective users of ICT who can evaluate the capabilities and limitations of the technology and of social, technical, political, ethical, organisational and economical principles associated with its use.
- To prepare the learners for the society of tomorrow by making them adaptable users of ICT who have the necessary openness and flexibility of mind to be able to adjust to future changes in the technology.
- To encourage the learners to develop the appropriate social skills that are essential for co-operative and collaborative learning based around ICT.
- To empower ICT disadvantaged learners by ensuring sufficient access for those learners who have little out-of-school opportunities to use the technology

List of Practical:	
1.	**Word Processor**: Using word processor for letters, documentation and reports with proper formatting and advanced features.
2.	**Presentation Software:** Using presentation software for preparing elegant presentations with voice and videos and giving different effects to make it more interesting and catchy.
3.	**Using Google docs and forms**
4.	**Using online collaboration and video conferencing tools**
5.	**Using screen recording and audio tools**
6.	**Using video editing tools**
7.	**Using Google Maps, Google Street view, Bing Maps**
8.	**Using Social Media (Facebook, Instagram, Twitter, Linkedin, youtube, snapchat, reddit, quora, dig, Pintrest, flipboard, Wordpress, Tumblr, Medium) for business and learning**

9.	**Using plagiarism software**
10.	**Using ICT in governance, agriculture and healthcare**

Course Outcomes:

After completion of the course, a student should be able to:

- Effective use the ICT software for different purposes in all walks of life.
- Develop the appropriate personal skills that are essential for independent learning based around ICT
- Develop their potential to their fullest by facilitating the acquisition of knowledge; by helping the learner concentrate on higher order cognitive tasks rather than on lower order routine tasks and by positively affecting the attitude of the learner towards further learning
- Facilitate better communication between the learners thereby promoting greater social understanding and harmony
- Effectively use the ICT in governance, agriculture and healthcare.

USDS105: Precalculus

B. Sc (Data Science)		Semester – I	
Course Name: Precalculus		**Course Code: USDS105**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives:

- To master the number fundamentals, equations and different types of mathematical functions.
- To review and explain the trigonometry and gain expertise trigonometric identities.
- To understand analytical trigonometry and inverse functions.
- To give the detailed knowledge about complex numbers, vectors and matrices.
- To understand the conics, sequences and series and

Unit	Details	Lectures
I	**Fundamentals:** Real Numbers, Exponents and Radicals, Algebraic Expressions, Rational Expressions, Equations, Modeling with Equations, Inequalities, Coordinate Geometry, Graphing Calculators; Solving Equations and Inequalities Graphically, Lines, Making Models Using Variation. **Functions:** What is function? Graphs of Functions, Getting Information from the Graph of a Function, Average Rate of Change of a Function, Transformations of Functions, Combining Functions, One-to-One Functions and Their Inverses. **Polynomial and Rational Functions:** Quadratic Functions and Models, Polynomial Functions and Their Graphs, Dividing Polynomials, Real Zeros of Polynomials, Complex Numbers, Complex Zeros and the Fundamental Theorem of Algebra, Rational Functions.	**12**
II	**Exponential and Logarithmic Functions:** Exponential Functions, The Natural Exponential Function, Logarithmic Functions, Laws of Logarithms, Exponential and Logarithmic Equations, Modelling with Exponential and Logarithmic Functions. **Trigonometric Functions: Unit Circle Approach:** The Unit Circle, Trigonometric Functions of Real Numbers, Trigonometric Graphs, Inverse Trigonometric Functions and Their Graphs, Modelling Harmonic Motion **Trigonometric Functions: Right Triangle Approach:** Angle Measure, Trigonometry of Right Triangles, Trigonometric Functions of Angles, Inverse Trigonometric Functions and Right Triangles, The Law of Sines, The Law of Cosines.	**12**
III	**Analytic Trigonometry:** Trigonometric Identities, Addition and Subtraction Formulas, Double-Angle, Half-Angle, and Product-Sum Formulas, Basic Trigonometric Equations, More Trigonometric Equations	**12**

	Sinusoidal Functions: A special class of functions, Sketching a sinusoidal graph, Functions not in standard sinusoidal form, sinusoidal behaviour. **Inverse Circular Functions:** Solving three equations, inverse Circular functions, applications, solving trigonometric equations	
IV	**Polar Coordinates and Parametric Equations:** Polar Coordinates, Graphs of Polar Equations, Polar Form of Complex Numbers; De Moivre's Theorem, Plane Curves and Parametric Equations **Vectors in Two and Three Dimensions:** Vectors in Two Dimensions, The Dot Product, Three-Dimensional Coordinate Geometry, Vectors in Three Dimensions, The Cross Product, Equations of Lines and Planes **Systems of Equations and Inequalities:** Systems of Linear Equations in Two Variables, Systems of Linear Equations in Several Variables, Matrices and Systems of Linear Equations, The Algebra of Matrices, Inverses of Matrices and Matrix Equations, Determinants and Cramer's Rule, Partial Fractions, Systems of Nonlinear Equations, Systems of Inequalities	**12**
V	**Conic Sections:** Parabolas, Ellipses, Hyperbolas, Shifted Conics, Rotation of Axes, Polar Equations of Conics **Sequences and Series:** Sequences and Summation Notation, Arithmetic Sequences, Geometric Sequences, Mathematics of Finance, Mathematical Induction, The Binomial Theorem **Limits: A Preview of Calculus:** Finding Limits Numerically and Graphically, Finding Limits Algebraically, Tangent Lines and Derivatives, Limits at Infinity; Limits of Sequences, Areas	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Year
1.	Precalculus–Mathematics for Calculus	James Stewart, Lothar Redlin, Saleem Watson	Cengage Learning	2013
2.	Precalculus	David H. Collingwood, K. David Prince, Matthew M. Conroy	Free Software Foundation	2011
3.	Precalculus Demystified	Rhonda Huettenmueller	Tata McGrawHill	2005
4.	Contemporary Precalculus: A Graphing Approach	Thomas W. Hungerford, Douglas J. Shaw	Thomson Higher Education	2009

Course Outcomes:

After completion of the course, a student should be able to:

- Apply the knowledge of numbers, graph and functions in real life.
- Apply trigonometry in modelling real life problems.
- Use analytic trigonometry and inverse circular functions to solve variety of problems.
- Apply complex numbers theory to different domains, use vectors and matrices to solve real life problems.
- Identify different types of conics from equations, understand sequences and series and basics of limits and derivatives.

USDS1P5: Precalculus Tutorials

B. Sc (Data Science)		**Semester – I**	
Course Name: Prrcalculus Tutorials		**Course Code: USDS1P5**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Tutorial Examination**	**2½**	**50**
	Internal	**--**	**--**

***10 Tutorials based on the Precalculus (USDS105) theory should be conducted.**

Semester II

USDS201: Probability and Distributions

B. Sc (Data Science)		Semester – II	
Course Name: Probability and Distributions		**Course Code: USDS201**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives:

- To explore about random variables and implement various distribution functions
- To familiarize with concepts of probability and learn implementation of different types of probabilities.
- Learn and implement the concept of expectation, related theorems and generating functions
- To know the concept and implementation of discrete distributions including Bernoulli, Binomial and power series distributions
- To get acquainted with theory and practical implementation of concepts of continuous distributions

Unit	Details	Lectures
I	**Theory of Probability:** Introduction, history, different terms, mathematical tools, Axiomatic approach to probability, Mathematical notation, multiplication aw and conditional probability, Bayes theorem, Geometric probability.	**12**
II	**Random Variables and Distribution Functions:** Random Variable, distribution function, discrete random variable, continuous random variable, joint probability law, transformation of one-dimensional random variable, transformation of two-dimensional random variable	**12**
III	**Mathematical Expectation and Generating Functions:** Mathematical expectation, Expectation of a Function of a Random Variable, Addition Theorem of Expectation, Multiplication Theorem of Expectation, Expectation of a Linear Combination of Random Variables, Covariance, Variance of a Linear Combination of Random Variables, Moments of Bivariate Probability Distributions, Conditional Expectation and Conditional Variance, Moment Generating Function, Cumulants, Characteristic Function, Chebychev's Inequality, Convergence in- Probability, Weak Law of Large Numbers, Borel Canteli Lemma, Probability Generating Function	**12**
IV	**Theoretical Discrete Distributions:** Introduction, Bernoulli Distribution, Binomial Distribution, Poisson Distribution, Negative Binomial Distribution, Geometric Distribution, Hypergeomeiric Distribution, Multinomial Distribution, Discrete Uniform Distribution, Power Series Distribution	**12**
V	**Theoretical Continuous Distributions:** Rectangular or Uniform Distribution, Normal Distribution, Gamma Distribution, Beta Distribution of First Kind, Beta Distribution of Second Kind, The Exponential Distribution, Laplace Double Exponential Distribution,	**12**

	Weibul Distribution, Cauchy Distribution, Central Limit Theorem, Compound Distributions, Pearson\s Distributions, Variate Transformations, Order Statistics, Truncated Distributions	

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Fundamentals of Mathematical statistics	S. C, Gupta and V. K. Kapoor	S. Chand and Sons	Tenth	2002
2.	Applied Statistics and Probability for Engineers	Douglas C. Montgomery and George C. Runger	Wiley	Sixth	2014
3.	Probability, Statistics, and Stochastic Processes	Peter Olofsson and Mikael Andersson	Wiley	Second	2012

Course Outcomes:

After completion of the course, a student should be able to use spreadsheet/excel:

- Organize, manage and present data
- Analyse statistical data graphically using frequency distributions and cumulative frequency distributions
- Use the basic probability rules, including additive and multiplicative laws, using the terms, independent and mutually exclusive events.
- Translate real-world problems into probability models.
- Derive the probability density function of transformation of random variables.
- Calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.

USDS2P1: Probability and Distributions Practical

B. Sc (Data Science)		**Semester – II**	
Course Name: Probability and Distributions Practical		**Course Code: USDS2P1**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

- To provide students with the foundations of probabilistic and statistical analysis mostly used in varied applications in engineering and science
- To practically learn the theory concepts and apply in real time

List of Practical: (Can be done in MS-Excel-or any Spreadsheet)	
1	**Introduction to Probability:**
a	Formulate and apply Bayes' Theorem Calculations for problems like The "Two-Supplier Example". [Hint: Use Prior Probabilities and Conditional Probabilities to compute Joint and Posterior Probabilities.]
b	Design spreadsheet to demonstrate the association Between Two Variables by Computing the Covariance and Correlation Coefficient. [Hint: Use COVAR and CORREL)]
2	**Discover Probability using formulas:**
a	Design and spreadsheet experiment to compute the probability using the geometric distribution formula.
b	Create a spreadsheet application to compute the Conditional Probability. Also **determine the probability that a randomly chosen event.**
3	**Random Variables and Distribution Functions:**
a	Create spreadsheet application to Compute the Expected Value, Variance, and Standard Deviation
b	Create a spreadsheet application to Compute Binomial Probabilities. [Hint Use BINOMDIST]
4	**Probability Distribution and Law:**
a	Create a spreadsheet application to Poisson Probability Distribution. [Hint: Use POISSON]
b	Create a spreadsheet application to implement joint probability law.
5	**Mathematical Expectation and Chebychev's Theorem:**
a	Create a spreadsheet application to compute the expectation of a Function of a Random Variable
b	Create a spreadsheet application to apply Chebychev's Theorem.

6	**Conditional Expectation and Generating Functions:**
a	Create a spreadsheet application to compute Conditional Expectation and Conditional Variance.
b	Create a spreadsheet application to demonstrate the use of Generating Functions
7	**Theoretical Discrete Distributions 1:**
a	Create spreadsheet application to demonstrate Bernoulli Distribution.
b	Create spreadsheet application to use excel function for computing hypergeometric probabilities.
8	**Theoretical Discrete Distributions 2:**
a	Create spreadsheet application to Calculate Binomial Distribution in Excel. [Hint: Use BINOM.DIST]
b	Create suitable spreadsheet application to work with Power Series Distribution.
9	**Theoretical Continuous Distributions 1:**
a	Create spread application for computing probabilities and z values for the standard normal distribution. [Use NORMSDIST and NORMSINV]
b	Create spread application for computing probabilities for the exponential probability distribution. [Hint: Use EXPONDIST]
10	**Theoretical Continuous Distributions 2:**
a	**Create spread application for** demonstrating Weibull Distribution to obtain a model for data sets. [Hint: Use **WEIBULL.DIST**]
b	**Create spread application for** demonstrating Pearson\s Distributions.

Course Outcomes:

After completion of the course, a student should be able to

- Use discrete and continuous probability distributions, including requirements, mean and variance, and making decisions.
- Define binomial outcomes and compute probability of getting X successes in N trials.
- Use the normal probability distribution including standard normal curve calculations of appropriate areas.
- Use different distributions to solve simple practical problems.

USDS202: Database Management

B. Sc (Data Science)		Semester – II	
Course Name: Database Management		**Course Code: USDS202**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives: This course concentrates the concept of the DBMS with respect to principles, design and implementation of DBMS. It aims to specify the functional and data requirements for a typical database application and to understand creation, manipulation and querying of data in databases.

- To understand Organizing, structuring and storing data
- Understand Database as Relational model
- To understand SQL to retrieve data and concept of redundancy
- To specify the functional and data requirements for a typical database application
- To understand creation, manipulation and querying of data in databases

Unit	Details	Lectures
I	**Introduction & DBMS Architecture:** Why Databases? Data versus Information, Introducing the Database, Role and Advantages of the DBMS, Types of Databases, Why Database Design Is Important, Evolution of File System Data Processing, Problems with File System Data Processing, Database Systems **Data Models** – Data Modeling and Data Models, The Importance of Data Models, Data Model Basic Building Blocks, Business Rules, The Evolution of Data Models, Degrees of Data Abstraction **Entity Relationship Model:** Entities, attributes, Relationships, Connectivity and Cardinality, Existence Dependence, Relationship Strength, Weak Entities, Relationship Participation, Relationship Degree, Recursive Relationships, Associative (Composite) Entities, Developing an ER Diagram, Database Design Challenges: Conflicting Goals.	**12**
II	**Advanced Data Modeling:** The Extended Entity Relationship Model, Entity Clustering, Entity Integrity: Selecting Primary Keys, Design Cases: Learning Flexible Database Design **Normalization of Database Tables:** Database Tables and Normalization, The Need for Normalization, The Normalization Process, Improving the Design, Surrogate Key Considerations, Higher-Level Normal Forms, Normalization and Database Design, Denormalization, Data-Modeling Checklist	**12**
III	**Structured Query Language (SQL):** Introduction to SQL, Basic SELECT Queries, SELECT Statement Options, FROM Clause Options, ORDER BY Clause Options, WHERE Clause Options, Aggregate Processing, Subqueries, SQL Functions, Relational Set Operators, Crafting SELECT Queries	**12**

IV	**Advanced SQL:** Data Definition Commands, Creating Table Structures, Altering Table Structures, Data Manipulation Commands, Virtual Tables: Creating a View, Sequences, Procedural SQL, Embedded SQL **Database Design:** The Information System, The Systems Development Life Cycle, The Database Life Cycle, Conceptual Design, DBMS Software Selection, Logical Design, Physical Design, Database Design Strategies, Centralized versus Decentralized Design	**12**
V	**Transaction Management and Concurrency Control:** What Is a Transaction? Concurrency Control with Locking Methods, Concurrency Control with Time Stamping Methods, Concurrency Control with Optimistic Methods, ANSI Levels of Transaction Isolation, Database Recovery Management **Database Performance Tuning and Query Optimization:** Database Performance-Tuning Concepts, Query Processing, Indexes and Query Optimization, Optimizer Choices, SQL Performance Tuning, Query Formulation, DBMS Performance Tuning, Query Optimization Examples **Database Administration and Security:** Data as a Corporate Asset, The Need for a Database and Its Role in an Organization, Introduction of a Database: Special Considerations, The Evolution of Database Administration, The Database Environment's Human Component, Security, Database Administration Tools, Developing a Data Administration Strategy, The DBA's Role in the Cloud, The DBA at Work: Using Oracle for Database Administration	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Fundamentals of Database Systems	Elmasri Ramez and Navathe Shamkant B,	Pearson Education	6th Edition,	2010.
2.	Database System Concepts	Silberschatz, Korth, Sudarshan,	McGraw Hill,	5 Edition,	2006.
3.	Database Management Systems,	Ramakrishnam, Gehrke,	McGraw-Hill,		2007
4.	Murach's MySQL	Joel Murach,	Murach,		2012

Course Outcomes:

After completion of the course, a student should be able to:

- Students should be able to evaluate business information problem and find the requirements of a problem in terms of data.
- Students should be able to draw database design in logical structure and can identify the entities which exist in a system
- Students should be able to construct normalized database and functional dependencies between attributes and relational algebra queries
- Students should be able to design the database schema with the use of appropriate data types for storage of data in database.
- Students should be able to create, manipulate, query and back up the databases with features of SQL.

USDS2P2: Database Management Practical

B. Sc (Data Science)		Semester – II	
Course Name: Database Management Practical		**Course Code: USDS2P2**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives: Provides the hands on the SQL language for retrieving the data from the database in different scenarios. The primary focus is to understand relational database concepts and design by using SQL.

- Identify entities and its relationship with relational model structure.
- To understand relational database using SQL and constraints implementation using create table query
- To Understand DML operations and backing of database
- To understand how to retrieve data from database and learn how to retrieve single value after performing calculations on group of values
- To understand built-in functions to perform operations on data
- To understand how to fetch data from two or more tables, which is joined to appear as single set of data
- To understand nested and larger query as advanced fetching of data
- To understand concept of virtual table.
- To understand how to control user access in a database.

List of Practical: (Can be done in Oracle / SQL Server / MySQL)	
1.	**For given scenario** Draw E-R diagram and convert entities and relationships to table.
2.	**Write SQL query for given problem statement:**
a.	Viewing all databases
b.	Creating a Database
c.	Viewing all Tables in a Database
3.	**Perform the following Operations:**
a.	Creating Tables (With and Without Constraints)
b.	Inserting/Updating/Deleting Records in a Table
c.	Saving (Commit) and Undoing (rollback)
4.	**Perform the following Operations:**
a.	Altering a Table
b.	Dropping/Truncating/Renaming Tables
c.	Backing up / Restoring a Database
5.	**Perform following:**
a.	Simple Queries with Where Operators
b.	Where with Keywords and Logical Operators

c.	Simple Queries with Aggregate functions
d.	Queries with Aggregate functions (group by and having clause)
6.	**Perform Queries involving:**
a.	Date Functions
b.	String Functions
c.	Math Functions
7.	**Retrieving Data from Multiple Table:**
a.	Joining Tables (InnerJoins, Outer-Joins)
b.	Aliases for Table Names
8.	**Subqueries:**
a.	With IN clause
b.	With EXISTS clause
c.	Handling NULL
9.	**Views:**
a.	Creating Views
b.	Dropping Views
c.	Selecting from view
10.	**DCL statements:**
a.	Granting and revoking permissions

Course Outcomes:
After completion of the course, a student should be able to:

- Students able to draw relationship diagram.
- Students able to perform various operations such as insert, update delete and retrieve data from database using SQL queries.
- Students able to perform alteration in tables and can restore and take backup of the database.
- Students able to perform operations using simple SQL Queries to fetch data and learns various aggregate functions to get single value.
- Students able to perform SQL Queries using JOIN keyword for joining two or more tables.
- Students able to perform nested queries using in, exists operators.
- Students able to create new table by joining one or more tables and learn how to hide attribute from end user.
- Students able to restrict the user from accessing data in database.

USDS203: R Programming

B. Sc (Data Science)		Semester – II	
Course Name: R Programming		**Course Code: USDS203**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives:

- Master the use of the R interactive environment and expanding by installing R packages
- Read Structured Data into R from various sources
- Understand the different data types and data structures in R
- Manipulate strings, dates in R
- Understand basic regular expressions in R
- Understand base R graphics
- Focus on GGplot2 graphics for R and be familiar with trellis (lattice) graphics.

Unit	Details	Lectures
I	**Getting started with R:** R Software: Obtaining R and RStudio, First R Encounter, Getting started: R as a big calculator, Assignment, Basic operators, Help with functions and features, Quiz, A few important points on R Working with R **R Interfaces - Using R and RStudio**: R Software, Obtaining R and RStudio, The default R interface, RStudio Interface, Example Datasets in R, R Packages, Installing new R libraries, Customizing R Start-up **Objects in R:** Using ls and rm to managing R Objects, Types of R objects, Attributes of R Objects, Creating and accessing objects, Modifying elements, Quick recap, Exercise **Reading and writing data to and from R:** Importing and reading text files data into RStudio, Importing data using R command read.table(), Exercise, Importing text files Using scan(), Parsing each line – Readlines, Writing Data table from R, Exercise, Importaing Data from other Software, Reading data from Excel into R, Import/Export from other statistical software, From a Database Connection, Sampling and Creating simulated data, Exercise	**12**
II	**Introduction to programming and writing Functions in R**: Why do we want to write functions?, Conditional statements (if, ifelse, switch), Repetitive execution: For and While loops, The Apply Functions, Exercise, Functions for parsing text, Programming in R: More advanced, Viewing Code of functions from R packages, Exercise-Parsing Real Data - World Population Data from Wikipedia, Writing functions: more technical discussion -Scoping, Options for Running memory or CPU intensive jobs in R, Efficient R coding **Introduction to graphics in R:** The R function plot(), Exercise, Customize plot with low-level plotting commands, Default parameters – par, Interacting with graphics, Saving plots, Useful Graphics Resources	**12**

III	**Advanced Graphics:** Advanced plotting using Trellis; ggplots2, Lattice, Examples that Present Panels of Scatterplots using xyplot(), Simple use of xyplot **Importing Data- readr:** Functions for Reading Data, File Headers, Column Types, String-based Column Type Specification, Function-based Column Type Specification Parsing Time and Dates, Space-separated Columns, Functions for Writing Data **Representing Tables – tibble:** Creating Tibbles, Indexing Tibbles	**12**
IV	**Reformatting Tables – tidyr:** Tidy Data, Gather and Spread, Complex Column Encodings, Expanding, Crossing, and Completing, Missing Values, Nesting Data **Pipelines – magrittr** : The Problem with Pipelines, Pipeline Notation, Pipelines and Function Arguments, Function Composition, Other Pipe Operations **Working with Strings – stringr:** Counting String Patterns, Splitting Strings, Capitalizing Strings, Wrapping, Padding, and Trimming, Detecting Substrings, Extracting Substrings, Transforming Strings **Working with Factors – forcats**: Creating Factors, Concatenation, Projection, Adding Levels, Reorder Levels	**12**
V	**Manipulating Data Frames – dplyr**: Selecting Columns, Filter, Sorting, Modifying Data Frames, Grouping and Summarizing, Joining Tables, Income in Fictional Countries **Working with Dates – lubridate**: Time Points, Time Zones, Time Intervals	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edi^{n}	Year
1.	Introduction to Programming and Statistical Modelling in R	Aedin Culhane	HARVARD SCHOOL	1st	2013
2.	R Data Science Quick Reference	Thomas Mailund	Apress	1st	2019
3.	THE BOOK OF R	Tilman M. Davies	No starch press	1st	2016
4.	Practical Data Science with R	NINA ZUMEL JOHN MOUNT	MANNING		2014
5.	Beginning Data Science in R	Thomas Mailund	Apress		2017

Course Outcomes:
After completion of the course, a student should be able to:

- To use R Studio and explore the features for R programming.
- To use R functions and graphics with in R programming for solving problems.
- To work with advanced graphics of R, import and use the data and represent the data into tables.
- To apply formatting on table, use Pipelines in application and use strings, factors in R programme.
- To manipulating Data Frames and make use of Dates in R application.

USDS2P3: R Programming Practical

B. Sc (Data Science)		Semester – II	
Course Name: R Programming Practical		**Course Code: USDS2P3**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Practical Examination**	**2½**	**50**
	Internal	**--**	**--**

Course Objectives:

- To learn implementing expressions in R
- To learn and implement control flow using loops
- To explore and use basic data structures in R

List of Practical:	
1.	**Introduction to R Programming Elements**
a.	Write an R Program to implement expressions, assignment and decision making
b.	Write an R Program to design and implement loops.
c.	Write a R program to demonstrate the use of essential data structures in R [Hint: Vectors, Matrix, Arrays]
2.	**Using List, Data Frames and Functions in R**
a.	Write an R program to manage data and exhibit operations on it using List data structure
b.	Write an R program to manage data and exhibit operations on it using Data Frames
c.	Write an R program to demonstrate the use of : i. user-defined functions ii. built-in numeric function, character functions etc.
3.	**Implementing Strings in R**
a.	Write an R program to store and access string in R objects(vectors, matrix, arrays, data frames, and lists)
b.	Write an R program to demonstrate use of various string manipulation functions. [Hint: paste(), print(), noquote(),format(), cat(), toString(), sprint()]
4.	**Performing Statistics with R-I**
a.	Write an R program to apply built-in statistical functions. [Hint: mean, median, standard deviation and others]
b.	Write an R program to demonstrate Linear and Multiple Regression analysis.
5.	**Performing Statistics with R-II**
a.	Write an R program to implement i. Normal Distribution. [Hint: dnorm(), pnorm(), qnorm(), rnorm()] ii. Binomial Distribution: [Hint: dbinom(), pbinom(),qbinom(),rbinom()]
b.	Write an R program to perform time-series analysis for the given data.
6.	**Data Visualization and Analysis**
a.	Write an R program to learn about Tabulation and related concepts [Hint: Contingency Tables, Selection of Parts, Conversion, Complex Tables, Cross Tabulation]

b.	Write an R program to demonstrate various ways of performing Graphical analysis.[Hint: Plots, Special Plots, Storing Graphics]
7.	**Object Oriented Programming in R**
a.	Write an R program to demonstrate OOP concepts, the construction and use of S3 and S4 classes
b.	Write an R program to define reference class and operations on them.
8.	**Data Interfaces in R**
a.	Write an R program to demonstrate data interface with CSV files [Hint: creating data for CSV, analyzing, writing CSV files]
b.	Write an R program to work with spreadsheet (Excel) programs. [Hint: installing, loading, verifying, creating data for xlsx file]
c.	Write an R program to manage data using XML files. [Develop data interface for maintaining Employee Information]
d.	Write an R program to demonstrate working with RMySQL Package
9.	**Handling Errors in R**
a.	Write an R program to demonstrate various error messages in R Programming
b.	Write an R program to implement Error Handling in R [Hint: warning(),stop(),try(), tryCatch(), CallingHandlers()]
10.	**Measuring Performance**
a.	Write R program to measure the performance with the help of bult-in function like mocrobechmark().

Course Outcomes:

After completion of the course, a student should be able to:

- Use expression for decision making, get Knowledge of types of loops and loop control statements and able to create, access and manipulate essential data structures.
- Develop skills to manage multiple data through various options available in R.
- Use R object, simple statistical function for data analysis and Differentiate between linear and multiple regression analysis.
- Get the knowledge about various function for Normal and Binomial Distribution and able to implement and analyse data using different time intervals and multiple time series
- To create Tabulation for presentation of data and operation of them and get the knowledge about various ways of plotting data and saving them
- Get the knowledge of implementing class concept in R and able to define reference class, create objects, access and modify fields
- Get the knowledge about developing data interface for storing data in CSV files also knowledge about working with Excel files and able to interface with XML files and able to interface with MySQL, query and manipulate data in it.
- Get the insight into errors related to name errors, control structure error, connection errors etc., and able to identify and handle errors in R code
- To analyze performance of the R code.

USDS204: Environmental Science

B. Sc (Data Science)		Semester – II	
Course Name: Environmental Science		**Course Code: USDS204**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives:

- To learn and sensitize learners to their environment
- To know about natural resources, ecology and ecosystem
- To learn insights of biodiversity, pollution and its impact
- Explore about Social Issues and the Environment
- To learn about Environment Management and sustainable development

Unit	Details	Lectures
I	**Introduction to Environmental Studies** Importance of Environmental Education, Environmental Literacy, Environmental Engineering, Environmentalism, Components of Environment and their Interactions, Man and the Biosphere, Impacts of Development on Environment **Natural Resources** Forest Resources, Dams, Water Resources, Food Resources Energy Resources, Land Resources	**12**
II	**Ecology** Ecosystem, Ecosystem-Anthroposystem Comparison, Biome and Ecosystem, Energy Flow through the Ecosystem, Ecological Succession, Food Chains and Webs, Ecological Pyramids, Biological Magnification or Biomagnification, Human versus Natural Food Chains, Biogeochemical Cycles, The Water Cycle (Hydrologic Cycle), Carbon Cycle, Oxygen Cycle, , Nitrogen Cycle, Forest Ecosystems, , Grassland Ecosystems, Aquatic Ecosystems **Biodiversity** Genetic Diversity, Species Diversity, Ecosystem Diversity, Value of Biodiversity, Value of Genes, Biopiracy, Biogeographical Classification of India, India as a Mega Diverse Nation, Endemic Species of India, Threats to Biodiversity, Hotspots of Biodiversity, Endangered Species, Conservation of Biodiversity, Genetic Engineering and Biodiversity	**12**
III	**Environmental Pollution** Air Pollution, Water Pollution, Soil Pollution, Marine Pollution, Noise Pollution, Thermal Pollution, Solid Waste Management, Hazardous Waste Management, Pollution Prevention, Disaster Management **Human Population and the Environment** Population Growth, Human Rights, Value Education, HIV/AIDS, Environment and Human Health, Family Welfare Programmes, Women	**12**

	and Child Welfare, Role of Information Technology in Environment and Human Health	
IV	**Social Issues and the Environment** From Unsustainable to Sustainable Development, Urban Problems Related to Energy, Water Conservation, Watershed Management, Resettlement and Rehabilitation, Environmental Ethics, Acid Rain, Ozone Layer Depletion, Greenhouse Effect, Global Warming and Climate Change, Pollution Control Boards and Control Pollution Acts in India, Nuclear Hazards and Accidents, Environmental Impact Assessment, Risk Management, Precautionary Principle, Polluter-Pays Principle, The Beneficiary-Pays Principle, Role of Non-Government Organizations, ISO 14000 Series of Environmental Management Standards, Economy and Environment	**12**
V	**Environmental Management** Environmental Impact Assessment, Methodology, Waste as a Resource,Environmental Laws, Requirements of a Contract, Environmental Legislations, Powers and Functions of Pollution Control Boards, Case Studies, Environmental Management Plan, Environmental Audit, Policies for Quality Improvement, Problems, Policy **Sustainable Development** Ethics, Laws of Nature, Progress, Environmental Stress, Sustainability, Self-purification and Regeneration, Action Plan, Computerization and Information Technology	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edition	Year
1.	Environmental Studies	Benny Joseph	McGrawHill	3rd	2017
2.	Principles of Environmental Science and Engineering	P. Venugopala Rao	PHI Learning	6th	2014
3.	Introduction to Environmental Engineering	Gilbert M Master	Pearson	3rd	2015
4.	Environmental Ethics: A Very Short Introduction	Robin Attfield	Oxford	1st	2019
5.	Fundamental Concept in Environmental Studies	D.D. Mishra	S. Chand	Revised Edition	2010

Course Outcomes:

After completion of the course, a student should be able to:

- Ability to recognise explain important of environment and its resources
- Knowledge about insights of ecology and biodiversity
- Recognise the cause and effects of environmental pollution and other social issues
- Knowledge about population and its impact on environment
- Insight into environment management and sustainable development.

USDS2P4: Case Studies on Environment

B. Sc (Data Science)		Semester – II	
Course Name: Case Studies on Environment		Course Code: USDS2P4	
Periods per week (1 Period is 50 minutes)		3	
Credits		2	
		Hours	Marks
Evaluation System	Tutorial Examination	2½	50
	Internal	--	--

*** 10 Case studies related to Environmental Science (USDS204) should be conducted.**

USDS205: Calculus

B. Sc (Data Science)		Semester – II	
Course Name: Calculus		**Course Code: USDS205**	
Periods per week (1 Period is 50 minutes)		**5**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Theory Examination**	**2½**	**75**
	Internal	**--**	**25**

Course Objectives:

- To give the insight of calculus starting with continuity and derivatives.
- To gain proficiency in integration.
- To apply derivatives and integration to various domains.
- To use polar coordinates for different conics and understand multiple integrals.
- To understand partial differentiation and differential equations.

Unit	Details	Lectures
I	**Continuity and Derivatives:** Limits at Infinity; Horizontal Asymptotes, Derivatives and Rates of Change, The Derivative as a Function. **Differentiation rules:** Derivatives of Polynomials and Exponential Functions, The Product and Quotient Rules, The Chain Rule, Implicit Differentiation, Derivatives of Logarithmic Functions, Rates of Change in the Natural and Social Sciences, Exponential Growth and Decay, Related Rates, Linear Approximations and Differentials, Hyperbolic Functions.	**12**
II	**Integrals:** Areas and distances, The Definite Integral, The Fundamental Theorem of Calculus, Indefinite Integrals and the Net Change Theorem, The Substitution Rule, Integration by Parts, Trigonometric Integrals, Trigonometric Substitution, Integration of Rational Functions by Partial Fractions, Strategy for Integration, Integration Using Tables and Computer Algebra Systems, Approximate Integration, Improper Integrals.	**12**
III	**Applications of differentiation:** Maximum and Minimum Values, The Mean Value Theorem, Derivatives and Shape of a Graph, Indeterminate Forms and L'Hospital's Rule, Curve Sketching, Graphing with Calculus *and* Calculators, Optimization Problems, Newton's Method. **Applications of Integration:** Areas between Curves, Volumes, Volumes by Cylindrical Shells, Work, Average Value of a Function, Arc Length, Area of a Surface of Revolution, Applications to Physics and Engineering, Applications to Economics and Biology, Probability.	**12**
IV	**Parametric Equations and Polar Coordinates:** Curves Defined by Parametric Equations, Calculus with Parametric Curves, Polar Coordinates, Areas and Lengths in Polar Coordinates, Conic Sections, Conic Sections in Polar Coordinates. **Multiple Integrals:** Double Integrals over Rectangles, Iterated Integrals, Double Integrals over General Regions, Double Integrals in Polar Coordinates, Applications of Double Integrals, Triple Integrals,	**12**

	Triple Integrals in Cylindrical Coordinates, Triple Integrals in Spherical Coordinates, Change of Variables in Multiple Integrals	
V	**Partial Derivatives:** Functions of Several Variables, Limits and Continuity, Partial Derivatives, Tangent Planes and Linear Approximations, The Chain Rule, Maximum and Minimum Values, Lagrange Multipliers. **Differential Equations:** Modelling with Differential Equations, Direction Fields and Euler's Method, Separable Equations, Models for Population Growth, Linear Equations, Predator-Prey Systems.	**12**

Books and References:

Sr. No.	Title	Author/s	Publisher	Edi^{n}	Year
1.	Calculus–Early Transcendentals	James Stewart	Thomson	6th	2008
2.	Calculus and Analytical Geometry	George B. Thomas Jr., Ross L. Finney Maurice D. Weir	Addision Wesley Publishing Company	--	1998
3.	Schaum's 3000 Solved Problems in Calculus	Elliot Mendelson	Tata McGraw Hill	--	1988
4.	The Advanced Calculus Problem Solver	Staff of Research & Education Association	Research & Education Association	---	2007
5.	Calculus Made easy	Silvanus P. Thompson, Martin Gardner	PALGRAVE		1998

Course Outcomes:

After completion of the course, a student should be able to:

- Quickly and easily find the derivative of a function.
- Perform integration of functions with ease.
- Apply the knowledge of derivatives and integration to different domains and obtain the results.
- Apply the knowledge of multiple integrals and polar coordinates to solve real life problems with ease.
- Use partial derivatives and differential equations to solve variety of problems.

USDS2P5: Calculus Tutorials

B. Sc (Data Science)		**Semester – II**	
Course Name: Calculus Tutorials		**Course Code: USDS2P5**	
Periods per week (1 Period is 50 minutes)		**3**	
Credits		**2**	
		Hours	**Marks**
Evaluation System	**Tutorial Examination**	**2½**	**50**
	Internal	**--**	**--**

*** 10 tutorials based on Calculus (USDS205) should be conducted.**

Evaluation Scheme

1. Internal Evaluation (25 Marks).

i. Test: 1 Class test of 20 marks. (Can be taken online)

Q	Attempt *any four* of the following:	20
a.		
b.		
c.		
d.		
e.		
f.		

ii. 5 marks: Active participation in the class, overall conduct, attendance.

2. External Examination: (75 marks)

	All questions are compulsory	
Q1	(Based on Unit 1) Attempt *any three* of the following:	15
a.		
b.		
c.		
d.		
e.		
f.		
Q2	(Based on Unit 2) Attempt *any three* of the following:	15
Q3	(Based on Unit 3) Attempt *any three* of the following:	15
Q4	(Based on Unit 4) Attempt *any three* of the following:	15
Q5	(Based on Unit 5) Attempt *any three* of the following:	15

3. Practical / Tutorial Exam: 50 marks

A Certified copy journal is essential to appear for the practical examination.

1.	Practical Question 1	20
2.	Practical Question 2	20
3.	Journal	5
4.	Viva Voce	5

OR

1.	Practical Question	40
2.	Journal	5
3.	Viva Voce	5

For Tutorial Exam, a paper of 50 marks to be solved.

AC : _10 May, 2019___ Item No. 4.20

UNIVERSITY OF MUMBAI

Syllabus for Approval

Date : April 26, 2019. **Signature :**

Sr. No.	Heading	Particulars

CHOICE BASED CREDIT SYSTEM

BA in Multimedia and Mass Communication (BAMMC) (Choice based) Semester - I & II revised Syllabus to be sanctioned & implemented from 2019-20.

PROGRAM OUTCOME

1. The program considers media industries and their relationship to culture and society, and the understanding of how communication works. The program emphasizes the development of critical thinking, professional writing skills and effective oral communication.
2. The Communication and Media Studies major prepares students for a wide variety of careers in business and industry, advertising, public relations and journalism, or advanced study

3. This program will equip the learners with professional skills essential for making career in Entertainment industry, Cinema, Television, OTT Platforms, social media platforms etc.

4. Students would demonstrate the ability to apply rhetorical principles in a variety of creative, cinematic, organizational, professional and journalistic venues.

5. Knowledge, skills, and values that prepare them for future careers in our interconnected society, whether in mass media or advanced study

6. Learners would develop a global awareness of political, social and corporate issues influenced by communication sensitivity and skills.

7. Learners will understand mass media as a system of interrelated forces, including historical foundations, technological advances, economic dynamics, regulatory constraints, and ethical concerns.

8. This programme will also give them an improved sense of self-confidence and self-efficacy and an awareness of their responsibilities as professionals in their field

9. Learners will be able to create and design emerging media products, including blogs, digital audio, digital video, social media, digital photography, and multimedia.

10. They will be better equipped to grasp the complex relationship between communication/media theories and a diverse set of individual, social, and professional practices.

11. Learners will understand the underlying philosophical assumptions of, and be able to apply, communication research methods to address a range of media texts and audiences, production and technological practices, and relevant social issues.

12. Learners will comprehend the foundations, process, and practices of writing for and about the media, and demonstrate proficiency in writing across platforms.

13. Learners will be able to conceptualize, design, and produce one or more works in media based on effective principles and practices of media aesthetics for a target audience.

14. Learners will acquire the knowledge and skills required to pursue a career in the specialization of their choice.

Semester I

CHOICE BASED CREDIT SYSTEM

BA in Multimedia and Mass Communication (BAMMC) (Choice based)

Semester –III, IV, V and VI revised Syllabus to be sanctioned and implemented from June 2020-21 in progressive manner.

PROGRAM OUTCOME

1. The program considers media industries and their relationship to culture and society, and the understanding of how communication works. The program emphasizes the development of critical thinking, professional writing skills and effective oral communication.
2. The Communication and Media Studies major prepares students for a wide variety of careers in business and industry, advertising, public relations and journalism, or advanced study
3. This program will equip the learners with professional skills essential for making career in Entertainment industry, Cinema, Television, OTT Platforms, social media platforms etc.
4. Students would demonstrate the ability to apply rhetorical principles in a variety of creative, cinematic, organizational, professional and journalistic venues.
5. Knowledge, skills, and values that prepare them for future careers in our interconnected society, whether in mass media or advanced study
6. Learners would develop a global awareness of political, social and corporate issues influenced by communication sensitivity and skills.
7. Learners will understand mass media as a system of interrelated forces, including historical foundations, technological advances, economic dynamics, regulatory constraints, and ethical concerns.
8. This programme will also give them an improved sense of self-confidence and self-efficacy and an awareness of their responsibilities as professionals in their field
9. Learners will be able to create and design emerging media products, including blogs, digital audio, digital video, social media, digital photography, and multimedia.
10. They will be better equipped to grasp the complex relationship between communication/media theories and a diverse set of individual, social, and professional practices.
11. Learners will understand the underlying philosophical assumptions of, and be able to apply, communication research methods to address a range of media texts and audiences, production and technological practices, and relevant social issues.
12. Learners will comprehend the foundations, process, and practices of writing for and about the media, and demonstrate proficiency in writing across platforms.
13. Learners will be able to conceptualize, design, and produce one or more works in media based on effective principles and practices of media aesthetics for a target audience.
14. Learners will acquire the knowledge and skills required to pursue a career in the specialization of their choice.

Paper	**ELECTIVE 01 (AEEC-4)**
Course Code	**BAMMC MGV-3014**
Total Marks	**100 (75 : 25)**
Number of Lectures	**48**

Brief:

The new generation is energetic and seeks energy in every experience. We see animation and visual effects in almost every television program including news and financial market channels. Sports channels are foremost in using various visual effects for updates as well as keeping energy intact. The future is around new experience of video viewing and the media learners will be part of future shape of media.

Course Outcome;

This course is designed to introduce the student to the art and science of visual effects for broadcast and digital filmmaking. Topics covered include the visual effects workflow, video technology, image processing, creating mattes, tracking, and compositing.

1. Understand the difference between a visual effect and a special effect.
2. Determine when to choose whether to create a visual effect or a special effect and determine when the two techniques can work together.
3. Understand basic image processing techniques.
4. Pull mattes using various image processing techniques including Chroma-keying
5. Track motion data using various techniques.
6. Describe and use the compositing process and identify major applications used in industry. Develop a visual effects pipeline for integration in the filmmaking process.

COURSE CODE	COURSE NAME and DETAILES SYLLABUS	
BAMMC MGV-3014	MOTION GRAPHICS and VISUAL EFFECTS	

Modules		Details	Lectures
01	Introduction to Adobe After Effects		10
	1. The interface	How to interact with interface and location of tools and panels. How to set up a project file and import media.	*02*
	2. Timeline	Understanding the timeline and its channels. Using channel settings to control media on timeline.	*02*
	3. Tools	Understanding tools and how they are used and applied.	*01*
	4. Panels	Understanding each individual panel and how they are used.	*01*
	5. Effects	Understanding the various effects, their usage and attributes. Introducing color correction. Understanding particle effects. Using sound Audio Effects.	*04*
02	Introduction to Adobe Premiere		08
	1. Files	Understanding files and formats. Importing files (video/audio/image).	*01*
	2. Timeline	Working on the time and layers.	*02*
	3. Editing	Tools required for editing the video. Working with audio layers separately.	*02*
	4. Key-frames and effects	Adding key-frames and using effects on layers.	*02*

	5. Rendering	Exporting files in various formats.	*01*
03	**Understanding VFX Elements**		**10**
	1. Layers	Understanding usage of layers.	*02*
	2. Masks	Understanding the importance of elements used to create masked effects.	*02*
	3. Render	Understanding render queue and setting up batch rendering while going through all render setups and outputs (formats) available.	*02*
	4. Composing	Working with media sequences. Understanding scene technique. One shot technique and cuts and transition techniques.	*02*
	5. Blend Modes	Working with various blend modes.	*02*
04	**Motion graphics and Colours**		**10**
	1. Kinematic Typography	Understanding usage of Kinematics in Typography.	*01*
	2. Content creation	Usage with simple characters to words or lines of content.	*02*
	3. Key framing	Importance of Key Frames. Understanding Tilting.	*02*
	4. Logo animation	Animating logos for visual impact and simulate still icons to communicate better.	*03*
	5. Colour	color Grading and color correction using after effects.	*02*
05	**Camera and Lights**		**10**
	1. Camera types	Types of camera and their usages.	*02*
	2. Shutter and aperture	Understanding shutter and aperture with lights.	*02*
	3. Lights	Types of lights and their usages.	*02*
	4. Effects of lights	Using camera and lights to simulate a 3D experience.	*02*
	5. Objects	Creating Objects and their usage with camera and lights.	*02*
Total			**48**

1. Mr. Arvind Parulekar: (Convener)
2. Mr. Neil Maheshwari: (Subject Expert)
3. Prof. Izaz Ansari (Subject Expert)
4. Mr. Ashish Gandhre: (Industry Expert)

Internal Exercise:

The objective of internal exercise is to help the learners identify opportunities in visual effects in the broadcast and film making industries.

Sr. No.	Project Assignment	Reason/Justification
01	Animated Logos and Kinematic Typography	Creating Indents for Television, Movies or Online Videos. This project creates understanding of animation and how kinematics works with the elements. Allows deeper understanding of communication with simple objects. (Logos and Text)

302

Program	**BAMMC**
Year	**SYBAMMC**
Semester	**III**
Course:	**CORPORATE COMMUNICATION and PUBLIC RELATIONS**
Paper	**02 (DSC-C1) CORE V**
Course Code	**BAMMC CCPR-302**
Total Marks	**100 (75 : 25)**
Number of Lectures	**48**

Course Outcome:

1. To provide the students with basic understanding of the concepts of corporate communication and public relations.
2. To introduce the various elements of corporate communication and consider their roles in managing media organizations.
3. To examine how various elements of corporate communication must be coordinated to communicate effectively in today's competitive world.
4. To develop critical understanding of the different practices associated with corporate communication with the latest trends and social media tools.

COUESE CODE	COURSE NAME	
BAMMC CCPR-302	CORPORATE COMMUNICATION and PUBLIC RELATIONS	
Syllabus		
Module	**Details**	**Lectures**
1	**Foundation of Corporate Communication**	**14**
	1. Introduction to Corporate Communication	Meaning , Need and Scope of Corporate Communication towards Indian Media Scenario — *02*
	2. Keys concept in Corporate Communication	*Corporate Identity:* Meaning and Features, *Corporate Image:* Meaning, Factors influencing Corporate Image, Corporate Image creation sustainability and restoration (Online and traditional) *Corporate Reputation and Management:* Meaning, Advantages of Good Corporate Reputation. — *06*
	3. Ethics and Law in Corporate Communication	Importance of Ethics in Corporate Communication, Professional Code of Ethics, Mass Media Laws: Defamation, Invasion of Privacy, Copyright Act, Cyber-crime and RTI. — *06*

2	**Understanding Public Relations**		**16**
	1.Introduction and Growth of Public Relations- Indian Scenario	Meaning, Definitions, Scope, Objective and Significance of Public Relation in Business. Tracing Growth of Public Relations, in India, Internal and External PR. Reasons for Emerging International Public Relations, Mergers/Collaborations/Joint Ventures between Indian and international public relations agencies, advantages and disadvantages of Public Relations.	*06*
	2.Role of Public Relations in various sectors	Healthcare, Entertainment, Banking and Finance, Real estate, Fashion and Lifestyle and Service.	*04*
	3.Theories and Tools of Public Relations	Grunting's (4 models),Pseudo-events, Publicity , Propaganda, Persuasion, Situational theory , Diffusion theory and various tools of Public Relations (Press conference, Press release , Media Dockets, Advertorials, Sponsorship.	*06*
3	**Corporate Communication and Public Relation's range of functions**		**10**
	1.Media Relations	Introduction, Importance of Media Relations, Sources of Media Information, Building Effective Media Relations, Principles of Good Media Relations , Media analysis and evaluation	*03*
	2.Employee Communication	Introduction, Sources of Employee Communications, Organizing Employee Communications, Benefits of Good Employee Communications, Steps in Implementing An Effective Employee Communications Programme, Role of Management in Employee Communications	*03*
	3.Crisis Communication	Introduction, Impact of Crisis, Role of Communication in Crisis, Guidelines for Handling Crisis, Trust Building, Case studies such as Nestle Maggie, Indigo, Cadbury Dairy Milk, Niira Radia, Tylenol etc	*04*
4	**Latest Trends, Tools and Technology Role of Social media in Corporate Communication and Public Relations**		**08**
	1.Emerging trends, tools and technology	Introduction, Today's Communication Technology, Importance of Technology to Corporate Communication, pros and cons of technology used in Corporate Communication.	*02*
	2.New Media Tools	Website, Online press release, Article marketing, Online newsletters, Blogs	*02*
	3.Role of Social Media	Role of Social media as Influential marketing, Identifying brand threats, influence journalist's stories, swiftly react to negative press, Viral marketing, engaging and interacting, storytelling, E- Public Relations and its importance.	*04*
Total Lectures			**48**

BOS Syllabus Sub- Committee Members		
1. Prof. Shobha Venkatesh (Convener) 2. Dr. Hanif Lakdawala (Course Expert) 3. Dr. Rinkesh Chheda (Course Expert) 4. Ms. Amrita Chohan (Industry Expert)		
Internal evaluation methodology		**25 Marks**
Sr no.	**Project/Assignment**	
1.	Presentation various topics learned	
2.	Writing Press release	
3.	Mock Press conference	
References:		
1. Public Relations Ethics, Philip Seib and Kathy Fitzpatrick 2. Public Relations- The realities of PR by Newsom, Turk, Kruckleberg 3. Principals of Public Relations-C.S Rayudu and K.R. Balan 4. Paper	**03 (DSC-C2) CORE VI**
Course Code	**BAMMC MS-303**
Total Marks	**100 (75 : 25)**
Number of Lectures	**48**

COURSE OUTCOME

1. **To provide an understanding of media theories**
2. **To understand the relationship of media with culture and society**
3. **To understand Media Studies in the context of trends in Global Media**

COURSE CODE	**COURSE NAME**
BAMMC MS-303	**MEDIA STUDIES**

Syllabus

Module	Topics	Details	Lectures
		Introduction	
1	**Eras, relevance, connection to culture, Literature**	• Era of Mass Society and culture – till 1965 • Normative theories-Social Responsibility Theory • Development media theory	**10**

		Media Theories	
2	**Propaganda and propaganda theory-**	• Origin and meaning of Propaganda • Hypodermic Needle/Magic bullet • Harold Lasswell	**14**
	Scientific perspectives to limited perspectives	• Paul Lazarsfeld-Two step flow • Carl Hovland and Attitude Change theory	
		Cultural Perspectives	
3	**Various schools**	• Toronto school (McLuhan) • Schools- Birmingham(Stuart Hall) • Frankfurt- Theodor Adorno and Max Horkheimer • Raymond Williams- Technological Determinism • Harold Innis- Bias of Communication	**12**
	Media and Identity	Feminism /Racism/ethnicity etc Caste/class/tribal/queer representations (India examples)	
		Media Effects	
4	**Theories on media Effects**	• Media effects and behavior • Media effect theories and the argument against media effect theories • Agenda Setting Theory • Cultivation Theory • Politics and Media studies-media bias, media decency, media consolidation.	**06**
		New Media and The Age Of Internet	
5	**Meaning making Perspectives**	• New media • Henry Jenkins-Participatory culture • Internet as Public sphere-Habermas to Twitter • McLuhan 's concept of Global village in the age of Netflix • Uses and Gratification in the age of Internet	**06**

BOS Syllabus Committee Members

1. Prof. Rani D'souza (Convener)
2. Prof. Neena Sharma
3. Prof. Bincy Koshy
4. Prof. Mithun Pillai

Internal Evaluation Methodology **25 MARKS**

1. Continuous assignments
2. Oral and practical presentations
3. Group/individual projects
4. Open book test
5. Group interactions
6. Quiz

References:

5. Media and cultural studies-Meenakshi Gigi Durham and Douglas M Kellner
6. Social media: a critical introduction- Christian Fuchs

304

Program	**BAMMC**
Year	**SY BAMMC**
Semester	**III**
Course:	**Introduction To Photography**
Paper	**04 (DSC-C3) CORE VII**
Course Code	**BAMMC IP-304**
Total Marks	**100 (75:25)**
Number of Lectures	**48**

Brief:

The world cannot be imagined without images. Image is inseparable part of media. "Picture speaks thousand words." The course is designed to explore "how to make picture speak thousand words.

Learning Outcome: **Lectures: 48**

1. To introduce to media learner the ability of image into effective communication.
2. To help the learner understand that media photography is a language of visual communication and is far beyond just point and shoot fun moments.
3. To practice how picture speaks thousand words by enlightening the learner on how.
4. To develop the base of visualisation among learners in using pictures in practical projects.
5. To help learner work on given theme or the subject into making a relevant picture or photo feature.

COURSE CODE	**COURSE NAME**
BAMMC IP-304	**INTRODUCTION TO PHOTOGRAPHY**

Syllabus

Module		**Details**	**Lectures**
1	**Camera: The Story teller**		**12**
	1. The Body: The faithful middleman	The heart of the system How camera sees differently than human eyes. Limitations and Wonders of camera. Formats of camera: Small Full frame, Half frame (APS-C), Medium, Large (camera movements) Experiencing frame Types of camera: DSLR; View; Rangefinder; Mirror-less	*02*

	2. Aperture: The iris of the camera	Diaphragm Controls amount of light entering lens Factor in Exposure calculation Active factor of Depth of field and Bokeh (creative) F'-numbers and aperture scale. Application of Depth of Field in advertising and Journalism.	*03*
	3. Shutter: The Click magic	Blind between Lens and Image sensor Controls duration of light Major factor in Exposure calculation Main player in controlling action Motion blur, Motion freeze and Long exposure effects Application of motion blur/freeze in Advertising and journalism. Synchronization with Flash, Creative Slow sync	*05*
	4. Image sensor: The retina that sees	The image maker or recorder Film v/s digital Film: Photochemistry Digital: Photo-electronics Types of Sensor: CCD and CMOS ISO: Photosensitivity (Sensor/Film Speed)	*01*
	5. Viewfinder: The interactive monitor	The control room cum monitor Displays camera settings Aperture, Shutter and ISO Metering modes, Focusing modes, Exposure modes, Frame count, File format etc	*01*
2	**Lens: Imaging device**		**08**
	6. The eye of camera: Learning to see	Main player in image formation, Focusing the object (sharpening the image) Speed of the Lens (light intake ability) Numbers and Markings on the Lens AF, ED, IF, IS, SW, ASP etc	*02*
	7. Focal length: Which lens is suitable	The factor to consider for Type of Photography and choosing lens for the purpose. Main distinguishing factor Fixed V/s Variable focal length	*01*
	8. Image size: See close	The magnification ratio of a lens Longer focal length = Bigger image size	*01*
	9. Coverage angle: Crop out unwanted	Prime concern in Composition How much of a scene a lens takes in from a viewpoint Safe focusing distance, Distortion: Barrel/ Pin-cuision	*01*
	10. Types of lenses: The right one for the task at hand	Prime Lens v/s Zoom lens Prime = Fixed focal length Zoom = Variable focal length Normal, Wide angle and Telephoto Special purpose lenses: Macro, Fish eye, Tilt-shift	*03*

3	**Light: Parameters of Light- The essential raw material**		**16**
	6. Intensity and Exposure: Perfect tone	How much light: consideration for exposure Exposure triangle (A,S,ISO) The model of exposure	*03*
	7. Direction and Lighting: Lighting for Cinema, Television and Advertising	From where: direction begets shadow Shadow = Depth Lighting = Shading Three point lighting Key: Main Fill: Contrast level (lighting ratio) Kicker: Separation or background light Types of lighting: Portrait, Effect, Ambient and Mood or drama	*06*
	8. Quality and Ambience: Why there are umbrellas and reflectors	How soft or how hard: Effective size of light source Small: Hard, Contrast, Sharp Medium: Mid soft, moderate contrast, soft shadow Large: Extra soft, low contrast, shadowless Modifiers: Umbrella, Soft-box, Reflector, Diffuser, Grid, Gobos	*02*
	9. Colour and Mood: What tells Cozy or Cool	Colour of light concept: Main distinguishing factor Kelvin: Colour temperature *Pure light>True colours* White balance: Neutralizing Preset white balance and AWB Colour and Mood (warm/cool)	*02*
	10. Measure The Director in you is the King	Light meter: Main input of exposure Incident v/s Reflective (advantage / disadvantage) In built meter and Metering modes: Average, Center weighted, Spot, Matrix, Focus priority Exposure Modes: M, A, S, P, and Smart program modes Errors in inbuilt metering>Exposure compensation	*03*
4	**Composition: Art of Seeing> Way of portraying a subject**		**06**
	6. Frame and Aspect ratio	Dimensions of sensor and proportion Aspect ratio: 2:3/ 4:5/ 16:9 (HD)	*01*
	7. Visual indicators	Line, Shape, Size, Tone, Colour, Texture, Space and Center of interest; Subject= Aesthetic Assembly of objects	*01*
	8. Rules of composition	Rule of thirds/ Balance/ Leading lines/ Frame within frame, Enhancing depth/ Unusual viewpoint/ Shadow/ Pattern breaking…	*02*
	9. Breaking the rules	Cropping, Panorama, Flattening	*01*

	10. Viewpoint and Perspective: What Pros do	1, 2 and 3 point perspective: Vanishing points and viewpoint Normal: The way we see Enhanced: Exaggerated depth Compressed: Feeling of distance taken away Forced: Unrealism Aligned: Back projection and green screen application	*03*
5	**Digital Imaging: Electronic format**		**06**
	9. Image sensor	Format, 135mm/ APS-C, Medium format, Large format	*01*
	10. Megapixel	Pixel and its values, Total number of pixels, File size	*01*
	11. Resolution	Pixel Per Inch: Quality of Image, Magnification ratio	*01*
	12. Image magnification	Viewing distance, Image size and Pixilation How large an image can be for given megapixel	*02*
	13. File Formats	RAW, JPEG, TIFF (Bit and Compression) advantages and limitations of Raw format	*01*
Total Lectures			**48**

BOS Syllabus Committee Members

1. Prof. Arvind Parulekar: (**Convener)**
2. Prof. Izaz Ansari (Subject Expert)
3. Mr. Atul Bagayatkar (Industry Expert)

Suggested Methods

Sr. no.	Project/Assignment	Reason/Justification
01 Print Media	Scrap book with collection of Photographs cropped from newspaper and Magazine (40+20)	The pictures cropped are captured by professionals. This gives ready examples of what is the decisive moment and they can have to inspect the picture to understand composition, lighting and subject handling. Analysis of each picture for the learned topics in scrap book. **Points:** Depth of field, Motion blur/freeze, Lighting, Quality of light, Composition, Colour temp, Mood/Drama
02 Electronic Media	Screen shots captured of a movie (36)	Movie is a 2-3 hrs ongoing continuous event. Capturing real key frames is as if photographing in a small 2-3 hrs event, This should help them to look for the right story telling frame, anticipate and stay alert as if required on actual photographic assignment.
03 Field work	Shooting, i.e. actual working on given topics or themes.	This is the field application of the learnt technique to get presentable pictures. The creation part of appreciation and imitation rom above two projects.

Reference Books:

Collins Books series: Pentax Inc.

1. Taking successful pictures,
2. Making most of colour,
3. Expanding SLR system,
4. Lighting techniques

Minolta Photographer's handbook

- Indoor Photography, •

Outdoor photography:

Life Book series:

- Colour,
- Camera,
- Light
- Portrait

Photography course:

- Volume 1: Understanding Camera
- Volume 2: Secrets behind successful pictures
- Volume 3: Practicing Photography
- Volume 4: Handling Professional assignments

Me and My Camera

- Portrait photography
- Glamour photography
- Do it in Dark (Darkroom Techniques)
- Pro-technique (Pro-photo)
- Night Photography
- Beauty and Glamour
- Product Photography

305

Program	**BAMMC**
Year	**SY BAMMC**
Semester	**III**
Course:	**Film Communication-I**
Paper	**06 DRG**
Course Code	**BAMMC FCO-305**
Total Marks	**100 (75:25)**
Number of Lectures	**48**

Brief:

The media cannot be experienced without cinema. Movies are inseparable from social life today. Contribution of films are in all fields of mass communication whether Journalism, Public Relations, Advertising or pure entertainment. Cinema has larger impact on masses as well as all classes. The course is designed to understand cinema rather than only seeing it.

Course Outcome:	**Lectures: 48**
1. To inculcate liking and understanding of good cinema. 2. To make students aware with a brief history of movies; the major cinema movements. 3. Understanding the power of visuals and sound and the ability to make use of them in effective communication. 4. Insight into film techniques and aesthetics.	

COURSE CODE	COURSE NAME		
BAMMC FCO-305	FILM COMMUNICATION-I		
Syllabus			
Module		**Details**	**Lectures**
	Art of Story telling		
1.	**History:** Still pictures to moving images.	**1.1** History of Cinema. **1.2** Birth of Visual Art. **1.3** Understanding the Language of Cinema. **1.4** Transition from Documentary to Feature Film	*04*
2.	**Understanding aspects of film appreciation.**	**2.1** Grammar, Technology and Art. Director - the captain Writer – the back bone. **2.2** Aspects of Film-1: Visual Aspects and Editing Mise-en-Scene (Art, Costume, Camera placement) Cinematography Creating Meaning through editing **2.3** Aspects of Film-1: Film Sound Three components of Film Sound The relationship between Sound and Image	*08*
3.	**The Early Cinema:** 1895 to 1950	3.1 Early Years (1895-1919) World and India. The Silent Era (1920-1931) 3.2 Early Sound Era (1930-1939) 3.3 The developmental stage (1940-1950)	*8*
4.	**Major film movements and its impact.**	4.1 The major cinema movements and their film makers 4.2 Hollywood Cinema-Brief history of Hollywood, Star system, academy Awards, global audience of Hollywood cinema 4.3 Italian neo-realism- Origin and impact on world cinema, work of Roberto Rossellini and Vittorio de sica 4.4 Japanese cinema- Work of Yasujiro ozu, Akira Kurosawa, Hayao Miyazaki etc. 4.5 Irani cinema- Contribution of Abbas Kiarostami, Majid Majidi etc.	*12*
5.	**Mainstream Indian Cinema and parallel Indian cinema**	5.1 Art v/s Commercial 5.2 Indian Meaningful cinema(Commercial) • The Angry Young Man • The Indian Diaspora and Bollywood • Contemporary Bollywood Cinema • Globalisation and Indian Cinema, The multiplex Era 5.3Golden era of Indian Cinema – Important work of Bimal Roy, Guru Datt, Raj Kapoor and V. Shantaram 5.4 Indian New Wave cinema – Mrinal Sen, Mani Kaul, Girish Kasarvalli, MS Sathu 5.5 Parallel cinema: Contribution of Shyam Benegal, Govind Nihlani, Gulzar, Mani Kaul,	*16*

		Said Mirza etc.	
Total Lectures			**48**

BOS Syllabus Committee Members

1. Prof. Gajendra Deoda (Convener)
2. Prof. Chetan Mathur (Subject Expert)
3. Mr. Abhijit Deshpande (Industry Expert)

Internal exercise:

The objective of internal exercise is to help the students identify good cinema and how to write film review including all points of view. Also develop their vision to higher aesthetic level.

Suggested Methods		
Sr. no	**Project/Assignment**	**Reason/Justification**
1.Print Media	Write reviews of film seen by them during lectures/film festivals	To inculcate understanding of cinema and writing skills needed for film review
2.Electronic Media	Making documentary on any of the prominent film personalities/ genre/film theories	To make them understand the depth of cinema and its different aspects

Suggested Screenings:

- Documentaries on World and Indian Cinema (100 years of Cinema).
- Films of Dada Saheb Phalke
- Citizen Kane,
- The Battle over Citizen Kane
- Bicycle Thief
- Roshomon
- Do Bigha Zamin/Bandini
- Sahab, Bibi aur Ghulam/Pyaasa,
- Awara/Shri 420
- Lajwanti/Ek ke Baad Ek

306

Program	**BAMMC**
Year	**SY BAMMC**
Semester	**III**
Course:	**COMPUTERS MULTIMEDIA -01**
Paper	**06 DRG**
Course Code	**BAMMC CMM-306**
Total Marks	**100 (75:25)**
Number of Lectures	**48**

Brief: Digital workflow:

Since the introduction of computers in media every process of image editing and film editing is computerized. Various softwares –beginners to professional- are developed and today software knowledge equals literacy in media. Image, Audio and Video in digital format are easy to share and store as well as saved to multiple places. The knowledge of software has become extremely essential to survive and grow in media today.

Course Outcome:

1. To help learners make media industry ready. This will help learners to be aware of the minimum requirement of the software when stepping out in the industry.
2. To introduce the media softwares to make the learners understand what goes behind the scene and help them choose their stream.
3. To prepare learners skilled enough for independency during project papers in TY sem VI.
4. To help learners work on small scale projects during the academic period.

COURSE CODE	COURSE NAME and DETAILED SYLLABUS
BAMMC CMM-306	COMPUTERS MULTIMEDIA -01

Syllabus

Modules		Details	Lectures
1	**Photoshop: Pixel based Image editing Software**		**12**
	1. Introduction to Photoshop	Image editing theory Bitmaps v/s Vectors When to use Photoshop and when to use drawing tools	*02*
	2. Photoshop Workspace	The tools, Toolbox controls Property bar, Options bar, Floating palates	*03*
	3. Working with images	Image mode, Image size, canvas size Image resolution, size and resampling What is perfect resolution? Cropping to size and resolution Resizing v/s resampling	*05*
	4. Image Editing	Levels, Curves, Contrast adjustment, Colour adjustment Photo filters	*01*
	5. Working with Text	Text layer, Character palate, Paragraph palate, Text resizing, Text colour, Text attributes Working on simple project/ one page design	*01*
2	**CorelDraw: Vector based Drawing software**		**06**
	1. Introduction to CorelDraw	Corel Draw Interface, Tool Box, Importing files in CorelDraw, Different file formats	*01*

	2. Using text	Artistic and paragraph text, Formatting Text, Embedding Objects into text, Wrapping Text around Object, Linking Text to Objects Text C2C:	*01*
	3. Exploring tools	Basic shapes: Cut, Erase, Combine, Shaping tool: Nodes, Handles, Corners Convert to Curves: Reshaping, Creating figures, Logos	*01*
	4. Applying effects	Power of Blends, Distortion and contour Effects, Envelopes, Lens effects, Transparency, Creating Depth Effects and Power Clips	*02*
	5. Exporting in CorelDraw	Exporting, Types of export, Exporting for other software	*01*
3	**Quark Xpress/ InDesign: Layout Software**		**08**
	1. Introduction to Quark Xpress	List the menus, List the tools, Benefits of using Quark, Application of Quark	*02*
	2. Text Edits in Quark	Format of text, Purpose of text selection, Aligning text in different design formats, Text alignment with embedded images	*02*
	3. Using palettes	Using palettes for different types of publications made in quark, Magazine in quark, Newspaper in quark,	*01*
	4. Colour correction in quark	Embedding images in proper formats, Colour correction on the images, Adjusting according to the color tone of the publication,	*02*
	5. Exporting files	Types of files, Exporting for different publications/templates, Newspaper, magazine, etc.	*01*
4	**Premiere Pro: Audio-visual: Video editing software**		**10**
	1. Introduction to editing	Editing importance, Great editing examples, Editing for different formats (film/ad/news/etc.)	*02*
	2. Introduction to premiere	How premiere helps in editing, Understanding the toolbar, Importing files, Experimenting with video and audio layers, Basics of editing (cut/layers/different windows/etc.)	*02*

	3. Understanding file formats	Understanding different file formats (AVI/MPEG/MOV/H264, etc.), Importing raw footage for edits, Performing video checks while editing	*02*
	4. Using colour grading	What is color grading, Examples of color grading, Using filters and presents in color mixing, Applying presents on layers for editing	*02*
	5. Exporting and rendering	Exporting in different formats, Choosing right formats for exposing, Managing quality while exporting, Rendering and maintain file format, Improving quality and time to render techniques	*02*
5	**Sound Forge/Sound Booth: Sound Editing Software**		**12**
	1. Introduction to Digital Audio	Sound basics, Audio band pitch volume Understanding Digital audio Sampling, bit rate	*02*
	2. Concept of Dolby Digital	Mono, Stereo, Quadrophonic Surround sound, 5.1 Channel, Subwoofer Difference in Dolby Digital and DTS, More about DTS Three way sound speaker	*02*
	3. Sound Recording	Recording Equipment Microphone and Types of microphones Preamps, Power amps, Sound card Input from audio sources, Extract audio from CD Different audio saving formats Wave, WMA, CDA, MP3 Digital Computer software	*03*
	4. Working with Sound	Workspace, Play bar, timeline, Transport tool bar Working with audio file Basic editing, cut/copy/paste, Paste special Using Markers, Regions and Commands Sound processing techniques Channel converter, Bit depth converter	*03*
	5. Advanced Sound Processing	Delay, Echo, Reverb, Chorus Mixing sounds Noise gating. Expansion, Changing pitch and Time duration Sound track output Create your audio CD and mark chapters	*02*
	Total		**48**

BOS Syllabus Committee Members

1. Prof. Arvind Parulekar: **Convener**
2. Prof. Izaz Ansari: (Subject Expert)
3. Mr. Ashish Gandhre: (Industry Expert)

Internal exercise:

The objective of internal exercise is to help them identify image and video editing, and apply it to projects. This will ensure the knowledge of the students are up to the industry standards. Also helping them develop their vision to higher aesthetic level.

Sr. no.	Project/Assignment	Reason/Justification
01 Print	Preparing a magazine or a series of posters of different size (type of a campaign promotion) using either quark of PS or Corel	Taking example of magazines or daily newspapers, students can come up with a sample. This will help them be industry ready with a fair hands-on-experience.
02 Electronic	Making a short clip with the use of premiere and 3D Maya	Making a short video clip with the fusion of 3D Maya (some 3D element) and premiere to edit out a short clip (short film/ad/news reel, etc.)

	SEM III	SEM IV	Justification
01	Photoshop Basic	Photoshop Advanced	Associated with Intro to Photography
02	CorelDraw	Adobe Illustrator	Both the software preferred in industry
03	Quark Express	Adobe InDesign	Both the software preferred in industry
04	Premiere Pro Basic	Premiere Pro Advance	Associated with Film Communication
05	Sound Forge/Booth	Dreamweaver	SF Associated with Radio and TV production and DW with Digital media production

1. The learner is learning Photography in Semester-III as well as Project papers in Semester - VI. Photoshop training shall make learner self-sufficient as well as employable in industry.
2. The learner is learning Film Communication in Semester -III. The knowledge of video editing shall help student to create short films and participate in competitions. Also learner can create his portfolio.
3. Dreamweaver is web designing software. Training in this can help learner to run his website and upload his work in photography and videography.
4. The learner is learning Radio and Television Production in Semester -IV. The audio is inevitable part and effective sound is the sole of audio and audio-video production. The training in sound processing shall help learner to use professional sound in his projects of Radio and Television as well as Film Communication.

Year	**SY BAMMC**
Semester	**IV**
Course:	**Electronic Media-II**
Paper	**Elective01 (AEEC-1)**
Course Code	**BAMMC EM-4011**
Total Marks	**100 (75:25)**

Number of Lectures	48

Course Outcome:

To make the students acquainted with working of the two powerful media; i.e. radio and television. The content is useful for both advertising and journalism students in order to further their careers in their respective fields.

COURSE CODE	COURSE NAME
BAMMC EM-4011	ELECTRONIC MEDIA-II

Syllabus

Modules		Details	Lectures
1	**Evolution and growth of Radio and Television:**		**08**
	A. Evolution and growth of Radio:	• Satellite Radio – The Evolution and Growth • AIR and Community Radio- Developmental and Educational Role • Internet Radio and Private FM Channels broadcast on Internet.	
	B. Evolution and growth of Television	• Evolution and growth of Private and Satellite channels: • Growth of Private International, National and Regional TV Networks and fierce. • Competition for ratings. • Satellite television broadcast- Television channels for niche audiences —entertainment, news, sports, science, health and life style. HDTV telecast • Proliferation of DTH services:	
2	**Regional channels:**		**10**
	A. Rise of regional channels and Importance of Regional Channels in India and Globally		
	B. Trends in regional radio and Television channels.		
3	**News and other nonfictional formats.**		**10**
	1. **TRP**	Breaking news on television and the TRP race:	
	2. Panel discussions:	How panel discussions can make the public opinion	
	3. Interviews:	Radio and Television Interview techniques	
	4. Anchoring:	Qualities of a good anchor Voice modulation	
	5. Radio Jockey:	Understanding your audience first, Voice modulation, Clear Diction, Accurate Pronunciation	

4	**Writing for Broadcast Media-(Radio and Television)**		**10**
	11. Preparation of Audio and Video briefs:	Idea generation, Scripting, Story board	
	12. Scripting:	Scripting for: Interviews/Documentary/Feature/Drama/ Skits on Radio and TV.	
	13. Ethics:	Ethics including Censorship in presentation of News. Code of conduct Fact checking	
5	**Current and Emerging Trends in Electronic media**		**10**
	5. '24/7 news broadcast:	Features, Audience effectiveness, advertisements and Dumbing down of News	
	6. Convergence and Multi-media:	1. Use of Facebook and Twitter handles by Radio and TV channels 2. Internet TV/ Radio 3. Mobile TV/Radio	
	7. Emerging Trends:	Mobile Technology, Social Media and Web: eg. • Hotstar • Voot • Sony Live	
	8. Digital storytelling /Features :	• Story idea • Development and Presentation • Web series	
	Total		**48**

Internals	**Marks 25**
Presenting, shooting and editing of news bulletin. Scripting and shooting for any fictional programme. Making a docudrama Writing and recording of radio talk show	
BOS Syllabus Committee Members	
1. Dr. Navita Kulkarni (Convener) 2. Prof. Neena Sharma (Subject Expert) 3. Prof. Gajendra Deoda (Subject Expert)	

401-2

Program	**BAMMC**
Year	**SYBMMC**
Semester	**IV**
Course:	**Theatre and Mass Communication-II**
Paper	**ELECTIVE**
Course Code	**BAMMC TMC-4012**

Total Marks	**100 (75 : 25)**
Number of Lectures	**48**

COURSE OUTCOME :

1. Direction and the works, developing an eye for details
2. Deeper understanding of theatre and how it has evolved to create human connections
3. Understanding the role theatre plays as a medium of mass communication in development of society

COURSE CODE	**COURSE NAME**
BAMMC TMC-4012	**THEATRE AND MASS COMMUNICATION-II**

Syllabus

Module	Topic	Details	Lectures
		Indian Theatre Icons	
I	**Play Writing:**	1. Role of a playwright in theatre 2. Structure: Plot, Act, Scene, Character Setting 3. Basic types of playwriting, Script format 4. Role of IPTA and National School of Drama in the flourishing of theatre in India 5. Theatre and its contribution to cinema and television in India	10
	Contribution of Indian Dramatists who revolutionized Indian Theatre:		
		• Vijay Tendulkar • Girish Karnad • Bijon Bhattacharya • Prithviraj Kapoor • Utpal Dutt • Shambhu Mitra • Mahesh Dattani • Badal Sarkar • Ebrahim Alkazi • Satyadev Dubey • B.V. Karanth • Ratan Thiyam • Mohan Rakesh	
		Role Of Theatre	
II	**Theatre: Role As A Medium Of Mass Communication**	1. In India theatre emphasizes on the social problems and themes such as agriculture, literacy campaign, social and national harmony, human trafficking, child labor, gender discrimination, religious tolerance, women empowerment, prevention of HIV-AIDS, family planning, pulse polio, nutrition, environment pollution 2. Performing Arts System and audience relations, Marketing and Communication strategies, Bookings and ticketing, Reviews and previews – press and publicity 4. Institutional relations and protocol, Infrastructure management 5. Supplier and provider management	**10**
		Scripting, designing and promotions	
	Theatre As self-expression:	1. Devising the message 2. Writing the script and finalising it 3. Designing the set 4. Rehearsals, Staging the performance, Curtains 5. Marketing and promotions	**08**
BOS Syllabus Committee Members			
1. Prof. Rani D'Souza (Convener) 2. Prof. Shamali Gupta (Subject expert) 3. Mr. Abhijit Khade (Industry expert)			

Internal evaluation through projects:
The class puts up a grand one act play

401-3

Program	**BAMMC**
Year	**SYBAMMC**
Semester	**IV**
Course:	**Radio Program Production-II**
Paper	**ELECTIVE**
Course Code	**BAMMC RPP-4013**
Total Marks	**100 (75 : 25)**
Number of Lectures	**48**
COURSE OUTCOME:	
To give learner basic knowledge of radio/audio production theory, techniques and aesthetics via practical experience in the writing and production of several program formats. To make familiar them with the art of audio recording, editing, mixing, and aural storytelling techniques.	

COURSE CODE	**COURSE NAME and DETAILED SYLLABUS**	
BAMMC RPP 310	**RADIO PRODUCTION-II**	
Syllabus		

MODULE		**DETAILS**	**LECTURES**
1	**The Discussion**		**10**
	1.	Format	
	2.	Selection of participants	
	3.	Preparation	
	4.	Speaker Control, Subject Control and Technical Control	
	5.	Ending the Programme	
2	**Commentary**		**08**
	1.	Preparation work with the Base Studio	
	2.	Different Sports	
	3.	Communicating Mood and Coordinating the images	
	4.	Content and style	
	5.	News Action and Sports Action	
3	**Using the internet and social media**		**10**
	1.	An online presence	
	2.	Internet radio	
	3.	Radio Podcasts	
	4.	Internet Research	
	5.	Making the best use of Social Media	
4	**Phone-Ins**		**10**
	1.	Technical Facilities, Programme Classification	
	2.	The Open Line And Choosing The Calls	
	3.	The Role Of The Host And The Host Style	
	4.	Reference Material, Use Of ‘Delay’	

	5.	Linking Programmes Together, Personal Counseling The Presenter As Listener	
5	**Making Commercials**		**10**
	1.	Copy Policy	
	2.	The Target Audience	
	3.	The Product Or Service 'Premise'	
	4.	Voicing And Treatment	
	5.	Music And Effects	
	Total		**48**

5. Out on the Wire: The Storytelling Secrets of the New Masters of Radio

401-4

Program	**BAMMC**
Year	**SYBAMMC**
Semester	**IV**
Course:	**Motion Graphics and Visual Effects-II**
Paper	**ELECTIVE**
Course Code	**BAMMC MGV-4014**
Total Marks	**100 (75 : 25)**
Number of Lectures	**48**

COURSE CODE	**COURSE NAME and DETAILED SYLLABUS**	
BAMMC MGV-4014	**MOTION GRAPHICS and VISUAL EFFECTS-II**	
	Syllabus	
Modules	**Details**	**Lectures**
01	**Compositing**	**08**
1. Pass Compositing	Multi Pass Compositing.	*01*
2. Pre Compositions	Creating a composition with original composition (Nesting)	*01*
3. Tracking-I	Application and usage of Tracking Elements. Understanding Match Moving.	*02*
4. Tracking-II	Object and Camera Tracking.	*01*
5. Layer and Node composition	Layer-based compositing. Node-based compositing.	*03*
02	**Rotoscopy**	**10**

	1. Rotoscopy	Understanding rotoscoping and its application and usage. Rig Removal and its importance.	*02*
	2. Matting	Understanding Alpha and Luma mattes. Use of Garbage mattes.	*03*
	3. Footage Clean-up	Removing faults/wires in live action footage.	*01*
	4. VFX and Colour Grading	Creating mattes for visual effects. Colour grading for specific objects/frames	*03*
	5. Exporting files	Understanding computability for rendering. Exporting in various file formats.	*01*
03	**Blender: Working with 3D**		**10**
	1. Introduction to 3D	Making and Rendering Your First Scenes.	*02*
	2. Tools	Basic Principle: Data blocks. Introduction to Edit Mode.	*02*
	3. 3D Objects	Separating and Joining Objects.	*02*
	4. Curves	Object Modifiers. Converting to Mesh from Curve.	*02*
	5. Textures	Materials, Textures, and How They Get onto Surfaces.	*02*
04	**Scripting and Workflow**		**10**
	1. Script Editor	Accessing Script Editor and its usage.	*02*
	2. Overlaying	Use and Importance of Overlaying.	*01*
	3. Expressions	Importance of Expressions. Understanding different expressions used and how they function.	*02*
	4. Workflows	The importance of workflows for a VFX Project.	*03*
	5. Industry application	How workflows are used in industry.	*02*
05	**Chroma Keying**		**10**
	1. Keying	What is Chroma Keying?	*02*
	2. Green and Blue screens	What is Blue/Green Screen Imaging? Why Blue/Green color be used.	*01*
	3. Chroma Screen	Application of Chroma (Green and Blue screen effect).	*02*
	4. Application	Using Chroma to work on simple shoots. Wire removals and cleaning up footage.	*03*
	5. Exporting to Premiere	Using visual effects into Premiere Pro timeline videos.	*02*
Total Lectures			**48**

Syllabus Sub-Committee

1. Prof. Arvind Parulekar: (Convener)
2. Prof. Izaz Ansari: (Subject Expert)
3. Mr. Ashish Gandhre (Industry Expert)

Internal Exercise:

The objective of internal exercise is to help them identify job opportunities in visual effects in the broadcast and film-making industries.

Sr. No.	Project/Assignment	Reason/Justification
01	Montage	Creating a Television News Broadcast with all its elements. This project helps with working with multiples elements and layers simultaneously. Shows the importance of audio elements and uses various techniques and effects.
02	Show Reel	Creating a project with all the tools, techniques and methods learnt in **Multimedia 1**. This project can be used as portfolio for aspiring VFX artists.

Note:

The course Motion Graphics and VFX is associated with Film Communication as well as Television Production of Radio and TV. Also, it is associated with Web designing and shall help learner create eye catching after effects in his own website.

402

Program	**BAMMC**
Year	**SYBAMMC**
Semester	**IV**
Course:	**Writing and Editing for Media**
Paper	**CORE VIII DSC D1**
Course Code	**BAMMC WEM-402**
Total Marks	**100 (75 : 25)**
Number of Lectures	**48**

COURSE OUTCOME

1. Provide the ability to understand writing styles that fit various media platforms.
2. It would help the learner acquire information gathering skills and techniques.
3. On completion of this course, students will be able to understand similarities and differences in writing for all forms of media including internet and digital.
4. The learner will gather knowledge of different news and copy formats along with appropriate style-sheets and layout.
5. The learner will imbibe the importance of writing clearly, precisely and accurately for different types of audiences
6. Provide acquire basic proficiency in proof-reading and editing.

COURSE CODE		COURSE NAME	
BAMMC WEM-402		WRITING and EDITING FOR MEDIA	
Syllabus			
Modules	**Topics**	**Details**	**Lectures**
		PRINT MEDIA	
I	**WRITING FOR PRINT MEDIA**	1. What makes news? (determinants of news) 2. Art and basic tools of writing 3. Steps and elements of writing-editorial, features and review 4. Brief: Digital workflow:

Since the introduction of computers in media every process of image editing and film editing is computerized. Various soft wares –beginners to professional- are developed and today software knowledge equals literacy in media. Image, Audio and Video in digital format are easy to share and store as well as saved to multiple places. The knowledge of software has become extremely essential to survive and grow in media today.

Course Outcome:

1. To help learner be media industry ready. This will help learners to be aware of the minimum requirement of the software when stepping in the industry.
2. To introduce the media soft wares to make the learner understand what goes behind the scene and help them choose their stream.
3. To prepare learner skilled enough for independency during project papers in TY sem.VI.
4. To help learners work on small scale projects during the academic period.

Modules	**Details**	**Lectures**
1	**Photoshop: Advanced Image Editing**	**12**
	1. Working with multiple images	**Mixing** Selection marquee, Lasso, Magnetic lasso, feather Slice tool, Erase tool Pen tool and image tracing Clone tool, Stamp tool	*02*
	2. Image Effects	**Editing** Burning, Dodging Smudge, Sharpen, Blur Eyedropper, Choosing colour Swatches, Colour pick Filters	*03*
	3. Working with Layers	**Layer basics** Changing background, Gradient Moving linking aligning layers Applying Transformations Masking layers Masts and extractions Layer effects, Adjustment layers	*05*
	4. Wonders of Blend Modes	Blend modes Advanced blending options Layer blends	*01*
	5. Fully Editable Text	Text as art, Glyphs, Creative text Type mask tool, Image in text Text to path and Direct selection Path selection (black arrow) Creating Professional design using all the tools	*01*

2	**Adobe Illustrator: Vector based Drawing software**		**07**
	1. Introduction to Adobe Illustrator	Illustrator Interface, Tool Box, Panels and Bars Importing files in illustrator, Different file formats	*02*
	2. Using text	Artistic and paragraph text, Formatting Text, Embedding Objects into text, Wrapping Text around Object, Linking Text to Objects	*02*
	3. Creating Simple designs	Text based logo replication, Shape based logo replica, Creating new symbols, Fill colour, Outline colour, Weight and opacity	
	4. Applying effects	Power of Blends, Distortion and contour Effects, Envelopes, Lens effects, Transparency, Creating Depth Effects and Power Clips	*02*
	5. Exporting in Illustrator	Exporting, Types of export, Exporting for other soft wares	*01*
3	**InDesign: Layout Software**		**08**
	1. Introduction to Adobe In Design	List the menus, List the tools, Palates Benefits of using In Design, Application of In Design	*02*
	2. Text Edits in InDesign	Format of text, Character and Paragraph Bars Purpose of text selection, Aligning text in different design formats, Text alignment with embedded images	*02*
	3. Using palettes	Using palettes for different types of publications made in InDesign, Magazine in InDesign, Paragraph styles Newspaper in InDesign, Paragraphs type palate, Text wrap palate	*01*
	4. Colour correction in InDesign	Embedding images in proper formats, Colour correction on the images, Adjusting according to the color tone of the publication	*02*
	5. Exporting files	Types of files, Exporting for different publications/templates, Newspaper, magazine, etc.	*01*
4	**Premiere Pro: Audio-visual: Advanced application**		**10**
	1. Introduction to editing	Editing importance, Great editing examples, Editing for different formats (film/ad/news/etc.)	*02*

	2. Exploring Premiere Pro	How premiere helps in editing, Understanding the toolbar, Importing files, Experimenting with video and audio layers, Basics of editing (cut/layers/different windows/etc.)	*02*
	3. Right application of various file formats	Understanding different file formats (AVI/MPEG/MOV/H264, etc.) Importing raw footage for edits, Performing video checks while editing Using inbuilt transitions,	*02*
	4. Using colour grading	What is color grading, Examples of color grading, Using filters and presents in color mixing, Applying presents on layers for editing	*02*
	5. Exporting and rendering	Exporting in different formats, Choosing right formats for exposing, Managing quality while exporting, Rendering and maintain file format, Improving quality and time to render techniques	*02*
5	**Adobe Dreamweaver: Web designing software**		**11**
	1. Introduction to Dreamweaver	Workspace overview Document toolbar, Document window, Panel groups, Files pane, Property inspector, Tag selector Defining website in Dreamweaver	*02*
	2. Working with DW	Creating Dreamweaver template Page layout in DW CSS layouts: advantages and disadvantages Creating HTML pages, Insert content and form Creating Forms in DW	*02*
	3. Linking pages	Using DW to accomplish basic web page development, Page properties Title, Background image, BG colour, Text colour, Links	*03*
	4. Using Tables	Cell padding, cell spacing, Border Table basics: Colour BG in cell, Invisible tables, Changing span, Making image into clickable link	*02*
	5. Typo in DW	Changing Font typefaces, size, style, colours Text to hyperlink	*02*
	Total		**48**

BOS Syllabus Committee Members

1. Prof. Arvind Parulekar (Convener)
2. Pro. Izaz Ansari (Subject Expert)
3. Mr. Ashish Gandhre (Industry Expert)

Internal exercise:

The objective of internal exercise is to help them identify image and video editing, and apply it to projects. This will ensure the knowledge of the students is up to the industry standards. Also helping them develop their vision to higher aesthetic level.

Sr. no.	Project/Assignment	Reason/Justification
01 Print	Preparing a magazine or a series of posters of different size (type of a campaign promotion) using either InDesign of PS or Illustrator	Taking example of magazines or daily newspapers, students can come up with a sample. This will help them be industry ready with a fair hands-on-experience.
02 Electronic	Making a short clip with the use of premiere	Making a short video clip with premiere to edit out a short clip (short film/ad/news reel, etc.) Embedding video with Dreamweaver

Bibliography:

- Photoshop Bible, McLeland ,Willey Publication
- Adobe Illustrator Classroom in a book: Adobe House
- InDesign: Classroom in a book Kelly Kordes and Tina DeJarld Adobe
- Adobe Premiere Pro: Practical Video Editing
- Dreamweaver: Web designing made easy: Todd Palamar

	SEM III	SEM IV	Justification
01	Photoshop Basic	Photoshop Advanced	Associated with Intro to Photography
02	CorelDraw	Adobe Illustrator	Both the soft wares preferred in industry
03	Quark Express	Adobe InDesign	Both the soft wares preferred in industry
04	Premiere Pro Basic	Premiere Pro Ad	Associated with Film Communication
05	Sound Forge/Booth	Dreamweaver	SF Associated with Radio and TV production and DW with Digital media production

Note: Please refer the reasons for this multimedia course in continuing soft wares like Photoshop and Premiere Pro from Sem-II to Sem-IV. The Course outcome shall be met during this course.

SEMESTER V	
COURSE CODE	**COURSE NAME and DETAILED SYLLABUS**
BAMMC DRG-501	**REPORTING**

COURSE OUTCOME

1. To enable students to become Reporters which is supposed to be a prerequisite while entering into the field of Journalism.
2. To make them understand basic ethos of the news and news-gathering.
3. To prepare them to write or present the copy in the format of news.
4. To develop nose for news.
5. To train them to acquire the skills of news-gathering with traditional as well as

modern tools.

6. To inculcate the skills for investigative journalism.
7. To make them understand the basic structure/ essential knowledge for various beats.
8. To make them responsible reporters and the face of media.

Module		Details	Lectures
1			
	Concept Of News	Definition Of News, types of news, elements of news, collection of facts. News-writing How to write a news story, Basic Principles of Reporting ABC of Reporting Accuracy, Balance/Brevity and Clarity. Objectivity as the basic principle. Is it possible to adhere to the principle? Other basic principles such Verification, Attribution of Sources, Speed. Do these principles clash with each other?	10
	2. News Gathering	A) How do reporters gather news? Press Conference, Public Meetings, Press Release, Interviews, Rallies, Official Programs. Incident/On the spot coverage. B) Sources Primary and Secondary Citizen journalism Role of anonymous sources. New-age technological sources-RTI, Recorders, Camera, Spy Camera and Spy tools, Social Media, Being undercover.	10
	3. **Beats System in Reporting**	What is beat system, why it is necessary, how does it help, What are requirements of various beats. The basic beats such as Crime, Civic Affairs/Local Administration Law and Courts, Politics, State Administration, Transport (Road, Rail, Waterways and Aviation), Infrastructure, Education Health, Entertainment and Defense. New upcoming beats : Community, Women and Child welfare, Technology, Science and Environment, Youth and Career, Consumer.	10
	4. Coverage of Disasters	Do's and Don'ts. Role of Reporters. Mitigation, nuisance value, constructive role, Risks involved, Special training, if any, Precautions and responsibilities. Imminent Dangers or threats in Reporting. Study these with special in-depth reference to Pulwama attack Gadchiroli Naxal attack Return of Abhinandan Varthaman The references of Kerala flood, Orissa thunderstorm, Bihar, Assam flood may also be studied.	08

	5.Case studies	Ethical Issues in reporting/ Credibility of Reporters. Follow-up Story Yellow Journalism and its comparison with other forms. Rafale scam Agusta westland case PNB scam (Nirav modi) National Herald Panama case Bofors scam Watergate scam The Case studies are to be studied in the light of coverage done by reporters. The tools and techniques learnt in earlier sections from 1 to 11 should be applied in studying these.	10
	Internal Assignments		
	Suggestions :	There should be uniformity in the yardsticks for internal assessment of Reporting and emphasis should be on the field work/assignments rather than just objective questions. The coverage of the original news-stories, even in mock environment, be given priority. The knowledge of basic beats can be tested through the application.

COURSE CODE	**COURSE NAME and DETAILED SYLLABUS**
BAMMC DRG-602	**NEWSPAPER and MAGAZINE DESIGN**

Brief: Design-A Reading Experience

The paper is around Publication Layout and Design. Publication especially is a periodical and certain aspects repeat over and oven within a publication as well as over the issue after issue. This is why the publication follows certain stylebook to keep consistency thereby identity established. The publication design is handled differently than the advertising design and is majorly discipline based software workout. Software such as Quark Express or Adobe InDesign are in practice across industry. Adobe In Design is evolved as highly professional version of Adobe PageMaker which ruled the industry since Desk Top Publishing (DTP) popularized as versatile solution.

Course Outcome:

- The learner is required to understand the process of print media production since the content collection to the final print ready layout.
- This includes news weightage as well as article relevancy and the visual treatment to the text block. The appearance of the various text blocks matters in layout.
- Learner should be able to reconstruct headlines suitable for the space keeping the core meaning and intensity intact.
- Learners are expected to develop software skills to be employable in industry.
- Learners shall develop the aesthetic vision and understand the discipline behind a layout.

Module	Subtopics	Expansion	Lectures
01	**Design and Layout basics**		**10**
	• Elements of design	Point, Line, Shape, Size, Tone, Colour, Texture, Space	*02*
	• Principles of Design	Proportion, Contrast, Harmony, Balance, Harmony, Unity	*02*
	• Rules of Layout	Alignment, Proximity, Emphasis, Syntax, Visual path	*02*
	• Grid and Page set up	Page size, Space division, Creating template, Margins,	*02*
	• Master Pages	Creating master pages, Margins, Page numbering, Columns, Footer space, Folio	*02*
02	**Editing and Terminology**		**08**
	• Page division	National Page, City/Local, World, Economy, Sports, Entertainment, Editorial (OpEd)	*01*
	• Rewriting / recomposing headlines, Creating decks,	Considering length of Head, Using synonyms, Abbreviations, Popular terms, Units and Counts	*02*
	• Terminology	Head, Deck, Body, Boost, Callout, Slug, Caption, Jumpline, Byline, Credits, Banner, Skyline, Strapline, Teasers	*02*
	• Type of Content	Anchor story, Lead, Tomb stoning, , Short stories, Feature, Editorial, Reviews, Interviews, Feedback,	*02*
	• Errors	Widow, Orphan, Dog leg, Burries story	*01*
03	**Typography and Visual aids**		**06**
	• Type classification	Serif, Sans serif, Decorative, Trendy, Distress, Handwriting	*01*
	• Measurements	Size, Weight, Posture, Kerning, Tracking, Leading, Expand, Condense	*01*
	• Visual indicators	Indentation, Dropcap, Inset, Alignment, Hyphenation	*01*
	• Text path	Curvelinear, Baseline, Shift, Warp text, Text in shapes	*01*
	• Text to Box	Picture in text, Texture in text, Text effects, Shadow, outline,	*02*
04	**Working on Project Quark or InDesign**		**12**
	• Workspace	Grouping required panels and assigning default, Menu bar, Property bar, Options bar, Measurement bar, Transform controls, Panel docking,	*02*
	• Toolbox	Text, Picture, Shape, Table, Transparency, Line,	*02*
	• Panels	Style sheet/Para styles, Colour/ Swatch, Page layout, Align, Wrap text,	*03*
	• Picture treatment	Choosing right picture, Tracing outline, Fading, Transparency, Extending canvas, Gradient, Reshaping picture, Placement	*03*

	• Creating Typo	Type templates i.e. Style sheets	*02*
05	**Planning and Production of Magazine**		**12**
	• Content Plan/ varied content: Cover story, Interview, Feature, Sp report, Tips,	Content collection, Sorting and scrutiny, Picture collection, Dividing in parts, Extracting pull outs, quotes, Assigning pages to stories, Assigning pages to Ads	*03*
	• Flat plan	Block diagram of the content, Judgment of facing page relevancy, Testing for contradiction	*02*
	• Rough Layout	Rough idea of layout, Conceptualization, Judging weightage of pictures and text	*03*
	• Logic of Cover design	Title size, Cover lines, Release date, Close up based, Action based, Celebrity, Demo, Art, Animation, Gimmick, Cover story	*02*
	• Pagination and Print ready	Sequencing for printing, Form, Cut marks, Alley	*02*
Total Lectures			**48**

BOS SYLLABUS COMMITTEE MEMBERS

1. Mr. Arvind Parulekar (Convener)
2. Prof. Rani D'Souza
3. Prof. Sandesh Patil

Instructions:

1. Content need not be original and can be sourced from Google or News sites.
2. Content should not be dummy or greeking not allowed. (Lorel Ipsum discouraged)
3. Rewriting of headline may be needed to fit the width and will be part of evaluation. (use editing techniques)
4. Pictures must be relevant and appropriate placement as well as proportional to news length necessary.
5. Pictures should not be in any case distorted. (broken aspect ratio deducts marks)
6. Use of illustrations recommended wherever necessary.
7. Picture placement and unity with the text in text frames is evaluative aspect.
8. Right content on right pages and in apt places has weightage in evaluation.
9. New original Masthead and design is evaluation aspect. (Discourage students from copying existing)
10. Enough issue details (day, date, pages, site etc.) on appropriate place count as layout element.
11. The script need not be Devanagari for Marathi medium learners and they can use English content. (Devanagari font problem is considered, However viva will be in Marathi or Hindi.
12. Viva voce will be conducted only against evaluation of the completed project.
13. Printout of the project may be in black and white in case of financial constraints, but then the original soft copy as well as pdf must be produced before the examiner.

Internal assessment:

Internal assessment is carried out based on following submissions to the internal faculty, but must be produced before external examiner.

i. Front page replica of broadsheet: This helps student to explore most of the tools to take his work close to the actual broadsheet page.
ii. Typography chart: Classification of typefaces into serif, sans serif, decorative and trendy. This helps them to understand the visual difference and readability of different fonts.

iii. Content plan for the magazine: The planning desk exercise to be carried out carefully before starting the magazine. Understanding parts of magazine and flow of the articles. Sections as well as front book, back book and main book concept.
iv. Flat plan: For judging facing page connectivity or discrepancy.
v. Pagination: A separate soft file with page sequence suitable for printing.

External Project:

1. **Broadsheet design and layout**: Broadsheet of 6 pages in Adobe InDesign OR Quark Express.
    a. Supportive software can be Adobe Photoshop for Image editing, Corel Draw or Illustrator for Masthead or Logo making and Illustrations wherever needed.
    b. Basic Layout must be either in Adobe InDesign or quark Express, one of the layout software.
    c. Learner may use Quark Express for Broadsheet and InDesign for Magazine and display his skills in both. (This will not fetch extra rewards.)
2. **Magazine Design and Layout:** Magazine of minimum 32 pages or in multiple of 4 pages thereof can be done.
    a. Content plan and Typo chart must be produced at the time of viva voce in print form.
    b. Broadsheet and Magazine shall be produced in print form as well as soft copy and examiner in his every right may ask for soft copy to be inspected on respective software.

SEMESTER VI		
COURSE CODE	**COURSE NAME and DETAILED SYLLABUS**	
BAMMC EJCR 2B 606	**CRIME REPORTING**	
Course objectives		
Indian Journalism has progressed significantly. Despite the fact that print media is still at the bleeding edge of remarkable work in Indian news coverage there are sure faces in the advanced media that motivate you to take up news-casting. Their trustworthiness, coarseness, and determination are characteristics that make them few of the best Indian writers over the most recent few decades. Composing or covering news isn't as simple an accomplishment as we might suspect it might be. There is a great deal of elements included while covering a news piece, either in print or advanced. In any case, there are sure identities in the Indian news coverage world that cross all deterrents and hindrances and think of an approach to convey the news to India and the remainder of the world with most extreme trustworthiness. Students will learn the art of covering news as well as have a thorough learning of criminal journalism in this subject,		
UNIT	**TOPIC**	**LECTURES**
I	➢ **The ethics of crime and justice coverage:** • Fairness and objectivity, sensationalism and integrity • conflicts of interest • Interesting versus important. • Balancing justice: • justice to victim and the accused • No assumption of guilt or innocence.	**10**

1. **Prof. Arvind Parulekar (Convener)**
2. **Prof. Arvind Hate (Subject Expert)**
3. **Prof. Ashish Gandhre (Industry Expert)**

Note:

1. Students have to choose an existing product with new fresh brand name & new logo &

not the existing brand.

2. Students should not be encouraged to bring in 'innovation' in the product or not to 'invent' totally new. Invention is job of engineers & we are in communication. (If agency has to rely on innovation for the advertisement then it's a failure of their efficiency.)

3. The viva will be based on the project & the evaluation will be based on its effectiveness as communication design.

4. Make students aware that marketing & advertising are different things & advertising has to be self-explanatory. If student has to verbally push to sell 'his work' then the work is weak.

Internal Assessment: (25 Marks)

Learning process in art has four phases:

1. Appreciation
2. Imitation
3. Inspiration
4. Creation

To take the students through all these phases the internal assessment comprise of: Scrap book: (appreciation) Collection of print ads from magazine & Newspaper as well as **Logos of different brands**. Students are supposed to analyse the ads in the scrap book for the layouts, colour harmonies used, typography, mood, type of headlines & visual path along with various design aspects.

Logos has to be analyzed for their shape, symbolism, typo treatment, uniqueness, connectivity to the industry & unity as well as alignment within logo elements.

Drawing book: (imitation & inspiration)The exercise in the book is based on various design principles such as harmony, contrast, illusions etc& to carry out rough layout & rough designs for new logo. This also comprise of idea generation & rough story board.

Final campaign: Creative brief & finalized layouts for press & print media that will follow Synergy. Student to start campaign on approval of creative brief.

Project: Elements of Campaign: Language can be English, Hindi, Marathi.

1. Logo Design: (Fresh) presented in Logo Manual
2. Stationary: Visiting Card, Letterhead, Envelope in hard copy crafted in actual.
3. Press Ads: Series of 3 ads for Newspaper maintaining synergy.
4. Print Ads: Series of 2 ads for Magazine maintaining synergy. English and/or regional
5. Outdoor Ad: Billboard, Hoarding (one as reminder ad or warm up campaign)
6. Innovative/ Transit/ Ambient Ad: Any one of these suitable to the product/service
7. Point of Sale: Standee/ Danglers/ Strut cad/ Tent card/ kiosk etc: any one suitable
8. TVC Storyboard: 12 to 16 key frames with Floor plan, Camera plot, OSD, SFX, VFS, VO
9. Internet Ads: Scroll/ Banner/ Pop up etc: Any one ad suitable to product/service

Incentives to Entrepreneurs in India. Women Entrepreneurs: Problems and Promotion.

Elective Courses (EC)-
Discipline Related Elective (DRE) Courses

3. Business Economics I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction	10
2	Demand Analysis	15
3	Supply and Production Decisions	10
4	Cost of Production	10
	Total	45

Sr. No.	Modules / Units
1	Introduction
	Scope and Importance of Business Economics - basic tools- Opportunity Cost principle- Incremental and Marginal Concepts. Basic economic relations - functional relations: equations- Total, Average and Marginal relations- use of Marginal analysis in decision making, The basics of market demand, market supply and equilibrium price- shifts in the demand and supply curves and equilibrium
2	Demand Analysis
	Demand Function - nature of demand curve under different markets Meaning, significance, types and measurement of elasticity of demand (Price, income cross and promotional)- relationship between elasticity of demand and revenue concepts Demand estimation and forecasting: Meaning and significance - methods of demand estimation : survey and statistical methods (numerical illustrations on trend analysis and simple linear regression)
3	Supply and Production Decisions
	Production function: short run analysis with Law of Variable Proportions- Production function with two variable inputs- isoquants, ridge lines and least cost combination of inputs- Long run production function and Laws of Returns to Scale - expansion path - Economies and diseconomies of Scale and economies of scope
4	Cost of Production
	Cost concepts: Accounting cost and economic cost, implicit and explicit cost, social and private cost, historical cost and replacement cost, sunk cost and incremental cost -fixed and variable cost - total, average and marginal cost - Cost Output Relationship in the Short Run and Long Run (hypothetical numerical problems to be discussed) Extensions of cost analysis: cost reduction through experience - LAC and Learning curve - Break even analysis (with business applications)

Ability Enhancement Courses (AEC)

4. Business Communication I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Theory of Communication	10
2	Obstacles to Communication in Business World	10
3	Business Correspondence	12
4	Language and Writing Skills	13
	Total	45

Note:
One tutorial per batch per week in addition to number of lectures stated above
(Batch size as per the University norms)

Sr. No.	Modules / Units
1	Theory of Communication
	Concept of Communication: Meaning, Definition, Process, Need, Feedback Emergence of Communication as a key concept in the Corporate and Global world Impact of technological advancements on Communication Channels and Objectives of Communication: Channels- Formal and Informal- Vertical, Horizontal, Diagonal, Grapevine Objectives of Communication: Information, Advice, Order and Instruction, Persuasion, Motivation, Education, Warning, and Boosting the Morale of Employees (A brief introduction to these objectives to be given) Methods and Modes of Communication: Methods: Verbal and Nonverbal, Characteristics of Verbal Communication Characteristics of Non-verbal Communication, Business Etiquette Modes: Telephone and SMS Communication 3 (General introduction to Telegram to be given) Facsimile Communication [Fax] Computers and E- communication Video and Satellite Conferencing
2	Obstacles to Communication in Business World
	Problems in Communication / Barriers to Communication: Physical/ Semantic/Language / Socio-Cultural / Psychological / Barriers, Ways to Overcome these Barriers Listening: Importance of Listening Skills, Cultivating good Listening Skills –4 Introduction to Business Ethics: Concept and Interpretation, Importance of Business Ethics, Personal Integrity at the workplace, Business Ethics and media, Computer Ethics, Corporate Social Responsibility Teachers can adopt a case study approach and address issues such as the following so as to orient and sensitize the student community to actual business practices: Surrogate Advertising, Patents and Intellectual Property Rights, Dumping of Medical/E-waste, Human Rights Violations and Discrimination on the basis of gender, race, caste, religion, appearance and sexual orientation at the workplace Piracy, Insurance, Child Labour
3	Business Correspondence
	Theory of Business Letter Writing: Parts, Structure, Layouts—Full Block, Modified Block, Semi - Block Principles of Effective Letter Writing, Principles of effective Email Writing, Personnel Correspondence: Statement of Purpose, Job Application Letter and Resume, Letter of Acceptance of Job Offer, Letter of Resignation

	[Letter of Appointment, Promotion and Termination, Letter of Recommendation (to be taught but not to be tested in the examination)]
Sr. No.	Modules / Units
4	Language and Writing Skills
	Commercial Terms used in Business Communication Paragraph Writing: Developing an idea, using appropriate linking devices, etc Cohesion and Coherence, self-editing, etc [Interpretation of technical data, Composition on a given situation, a short informal report etc.] Activities § Listening Comprehension § Remedial Teaching § Speaking Skills: Presenting a News Item, Dialogue and Speeches § Paragraph Writing: Preparation of the first draft, Revision and Self – Editing, Rules of spelling. § Reading Comprehension: Analysis of texts from the fields of Commerce and Management

Revised Syllabus of Courses of B.Com. Programme at Semester I with Effect from the Academic Year 2016-2017

Ability Enhancement Courses (AEC)

5. Environmental Studies I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Environment and Ecosystem	13
2	Natural Resources and Sustainable Development	13
3	Populations and Emerging Issues of Development	13
4	Urbanisation and Environment	13
5	Reading of Thematic Maps and Map Filling	08
	Total	60

Sr. No.	Modules / Units
1	Environment and Ecosystem
	Environment: Meaning, definition, scope and its components; concept of an ecosystem : definition, Characteristics, components and types, functioning and structure; Food Chain and Food Web- Ecological Pyramids - Man and environment relationship; Importance and scope of Environmental Studies.
2	Natural Resources and Sustainable Development
	Meaning and definitions ; Classification and types of resources, factors influencing resource; Resource conservation- meaning and methods- l and non-conventional resources, problems associated with and management of water, forest and energy resources- resource utilization and sustainable development
3	Populations and Emerging Issues of Development
	Population explosion in the world and in India and arising concerns- Demographic Transition Theory - pattern of population growth in the world and in India and associated problems - Measures taken to control population growth in India; Human population and environement- Environment and Human Health –Human Development Index –The World Happiness Index
4	Urbanisation and Environment
	Concept of Urbanisation – Problems of migration and urban environment-changing land use, crowding and stress on urban resources, degradation of air and water, loss of soil cover impact on biodiversity, Urban heat islands – Emerging Smart Cities and safe cities in India - Sustainable Cities
5	Reading of Thematic Maps and Map Filling
	Reading of Thematic Maps (4 Lectures) Located bars, Circles, Pie charts, Isopleths, Choropleth and Flow map, Pictograms - Only reading and interpretation. Map Filling: (4 Lectures) Map filling of World (Environmentally significant features) using point, line and polygon segment. Concept and Calculation of Ecological Footprint

Revised Syllabus of Courses of B.Com. Programme at Semester I with Effect from the Academic Year 2016-2017

Skill Enhancement Courses (SEC)

6. Foundation Course - I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Overview of Indian Society	05
2	Concept of Disparity - 1	10
3	Concept of Disparity - 2	10
4	The Indian Constitution	10
5	Significant Aspects of Political Processes	10
	Total	45

Sr. No.	Modules / Units
1	Overview of Indian Society
	Understand the multi-cultural diversity of Indian society through its demographic composition: population distribution according to religion, caste, and gender; Appreciate the concept of linguistic diversity in relation to the Indian situation; Understand regional variations according to rural, urban and tribal characteristics; Understanding the concept of diversity as difference

	Dimensions of human personality Social Dimension of Human personality- Understanding of the socity Physical Dimension of Human personality- Physical Exercise, Yoga, etc. National integration & Communal Harmony National Integration- its meaning, importance and practice Communal Harmony- its meaning, importance and practice

Skill Enhancement Courses (SEC)

6. Foundation Course in NCC - I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to NCC, National Integration & Awareness	10
2	Drill: Foot Drill	10
3	Adventure Training, Environment Awareness and Conservation	10
4	Personality Development and Leadership	10
5	Specialized Subject: Army/ Navy/ Air	05
	Total	45

Sr. No.	Modules / Units
1	Introduction to NCC, National Integration & Awareness
	Desired outcome: The students will display sense of patriotism, secular values and shall be transformed into motivated youth who will contribute towards nation building through national unity and social cohesion. • Genesis, Aims, Objectives of NCC & NCC Song • Organisation & Training • Incentives & Benefits • Religions, Culture, Traditions and Customs of India • National Integration: Importance and Necessity • Freedom Struggle
2	Drill: Foot Drill
	Desired outcome: The students will demonstrate the sense of discipline, improve bearing, smartness, turnout, develop the quality of immediate and implicit obedience of orders, with good reflexes. • General and Words of Command • Attention, Stand at Ease and Stand Easy, Turning and Inclining at the Halt • Sizing, Forming Up in Three Ranks and Numbering, Open and Close Order March and Dressing • Saluting at the Halt, Getting On Parade, Dismissing and Falling Out • Marching, Length of Pace and Time of Marching in Quick Time and Halt, Slow March and Halt • Turning on the March and Wheeling. • Saluting on the March. • Formation of squad and Squad Drill.
3	Adventure Training, Environment Awareness and Conservation
	Adventure Training Desired outcome: The students will overcome fear & inculcate within them the sense of adventure , sportsmanship , espirit-d-corp and develop confidence , courage , determination, diligence and quest for excellence. • Any Two such as –Obstacle course, Slithering, Trekking, Cycling, Rock Climbing, Para Sailing, Sailing, Scuba Diving etc Environment Awareness and Conservation Desired outcome: The student will be aware of the conservation of natural resources and protection of environment. • Natural Resources –Conservation and Management • Water Conservation and Rainwater Harvesting

Sr. No.	Modules / Units
4	Personality Development and Leadership
	Desired outcome: The student will develop an all-round personality with adequate leadership traits to deal / contribute effectively in life. • Introduction to Personality Development • Factors Influencing /Shaping Personality: Physical, Social, Physiological, Philosophical and Psychological • Self Awareness Know yourself/ Insight • Change Your Mind Set • Communication Skills: Group Discussion / Lecturettes (Public Speaking) • Leadership Traits • Types of Leadership
5	Specialized Subject: Army Or Navy Or Air
	<u>Army</u> Desired outcome: The training shall instill patriotism, commitment and passion to serve the nation motivating the youth to join the defence forces. It will also acquaint, expose & provide basic knowledge about armed, naval and air-force subjects A. Armed Force • Basic organisation of Armed Forces • Organisation of Army • Badges and Ranks B. Introduction to Infantry and weapons and equipments • Characteristics of 7.62mm SLR Rifle, Ammunition, Fire power, Stripping, Assembling and Cleaning C. Military history • Biographies of renowned Generals (Carriapa / Sam Manekshaw) • Indian Army War Heroes- PVCs D. Communication • Types of Communications • Characteristics of Wireless Technologies (Mobile, Wi-Fi etc.) *OR* <u>Navy</u> A. Naval orientation and service subjects • History of the Indian Navy-Pre and Post Independence, Gallantry award winners • Organization of Navy- NHQ, Commands, Fleets, Ships and shore establishments • Types of Warships and their role • Organization of Army and Air Force- Operational and Training commands • Ranks of Officers and Sailors, Equivalent Ranks in the Three Services B. Ship and Boat Modelling • Principles of Ship Modelling

Sr. No.	Modules / Units
	• Maintenance and Care of tools
	C. Search and Rescue • SAR Organization in the Indian ocean D. Swimming Floating for three minutes and Free style swimming for 50 meters *OR* <u>AIR</u> A. General Service Knowledge • Development of Aviation • History of IAF B. Principles of Flight • Introduction • Laws of Motion • Glossary of Terms. C. Airmanship • Introduction • Airfield Layout • Rules of the Air • Circuit Procedure • ATC/RT Procedures • Aviation Medicine D. Aero- Engines • Introduction to Aero-engines

Revised Syllabus of Courses of B.Com. Programme at Semester I with Effect from the Academic Year 2016-2017

Skill Enhancement Courses (SEC)

6. Foundation Course in Physical Education - I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Basic Relevant concepts in Physical Education	10
2	Components of Physical Fitness	15
3	Testing Physical Fitness	10
4	Effect of Exercise on various Body System	10
	Total	45

Sr. No.	Modules / Units
1	Introduction to Basic Relevant concepts in Physical Education
	• Dimensions and determinants of Health, Fitness & Wellness • Concept of Physical Education and its importance • Concept of Physical Fitness and its types • Concept of Physical Activity, exercise and its types & benefits
2	Components of Physical Fitness
	• Concept of components of Physical Fitness • Concept and components of HRPF • Concept and components of SRPF • Importance of Physical Education in developing physical fitness components.
3	Testing Physical Fitness
	• Tests for measuring Cardiovascular Endurance • Tests for measuring Muscular Strength& Endurance • Tests for measuring Flexibility • Tests for measuring Body Composition
4	Effect of Exercise on various Body System
	• Effect of exercises on Musculoskeletal system • Effect of exercises on Circulatory System • Effect of exercises on Respiratory System • Effect of exercises on Glandular System

Revised Syllabus of Courses of B.Com. Programme at Semester I with Effect from the Academic Year 2016-2017

Core Courses (CC)

7. Mathematical and Statistical Techniques I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Shares and Mutual Funds	15
2	Permutation, Combination and Linear Programming Problems	15
3	Summarization Measures	15
4	Elementary Probability Theory	15
5	Decision Theory	15
	Total	75

Note:

One tutorial per batch per week in addition to number of lectures stated above (Batch size as per the University norms)

Sr. No.	Modules / Units
1	Shares and Mutual Funds
	• Shares: Concept of share, face value, market value, dividend, equity shares, preferential shares, bonus shares. Simple examples. • Mutual Funds: Simple problems on calculation of Net income after considering entry load, dividend, change in Net Asset Value (N.A.V.) and exit load. Averaging of price under the Systematic Investment Plan (S.I.P.)
2	Permutation, Combination and Linear Programming Problems
	• Permutation and Combination: Factorial Notation, Fundamental principle of counting, Permutation as arrangement, Simple examples, combination as selection, Simple examples, Relation between ${}_nC_r$ and ${}_nP_r$ Examples on commercial application of permutation and combination • Linear Programming Problem: Sketching of graphs of (i) linear equation Ax + By + C= 0 (ii) linear inequalities. Mathematical Formulation of Linear Programming Problems upto 3 variables. Solution of Linear Programming Problems using graphical method up to two variables.
3	Summarization Measures
	• Measures of Central Tendencies: Definition of Average, Types of Averages: Arithmetic Mean, Median, and Mode for grouped as well as ungrouped data. Quartiles, Deciles and Percentiles. Using Ogive locate median and Quartiles. Using Histogram locate mode. Combined and Weighted mean. • Measures of Dispersions: Concept and idea of dispersion. Various measures Range, Quartile Deviation, Mean Deviation, Standard Deviation, Variance, Combined Variance.
4	Elementary Probability Theory
	• Probability Theory: Concept of random experiment/trial and possible outcomes; Sample Space and Discrete Sample Space; Events their types, Algebra of Events, Mutually Exclusive and Exhaustive Events, Complimentary events. Classical definition of Probability, Addition theorem (without proof), conditional probability. Independence of Events: $P(A \cap B) = P(A)\,P(B)$. Simple examples. • Random Variable: Probability distribution of a discrete random variable; Expectation and Variance of random variable, simple examples on probability distributions.
5	Decision Theory
	Decision making situation, Decision maker, Courses of Action, States of Nature, Pay-off and Pay-off matrix; Decision making under uncertainty, Maximin, Maximax, Minimax regret and Laplace criteria; simple examples to find optimum decision. Formulation of Payoff Matrix. Decision making under Risk, Expected Monetary Value (EMV); Decision Tree; Simple Examples based on EMV. Expected Opportunity Loss (EOL), simple examples based on EOL.

B.Com. Programme

Under Choice Based Credit, Grading and Semester System

Course Structure

(To be implemented from Academic Year- 2016-2017)

Semester II

No. of Courses	Semester II	Credits
1	*Elective Courses (EC)*	
1A	*Discipline Specific Elective(DSE) Courses*	
1	Accountancy and Financial Management II	03
1B	*Discipline Related Elective(DRE) Courses*	
2	Commerce II	03
3	Business Economics II	03
2	*Ability Enhancement Courses (AEC)*	
2A	*Ability Enhancement Compulsory Courses (AECC)*	
4	Business Communication II	03
5	Environmental Studies II	03
2B	***Skill Enhancement Courses (SEC)*	
6	Any one course from the following list of the courses	02
3	*Core Courses (CC)*	
7	Mathematical and Statistical Techniques II	03
	Total Credits	20

**List of Skill Enhancement Courses (SEC) for Semester II (Any One)*	
1	Foundation Course - II
2	Foundation Course in NSS - II
3	Foundation Course in NCC - II
4	Foundation Course in Physical Education - II

Revised Syllabus of Courses of B.Com. Programme at Semester II
with Effect from the Academic Year 2016-2017

Elective Courses (EC)-
Discipline Specific Elective (DSE) Courses

1. Accountancy and Financial Management II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Accounting from Incomplete Records	15
2	Consignment Accounts	15
3	Branch Accounts	15
4	Fire Insurance Claim	15
	Total	60

Sr. No.	Modules / Units
1	Accounting from Incomplete Records
	Introduction Problems on preparation of final accounts of Proprietary Trading Concern (conversion method)
2	Consignment Accounts
	Accounting for consignment transactions Valuation of stock Invoicing of goods at higher price (excluding overriding commission, normal/abnormal losses)
3	Branch Accounts
	Meaning/ Classification of branch Accounting for Dependent Branch not maintaining full books: Debtors method Stock and debtors method
4	Fire Insurance Claim
	Computation of Loss of Stock by Fire Ascertainment of Claim as per the Insurance Policy Exclude: Loss of Profit and Consequential Loss

Revised Syllabus of Courses of B.Com. Programme at Semester II
with Effect from the Academic Year 2016-2017

Elective Courses (EC)-
Discipline Related Elective (DRE) Courses

2. Commerce II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Concept of Services	12
2	Retailing	12
3	Recent Trends in Service Sector	10
4	E-Commerce	11
	Total	45

Sr. No.	Modules / Units
1	Concept of Services
	Introduction: Meaning, Characteristics, Scope and Classification of Services – Importance of service sector in the Indian Marketing Mix Services: Consumer expectations, Services Mix, - Product, Place, Price, Promotion, Process of Services delivery, Physical evidence and people Service Strategies: Market research and Service development cycle, Managing demand and capacity, opportunities and challenges in service sector.
2	Retailing
	Introduction: Concept of organized and unorganized retailing , Trends in retailing, growth of organized retailing in India, Survival strategies for unorganized Retailers Retail Format: Store format, Non – Store format, Store Planning, design and layout Retail Scenario: Retail Scenario in India and Global context – Prospects and Challenges in India. Mall Management – Retail Franchising. FDI in Retailing, Careers in Retailing
3	Recent Trends in Service Sector
	ITES Sector: Concept and scope of BPO, KPO, LPO and ERP. Banking and Insurance Sector: ATM, Debit & Credit Cards, Internet Banking – Opening of Insurance sector for private players, FDI and its impact on Banking and Insurance Sector in India Logistics: Net working –Importance –Challenges
4	E-Commerce
	Introduction: Meaning, Features, Functions and Scope of E-Commerce- Importance and Limitations of E-Commerce Types of E-Commerce: Basic ideas and Major activities of B2C, B2B, C2C. Present status of E-Commerce in India: Transition to E-Commerce in India, E-Transition Challenges for Indian Corporates; on-line Marketing Research.

Elective Courses (EC)-
Discipline Related Elective (DRE) Courses

3. Business Economics II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Market structure: Perfect competition and Monopoly	10
2	Pricing and Output Decisions under Imperfect Competition	15
3	Pricing Practices	10
4	Evaluating Capital Projects	10
	Total	45

Sr. No.	Modules / Units
1	Market structure: Perfect competition and Monopoly
	Perfect competition and Monopoly models as two extreme cases - profit maximisation and the competitive firm ś supply curve - Short run and long run equilibrium of a firm and of industry - monopoly - Sources of monopoly power –short run and long- run equilibrium of a firm under Monopoly
2	Pricing and Output Decisions under Imperfect Competition
	Monopolistic competition: competitive and monopolistic elements of monopolistic competition - equilibrium of a firm under monopolistic competition, monopolistic competition verses perfect competition- excess capacity and inefficiency - debate over role of advertising (topics to be taught using case studies from real life examples) Oligopolistic markets: key attributes of oligopoly - Collusive and non collusive oligopoly market - Price rigidity - Cartels and price leadership models (with practical examples)
3	Pricing Practices
	Cost oriented pricing methods: cost – plus (full cost) pricing, marginal cost pricing, Mark up pricing, discriminating pricing, multiple – product pricing - transfer pricing (case studies on how pricing methods are used in business world)
4	Evaluating Capital Projects
	Meaning and importance of capital budgeting- steps in capital budgeting - +Techniques of Investment appraisal: Payback Period Method, Net Present Value Method, and Internal Rate of Return Method (with numerical examples)

Revised Syllabus of Courses of B.Com. Programme at Semester II with Effect from the Academic Year 2016-2017

Ability Enhancement Courses (AEC)

4. Business Communication II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Presentation Skills	10
2	Group Communication	15
3	Business Correspondence	10
4	Language and Writing Skills	10
	Total	45

Note:

One tutorial per batch per week in addition to number of lectures stated above (Batch size as per the University norms)

Sr. No.	Modules / Units
1	Presentation Skills
	Presentations: (to be tested in tutorials only) 4 Principles of Effective Presentation Effective use of OHP Effective use of Transparencies How to make a Power-Point Presentation
2	Group Communication
	Interviews: Group Discussion Preparing for an Interview, Types of Interviews – Selection, Appraisal, Grievance, Exit Meetings: Need and Importance of Meetings, Conduct of Meeting and Group Dynamics Role of the Chairperson, Role of the Participants, Drafting of Notice, Agenda and Resolutions Conference: Meaning and Importance of Conference Organizing a Conference Modern Methods: Video and Tele –Conferencing Public Relations: Meaning, Functions of PR Department, External and Internal Measures of PR
3	Business Correspondence
	Trade Letters: Order, Credit and Status Enquiry, Collection (just a brief introduction to be given) Only following to be taught in detail:- Letters of Inquiry, Letters of Complaints, Claims, Adjustments Sales Letters, promotional leaflets and fliers Consumer Grievance Letters, Letters under Right to Information (RTI) Act [Teachers must provide the students with theoretical constructs wherever necessary in order to create awareness. However students should not be tested on the theory.]
4	Language and Writing Skills
	Reports: Parts, Types, Feasibility Reports, Investigative Reports Summarisation: Identification of main and supporting/sub points Presenting these in a cohesive manner

Tutorial Activities:

Presentations, Group Discussion, Mock Interviews, Mock Meetings / Conferences, Book Reviews/Summarization, Reading Comprehension: Analysis of texts from the field of Literature

[Suggested Books for Book Reviews: Books from the fields of Management, Finance, and Literature Like – Sun Tzu :The Art of War, Eliyahu M. Goldratt : The Goal , Eliyahu M. Goldratt: It s' Not Luck , Spencer Johnson: Who Moved My Cheese, Stephen Lundin, Ph.D, Harry Paul, John Christen: Fish, Chetan Bhagat One Night At A Call Center, Chetan Bhagat My Three Mistakes , Arindam Choudhary: Count Your Chickens Before They Hatch ,Stephen

Covey :Seven Habits of Successful People, George Orwell: Animal Farm, Dr. Abdul Kalam: Wings of Fire]

[N.B.: The above list is only indicative and not prescriptive.]

Revised Syllabus of Courses of B.Com. Programme at Semester II with Effect from the Academic Year 2016-2017

Ability Enhancement Courses (AEC)

5. Environmental Studies II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Solid Waste Management for Sustainable Society	13
2	Agriculture and Industrial Development	13
3	Tourism and Environment	13
4	Environmental Movements and Management	13
5	Map Filling	08
	Total	60

Sr. No.	Modules / Units
1	Solid Waste Management for Sustainable Society
	Classification of solid wastes –Types and Sources of Solid Waste ; Effects of Solid Waste Pollution- Health hazards, Environmental Impacts; Solid Waste Management –solid waste management in Mumbai- Schemes and initiatives run by MCGM –role of citizens in waste management in Mumbai
2	Agriculture and Industrial Development
	Environmental Problems Associated with Agriculture: Loss of Productivity, Land Degradation ,desertification - Uneven Food Production – Hunger, Malnutrition and Food Security –Sustainable Agricultural practices Environmental Problems Associated with Industries – pollution -Global warming, Ozone Layer Depletion , Acid rain, - Sustainable Industrial practices – Green Business and Green Consumerism, Corporate Social Responsibility
3	Tourism and Environment
	Tourism: Meaning, Nature, Scope and importance –Typology of tourism-classification; Tourism potentials in India and challenges before India; New Tourism Policy of India; Consequences of tourism : Positive and Negative Impacts on Economy, Culture and environment- Ecotourism
4	Environmental Movements and Management
	Environmental movements in India: Save Narmada Movement, Chipko Movement, Appiko Movement, Save Western Ghat and Save Jaitapur; Environmental Management: Concept, need and relevance; Concept of ISO 14000 and 16000; Concept of Carbon Bank and Carbon Credit.EIA - Environment Protection Acts – Concept and components of Geospatial Technology- Applications of GST in Environmental Management.
5	Map Filling
	Map filling of Konkan and Mumbai (Environmentally significant features and GST centers) using point, line and polygon segment. Concept and Calculation of Environmental Performance Index (EPI)

Revised Syllabus of Courses of B.Com. Programme at Semester II
with Effect from the Academic Year 2016-2017

Skill Enhancement Courses (SEC)

6. Foundation Course - II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Globalisation and Indian Society	07
2	Human Rights	10
3	Ecology	10
4	Understanding Stress and Conflict	10
5	Managing Stress and Conflict in Contemporary Society	08
	Total	45

Sr. No	Modules / Units
1	Globalisation and Indian Society
	Understanding the concepts of liberalization, privatization and globalization; Growth of information technology and communication and its impact manifested in everyday life; Impact of globalization on industry: changes in employment and increasing migration; Changes in agrarian sector due to globalization; rise in corporate farming and increase in farmers' suicides.
2	Human Rights
	Concept of Human Rights; origin and evolution of the concept; The Universal Declaration of Human Rights; Human Rights constituents with special reference to Fundamental Rights stated in the Constitution
3	Ecology
	Importance of Environment Studies in the current developmental context; Understanding concepts of Environment, Ecology and their interconnectedness; Environment as natural capital and connection to quality of human life; Environmental Degradation – causes and impact on human life; Sustainable development – concept and components; poverty and environment
4	Understanding Stress and Conflict
	Causes of stress and conflict in individuals and society; Agents of socialization and the role played by them in developing the individual; Significance of values, ethics and prejudices in developing the individual; Stereotyping and prejudice as significant factors in causing conflicts in society. Aggression and violence as the public expression of conflict
5	Managing Stress and Conflict in Contemporary Society
	Types of conflicts and use of coping mechanisms for managing individual stress; Maslow's theory of self – actualisation; Different methods of responding to conflicts in society; Conflict – resolution and efforts towards building peace and harmony in society

Revised Syllabus of Courses of B.Com. Programme at Semester II with Effect from the Academic Year 2016-2017

Skill Enhancement Courses (SEC)

6. Foundation Course in NSS - II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Socio-economic Survey and Special Camp	10
2	Orientation of the College Unit and Communication Skills	15
3	Rapport with Community and Programme Planning	10
4	Government Organisations /Non-Government Organisations	10
	Total	45

Sr. No.	Modules / Units
1	Socio-economic Survey and Special Camp
	Socio economic survey Socio-economic survey- its meaning and need, Process of Socio-economic survey- design of questionnaire; data collection, data analysis and report writing Special camping activity Concept of camp- Identification of community problems- Importance of group living- Team building- Adoption of village- Planning for camp- pre camping, during the course of camp and post camping activities
2	Orientation of the College Unit and Communication Skills
	Training and orientation of the program unit in the college Leadership training – formation of need based programmmes- Concept of campus to community(C to C) activities Communication skills and Documentation Communication skills- the concept, Verbal, Non-Verbal communication The documentation- Activity Report Writing –basics of NSS accounting –Annual Report –Press note and preparation
3	Rapport with Community and Programme Planning
	Working with individual group and community Ice breaking- interaction games –conflict resolution Program planning Programme planning- the concept and its features, requirements for successful implementation of program- program flow charting- feedback
4	Government Organisations / Non-Government Organisations
	Structure of Government Organisations and Non-Government Organisations Government organisations (GO)- its meaning -Legal set up, functioning, Sources of funding Non-Government organisations (NGO)- its meaning -Legal set up, functioning, Sources of funding National Service Scheme(NSS)- Government organisations (GO) and Non-Government organisations (NGO) Government schemes for community development Schemes os Government welfare departments for community development- provisions & examples

Skill Enhancement Courses (SEC)

6. Foundation Course in NCC - II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Disaster Management, Social Awareness and Community Development	05
2	Health and Hygiene	10
3	Drill with Arms	10
4	Weapon Training	10
5	Specialized Subject: Army Or Navy Or Air	10
	Total	45

Sr. No.	Modules / Units
1	Disaster Management, Social Awareness and Community Development
	Disaster Management: Desired outcome: The student shall gain basic information about civil defence organisation / NDMA & shall provide assistance to civil administration in various types of emergencies during natural / manmade disasters • Civil Defence Organisation and Its Duties/ NDMA • Types of Emergencies/ Natural Disaster • Assistance during Natural / Other Calamities: Flood / Cyclone/ Earth Quake/ Accident etc. • Ávan ʾmodel of NCC Social Awareness and Community Development: Desired outcome: The student shall have an understanding about social service and its need, about NGOs and shall participate in community action programmes for betterment of the community. • Basics of Social Service, Weaker Sections of Our Society and Their Needs • Social/ Rural Development Project: MNREGA, SGSY, NSAP etc. • Contribution of Youth towards Social Welfare • Civic Responsibilities • Causes & Prevention of HIV/AIDS; Role of Youth
2	Health and Hygiene
	Desired outcome: The student shall be fully aware about personal health and hygiene lead a healthy life style and foster habits of restraint and self awareness. • Structure and Functioning of the Human Body • Hygiene and Sanitation (Personal and Food Hygiene) • Infectious & Contagious Diseases & Their Prevention
3	Drill with Arms
	Desired outcome: The students will demonstrate the sense of discipline, improve bearing, smartness, turnout, develop the quality of immediate and implicit obedience of orders, with good reflexes. • Attention, Stand at Ease and Stand Easy • Getting on Parade with Rifle and Dressing at the Order • Dismissing and Falling Out • Ground / Take Up Arms • Present From the Order and Vice-versa • General Salute, Salami Shastra
4	Weapon Training
	Desired outcome: The student shall have basic knowledge of weapons and their use and handling. • Characteristics of a Rifle / Rifle Ammunition and its Fire Power • Stripping, Assembling, Care and Cleaning and Sight Setting of .22 rifle • Stripping, Assembling, Care and Cleaning of 7.62mm SLR • Loading, Cocking and Unloading • The lying position, Holding and Aiming- I • Trigger control and firing a shot

	• Range procedure and safety precautions • Short range firing, Aiming- II -Alteration of sight
Sr. No.	Modules / Units
5	Specialized Subject: Army Or Navy Or Air
	Army Desired outcome: The training shall instill patriotism, commitment and passion to serve the nation motivating the youth to join the defence forces. It will also acquaint, expose & provide basic knowledge about armed, naval and air-force subjects A. Map reading • Introduction to types of Maps and Conventional signs • Scales and Grid system • Topographical forms and technical terms • Relief, contours and Gradients • Cardinal points and Types of North • Types of bearings and use of Service Protractor • Prismatic compass and its use and GPS B. Field Craft and Battle Craft • Introduction • Judging distance • Description of ground • Recognition, Description and Indication of landmarks and targets *OR* Navy A. Naval Communication • Introduction to Naval Modern Communication, Purpose and Principles § Introduction of Naval communication § Duties of various communication sub-departments • Semaphore § Introduction of position of letters and prosigns § Reading of messages § Transmission of messages B. Seamanship • Anchor work § Parts of Anchor and Cable, their identification • Rigging § Types of ropes and breaking strength- stowing, maintenance and securing of ropes § Practical Bends and Hitches: Reef Knot, Half hitch, Clove Hitch, Rolling Hitch, Timber Hitch, Bow Line, Round Turn and Two half hitch and Bow line on the Bight and its basic elements and uses. § Introduction to Shackles, Hooks, Blocks and Derricks, Coiling Down and Splicing of rope C. Boat work • Parts of Boat and Parts of an Oar • Instruction on boat Pulling- Pulling orders • Steering of boat under oars, Practical instruction on Boat Pulling,

	Precautions while pulling

Sr. No.	Modules / Units
	OR Air A. Air frames • Aircraft Controls • Landing Gear B. Instruments • Basic Flight Instruments C. Aircraft Particulars • Aircraft Particulars (Type specific) D. Aero modelling • History of Aero modelling • Materials used in Aero modelling • Type of Aero models • Flying/ Building of Aero models

Skill Enhancement Courses (SEC)

6. Foundation Course in Physical Education - II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Development of Fitness	10
2	Health, Fitness and Diseases	15
3	Yoga Education	10
4	Daily Schedule of Achieving Quality of Life and Wellness	10
	Total	60

Sr. No.	Modules / Units
1	Development of Fitness
	• Benefits of physical fitness and exercise and principles of physical fitness • Calculation of fitness index level 1-4 • Waist-hip ratio Target Heart Rate, BMI and types and principles of exercise (FITT) • Methods of training –continues, Interval, circuit, Fartlek and Plyometric
2	Health, Fitness and Diseases
	• Definition of obesity and its management • Communicable diseases, their preventive and therapeutic aspectS • Factors responsible for communicable diseases • Preventive and therapeutic aspect of Communicable and non- communicable diseases
3	Yoga Education
	• Meaning and history of yoga • Ashtang yoga and types of yoga • Types of Suryanamaskar and Technique of Pranayam • Benefits of Yoga
4	Daily Schedule of Achieving Quality of Life and Wellness
	• Daily schedule based upon one ś attitude, gender, age &occupation. • Basic –module: - Time split for rest, sleep, diet, activity & recreation. • Principles to achieve quality of life:- positive attitude, daily regular exercise, control over food habits & healthy hygienic practices.

Revised Syllabus of Courses of B.Com. Programme at Semester II with Effect from the Academic Year 2016-2017

Core Courses (CC)

7. Mathematical and Statistical Techniques II

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Functions, Derivatives and Their Applications	15
2	Interest and Annuity	15
3	Bivariate Linear Correlation and Regression	15
4	Time series and Index Numbers	15
5	Elementary Probability Distributions	15
	Total	75

Note:

One tutorial per batch per week in addition to number of lectures stated above (Batch size as per the University norms)

Sr. No.	Modules / Units
1	Functions, Derivatives and Their Applications
	Concept of real functions: Constant function, linear function, xn, ex, ax, log x. Demand, Supply, Total Revenue, Average Revenue, Total cost, Average cost and Profit function. Equilibrium Point, Break-even point. Derivative of functions: § Derivative as rate measure, Derivative of xn, ex, ax, log x. § Rules of derivatives: Scalar multiplication, sum, difference, product, quotient (Statements only), Simple problems. Second order derivatives. § Applications: Marginal Cost, Marginal Revenue, Elasticity of Demand. Maxima and Minima for functions in Economics and Commerce. (Examination Questions on this unit should be application oriented only.)
2	Interest and Annuity
	Interest: Simple Interest, Compound Interest (Nominal & Effective Rate of Interest), Calculations involving upto 4 time periods. Annuity: Annuity Immediate and its Present value, Future value. Equated Monthly Installments (EMI) using reducing balance method & amortization of loans. Stated Annual Rate & Affective Annual Rate Perpetuity and its present value. Simple problems involving up to 4 time periods.
3	Bivariate Linear Correlation and Regression
	Correlation Analysis: Meaning, Types of Correlation, Determination of Correlation: Scatter diagram, Karl Pearson's method of Correlation Coefficient (excluding Bivariate Frequency Distribution Table) and Spearman's Rank Correlation Coefficient. Regression Analysis: Meaning, Concept of Regression equations, Slope of the Regression Line and its interpretation. Regression Coefficients (excluding Bivariate Frequency Distribution Table), Relationship between Coefficient of Correlation and Regression Coefficients , Finding the equations of Regression lines by method of Least Squares.
4	Time series and Index Numbers
	Time series: Concepts and components of a time series. Representation of trend by Freehand Curve Method, Estimation of Trend using Moving Average Method and Least Squares Method (Linear Trend only). Estimation of Seasonal Component using Simple Arithmetic Mean for Additive Model only (For Trend free data only). Concept of Forecasting using Least Squares Method. Index Numbers: Concept and usage of Index numbers, Types of Index numbers, Aggregate and Relative Index Numbers, Lasperye's, Paasche's, Dorbisch-Bowley's, Marshall-Edgeworth and Fisher's ideal index numbers, Test of Consistency: Time Reversal Test and Factor Reversal Test. Chain Base Index Nos. Shifting of Base year. Cost of Living Index Numbers, Concept of Real Income, Concept of Wholesale

	Price Index Number. (Examples on missing values should not be taken)
5	Elementary Probability Distributions
	Probability Distributions: § Discrete Probability Distribution: Binomial, Poisson (Properties and applications only, no derivations are expected) § Continuous Probability distribution: Normal Distribution. (Properties and applications only, no derivations are expected)

Tutorial:

Two tutorials to be conducted on each unit i.e. 10 tutorials per semester. At the end of each semester one Tutorial assignment of 10 marks should be given.

Revised Syllabus of Courses of B.Com. Programme at
Semester I and II
with effect from the Academic Year 2016-2017

University of Mumbai

B.Com. (Financial Markets) Programme
Guidelines for Project Work
at
Third Year
Semester VI

Under Choice Based Credit, Grading and Semester System

(To be implemented from Academic Year 2018-2019)

Board of Studies-in-Financial Markets

Introduction

Inclusion of project work in the course curriculum of the B.Com. (Financial Markets) programme is one of the ambitious aspects in the programme structure. The main objective of inclusion of project work is to inculcate the element of research analyse and scientific temperament challenging the potential of learner as regards to his/ her eager to enquire and ability to interpret particular aspect of the study. It is expected that the guiding teacher should undertake the counselling sessions and make the awareness among the learners about the methodology of formulation, preparation and evaluation pattern of the project work.

- There are two modes of preparation of project work
  1. Project work based on research methodology in the study area
  2. Project work based on internship in the study area

Guidelines for preparation of Project Work

1. General guidelines for preparation of project work based on Research Methodology

- The project topic may be undertaken in any area of Elective Courses.
- Each of the learner has to undertake a Project individually under the supervision of a teacher-guide.
- The learner shall decide the topic and title which should be specific, clear and with definite scope in consultation with the teacher-guide concerned.
- University/college shall allot a guiding teacher for guidance to the students based on her / his specialization.
- The project report shall be prepared as per the broad guidelines given below:
  - Font type: Times New Roman
  - Font size: 12-For content, 14-for Title
  - Line Space : 1.5-for content and 1-for in table work
  - Paper Size: A4

Structure to be followed to maintain the uniformity in formulation and presentation of Project Work

(Model Structure of the Project Work)

- **Chapter No. 1: Introduction**

  In this chapter Selection and relevance of the problem, historical background of the problem, brief profile of the study area, definition/s of related aspects, characteristics, different concepts pertaining to the problem etc can be incorporated by the learner.

- **Chapter No. 2: Research Methodology**

  This chapter will include Objectives, Hypothesis, Scope of the study, limitations of the study, significance of the study, Selection of the problem, Sample size, Data collection, Tabulation of data, Techniques and tools to be used, etc can be incorporated by the learner.

- **Chapter No. 3: Literature Review**

  This chapter will provide information about studies done on the respective issue. This would specify how the study undertaken is relevant and contribute for value addition in information/ knowledge/ application of study area which ultimately helps the learner to undertake further study on same issue.

- **Chapter No. 4: Data Analysis, Interpretation and Presentation**

  This chapter is the core part of the study. The analysis pertaining to collected data will be done by the learner. The application of selected tools or techniques will be used to arrive at findings. In this, table of information's, presentation of graphs etc. can be provided with interpretation by the learner.

- **Chapter No. 5: Conclusions and Suggestions**

  In this chapter of project work, findings of work will be covered and suggestion will be enlisted to validate the objectives and hypotheses.

Note: If required more chapters of data analysis can be added.

Acknowledgment

(Model structure of the acknowledgement)

To list who all have helped me is difficult because they are so numerous and the depth is so enormous.

I would like to acknowledge the following as being idealistic channels and fresh dimensions in the completion of this project.

I take this opportunity to thank the **University of Mumbai** for giving me chance to do this project.

I would like to thank my **Principal, _____**for providing the necessary facilities required for completion of this project.

I take this opportunity to thank our **Coordinator_____**, for her moral support and guidance.

I would also like to express my sincere gratitude towards my project guide _____ whose guidance and care made the project successful.

I would like to thank my **College Library**, for having provided various reference books and magazines related to my project.

Lastly, I would like to thank each and every person who directly or indirectly helped me in the completion of the project especially **my Parents and Peers** who supported me throughout my project.

2. Guidelines for Internship based project work

- Minimum 20 days/ 100 hours of Internship with an Organisation/ NGO/ Charitable Organisation/ Private firm.
- The theme of the internship should be based on any study area of the elective courses
- Experience Certificate is Mandatory
- A project report has to be brief in content and must include the following aspects:
  - **Executive Summary:**

    A bird's eye view of your entire presentation has to be precisely offered under this category.
  - **Introduction on the Company:**

    A Concise representation of company/ organization defining its scope, products/ services and its SWOT analysis.
  - **Statement and Objectives:**

    The mission and vision of the organization need to be stated enshrining its broad strategies.
  - **Your Role in the Organisation during the internship:**

    The key aspects handled, the department under which you were deployed and brief summary report duly acknowledged by the reporting head.
  - **Challenges:**

    The challenges confronted while churning out theoretical knowledge into practical world.
  - **Conclusion:**

    A brief overview of your experience and suggestions to bridge the gap between theory and practice.
- The project report based on internship shall be prepared as per the broad guidelines given below:
  - Font type: Times New Roman
  - Font size: 12-For content, 14-for Title
  - Line Space : 1.5-for content and 1-for in table work
  - Paper Size: A4
  - Margin : in Left-1.5, Up-Down-Right-1
  - The Project Report shall be bounded.
  - The project report should be of minimum 50 pages

Evaluation pattern of the project work

The Project Report shall be evaluated in two stages viz.	
• **Evaluation of Project Report (Bound Copy)**	**60 Marks**
▪ Introduction and other areas covered	20 Marks
▪ Research Methodology, Presentation, Analysis and interpretation of data	30 Marks
▪ Conclusion & Recommendations	10 Marks
• **Conduct of Viva-voce**	**40 Marks**
▪ In the course of Viva-voce, the questions may be asked such as importance / relevance of the study, objective of the study, methodology of the study/ mode of Enquiry (question responses)	10 Marks
▪ Ability to explain the analysis, findings, concluding observations, recommendation, limitations of the Study	20 Marks
▪ Overall Impression (including Communication Skill)	10 Marks

Note:

- ***The guiding teacher along with the external evaluator appointed by the University/ College for the evaluation of project shall conduct the viva-voce examination as per the evaluation pattern***

Passing Standard

- Minimum of Grade E in the project component
- In case of failing in the project work, the same project can be revised for ATKT examination.
- Absence of student for viva voce: If any student fails to appear for the viva voce on the date and time fixed by the department such student shall appear for the viva voce on the date and time fixed by the Department, such student shall appear for the viva voce only along with students of the next batch.

Revised Syllabus of Courses of B.Com. (Financial Markets) Programme at Semester V and VI
with effect from the Academic Year 2018-2019

Scheme of Evaluation

The performance of the learners will be evaluated in two Components. One component will be the Internal Assessment component carrying 25% marks and the second component will be the Semester-wise End Examination component carrying 75% marks. The allocation of marks for the Internal Assessment and Semester End Examinations will be as shown below:-

A) Internal Assessment: 25 %

Question Paper Pattern
(Internal Assessment- Courses without Practical Courses)

Sr. No.	Particular	Marks
1	**One class test (20 Marks)**	
	Match the Column/ Fill in the Blanks/ Multiple Choice Questions ***(½ Mark each)***	05 Marks
	Answer in One or Two Lines (Concept based Questions) ***(01 Mark each)***	05 Marks
	Answer in Brief (Attempt Any Two of the Three) ***(05 Marks each)***	10 Marks
2	Active participation in routine class instructional deliveries and overall conduct as a responsible learner, mannerism and articulation and exhibit of leadership qualities in organizing related academic activities	05 Marks

B) Semester End Examination: 75 %

i) Duration: The examination shall be of 2 ½ Hours duration

ii) Theory question paper pattern

- There shall be five questions each of 15 marks.
- All questions shall be compulsory with internal choice within the questions.
- Question may be subdivided into sub-questions a, b, c… and the allocation of marks depends on the weightage of the topic.

  (Detail question paper pattern has been given separately)

❖ **Passing Standard**

The learners to pass a course shall have to obtain a minimum of 40% marks in aggregate for each course where the course consists of Internal Assessment and Semester End Examination. The learners shall obtain minimum of 40% marks (i.e. 10 out of 25) in the Internal Assessment and 40% marks in Semester End Examination (i.e. 30 Out of 75) separately, to pass the course and minimum of Grade E to pass a particular semester A learner will be said to have passed the course if the learner passes the Internal Assessment and Semester End Examination together.

Question Paper Pattern

(Practical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 1/2 Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Objective Questions A. Sub Questions to be asked 10 and to be answered any 08 B. Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks
Q-2 Q-2	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-3 Q-3	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-4 Q-4	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-5 Q-5	A) Theory questions B) Theory questions ***OR*** Short Notes To be asked 05 To be answered 03	08 Marks 07 Marks 15 Marks

Note:

Practical question of 15 marks may be divided into two sub questions of 7/8 and 10/5Marks. If the topic demands, instead of practical questions, appropriate theory question may be asked.

Question Paper Pattern

(Theoretical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 1/2 Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Objective Questions A) Sub Questions to be asked 10 and to be answered any 08 B) Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks
Q-2 Q-2	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-3 Q-3	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-4 Q-4	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-5 Q-5	A) Theory questions B) Theory questions ***OR*** Short Notes To be asked 05 To be answered 03	08 Marks 07 Marks 15 Marks

Note:

Theory question of 15 marks may be divided into two sub questions of 7/8 and 10/5Marks.

University of Mumbai

B.Com. (Investment Management) Programme
Guidelines for Project Work
at
Third Year
Semester VI

Under Choice Based Credit, Grading and Semester System

(To be implemented from Academic Year 2018-2019)

Board of Studies-in-Banking and Finance

Introduction

Inclusion of project work in the course curriculum of the B.Com. (Investment Management) programme is one of the ambitious aspects in the programme structure. The main objective of inclusion of project work is to inculcate the element of research analyse and scientific temperament challenging the potential of learner as regards to his/ her eager to enquire and ability to interpret particular aspect of the study. It is expected that the guiding teacher should undertake the counselling sessions and make the awareness among the learners about the methodology of formulation, preparation and evaluation pattern of the project work.

- There are two modes of preparation of project work
  1. Project work based on research methodology in the study area
  2. Project work based on internship in the study area

Guidelines for preparation of Project Work

1. General guidelines for preparation of project work based on Research Methodology

- The project topic may be undertaken in any area of Elective Courses.
- Each of the learner has to undertake a Project individually under the supervision of a teacher-guide.
- The learner shall decide the topic and title which should be specific, clear and with definite scope in consultation with the teacher-guide concerned.
- University/college shall allot a guiding teacher for guidance to the students based on her / his specialization.
- The project report shall be prepared as per the broad guidelines given below:
  - Font type: Times New Roman
  - Font size: 12-For content, 14-for Title
  - Line Space : 1.5-for content and 1-for in table work
  - Paper Size: A4
  - Margin : in Left-1.5, Up-Down-Right-1
  - The Project Report shall be bounded.
  - The project report should be 80 to 100 pages

Structure to be followed to maintain the uniformity in formulation and presentation of Project Work

(Model Structure of the Project Work)

- **Chapter No. 1: Introduction**

  In this chapter Selection and relevance of the problem, historical background of the problem, brief profile of the study area, definition/s of related aspects, characteristics, different concepts pertaining to the problem etc can be incorporated by the learner.

- **Chapter No. 2: Research Methodology**

  This chapter will include Objectives, Hypothesis, Scope of the study, limitations of the study, significance of the study, Selection of the problem, Sample size, Data collection, Tabulation of data, Techniques and tools to be used, etc can be incorporated by the learner.

- **Chapter No. 3: Literature Review**

  This chapter will provide information about studies done on the respective issue. This would specify how the study undertaken is relevant and contribute for value addition in information/ knowledge/ application of study area which ultimately helps the learner to undertake further study on same issue.

- **Chapter No. 4: Data Analysis, Interpretation and Presentation**

  This chapter is the core part of the study. The analysis pertaining to collected data will be done by the learner. The application of selected tools or techniques will be used to arrive at findings. In this, table of information's, presentation of graphs etc. can be provided with interpretation by the learner.

- **Chapter No. 5: Conclusions and Suggestions**

  In this chapter of project work, findings of work will be covered and suggestion will be enlisted to validate the objectives and hypotheses.

Note: If required more chapters of data analysis can be added.

Acknowledgment

(Model structure of the acknowledgement)

To list who all have helped me is difficult because they are so numerous and the depth is so enormous.

I would like to acknowledge the following as being idealistic channels and fresh dimensions in the completion of this project.

I take this opportunity to thank the **University of Mumbai** for giving me chance to do this project.

I would like to thank my **Principal, _____**for providing the necessary facilities required for completion of this project.

I take this opportunity to thank our **Coordinator_____**, for her moral support and guidance.

I would also like to express my sincere gratitude towards my project guide _____ whose guidance and care made the project successful.

I would like to thank my **College Library**, for having provided various reference books and magazines related to my project.

Lastly, I would like to thank each and every person who directly or indirectly helped me in the completion of the project especially **my Parents and Peers** who supported me throughout my project.

2. Guidelines for Internship based project work

- Minimum 20 days/ 100 hours of Internship with an Organisation/ NGO/ Charitable Organisation/ Private firm.
- The theme of the internship should be based on any study area of the elective courses
- Experience Certificate is Mandatory
- A project report has to be brief in content and must include the following aspects:
  - **Executive Summary:**

    A bird's eye view of your entire presentation has to be precisely offered under this category.
  - **Introduction on the Company:**

    A Concise representation of company/ organization defining its scope, products/ services and its SWOT analysis.
  - **Statement and Objectives:**

    The mission and vision of the organization need to be stated enshrining its broad strategies.
  - **Your Role in the Organisation during the internship:**

    The key aspects handled, the department under which you were deployed and brief summary report duly acknowledged by the reporting head.
  - **Challenges:**

    The challenges confronted while churning out theoretical knowledge into practical world.
  - **Conclusion:**

    A brief overview of your experience and suggestions to bridge the gap between theory and practice.
- The project report based on internship shall be prepared as per the broad guidelines given below:
  - Font type: Times New Roman
  - Font size: 12-For content, 14-for Title
  - Line Space : 1.5-for content and 1-for in table work
  - Paper Size: A4
  - Margin : in Left-1.5, Up-Down-Right-1
  - The Project Report shall be bounded.
  - The project report should be of minimum 50 pages

Evaluation pattern of the project work

The Project Report shall be evaluated in two stages viz.	
• **Evaluation of Project Report (Bound Copy)**	**60 Marks**
▪ Introduction and other areas covered	20 Marks
▪ Research Methodology, Presentation, Analysis and interpretation of data	30 Marks
▪ Conclusion& Recommendations	10 Marks
• **Conduct of Viva-voce**	**40 Marks**
▪ In the course of Viva-voce, the questions may be asked such as importance / relevance of the study, objective of the study, methodology of the study/ mode of Enquiry (question responses)	10 Marks
▪ Ability to explain the analysis, findings, concluding observations, recommendation, limitations of the Study	20 Marks
▪ Overall Impression (including Communication Skill)	10 Marks

Note:

- ***The guiding teacher along with the external evaluator appointed by the University/ College for the evaluation of project shall conduct the viva-voce examination as per the evaluation pattern***

Passing Standard

- Minimum of Grade E in the project component
- In case of failing in the project work, the same project can be revised for ATKT examination.
- Absence of student for viva voce: If any student fails to appear for the viva voce on the date and time fixed by the department such student shall appear for the viva voce on the date and time fixed by the Department, such student shall appear for the viva voce only along with students of the next batch.

Revised Syllabus of Courses of B.Com. (Investment Management) Programme at Semester V and VI
with effect from the Academic Year 2018-2019

Scheme of Evaluation

The performance of the learners will be evaluated in two Components. One component will be the Internal Assessment component carrying 25% marks and the second component will be the Semester-wise End Examination component carrying 75% marks. The allocation of marks for the Internal Assessment and Semester End Examinations will be as shown below:-

A) Internal Assessment: **25 %**

Question Paper Pattern
(Internal Assessment- Courses without Practical Courses)

Sr. No.	Particular	Marks
1	**One class test (20 Marks)**	
	Match the Column/ Fill in the Blanks/ Multiple Choice Questions ***(½ Mark each)***	05 Marks
	Answer in One or Two Lines (Concept based Questions) ***(01 Mark each)***	05 Marks
	Answer in Brief (Attempt Any Two of the Three) ***(05 Marks each)***	10 Marks
2	Active participation in routine class instructional deliveries and overall conduct as a responsible learner, mannerism and articulation and exhibit of leadership qualities in organizing related academic activities	05 Marks

B) Semester End Examination: 75 %

i) Duration: The examination shall be of 2 ½ Hours duration

ii) Theory question paper pattern

- There shall be five questions each of 15 marks.
- All questions shall be compulsory with internal choice within the questions.
- Question may be subdivided into sub-questions a, b, c… and the allocation of marks depends on the weightage of the topic.

  (Detail question paper pattern has been given separately)

❖ **Passing Standard**

The learners to pass a course shall have to obtain a minimum of 40% marks in aggregate for each course where the course consists of Internal Assessment and Semester End Examination. The learners shall obtain minimum of 40% marks (i.e. 10 out of 25) in the Internal Assessment and 40% marks in Semester End Examination (i.e. 30 Out of 75) separately, to pass the course and minimum of Grade E to pass a particular semester A learner will be said to have passed the course if the learner passes the Internal Assessment and Semester End Examination together.

Question Paper Pattern

(Practical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 1/2 Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Objective Questions A. Sub Questions to be asked 10 and to be answered any 08 B. Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks
Q-2 Q-2	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-3 Q-3	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-4 Q-4	Full Length Practical Question ***OR*** Full Length Practical Question	15 Marks 15 Marks
Q-5 Q-5	A) Theory questions B) Theory questions ***OR*** Short Notes To be asked 05 To be answered 03	08 Marks 07 Marks 15 Marks

Note:

Practical question of 15 marks may be divided into two sub questions of 7/8 and 10/5Marks. If the topic demands, instead of practical questions, appropriate theory question may be asked.

Question Paper Pattern

(Theoretical Courses)

Maximum Marks: 75

Questions to be set: 05

Duration: 2 1/2 Hrs.

All Questions are Compulsory Carrying 15 Marks each.

Question No	Particular	Marks
Q-1	Objective Questions A) Sub Questions to be asked 10 and to be answered any 08 B) Sub Questions to be asked 10 and to be answered any 07 (*Multiple choice / True or False / Match the columns/Fill in the blanks)	15 Marks
Q-2 Q-2	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-3 Q-3	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-4 Q-4	Full Length Question ***OR*** Full Length Question	15 Marks 15 Marks
Q-5 Q-5	A) Theory questions B) Theory questions ***OR*** Short Notes To be asked 05 To be answered 03	08 Marks 07 Marks 15 Marks

Note:

Theory question of 15 marks may be divided into two sub questions of 7/8 and 10/5Marks.

University of Mumbai

No. AAMS(UG)/88 of 2021-22

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges and Directors of the Recognized Institutions in Faculty of Science & Technology is invited to this office circular No. UG/18 of 2016-17, dated 27th June, 2016 relating to the revised syllabus as per the (CBSGS) of F.Y.B.Sc. (Computer Science) (Sem. I & II).

They are hereby informed that the recommendations made by the Ad-hoc Board of Studies in Computer Science at its meeting held on 21st June , 2021 and subsequently passed by the Board of Deans at its meeting held on 28th June, 2021 vide item No. 6.38 (R) have been accepted by the Academic Council at its meeting held on 29th June, 2021 vide item No.6.38 (R) and that in accordance therewith, the revised syllabus as per the (CBSGS) for the F.Y.B.Sc. Computer Science (Sem. I & II) has been brought into force with effect from the academic year 2021-22 accordingly. (The same is available on the University's website www.mu.ac.in).

(Dr. B.N.Gaikwad)

Dr. Jagdish Bakal
BoS Chairperson in Computer Science

Dr. Anuradha Majumdar
Dean, Science and Technology

Preamble

The rise of Information and Communication Technology (ICT) has profoundly affected modern society. Increasing applications of computers in almost all areas of human endeavor has led to vibrant industries with concurrent rapid change in technology.

As the computing field advances at a rapid pace, the students must possess a solid foundation that allows and encourages them to maintain relevant skills as the field evolves. Specific languages and technology platforms change over time. Thus students must continue to learn and adapt their skills throughout their careers. To develop this ability, students will be exposed to multiple programming languages, tools, paradigms and technologies as well as the fundamental underlying principles throughout this programme.

The programme offers required courses such as programming languages, data structures, computer architecture and organization, algorithms, database systems, operating systems, and software engineering; as well as specialized courses in artificial intelligence, computer-based communication networks, distributed computing, information security, graphics, human-computer interaction, multimedia, scientific computing, web technology, and other current topics in computer science.

The core philosophy of this programme is to –

- Form strong foundations of Computer Science
- Nurture programming, analytical & design skills for the real world problems.
- Introduce emerging trends to the students in gradual way.
- Groom the students for the challenges of ICT industry

The students these days not only aspire for a career in the industry but also look for research opportunities. The main aim of this programme is to deliver a modern curriculum that will equip graduates with strong theoretical and practical backgrounds to enable them to excel in the workplace and to be lifelong learners. Not only does it prepare the students for a career in Software industry, it also motivates them towards further studies and research opportunities. Graduating students, can thus take up postgraduate programmes in CS leading to research as well as R&D, can be employable at IT industries, or can adopt a business management career.

In the first year i.e. for semester I & II, basic foundation of important skills required for software development is laid. The syllabus proposes to have four core subjects of Computer science and two core courses of Mathematics-Statistics. All core subjects are proposed to have theory as well as practical tracks. While the Computer Science courses will form fundamental skills for solving computational problems, the Mathematics & Statistics course will inculcate research-oriented acumen. Ability Enhancement Courses on Soft Skill Development will ensure an overall and holistic development of the students. The syllabus design for further semesters encompasses more advanced and specialized courses of Computer Science.

We sincerely believe that any student taking this programme will get very strong foundation and exposure to basics, advanced and emerging trends of the subject. We hope that the students‟ community and teachers‟ fraternity will appreciate the treatment given to the courses in the syllabus.

We wholeheartedly thank all experts who shared their valuable feedbacks and suggestions in order to improvise the contents; we have sincerely attempted to incorporate each of them. We further thank Chairperson and members of Board of Studies for their confidence in us.

Special thanks to Department of Computer Science and colleagues from various colleges, who volunteered or have indirectly, helped designing certain specialized courses and the syllabus as a whole.

Programme Structure for B.Sc. Computer Science

Programme Duration	06 Semesters *spread across 3 years*
Total Credits required for successful completion of the Course	120
Credits required from the Core Courses	76
Credits required for the Ability Enhancement Courses	04
Credits required for Skills Enhancement Courses	32
Credits for General Elective Courses	08
Minimum Attendance per Semester	75%

Progamme Objectives

The objectives of the 3 year B.Sc. Computer Science programme are as follows:

- To develop an understanding and knowledge of the basic theory of Computer Science with good foundation on theory, systems and applications.
- To fosternecessary skills and analytical abilities for developing computer based solutions of real-life problems.
- To provide training in emergent computing technologies which lead to innovative solutions for industry and academia.
- To develop the necessary study skills and knowledge to pursue further post-graduate study in computer science or other related fields.
- To develop the professional skillset required for a career in an information technology oriented business or industry.
- To enable students to work independently and collaboratively, communicate effectively, and become responsible, competent, confident, insightful, and creative users of computing technology

Progamme Learning Outcomes

At the end of three year Bachelor of Computer Science the students will be able:

- To formulate, to model, to design solutions, procedure and to use software tools to solve real world problems.
- To design and develop computer programs/computer -based systems in the areas such as networking, web design, security, cloud computing, IoT, data science and other emerging technologies.
- To familiarize with the modern-day trends in industry and research based settings and thereby innovate novel solutions to existing problems.
- To apply concepts, principles, and theories relating to computer science to new situations.
- To use current techniques, skills, and tools necessary for computing practice
- To apply standard Software Engineering practices and strategies in real-time software project development
- To pursue higher studies of specialization and to take up technical employment.
- To work independently or collaboratively as an effective tame member on a substantial software project.
- To communicate and present their work effectively and coherently.
- To display ethical code of conduct in usage of Internet and Cyber systems.
- To engage in independent and life-long learning in the background of rapid changing IT industry.

Semester I

Course Code	Course Title	Credits	Lectures /Week
USCS101	**Digital Systems & Architecture**	**2**	**3**

About the Course:
This course introduces the principles of computer organization and the basic architecture concepts.The course emphasizes performance and cost analysis, instruction set design, pipelining, memory technology, memory hierarchy, virtual memory management, and I/O systems.

Course Objectives:

- To have an understanding of Digital systems and operation of a digital computer.
- To learn different architectures & organizations of memory systems, processor organization and control unit.
- To understand the working principles of multiprocessor and parallel organization"s as advanced computer architectures

Learning Outcomes:
After successful completion of this course, students would be able to

- To learn about how computer systems work and underlying principles
- To understand the basics of digital electronics needed for computers
- To understand the basics of instruction set architecture for reduced and complex instruction sets
- To understand the basics of processor structure and operation
- To understand how data is transferred between the processor and I/O devices

Unit	Topics	No of Lectures
I	**Fundamentals of Digital Logic:** Boolean algebra, Logic Gates, Simplification of Logic Circuits: Algebraic Simplification, Karnaugh Maps. Combinational Circuits: Adders, Mux, De-Mux, Sequential Circuits: Flip-Flops (SR, JK & D), Counters: synchronous and asynchronous Counter **Computer System:** Comparison of Computer Organization & Architecture, Computer Components and Functions, Interconnection Structures. Bus Interconnections, Input / Output: I/O Module, Programmed I/O, Interrupt Driven I/O, Direct Memory Access	**15**
II	**Memory System Organization:** Classification and design parameters, Memory Hierarchy, Internal Memory: RAM, SRAM and DRAM, Interleaved and Associative Memory. Cache Memory: Design Principles, Memory mappings, Replacement Algorithms, Cache performance, Cache Coherence. Virtual Memory, External Memory: Magnetic Discs, Optical Memory, Flash Memories, RAID Levels **Processor Organization:** Instruction Formats, Instruction Sets, Addressing Modes, Addressing Modes Examples with Assembly Language [8085/8086 CPU], Processor Organization, Structure and Function. Register	**15**

	Organization, Basic Microprocessor operations: Data Transfer (Register / Memory) Operations, Arithmetic & Logical Operations, Instruction Cycle, Instruction Pipelining. Introduction to RISC and CISC Architecture, Instruction Level Parallelism and Superscalar Processors: Design Issues	
III	**Control Unit:** Micro-Operations, Functional Requirements, Processor Control, Hardwired Implementation, Micro-programmed Control**.** **Fundamentals of Advanced Computer Architecture:** Parallel Architecture: Classification of Parallel Systems, Flynn‟s Taxonomy, Array Processors, Clusters, and NUMA Computers. Multiprocessor Systems: Structure & Interconnection Networks, Multi-Core Computers: Introduction, Organization and Performance.	**15**

Textbooks:

Course Code	**Course Title**	**Credits**	**Lectures /Week**
USCSP101	**Digital Systems & Architecture – Practical**	**1**	**3**
1	Study and verify the truth table of various logic gates (NOT, AND, OR, NAND, NOR, EX-OR, and EX-NOR).		
2	Simplify given Boolean expression and realize it.		
3	Design and verify a half/full adder		
4	Design and verify half/full subtractor		
5	Design a 4 bit magnitude comparator using combinational circuits.		
6	Design and verify the operation of flip-flops using logic gates.		
7	Verify the operation of a counter.		
8	Verify the operation of a 4 bit shift register		
9	Design and implement expression using multiplexers / demultiplexers.		
10	Design and implement 3-bit binary ripple counter using JK flip flops.		
11	Simple microprocessor programs for data transfer operations		
12	Simple microprocessor programs for arithmetic & logical transfer operations		
Note	Practical 1 – 10 can be performed using any open source simulator (like Logisim) (Download it from https://sourceforge.net/projects/circuit/) Practical 11 – 12 can be performed on any simulation software like Jubin‟s 8085 simulator		

Course Code	Course Title	Credits	Lectures /Week
USCS102	**Introduction to Programming with Python**	**2**	**3**

About the Course:

This course is aims at introducing one of the fastest growing programming language of current time and enables learners to understand the fundamentals of programming with Python. Learners will be able to write programs to solve real-world problems, and produce quality code. It will help to develop strong skills of programming for implementing applications for emerging fields including data science and machine learning.

Course Objectives:

- To learn how to design and program Python applications.
- To explore the innards of Python Programming and understandcomponents of Python Program
- To define the structure and components of a Python program.
- To learn how to write loops and decision statements in Python
- To learn about inbuilt input/output operations and compound data types in Python

Learning Outcomes:

After successful completion of this course, students would be able to:

- Ability to store, manipulate and access data in Python
- Ability to implement basic Input / Output operations in Python
- Ability to define the structure and components of a Python program.
- Ability to learn how to write loops and decision statements in Python.
- Ability to learn how to write functions and pass arguments in Python.
- Ability to create and use Compound data types in Python

Unit	Topics	No of Lectures
I	**Overview of Python:** History & Versions, Features of Python, Execution of a Python Program, Flavours of Python, Innards of Python, Python Interpreter, Memory Management in Python, Garbage Collection in Python, Comparison of Python with C and Java, Installing Python, Writing and Executing First Python Program, Getting Help, IDLE **Data Types, Variables and Other Basic Elements:** Comments, Docstrings, Data types- Numeric Data type, Compound Data Type, Boolean Data type, Dictionary, Sets, Mapping, Basic Elements of Python, Variables **Input and Output Operations:** Input Function, Output Statements, The print() function, The print("string") function, The print(variables list) function, , The print(object) function, The print(formatted string) function, Command Line Arguments **Control Statements:** The if statement, The if … else Statement, The „if …	**15**

	elif … else" Statement, Loop Statement- while loop, for loop, Infinite loop, Nested loop, The else suite, break statement, continue statement, pass statement, assert statement, return statement	
II	**Operators:** Arithmetic operators, Assignment operators, Unary minus operator, Relational operators, Logical operators, Bitwise operators, Membership operators, Identity operators, Precedence of Operators, Associativity of Operators **Arrays:** Creating Arrays, Indexing and Slicing of Arrays, Basic Array Operations, Arrays Processing, Mathematical Operations on Array, Aliasing Arrays, Slicing and Indexing in NumPy Arrays, Basic slicing, Advanced Indexing, Dimensions of Arrays, Attributes of an Array, The ndim Attribute, The shape Attribute, The size Attribute, The itemsize Attribute **Functions:** Function definition and call, Returning Results, Returning Multiple Values from a Function, Built-in Functions, Difference between a Function and a Method, Pass Value by Object Reference, Parameters and Arguments, Formal and Actual Arguments, Positional Arguments, Keyword Arguments, Default Arguments, Arbitrary Arguments, Recursive Functions, Anonymous or Lambda Functions, Using Lambda with the filter() Function, Using Lambda with the map() Function, Using Lambda with the reduce() Function **Modules**:Introduction to Modules in Python	**15**
III	**Strings:** Creating Strings, Functions of Strings, Working with Strings, Length of a String, Indexing and Slicing, Repeating and Concatenating Strings, Checking Membership, Comparing Strings, Removing Spaces, Finding Substrings, Counting Substrings, Immutability, Splitting and Joining Strings, Changing Case, Checking Starting and Ending of a String, Sorting Strings, Searching in the Strings, Testing Methods, Formatting Strings, Finding the Number of Characters and Words, Inserting Substrings into a String **List and Tuples:** Lists, List Functions and Methods, List Operations, List Slices, Nested Lists, Tuples, Functions in Tuple **Dictionaries:** Creating a Dictionary, Operators in Dictionary, Dictionary Methods, Using for Loop with Dictionaries, Operations on Dictionaries, Converting Lists into Dictionary, Converting Strings into Dictionary, Passing Dictionaries to Functions, Sorting the Elements of a Dictionary using Lambda, Ordered Dictionaries	**15**

Textbooks:

5. Let Us Python, Yashwant. B. Kanetkar, BPB Publication, 2019

Course Code	Course Title	Credits	Lectures /Week
USCSP102	**Introduction to Programming with Python – Practical**	**1**	**3**
1	Write a program to design and develop python program to implement various control statement using suitable examples		
2	Write program in Python to define and call functions for suitable problem.		
3	Write Python program to demonstrate different types of function arguments.		
4	Write a Python program to demonstrate the precedence and associativity of operators.		
5	Write suitable Python program to implement recursion for problems such as Fibonacci series, Factorial, Tower of Hanoi etc.		
6	Write Python program to implement and use lambda function in python		
7	Write a python program to create and manipulate arrays in Python. Also demonstrate use of slicing and indexing for accessing elements from the array.		
8	Write a program to implement list in Python for suitable problem. Demonstrate various operations on it.		
9	Write a program to implement tuple in Python for suitable problem. Demonstrate various operations on it.		
10	Write a program to implement dictionary in Python for suitable problem. Demonstrate various operations on it.		

Course Code	Course Title	Credits	Lectures /Week
USCS103	**LINUX Operating System**	**2**	**3**

About the Course:

This syllabus will help to train students in fundamental skills and build-up sustainable interest in Linux Operating System. It will improve necessary knowledge base to understand Linux Operating System and its practical implementation, it will also help to develop Linux based solutions for real life problems.

Course Objectives:

- To learn basic concepts of Linux in terms of operating system
- To learn use of various shell commands with regular expressions
- To set Linux Environment variables and learn setting file permissions to maintain Linux security implementation
- To learn various editors available in Linux OS
- To learn shell scripting.
- To learn installation of compilers and programming using C and Python languages on Linux platform

Learning Outcomes:

After successful completion of this course, students would be able to

- Work with Linux file system structure, Linux Environment
- Handle shell commands for scripting, with features of regular expressions, redirections
- Implement file security permissions
- Work with vi, sed and awk editors for shell scripting using various control structures
- Install softwares like compilers and develop programs in C and Python programming languages on Linux Platform

Unit	Topics	No of Lectures
I	**Linux operating system and Basics :** History, GNU Info and Utilities, Various Linux Distributions, The Unix/Linux architecture, Features of Unix/Linux, Starting the shell, Shell prompt, Command structure, File Systems and Directory Structure, man pages, more documentation pages **Basic Bash shell commands:** General purpose utility Commands, basic commands, Various file types, attributes and File handling Commands, Handling Ordinary Files. More file attributes **Advanced Bash shell commands:** Simple Filters, Filters using regular expressions. **The Linux environment variable:** Setting, Locating and removing environment variables like PATH etc, Default shell environment variables, Using command aliases.	**15**

II	**Understanding Linux file permission:** Linux security, Using Linux groups, Decoding file permissions, Changing security setting, Sharing files. **Linux Security:** Understanding Linux Security, uses of root, sudo command, working with passwords, Understanding ssh. **Networking:** TCP/IP Basics, TCP/IP Model, Resolving IP addresses, Applications, ping, telnet, ftp, DNS **Working withEditors:** awk, sed and Introduction to vi	**15**
III	**Basic script building:** Using multiple commands, Creating script files, Displaying messages, Using variables, Redirecting Input and Output, Pipes performing math, Exiting the script. **Using structured commands:** Working with if-then, if-then-else and nested if statements, test command, Compound condition testing, while command, until command, case command. **Script and Process control :** Handling signals, Running scripts in background mode, Running scripts without a console, Job control, Job scheduling commands: ps, nice, renice, at, batch, cron table, Running the script at boot	**15**

Textbooks:

1. "Linux Command line and Shell Scripting Bible", Richard Blum, Wiley India.
2. "Unix: Concepts and Applications", Sumitabha Das, 4th Edition, McGraw Hill.
3. "Official Ubuntu Book", Matthew Helmke& Elizabeth K. Joseph with Jose Antonio Rey and Philips Ballew, 8th Ed.

Additional References:

1. "Linux Administration: A Beginner's Guide", Fifth Edition, Wale Soyinka, Tata McGraw-Hill, 2008.
2. "Linux: Complete Reference", Richard Petersen, 6th Edition, Tata McGraw-Hill
3. "Beginning Linux Programming", Neil Mathew, 4th Edition, Wiley Publishing, 2008.

Course Code	Course Title	Credits	Lectures /Week
USCSP103	**LINUX Operating System – Practical**	**1**	**3**
1	**Installation of Ubuntu Linux operating system.** a) Booting and Installing from (USB/DVD) b) Using Ubuntu Software center / Using Synaptic c) Explore useful software packages.		
2	**Becoming an Ubuntu power user** a) Administering system and User setting b) Learning Unity keyboard c) Using the Terminal d) Working with windows programs		

3	**File System Commands:** touch, help, man, more, less, pwd, cd, mkdir, rmdir, ls, find, ls, etc **File handling Commands:** cat, cp, rm, mv, more, file, wc, od, cmp, diff, comm, chmod, chown, chgrp, gzip and gunzip, zip and unzip, tar, ln, umask,, chmod, chgrp, chown, etc
4	**General purpose utility Commands:**cal, date, echo, man, printf, passwd, script, who, uname, tty, stty, etc **Simple Filters and I/O redirection:** head, tail, cut paste, sort, grep family, tee, uniq, tr, etc. **Networking Commands:** who, whoami, ping, telnet, ftp, ssh, etc
5	**Editors:** vi, sed, awk
6	**Working and Managing with processes-** sh, ps, kill, nice, at and batch etc.
7	**Shell scripting I:** Defining variables, reading user input, exit and exit status commands, , expr, test, [], if conditional, logical operators
8	**Shell scripting II:** Conditions (for loop, until loop and while loop) arithmetic operations, examples
9	**Shell scripting III:** Redirecting Input / Output in scripts, creating your own Redirection
10	Installation of C/C++/Java/Python Compiler and creating an environment for app development. Basic programming using C and Python Languages.

Course Code	Course Title	Credits	Lectures /Week
USCS104	**Open Source Technologies**	**2**	**3**

About the Course:

Open Source Software is becoming an important resource for development, especially in developing countries. A working understanding of the economic and technical background of the Free / Open Source Software movement (FOSS) is essential for its effective use. The course takes students through the history and current status of the FOSS world, and starts them exploring it, by connecting their personal experiences with corresponding FOSS projects. Students will experience finding and using Open Source Software projects.

Course Objectives:

- Understand the difference between open-source software and commercial software.
- Understand the policies, licensing procedures and ethics of FOSS.
- Understand open-source philosophy, methodology and ecosystem.
- Awareness with Open-Source Technologies.

Learning Outcomes:

- Differentiate between Open Source and Proprietary software and Licensing.
- Recognize the applications, benefits and features of Open-Source Technologies
- Gain knowledge to start, manage open-source projects.

Unit	Topics	No of Lectures
I	**Introduction to Open-Source:** Open Source, Need and Principles of OSS, Open-Source Standards, Requirements for Software, OSS success, Free Software, Examples, Licensing, Free Vs. Proprietary Software, Free Software Vs. Open-Source Software, Public Domain. History of free software, Proprietary Vs Open-Source Licensing Model, use of Open-Source Software, FOSS does not mean no cost. History: BSD, The Free Software Foundation and the GNU Project. **Open-Source Principles and Methodology:** Open-Source History, Open-Source Initiatives, Open Standards Principles, Methodologies, Philosophy, Software freedom, Open-Source Software Development, Licenses, Copyright vs. Copy left, Patents, Zero marginal cost, Income-generation Opportunities, Internationalization. **Licensing:** What Is A License, How to create your own Licenses, Important FOSS Licenses (Apache, BSD, PL, LGPL), copyrights and copy lefts, Patent.	**15**
II	**Open-Source projects:** Starting and maintaining own Open-Source Project, Open-Source Hardware, Open-Source Design, Open-source Teaching, Open-source media. **Collaboration:** Community and Communication, Contributing to Open-Source Projects Introduction to GitHub, interacting with the community on GitHub, Communication and etiquette, testing open-source code, reporting	**15**

	issues, contributing code. Introduction to Wikipedia, contributing to Wikipedia or contributing to any prominent open-source project of student's choice. **Open-Source Ethics and Social Impact:** Open source vs. closed source, Open-source Government, Ethics of Open-source, Social and Financial impacts of open-source technology, Shared software, Shared source, Open Source as a Business Strategy	
III	**Understanding Open-Source Ecosystem**: Open-Source Operating Systems: GNU/Linux, Android, Free BSD, Open Solaris. Open-Source Hardware, Virtualization Technologies, Containerization Technologies: Docker, Development tools, IDEs, Debuggers, Programming languages, LAMP, Open-Source Database technologies **Case Studies:** Example Projects: Apache Web server, BSD, GNU/Linux, Android, Mozilla (Firefox), Wikipedia, Drupal, WordPress, Git, GCC, GDB, GitHub, Open Office, LibreOffice Study: Understanding the developmental models, licensing, mode of funding, commercial/non-commercial use.	**15**

Course Code	Course Title	Credits	Lectures /Week
USCSP104	**Open Source Technologies– Practical**	**1**	**3**
1	**Open Source Operating Systems** • Learn the following open source operating system of your choice: Linux, Android, FreeBSD, Open Solaris etc. • Learn the installation. • Identify the unique features of these OS.		
2	Hands on with **LibreOffice** • Learn it from practical view-point • Give a brief presentation about it to the class		
3	Hands on with **GIMP** Photo Editing Tool • Learn it from practical view-point • Give a brief presentation about it to the class		
4	Hands on with **Shotcut** Video Editing Tool • Learn it from practical view-point • Give a brief presentation about it to the class		
5	Hands on with **Blender** Graphics and Animation Tool • Learn it from practical view-point • Give a brief presentation about it to the class		
6	Hands on with **Apache** Web Server • Learn it from practical view-point • Give a brief presentation about it to the class		
7	Hands on with **WordPress** CMS • Learn it from practical view-point • Give a brief presentation about it to the class		
8	Contributing to **Wikipedia**: • Introduction to wikipedia: operating model, license, how to contribute? • Create your user account on wikipedia • c. Identify any topic of your choice and contribute the missing information		
9	**Github** • Create and publish your own open source project: Write any simple program using your choice of programming language. • Create a repository on github and save versions of your project. You"ll learn about the staging area, committing your code, branching, and merging, • Using GitHub to Collaborate: Get practice using GitHub or other remote repositories to share your changes with others and collaborate on multi-developer projects. You'll learn how to make and review a pull request on GitHub. • d. Contribute to a Live Project: Students will publish a repository containing their reflections from the course and submit a pull request.		

10	**Virtualization:** Open Source virtualization technologies: • Install and configure the following: VirtualBox, Zen, KVM • Create and use virtual machines
11	**Containerization:** • Install and configure the following containerization technologies: docker, rocket, LXD • Create and use containers using it

Course Code	Course Title	Credits	Lectures /Week
USCS105	**Discrete Mathematics**	**2**	**3**

About the Course:
Discrete Mathematics provides an essential foundation for virtually every area of Computer Science. The problem-solving techniques honed in Discrete Mathematics are necessary for writing complicated software. Discrete mathematics also builds the gateway to advanced courses in Mathematical Sciences, Data Science, Machine Learning, Software Engineering, etc.

Course Objectives:

- The purpose of the course is to familiarize the prospective learners with mathematical structures that are fundamentally discrete.
- This course will enhance prospective learners to reason and ability to articulate mathematical problems.
- This course will introduce functions, forming and solving recurrence relations and different counting principles. These concepts will be useful to study or describe objects or problems in computer algorithms and programming languages and these concepts can be used effectively in other courses.

Learning Outcomes:
After successful completion of this course, learners would be able to:

- Define mathematical structures (relations, functions, graphs) and use them to model real life situations.
- Understand, construct and solve simple mathematical problems.
- Solve puzzles based on counting principles.
- Provide basic knowledge about models of automata theory and the corresponding formal languages.
- Develop an attitude to solve problems based on graphs and trees, which are widely used in software.

Unit	Topics	No of Lectures
I	**Functions:** Definition of function; Domain, co-domain, range of a function; Examples of standard functions such as identity and constant functions, absolute value function, logarithmic and exponential functions, flooring and ceiling functions; Injective, surjective and bijective functions; Composite and inverse functions. **Relations:** Definition and examples of relation; Properties of relations, Representation of relations using diagraphs and matrices; Equivalence relation; Partial Order relation, Hasse Diagrams, maximal, minimal, greatest, least element, Lattices.	**15**

	Recurrence Relations: Definition and Formulation of recurrence relations; Solution of a recurrence relation; Solving recurrence relations- Back tracking method, Linear homogeneous recurrence relations with constant coefficients; Homogeneous solution of linear homogeneous recurrence relation with constant coefficients; Particular solution of non-linear homogeneous recurrence relation with constant coefficients; General solution of non-linear homogeneous recurrence relation with constant coefficients; Applications- Formulate and solve recurrence relation for Fibonacci numbers, Tower of Hanoi, Intersection of lines in a plane, Sorting Algorithms.	
II	**Counting Principles:** Basic Counting Principles (Sum and Product Rule); Pigeonhole Principle (without proof) - Simple examples; Inclusion Exclusion Principle (Sieve formula) (without proof); Counting using Tree diagrams. **Permutations and Combinations:** Permutation without and with repetition; Combination without and with repetition; Binomial numbers and identities: Pascal Identity, Vandermonde‟s Identity, Pascal triangle, Binomial theorem (without proof) and applications; Multionomial numbers, Multinomial theorem (without proof) and applications. **Languages, Grammars and Machines:** Languages and Grammars – Introduction, Phase structure grammar, Types of grammar, derivation trees; Finite-State Machines with Output; Finite-State Machines with No Output; Regular Expression and Regular Language.	**15**
III	**Graphs:** Graphs and Graph Models; Graph terminologies and Special types of graphs; Definition and elementary results; Representing graphs, Linked representation of a graph; Graph Isomorphism; Connectivity in graphs – path, trail, walk; Euler and Hamilton paths; Planar graphs, Graph coloring and chromatic number. **Trees:** Definition, Tree terminologies and elementary results; Linked representation of binary trees; Ordered rooted tree, Binary trees, Complete and extended binary trees, Expression trees, Binary Search tree, Algorithms for searching and inserting in binary search trees, Algorithms for deleting in a binary search tree; Traversing binary trees	**15**

Course Code	Course Title	Credits	Lectures /Week
USCSP105	**Discrete Mathematics – Practical**	**1**	**3**
1	**Functions –** a. Identify if the given mapping is a function b. Finding domain and range of a given function c. Check if the given function is injective/surjective/bijective d. Find the inverse of a given function e. Operations on functions f. Graphs of functions using any online tool		
2	**Relations –** a. Representation of relations b. Determine if the given relation satisfies equivalence relation/partial order relation c. Draw Hasse diagrams d. Find maximal, minimal, greatest, least element in a poset e. Determine if a given poset is a lattice		
3	**Recurrence Relation –** a. Solve recurrence relation using backtracking method b. Solve linear homogeneous recurrence relations with constant coefficients c. Find homogeneous, particular, general solution of a recurrence relation d. Formulate and solving recurrence relation		
4	**Counting Principles –** a. Sum and product rule b. Pigeonhole Principle c. Inclusion Exclusion Principle d. Counting using Tree diagrams		
5	**Permutations and Combinations –** a. Permutations b. Permutations with repetitions c. Combinations d. Combinations with repetitions e. Binomial numbers and Identities		

	f. Applications on Binomial theorem g. Applications on Multinomial theorem
6	**Languages and Grammars –** a. Find the language generated by given grammar b. Check if a given string belongs or not to a given language/grammar c. Operations on languages d. Identify the type of grammar
7	**Finite State Machines –** a. Check if a given string is accepted or rejected by FSM without output b. Find the output for a FSM with output c. Describe a machine (diagram/table)
8	**Regular Expression and Regular Language –** a. Describe the regular expressions represented by given language b. Describe the language represented by given regular expression
9	**Graphs –** a. Types of graph b. Properties of graph c. Representation of graph d. Graph Isomorphism e. Connectivity in graphs – path, trail, walk f. Euler and Hamilton graphs g. Planar graphs h. Graph coloring and chromatic number
10	**Trees –** a. Tree terminologies b. Types of tree c. Properties of tree d. Representation of tree e. Expression tree f. Binary Search tree g. Tree traversal

Course Code	Course Title	Credits	Lectures /Week
USCS106	**Descriptive Statistics**	**2**	**3**

About the Course:

This course is designed to provide learners with an understanding of the data and to develop an understanding of the quantitative techniques from Statistics. It also provides the knowledge of different statistical tools used for primary statistical analysis of data.

Course Objectives:

1. To develop the learners ability to deal with different types of data.
2. To enable the use of different measures of central tendency and dispersion wherever relevant.
3. To make learner aware about the techniques to check the Skewness and Kurtosis of data.
4. To make learner enable to find the correlation between different variables and further apply the regression analysis to find the exact relation between them.
5. To develop ability to analyze statistical data through R software.

Learning Outcomes:

After successful completion of this course, learners would be able to

1. Organize, manage and present data.
2. Analyze Statistical data using measures of central tendency and dispersion.
3. Analyze Statistical data using basics techniques of R.
4. Study the relationship between variables using techniques of correlation and regression.

Unit	Topics	No of Lectures
I	**Data Types and Data Presentation: Data types:** Attribute, Variable, Discrete and Continuous variable, Univariate and Bivariate distribution. Types of Characteristics, Different types of scales: nominal, ordinal, interval and ratio. **Data presentation:** Frequency distribution, Histogram, Ogive curves. **Introduction to R:** Data input, Arithmetic Operators, Vector Operations, Matrix Operations, Data Frames, Built-in Functions. Frequency Distribution, Grouped Frequency Distribution, Diagrams and Graphs, Summary statistics for raw data and grouped frequency distribution. **Measures of Central tendency:** Concept of average/central tendency, characteristics of good measure of central tendency. Arithmetic Mean (A.M.), Median, Mode - Definition, examples for ungrouped and grouped data, effect of shift of origin and change of scale, merits and demerits. Combined arithmetic mean. Partition Values: Quartiles, Deciles and Percentiles - examples for ungrouped and grouped data	**15**

II	**Measures dispersion:** Concept of dispersion, Absolute and Relative measure of dispersion, characteristics of good measure of dispersion. Range, Semi-interquartile range, Quartile deviation, Standard deviation - Definition, examples for ungrouped and grouped data, effect of shift of origin and change of scale, merits and demerits. Combined standard deviation, Variance. Coefficient of range, Coefficient of quartile deviation and Coefficient of variation (C.V.) **Moments:** Concept of Moments, Raw moments, Central moments, Relation between raw and central moments. **Measures of Skewness and Kurtosis:** Concept of Skewness and Kurtosis, measures based on moments, quartiles.	**15**
III	**Correlation:** Concept of correlation, Types and interpretation, Measure of Correlation: Scatter diagram and interpretation; Karl Pearson‟s coefficient of correlation (r): Definition, examples for ungrouped and grouped data, effect of shift of origin and change of scale, properties; Spearman‟s rank correlation coefficient: Definition, examples of with and without repetition. Concept of Multiple correlation. **Regression:** Concept of dependent (response) and independent (predictor) variables, concept of regression, Types and prediction, difference between correlation and regression, Relation between correlation and regression. Linear Regression - Definition, examples using least square method and regression coefficient, coefficient of determination, properties. Concept of Multiple regression and Logistic regression.	**15**

Problem solving and implementation using R programming			
1	**Basics of R-** a. Data input, Arithmetic Operators b. Vector Operations, Matrix Operations c. Data Frames, Built-in Functions d. Frequency Distribution, Grouped Frequency Distribution e. Diagrams and Graphs		
2	**Frequency distribution and data presentation-** a. Frequency Distribution (Univariate data/ Bivariate data) b. Diagrams c. Graphs		
3	**Measures of Central Tendency-** a. Arithmetic Mean b. Median c. Mode d. Partition Values		
4	**Measures dispersion-** a. Range and Coefficient of range b. Quartile deviation and Coefficient of quartile deviation c. Standard deviation, Variance and Coefficient of variation (C.V.)		
5	**Moments-** a. Raw moments b. Central moments		
6	**Measures of Skewness -** a. Karl Pearson‟s measure of Skewness b. Bowley‟s measure of Skewness c. Moment coefficient of Skewness		
7	**Measures of Kurtosis-** a. Moment coefficient of Kurtosis (Absolute measure) b. Moment coefficient of Kurtosis (Relative measure)		
8	**Correlation-** a. Karl Pearson‟s correlation coefficient b. Spearman‟s Rank correlation		
9	**Regression-** a. Method of least squares b. Using regression coefficients c. Properties of regression lines & regression coefficients		
10	**Summary Statistics using R-** a. Summary statistics for raw data b. Summary statistics for grouped frequency distribution c. Simple Correlation & Regression using R		

Course Code	Course Title	Credits	Lectures /Week
USCS107	**Soft Skills**	**2**	**3**

About the Course:
To help learners develop their soft skills and develop their personality along with technical skills. Focus on various communication enhancement along with academic and professional ethics.

Course Objectives:

- Understand the significance and essence of a wide range of soft skills.
- Learn how to apply soft skills in a wide range of routine social and professional settings
- Learn how to employ soft skills to improve interpersonal relationships
- Learn how to employ soft skills to enhance employability and ensure workplace and career success

Learning Outcomes:

- Learners will be able to understand the importance and types soft skills
- Learners will develop skills for Academic and Professional Presentations.
- Learners will able to understand Leadership Qualities and Ethics.
- Ability to understand the importance of stress management in their academic & professional life.

Unit	Topics	No of Lectures
I	**Introduction to Soft Skills** **Soft Skills: An Introduction –** Definition and Significance of Soft Skills; Process, Importance and Measurement of Soft Skill Development. **Personality Development:** Knowing Yourself, Positive Thinking, Johari's Window, Physical Fitness **Emotional Intelligence:** Meaning and Definition, Need for Emotional Intelligence, Intelligence Quotient versus Emotional Intelligence Quotient, Components of Emotional Intelligence, Competencies of Emotional Intelligence, Skills to Develop Emotional Intelligence **Positivity and Motivation:** Developing Positive Thinking and Attitude; Driving out Negativity; Meaning and Theories of Motivation; Enhancing Motivation Levels **Etiquette and Mannerism:** Introduction, Professional Etiquette, Technology Etiquette **Ethical Values:** Ethics and Society, Theories of Ethics, Correlation between Values and Behavior, Nurturing Ethics, Importance of Work Ethics, Problems in the Absence of Work Ethics	**15**

II	**Basic Skills in Communication:** **Components of effective communication:** Communication process and handling them, Composing effective messages, Non – Verbal Communication: its importance and nuances: Facial Expression, Posture, Gesture, Eye contact, appearance (dress code). **Communication Skills:** Spoken English, Phonetics, Accent, Intonation **Employment Communication:** Introduction, Resume, Curriculum Vitae, Scannable Resume, Developing an Impressive Resume, Formats of Resume, Job Application or Cover Letter **Job Interviews:** Introduction, Importance of Resume, Definition of Interview, Background Information, Types of Interviews, Preparatory Steps for Job Interviews, Interview Skill Tips, Changes in the Interview Process, FAQ During Interviews **Group Discussion:** Introduction, Ambience/Seating Arrangement for Group Discussion, Importance of Group Discussions, Difference between Group Discussion, Panel Discussion and Debate, Traits, Types of Group Discussions, topic based and Case based Group Discussion, Individual Traits	**15**
III	**Academic and Professional Skills:** **Professional Presentation:** Nature of Oral Presentation, planning a Presentation, Preparing the Presentation, Delivering the Presentation **Creativity at Workplace:** Introduction, Current Workplaces, Creativity, Motivation, Nurturing Hobbies at Work, The Six Thinking Hat Method. **Capacity Building: Learn, Unlearn and Relearn**: Capacity Building, Elements of Capacity Building, Zones of Learning, Ideas for Learning, Strategies for Capacity Building **Leadership and Team Building:** Leader and Leadership, Leadership Traits, Culture and Leadership, Leadership Styles and Trends, Team Building, Types of Teams. **Decision Making and Negotiation:** Introduction to Decision Making, Steps for Decision Making, Decision Making Techniques, Negotiation Fundamentals, Negotiation Styles, Major Negotiation Concepts **Stress and Time Management:** Stress, Sources of Stress, Ways to Cope with Stress	**15**

Textbooks:

1. Managing Soft Skills for Personality Development – edited by B.N.Ghosh, McGraw Hill India, 2017.
2. Soft Skills: An Integrated Approach to Maximize Personality, Gajendra S. Chauhan, Sangeeta Sharma, Wiley India

Semester II

Course Code	Course Title	Credits	Lectures /Week
USCS201	**Design & Analysis of Algorithms**	**2**	**3**

About the Course:
The course covers the concepts of - (i) calculating complexity of algorithms, (ii) the essential operations like searching, sorting, selection, pattern matching & recursion, and (iii) various algorithmic strategies like greedy, divide-n-conquer, dynamic programming, backtracking and implementations of all these on basic data structures like array, list and stack.

Course Objectives:
The objectives of this course are:

- To make students understand the basic principles of algorithm design
- To give idea to students about the theoretical background of the basic data structures
- To familiarize the students with fundamental problem-solving strategies like searching, sorting, selection, recursion and help them to evaluate efficiencies of various algorithms.
- To teach students the important algorithm design paradigms and how they can be used to solve various real world problems.

Learning Outcomes:
After successful completion of this course, students would be able to

- Students should be able to understand and evaluate efficiency of the programs that they write based on performance of the algorithms used.
- Students should be able to appreciate the use of various data structures as per need
- To select, decide and apply appropriate design principle by understanding the requirements of any real life problems

Unit	Topics	No of Lectures
I	**Introduction to algorithms** - What is algorithm, analysis of algorithm, Types of complexity, Running time analysis, How to Compare Algorithms, Rate of Growth, Types of Analysis, Asymptotic Notation, Big-O Notation, Omega-Ω Notation, Theta-Θ Notation, Asymptotic Analysis, Performance characteristics of algorithms, Estimating running time / number of steps of executions on paper, Idea of Computability **Introduction to Data Structures** - What is data structure, types, Introduction to Array(1-d & 2-d), Stack and List data structures, operations on these data structures, advantages disadvantages and applications of these data structures like solving linear equations, Polynomial Representation, Infix-to-Postfix conversion	**15**
II	**Recursion** - What is recursion, Recursion vs Iteration, recursion applications like Factorial of a number, Fibonacci series & their	**15**

	comparative analysis with respect to iterative version, Tower of hanoi problem **Basic Sorting Techniques -** Bubble, Selection and Insertion Sort & their comparative analysis **Searching Techniques -** Linear Search and its types, Binary Search and their comparative analysis **Selection Techniques** - Selection by Sorting, Partition-based Selection Algorithm, Finding the Kth Smallest Elements in Sorted Order & their comparative analysis **String Algorithms** - Pattern matching in strings, Brute Force Method & their comparative analysis	
III	**Algorithm Design Techniques -** Introduction to various types of classifications/design criteria and design techniques **Greedy Technique -** Concept, Advantages & Disadvantages, Applications, Implementation using problems like - file merging problem **Divide-n-Conquer -** Concept, Advantages & Disadvantages, Applications, Implementation using problems like - merge sort, Strassen's Matrix Multiplication **Dynamic Programming** - Concept, Advantages & Disadvantages, Applications, Implementation using problems like - Fibonacci series, Factorial of a number, Longest Common subsequence **Backtracking Programming -** Concept, Advantages & Disadvantages, Applications, Implementation using problems like N-Queen Problem	**15**

USCSP201	**Design & Analysis of Algorithms – Practical**	**1**	**3**
1	Programs on 1-d arrays like - sum of elements of array, searching an element in array, finding minimum and maximum element in array, count the number of even and odd numbers in array. For all such programs, also find the time complexity, compare if there are multiple methods		
2	Programs on 2-d arrays like row-sum, column-sum, sum of diagonal elements, addition of two matrices , multiplication of two matrices. For all such programs, also find the time complexity, compare if there are multiple methods		
3	Program to create a list-based stack and perform various stack operations.		
4	Program to perform linear search and binary search on list of elements. Compare the algorithms by calculating time required in milliseconds using readymade libraries.		
5	Programs to sort elements of list by using various algorithms like bubble, selection sort, and insertion sort. Compare the efficiency of algorithms.		
6	Programs to select the N^{th} Max/Min element in a list by using various algorithms. Compare the efficiency of algorithms.		
7	Programs to find a pattern in a given string - general way and brute force technique. Compare the efficiency of algorithms.		
8	Programs on recursion like factorial, fibonacci, tower of hanoi. Compare algorithms to find factorial/fibonacci using iterative and recursive approaches.		
9	Program to implement file merging, coin change problems using Greedy Algorithm and to understand time complexity.		
10	Program to implement merge sort, Straseen‟s Matrix Multiplication using D-n-C Algorithm and to understand time complexity.		
11	Program to implement fibonacci series, Longest Common Subsequence using dynamic programming and to understand time complexity. Compare it with the general recursive algorithm.		
12	Program to implement N-Queen Problem, Binary String generation using Backtracking Strategy and to understand time complexity.		

Course Code	Course Title	Credits	Lectures /Week
USCS202	**Advanced Python Programming**	**2**	**3**

About the Course:

This course aims to explore and enable learners to master the skills of advanced topics in Python Programming. It helps learners develops advanced skills such as working with databases, matching patterns, implementing threads and exception handling and GUI in Python. It also highlights and why Python is a useful scripting language for all developers.

Course Objectives:

- To learn how to design object-oriented programs with Python classes.
- To learn about reading, writing and implementing other operation on files in Python.
- To implement threading concept and multithreading on Python
- To design GUI Programs and implement database interaction using Python.
- To know about use of regular expression and handling exceptions for writing robust python programs.

Learning Outcomes:

After successful completion of this course, students would be able to

- Ability to implement OOP concepts in Python including Inheritance and Polymorphism
- Ability to work with files and perform operations on it using Python.
- Ability to implement regular expression and concept of threads for developing efficient program
- Ability to implement exception handling in Python applications for error handling.
- Knowledge of working with databases, designing GUI in Python and implement networking in Python

Unit	Topics	No of Lectures
I	**Working with files:** Files, opening and closing a file, working with text files containing strings, knowing whether a file exists or not, working with binary files, the „with" statement, the seek() and tell() methods, random accessing of binary files, zipping and unzipping files, working with directories, running other programs from python program **Regular expressions:** What is a regular expression?, sequence characters in regular expressions, quantifiers in regular expressions, special characters in regular expressions, using regular expression on files, retrieving information from an html file, **Threads in python:** Difference between process and thread, types of threads, benefits of threads, creating threads, single tasking and multitasking, thread synchronization, deadlock in threads, daemon threads **Date and time in python:** Date and time now, combining date and time,	**15**

	formatting dates and times, finding durations using “time delta”, comparing two dates, sorting dates, stopping execution temporarily, knowing the time taken by a program, calendar module	
II	**Database in python:** Using SQL with python, retrieving rows from a table, inserting rows into a table, deleting rows from a table, updating rows in a table, creating database tables through python, Exception handling in databases. **Exceptions in python:** Errors in a python program, compile & run-time errors, logical error, exceptions-exception handling, types of exceptions, the except block, the assert statement, user-defined exceptions, logging the exceptions **Networking:** Protocols,server-client architecture, tcp/ip and udp communication **Graphical user interface:** Creating a GUI in python, Widget classes, Working with Fonts and Colours, working with Frames, Layout manager, Event handling	**15**
III	**OOPs in python:** Features of Object Oriented Programming system (oops)-classes and objects, encapsulation, abstraction, inheritance, polymorphism, constructors and destructors **Classes and objects:** Creating a class, the self-variable, types of variables, namespaces, types of methods, instance methods, class methods, static methods, passing members of one class to another class, inner classes **Inheritance and polymorphism:** Inheritance in python, types of inheritance- single inheritance, multilevel inheritance, hierarchical inheritance, multiple inheritance, constructors in inheritance, overriding super class constructors and methods, the super() method, method resolution order (mro), polymorphism, duck typing, operator overloading, method overloading, method overriding**,** **Abstract classes and interfaces:** Abstract class, abstract method,interfaces in python, abstract classes vs. Interfaces	**15**

USCSP202	**Advanced Python Programming – Practical**	**1**	**3**
1	Write a program to Python program to implement various file operations.		
2	Write a program to Python program to demonstrate use of regular expression for suitable application.		
3	Write a Program to demonstrate concept of threading and multitasking in Python.		
4	Write a Python Program to work with databases in Python to perform operations such as a. Connecting to database b. Creating and dropping tables c. Inserting and updating into tables.		
5	Write a Python Program to demonstrate different types of exception handing.		
6	Write a GUI Program in Python to design application that demonstrates a. Different fonts and colors b. Different Layout Managers c. Event Handling		
7	Write Python Program to create application which uses date and time in Python.		
8	Write a Python program to create server-client and exchange basic information		
9	Write a program to Python program to implement concepts of OOP such as a. Types of Methods b. Inheritance c. Polymorphism		
10	Write a program to Python program to implement concepts of OOP such as a. Abstract methods and classes b. Interfaces		

Course Code	Course Title	Credits	Lectures /Week
USCS203	**Introduction to OOPs using C++**	**2**	**3**

About the Course:

The course aims to introduce a new programming paradigm called Object Oriented Programming. This will be covered using C++ programming language. C++ is a versatile programming language, which supports a variety of programming styles, including procedural, object-oriented, and functional programming. This makes C++ powerful as well as flexible. It can be used to develop software such as operating systems, databases, and compilers.

Course Objectives:

Learning Outcomes:

After successful completion of this course, students would be able to

- Work with numeric, character and textual data and arrays.
- Understand the importance of OOP approach over procedural language.
- Understand how to model classes and relationships using UML.
- Apply the concepts of OOPS like encapsulation, inheritance and polymorphism.
- Handle basic file operations.

Unit	Topics	No of Lectures
I	**Introduction to Programming Concepts:** Object oriented programming paradigm, basic concepts of object oriented programming, benefits of object oriented programming, object oriented languages, applications of object oriented programming. Tokens-keywords, identifiers, constants-integer, real, character and string constants, backslash constants, features of C++ and its basic structure, simple C++ program without class, compiling and running C++ program. **Data Types, Data Input Output and Operators:** Basic data types, variables, rules for naming variables, programming constants, the type cast operator, implicit and explicit type casting, cout and cin statements, operators, precedence of operators. **Decision Making, Loops, Arrays and Strings:** Conditional statements-if, if...else, switch loops- while, do...while, for, types of arrays and string and string manipulations **Unified Modeling Language (UML):** Introduction to UML & class diagrams. **Classes, Abstraction & Encapsulation:** Classes and objects, Dot Operator, data members, member functions, passing data to functions, scope and visibility of variables in function.	**15**

II	**Constructors and Destructors:** Default constructor, parameterized constructor, copy constructor, private constructor, destructors. **Working with objects:**Accessor - mutator methods, static data and static function, access specifiers, array of objects. **Polymorphism -** Binding-static binding & overloading, constructor overloading function overloading, operator overloading, overloading unary and binary operators. **Modelling Relationships in Class Diagrams:** Association, Aggregation-Composition and examples covering these principles	**15**
III	**Inheritance:** Defining base class and its derived class, access specifiers, types of inheritance-single, multiple, hierarchical, multilevel, hybrid inheritance, friend function and friend class, constructors in derived classes. **Modelling Relationships**: Generalization-Specialization and examples covering these principles **Run time Polymorphism -** Dynamic Binding, Function overriding, virtual function, pure virtual function, virtual base class, abstract class. **Pointers:** Introduction to pointers, * and & operators, assigning addresses to pointer variables, accessing values using pointers, pointers to objects & this pointer, pointers to derived classes **File Handling:** File Stream classes, opening and closing file-file opening modes, text file handling, binary file handling. **Applying OOP to solve real life applications:** To cover case studies like library management, order management etc. to design classes covering all relationships	**15**

Textbooks:

1. Object Oriented Programming with C++, Balagurusamy E., 8th Edition, McGraw Hill Education India.
2. UML & C++: A Practical Guide to Object Oriented Development, Lee/Tepfenhart, Pearson Education, 2nd Edition2015

1. Mastering C++ by Venugopal, Publisher: McGraw-Hill Education, 2017
2. Let Us C++ by KanetkarYashwant, Publisher: BPB Publications, 2020
3. Object Oriented Analysis and Design by Timothy Budd TMH, 2001

Course Code	Course Title	Credits	Lectures /Week
USCSP203	**Introduction to OOPs using C++ - Practical**	**1**	**3**
1	Program todemonstrate use of data members & member functions.		
2	Programs based on branching and looping statements using classes.		
3	Program to demonstrate one and two dimensional arrays using classes		
4	Program to use scope resolution operator. Display the various values of the same variables declared at different scope levels.		
5	Programs to demonstrate various types of constructors and destructors.		
6	Programs to demonstrate use of public, protected & private scope specifiers.		
7	Programs to demonstrate single and multilevel inheritance		
8	Programs to demonstrate multiple inheritance and hierarchical inheritance		
9	Programs to demonstrate inheritance and derived class constructors		
10	Programs to demonstrate friend function, inline function, this pointer		
11	Programs to demonstrate function overloading and overriding.		
12	Programs to demonstrate use of pointers		
13	Programs to demonstrate text and binary file handling		

Course Code	Course Title	Credits	Lectures /Week
USCS204	**Database Systems**	**2**	**3**

About the Course:

The course introduces the core principles and techniques required in the design and implementation of database systems. It includes ER Model, Normalization, Relational Model, and Relational Algebra. It also provides students with theoretical knowledge and practical skills of creating and manipulating data with an interactive query language (MySQL). It also provide student knowledge and importance of data protection.

Course Objectives:

- To make students aware fundamentals of database system.
- To give idea how ERD components helpful in database design and implementation.
- To experience the students working with database using MySQL.
- To familiarize the student with normalization, database protection and different DCL Statements.
- To make students aware about importance of protecting data from unauthorized users.
- To make students aware of granting and revoking rights of data manipulation.

Learning Outcomes:

After successful completion of this course, students would be able to

- To appreciate the importance of database design.
- Analyze database requirements and determine the entities involved in the system and their relationship to one another.
- Write simple queries to MySQL related to String, Maths and Date Functions.
- Create tables and insert/update/delete data, and query data in a relational DBMS using MySQL commands.
- Understand the normalization and its role in the database design process.
- Handle data permissions.
- Create indexes and understands the role of Indexes in optimization search.

Unit	Topics	No of Lectures
I	**Introduction to DBMS –** Database, DBMS – Definition, Overview of DBMS, Advantages of DBMS, Levels of abstraction, Data independence, DBMS Architecture **Data models** - Client/Server Architecture, Object Based Logical Model, Record Based Logical Model (relational, hierarchical, network) **Entity Relationship Model -** Entities, attributes, entity sets, relations, relationship sets, Additional constraints (key constraints, participation constraints, weak entities, aggregation / generalization, Conceptual Design using ER (entities VS attributes, Entity Vs relationship, binary Vs ternary, constraints beyond ER)	**15**

	ER to Table- Entity to Table, Relationship to tables with and without key constraints. **DDL Statements** - Creating Databases, Using Databases, datatypes, Creating Tables (with integrity constraints – primary key, default, check, not null), Altering Tables, Renaming Tables, Dropping Tables, Truncating Tables **DML Statements** – Viewing the structure of a table insert, update, delete, Select all columns, specific columns, unique records, conditional select, in clause, between clause, limit, aggregate functions (count, min, max, avg, sum), group by clause, having clause	
II	**Relational data model**– Domains, attributes, Tuples and Relations, Relational Model Notation, Characteristics of Relations, Relational Constraints - primary key, referential integrity, unique constraint, Null constraint, Check constraint **Relational Algebra** operations (selection, projection, set operations union, intersection, difference, cross product, Joins –conditional, equi join and natural joins, division) **Functions** – String Functions (concat, instr, left, right, mid, length, lcase/lower, ucase/upper, replace, strcmp, trim, ltrim, rtrim), Math Functions (abs, ceil, floor, mod, pow, sqrt, round, truncate) Date Functions (adddate, datediff, day, month, year, hour, min, sec, now, reverse) **Joining Tables** – inner join, outer join (left outer, right outer, full outer) **Subqueries** – subqueries with IN, EXISTS, subqueries restrictions, Nested subqueries, ANY/ALL clause, correlated subqueries	**15**
III	**Schema refinement and Normal forms:** Functional dependencies, first, second, third, and BCNF normal forms based on primary keys, lossless join decomposition. **Database Protection:** Security Issues, Threats to Databases, Security Mechanisms, Role of DBA, Discretionary Access Control, Backing Up and Restoring databases **Views** (creating, altering dropping, renaming and manipulating views) **DCL Statements** (creating/dropping users, privileges introduction, granting/revoking privileges, viewing privileges), Transaction control commands – Commit, Rollback **Index Structures of Files:** Introduction, Primary index, Clustering Index, Multilevel indexes	**15**

Textbooks:

1. "Fundamentals of Database System", ElmasriRamez, NavatheShamkant, Pearson Education, Seventh edition, 2017
2. "Database Management Systems", Raghu Ramakrishnan and Johannes Gehrke, 3rd Edition, 2014
3. "Murach's MySQL", Joel Murach, 3rd Edition, 3rd Edition, 2019

Additional References:

1. "Database System Concepts", Abraham Silberschatz,HenryF.Korth,S.Sudarshan, McGraw Hill, 2017
2. "MySQL: The Complete Reference", VikramVaswani , McGraw Hill, 2017
3. "Learn SQL with MySQL: Retrieve and Manipulate Data Using SQL Commands with Ease", AshwinPajankar, BPB Publications, 2020

Course Code	Course Title	Credits	Lectures /Week
USCSP204	**Database Systems – Practical**	**1**	**3**
1.	Conceptual Designing using ER Diagrams (Identifying entities, attributes, keys and relationships between entities, cardinalities, generalization, specialization etc.)		
2.	Perform the following: ☐ Viewing all databases ☐ Creating a Database ☐ Viewing all Tables in a Database ☐ Creating Tables (With and Without Constraints) ☐ Inserting/Updating/Deleting Records in a Table		
3.	Perform the following: ☐ Altering a Table ☐ Dropping/Truncating/Renaming Tables ☐ Backing up / Restoring a Database		
4.	Perform the following: ☐ Simple Queries ☐ Simple Queries with Aggregate functions		
5.	Queries involving ☐ Date Functions ☐ String Functions ☐ Math Functions		
6.	Join Queries ☐ Inner Join ☐ Outer Join		

7.	Subqueries ☐ With IN clause ☐ With EXISTS clause
8.	Converting ER Model to Relational Model and apply Normalization on database. (Represent entities and relationships in Tabular form, Represent attributes as columns, identifying keys and normalization up to 3rd Normal Form).
9.	Views ☐ Creating Views (with and without check option) ☐ Dropping views ☐ Selecting from a view
10.	DCL statements ☐ Granting and revoking permissions ☐ Saving (Commit) and Undoing (rollback)
11.	Creating Indexes on data tables.

Course Code	Course Title	Credits	Lectures /Week
USCS205	**Calculus**	**2**	**3**

About the Course:
Calculus is a branch of mathematics that involves the study of rates of change. In Computer Science, Calculus is used in Machine Learning, Data Mining, Scientific Computing, Image Processing, and creating the graphics and physics engines for video games, including the 3D visuals for simulations.

Course Objectives:

- The primary objective of this course is to introduce the basic tools of Calculus which are helpful in understanding their applications to the real world problems.
- The course is designed to have a grasp of important concepts of Calculus in a scientific way.
- It covers topics from as basic as definition of functions to partial derivatives of functions in a gradual and logical way.
- The learner is expected to solve as many examples as possible to a get compete clarity and understanding of the topics covered.

Learning Outcomes:
After successful completion of this course, learners would be able to:

- Develop mathematical skills and enhance thinking power of learners.
- Understand mathematical concepts like limit, continuity, derivative, integration of functions, partial derivatives.
- Appreciate real world applications which use the learned concepts.
- Skill to formulate a problem through Mathematical modelling and simulation.

Unit	Topics	No of Lectures
I	**DERIVATIVES AND ITS APPLICATIONS:** **Review of Basic Concepts:** Functions, limit of a function, continuity of a function, derivative function. **Derivative In Graphing And Applications:** Increase, Decrease, Concavity, Relative Extreme; Graphing Polynomials, Rational Functions, Cusps and Vertical Tangents. Absolute Maxima and Minima, Applied Maximum and Minimum Problems, Newton‟s Method.	**15**
II	**INTEGRATION AND ITS APPLICATIONS:** **Integration:** An Overview of the Area Problem, Indefinite Integral, Definition of Area as a Limit; Sigma Notation, Definite Integral, Evaluating Definite Integrals by Substitution, Numerical Integration: Simpson‟s Rule. **Applications of Integration:** Area between two curves, Length of a plane curve. **Mathematical Modeling with Differential Equations**: Modeling with	**15**

	Differential Equations, Separation of Variables, Slope Fields, Euler‟s Method, First-Order Differential Equations and Applications.	
III	**PARTIAL DERIVATIVES AND ITS APPLICATIONS:** **Functions of Several Variables**: Functions of two or more variables, Limits and Continuity of functions of two or three variables. **Partial Derivatives:** Partial Derivatives, Differentiability, Differentials, and Local Linearity, Chain Rule, Implicit Differentiation, Directional Derivatives and Gradients, **Applications ofPartial Derivatives:** Tangent Planes and Normal Vectors, Maxima and Minima of Functions of Two Variables.	**15**

Textbooks:

1. Calculus: Early transcendental (10th Edition): Howard Anton, IrlBivens, Stephen Davis, John Wiley & sons, 2012.

Additional References:

1. Calculus and analytic geometry (9th edition): George B Thomas, Ross L Finney, Addison Wesley, 1995
2. Calculus: Early Transcendentals (8th Edition): James Stewart, Brooks Cole, 2015.
3. Calculus (10th Edition): Ron Larson, Bruce H. Edwards, Cengage Learning, 2013.
4. Thomas' Calculus (13th Edition): George B. Thomas, Maurice D. Weir, Joel R. Hass, Pearson, 2014.

Course Code	Course Title	Credits	Lectures /Week
USCSP205	**Calculus – Practical**	**1**	**3**
1	**Review of Basic Concepts –** a. Functions of one variable, its domain and range, Operations on functions b. Limits of functions of one variable c. Continuity of functions of one variable d. Derivatives of functions of one variable		
2	**Applications of Derivatives I –** a. Increasing and Decreasing functions b. Concavity and inflection points c. Relative Extrema d. Absolute Extrema		
3	**Applications of Derivatives II –** a. Analysis of polynomials b. Graphing rational functions c. Graphs With Vertical Tangents And Cusps d. Newton‟s method to find approximate solution of an equation		

4	**Integration –** a. Finding area using rectangle method and antiderivative method b. Indefinite and definite integrals c. Properties of integrals d. Numerical integration using Simpson‟s rule.
5	**Applications of Integration –** a. Area between two curves b. Length of a plane curve
6	**Differential Equations –** a. Solution of a first order first degree differential equation using variable separable method b. Solution of a first order linear differential equation using integrating factor c. Numerical solution of first-order equations using Euler‟s method d. Modeling using differential equation
7	**Functions of Several Variables –** a. Functions of two or more variables, its domain and range, Operations on functions, level curves b. Limits of functions of two or three variables c. Continuity of functions of two or three variables
8	**Partial Derivatives I –** a. Partial derivatives of functions, First and Second order partial derivatives, Mixed derivative theorem, Higher order partial derivatives b. Differential for functions of two or three variables c. Local linear approximation for functions of two or three variables
9	**Partial Derivatives II –** a. Chain rule for functions of two or three variables b. Implicit differentiation c. Directional derivatives and gradient
10	**Applications of Partial Derivatives–** a. Tangent Planes and Normal Vectors for functions of two or three variables b. Maxima and Minima of Functions of Two Variables
NOTE	**Above Practical's can also to be implemented using Sage Math/ Geogebra.**

Course Code	Course Title	Credits	Lectures /Week
USCS206	**Statistical Methods**	**2**	**3**

About the Course:
This course introduces the key concepts in probability, conditional probabilities and distribution theory, including probability laws, random variables, expectation and variance, functions of random variables and its probability distributions. Emphasis is placed on theoretical understanding combined with problem solving using various statistical inferential techniques.

Course Objectives:

- To make learner aware about basic probability axioms and rules and its application.
- To understand the concept of conditional probability and Independence of events.
- To make learner familiar with discrete and continuous random variables as well as standard discrete and continuous distributions.
- To learn computational skills to implement various statistical inferential approaches.

Learning Outcomes:
After successful completion of this course, learners would be able to

- Calculate probability, conditional probability and independence.
- Apply the given discrete and continuous distributions whenever necessary.
- Define null hypothesis, alternative hypothesis, level of significance, test statistic and p value.
- Perform Test of Hypothesis as well as calculate confidence interval for a population parameter for single sample and two sample cases.
- Apply non-parametric test whenever necessary.
- Conduct and interpret one-way and two-way ANOVA.

Unit	Topics	No of Lectures
I	**Probability:** Random experiment, sample space, events types and operations of events, Probability definition: classical, axiomatic, Elementary Theorems of probability (without proof). Conditional probability, „Bayes" theorem, independence, Examples on Probability. **Random Variables:** Concept and definition of a discrete random variable and continuous random variable. Probability mass function, Probability density function and cumulative distribution function of discrete and continuous random variable, Properties of cumulative distribution function.	**15**
II	**Mathematical Expectation and Variance:** Expectation of a function, Variance and S.D of a random variable, properties. **Standard Probability distributions:** Introduction, properties, examples and applications of each of the following distributions: Binomial distribution, Normal distribution, Chi-square distribution, t distribution, F distribution	**15**

III	**Hypothesis testing:** One sided, Two sided hypothesis, critical region, p-value, tests based on t, Normal and F, confidence intervals. **Analysis of Variance:** One-way, two-way analysis of variance. **Non-parametric tests:** Need of non-parametric tests, Sign test, Wilicoxon"s signed rank test, run test, Kruskal-Walis tests, Chi square test.	**15**

Textbooks:

1. Gupta, S.C. and Kapoor, V.K. (1987): Fundamentals of Mathematical Statistics, S. Chand and Sons, New Delhi
2. Goon, A. M., Gupta, M. K. and Dasgupta, B. (1983). Fundamentals of Statistics, Vol. 1, Sixth Revised Edition, The World Press Pvt. Ltd., Calcutta.

4. Walpole R. E., Myers R. H. and Myers S. L. (1985), Probability and Statistics for Engineers and Scientists
5. Agarwal, B. L. (2003). Programmed Statistics, Second Edition, New Age International Publishers, New Delhi.

Course Code	**Course Title**	**Credits**	**Lectures /Week**
USCSP206	**Statistical Methods – Practical**	**1**	**3**
1	**Probability-** a. Examples based on Probability definition: classical, axiomatic b. Examples based on elementary Theorems of probability		
2	**Conditional probability and independence-** a. Examples based on Conditional probability b. Examples based on „Bayes" theorem c. Examples based on independence		
3	**Discrete random variable-** a. Probability distribution of discrete random variable b. Probability mass function		
4	**Continuous random variable-** a. Probability distribution of continuous random variable b. Probability density function		

5	**Mathematical Expectation and Variance-** a. Mean of discrete and continuous Probability distribution b. S.D. and variance of discrete and continuous Probability distribution
6	**Standard probability distributions-** a. Calculation of probability, mean and variance based on Binomial distribution b. Calculation of probability based on Normal distribution
7	**Large Sample tests based on Normal (Z) -** a. Test of significance for proportion (Single proportion Ho: P = Po) b. Test of significance for difference between two proportions (Double proportion Ho: P1 = P2) c. Test of significance for mean (Single mean Ho: $\mu = \mu 0$) d. Test of significance for difference between two means. (Double mean Ho: $\mu 1 = \mu 2$)
8	**Small sample tests based on t and F-** a. t-test for significance of single mean, population variance being unknown (Single mean Ho : $\mu = \mu 0$) b. t-test for significance of the difference between two sample means (Independent samples) c. t-test for significance of the difference between two sample means (Related samples) d. F-Test to Compare Two Variances
9	**Analysis of variance -** a. Perform One-way ANOVA b. Perform Two-way ANOVA
10	**Non-parametric tests-** a. Sign test and Wilcoxon Sign rank test b. Run test c. Kruskal-Wallis (H) test d. Chi-square test
Note: Practical no. 6, 7, 8, 9 can also to be implemented using R programming.	

Course Code	Course Title	Credits	Lectures /Week
USCS207	**E-Commerce & Digital Marketing**	**2**	**3**

About the Course:

This course introduces the fundamental concepts of e-commerce, its types, the various legal and ethical issues of e-commerce and different e-commerce applications. The course also aims to introduce basic principles and types of digital marketing and web and Google analytics

Course Objectives:

- To understand increasing significance of E-Commerce and its applications in Business and Various Sectors
- To provide an insight on Digital Marketing activities on various Social Media platforms and its emerging significance in Business
- To understand Latest Trends and Practices in E-Commerce and Digital Marketing, along with its Challenges and Opportunities for an Organization

Learning Outcomes:

After successful completion of this course, students would be able to

- Understand the core concepts of E-Commerce.
- Understand the various online payment techniques
- Understand the core concepts of digital marketing and the role of digital marketing in business.
- Apply digital marketing strategies to increase sales and growth of business
- Apply digital marketing through different channels and platforms
- Understand the significance of Web Analytics and Google Analytics and apply the same.

Unit	Topics	No of Lectures
I	**Introduction to E-Commerce and E- Business:** Definition and competing in the digital economy, Impact of E-Commerce on Business Models, Factors Driving e-commerce and e-Business Models, Economics and social impact of e-Business, opportunities and Challenges, e-Commerce vs m- Commerce, Different e-Commerce Models (B2B, B2C, C2B, C2C, B2E), e-Commerce Applications: e-Trading, e-Learning, e-Shopping, Virtual Reality & Consumer Experience, Legal and Ethical issues in e-Commerce. **Overview of Electronic Payment system**s: Types of Electronic payment schemes (Credit cards, Debit cards, Smartcards, Internet banking), E-checks, E-Cash Concepts and applications of EDI and Limitation **Introduction & origin of Digital Marketing**: Traditional v/s Digital Marketing. Digital Marketing Strategy, The P-O-E-M Framework, Segmenting & Customizing Messages, The Digital landscape, Digital Advertising Market in India. Skills required in Digital Marketing. Digital Marketing Plan.	**15**
II	**Social Media Marketing:** Meaning, Purpose, types of social media websites, Social Media Engagement, Target audience, Facebook Marketing: Business through Facebook Marketing, Creating Advertising Campaigns,	**15**

	Adverts, Facebook Marketing Tools, LinkedIn Marketing: Importance of LinkedIn Marketing, Framing LinkedIn Strategy, Lead Generation through LinkedIn, Content Strategy, Analytics and Targeting, Twitter Marketing: Framing content strategy, Twitter Advertising Campaigns, YouTube Marketing: Video optimization, Promoting on YouTube, Monetization, YouTube Analytics **Email Marketing:** Types of Emails, Mailing List, Email Marketing tools, Email Deliverability & Email Marketing automation **Mobile Marketing**: Introduction, Mobile Usage, Mobile Advertising, Mobile Marketing Types, Mobile Marketing Features, Mobile Campaign Development, Mobile Advertising Analytics **Content Marketing:** Introduction, Content marketing statistics, Types of Content, Types of Blog posts, Content Creation, Content optimization, Content Management & Distribution, Content Marketing Strategy, Content creation tools and apps, Challenges of Content Marketing.	
III	**Search Engine Optimization:** Meaning, Common SEO techniques, Understanding Search Engines, basics of Keyword search, Google rankings, Link Building, Steps to optimize website, On-page and off-page optimization **Search Engine Marketing:** Introduction to SEM, Introduction to Ad Words - Google Ad Words, Ad Words fundamentals, Ad Placement, Ad Ranks, Creating Ad Campaigns, Campaign Report Generation, Display marketing, Buying Models: Cost per Click (CPC), Cost per Milli (CPM), Cost per Lead (CPL), Cost per Acquisition (CPA). **Web Analytics:** Purpose, History, Goals & objectives, Web Analytic tools & Methods. Web Analytics Mistakes and Pitfalls. **Google Analytics:** Basics of Google Analytics, Installing Google Analytics in website, Parameters of Google Analytics, Reporting and Analysis	**15**

Textbooks:

1. "E-Commerce Strategy, Technologies and Applications", Whitley, David, Tata McGraw Hill, 2017
2. Digital Marketing, Seema Gupta, McGraw Hill Education, 2nd Edition

Additional References:

1. E-Commerce by S. Pankaj, A.P.H. Publication, New Delhi
2. Fundamentals of Digital Marketing, Punit Singh Bhatia, Pearson, 2nd Edition
3. "Understanding Digital Marketing: Marketing Strategies for Engaging the Digital Generation", Damian Ryan, Calvin Jone. Kogan Page, 4th Edition

Evaluation Scheme

I. Internal Evaluation for Theory Courses – 25 Marks

(i) Mid-Term Class Test– 15Marks

- It should be conducted using any **learning management system** such as **Moodle** (Modular object-oriented dynamic learning environment)
- The test should have **15 MCQ's** which should be solved in a time duration of **30 minutes.**

(ii) Assignment/ Case study/ Presentations– 10 Marks

- Assignment / Case Study Report / Presentation can be uploaded on any **learning management system**.

II. External Examination for Theory Courses – 75 Marks

- Duration: **2.5 Hours**
- Theory question paper pattern:

	All questions are compulsory.		
Question	**Based on**	**Options**	**Marks**
Q.1	Unit I	*Any 4 out of 6*	20
Q.2	Unit II	*Any 4 out of 6*	20
Q.3	Unit III	*Any 4 out of 6*	20
Q.4	Unit I,II and III	*Any 5 out of 6*	15

- All questions shall be compulsory with internal choice within the questions.
- Each Question maybe sub-divided into subquestions as a, b, c, d, etc. & the allocation of Marks depends on the weightage of the topic.

III. Practical Examination

- Each core subjectcarries50 Marks

  40 marks + 05 marks (journal) + 05 marks (viva)
- Duration: **2 Hours** for each practical course.
- Minimum **80% practical** from each core subjects are required to be completed.
- **Certified Journal is compulsory for appearing at the time of Practical Exam**
- The final submission and evaluation of **journal in electronic form** using a Learning Management System / Platform can be promoted by college.

UNIVERSITY OF MUMBAI

Syllabus for

Program: Bachelor of Science

Course: Computer Science

with effect from

Academic Year 2022-2023

Preamble

The revised and restructured curriculum for the Three-year integrated course is systematically designed considering the current industry needs in terms of skills sets demanded under new technological environment. It also endeavors to align the programme structure and course curriculum with student aspirations and corporate expectations. The proposed curriculum is more contextual, industry affable and suitable to cater the needs of society and nation in present day context.

The Core Subjects offers to develop strong theoretical foundations in Computer Science to build computational thinking, analytical, and problem solving skills. Principles of Operating Systems course provides an overview of computer operating systems, their functionalities, processes, and computing resource management. Linear Algebra course covers concepts crucial to many areas of computer science, such as graphics, image processing, cryptography, machine learning, computer vision, optimization, graph algorithms, quantum computation, computational biology, information retrieval and web search. Data Structures course provides an understanding of different types of data structures and how to use them per the requirements of a given application. Advanced Database Concepts course touches the touches security, recovery, and transaction aspects of database. Theory of Computation course helps to develop capabilities to design and develop formulations for computing models and identify its applications in diverse areas. Computer Networks course include topics such as application layer protocols, Internet protocols, network interfaces, local and wide area networks, wireless networks, bridging and routing, among other current topics. Software Engineering course embodies an engineering approach to the development of software. It discusses the nature of software and software projects, software development models, software process maturity, project planning, management, and estimations along with topics on software testing and quality assurance. The course on IoT Technologies will definitely open future area as Embedded Engineer, involvement in IoT projects, Robotics and many more.

Skill Enhancement courses such as Java based Application Development, Web Technologies, Android Application Development and Advanced Application Development cater to present day needs of web and mobile based platforms and applications. These courses aims to produce skilled graduates with a creative mind-set who can recognize a computational problem either in IT industry or society, and develop effective solutions.

The General Elective courses offers the students the option to explore disciplines of interest beyond the choices they make in Core and Discipline Specific Elective papers. The course on Creative Content Writing prepare students to comprehend, refine, and enhance their writing abilities and enter the industry with enhanced skill and substantial competence. The course on Green Technologies emphasizes the use of principles and practices of green services and regulatory standards for addressing the carbon issues and related concerns. The Research Methodology instills basic research skills for students who wish to pursue a research or an academic career. Management & Entrepreneurship course aims to focus on giving students the business management and innovation skills required to succeed in a startup.

We sincerely believe that any student taking this programme will get very strong foundation and exposure to basics, advanced and emerging trends of the subject.

We wholeheartedly thank all experts who shared their valuable feedbacks and suggestions in order to improvise the contents, we have sincerely attempted to incorporate each of them. We further thank Chairperson and members of Board of Studies for their confidence in us.

Special thanks to University Department of Computer Science and colleagues from various colleges, who volunteered or have indirectly helped designing certain specialized courses and the syllabus as a whole.

Semester III

Course Code	Course Title	Credits	Lectures /Week
USCS301	**Principles of Operating Systems**	**2**	**3**

About the Course: The purpose of this course is to provide an overview of computer operating systems, their functionalities, processes, and computing resource management. In particular, the course will cover processes and threads, mutual exclusion, CPU scheduling, deadlock, memory management, and file systems.

Course Objectives:

- To learn basic concepts and structure of operating systems
- To learn about process and synchronization in operating system level
- To learn CPU scheduling algorithms
- To learn Memory and File system management

Learning Outcomes:

After successful completion of this course, students would be able to

- Work with any type of operating system
- Handle threads, processes, process synchronization
- Implement CPU scheduling algorithms
- Understand the background role of memory management
- Design file system.

Unit	Topics	No of Lectures
I	**Introduction to Operating-Systems:** Definition of Operating System, Operating System's role, Operating-System Operations, Functions of Operating System, Computing Environments **Operating-System Structures:** Operating-System Services, User and Operating-System Interface, System Calls, Types of System Calls, Operating-System Structure **Processes:** Process Concept, Process Scheduling, Operations on Processes, Inter process Communication **Threads:** Overview, Multicore Programming, Multithreading Models	**15**
II	**Process Synchronization:** General structure of a typical process, race condition, The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors	**15**

	CPU Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms (FCFS, SJF, SRTF, Priority, RR, Multilevel Queue Scheduling, Multilevel Feedback Queue Scheduling), Thread Scheduling **Deadlocks:** System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock	
III	**Main Memory:** Background, Logical address space, Physical address space, MMU, Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table **Virtual Memory:** Background, Demand Paging, Copy-on-Write, Page Replacement, Allocation of Frames, Thrashing **Mass-Storage Structure:** Overview, Disk Structure, Disk Scheduling, Disk Management **File-System Interface:** File Concept, Access Methods, Directory and Disk Structure, File-System Mounting, File Sharing **File-System Implementation:** File-System Structure, File-System Implementation, Directory Implementation, Allocation Methods, Free-Space Management	**15**

Textbook(s):

1. Abraham Silberschatz, Peter Galvin, Greg Gagne, Operating System Concepts, Wiley, 2021

Additional Reference(s):

1. Achyut S. Godbole, Atul Kahate, Operating Systems, Tata McGraw Hill, 2017
2. Naresh Chauhan, Principles of Operating Systems, Oxford Press, 2014
3. Andrew S Tanenbaum, Herbert Bos, Modern Operating Systems, 4e Fourth Edition, Pearson Education, 2016

Course Code	Course Title	Credits	Lectures /Week
USCSP301	**Principles of Operating Systems – Practical**	**1**	**3**
1	Process Communication: a. Write a program to give a solution to the producer–consumer problem using shared memory. b. Write a program to give a solution to the producer–consumer problem using message passing.		
2	Threads: a. Write a program to work with a single thread. b. Write a program to work with multi threads. c. The Fibonacci sequence is the series of numbers 0, 1, 1, 2, 3, 5. 8, ... Formally, it can be expressed as: fib0 = 0, fib1 = 1, fibn = fibn-1 + fibn-2. Write a multithreaded program that generates the Fibonacci sequence.		
3	Synchronization: a. Write a program to give a solution to the Bounded buffer problem. b. Write a program to give a solution to the readers–writers problem.		
4	Write a program that implements FCFS scheduling algorithm.		
5	Write a program that implements (with no premption) scheduling algorithm.		
6	Write a program that implements RR scheduling algorithm.		
7	Write a program that implements the banker's algorithm		
8	Write a program that implements the FIFO page-replacement algorithm.		
9	Write a program that implements the LRU page-replacement algorithm.		
10	Write a program to design a File System.		

Course Code	Course Title	Credits	Lectures /Week
USCS302	**Linear Algebra**	**2**	**3**

About the Course:
Linear algebra, a branch of mathematics, provides concepts that are crucial to many areas of computer science, such as graphics, image processing, cryptography, machine learning, computer vision, optimization, graph algorithms, quantum computation, computational biology, information retrieval and web search. The course covers topics such as fields, vectors, matrices, eigenvalues and eigenvectors

Course Objectives:

- To offer the learner the relevant Linear Algebra concepts through Computer Science applications.
- To interpret existence and analyze the solution set of a system of linear equations.
- To formulate, solve, apply, and interpret properties of linear systems.
- To learn about the concept of linear independence of vectors over a field, and the dimension of a vector space.
- To interpret basic concepts of linear transformations, dimension, matrix representation of a linear transformation, and the change of coordinate matrix.

Learning Outcomes:
After successful completion of this course, students would be able to

- Appreciate the relevance and applications of Linear Algebra in the field of Computer Science.
- Understand the concepts through program implementation.
- Instill a computational thinking while learning linear algebra.
- Express clear understanding of the concept of a solution to a system of equations.
- Find eigenvalues and corresponding eigenvectors for a square matrix.

Unit	Topics	No of Lectures
I	**Field:** Introduction to complex numbers, complex numbers in Python, abstracting over fields, Playing with GF (2). **Vectors:** Vectors are functions, Vector addition, Scalar-vector multiplication, combining vector addition and scalar multiplication, Dictionary-based representations of vectors, Dot-product, Solving a triangular system of linear equations, Support Vector Machine – Introduction, Mechanism. **The Vector Space:** Linear combination, Span, The geometry of sets of vectors, Vector spaces, Linear systems, homogeneous and otherwise	**15**
II	**Matrix**: Matrices as vectors, Column space and row space, Matrix-vector and vector-matrix multiplication in terms of linear combinations, Matrix-vector multiplication in terms of dot-products, Null space, Computing sparse matrix-vector product, Linear functions, Matrix-matrix multiplication, Inner product and outer product, From function inverse to matrix inverse	**15**

	Basis: Coordinate systems, two greedy algorithms for finding a set of generators, Linear dependence, Basis, Unique representation, Change of basis, first look, Computational problems involving finding a basis **Dimension:** Dimension and rank, Direct sum, Dimension and linear functions, The annihilator **Gaussian elimination**: Echelon form, Gaussian elimination over GF(2), Solving a matrix-vector equation using Gaussian elimination.	
III	**Inner Product**: The inner product for vectors over the reals, Orthogonality. **Orthogonalization**: Projection orthogonal to multiple vectors, projecting orthogonal to mutually orthogonal vectors, Building an orthogonal set of generators, orthogonal complement. **Eigenvalues and Eigenvectors:** Characteristic Polynomials of degree 2 and 3, Eigenvalues and eigenvectors, Properties of eigenvalues and eigenvectors, Cayley–Hamilton Theorem, Minimal Polynomial. Coordinate representation in terms of eigenvectors, The Internet worm, Markov Chains, Google Page Rank algorithm.	**15**

Textbooks:

1. Coding the Matrix Linear Algebra through Applications to Computer Science, First Edition, Philip N. Klein, Newtonian Press 2013
2. Schaum's Outline of Linear Algebra, Sixth Edition by Seymour Lipschutz, Marc Lipson, McGraw Hill 2017

Additional References:

1. Linear Algebra and Probability for Computer Science Applications, First Edition, Ernest Davis, A K Peters/CRC Press, 2012.
2. Linear Algebra and Its Applications, Gilbert Strang, Cengage Learning, 4th Edition, 2007
3. Linear Algebra and Its Applications, David C Lay, Pearson Education India; 3rd Edition, 2002
4. Introduction to Information Retrieval, Christopher D. Manning, Prabhakar Raghavan and Hinrich Schütze, Cambridge University Press, 2008.
5. Computer Networking With Internet Protocols and Technology, William Stallings, Pearson Education India, 2013.

Course Code	Course Title	Credits	Lectures /Week
USCSP302	**Linear Algebra – Practical**	**1**	**3**
1	Write a program which demonstrates the following: • Addition of two complex numbers • Displaying the conjugate of a complex number • Plotting a set of complex numbers • Creating a new plot by rotating the given number by a degree 90, 180, 270 degrees and also by scaling by a number a = 1/2, a = 1/3, a = 2 etc.		
2	Write a program to do the following: • Enter a vector u as a n-list • Enter another vector v as a n-list • Find the vector au + bv for different values of a and b • Find the dot product of u and v		
3	Vector Applications: Classify given data using support vector machines (SVM)		
4	Basic Matrix Operations: • Matrix Addition, Subtraction, Multiplication • Check if matrix is invertible. • If yes then find Inverse		
5	Write a program to convert a matrix into its row echelon form. (Order 2). Write a program to find rank of a matrix.		
6	Basic Matrix Application – I Representation of Image in Matrix Format and Image Transformations		
7	Basic Matrix Application – II Perform Image addition, multiplication and subtraction		
8	Write a program to do the following: • Enter a vector b and find the projection of b orthogonal to a given vector u. • Find the projection of b orthogonal to a set of given vectors		
9	Write a program to calculate eigenvalue and eigenvector (Order 2 and 3)		
10	Implement Google's Page rank algorithm.		

Course Code	Course Title	Credits	Lectures /Week
USCS303	**Data Structures**	**2**	**3**

About the Course:
The course focuses to give an understanding of different types of data structures that can be used to store data in memory, how to create-manipulate them and to use them in the best possible manner as per the requirements of the application.

Course Objectives:

- To introduce data abstraction and data representation in memory
- To describe, design and use of elementary data structures such as stack, queue, linked list, tree and graph
- How and why different data structures are used for different types of problems.

Learning Outcomes:
After successful completion of this course, students would be able to-

- Create different types of data structures.
- Understand which data structure to be used based on the type of the problem.
- Apply combined knowledge of algorithms and data structures to write highly effective programs in various domains.

Unit	Topics	No of Lectures
I	**Abstract Data Type:** Different Data Types, different types of data structures & their classifications, Introduction to ADT, Creating user-specific ADT **Linked Structures**: ADT for linked list, Advantages & Disadvantages, Singly Linked List-Traversing, Searching, Prepending and Removing Nodes, applications of linked list like polynomial equation **Stacks**: Stack ADT for Stack, Advantages & Disadvantages, Applications of stack like balanced delimiter, prefix to postfix notation **Queues**: Queue ADT, Advantages & Disadvantages, linked representations. Circular Queue operations, Dequeues, applications of queue like job scheduling queues	**15**
II	**Doubly Linked list:** ADT of doubly linked list, Advantages & Disadvantages, Insertion and deletion of nodes at various positions **Trees**: ADT for Tree Structure. Advantages & disadvantages, Binary Tree-Properties, Implementation and Traversals, Binary Search Tree, Balanced BST, Threaded Binary Trees, AVL Trees, Applications of Tree like Huffman Coding,	

	Priority Queues & Heaps: Priority Queue, Priority Queue ADT, Advantages and Disadvantages, Applications, Heaps, types of heaps, Heapifying the element,	
III	**Graph:** Introduction, Graph ADT, Advantages and Disadvantages, Graph Representation using adjacency matrix and adjacency list, Graph operations like insertion and deletion of nodes, Graph Traversals using BFS & DFS, Applications of Graphs like shortest path algorithms, **Hashing:** Hash Table ADT, Advantages & Disadvantages, Concept of hashing, hash table, hash functions, collision, collision avoidance techniques, Applications of hashing	

Textbooks:

1. Introduction to Algorithm, Thomas H Cormen, PHI
2. Data Structures And Algorithms Made Easy, Narasimha Karumanchi, 2021

Additional References:

1. Fundamentals of Computer Algorithms, Sartaj Sahni and Sanguthevar Rajasekaran Ellis Horowitz, Universities Press, 2018
2. Data Structures and Algorithms in Python, Michael T. Goodrich, Roberto Tamassia, Michael H. Goldwasser, Wiley, 2016

Course Code	Course Title	Credits	Lectures /Week
USCSP303	**Data Structures – Practical**	**1**	**3**
1	Write a program to implement Abstract Data Types (ADT)		
2	Write a program to implement Singly Linked list with insertion, deletion, traversal operations		
3	Write a program to implement Doubly Linked list with insertion, deletion, traversal operations		
4	Write a program to implement Stack with insertion, deletion, traversal operations		
5	Write a program to implement Queue with insertion, deletion, traversal operations		
6	Write a program to implement Priority Queue with insertion, deletion, traversal operations		
7	Write a program to implement Binary Tree with insertion, deletion, traversal operations		
8	Write a program to implement Huffman Coding		
9	Write a program to implement Graph with insertion, deletion, traversal operations		
10	Write a program to implement Travelling Salesman Problem		
11	Write a program to create basic Hash Table for insertion, deletion, traversal operations(assume that there are no collisions)		
12	Write a program to create hash table to handle collisions using overflow chaining		

Course Code	Course Title	Credits	Lectures /Week
USCS304	**Advanced Database Concepts**	**2**	**3**

About the Course:
This course deals with the basic understanding of programming in database. It touches security, recovery, and transaction aspects of database. The course will increase the confidence among the learner while dealing with database.

Course Objectives:

- To develop understanding of concepts and techniques for data management and learn about widely used systems for implementation and usage.
- To develop understanding of Transaction management and crash recovery.
- To develop concepts of programming concepts of database.

Learning Outcomes:
After successful completion of this course, students would be able to

- Master concepts of stored procedure, functions, cursors and triggers and its use.
- Learn about using PL/SQL for data management.
- Use efficiently Collections and records.
- Understand concepts and implementations of transaction management and crash recovery.

Unit	Topics	No of Lectures
I	**Overview of PL/SQL:** Advantages of PL/SQL, Main Features of PL/SQL, Architecture of PL/SQL **Fundamentals of PL/SQL:** Character Sets, Lexical Units, Declarations, References to Identifiers, Scope and Visibility of Identifiers, Assigning Values to Variables, Expressions, Error-Reporting Functions, Data Types. **Control Statements:** Conditional Selection Statements, LOOP Statements, Sequential Control Statements, GOTO, and NULL Statements. **Sequences:** creating sequences, referencing, altering, and dropping a sequence. **Stored Procedures and Functions:** Procedures: Types and benefits of stored procedures, creating stored procedures, executing stored procedures, altering stored procedures, viewing stored procedures. Functions: Calling function and recursion function.	**15**
II	**Collections and Records:** Associative Arrays, Varrays (Variable-Size Arrays), Nested Tables, Collection Constructors, Assigning Values to Collection Variables, Multidimensional Collections, Collection	**15**

	Comparisons, Collection Methods, Collection Types Defined in Package Specifications, Record Variables, Assigning Values to Record Variables. **Error Handling:** Compile-Time Warnings, Overview of Exception Handling, Internally Defined Exceptions, Predefined Exceptions, User-Defined Exceptions, Redeclared Predefined Exceptions, Raising Exceptions Explicitly, Exception Propagation, Unhandled Exceptions. **Cursors:** Overview of Cursor, Types of cursors, Invalid cursor Exception. **Static and Dynamic SQL:** Static SQL: Description of Static SQL, Cursors Overview, Processing Query Result Sets, Cursor Variables, CURSOR Expressions, Transaction Processing and Control, Autonomous Transactions. Dynamic SQL: Native Dynamic SQL, DBMS_SQL Package, SQL Injection.	
III	**Triggers:** Overview of Triggers, implementing triggers – creating triggers, Insert, delete, and update triggers, nested triggers, viewing, deleting, and modifying triggers, and enforcing data integrity through triggers. **Packages:** Overview of a Package. Need of Packages, Package Specification, Package Body, Package Instantiation and Initialization. **Transaction Management:** ACID Properties, Serializability, Two-phase Commit Protocol, Concurrency Control, Lock Management, Lost Update Problem, Inconsistent Read Problem, Read-Write Locks, Deadlocks Handling, Two Phase Locking protocol. **Crash Recovery:** ARIES algorithm. The log-based recovery, recovery related structures like transaction and dirty page table, Write-ahead log protocol, check points, recovery from a system crash, Redo and Undo phases	**15**

Textbooks:

1. Mastering PL/SQL Through Illustrations: From Learning Fundamentals to Developing Efficient PL/SQL Blocks, Dr. B. Chandra, BPB Publication, 2020
2. Oracle Pl/Sql Training Guide., Training guide, BPB Publications, 2016
3. Raghu Ramakrishnam, Gehrke, Database Management Systems, McGraw-Hill,3rd Edition, 2014
4. Abraham Silberschatz, Henry F. Korth,S. Sudarshan , Database System Concepts, 6th Edition 2019

Additional References:

1. Ivan Bayross, "SQL, PL/SQL -The Programming language of Oracle", B.P.B. Publications 2009
2. Ramez Elmasri & Shamkant B.Navathe, Fundamentals of Database Systems, Pearson Education, 2008

Course Code	Course Title	Credits	Lectures /Week
USCSP304	**Advanced Database Concepts – Practical**	**1**	**3**
1	Writing PL/SQL Blocks with basic programming constructs by including following: a. Sequential Statements b. unconstrained loop		
2	Sequences: a. Creating simple Sequences with clauses like START WITH, INCREMENT BY, MAXVALUE, MINVALUE, CYCLE | NOCYCLE, CACHE | NOCACHE, ORDER | NOORECER. b. Creating and using Sequences for tables.		
3	Writing PL/SQL Blocks with basic programming constructs by including following: a. If...then...Else, IF...ELSIF...ELSE... END IF b. Case statement		
4	Writing PL/SQL Blocks with basic programming constructs for following Iterative Structure: a. While-loop Statements b. For-loop Statements.		
5	Writing PL/SQL Blocks with basic programming constructs by including a GoTO to jump out of a loop and NULL as a statement inside IF.		
6	Writing Procedures in PL/SQL Block a. Create an empty procedure, replace a procedure and call procedure b. Create a stored procedure and call it c. Define procedure to insert data d. A forward declaration of procedure		
7	Writing Functions in PL/SQL Block. a. Define and call a function b. Define and use function in select clause, c. Call function in dbms_output.put_line d. Recursive function e. Count Employee from a function and return value back f. Call function and store the return value to a variable		
8	Creating and working with Insert/Update/Delete Trigger using Before/After clause.		
9	Write an Implicit and explicit cursor to complete the task.		
10	Create packages and use it in SQL black to complete the task.		
11	Write a SQL block to handle exception by writing: a. Predefined Exceptions, b. User-Defined Exceptions, c. Redeclared Predefined Exceptions,		
12	Create nested tables and work with nested tables.		

Course Code	Course Title	Credits	Lectures /Week
USCS305	**Java based Application Development**	**2**	**3**

About the Course:
The objective of this course is to teach the learner how to use Object Oriented paradigm to develop code and understand the concepts of Core Java and explore advanced topic of Java programming for solving problems.

Course Objectives:

- To provide insight into java based applications using OOP concepts.
- To provide understanding of developing GUI based desktop applications in java.
- To provide knowledge of web based applications through servlet and jsp.
- To provide understanding and implementation of basic JSON

Learning Outcomes:
After successful completion of this course, students would be able to

- Design basic application in java using Graphical User Interface.
- The learner will be able to develop applications using swings
- The learner will be able to develop web based applications using servlet and jsp
- The learner will be able to connect databases with java through
- The learner will be able to perform programs using JSON objects

Unit	Topics	No of Lectures
I	**Introduction:** History, Features of Java, Java Development Kit, Java Application Programming Interface, Java Virtual Machine Java Program Structure, Java Tokens. **OOPS**: Introduction, Class, Object, Static Keywords, Constructors, this keyword, Inheritance, Inner class, Anonymous Inner class, super keyword, Polymorphism (overloading and overriding), Abstraction, Encapsulation, Abstract Classes, Interfaces **Packages:** Introduction to predefined packages, User Defined Packages, Access specifiers **Exception Handling:** Introduction, Pre-Defined Exceptions, try-catch-finally, throws, throw, User Defined Exceptions **Multithreading:** Thread Creations, Thread Life Cycle, Life Cycle Methods, Synchronization, wait() notify() notify all() methods	**15**
II	**Collection Framework**: Introduction, java.util Package interfaces, List, Set, Map, List interface & its classes, Set interface & its classes, Map interface & its classes.	**15**

	Introduction to JFC and Swing- Features of the Java Foundation Classes, Swing API Components, JComponent Class, Windows, Dialog Boxes, and Panels, Labels, Buttons, Check Boxes, Menus, Toolbars, Implementing Action interface, Pane, JScrollPane, Desktop pane, Scrollbars, Lists and Combo Boxes, Text-Entry Components, Colors and File Choosers, Tables and Trees, Printing with 2D API and Java Print Service API. **Event Handling:** Delegation Event Model, Events, Event classes, Event listener interfaces, Using delegation event model, adapter classes. **JDBC:** Introduction, JDBC Architecture, JDBC Drivers, JDBC Connectivity Model, java.sql package, Using Statement, PreparedStatement, CallableStatement, ResultSet, Scrollable and Updatable ResultSet, Navigating and manipulating data, ResultSetMetaData, Managing Transactions in JDBC, JDBC Exception classes, BLOB & CLOB	
III	**Servlets:** Introduction, Servlet Life Cycle, Types of Servlet, Servlet Configuration with Deployment Descriptor, Working with ServletContext and ServletConfig Object, Attributes in Servelt,, Response and Redirection using Request Dispacher and using sendRedirect Method, Filter API, Manipulating Responses using Filter API, Session Tracking: using Cookies, HTTPSession, Hidden Form Fields and URL Rewriting,Types of Servlet Event: ContextLevel and SessionLevel. **Java Server Pages (JSP)**: Introduction to JSP , Comparison with Servlet, JSP Architecture, JSP Life Cycle, JSP Scripting Elements, JSP Directives, JSP Action, JSP Implicit Objects, JSP Expression Language, JSP Standard Tag Libraries, JSP Custom Tag, JSP Session Management, JSP Exception Handling, JSP CRUD Applications **JSON:** Overview, Syntax, DataTypes, Objects, Schema, Comparison with XML, JSON with Java	**15**

Textbooks:

1. Herbert Schildt, Java The Complete Reference, Eleventh Edition, McGraw-Hill Education, 2020
2. Bryan Basham, Kathy Sierra, Bert Bates, Head First Servlets and JSP, O'reilly (SPD), 2018
3. Cay S. Horstmann, Gary Cornell, Core Java™ 2: Volume II–Advanced Features Prentice Hall PTR, 2004
4. Ivan Bayross, Web Enabled Commercial Applications Development Using Java 2, BPB Publications
5. Java XML and JSON: Document Processing for Java SE by Jeff Friesen January 2019, Apress

Additional References:

1. E. Balagurusamy, Programming with Java- A Primer, Tata McGraw-Hill Education India, 2014
2. Programming in JAVA, 2nd Ed, Sachin Malhotra & Saurabh Choudhary, Oxford Press, 2018
3. Joe Wigglesworth and Paula McMillan, Java Programming: Advanced Topics, Thomson Course Technology (SPD)
4. Eric Jendrock, Jennifer Ball, D Carson and others, The Java EE 5 Tutorial, Pearson Education
5. The Java Tutorials: http://docs.oracle.com/javase/tutorial/
6. Java Parsing Collection XML JSON: Map List XML JSON Transform by Yang Hu, 2019

Course Code	Course Title	Credits	Lectures /Week
USCSP305	**Java based Application Development – Practical**	**1**	**3**
1	a. Write a program to create a class and implement the concepts of Constructor Overloading, Method Overloading, Static methods b. Write a program to implement the concept of Inheritance and Method Overriding		
2	a. Write a program to implement the concepts of Abstract classes and methods b. Write a program to implement the concept of interfaces		
3	Write a program to define user defined exceptions and raise them as per the requirements		
4	Write a program to demonstrate the methods of: a. List interface b. Set interface c. Map interface		
5	Write a program using various swing components design Java application to accept a student's resume. (Design form)		
6	a. Write a JDBC program that displays the data of a given table b. Write a JDBC program to return the data of a specified record from a given table c. Write a JDBC program to insert / update / delete records into a given table		
7	a. Construct a simple calculator using the JAVA Swings with minimum functionality. b. Construct a GUI using JAVA Swings to accept details of a record of a given table and submit it to the database using JDBC technology on the click of a button.		
8	a. Write a Servlet that accepts a User Name from a HTML form and stores it as a cookie. Write another Servlet that returns the value of this cookie and displays it. b. Write a Servlet that displays the names and values of the cookie stored on the client. c. Write a Servlet that accepts a User Name from a HTML form and stores it as a session variable. Write another Servlet that returns the value of this session variable and displays it.		
9	a. Write a registration Servlet that accepts the data for a given table and stores it in the database. b. Write a Servlet that displays all the records of a table.		
10	a. Write a JSP that accepts a User Name from a HTML form and stores it as a cookie. Write another JSP that returns the value of this cookie and displays it. b. Write a JSP that displays the names and values of the cookie stored on the client. c. Write a JSP that accepts a User Name from a HTML form and stores it as a session variable. Write another JSP that returns the value of this session variable and displays it.		

11	a. Write a JSP code that accepts username and password from HTML file and validates the user from the database b. Write a registration JSP that accept the data for a given table and stores it in the database. c. Write a JSP that displays all the records of a table
12	. Write Java application to encoding and decoding JSON in Java.

Course Code	Course Title	Credits	Lectures /Week
USCS306	**Web Technologies**	**2**	**3**

About the Course:
The course provides an insight into emerging technologies to design and develop state of the art web applications using client-side scripting, server-side scripting, and database connectivity

Course Objectives:

- To understand the concepts of Hyper Text Markup Language and Cascading Style Sheets.
- To learn JavaScript for creating dynamic websites.
- To learn various operations performed on data among web applications using XML
- To learn Server-Side Programming using PHP

Learning Outcomes:
After successful completion of this course, students would be able to

- Design valid, well-formed, scalable, and meaningful pages using emerging technologies.
- Understand the various platforms, devices, display resolutions, viewports, and browsers that render websites
- Develop and implement client-side and server-side scripting language programs.
- Develop and implement Database Driven Websites.
- Design and apply XML to create a markup language for data and document centric applications.

Unit	Topics	No of Lectures
I	**HTML5:** Fundamental Elements of HTML, Formatting Text in HTML, Organizing Text in HTML, Links and URLs in HTML, Tables in HTML, Images on a Web Page, Image Formats, Image Maps, Colors, FORMs in HTML, Interactive Elements, Working with Multimedia - Audio and Video File Formats, HTML elements for inserting Audio / Video on a web page **CSS:** Understanding the Syntax of CSS, CSS Selectors, Inserting CSS in an HTML Document, CSS properties to work with background of a Page, CSS properties to work with Fonts and Text Styles, CSS properties for positioning an element.	**15**
II	**JavaScript:** Using JavaScript in an HTML Document, Programming Fundamentals of JavaScript – Variables, Operators, Control Flow Statements, Popup Boxes, Functions – Defining and Invoking a Function, Defining Function arguments, defining a return Statement, Calling Functions with Timer, JavaScript Objects - String, RegExp, Math, Date, Browser Objects - Window, Navigator, History, Location, Document, Cookies, Document Object Model, Form Validation using JavaScript **XML:** Comparing XML with HTML, Advantages and Disadvantages of XML, Structure of an XML Document, XML Entity References, DTD,	**15**

	XSLT: XSLT Elements and Attributes - xsl:template, xsl:apply-templates, xsl:import, xsl:call-template, xsl:include, xsl:element, xsl:attribute, xsl:attribute-set, xsl:value-of	
III	**AJAX**: AJAX Web Application Model, How AJAX Works, XMLHttpRequest Object – Properties and Methods, handling asynchronous requests using AJAX **PHP**: Variables and Operators, Program Flow, Arrays, working with Files and Directories, working with Databases, Working with Cookies, Sessions and Headers **Introduction to jQuery**: Fundamentals, Selectors, methods to access HTML attributes, methods for traversing, manipulators, events, effects.	**15**

Textbooks:

1. HTML 5 Black Book, Covers CSS 3, JavaScript, XML, XHTML, AJAX, PHP and jQuery, 2ed, Dreamtech Press, 2016
2. Web Programming and Interactive Technologies, scriptDemics, StarEdu Solutions India, 2018
3. PHP: A Beginners Guide, Vikram Vaswani, TMH

Additional References:

1. HTML, XHTML, and CSS Bible Fifth Edition, Steven M. Schafer, WILEY, 2011
2. Learning PHP, MySQL, JavaScript, CSS & HTML5, Robin Nixon, O'Reilly, 2018
3. PHP, MySQL, JavaScript & HTML5 All-in-one for Dummies, Steve Suehring, Janet Valade Wiley, 2018

Course Code	Course Title	Credits	Lectures /Week
USCSP306	**Web Technologies – Practical**	**1**	**3**
1	Design a webpage that makes use of a. Document Structure Tags b. Various Text Formatting Tags c. List Tags d. Image and Image Maps		
2	Design a webpage that makes use of a. Table tags b. Form Tags (forms with various form elements) c. Navigation across multiple pages d. Embedded Multimedia elements		
3	Design a webpage that make use of Cascading Style Sheets with a. CSS properties to change the background of a Page b. CSS properties to change Fonts and Text Styles c. CSS properties for positioning an element		
4	Write JavaScript code for a. Performing various mathematical operations such as calculating factorial / finding Fibonacci Series / Displaying Prime Numbers in a given range / Evaluating Expressions / Calculating reverse of a number b. Validating the various Form Elements		
5	Write JavaScript code for a. Demonstrating different JavaScript Objects such as String, RegExp, Math, Date b. Demonstrating different JavaScript Objects such as Window, Navigator, History, Location, Document, c. Storing and Retrieving Cookies		
6	Create a XML file with Internal / External DTD and display it using a. CSS b. XSL		
7	Design a webpage to handle asynchronous requests using AJAX on a. Mouseover b. button click		
8	Write PHP scripts for a. Retrieving data from HTML forms b. Performing certain mathematical operations such as calculating factorial / finding Fibonacci Series / Displaying Prime Numbers in a given range / Evaluating Expressions / Calculating reverse of a number c. Working with Arrays d. Working with Files (Reading / Writing)		
9	Write PHP scripts for		

	a. Working with Databases (Storing Records / Reprieving Records and Display them) b. Storing and Retrieving Cookies c. Storing and Retrieving Sessions
10	Design a webpage with some jQuery animation effects.

Course Code	Course Title	Credits	Lectures /Week
USCS3071	**Creative Content Writing**	**2**	**3**

About the Course:
With the advent of the internet, content writing has become a very lucrative and promising career. The course is designed to equip students to comprehend, refine, and enhance their writing abilities so that they may become proficient web content developers. The course aims to prepare students to enter the industry with enhanced skill and substantial competence.

Course Objectives:

- To introduce students to the concepts of content writing.
- To connect them with various writing and editing styles and techniques.
- To help them develop their creative abilities.
- To improve the learners' employability

Learning Outcomes:
After successful completion of this course, students would be able to

- Understand the fundamentals of content creation for Blog, Website etc.
- Acquire the ability to write and edit in a variety of styles and procedures
- To develop the creative abilities.
- To acquire essential language skills for editors.

Unit	Topics	No of Lectures
I	**Basics of Content writing:** Introduction to Content Writing, Learning Tone in Writing and Its Types, Comprehending style in writing and its Types, Common Grammatical Errors. **Best Practices for Writing for the Web:** Making our story Elegant, Professional, Write with an Attitude, Keep Verbs Active, List Items, Chunk Information, Title and Subtitle, Organize for Your Audience. **Things Marketers Write:** The Ideal Length for Blog Posts, Podcast, Facebook Posts, Tweets, and Other Marketing Content.	**15**
II	**Social Media Writing:** Writing for Twitter, writing with Hashtags, Writing Social Media with Humor, writing for Facebook, writing for LinkedIn, Writing Your LinkedIn Profile, writing for Email, Writing Landing Pages, Writing Headlines, writing a Home Page, Writing the About Us Page, Writing Better Blog Posts, Writing Annual Reports. **Infographics:** Visual Communication- What Are Infographics?, The Science of Visualization, Creating Infographics- Purpose, The Art of Observation, Processing Your Ideas, Designing Your Infographics, Publishing Your Infographics.	**15**

III	**Content Tools:** Research and Knowledge Management Tools, Writing Tools, Productivity Tools, Editing Tools, A Few Great Style Guides, Non-Text Writing Tools, Blog Idea Generators, Google Authorship, Image Sources, Tools for Content Writing. **Ethical and Legal aspects of content writing:** Learn Legal English, Learn Legal Vocabulary In Legal Writing, IPR Laws, and Copywriting, Plagiarism laws in Content Writing**.**	**15**

Textbooks:

1. Content Writing Handbook, Author:Kounal Gupta, 2020, Henry Harvin.
2. Feldar, Lynda. Writing for the Web: Creating Compelling Web Content Using Words, Pictures, and Sound. New Riders, CA, USA, 2011

Course Code	Course Title	Credits	Lectures /Week
USCS3072	**Green Technologies**	**2**	**3**

About the Course:
This course focuses on familiarizing learners with the need and relevance of Green Computing, Technology, and its practices for creating a sustainable work and production environment for the IT-enabled sector. The course emphasizes the use of principles and practices of green services and regulatory standards for addressing the carbon issues and related concerns.

Course Objectives:

- Know about Green IT Fundamentals: Business, IT, and the Environment
- Green IT Strategies and Significance of Green IT Strategies
- Green Enterprise Architecture and Green Information Systems
- Sociocultural Aspects of Green IT and Green Compliance

Learning Outcomes:
After successful completion of this course, students would be able to

- Explain drivers and dimensions of change for Green Technology
- Appreciate Virtualization; smart meters and optimization in achieving green IT
- Gain knowledge about green assets, green processes, and green enterprise architecture
- ISO 14001 and related standards for Audit for Green Compliance

Unit	Topics	No of Lectures
I	**Green IT Fundamentals:** Information Technology and Environment, Business, Environment, and Green Enterprise Characteristics, Green Vision and Strategic Points, Green Value, Green IT Opportunity, Challenges of a Carbon Economy, Environmental Intelligence, Envisioning the Green Future **Green IT Strategies**: Green strategic alignment, Green IT Drivers-Cost, Regulatory and Legal, Sociocultural and Political, Business ecosystem, New market opportunities, Green IT Business Dimensions, KPIs in Green Strategies **Environmentally Responsible Business:** Developing ERBS, Policies, Practices, and Metrics, Mobility and Environment, Green It Metrics and Measurements, Green IT Readiness and CMM, Context Sensitivity and Automation in Green IT Measures **Green Assets:** Introduction, Green Assets, Green IT Hardware, Green Data Centers and ICT Equipment, Server and Data Strategy	**15**
II	**Green Assets and emerging Trends:** Data Servers Optimization and Virtualization, Physical Data Server Organization and Cooling, Cloud Computing and Data Centers, Networking and Communications Infrastructure, End-User Devices, Smart Meters in Real-Time, Managing	**15**

	Devices for Central Green Services, Devices and Organizational Boundaries for Measurements, Mobile Devices, and Sustainability **Green Business Process Management:** Introduction, Green Reengineering, Green Process, Green BPM and standards, Green Business Analysis, Green Requirements Modelling, Green IT Governance, Green Business Process and Applications, QoS, Achieving green BPM, Green Mobile Business Process, Digital Library **Green Enterprise Architecture:** Green IT and organizational Systems, Aspects of Green Solutions Architecture, Contents and Integration with Service-Oriented Architecture, Green Supply Chain Management, Green Portals in Green Enterprise Architecture, Environmental Intelligence	
III	**Green Information Systems(GIS): Design and Development Models:** Describing GIS, GIS Requirements **Sociocultural Aspects of Green IT:** Green IT's Social Impact, Learning Organization, Green Social Stakeholders, Role-Based View of Green IT, Green User Practices, Attitude and Subjectivity in Green IT, Green IT Ethics and Code of Conduct, Privacy and Security of Green Information, Green Washing, Communications in Green Transformation Projects, Green HR and Changing Organizational Structures, Green-Collar Workers: Roles and Skill Sets, Green Virtual Communities **Green Compliance: Protocols, Standards, and Audits:** Protocols and Standards, ISO 14000-2004 Standard, Various initiatives by stakeholders, Green Audits and types, Audit and use of Carbon emission management software **Emerging Carbon Issues:** Technologies and Future: Future Carbon Landscape, Green ICT and Technology Trends, Cloud Computing, Nanotechnology, Quantum computing, Renewable energies, eco-design, Collaborative environmental intelligence	**15**

Textbooks:

1. Green IT Strategies and Applications Using Environmental Intelligence, Bhuvan Unhelkar, CRC Press, 2016
2. Green Information and Communication Systems for a Sustainable Future, Rajshree Srivastava, Sandeep Kautish, Rajeev Tiwari. CRC Press, 2020

Additional References:

1. Emerging Green Technologies, Matthew N. O. Sadiku, Taylor and Francis (CRC Press), 2022
2. Sustainability Awareness and Green Information Technologies, Tomayess Issa, Springer, 2021
3. Environmental Sustainability Role of Green Technologies, P. Thangavel, and G. Sridevi, Springer, 2016

Semester IV

Course Code	Course Title	Credits	Lectures /Week
USCS401	**Theory of Computation**	**2**	**3**

About the Course:
The course provides a comprehensive insight into theory of computation by understanding grammar, languages and other elements of modern language design. It also helps to develop capabilities to design and develop formulations for computing models and identify its applications in diverse areas.

Course Objectives:

- To give an overview of the theoretical foundations of computer science from the perspective
- of formal languages
- To illustrate finite state machines to solve problems in computing
- To explain the hierarchy of problems arising in the computer sciences.
- To familiarize Regular grammars, context frees grammar.

Learning Outcomes:
After successful completion of this course, students would be able to

- Understand Grammar and Languages
- Learn about Automata theory and its application in Language Design
- Learn about Turing Machines and Pushdown Automata
- Understand Linear Bound Automata and its applications

Unit	Topics	No of Lectures
I	**Automata Theory:** Defining Automaton, Finite Automaton, Transitions and Its properties, Acceptability by Finite Automaton, Nondeterministic Finite State Machines, DFA and NDFA equivalence, Mealy and Moore Machines, Minimizing Automata. **Formal Languages:** Defining Grammar, Derivations, Languages generated by Grammar, Chomsky Classification of Grammar and Languages, Recursive Enumerable Sets, Operations on Languages, Languages and Automata	**15**
II	**Regular Sets and Regular Grammar:** Regular Grammar, Regular Expressions, Finite automata and Regular Expressions, Pumping Lemma and its Applications, Closure Properties, Regular Sets and Regular Grammar **Context Free Languages:** Context-free Languages, Derivation Tree, Ambiguity of Grammar, CFG simplification, Normal Forms, Pumping Lemma for CFG **Pushdown Automata:** Definitions, Acceptance by PDA, PDA and CFG	**15**

III	**Linear Bound Automata:** The Linear Bound Automata Model, Linear Bound Automata and Languages. **Turing Machines:** Turing Machine Definition, Representations, Acceptability by Turing Machines, Designing and Description of Turing Machines, Turing Machine Construction, Variants of Turing Machine, **Undecidability:** The Church-Turing thesis, Universal Turing Machine, Halting Problem, Introduction to Unsolvable Problems	**15**

Textbooks:

1. Theory of Computer Science, K. L. P Mishra, Chandrasekharan, PHI,3rd Edition 2019
2. Introduction to Computer Theory, Daniel Cohen, Wiley, 2nd Edition, 2007
3. Introductory Theory of Computer Science, E.V. Krishnamurthy, Affiliated East-West Press, 2009

Additional References:

1. Theory of Computation, Kavi Mahesh, Wiley India, 2018
2. Elements of The Theory of Computation, Lewis, Papadimitriou, PHI, 2015
3. Introduction to Languages and the Theory of Computation, John E Martin, McGraw-Hill Education, 2010
4. Introduction to Theory of Computation, Michel Sipser, Thomson
5. Introduction to Automata Theory, Languages and Computation, John E. Hopcroft, Pearson Education, 2014

Course Code	Course Title	Credits	Lectures /Week
USCSP401	**Theory of Computation – Practical**	**1**	**3**
1	Write a program for tokenization of given input		
2	Write a program for generating regular expressions for regular grammar		
3	Write a program for generating derivation sequence / language for the given sequence of productions		
4	Design a Program for creating machine that accepts three consecutive one.		
5	Design a Program for creating machine that accepts the string always ending with 101.		
6	Design a program for accepting decimal number divisible by 2.		
7	Design a program for creating a machine which accepts string having equal no. of 1's and 0's.		
8	Design a program for creating a machine which count number of 1's and 0's in a given string.		
9	Design a PDA to accept WCWR where w is any string and WR is reverse of that string and C is a Special symbol.		
10	Design a Turing machine that's accepts the following language an b n c n where n>0		

Course Code	Course Title	Credits	Lectures /Week
USCS402	**Computer Networks**	**2**	**3**

About the Course:
This course introduces computer networks, with a special focus on the Internet architecture and protocols. The course includes topics such as network architectures, addressing, naming, forwarding, routing, communication reliability, the client-server model, web, email and other application layer protocols.

Course Objectives:

- To Understand Basic Concepts of Networking.
- To Understand Working of Network Layer Architecture.
- To Learn Practical Implementation of Basic Routing Algorithms.
- To Learn Different Networking Protocols.

Learning Outcomes:
After successful completion of this course, students would be able to

- Learn basic networking concepts and layered architecture.
- Understand the concepts of networking, which are important for them to be known as a 'networking professionals'.

Unit	Topics	No of Lectures
I	**Introduction:** Networking standards and Administrations, networks, network types – LAN, MAN, WAN. **Network Models:** The OSI model, TCP/IP protocol suite, **Introduction to Physical layer:** Data and signals, periodic analog signals, digital signals, transmission impairment, data rate limits, performance. **Digital transmissions:** Digital-to-digital conversion, analog-to-digital conversion, transmission modes **Analog transmissions:** digital-to-analog conversion, analog-to-analog conversion. **Bandwidth Utilization – Multiplexing and Spectrum spreading:** Multiplexing, Spread Spectrum **Transmission media:** Guided Media, Unguided Media **Switching:** Introduction, Circuit Switched Network, Packet Switching.	**15**
II	**Introduction to Data Link Layer:** Link layer addressing, Data Link Layer Design Issues. **Error detection and correction**: -Block coding, cyclic codes, checksum, forward error correction, error correcting codes, error detecting codes.	**15**

	Data Link Control: DLC services, data link layer protocols, HDLC, Point-to-point protocol. **Media Access Control:** Random access, controlled access, channelization, **Wired LANs – Ethernet:** Ethernet Protocol, standard Ethernet, fast Ethernet, gigabit Ethernet, 10 gigabit Ethernet **Wired Network:** Telephone Network, Cable Network, SONET, ATM **Wireless LANs:** Introduction, IEEE 802.11 project, Bluetooth, WiMAX, Cellular telephony, Satellite networks. **Introduction to Network Layer:** Network layer services, packet switching, network layer performance, IPv4 addressing, forwarding of IP packets, **Network Layer Protocols** : Internet Protocol, ICMPv4, Mobile IP	
III	**Unicast Routing:** Introduction, routing algorithms, unicast routing protocols. **Next generation IP:** IPv6 addressing, IPv6 protocol, ICMPv6 protocol, transition from IPv4 to IPv6. **Introduction to the Transport Layer:** Transport Layer Protocol, User Datagram Protocol, Transmission Control Protocol, SCTP. **Introduction to Application Layer:** Client Server Programming, Iterative Programming. **Standard Client-Server Protocols:** WWW, HTTP, FTP, Electronic Mail, TELNET, Secure Cell, DNS, SNMP **Quality of Service:** Data Flow to improve QoS, Flow control to improve QoS, Integrated service (Intserv), Differentiated Service(Diffserv).	**15**

Textbooks:

1. Data Communications and Networking, Behrouz A. Forouzan, Fifth Edition, TMH, 2018.
2. Computer Network, Andrew S. Tanenbaum, David J. Wetherall, Fifth Edition, Pearson Education, 2018.

Additional References:

1. Computer Network, Bhushan Trivedi, Oxford University Press, 2016
2. Data and Computer Communication, William Stallings, PHI, 2017

Course Code	Course Title	Credits	Lectures /Week
USCSP402	**Computer Networks – Practical**	**1**	**3**
1	Using, linux-terminal or Windows-cmd, execute following networking commands and note the output: ping, traceroute, netstat, arp, ipconfig, Getmac, hostname, NSLookUp, pathping, SystemInfo		
2	Using Packet Tracer, create a basic network of two computers using appropriate network wire. Use Static IP address allocation and show connectivity		
3	Using Packet Tracer, create a basic network of One server and two computers using appropriate network wire. Use Dynamic IP address allocation and show connectivity		
4	Using Packet Tracer, create a basic network of One server and two computers and two mobile / movable devices using appropriate network wire. Show connectivity		
5	Using Packet Tracer, create a network with three routers with RIPv1 and each router associated network will have minimum three PC. Show Connectivity		
6	Using Packet Tracer, create a network with three routers with RIPv2 and each router associated network will have minimum three PC. Show Connectivity		
7	Using Packet Tracer, create a network with three routers with OSPF and each router associated network will have minimum three PC. Show Connectivity		
8	Using Packet Tracer, create a network with three routers with BGP and each router associated network will have minimum three PC. Show Connectivity		
9	Using Packet Tracer, create a wireless network of multiple PCs using appropriate access point.		
10	Using Wireshark, network analyzer, set the filter for ICMP, TCP, HTTP, UDP, FTP and perform respective protocol transactions to show/prove that the network analyzer is working		

Course Code	Course Title	Credits	Lectures /Week
USCS403	**Software Engineering**	**2**	**3**

About the Course:
This course covers a collection of methods which embody an "engineering" approach to the development of software. It discusses the nature of software and software projects, software development models, software process maturity, project planning, management, and estimations. It also underlines the topics on software testing and quality assurance.

Course Objectives:

- To learn and understand the Concepts of Software Engineering
- To learn and understand Software Development Life Cycle
- To apply the project management and analysis principles to software project development.
- To apply the design & testing principles to software project development.

Learning Outcomes:
After successful completion of this course, students would be able to

- Plan a software engineering process life cycle, including the specification, design, implementation, and testing of software systems that meet specification, performance, maintenance and quality requirements
- Analyze and translate a specification into a design, and then realize that design practically, using an appropriate software engineering methodology.
- Know how to develop the code from the design and effectively apply relevant standards and perform testing, and quality management and practice
- Able to use modern engineering tools necessary for software project management, time management and software reuse.

Unit	Topics	No of Lectures
I	**Introduction:** The Nature of Software, Software Engineering, Professional Software Development, Layered Technology, Process framework, CMM, Process Patterns and Assessment Prescriptive Models: Waterfall Model, Incremental, RAD Models Evolutionary Process Models: Prototyping, Spiral and Concurrent Development Model Specialized Models: Component based, Aspect Oriented development, The Unified Process Phases, Agile Development- Agility, Agile Process, Extreme Programming **Requirement Analysis and System Modeling:** Requirements Engineering, Eliciting Requirements, SRS Validation, Components of SRS, Characteristics of SRS, Object-oriented design using the UML - Class diagram, Object diagram, Use case diagram, Sequence diagram, Collaboration diagram, State chart diagram, Activity diagram, Component diagram, Deployment diagram	**15**

II	**System Design:** System/Software Design, Architectural Design, Low-Level Design Coupling and Cohesion, Functional-Oriented Versus Object-Oriented Approach, Design Specifications, Verification for Design, Monitoring and Control for Design **Software Measurement and Metrics:** Process Metrics and Project Metrics, Software Measurement, Object Oriented Metrics, Software Project Estimation, Decomposition Techniques, LOC based, FP based and Use case based estimations, Empirical estimation Models **Software Project Management: Estimation** in Project Planning Process –Software Scope and Feasibility, Resource Estimation, Empirical Estimation Models – COCOMO II, Estimation for Agile Development, The Make/Buy Decision **Project Scheduling -** Basic Principles, Relationship Between People and Effort, Effort Distribution, Time-Line Charts	**15**
III	**Risk Management -** Risk strategies, Software risks, Risk Identification, projection, RMMM Quality Concepts **Software Quality Assurance** SQA activities, Software reviews, FTR, Software reliability and measures, SQA plan Software Configuration Management, elements of SCM, SCM Process, Change Control Capability Maturity Model **Software Testing :** Verification and Validation, Introduction to Testing, Testing Principles, Testing Objectives, Test Oracles, Levels of Testing, White-Box Testing/Structural Testing, Functional/Black-Box Testing, Test Plan, Test-Case Design	**15**

Textbooks:

1. Software Engineering, A Practitioner's Approach, Roger S, Pressman, 2019
2. Software Engineering: principles and Practices, Deepak Jain, OXFORD University Press, 2008

Additional References:

1. Software Engineering, Ian Sommerville, Pearson Education, 2017
2. Fundamentals of Software Engineering, Fourth Edition, Rajib Mall, PHI, 2018
3. Software Engineering: Principles and Practices, Hans Van Vliet, John Wiley & Sons, 2010
4. A Concise Introduction to Software Engineering, Pankaj Jalote, Springer

Course Code	Course Title	Credits	Lectures /Week
USCSP403	**Software Engineering – Practical**	**1**	**3**

Perform the following exercises for any two projects given in the list of sample projects or any other projects:

1	Write down the problem statement for a suggested system of relevance
2	Perform requirement analysis and develop Software Requirement Specification Sheet (SRS) for suggested system.
3	Draw the function oriented diagram: Data Flow Diagram (DFD) and Structured chart.
4	Draw the user‘s view analysis for the suggested system: Use case diagram.
5	Draw the structural view diagram for the system: Class diagram, object diagram.
6	Draw the behavioral view diagram : State-chart diagram, Activity diagram
7	Draw the behavioral view diagram for the suggested system: Sequence diagram, Collaboration diagram
8	Draw the implementation and environmental view diagram: Component diagram, Deployment diagram
9	Perform Estimation of effort using FP Estimation
10	Prepare time line chart/Gantt Chart/PERT Chart
11	Develop test cases for unit testing and integration testing
12	Develop test cases for various white box and black box testing

List of sample projects

a. Student Result Management System
b. Library management system
c. Inventory control system
d. Accounting system
e. Fast food billing system
f. Bank loan system
g. Blood bank system
h. Railway reservation system
i. Automatic teller machine
j. Video library management system
k. Hotel management system
l. Hostel management system
m. Share online trading
n. Hostel management system
o. Resource management system
p. Court case management system

Course Code	Course Title	Credits	Lectures /Week
USCS404	**IoT Technologies**	**2**	**3**

About the Course:

The course aims to provide basic understanding of SoC architectures; IoT, different types of IoT platforms and different types of applications that can be built.

Course Objectives:

- Introduce concepts of SoC and IoT
- Introduce various types of IoT platforms
- Interfacing various types of devices using different protocols with IoT
- Understand practical applications of IoT in real life world

Learning Outcomes:

After successful completion of this course, students would be able to

- understand SoC and IoT
- use different types of IoT Platforms and interfaces
- understand and implement an idea of various types of applications built using IoT

Unit	Topics	No of Lectures
I	**Fundamentals of IoT:** Introduction, Definitions & Characteristics of IoT, IoT Architectures, Physical & Logical Design of IoT, Enabling Technologies in IoT, History of IoT, About Things in IoT, The Identifiers in IoT, About the Internet in IoT, IoT frameworks, IoT and M2M. **System on Chip:** What is System on chip? Structure of System on Chip. SoC Elements: FPGA, GPU, APU, Compute Units. **Different types of IoT/SoC Platforms:** Introduction to Raspberry Pi, Arduino & NodeMCU, Introduction to SoC-ARM Architecture, atmega328 architecture	**15**
II	**Interfacing with IoT Platforms:** Basic hardware components like LED, Button, Camera, 8X8 LED Grid, Motor etc and interfacing them for input/output with IoT devices using PWM, UART, GPIO, I2C, SPI **Using Sensor & Actuators**: Overview of Sensors working, Analog and Digital Sensors, Interfacing of Temperature, Humidity, Motion, Light and Gas Sensor, Level Sensors, Ultrasonic sensors, Interfacing of Actuators, Interfacing of Relay Switch and Servo Motor **IoT and Protocols IoT Security:** HTTP, UPnP, CoAP, MQTT, XMPP, Privacy and Security Issues in IoT.	**15**

III	**IoT & Web:** Web server for IoT, Sending/Receiving data between web server & IoT device, Cloud for IoT, Node RED, M2M vs IoT Communication Protocols, Basics of WSNs, WSN architecture and types, **IoT Applications:** Modern IoT case studies / applications used in the areas of transportation, agriculture, health care etc **Edge Computing:** Edge computing purpose and definition, Edge computing use cases, Edge computing hardware architectures, Edge platforms, Edge vs Fog Computing, Communication Models - Edge, Fog and M2M.	**15**

Textbooks:

1. Introduction to IoT Paperback by Sudip Misra , Anandarup Mukherjee , Arijit Roy , Cambridge Press, 2022
2. Jain, Prof. Satish, Singh, Shashi, "Internet of Things and its Applications", 1st Edition, BPB, 2020.
3. Shriram K Vasudevan, Abhishek S Nagarajan, RMD Sundaram, Internet of Things, Wiley, India, 2019
4. IoT and Edge Computing for Architects - Second Edition, by Perry Lea, Publisher: Packt Publishing, 2020

Additional References:

1. Internet of Things by Vinayak Shinde, SYBGEN Learning India Pvt. Ltd, 2020
2. Internet of things, Dr. Kamlesh Lakhwani, Dr. Hemant kumar Gianey, Josef Kofi Wireko, Kamalkant Hiran, BPB Publication, 2020
3. Arduino, Raspberry Pi, NodeMCU Simple projects in easy way by Anbazhagan k and Ambika Parameswari k, 2019.
4. IoT based Projects: Realization with Raspberry Pi, NodeMCU Paperback – February 2020, by Rajesh Singh Anita Gehlot, 2020
5. Mastering the Raspberry Pi, Warren Gay, Apress, 2014

Course Code	Course Title	Credits	Lectures /Week
USCSP404	**IoT Technologies – Practical**	**1**	**3**
1	Preparing Raspberry Pi: Hardware preparation and Installation		
2	Demonstrate Arduino Uno and its pins interfacing with IDE.		
3	GPIO: Light the LED with Python with/without a button using either Uno/Raspberry Pi.		
4	SPI: Camera Connection and capturing Images/Videos using SPI		
5	GPIO: LED Grid Module: Program the 8X8 Grid with Different Formulas		
6	Stepper Motor Control: PWM to manage stepper motor speed using Uno/Raspberry Pi.		
7	Node RED: Connect LED to Internet of Things		
8	Use different types of sensors (LDR, Temperature) with Raspberry Pi/Uno.		
9	Trigger a set of led GPIO on any IoT platform via any related web server		
10	Interface with any sensor and send its value over the internet to the server using any suitable protocol		

Course Code	Course Title	Credits	Lectures /Week
USCS405	**Android Application Development**	**2**	**3**

About the Course:
This course is aimed at creating a skilled IT workforce that is focused on developing Apps for mobile and smart Android-based computing platforms. It familiarises the development of android applications using Kotlin for problems that address real-life needs ranging from intuitive UI to rich multimedia experience.

Course Objectives:

- Kotlin Programming Language for application development
- Creating robust mobile applications on simulators and physical devices
- Creating intuitive, reliable mobile apps using the android services and components
- Handling data local and remote data storage
- Create a seamless user interface that works with different mobile screens

Learning Outcomes:
After successful completion of this course, students would be able to

- Build useful mobile applications using Kotlin language on Android
- Install and configure Android Studio for application development
- Master basic to intermediate concepts of Kotlin required for mobile application development
- Use built-in widgets and components, work with the database to store data
- Master key Android programming concepts and deploy the application on Google Play

Unit	Topics	No of Lectures
I	**Introduction to Kotlin**: Basics of Kotlin, type conversions, comments, Kotlin operators, variables in Kotlin, packages, visibility modifiers, control flow statements, Concept of OOPS in Kotlin, classes in Kotlin, delegation and extension functions, the companion object, **Advanced Concepts in Kotlin:** declaring and calling functions, parameters, and arguments in Kotlin, default argument, variable number of arguments, unit-returning function, explicit return type, lambda expression, coroutines, Collections in Kotlin, Mutable and Immutable Collections, Ranges, type Checks, casting concept, this expression, Null safety, exception handling, annotations **App Development with Android Studio**: Android Architecture, Android Application Framework, Android Virtual Device, Creating and running First Android Application, working with Physical Android Device, Adding Kotlin Files in Android Studio **Basics Of Android**- Application Components: Activities, Intent, and Broadcast Receiver, Services, Fragment, Activity Life Cycle, Content Provider, Widgets, and Notifications	**15**

II	**Designing Android UI**: User Interface (UI), Layout and Its Types, Layout Attribute, working with Views, Android UI Controls, Styles and Themes, Event Handler, setting up themes in Manifest and from the application, dialog in activity, using intents, fragments **Handle Images, Listview And Menu**: ImageView, ImageSwitcher, ListView, Menu, and its types**,** Designing menu in XML, Option menu, Context menu, popup menu, **Screen** Navigation, RecyclerView, Interaction of Views **Data binding in Android-**AdapterView, Spinner, Gallery view, AutotextCompleteView, screen orientation, Design the view dynamically **Implementing Data Persistence**: Data Storage-Shared Preference, Internal And External Storage Storing Data Using SQLite Databases, Content Provider, Firebase Real-Time Data	**15**
III	**Graphics, Animations, and Integrating Media in Android:** Drawable Class, Animation in Android, MediaPlayer API and in Android, Mediaplayer and AudioManger Class, **Interacting With Camera** and input gestures: Android Camera, Input gestures-multiple touch, swipe, drag, scroll, zoom, Recording **Gathering Location Data:** **Managing Background Tasks:** Broadcaset Receivers, Services, Threads and Process, AsyncTask, JobScheduler, Manage device Awake State **Deploying Android applications on Google Play**-Publishing/Deploy the application, Versioning, signing Application	**15**

Textbooks:

1. How to Build Android Apps with Kotlin: A hands-on guide to developing, testing, and publishing your first apps with Android, Alex Forrester, Packt Publishing, 2021
2. Android Programming: Crafting UI/UX using Kotlin, SYBGEN Learning, 2020

Additional References:

1. Head First Android Development: A Learner's Guide to Building Android Apps with Kotlin Dawn Griffiths, 3rd Edition, O'Reilly Media, 2021
2. Android Studio 4.2 Development Essentials - Kotlin Edition: Developing Android Apps Using Android Studio 4.2, Kotlin and Android Jetpack, Neil Smyth, Payload Media, 2021
3. Android Programming with Kotlin for Beginners, John Horton, Packt Publishing, 2019
4. Android Development with Kotlin: Enhance your skills for Android development using Kotlin, Marcin Moskala, Packt Publishing

Course Code	Course Title	Credits	Lectures /Week
USCSP405	**Android Application Development – Practical**	**1**	**3**
1	i. Write a program using Kotlin to implement control structures and loops. ii. Write a program to implement object-oriented concepts in Kotlin.		
2	i. Create an Android application to design screens using different layouts and UI including Button, Edittext, Textview, Radio Button etc. ii. Write an android application demonstrating response to event/user interaction for a. Checkbox b. Radio button c. Button d. Spinner		
3	i. Create an application to create Image Flipper and Image Gallery. On click on the image display the information about the image. ii. Create an application to use Gridview for shopping cart application.		
4	i. Create an Android application to demonstrate implicit and explicit intents ii. Create an application to demonstrate shared preferences		
5	i. Create an Android application to demonstrate the use of Broadcast listeners. ii. Create an Android application to create and use services.		
6	i. Create an Android application to demonstrate XML based animation ii. Create an Android application to display canvas and allow the user to draw on it.		
7	i. Create a media player application in android that plays audio. Implement play, pause, and loop features. ii. Create an Android application to use a camera and capture image/video and display them on the screen.		
8	i. Create an android application to implement Asynctask and threading concepts. ii. Create an Android application to demonstrate the different types of menus. a. Pop-up Menu b. Context Menu c. Option Menu		
9	Create an Android application to record the current location. Based on the current location allow the user to use some useful services/applications		
10	Create a suitable Android application to store and retrieve data in the SQLite database.		
11	Create a suitable Android application to work with Firebase for storing and manipulating data.		

Course Code	Course Title	Credits	Lectures /Week
USCS406	**Advanced Application Development**	**2**	**3**

About the Course:
The course aims at developing scalable, robust, and maintainable web applications using MEAN stack and developing advanced mobile applications using Flutter

Course Objectives:

- To understand all the necessary and important technologies such as MongoDB, Express.js, AngularJS, and Node.js.
- To understand modern app development using Flutter

Learning Outcomes:
After successful completion of this course, students would be able to

- Store the data in NoSQL, document-oriented MongoDB database that brings performance and scalability.
- Use Node.js and Express Framework for building fast, scalable network applications
- Use AngularJS framework that offers declarative, two-way data binding for web applications.
- Integrate the front-end and back-end components of the MEAN stack.
- Develop robust mobile applications using Flutter.

Unit	Topics	No of Lectures
I	**Node.js (N):** Introduction to Node.js. Installing Node.js. The package.json File. The Node.js Event Loop. The I/O Cycle. The Anatomy of a Node.js Module. Creating Node Modules. Exploring the Node.js HTTP Module. Creating an HTTP Webserver with Node.js. Responding to HTTP Requests. Routing in Node.js. Creating a Sample Node.js Application. **MongoDB(M):** Introduction to MongoDB. Installing MongoDB. Using MongoDB Compass. Using Mongo Shell Interface. Connecting to MongoDB. Creating Schemas and Models. Querying Documents Using find(). Inserting Documents Using create(). Updating Documents Using findOneAndUpdate(). Deleting Documents Using findOneAndDelete() & deleteMany()	**15**
II	**Server-Side Development with Express (E):** Introduction to the Express Framework. Installing and Testing Express. Creating a Node.js Express App. Restructuring an Express App. Creating Templates. Using Express Middleware Functions. Creating the List Page. Creating the Details Page. Creating the Edit Page. Creating the Add Page. Deleting Data. REST API Basics. Testing REST APIs. Refactoring APIs. **Understanding Angular.JS(A):** Getting Started with Angular. Creating an Angular Application. Angular Project File Structure. Anatomy of an Angular	**15**

	Component. One-way Data Binding. Two-way Data Binding. Using Nglf Directive. Using NgForOf Directive. Angular Modules. Creating NgModules Using Angular Router. Configuring Templates. Creating Navigations. Working with Template-driven Forms. Working with Reactive Forms. Validating Form Data. Services Dependency Injection (DI). Reading Data from Database. Inserting Data into Database. Updating Data in the Database. Delete Data from Database.	
III	**Understanding Flutter:** Importance of Flutter, Flutter Framework, Android Studio, Flutter SDK, Installing and Configuring Flutter SDK. **Dart Programming**: main() function, Dart Variables, Dart Data Types, Dart Conditional Operators, Control Flow & Loops. Dart Functions - Functions, Function Structure, creating a Function, Function Returning Expression. Object-Oriented Programming (OOP) - Creating a Class, Adding Methods to Classes, Class — Getters and Setters, Class Inheritance, Abstract Class. **Flutter Widgets Fundamentals**: Scaffold Widget, Image Widget, Container Widget, Column and Row Widgets, Icon Widget, Layouts in Flutter, Card Widget, Hot Reload and Hot Restart, Stateful and Stateless Widgets **Navigation and Routing:** Button Widget, App Structure and Navigation, Navigate to a New Screen and Back, Navigate with Named Routes, Send and Return Data among Screens, Animate a Widget across Screens, WebView Widget in Flutter	**15**

Textbooks:

1. Node.js, MongoDB and Angular Web Development: The definitive guide to using the MEAN stack to build web applications by Brad Dayley, Brendan Dayley, Caleb Dayley, Pearson, 2018.
2. Beginning Flutter: A Hands On Guide to App Development by Marco L. Napoli, Wrox, 2019

Additional References:

1. Full Stack Javascript Development with Mean - MongoDB, Express, AngularJS, and Node.JS by Adam Bretz, Colin J Ihrig, Shroff/SitePoint, 2015
2. Practical Flutter by Zammetti Frank, Apress, 2019

Course Code	Course Title	Credits	Lectures /Week
USCSP406	**Advanced Application Development – Practical**	**1**	**3**
1	Write a program to implement MongoDB data models		
2	Write a program to implement CRUD operations on MongoDB		
3	Write a program to perform validation of a form using AngularJS		
4	Write a program to create and implement modules and controllers in Angular JS		
5	Write a program to implement Error Handling in Angular JS		
6	Create an application for Customer / Students records using AngularJS		
7	Write a program to create a simple web application using Express, Node JS and Angular JS		
8	Create a simple HTML “Hello World” Project using AngularJS Framework and apply ng-controller, ng-model and expressions		
9	Create an app using Flutter for User Authentication		
10	Create an app using Flutter to implement an Image Gallery		
11	Create an app using Flutter to demonstrate the use of different layouts		
12	Create an app using Flutter to demonstrate navigation in an App		

Course Code	Course Title	Credits	Lectures /Week
USCS4071	**Research Methodology**	**2**	**3**

About the Course:
The course aims to understand the basics research, how research problems are defined, research methods are adopted and/or developed, research is undertaken, and how research results are communicated to the peers.

Course Objectives:

- The research methodology course is proposed to assist students in planning and carrying out research projects.
- The students are exposed to the principles, procedures and techniques of implementing research project.
- The course starts with an introduction to research and carries through the various methodologies involved.
- It continues with finding out the literature using technology, basic statistics required for research and finally report writing.

Learning Outcomes:
After successful completion of this course, students would be able to

- Define research, formulate problem and describe the research process and research methods.
- Understand and apply basic research methods including research design, data analysis and interpretation.
- Understand ethical issues in research, write research report, research paper and publish the paper.

Unit	Topics	No of Lectures
I	**Introduction to Research Methodology:** Meaning of Research, Objectives of Research, Motivations in Research, types of Research, Research Approaches, Significance of Research, Research Methods v/s Methodology, Research and Scientific Methods, Research Process, Criteria of Good Research. **Defining the Research Problem:** Concept and need, Identification of Research problem, defining and delimiting Research problem. **Formulating a Research Problem:** Reviewing Literature, formulating a Research Problem, Research Question, Identifying Variables, Constructing Hypothesis **The Research Design**: Meaning, Need for Research Design, Important Concepts, Different Research Designs, Basic Principles of Experimental Designs.	**15**
II	**Tools for Data Collection**: Collections of Primary Data, Collection of Data through questionnaire and Schedules, other Observation Interview Methods,	**15**

	Collection of Secondary Data, Selection of appropriate method for data collection, Case Study, Focus Group Discussion, Techniques of developing research tools, viz. Questionnaire and rating scales etc. Reliability and validity of Research tools. **Sampling Design:** Steps in Sampling Design, Criteria of Selecting a Sampling Procedure, Characteristics of a Good Sample Design, Different Types of Sample Designs, how to Select a Random Sample. Probability and Non-Probability sampling types and criteria for selection, Developing sampling Frames. **Overview of Hypothesis Testing:** What is a Hypothesis? Characteristics of good Hypothesis. Basic Concepts, Procedure for Hypothesis Testing, Flow Diagram for Hypothesis Testing, Tests of Hypotheses, and One sided and two-sided hypothesis, Type – I and Type – II errors, Null Hypothesis-Alternative Hypothesis.	
III	**Technical Writing:** Writing a Research Proposal, what is a Scientific Paper? Ethics in Scientific Publishing. **Preparing the Text:** How to Prepare the Title, how to List the Authors and Addresses, how to Prepare the Abstract, how to Write the Introduction, how to Write the Materials and Methods Section, how to Write the Results, how to Write the Discussion, how to State the Acknowledgments, how to Cite the References. **Preparing the Tables and Figures:** How to Design Effective Tables, how to Prepare Effective Graphs, how to Prepare Effective Photographs. **Publishing the Paper:** Rights and Permissions, How to Submit the Manuscript, How and When to Use Abbreviations, How to Write a thesis, Outcome of Research, Ethical issues in research	**15**

Textbooks:

1. Kothari C.R., Research Methodology, New Age International Publication, 2019
2. Research Methodology-A Step-by-Step Guide for Beginners, (4th ed.), Ranjit Kumar, Singapore, Pearson Education, 2018
3. Research Methodology, Vaishali Khairnar, Staredu Solutions India Pvt Ltd, 2020

Additional References:

1. Research Methodology: Methods and Techniques, Dr. R. K. Jain, , Fifth Edition, VEI, 2021
2. Research Methodology, R. Panneerselvam, Second Edition, PHI, 2014
3. Dr. Rachna Jain, Research Methodology, Maximax Publishing House
4. How to Write and Publish a Scientific Paper, Cambridge University Press, Barbara Gastel and Robert A. Day, 2017

Course Code	Course Title	Credits	Lectures /Week
USCS4072	**Management & Entrepreneurship**	**2**	**3**

About the Course:
The aim of the course is to develop conceptual understanding of management and administration, and comprehend the environment of making of an entrepreneur. The course focuses on giving students the business management and innovation skills required to succeed in a startup

Course Objectives:

- To understand the idea of management, process and its levels.
- To understand the perception of entrepreneurship, process and its types.
- To understand the concept SSI and steps to start SSI.
- To understand the selection of project, project report, project appraisal, and its feasibility.

Learning Outcomes:
After successful completion of this course, students would be able to

- Understand the meaning of management, functions, administration and its process.
- Understand the foundation of entrepreneurship and its theory, types and its process.
- Identify the steps involved in an entrepreneurial venture (SSI).
- Understand an entrepreneur is converting his business ideas into running concern by selecting the project.

Unit	Topics	No of Lectures
I	**Introduction: Meaning,** Meaning, Characteristics of Management, Nature of Management, Management Functions, Functional Areas of Management, Management and Administration, Role of Management, Levels of Management, Evolution of Management **Planning:** Meaning, Nature, importance, types of planning, types of plans, planning process, decision-making. **Organizing and staffing:** Meaning and Definitions of Organizing, Steps in Organizing, Nature of Organization, Organization Structure, Purpose of Organization, Principles of Organization, Departmentation, Types of Organization, Span of Control, Authority, Power and Responsibility, Delegation of Authority, Centralization and Decentralization, Delegation vs Decentralization, Management by Objectives [MBO], Meaning of Staffing, Nature and Importance of Staffing, Recruitment, Selection.	**15**
II	**Directing and Controlling:** Meaning and Nature of Direction, Principles of Directing, Leadership and Leadership Styles, Motivation, Communication, Noise and Feedback in Communication, Importance of Communication, Channels of Communication, Types of Communication, Forms of Communication, Coordination, Coordination and Cooperation, Importance	**15**

	of Coordination, Techniques of Coordination, Managerial Control, Steps in a Control Process, Essentials of a Sound Control System, Control Methods. **Entrepreneurship:** Evolution of Concept of Entrepreneur, Concept of Entrepreneur, Characteristics of Entrepreneur, Distinction between Entrepreneur and Manager, Technical Entrepreneur, Charms of Being an Entrepreneur, Functions of an Entrepreneur, Types of Entrepreneurs, Intrapreneurs, Ultrapreneurs, Concept of Entrepreneurship, Evolution of Entrepreneurship, Role of Entrepreneurship in Economic Development, Stages in the Entrepreneurial Process, Barriers to Entrepreneurship	
III	**Small Scale Industry:** Meaning and Definition of Small-Scale Industry, Characteristics of SSI, Objectives, Scope, Role of SSI in Economic Development, Advantages of Small-Scale Industries, steps to Start an SSI, Government Policy towards SSI **Preparation of Project:** Meaning, Project Classification, Project Identification, Project Report and its significance, Contents of a Project Report, Formulation of Project Report, Planning Commission Guidelines, Network Analysis, Common Mistakes by Entrepreneurs in Project Formulation, Project Appraisal, Identification of Opportunity, Project Feasibility study.	**15**

Textbooks:

1. Havinal Veerabhadrappa, Management and Entrepreneurship, New Age International Publishers.
2. Kanishka Bedi, Management and Entrepreneurship, Oxford University Press
3. Dr. R. K. Singal, Entrepreneurship Development and Management

Additional References:

1. P. N. Singh, J. C. Saboo, Entrepreneurship Management, 6th Edition, Dr. P. N. Singh Centre for Hrd Publications.
2. Donald L. Sexton & Raymond W. Smilor, The Art and Science of Entrepreneurship, Ballinger, 2022
3. Clifford M.Baumback & Joseph R.Mancuso, Entrepreneurship And Venture Management, Prentice Hall

Evaluation Scheme

I. Internal Evaluation for Theory Courses – 25 Marks

(i) Mid-Term Class Test – 15 Marks

- It should be conducted using any **learning management system** such as **Moodle** (Modular object-oriented dynamic learning environment)
- The test should have **15 MCQ's** which should be solved in a time duration of **30 minutes.**

(ii) Assignment/ Case study/ Presentations – 10 Marks

- Assignment / Case Study Report / Presentation can be uploaded on any **learning management system**.

II. External Examination for Theory Courses – 75 Marks

- Duration: **2.5 Hours**
- Theory question paper pattern:

	All questions are compulsory.		
Question	**Based on**	**Options**	**Marks**
Q.1	Unit I	*Any 4 out of 6*	20
Q.2	Unit II	*Any 4 out of 6*	20
Q.3	Unit III	*Any 4 out of 6*	20
Q.4	Unit I, II and III	*Any 5 out of 6*	15

- All questions shall be compulsory with internal choice within the questions.
- Each Question may be sub-divided into sub questions as a, b, c, d, etc. & the allocation of Marks depends on the weightage of the topic.

III. Practical Examination

- Each core subject carries 50 Marks
  40 marks + 05 marks (journal) + 05 marks (viva)
- Duration: **2 Hours** for each practical course.
- Minimum **80% practical** from each core subjects are required to be completed.
- **Certified Journal is compulsory for appearing at the time of Practical Exam**
- The final submission and evaluation of **journal in electronic form** using a Learning Management System / Platform can be promoted by college.

UNIVERSITY OF MUMBAI
No. UG/63 of 2018-19

CIRCULAR:-

Attention of the Principals of the affiliated Colleges and Directors of the recognized Institutions in Science & Technology Faculty is invited to this office Circular Nos. UG/108 of 2017-18, dated 27th July, 2017 relating to syllabus of the Bachelor of Science (B.Sc.) degree course.

They are hereby informed that the recommendations made by the Ad-hoc Board of Studies in Computer Science at its meeting held on 10th May, 2018 have been accepted by the Academic Council at its meeting held on 14th June, 2018 **vide** item No. 4.40 and that in accordance therewith, the revised syllabus as per the (CBCS) for the T.Y.B.Sc. in Computer Science (Sem - V & VI), has been brought into force with effect from the academic year 2018-19, accordingly. (The same is available on the University's website www.mu.ac.in).

(Dr. Dinesh Kamble)
I/c REGISTRAR

MUMBAI – 400 032
6th July, 2018

To

The Principals of the affiliated Colleges & Directors of the recognized Institutions in Science & Technology Faculty. (Circular No. UG/334 of 2017-18 dated 9th January, 2018.)

A.C./4.40/14/06/2018

****

No. UG/ 63 -A of 2018 MUMBAI-400 032 6th July, 2018

Copy forwarded with Compliments for information to:-

1) The I/c Dean, Faculty of Science & Technology,
2) The Chairman, Ad-hoc Board of Studies in Computer Science,
3) The Director, Board of Examinations and Evaluation,
4) The Director, Board of Students Development,
5) The Co-Ordinator, University Computerization Centre,

UNIVERSITY OF MUMBAI

Syllabus for SemV&VI
Program: Bachelor of Science
Course: Computer Science

Credit Based Semester and Grading System with effect from
Academic Year 2018-2019

Preamble

This is the third year curriculum in the subject of Computer Science. The revised structure is designed to transform students into technically competent, socially responsible and ethical Computer Science professionals. In these Semesters we have made the advancements in the subject based on the previous Semesters Knowledge.

In the first year basic foundation of important skills required for software development is laid. Second year of this course is about studying core computer science subjects. The third year is the further advancement which covers developing capabilities to design formulations of computing models and its applications in diverse areas.

The proposed curriculum contains two semesters, each Semester contains two Electives: Elective-I and II. Every Elective contains three papers based on specific areas of Computer Science. It also includes one Skill Enhancement paper per semester, helps the student to evaluate his/her computer science domain specific skills and also to meet industry expectations. This revised curriculum has not only taken the specific areas of computer science into consideration but will also give the opportunity to the student to prove his/her ability in the subject practically through the Project Implementation. In Semester V and Semester VI student has to undertake a Project. It can boost his/her confidence and also can encourage the student to perform innovations in the subject as the choice of the Project topic is kept open covering most of the areas of Computer Science subject as per the students interest and the subject they have learned during the Course.

Proposed Curriculum contains challenging and varied subjects aligned with the current trend with the introduction of Machine Intelligence specific subject such as Artificial Intelligence, Information Retrieval. Data Management related subjects such as Cloud Computing and Data Science. Image processing topics such as Game Programming, Digital Image Processing. Introduction of physical world through Architecting of IoT and Wireless Sensor Networks and Mobile Communication. Security domain is also evolved by the introduction of Ethical Hacking, Cyber Forensic and Information and Network Security. To get the hands on experience Linux Server Administration and Web Services topics are included.

In essence, the objective of this syllabus is to create a pool of technologically savvy, theoretically strong, innovatively skilled and ethically responsible generation of computer science professionals. Hope that the teacher and student community of University of Mumbai will accept and appreciate the efforts.

T.Y.B.Sc. (Semester V and VI)
Computer Science Syllabus
Credit Based Semester and Grading System
To be implemented from the Academic year 2018-2019

SEMESTER V			
Course	**TOPICS**	**Credits**	**L / Week**
	Elective-I (Select Any Two)		
USCS501	Artificial Intelligence	3	3
USCS502	Linux Server Administration	3	3
USCS503	Software Testing and Quality Assurance	3	3
	Elective-II (Select Any Two)		
USCS504	Information and Network Security	3	3
USCS505	Architecting of IoT	3	3
USCS506	Web Services	3	3
	Skill Enhancement		
USCS507	Game Programming	2	3
	Practical		
USCSP501	Practical of Elective-I	2	6
USCSP502	Practical of Elective-II	2	6
USCSP503	Project Implementation	1	3
USCSP504	Practical of Skill Enhancement : USCS507	1	3

SEMESTER VI			
Course	**TOPICS**	**Credits**	**L / Week**
	Elective-I (Select Any Two)		
USCS601	Wireless Sensor Networks and Mobile Communication	3	3
USCS602	Cloud Computing	3	3
USCS603	Cyber Forensics	3	3
	Elective-II (Select Any Two)		

USCS604	Information Retrieval	3	3
USCS605	Digital Image Processing	3	3
USCS606	Data Science	3	3
	Skill Enhancement		
USCS607	Ethical Hacking	2	3
	Practical		
USCSP601	Practical of Elective-I	2	6
USCSP602	Practical of Elective-II	2	6
USCSP603	Project Implementation	1	3
USCSP604	Practical of Skill Enhancement : USCS607	1	3

SEMESTER V

THEORY

Course: USCS501	TOPICS (Credits : 03 Lectures/Week:03) Artificial Intelligence	
Objectives: Artificial Intelligence (AI) and accompanying tools and techniques bring transformational changes in the world. Machines capability to match, and sometimes even surpass human capability, make AI a hot topic in Computer Science. This course aims to introduce the learner to this interesting area. **Expected Learning Outcomes:** After completion of this course, learner should get a clear understanding of AI and different search algorithms used for solving problems. The learner should also get acquainted with different learning algorithms and models used in machine learning.		
Unit I	**What Is AI:** Foundations, History and State of the Art of AI. **Intelligent Agents:** Agents and Environments, Nature of Environments, Structure of Agents. **Problem Solving by searching:** Problem-Solving Agents, Example Problems, Searching for Solutions, Uninformed Search Strategies, Informed (Heuristic) Search Strategies, Heuristic Functions.	**15L**
Unit II	**Learning from Examples:** Forms of Learning, Supervised Learning, Learning Decision Trees, Evaluating and Choosing the Best Hypothesis, Theory of Learning, Regression and Classification with Linear Models, Artificial Neural Networks, Nonparametric Models, Support Vector Machines, Ensemble Learning, Practical Machine Learning	**15L**

Unit III	**Learning probabilistic models:** Statistical Learning, Learning with Complete Data, Learning with Hidden Variables: The EM Algorithm. Reinforcement learning: Passive Reinforcement Learning, Active Reinforcement Learning, Generalization in Reinforcement Learning, Policy Search, Applications of Reinforcement Learning.	**15L**

Textbook(s):

1) Artificial Intelligence: A Modern Approach, Stuart Russell and Peter Norvig,3rd Edition, Pearson, 2010.

Additional Reference(s):

1) Artificial Intelligence: Foundations of Computational Agents, David L Poole,Alan K. Mackworth, 2nd Edition, Cambridge University Press ,2017.
2) Artificial Intelligence, Kevin Knight and Elaine Rich, 3rd Edition, 2017
3) The Elements of Statistical Learning, Trevor Hastie, Robert Tibshirani and Jerome Friedman, Springer, 2013

Course:	**TOPICS (Credits : 03 Lectures/Week:03)**
USCS502	**Linux Server Administration**

Objectives:

Demonstrate proficiency with the Linux command line interface, directory & file management techniques, file system organization, and tools commonly found on most Linux distributions. Effectively operate a Linux system inside of a network environment to integrate with existing service solutions. Demonstrate the ability to troubleshoot challenging technical problems typically encountered when operating and administering Linux systems.

Expected Learning Outcomes:

Learner will be able to develop Linux based systems and maintain. Learner will be able to install appropriate service on Linux server as per requirement. Learner will have proficiency in Linux server administration.

Unit I	**Introduction:** Technical Summary of Linux Distributions, Managing Software **Single-Host Administration:** Managing Users and Groups, Booting and shutting down processes, File Systems, Core System Services, Process of configuring, compiling, Linux Kernel **Networking and Security:** TCP/IP for System Administrators, basic network Configuration, Linux Firewall (Netfilter), System and network security	**15L**
Unit II	**Internet Services:** Domain Name System (DNS), File Transfer Protocol (FTP), Apache web server, Simple Mail Transfer Protocol (SMTP), Post Office Protocol and Internet Mail Access Protocol (POP and IMAP), Secure Shell (SSH), Network Authentication, OpenLDAP Server, Samba and LDAP, Network authentication system (Kerberos), Domain Name Service (DNS), Security	**15L**
Unit III	**Intranet Services:** Network File System (NFS), Samba, Distributed File Systems (DFS), Network Information Service (NIS), Lightweight Directory Access Protocol (LDAP), Dynamic Host Configuration Protocol (DHCP), MySQL, LAMP Applications File Servers, Email Services, Chat Applications, Virtual Private Networking.	**15L**

Textbook(s):

1) Linux Administration: A Beginner's Guide, Wale Soyinka, Seventh Edition, McGraw-Hill Education, 2016
2) Ubuntu Server Guide, Ubuntu Documentation Team, 2016

Additional Reference(s):

1) Mastering Ubuntu Server, Jay LaCroix, PACKT Publisher, 2016

Course: USCS503	TOPICS (Credits : 03 Lectures/Week:03) Software Testing and Quality Assurance	
Objectives: To provide learner with knowledge in Software Testing techniques. To understand how testing methods can be used as an effective tools in providing quality assurance concerning for software. To provide skills to design test case plan for testing software **Expected Learning Outcomes:** Understand various software testing methods and strategies. Understand a variety of software metrics, and identify defects and managing those defects for improvement in quality for given software. Design SQA activities, SQA strategy, formal technical review report for software quality control and assurance.		
Unit I	**Software Testing and Introduction to quality :** Introduction, Nature of errors, an example for Testing, Definition of Quality , QA, QC, QM and SQA , Software Development Life Cycle, Software Quality Factors **Verification and Validation :** Definition of V &V , Different types of V & V Mechanisms, Concepts of Software Reviews, Inspection and Walkthrough **Software Testing Techniques :** Testing Fundamentals, Test Case Design, White Box Testing and its types, Black Box Testing and its types	**15L**
Unit II	**Software Testing Strategies :** Strategic Approach to Software Testing, Unit Testing, Integration Testing, Validation Testing, System Testing **Software Metrics :** Concept and Developing Metrics, Different types of Metrics, Complexity metrics **Defect Management:** Definition of Defects, Defect Management Process, Defect Reporting, Metrics Related to Defects, Using Defects for Process Improvement.	**15L**
Unit III	**Software Quality Assurance :** Quality Concepts, Quality Movement, Background Issues, SQA activities, Software Reviews, Formal Technical Reviews, Formal approaches to SQA, Statistical Quality Assurance, Software Reliability, The ISO 9000 Quality Standards, , SQA Plan , Six sigma, Informal Reviews	**15L**

	Quality Improvement : Introduction, Pareto Diagrams, Cause-effect Diagrams, Scatter Diagrams, Run charts **Quality Costs :** Defining Quality Costs, Types of Quality Costs, Quality Cost Measurement, Utilizing Quality Costs for Decision-Making	

Textbook(s):

1. Software Engineering for Students, A Programming Approach, Douglas Bell, 4th Edition,, Pearson Education, 2005
2. Software Engineering – A Practitioners Approach, Roger S. Pressman, 5th Edition, Tata McGraw Hill, 2001
3. Quality Management, Donna C. S. Summers, 5th Edition, Prentice-Hall, 2010.
4. Total Quality Management, Dale H. Besterfield, 3rd Edition, Prentice Hall, 2003.

Additional Reference(s):

1. Software engineering: An Engineering approach, J.F. Peters, W. Pedrycz , John Wiley,2004
2. Software Testing and Quality Assurance Theory and Practice, Kshirsagar Naik, Priyadarshi Tripathy , John Wiley & Sons, Inc. , Publication, 2008
3. Software Engineering and Testing, B. B. Agarwal, S. P. Tayal, M. Gupta, Jones and Bartlett Publishers, 2010

Course:	**TOPICS (Credits : 03 Lectures/Week:03)**
USCS504	**Information and Network Security**

Objectives:

To provide students with knowledge of basic concepts of computer security including network security and cryptography.

Expected Learning Outcomes:

Understand the principles and practices of cryptographic techniques. Understand a variety of generic security threats and vulnerabilities, and identify & analyze particular security problems for a given application. Understand various protocols for network security to protect against the threats in a network

Unit I	**Introduction:** Security Trends, The OSI Security Architecture, Security Attacks, Security Services, Security Mechanisms **Classical Encryption Techniques:** Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Steganography, Block Cipher Principles, The Data Encryption Standard, The Strength of DES, AES (round details not expected), Multiple Encryption and Triple DES, Block Cipher Modes of Operation, Stream Ciphers **Public-Key Cryptography and RSA:** Principles of Public-Key Cryptosystems, The RSA Algorithm	**15L**
Unit II	**Key Management:** Public-Key Cryptosystems, Key Management, Diffie-Hellman Key Exchange **Message Authentication and Hash Functions**: Authentication Requirements, Authentication Functions, Message Authentication Codes, Hash Functions, Security of Hash Functions and Macs, Secure Hash Algorithm, HMAC **Digital Signatures and Authentication:** Digital Signatures, Authentication Protocols, Digital Signature Standard **Authentication Applications:** Kerberos, X.509 Authentication, Public-Key Infrastructure	**15L**
Unit III	**Electronic Mail Security:** Pretty Good Privacy, S/MIME **IP Security:** Overview, Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management **Web Security:** Web Security Considerations, Secure Socket Layer and Transport Layer Security, Secure Electronic Transaction **Intrusion:** Intruders, Intrusion Techniques, Intrusion Detection **Malicious Software:** Viruses and Related Threats, Virus Countermeasures, DDOS **Firewalls:** Firewall Design Principles, Types of Firewalls	**15L**

Textbook(s):

1) Cryptography and Network Security: Principles and Practice 5th Edition, William

Stallings, Pearson,2010

Additional Reference(s):

1) Cryptography and Network Security, Atul Kahate, Tata McGraw-Hill, 2013.
2) Cryptography and Network, Behrouz A Fourouzan, Debdeep Mukhopadhyay, 2nd Edition,TMH,2011

Course: **USCS505**	**TOPICS (Credits : 03 Lectures/Week:03)** **Architecting of IoT**	
Objectives: Discovering the interconnection and integration of the physical world. Learner should get knowledge of the architecture of IoT. **Expected Learning Outcomes:** Learners are able to design & develop IoT Devices. They should also be aware of the evolving world of M2M Communications and IoT analytics.		
Unit I	**IoT-An Architectural Overview**: Building architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations. **IoT Architecture-State of the Art** : Introduction, State of the art, Reference Model and architecture, IoT reference Model - IoT Reference Architecture Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views	**15L**
Unit II	**IoT Data Link Layer and Network Layer Protocols:** PHY/MAC Layer(3GPP MTC, IEEE 802.11, IEEE 802.15), Wireless HART,Z-Wave, Bluetooth Low Energy, Zigbee Smart Energy DASH7 **Network Layer**:IPv4, IPv6, 6LoWPAN, 6TiSCH,ND, DHCP, ICMP, RPL, CORPL, CARP	**15L**

Unit III	**Transport layer protocols :** Transport Layer (TCP, MPTCP, UDP, DCCP, SCTP)-(TLS, DTLS) **Session layer:** Session Layer-HTTP, CoAP, XMPP, AMQP, MQTT **Service layer protocols:** Service Layer -oneM2M, ETSI M2M, OMA, BBF	**15L**

Textbook(s):

1. From Machine-to-Machine to the Internet of Things: Introduction to a New Age of Intelligence, Jan Holler, Vlasios Tsiatsis, Catherine Mulligan, Stefan Avesand, Stamatis Karnouskos, David Boyle,1st Edition, Academic Press, 2014.
2. Learning Internet of Things, Peter Waher, PACKT publishing, BIRMINGHAM – MUMBAI,2015

Additional References(s):

1. Building the Internet of Things with IPv6 and MIPv6: The Evolving World of M2M Communications, Daniel Minoli, Wiley Publications,2013
2. Internet of Things (A Hands-onApproach), Vijay Madisetti and ArshdeepBahga,1st Edition, VPT, 2014.
3. http://www.cse.wustl.edu/~jain/cse570-15/ftp/iot_prot/index.html

Course: **USCS506**	**TOPICS (Credits : 03 Lectures/Week:03)** **Web Services**

Objectives:

To understand the details of web services technologies like SOAP, WSDL, and UDDI. To learn how to implement and deploy web service client and server. To understand the design principles and application of SOAP and REST based web services (JAX-Ws and JAX-RS).To understand WCF service. To design secure web services and QoS of Web Services

Expected Learning Outcomes:

Emphasis on SOAP based web services and associated standards such as WSDL. Design SOAP based / RESTful / WCF services Deal with Security and QoS issues of Web Services

Unit I	**Web services basics :** What Are Web Services? Types of Web Services Distributed computing infrastructure, overview of XML, SOAP, Building Web Services with JAX-WS, Registering and Discovering Web Services, Service Oriented Architecture, Web Services Development Life Cycle, Developing and consuming simple Web Services across platform	**15L**
Unit II	**The REST Architectural style :** Introducing HTTP, The core architectural elements of a RESTful system, Description and discovery of RESTful web services, Java tools and frameworks for building RESTful web services, JSON message format and tools and frameworks around JSON, Build RESTful web services with JAX-RS APIs, The Description and Discovery of RESTful Web Services, Design guidelines for building RESTful web services, Secure RESTful web services	**15L**
Unit III	**Developing Service-Oriented Applications with WCF :** What Is Windows Communication Foundation, Fundamental Windows Communication Foundation Concepts, Windows Communication Foundation Architecture, WCF and .NET Framework Client Profile, Basic WCF Programming, WCF Feature Details. Web Service QoS	**15L**

Textbook(s):

1) Web Services: Principles and Technology, Michael P. Papazoglou, Pearson Education Limited, 2008
2) RESTful Java Web Services, Jobinesh Purushothaman, PACKT Publishing,2nd Edition, 2015
3) Developing Service-Oriented Applications with WCF, Microsoft, 2017 https://docs.microsoft.com/en-us/dotnet/framework/wcf/index

Additional Reference(s):

1) Leonard Richardson and Sam Ruby, RESTful Web Services, O'Reilly, 2007
2) The Java EE 6Tutorial, Oracle, 2013

Course: USCS507	TOPICS (Credits : 03 Lectures/Week: 03) Game Programming	
Objectives: Learner should get the understanding computer Graphics programming using Directx or Opengl. Along with the VR and AR they should also aware of GPU, newer technologies and programming using most important API for windows. **Expected Learning Outcomes:** Learner should study Graphics and gamming concepts with present working style of developers where everything remains on internet and they need to review it, understand it, be a part of community and learn.		
Unit I	**Mathematics for Computer Graphics, DirectX Kickstart:** **Cartesian Coordinate system:** The Cartesian XY-plane, Function Graphs, Geometric Shapes, Polygonal Shapes, Areas of Shapes, Theorem of Pythagoras in 2D, Coordinates, Theorem of Pythagoras in 3D, 3D Polygons, Euler's Rule **Vectors:** Vector Manipulation, multiplying a Vector by a Scalar, Vector Addition and Subtraction, Position Vectors, Unit Vectors, Cartesian Vectors, Vector Multiplication, Scalar Product, Example of the Dot Product, The Dot Product in Lighting Calculations, The Dot Product in Back-Face Detection, The Vector Product, The Right-Hand Rule, deriving a Unit Normal Vector for a Triangle Areas, Calculating 2D Areas **Transformations:** 2D Transformations, Matrices, Homogeneous Coordinates, 3D Transformations, Change of Axes, Direction Cosines, rotating a Point about an Arbitrary Axis, Transforming Vectors, Determinants, Perspective Projection, Interpolation **DirectX:** Understanding GPU and GPU architectures. How they are different from CPU Architectures? Understanding how to solve by GPU?	**15L**

Unit II	**DirectX Pipeline and Programming:** **Introduction To DirectX 11:** COM, Textures and Resources Formats, The swap chain and Page flipping, Depth Buffering, Texture Resource Views, Multisampling Theory and MS in Direct3D, Feature Levels **Direct3D 11 Rendering Pipeline:** Overview, Input Assembler Stage (IA), Vertex Shader Stage (VS), The Tessellation Stage (TS), Geometry Shader Stage (GS), Pixel Shader Stage (PS), Output merger Stage (OM) Understanding Meshes or Objects, Texturing, Lighting, Blending. **Interpolation and Character Animation:** **Trigonometry:** The Trigonometric Ratios, Inverse Trigonometric Ratios, Trigonometric Relationships, The Sine Rule, The Cosine Rule, Compound Angles, Perimeter Relationships **Interpolation**: Linear Interpolant, Non-Linear Interpolation, Trigonometric Interpolation, Cubic Interpolation, Interpolating Vectors, Interpolating Quaternions **Curves:** Circle, Bezier, B-Splines **Analytic Geometry:** Review of Geometry, 2D Analytic Geometry, Intersection Points, Point in Triangle, and Intersection of circle with straight line.	**15L**
Unit III	**Introduction to Rendering Engines:** Understanding the current market Rendering Engines. Understanding AR, VR and MR.Depth Mappers, Mobile Phones, Smart Glasses, HMD's **Unity Engine: Multi-platform publishing, VR + AR:** Introduction and working in Unity, 2D, Graphics, Physics, Scripting, Animation, Timeline, Multiplayer and Networking, UI, Navigation and Pathfinding, XR, Publishing. **Scripting:** Scripting Overview, Scripting Tools and Event Overview **XR:** VR, AR, MR, Conceptual Differences. SDK, Devices	**15L**

Text Book(s):

1) Mathematics for Computer Graphics, John Vince, Springer-Verlag London, 5th Edition,2017
2) Mathematics for 3D Game Programming and Computer Graphic, Eric Lengyel, Delmar

Cengage Learning, Delmar Cengage Learning,2011

3) Introduction To 3D Game Programming With Directx® 11,Frank D Luna, Mercury Learning And Information,2012.
4) https://docs.unity3d.com/Manual/index.html - Free

2) HLSL Development Cookbook, Doron Feinstein, PACKT Publishing,2013

Suggested List of Practical- SEMESTER V

Course: USCSP501	(Credits : 02 Lectures/Week: 06) Practical of Elective-I	

USCS501: Artificial Intelligence

Practical shall be implemented in LISP

1. Implement Breadth first search algorithm for Romanian map problem.
2. Implement Iterative deep depth first search for Romanian map problem.
3. Implement A* search algorithm for Romanian map problem.
4. Implement recursive best-first search algorithm for Romanian map problem.
5. Implement decision tree learning algorithm for the restaurant waiting problem.
6. Implement feed forward back propagation neural network learning algorithm for the restaurant waiting problem.
7. Implement Adaboost ensemble learning algorithm for the restaurant waiting problem.
8. Implement Naive Bayes' learning algorithm for the restaurant waiting problem.
9. Implement passive reinforcement learning algorithm based on adaptive dynamic programming (ADP) for the 3 by 4 world problem
10. Implement passive reinforcement learning algorithm based on temporal differences (TD) for 3 by 4 world problem.

USCS502: Linux Server Administration

- Practical shall be performed using any Linux Server (with 8GB RAM).

- Internet connection will be required so that Linux server (command line mode) can be connected to Internet.

1. Install DHCP Server in Ubuntu 16.04
2. Initial settings: Add a User, Network Settings, Change to static IP address, Disable IPv6 if not needed, Configure Services, display the list of services which are running, Stop and turn OFF auto-start setting for a service if you don't need it, Sudo Settings
3. Configure NTP Server (NTPd), Install and Configure NTPd, Configure NTP Client (Ubuntu and Windows)
4. SSH Server : Password Authentication

Configure SSH Server to manage a server from the remote computer, SSH Client : (Ubuntu and Windows)

5. Install DNS Server BIND, Configure DNS server which resolves domain name or IP address, Install BIND 9, Configure BIND, Limit ranges you allow to access if needed.
6. Configure DHCP Server, Configure DHCP (Dynamic Host Configuration Protocol) Server, Configure NFS Server to share directories on your Network, Configure NFS Client. (Ubuntu and Windows Client OS)
7. Configure LDAP Server, Configure LDAP Server in order to share users' accounts in your local networks, Add LDAP User Accounts in the OpenLDAP Server, Configure LDAP Client in order to share users' accounts in your local networks. Install phpLDAPadmin to operate LDAP server via Web browser.
8. Configure NIS Server in order to share users' accounts in your local networks, Configure NIS Client to bind NIS Server.
9. Install MySQL to configure database server, Install phpMyAdmin to operate MySQL on web browser from Clients.
10. Install Samba to share folders or files between Windows and Linux.

USCS503: Software Testing and Quality Assurance

1. Install Selenium IDE; Write a test suite containing minimum 4 test cases for different formats.
2. Conduct a test suite for any two web sites.
3. Install Selenium server (Selenium RC) and demonstrate it using a script in Java/PHP.
4. Write and test a program to login a specific web page.
5. Write and test a program to update 10 student records into table into Excel file
6. Write and test a program to select the number of students who have scored more than 60 in any one subject (or all subjects).
7. Write and test a program to provide total number of objects present / available on the page.
8. Write and test a program to get the number of items in a list / combo box.
9. Write and test a program to count the number of check boxes on the page checked and unchecked count.
10. Load Testing using JMeter, Android Application testing using Appium Tools, Bugzilla Bug tracking tools.

Course: USCSP502	(Credits : 02 Lectures/Week: 06) Practical of Elective-II	

USCS504: Information and Network security

1.Write programs to implement the following Substitution Cipher Techniques:

- Caesar Cipher
- Monoalphabetic Cipher

2 Write programs to implement the following Substitution Cipher Techniques:

- Vernam Cipher
- Playfair Cipher

3 Write programs to implement the following Transposition Cipher Techniques:

- Rail Fence Cipher
- Simple Columnar Technique

4 Write program to encrypt and decrypt strings using

- DES Algorithm
- AES Algorithm

5 Write a program to implement RSA algorithm to perform encryption / decryption of a given string.

6 Write a program to implement the Diffie-Hellman Key Agreement algorithm to generate symmetric keys.

7 Write a program to implement the MD5 algorithm compute the message digest.

8 Write a program to calculate HMAC-SHA1 Signature

9 Write a program to implement SSL.

10 Configure Windows Firewall to block:

- A port
- An Program
- A website

USCS505: Architecting of IoT

1. a) Edit text files with nano and cat editor, Learn sudo privileges and Unix shell commands such as cd , ls , cat, etc

b) Learn to set dynamic and static IP. Connect to and Ethernet and WiFi network. Learn to vnc and ssh into a raspberry pi using vnc and putty from a different computer on the network.

c) Write a basic bash script to open programs in kiosk mode. Learn how to autostart programs on boot.

2. Run the node red editor and run simple programs and trigger gpios. Use basic nodes such as inject, debug, gpio
3. Open the python idle editor and run simple Python scripts such as to print Fibonacci numbers, string functions. Learn how to install modules using Pip and write functions
4. Setup a physical button switch and trigger an led in node red and python w debounce
5. Write simple JavaScript functions in Node-Red simple HTTP server page using node red
6. Setup a TCP server and client on a raspberry pi using Python modules to send messages and execute shell commands from within python such as starting another application
7. Trigger a set of led Gpios on the pi via a Python Flask web server
8. Interface the raspberry pi with a 16x2 LCD display and print values.
9. Setup a Mosquitto MQTT server and client and write a Python script to communicate data between Pi's.
10. Interface with an Accelerometer Gyro Mpu6050 on the i2c bus and send sensor values over the internet via mqtt.

USCS506: Web Services

1. Write a program to implement to create a simple web service that converts the temperature from Fahrenheit to Celsius and vice a versa.
2. Write a program to implement the operation can receive request and will return a response in two ways. a) One - Way operation b) Request –Response
3. Write a program to implement business UDDI Registry entry.
4. Develop client which consumes web services developed in different platform.
5. Write a JAX-WS web service to perform the following operations. Define a Servlet / JSP that consumes the web service.
6. Define a web service method that returns the contents of a database in a JSON string. The contents should be displayed in a tabular format.
7. Define a RESTful web service that accepts the details to be stored in a database and performs

CRUD operation.

8. Implement a typical service and a typical client using WCF.
9. Use WCF to create a basic ASP.NET Asynchronous JavaScript and XML (AJAX) service.
10. Demonstrates using the binding attribute of an endpoint element in WCF.

Course: **USCSP503**	**(Credits : 01 Lectures/Week: 03) Project Implementation**	
Please Refer to Project Implementation Guidelines		
Course: **USCSP504**	**(Credits : 01 Lectures/Week: 03) Practical of Skill Enhancement**	

USCS507 : Game Programming

1. Setup DirectX 11, Window Framework and Initialize Direct3D Device
2. Buffers, Shaders and HLSL (Draw a triangle using Direct3D 11)
3. Texturing (Texture the Triangle using Direct 3D 11)
4. Lightning (Programmable Diffuse Lightning using Direct3D 11)
5. Specular Lightning (Programmable Spot Lightning using Direct3D 11)
6. Loading models into DirectX 11 and rendering.

Perform following Practical using online content from the Unity Tutorials Web--sites: https://unity3d.com/learn/tutorials/s/interactive-tutorials

7. https://unity3d.com/learn/tutorials/s/2d-ufo-tutorial
8. https://unity3d.com/learn/tutorials/s/space-shooter-tutorial
9. https://unity3d.com/learn/tutorials/s/roll-ball-tutorial
10. https://unity3d.com/learn/tutorials/topics/vr/introduction?playlist=22946

SEMESTER VI

THEORY

Course: USCS601	TOPICS (Credits : 03 Lectures/Week: 03) Wireless Sensor Networks and Mobile Communication	
Objectives: In this era of wireless and adhoc network, connecting different wireless devices and understanding their compatibility is very important. Information is gathered in many different ways from these devices. Learner should be able to conceptualize and understand the framework. On completion, will be able to have a firm grip over this very important segment of wireless network. **Expected Learning Outcomes:** After completion of this course, learner should be able to list various applications of wireless sensor networks, describe the concepts, protocols, design, implementation and use of wireless sensor networks. Also implement and evaluate new ideas for solving wireless sensor network design issues.		
Unit I	**Introduction:** Introduction to Sensor Networks, unique constraints and challenges. Advantage of Sensor Networks, Applications of Sensor Networks, Mobile Adhoc NETworks (MANETs) and Wireless Sensor Networks, Enabling technologies for Wireless Sensor Networks. **Sensor Node Hardware and Network Architecture:** Single-node architecture, Hardware components & design constraints, Operating systems and execution environments, introduction to TinyOS and nesC. Network architecture, Optimization goals and figures of merit, Design principles for WSNs, Service interfaces of WSNs, Gateway concepts.	**15L**
Unit II	**Medium Access Control Protocols:** Fundamentals of MAC Protocols, MAC Protocols for WSNs, Sensor-MAC Case Study. **Routing Protocols** : Data Dissemination and Gathering, Routing Challenges and Design Issues in Wireless Sensor Networks, Routing Strategies in Wireless Sensor Networks. **Transport Control Protocols :** Traditional Transport Control Protocols,	**15L**

	Transport Protocol Design Issues, Examples of Existing Transport Control Protocols, Performance of Transport Control Protocols.	
Unit III	**Introduction, Wireless Transmission and Medium Access Control:** Applications, A short history of wireless communication. **Wireless Transmission:** Frequency for radio transmission, Signals, Antennas, Signal propagation, Multiplexing, Modulation, Spread spectrum, Cellular systems. **Telecommunication, Satellite and Broadcast Systems: GSM:** Mobile services, System architecture, Radio interface, Protocols, Localization And Calling, Handover, security, New data services; DECT: System architecture, Protocol architecture; ETRA, UMTS and IMT- 2000. Satellite Systems: History, Applications, Basics: GEO, LEO, MEO; Routing, Localization, Handover.	**15L**

Textbook(s):

1) Protocols and Architectures for Wireless Sensor Network, Holger Kerl, Andreas Willig, John Wiley and Sons, 2005
2) Wireless Sensor Networks Technology, Protocols, and Applications ,Kazem Sohraby, Daniel Minoli and TaiebZnati, John Wiley & Sons, 2007
3) Mobile communications, Jochen Schiller,2nd Edition, Addison wisely , Pearson Education,2012

Additional Reference(s):

1) Fundamentals of Wireless Sensor Networks, Theory and Practice, Waltenegus Dargie, Christian Poellabauer , Wiley Series on wireless Communication and Mobile Computing, 2011
2) Networking Wireless Sensors, Bhaskar Krishnamachari , Cambridge University Press, 2005

Course: USCS602	TOPICS (Credits : 03 Lectures/Week: 03) Cloud Computing	

Objectives:

To provide learners with the comprehensive and in-depth knowledge of Cloud Computing concepts, technologies, architecture, implantations and applications. To expose the learners to frontier areas of Cloud Computing, while providing sufficient foundations to enable further study and research.

Expected Learning Outcomes:

After successfully completion of this course, learner should be able to articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art cloud computing using open source technology. Learner should be able to identify the architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, public cloud, private cloud, hybrid cloud, etc. They should explain the core issues of cloud computing such as security, privacy, and interoperability.

Unit I	Introduction to Cloud Computing, Characteristics and benefits of Cloud Computing, Basic concepts of Distributed Systems, Web 2.0, Service-Oriented Computing, Utility-Oriented Computing. Elements of Parallel Computing. Elements of Distributed Computing. Technologies for Distributed Computing. Cloud Computing Architecture. The cloud reference model. Infrastructure as a service. Platform as a service. Software as a service. Types of clouds.	**15L**
Unit II	Characteristics of Virtualized Environments. Taxonomy of Virtualization Techniques. Virtualization and Cloud Computing. Pros and Cons of Virtualization. Virtualization using KVM, Creating virtual machines, oVirt - management tool for virtualization environment. Open challenges of Cloud Computing	**15L**
Unit III	Introduction to OpenStack, OpenStack test-drive, Basic OpenStack operations, OpenStack CLI and APIs, Tenant model operations, Quotas, Private cloud building blocks, Controller deployment, Networking deployment, Block Storage deployment, Compute deployment, deploying and utilizing OpenStack in production environments, Building a production environment, Application orchestration using OpenStack Heat	**15L**

Textbook(s):

1) Mastering Cloud Computing, Rajkumar Buyya, Christian Vecchiola, S Thamarai Selvi, Tata McGraw Hill Education Private Limited, 2013
2) OpenStack in Action, V. K. CODY BUMGARDNER, Manning Publications Co, 2016

Additional Reference(s)*:*

1) OpenStack Essentials, Dan Radez, PACKT Publishing, 2015
2) OpenStack Operations Guide, Tom Fifield, Diane Fleming, Anne Gentle, Lorin Hochstein, Jonathan Proulx, Everett Toews, and Joe Topjian, O'Reilly Media, Inc., 2014
3) https://www.openstack.org

Course: **USCS603**	**TOPICS (Credits :03 Lectures/Week:03)** **Cyber Forensics**	

Objectives:

To understand the procedures for identification, preservation, and extraction of electronic evidence, auditing and investigation of network and host system intrusions, analysis and documentation of information gathered

Expected Learning Outcomes :

The student will be able to plan and prepare for all stages of an investigation - detection, initial response and management interaction, investigate various media to collect evidence, report them in a way that would be acceptable in the court of law.

Unit I	**Computer Forensics :** Introduction to Computer Forensics and standard procedure, Incident Verification and System Identification ,Recovery of Erased and damaged data, Disk Imaging and Preservation, Data Encryption and Compression, Automated Search Techniques, Forensics Software **Network Forensic :** Introduction to Network Forensics and tracking network traffic, Reviewing Network Logs, Network Forensics Tools, Performing Live Acquisitions, Order of Volatility, Standard Procedure **Cell Phone and Mobile Device Forensics:** Overview, Acquisition Procedures for Cell Phones and Mobile Devices	**15L**

Unit II	**Internet Forensic :** **Introduction** to Internet Forensics, World Wide Web Threats, Hacking and Illegal access, Obscene and Incident transmission, Domain Name Ownership Investigation, Reconstructing past internet activities and events **E-mail Forensics :** e-mail analysis, e-mail headers and spoofing, Laws against e-mail Crime, **Messenger Forensics:** Yahoo Messenger **Social Media Forensics:** Social Media Investigations **Browser Forensics:** Cookie Storage and Analysis, Analyzing Cache and temporary internet files, Web browsing activity reconstruction	**15L**
Unit III	**Investigation, Evidence presentation and Legal aspects of Digital Forensics:** Authorization to collect the evidence , Acquisition of Evidence, Authentication of the evidence, Analysis of the evidence, Reporting on the findings, Testimony **Introduction to Legal aspects of Digital Forensics:** Laws & regulations, Information Technology Act, Giving Evidence in court, Case Study – Cyber Crime cases, Case Study – Cyber Crime cases	**15L**

Textbook(s):

1. Guide to computer forensics and investigations, Bill Nelson, Amelia Philips and Christopher Steuart, course technology,5th Edition,2015

Additional Reference(s)*:*

2. Incident Response and computer forensics, Kevin Mandia, Chris Prosise, Tata McGrawHill,2nd Edition,2003

Course:	**TOPICS (Credits : 03 Lectures/Week: 03)**	
USCS604	**Information Retrieval**	

Objectives:

To provide an overview of the important issues in classical and web information retrieval. The focus is to give an up-to- date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents and of methods for evaluating systems.

Expected Learning Outcomes:

After completion of this course, learner should get an understanding of the field of information retrieval and its relationship to search engines. It will give the learner an understanding to apply information retrieval models.		
Unit I	**Introduction to Information Retrieval:** Introduction, History of IR, Components of IR, and Issues related to IR, Boolean retrieval, Dictionaries and tolerant retrieval.	**15L**
Unit II	**Link Analysis and Specialized Search:** Link Analysis, hubs and authorities, Page Rank and HITS algorithms, Similarity, Hadoop & Map Reduce, Evaluation, Personalized search, Collaborative filtering and content-based recommendation of documents and products, handling "invisible" Web, Snippet generation, Summarization, Question Answering, Cross- Lingual Retrieval.	**15L**
Unit III	**Web Search Engine:** Web search overview, web structure, the user, paid placement, search engine optimization/spam, Web size measurement, search engine optimization/spam, Web Search Architectures. **XML retrieval:** Basic XML concepts, Challenges in XML retrieval, A vector space model for XML retrieval, Evaluation of XML retrieval, Text-centric versus data-centric XML retrieval.	**15L**

Text book(s):

1) Introduction to Information Retrieval, C. Manning, P. Raghavan, and H. Schütze, Cambridge University Press, 2008
2) Modern Information Retrieval: The Concepts and Technology behind Search, Ricardo Baeza -Yates and Berthier Ribeiro – Neto, 2nd Edition, ACM Press Books 2011.
3) Search Engines: Information Retrieval in Practice, Bruce Croft, Donald Metzler and Trevor Strohman, 1st Edition, Pearson, 2009.

Additional Reference(s):

1) Information Retrieval Implementing and Evaluating Search Engines, Stefan Büttcher, Charles L. A. Clarke and Gordon V. Cormack, The MIT Press; Reprint edition (February 12, 2016)

Course: USCS605	TOPICS (Credits : 03 Lectures/Week: 03) Digital Image Processing	
Objectives: To study two-dimensional Signals and Systems. To understand image fundamentals and transforms necessary for image processing. To study the image enhancement techniques in spatial and frequency domain. To study image segmentation and image compression techniques. **Expected Learning Outcomes**: Learner should review the fundamental concepts of a digital image processing system. Analyze the images in the frequency domain using various transforms. Evaluate the techniques for image enhancement and image segmentation. Apply various compression techniques. They will be familiar with basic image processing techniques for solving real problems.		
Unit I	**Introduction to Image-processing System :** Introduction, Image Sampling, Quantization, Resolution, Human Visual Systems, Elements of an Image-processing System, Applications of Digital Image Processing **2D Signals and Systems :** 2D signals, separable sequence, periodic sequence, 2D systems, classification of 2D systems, 2D Digital filter **Convolution and Correlation :** 2D Convolution through graphical method, Convolution through 2D Z—transform, 2D Convolution through matrix analysis, Circular Convolution, Applications of Circular Convolution, 2D Correlation **Image Transforms:** Need for transform, image transforms, Fourier transform, 2D Discrete Fourier Transform, Properties of 2D DFT, Importance of Phase, Walsh transform, Hadamard transform, Haar transform, Slant transform, Discrete Cosine transform, KL transform	**15L**
Unit II	**Image Enhancement :**Image Enhancement in spatial domain, Enhancement trough Point operations, Histogram manipulation, Linear and nonlinear Gray Level Transformation, local or neighborhood operation, Median Filter, Spatial domain High pass filtering, Bit-plane slicing, Image Enhancement in frequency domain, Homomorphic filter, Zooming operation, Image Arithmetic	**15L**

	Binary Image processing : Mathematical morphology, Structuring elements, Morphological image processing, Logical operations, Morphological operations, Dilation and Erosion, Distance Transform **Colour Image processing :**Colour images, Colour Model, Colour image quantization, Histogram of a colour image	
Unit III	**Image Segmentation:** Image segmentation techniques, Region approach, Clustering techniques, Thresholding, Edge-based segmentation, Edge detection, Edge Linking, Hough Transform **Image Compression:** Need for image compression, Redundancy in images, Image-compression scheme, Fundamentals of Information Theory, Run-length coding, Shannon-Fano coding, Huffman Coding, Arithmetic Coding, Transform-based compression, Image-compression standard	**15L**

Textbook(s):

1) Digital Image Processing, S Jayaraman, S Esakkirajan, T Veerakumar,Tata McGraw-Hill Education Pvt. Ltd., 2009

Additional Reference(s)*:*

1) Digital Image Processing 3rd Edition, Rafael C Gonzalez, Richard E Woods, Pearson, 2008
2) Scilab Textbook Companion for Digital Image Processing, S. Jayaraman, S. Esakkirajan And T. Veerakumar, 2016 (https://scilab.in/textbook_companion/generate_book/125)

Course: **USCS606**	**TOPICS (Credits : 03 Lectures/Week: 03)** **Data Science**	

Objectives:

Understanding basic data science concepts. Learning to detect and diagnose common data issues, such as missing values, special values, outliers, inconsistencies, and localization. Making aware of how to address advanced statistical situations, Modeling and Machine Learning.

Expected Learning Outcomes:

After completion of this course, the students should be able to understand & comprehend the problem; and should be able to define suitable statistical method to be adopted.

Unit I	**Introduction to Data Science:** What is Data? Different kinds of data,	**15L**

	Introduction to high level programming language + Integrated Development Environment (IDE), Exploratory Data Analysis (EDA) + Data Visualization, Different types of data sources, **Data Management**: Data Collection, Data cleaning/extraction, Data analysis & Modeling	
Unit II	**Data Curation:** Query languages and Operations to specify and transform data, Structured/schema based systems as users and acquirers of data Semi-structured systems as users and acquirers of data, Unstructured systems in the acquisition and structuring of data, Security and ethical considerations in relation to authenticating and authorizing access to data on remote systems, Software development tools, Large scale data systems, Amazon Web Services (AWS)	**15L**
Unit III	**Statistical Modelling and Machine Learning:** Introduction to model selection: Regularization, bias/variance tradeoff e.g. parsimony, AIC, BIC, Cross validation, Ridge regressions and penalized regression e.g. LASSO **Data transformations**: Dimension reduction, Feature extraction, Smoothing and aggregating **Supervised Learning**: Regression, linear models, Regression trees, Time-series Analysis, Forecasting, Classification: classification trees, Logistic regression, separating hyperplanes, k-NN **Unsupervised Learning**: Principal Components Analysis (PCA), k-means clustering, Hierarchical clustering, Ensemble methods	**15L**

Textbook(s):

1) Doing Data Science, Rachel Schutt and Cathy O'Neil, O'Reilly,2013
2) Mastering Machine Learning with R, Cory Lesmeister, PACKT Publication,2015

Additional Reference(s):

1) Hands-On Programming with R, Garrett Grolemund,1st Edition, 2014
2) An Introduction to Statistical Learning, James, G., Witten, D., Hastie, T., Tibshirani, R.,Springer,2015

Course: USCS607	TOPICS (Credits : 02 Lectures/Week: 03) Ethical Hacking	
Objectives: To understand the ethics, legality, methodologies and techniques of hacking. **Expected Learning Outcomes:** Learner will know to identify security vulnerabilities and weaknesses in the target applications. They will also know to test and exploit systems using various tools and understand the impact of hacking in real time machines.		
Unit I	**Information Security : Attacks and Vulnerabilities** **Introduction to information security** : Asset, Access Control, CIA, Authentication, Authorization, Risk, Threat, Vulnerability, Attack, Attack Surface, Malware, Security-Functionality-Ease of Use Triangle **Types of malware** :Worms, viruses, Trojans, Spyware, Rootkits **Types of vulnerabilities** : OWASP Top 10 : cross-site scripting (XSS), cross site request forgery (CSRF/XSRF), SQL injection, input parameter manipulation, broken authentication, sensitive information disclosure, XML External Entities, Broken access control, Security Misconfiguration, Using components with known vulnerabilities, Insufficient Logging and monitoring, OWASP Mobile Top 10, CVE Database **Types of attacks and their common prevention mechanisms** : Keystroke Logging, Denial of Service (DoS /DDoS), Waterhole attack, brute force, phishing and fake WAP, Eavesdropping, Man-in-the-middle, Session Hijacking, Clickjacking, Cookie Theft, URL Obfuscation, buffer overflow, DNS poisoning, ARP poisoning, Identity Theft, IoT Attacks, BOTs and BOTNETs **Case-studies** : Recent attacks – Yahoo, Adult Friend Finder, eBay, Equifax, WannaCry, Target Stores, Uber, JP Morgan Chase, Bad Rabbit	**15L**
Unit II	**Ethical Hacking – I (Introduction and pre-attack)** **Introduction**: Black Hat vs. Gray Hat vs. White Hat (Ethical) hacking, Why is Ethical hacking needed?, How is Ethical hacking different from security auditing and digital forensics?, Signing NDA, Compliance and Regulatory	**15L**

	concerns, Black box vs. White box vs. Black box, Vulnerability assessment and Penetration Testing. **Approach : Planning -** Threat Modeling, set up security verification standards, Set up security testing plan – When, which systems/apps, understanding functionality, black/gray/white, authenticated vs. unauthenticated, internal vs. external PT, Information gathering, Perform Manual and automated (Tools: WebInspect/Qualys, Nessus, Proxies, Metasploit) VA and PT, How WebInspect/Qualys tools work: Crawling/Spidering, requests forging, pattern matching to known vulnerability database and Analyzing results, Preparing report, Fixing security gaps following the report **Enterprise strategy** : Repeated PT, approval by security testing team, Continuous Application Security Testing, **Phases:** Reconnaissance/foot-printing/Enumeration, **Phases**: Scanning, Sniffing	
Unit III	**Ethical Hacking :Enterprise Security** **Phases : Gaining and Maintaining Access** : **Systems hacking** – Windows and Linux – Metasploit and Kali Linux, Keylogging, Buffer Overflows, Privilege Escalation, Network hacking - ARP Poisoning, Password Cracking, WEP Vulnerabilities, MAC Spoofing, MAC Flooding, IPSpoofing, SYN Flooding, Smurf attack, **Applications hacking** : SMTP/Email-based attacks, VOIP vulnerabilities, Directory traversal, Input Manipulation, Brute force attack, Unsecured login mechanisms, SQL injection, XSS, Mobile apps security, **Malware analysis** : Netcat Trojan, wrapping definition, reverse engineering **Phases :** Covering your tracks : Steganography, Event Logs alteration **Additional Security Mechanisms** : IDS/IPS, Honeypots and evasion techniques, Secure Code Reviews (Fortify tool, OWASP Secure Coding Guidelines)	**15L**

Textbook(s):

Suggested List of Practical – SEMESTER VI

Course: **USCSP601**	**(Credits : 02 Lectures/Week:06)** **Practical of Elective-I**	

USCS601: Wireless Sensor Networks and Mobile Communication

Practical experiments require software tools like INET Framework for OMNeT++, NetSim , TOSSIM, Cisco packet tracer 6.0 and higher version.

1. Understanding the Sensor Node Hardware. (For Eg. Sensors, Nodes(Sensor mote), Base Station, Graphical User Interface.)
2. Exploring and understanding TinyOS computational concepts:- Events, Commands and Task.
   - nesC model
   - nesC Components
3. Understanding TOSSIM for
   - Mote-mote radio communication
   - Mote-PC serial communication
4. Create and simulate a simple adhoc network
5. Understanding, Reading and Analyzing Routing Table of a network.
6. Create a basic MANET implementation simulation for Packet animation and Packet Trace.
7. Implement a Wireless sensor network simulation.
8. Create MAC protocol simulation implementation for wireless sensor Network.
9. Simulate Mobile Adhoc Network with Directional Antenna
10. Create a mobile network using Cell Tower, Central Office Server, Web browser and Web Server. Simulate connection between them.

USCS602: Cloud Computing

1. Study and implementation of Infrastructure as a Service.
2. Installation and Configuration of virtualization using KVM.
3. Study and implementation of Infrastructure as a Service
4. Study and implementation of Storage as a Service
5. Study and implementation of identity management
6. Study Cloud Security management

7. Write a program for web feed.
8. Study and implementation of Single-Sing-On.
9. User Management in Cloud.
10. Case study on Amazon EC2/Microsoft Azure/Google Cloud Platform

USCS603: Cyber Forensics

1. Creating a Forensic Image using FTK Imager/Encase Imager :

- Creating Forensic Image
- Check Integrity of Data
- Analyze Forensic Image

2. Data Acquisition:

- Perform data acquisition using:
- USB Write Blocker + Encase Imager
- SATA Write Blocker + Encase Imager
- Falcon Imaging Device

3. Forensics Case Study:

- Solve the Case study (image file) provide in lab using Encase Investigator or Autopsy

4. Capturing and analyzing network packets using Wireshark (Fundamentals) :

- Identification the live network
- Capture Packets
- Analyze the captured packets

5. Analyze the packets provided in lab and solve the questions using Wireshark :

- What web server software is used by www.snopes.com?
- About what cell phone problem is the client concerned?
- According to Zillow, what instrument will Ryan learn to play?
- How many web servers are running Apache?
- What hosts (IP addresses) think that jokes are more entertaining when they are explained?

6. Using Sysinternals tools for Network Tracking and Process Monitoring :

- Check Sysinternals tools

- Monitor Live Processes
- Capture RAM
- Capture TCP/UDP packets
- Monitor Hard Disk
- Monitor Virtual Memory
- Monitor Cache Memory

7. Recovering and Inspecting deleted files

- Check for Deleted Files
- Recover the Deleted Files
- Analyzing and Inspecting the recovered files

  Perform this using recovery option in ENCASE and also Perform manually through command line

8. Acquisition of Cell phones and Mobile devices
9. Email Forensics

- Mail Service Providers
- Email protocols
- Recovering emails
- Analyzing email header

10. Web Browser Forensics

- Web Browser working
- Forensics activities on browser
- Cache / Cookies analysis
- Last Internet activity

Course: **USCSP602**	**(Credits : 02 Lectures/Week:06)** **Practical of Elective-II**	

USCS604: Information Retrieval

Practical may be done using software/tools like Python / Java / Hadoop

1. Write a program to demonstrate bitwise operation.
2. Implement Page Rank Algorithm.
3. Implement Dynamic programming algorithm for computing the edit distance between

strings s1 and s2. (Hint. Levenshtein Distance)

4. Write a program to Compute Similarity between two text documents.
5. Write a map-reduce program to count the number of occurrences of each alphabetic character in the given dataset. The count for each letter should be case-insensitive (i.e., include both upper-case and lower-case versions of the letter; Ignore non-alphabetic characters).
6. Implement a basic IR system using Lucene.
7. Write a program for Pre-processing of a Text Document: stop word removal.
8. Write a program for mining Twitter to identify tweets for a specific period and identify trends and named entities.
9. Write a program to implement simple web crawler.
10. Write a program to parse XML text, generate Web graph and compute topic specific page rank.

USCS605: Digital Image Processing

Practical need to be performed using Scilab under Linux or Windows

1. 2D Linear Convolution, Circular Convolution between two 2D matrices
2. Circular Convolution expressed as linear convolution plus alias
3. Linear Cross correlation of a 2D matrix, Circular correlation between two signals and Linear auto correlation of a 2D matrix, Linear Cross correlation of a 2D matrix
4. DFT of 4x4 gray scale image
5. Compute discrete cosine transform, Program to perform KL transform for the given 2D matrix
6. Brightness enhancement of an image, Contrast Manipulation, image negative
7. Perform threshold operation, perform gray level slicing without background
8. Image Segmentation
9. Image Compression
10. Binary Image Processing and Colour Image processing

USCS606:Data Science

Practical shall be performed using R

1. Practical of Data collection, Data curation and management for Unstructured data (NoSQL)

2. Practical of Data collection, Data curation and management for Large-scale Data system (such as MongoDB)
3. Practical of Principal Component Analysis
4. Practical of Clustering
5. Practical of Time-series forecasting
6. Practical of Simple/Multiple Linear Regression
7. Practical of Logistics Regression
8. Practical of Hypothesis testing
9. Practical of Analysis of Variance
10. Practical of Decision Tree

Course: **USCSP603**	**(Credits : 01 Lectures/Week: 03) Project Implementation**	

Please Refer to Project Implementation Guidelines

Course: **USCSP604**	**(Credits : 01 Lectures/Week: 03) Practical of Skill Enhancement**	

USCS607 : Ethical Hacking

1. Use Google and Whois for Reconnaissance
2. a) Use CrypTool to encrypt and decrypt passwords using RC4 algorithm
   b) Use Cain and Abel for cracking Windows account password using Dictionary attack and to decode wireless network passwords
3. a) Run and analyze the output of following commands in Linux – ifconfig, ping, netstat, traceroute
   b) Perform ARP Poisoning in Windows
4. Use NMap scanner to perform port scanning of various forms – ACK, SYN, FIN, NULL, XMAS
5. a) Use Wireshark (Sniffer) to capture network traffic and analyze
   b) Use Nemesy to launch DoS attack
6. Simulate persistent cross-site scripting attack
7. Session impersonation using Firefox and Tamper Data add-on

8. Perform SQL injection attack
9. Create a simple keylogger using python
10. Using Metasploit to exploit (Kali Linux)

Project Implementation Guidelines

1. A learner is expected to carry out two different projects: one in Semester V and another in Semester VI.
2. A learner can choose any topic which is covered in Semester I- semester VI or any other topic with the prior approval from head of the department/ project in charge.
3. The Project has to be performed individually.
4. A learner is expected to devote around three months of efforts in the project.
5. The project can be application oriented/web-based/database/research based.
6. It has to be an implemented work; just theoretical study will not be acceptable.
7. A learner can choose any programming language, computational techniques and tools which have been covered during BSc course or any other with the prior permission of head of the department/ project guide.
8. A project guide should be assigned to a learner. He/she will assign a schedule for the project and hand it over to a learner. The guide should oversee the project progress on a weekly basis by considering the workload of 3 lectures as assigned.
9. The quality of the project will be evaluated based on the novelty of the topic, scope of the work, relevance to the computer science, adoption of emerging techniques/technologies and its real-world application.
10. A learner has to maintain a project report with the following subsections

    a) Title Page

    b) Certificate

    A certificate should contain the following information –

    - The fact that the student has successfully completed the project as per the syllabus and that it forms a part of the requirements for completing the BSc degree in computer science of University of Mumbai.
    - The name of the student and the project guide
    - The academic year in which the project is done
    - Date of submission,
    - Signature of the project guide and the head of the department with date along with the department stamp,

- Space for signature of the university examiner and date on which the project is evaluated.

c) Self-attested copy of Plagiarism Report from any open source tool.

d) Index Page detailing description of the following with their subsections:

- Title: A suitable title giving the idea about what work is proposed.
- Introduction: An introduction to the topic giving proper back ground of the topic.
- Requirement Specification: Specify Software/hardware/data requirements.
- System Design details : Methodology/Architecture/UML/DFD/Algorithms/protocols etc. used(whichever is applicable)
- System Implementation: Code implementation
- Results: Test Cases/Tables/Figures/Graphs/Screen shots/Reports etc.
- Conclusion and Future Scope: Specify the Final conclusion and future scope
- References: Books, web links, research articles, etc.

11. The size of the project report shall be around twenty to twenty five pages, excluding the code.
12. The Project report should be submitted in a spiral bound form
13. The Project should be certified by the concerned Project guide and Head of the department.
14. A learner has to make a presentation of working project and will be evaluated as per the Project evaluation scheme

Scheme of Examination

1. Theory:

I. Internal 25 Marks :

a) Test – 20 Marks

20 marks Test – Duration 40 mins
It will be conducted either using any open source learning management system like Moodle (Modular object-oriented dynamic learning environment)

OR

A test based on an equivalent online course on the contents of the concerned course (subject) offered by or build using MOOC (Massive Open Online Course) platform.

b) 5 Marks – Active participation in routine class instructional deliveries
Overall conduct as a responsible student, manners, skill in articulation, leadership qualities demonstrated through organizing co-curricular activities, etc.

II. External 75 Marks as per University Guidelines

11. Practical and Project Examination:

There will be separate Practical examination for Elective-I, II, Skill enhansement and project of these Elective-I 100, Elective-II: 100 and Skill Enhansement: 50 and Project Implementation: 50.

In the Practical Examination of Elective-I and II, the student has to perform practical on each of the subjects chosen. The Marking Scheme for each of the Elective is given below:

	Subject Code	**Experiment-I**	**Experiment-II**	**Total Marks**
Elective-I	**USCSP501/ USCSP601**	Experiment-40+Journal-5 +viva-5 Total:50M	Experiment-40+Journal-5+viva-5 Total:50M	100 M
Elective-II	**USCSP502/ USCSP602**	Experiment-40+Journal-5 +viva-5 Total:50M	Experiment-40+Journal-5+viva-5 Total:50M	100 M

Project Implementation	**USCSP503/ USCSP603**	****Project Evaluation Scheme**	**50M**
Skill Enhancement	**USCSP504/ USCSP604**	Experiment-40+Journal:5+viva-5 Total-50M	**50M**
Total Marks			**300M**

(Certified Journal is compulsory for appearing at the time of Practical Examination)

****Project Evaluation Scheme:**

Presentation	**Working of the Project**	**Quality of the Project**	**Viva**	**Documentation**
10Marks	10 Marks	10 Marks	10 Marks	10Marks

(Certified Project Document is compulsory for appearing at the time of Project Presentation)

AC 29/4/13
Item no, 4.92

UNIVERSITY OF MUMBAI

Syllabus for M.Sc. Semester III &IV

Program: M.Sc.

Course: Environmental Sciences

(Credit Based Semester and Grading System with effect from the academic year 2012–2013)

M. Sc. Environmental Sciences Syllabus

Credit Based and Grading System

To be implemented from the Academic year 2012-2013

Semester –III

Theory				
Course	Unit	TOPIC	Credits	L / Week
PSEVS301	I	Water and Wastewater Pollution Control	4	1
	II	Air Pollution Control		1
	III	Hazardous and Radioactive Waste Management		1
	IV	Biomedical Waste and Electronic (E-Waste Management)		1
PSEVS302	I	Environmental Monitoring and sampling	4	1
	II	Instrumental methods of environmental analysis-I		1
	III	Instrumental methods of environmental analysis-II		1
	IV	Statistical Aspects		1
PSEVS303	I	Basic concepts of Eco-toxicology	4	1
	II	Toxicants in the Environment		1
	III	Evaluation of toxicity		1
	IV	Organ toxicity		1
PSEVS304	I	Industrial Hygiene	4	1
	II	Industrial Work Environment		1
	III	Disaster Management and Risk Assessment		1
	IV	Safety		1
			16	**16**
Practicals				
PSEVS3P1		Practicals based on PSEVS301	2	4
PSEVS3P2		Practicals based on PSEVS3O2	2	4
PSEVS3P3		Practicals based on PSEVS3O3	2	4
PSEVS3P4		Practicals based on PSEVS304	2	4
Total			**08**	**16**
TOTAL			**24**	**32**

.

SEMESTER –IV

Theory				
Course	Unit	TOPIC	Credits	L / Week
PSEVS401	I	Introduction to Ecotechnology	4	1
	II	Sanitation -PhytosanitationAnd Green Inhibitors		1
	III	Climate Change Mitigation And Carbon Sequestration		1
	IV	Restoration Ecology& Remediation Technology		1
PSEVS402	I	Environmental Biotechnology	4	1
	II	Biotechnology in Protection and Conservation of the Environment		1
	III	Organic Farming		1
	IV	Environmental Nanotechnology		1
PSEVS403	I	Understanding sustainable development	4	1
	II	Business strategies and sustainability		1
	III	Sustainable urban development		1
	IV	Sustainability in practice		1
PSEVS404	I	Introduction to principles of Environment Management	4	1
	II	Environment Management Systems and Life Cycle Assessment		1
	III	Environmental Audit and Environmental Economics		1
	IV	Environmental Design(ED) and Modeling		1
			16	16
Practicals				
PSEVS4P1		Practicals based on PSEVS401	2	4
PSEVS4P2		Practicals based on PSEVS402	2	4
PSEVS4P3		Practicals based on PSEVS403	2	4
PSEVS4P4		Practicals based on PSEVS404	2	4
Total			08	16
TOTAL			24	32

Semester -III

PSEVS 301: Advanced Pollution Control Technology

PSEVS 302: Instrumentation and Biostatistics

PSEVS 303: Environmental Toxicology

PSEVS 304: Industrial Hygiene and Chemical Safety

Semester -IV

PSEVS 401: Eco Technology

PSEVS 402: Environmental Biotechnology and Nanotechnology

PSEVS 403: Sustainable Management

PSEVS 404: Environmental Management

SEMESTER -III

PSEVS 301

Advanced Pollution Control Technology

Unit I: Water and Wastewater Pollution Control **15 L (1 Credit)**

- General scheme for the treatment of water for drinking purpose.
- WaterTreatment:UV, H_2O_2 ,Ozonization, chemical precipitation, disinfection, adsorption, softening, desalinization / demineralization, membrane processes.
- Biological treatment processes for wastewater- **aerobic processes**: Suspended floc type- the activated sludge processes. Extended aeration, Aerated lagoons, Waste stabilization ponds, rotating biological contact system, the trickling filter process. **Anaerobic processes**: Flow through systems and contactsystems. UASB reactors and modifications. Sludge types, treatment and disposal. Processing of sludges- conditioning, thickening, dewatering, drying, incineration and disposal.
- Concept of common effluent treatment plant (CETP) their importance and advantages, role in wastewater treatment. Unit processes involved. Effluent discharge standards, industry specific minimum and national standards.

Unit II: Air Pollution Control **15 L (1 Credit)**

- Treatment Processes for Particulate matter: Absorption in liquids by Scrubbers, adsorption on solids. Combustion: flaring, thermal incineration, catalytic oxidation.
- Treatment Processes for other gaseous pollutants: Odour, VOCs, oxides of sulphur and nitrogen emissions.
- Indoor air quality management, principles and control measures, steps for improving indoor air quality.
- Auto-exhausts, its components. Control of auto-exhausts emissions. Emission specific control options, use of after burners, engine modifications / tuning; importance of good maintenance and driving habits.

Unit III: Hazardous and Radioactive Waste Management 15 L (1 Credit)

- Hazardous wastes:Sources and characteristics. Classification. Health and environmental effects. Safe storage, transport and treatment of. Stabilization and disposal Criteria for selection for secured and unsecured landfill disposal sites.
- Radioactive waste: sources, classification, health and safety aspects. Control and Management of radioactive wastes

Unit IV: Biomedical Waste and Electronic (E-Waste Management) 15 L (1 Credit)

- Biomedical Waste: Definition, Sources of generation, categories, colour coding system for segregation, transportation specifications, treatment methods: Incineration, Microwave, Plasma Pyrolysis, Hydroclave etc. Treatment and disposal of Plastic waste, Treatment and disposal of metal sharps.Biomedical Waste (Handling and Management) Rules, 1998
- E-Waste: Sources of generation, categories, segregation, transportation, treatment methods: Plastic waste treatment and disposal. E-Waste (Handling and Management) Rules 2011

6. A Textbook of Sanitary Engineering: VinayakGharpure, Engineering BookPublishing Company, Pune.
7. Water Pollution: V. P. Kudesia, PragatiPrakashan, Meerut.
8. Environmental Problems and Solution: D.K. Asthana, S.Chand and Company,New Delhi.
9. A Textbook of Environment: K. M. Agarwal and P.K. Sikdar, Macmillon IndiaLtd, Nagpur
10. Environmental Chemistry : B.K. Sharma, and H. Kaur.
11. Elements of Environmental Chemistry : H.V. Jadhav.
12. Environmental Chemistry : S. K. Banerjee.
13. A text book of Environmental Chemistry and Pollution Control : S.S.Dara.

SEMESTER -III

PSEVS 302

Instrumentation and Biostatistics

Unit I:Environmental Monitoring and sampling **15 L (1 Credit)**

- Concepts of environmental monitoring and its significance.
- Methods of physical characterization of samples.
- Sampling of air ,water and soil:- Protocol and methods of sampling, sampling devices, Preservation, storage and processing of air, water and soil samples

Unit II:Instrumental methods of environmental analysis- I **15 L (1 Credit)**

- Conductometry, Potentiometry, Voltammetry :Theory, instrumentation and applications.
- Colorimetry and spectrophotometry: Electromagnetic radiation spectrum. Interaction of radiation with matter. Beer- Lambert's law, Flame photometry.
- Conventional microscopy and Scanningelectron microscopy.
- Hyphenated techniques for analysis – GC-MS, HPTLC, GC-AES. Electrophoresis: Theory , classification , instrumentation and applications.

Unit III:Instrumental methods of environmental analysis- II **15 L (1 Credit)**

- Principle, instrumentation and environmental applications of Neutron Activation Analysis, X-Ray Fluorescence, X-Ray Diffraction, Thermogravimetry.
- Continuous monitoring analysis – fluorescent analyzer for SO_2, chemiluminescentanalyzer for NOx, NDIR for CO, Flow injection analyzer.

Unit IV:Statistical Aspects **15 L (1 Credit)**

- Collection, classification and tabulation of data. Essentials of good tabular form. Preparation of one-way and two-way frequency tables. Diagrammatic and graphical representation of data (data bar, pie, picot and histograms, frequency polygons), frequency curves and cumulative curves.
- Measures of central tendency and dispersion : mean. median, mode , range, standard and relative deviation,coefficient of variation, skewness, kurtosis confidence limits and confidence intervals and normal distribution curve, Analysis of variance one way and two way classification, probit analysis
- Accuracy, precision and errors: Classification, Minimisation of errors, Rejection of data . Z, t, F, and chi-square tests
- Correlation and Regression: Pearson's coefficient, Spearman's coefficient, regression lines and their use. Curve fitting.
- Probability: Exclusive and independent events, addition and multiplication theorems, dependent events and conditional probability

6. APHA standard methods for Water and Wastewater Examination, 20th Edition, Washington,1998.

SEMESTER -III

PSEVS 303

Environmental Toxicology

Unit I: Basic concepts of Eco-toxicology 15 L (1 Credit)

- Introduction to ecotoxicology, Principles of toxicology,scope of toxicology.
- Types of toxicsubstances - degradable and non-degradable. Factors influencing toxicity, drug toxicity.
- Biochemical basis toxicity – mechanism of toxicity and receptor mediated events, acute and chronic toxicity.
- Sigmoid relationships, Corollary of toxicology. Influence of ecological factors on the effects of toxicity.

Unit II: Toxicants in the Environment 15 L (1 Credit)

- Toxic substances in the environment, their sources and entryroutes.
- Transport of toxicants by air and water: Transport through food chain - bioaccumulation and biomagnificationof toxic materials in food chain.
- Toxicology of major pesticides- biotransformation, biomonitoring, programs and parameters ofbiomonitoring, concept of bioindictor, bioindicator groups and examples.
- Environmental impacts of pesticides:Physiological and metabolic effects on flora andfauna.

Unit III:Evaluation of toxicity 15 L (1 Credit)

- Methods used to assess toxicity classification of toxic materials.
- Concepts of Bioassay- types, characteristics. Importance and significance of bioassay,

Microbial bioassay for toxicity testing, Bioassay test models and classification.

- Threshold limit value, LC50 LD50.Toxicity Testing, Concept of Dosimetry: lethal, sub-lethal & chronic tests
- Dose response curves

Unit IV: Organ toxicity **15 L (1 Credit)**

- Hepatotoxicity: Common examples of hepatotoxicants, injuries caused to liver
- Nepherotoxicity: Common examples of nepherotoxicants, injuries caused to kidney
- Pulmonary toxicity: Common examples of pulmonary toxicants, injuries caused to lungs.
- Neurotoxicity: Common examples of neuro toxicants, injuries caused to nervous tissues.

9. Text book of Preventive and Social Medicine, by Park J.E. and Park K., Banosidas Bharat Publishers, Jabalpur, 1985
10. Environmental Epidemiology, by AnisaBasheer, Rawat Publication Jaipur, New Delhi 1995.

SEMESTER -III

PSEVS304

Industrial Hygiene and Chemical Safety

Unit I: Industrial Hygiene **15 L (1 Credit)**

- Introduction, definition, scope, significance and applications.
- Occupational environmental stresses i.e Physical, stresses – Noise, vibration, illumination, ventilation, heat stresses, Chemical stresses: Toxic chemicals, hazardous chemicals. Flammable chemical, explosive chemicals. etc. Inhalation and ingestion risks.
- Airborne Chemicals: Dust or aerosols (respirable and non respirable, inhalable and total dust), gases, fumes, vapours, mist and smoke.
- Concept of threshold limiting values(concentration), TLVs, time weighted averages (TWAs), short term exposure limits (STELs), minimal national standards(MINAS), International and national regulatory agencies like ACGIH, OSHA.

Unit II: Industrial Work Environment **15 L (1 Credit)**

- Monitoring of Work Environment:Identification of contaminants. Sampling strategies: monitoring methods / protocol on procedures. Sampling of airborne contaminants, viz dust, gases, fumes, vapours, mists etc in work place environment and analysis methods for quantification – Instrumental and manual methods.
- Notifiable Diseases: Pneumoconiosis, Silicosis, Asbestosis, Bagassosis, Byssiniosis.
- Work environment control measures: Substitution, isolation, ventilation, local exhaust system and engineering control methods.
- House keeping and maintenance. Modification of the processes and operation. Process and product specific control measures. Report writing

Unit III: Disaster Management and Risk Assessment **15 L (1 Credit)**

- Introduction , definitions, Natural Hazards, nature, causes impacts and occurrences. Earthquakes, volcanic activity, landslides, cyclones, floods, draughts, forest fires; their Mitigation.
- Industrial and technological hazards; types and causes of industrial accidents: fire, explosion, toxic release and dispersion.
- Disaster management: Components of disaster management plan on-site and off-site emergency plans.
- Technical hazards control system- incident reduction, incident management Techniques of hazards assessment: PHA, HAZOP, HAZAN, MCAA

Unit IV: Safety **15 L (1 Credit)**

- Precautions in the processes and operations involving explosives, flammables, toxic substances, dusts, vapours, cloud formation and combating.
- Safety precautions for transportation for hazardous chemicals. Handling and storage of hazardous chemicals. Safety in pipelines and co33lour coding.
- Risk assessment and on site and off site emergency planning. Safety audit in chemical industry. Accidents and unusual occurrences reporting .
- Respiratory personal protective equipment (RPPE)& non respiratory personal protecti equipment (NRPPE): head protection , ear protection , face and eye protection , hand protection, foot protection and body protection. Quality control of protective equipments.

PRACTICALS

Semester -III

PSEVSP301

Advanced Pollution Control Technology

A. Minor Experiments

1. Determination of heavy metals (Fe/Cu) by spectrophotometric methods
2. Removal of suspended solids by sand filter method.
3. Detection/estimation of Cr (VI) in presence of Cr (III)
4. Estimation of mixed liquor suspended solids (MLSS)and Sludge Volume Index (SVI) in activated sludge.

B. Major Experiments

1. Jar Test (removal of suspended solids by coagulation, e.g. use of alum).
2. Waste water analysis for pH, conductivity, TDS, DO, COD, BOD, alkalinity, chloride and hardness.
3. Estimation of fluoride in waste samples by spectrophotometry.
4. Study of adsorption isotherm : Removal of Cr by activated charcoal.

PSEVSP302
Instrumentation and Biostatistics

A. Minor Experiments

1. Estimation of Chloride in water sample by conductometric titration.
2. Estimation of Fe^{+2} by potentiometric titration.
3. Determination of mean, median, mode, geometric mean, range, quartile using a given data
4. Determination of standard deviation,variance, coefficient of variation, skewness, kurtosis using a given data

B. Major Experiments

1. Separation of proteins using Polyacrylamide Gel Electrophoresis.
2. Determination Pesticides in soil/plants by GC-MS.
3. Analysis of a given data by t- test/ f test,
4. Analysis of a given data by z test /Annova

PSEVSP303
Environmental Toxicology

A. Minor Experiments

1. Study of instruments and equipment used in the MicrobiologyLaboratory.
2. Enrichment and Isolation of anaerobic bacteria
3. Isolation and Enumeration of microorganisms from soil
4. Effect of Heavy Metal toxicants on the behaviour pattern of earthworm

1. Major Experiments

1. Effect of effluents containing heavy metals on germination of groundnut.
2. Determination of LC50.
3. Effect of different concentrations of any 2 heavy metals on growth of microorganisms
4. Estimation of any toxicant by agar diffusion assay.

PSEVSP304
Industrial Hygiene and Chemical Safety

A. Minor Experiments

1. Preparation of Material Safety Data Sheet for some common chemicals.
2. To neutralize the given sample using NaOH / HCL/ $CaCO_3$
3. Determination of CO_2 from the atmosphere by volumetric method in a workplace Environment.
4. Estimate Noise Levels and Determine L_{10}, L_{50}, L_{90} by histogram method.

B. Major Experiments

1. Air sampling of gases (sulphur dioxide, nitrogen dioxide, carbon disulphide, carbon monoxide etc.) and analysis by UV-Visible spectrophotometer.
2. Estimation of sulphur in coal and calculation of release of SO_2 on combustion of per ton of coal.
3. Enlisting the characteristics, advantages and disadvantages of PPE and NRPPE of any industry.
4. Preparation of DMP for nuclear power plant, petrochemical industry, fertilizer plant, hydropower station, chemical industry, thermal power plant, textile mill, metallurgical industry

SEMESTER -IV

PSEVS401

Eco Technology

Unit I:INTRODUCTION TO ECOTECHNOLOGY 15 L (1 Credit)

- Definition, Principles and Concept of Ecotechnology, Why Ecotechnology and Applications of Ecotechnology.
- Appropriate technology for rural environment: Gandhian philosophy: swadeshi movement, concept & definition, characteristic features of appropriate technologies, an account of various technologies developed for rural people- Biogas schemes for rural development, solar cells, solar cooker, solar heaters, smokeless chulas, Biogas stoves, community Biogas plant.

Unit II:Sanitation -PhytosanitationAnd Green Inhibitors 15 L (1 Credit)

- Meaning, concept and importance of SPS, in reference to WTO-SRS Agreement, important phytosanitation technologies-HBPST,TDC,SPS committee-Who and What they do, the ten commandmentsof SPS agreement of WTO.
- Green inhibitors: Factors pertaining to metal samples, Inhibitors in use, Cooling systems, Processing with acid solutions, Corrosion ,Problems in oil industry, Corrosion inhibition in the mining industry, Atmospheric corrosion inhibition mechanisms, Standardized Environmental testing, Hybrid coating & corrosion inhibitors, Environmental green inhibitors, Industrial application of corrosion inhibition.

Unit III: Climate Change Mitigation And Carbon Sequestration 15 L (1 Credit)

- Carbon related definitions C-pool, C-stock, C-Flux, C-sink, C-source, sequestration/uptake.
- A brief understanding of the Clean Development Mechanism (CDM) to combat CC, Developing C market for combating CC, how India can benefit from CDM projects,.
- Development of C-sequestration projects their modalities & procedures- reducing emissions from degradation and deforestation (REDD and REDD+),International efforts in combating global warming & CC.A brief understanding of UNFCCC (Kyotoprotocol)NATCOM, IPCC,CBD,UNCCD,world heritage conventions , UN forum on forests etc.

Unit IV:Restoration Ecology& Remediation Technology 15 L (1 Credit)

- Definitions, aims and objectives, principles, concept & strategies (long tern vs short term), physical chemical & biological restoration, role of ecological principles in restoration, holistic approach in restoration.
- Greenness improvement & planting technologies, bamboo forest maintenance, biotopes, recycled water technology, soil & ground water contamination survey & cleaning technologies.

4. Green Corrosion Inhibitors by V.S.Sastri

SEMESTER -IV

PSEVS402

Environmental Biotechnology and Nanotechnology

Unit I: Environmental Biotechnology 15 L (1 Credit)

- Basic Concept, Brief account of the structure and functions of DNA and RNA, Recombinant DNA Technology, Tools in rDNA Technology.
- Transgenic Plants, Insect Tolerant and Herbicide Tolerant Plants, Environmental Impact of Transgenic Plants, Genetically Modified Organism (GMOs) Impact on the Environment, Molecular Probes in Environmental Monitoring.
- Bioremediation Technology: Land Treatment, Surface Soil Contaminant Remediation: Case Studies, Slurry Bioreactor, Bioremediation of Metals.
- Phytoremediation- Approaches, Technical Considerations, Types of Phytoremediation, Factors influencing Phytoremediation, Uptake and Translocation, Enzymatic Transformation, Detoxification and Tolerance for Heavy Metals.

Unit II: Biotechnology in Protection and Conservation of the Environment 15 L (1 Credit)

- Degradation of Xenobiotic compounds, Microbial degradation of surfactants, Biological Odorization, Bioleaching- *Thiobacillusferroxidant* in leaching,
- Metal recovery by Microbial Accumulation, Biosensors in Environmental Monitoring and Analysis, Biopolymers, Bioplastics
- Biocomposting; Aerobic composting methods such as Windrow, Static pile and In-vessel methods for composting, Preparation of Biocompost, Particle size, Carbon to Nitrogen ratio, Temperature, Aeration, pH Control, Anaerobic Composting Fermentation/Digestion: Role of Hydrolyzing Microbes, Acetogens and Methanogens, Marketing of Biocompost
- Vermicomposting: Introduction, Biology of Earthworm, Type/ Species of, Preparation of Worm Pit, Bedding Material, Addition of Worms, Sampling, Washing and Sieving Addition of Organic Waste, Harvesting the Final Product.

Unit III: Organic Farming **15 L (1 Credit)**

- **Biopesticides**:Introduction,Biological Insecticides, Properties of *Bacillus thuringiensis*, Microbial Pesticides, Entomopathogenic Fungi or Viruses, Entomopathogenic Nematodes Biochemical Pesticides Plant-Incorporated Protectants (PIPs) like GM plants etc, Insect Pheromones and other Semiochemicals, Applications of Biopesticides.
- **Biofertilizers**:Classification, Nitrogen Fixation (Bacterial, with Blue Green Algae, VAM etc.), Symbiotic Nitrogen Fixers *Rhizobium sp.,* Non-symbiotic, Free Living Nitrogen Fixers *Azotobacter, Azospirillum* etc. BGA Inoculants *Azolla-Anabaena,,* Phosphate Solubilizing Microorganisms (PSM) *Bacillus Pseudomonas, PenicilliumAspergillus* etc. Mycorrhiza, Cellulolytic microorganisms and Organic fertilizers.

Unit IV: Environmental Nanotechnology **15 L (1 Credit)**

- Nanotechnology and its Applications in Agriculture and Food Industry, Nanotechnology : Materials and Manufacture, Nanotechnology for Renewable Energy,
- Nanotechnology in the Environment, Nanotechnology- Risks for Health and Environment, Benefits for the Environment.
- Nanomaterials-Remediation, Nano Membranes, Nano Fibers, Nano Clays Adsorbents, Zeolites, Nano Catalysts, Carbon Nano tubes,
- Environmental Nano Remediation Technology- Thermal, Physico-Chemical, and Biological Methods, Nano Filtration for the Treatment of Wastes, Removal of Organics, Inorganics and Pathogens, Nanotechnology for Water Purification.

SEMESTER -IV

PSEVS403

Sustainable Management

Unit I:Understanding sustainable development **15 L (1 Credit)**

- Definition and dimensions of sustainability, The ecological footprint and carrying capacity
- Global challenges of sustainable development:Our common future report, Agenda 21 and Millenium Development Goals, Earth Charter , domains of sustainability-Economics, ecology, politics and culture.
- National Action Plan on Climate Change.
- National sustainable development strategies in India: Twenty point program of Govt. of India, Key programs introduced to increase agricultural productivity and profitability. Policies and programs relevant to sustainable development in India key legislations relative to sustainable development
- Strategies for promoting sustainable development-International Trade-TRIPS,IPR; finance, technology, Science and education
- Resistances to the concept and some alternative approaches, Important current issues and areas of debate in relation to sustainable development.

Unit II:Business strategies and sustainability **15 L (1 Credit)**

- Business and sustainability-Concept of responsible business, CERES (coalition for environmentally responsible economics)principles and blended value.
- Principles of sustainable development in business planning and management
- Triple Bottom Line approach in sustainable business planning and development,
- Green Business profiles- The Body Shop, General Electric, Toyota etc.
- Indicators for sustainability: introduction to Nature's Living Planet Index developed by WWF, Happy Planet Index developed by New Economics Foundation, Gross domestic product, Human development index, Dow Jones sustainability index.

- Sustainability reporting: Corporate social responsibility –Global reporting initiatives guidelines for sustainability reporting

Unit III:Sustainable urban development 15 L (1 Credit)

- Urbanization and its impact on Environment, Rural and Urban planning for sustainable development
- Green city challenges-Ecological footprint, Principles of creating eco cities with two examples.
- Architecture- Eco industrial parks, Urban farming, Green roofs, Green Building-LEED certification, with two examples, walkable Urbanism, Xeriscaping,
- Transportation: improved public transport, car free cities, emphasis on proximity, zero emission transport, Diversity in modes of transportation
- Green city solutions - bicycle city, car-free day campaign ,green belt, compact development, carpooling ,bus rapid transit, parks, greenways and open space, traffic calming

Unit IV:Sustainability in practice 15 L (1 Credit)

- Current environmental Issues in India, Narmada Dam, Tehri, Almetti Dam, waste land & their reclamation, desertification, water crises, wetland conservation.
- Watershed management: Definition, Concepts, principals and classification in watershed management.Rainfall and runoff, water balance approach, water budgeting, topographic surveying, water conservation and harvesting methods – importance and techniques, artificial recharge of groundwater
- NGOs – characteristics and role of NGOs in sustainable development, Principles for NGOs, NGO-Community relations, NGO-Government relations , Some Indian NGOs working for saving environment

SEMESTER -IV

PSEVS404

Paper –ENVIRONMENTAL MANAGEMENT

Unit I: **Introduction to principles of Environment Management 15L (1 Credit)**

Resources and wealth-meaning, types of resources and its exploitation, Wealth-meaning, distinction between wealth and resources, optimum conversion of resources into wealth.Definition, Goals of Environment Management, significance of environmental management, scope of environmental management,Development and environmental linkages,Environmental concerns in India, Actions For Environmental ProtectionIndian initiatives- National committee on Environmental Planning and Coordination, The Tiwari committee, Department of Environment etc, Ministry of Environment & Forest,Changes in Environmental Management Practices, Introduction Environmental Management Tools

Unit II: **Environment Management Systems and Life Cycle Assessment15L (1 Credit)**

International Organization for Standardization (ISO), Plan -Do-Check-Act Cycle, EMS Certification ,ISO 14000 series, ISO 14001, Difference between ISO 14000 and ISO 14001 Environmental Policy, Plannng, Implementation and Operation, Checking, Management Review, ,Benefits of ISO 14001 certification,Evolution of Life Cycle Assessment (LCA), Cradle to grave approach. Different applications of LCA.

Procedure for LCA: Defining goal and scope, preparation of life cycle inventory, assessment of environmental impact, Areas for Improvement and Interpretaion. Methods to assess impact using methods like ecoindicator-95

Unit III: **Environmental Audit and Environmental Economics15L (1 Credit)**

Introduction to environmental audit, Types of environmental audits: objectives- based and client-driven types. General audit methodology and audit process: Introduction, the basic steps of an environmental audit program.Element of audit process, audit protocols (why, who, what and how).Waste audits and pollution prevention assessments, Waste minization audit examples. Site assessment and liability audit, Introduction to macro economics, microeconomics, environmental economics, difference between natural resource economics and environmental economics. Valuation of environment impacts: types of economic values, approach, valuation techniques, valuing environmental amenities. Environmental Costs and benefits analysis, examples of cost benefit analysis of technology or process,Introduction to Market based instruments and command control instrument for pollution control.

Unit IV: **Environmental Design(ED) and Modeling15L (1 Credit)**

Environmental Design: Principles of Environmental Design (ED). Benefits of environmental design, ED of manufactured products, ED considerations in products life stages-DfE concepts, tools for ED of products, Examples of environmental design: Concept of Ecolabel. Cleaner Production Programmes, Leadership in Energy and Environmental Design certification programmes.

Introduction to Environmental Monitoring and Modeling, Definition of model, Need of modeling, water quality models-surface and ground water, Air Quality Models-Dispersion and receptor models

PSEVSP401

Eco Technology

A. Minor Experiments

1. Determination ofRoot density
2. Determination ofFertility rejuvenation index
3. Determination of Translocation factor by phytoremediation.
4. Case study on Tehri project, Silent Valley Project , Narmada Dam Project, Biopiracy, Ecodisaster of deforestation

B. Major Experiments

1. Tracing of watershed and their morphological features from toposheets.
2. Interpretation of Aerial photographs/satellite imageries/GIS data.
3. Problems in water budgeting.
4. Designing structures for water conservation and harvesting based on field visits.

PSEVSP402

Environmental Biotechnology and Nanotechnology

Minor Experiments

1. Bioremediation of Heavy Metals by Green Plants in Aquatic/ Soil Environment.
2. Phytoremediation of Heavy Metals by Green Plants in Aquatic/ Soil Environment.
3. Development of Mycorrihzal Soil Using Pot Culture Technique.
4. Development of Compost from Organic Waste.

Major Experiments

1. Estimation of DNA by spectrophotometer
2. Determination of molecular weight of DNA by electrophoresis.
3. Determination of coliforms by Membrane Filter Technique
4. Determination of Streptococcus faecalis.

PSEVSP403

Sustainable Management

Minor Experiments

1. To perform Water/Energy audit in the house/college building /society/laboratory
2. To study sustainability report of major business groups/environment compliance report for a company.
3. Report on Visit to NGO/Biomedical waste management site/hazardous waste Management/Pollution control facility of any industry.
4. Report on Seminar/Conference attended.

Major Experiments

1. Report on study tour to the following places
    - Lakes/rivers/estuary/marine ecosystem.
    - National Park/Sanctuary
    - Mangrove Ecosystem/Open Cast Mining/Agricultural field.
    - Pollution Control Board/Research Institute/Meterology Department.

PSEVSP404
Environmental Management

Project work : 50 MARKS
Student will submit their independent project work at the end of semester IV. Assessment of the project and internship will be based on the submitted M. Sc. project report, seminar and viva-voice examination.

Report on Project work : 30 MARKS
The Internship/project report submitted by the student and the evaluation report by the externalexaminer.

Project Evaluations:20 MARKS
(Viva-voice + Presentation)

Texts/References:

1. Standard methods for examination of water and waste water , American Public Health Association.
2. A comprehensive laboratory manual for Environmental Sciences and Engineering By P.R. SreemahadevanPillai**.**New Age International Publishers.
3. Chemical and biological methods for water pollution studies By R.K. Trivedi
4. Handbook of water and waste water analysis By S.K. Maiti.
5. Soil and air analysis by S.K. Maiti.

1. The candidate is expected to submit a journal certified by the head of the department or institutionat the time of the practical examination.

2. A candidate will not be allowed to appear for the practical examination unless he or she producesa certified journal or a certificate from the head of the institution or department stating that thejournal is lost and the candidate has performed the required number of experiments satisfactorily.The list of the experiments performed by the candidate should be attached with such certificate

3. Use of non programmable calculators is allowed both at the theory and the practical examination.

Academic Council/07/2016
Item No: 4.51

UNIVERSITY OF MUMBAI

Syllabus for F.Y.B.Sc.

(Restructured)

Programme : B.Sc.

Course: Biotechnology

with effect from the academic year

2016 – 2017

Preamble:

Twenty First Century is known as the 'Century of Biotechnology'. Biotechnology is one of the youngest branches of Life Science, whichhas expanded and established as an advanced interdisciplinary applied science in last few years. Biotechnology at the core envisages the comprehensive study of Life and the Interdisciplinary potential of Biotechnology has led to aunique status for Biotechnology in Research and Industry.

The socio-economic potential of Biotechnology is well established which has almost become synonymous withmodern development. Biotechnology has its applications in almost every field touching practically every human activity. The applied aspect of Biotechnology is now getting established with its applications in Industry, Agriculture, Health and Environment, Biotechnology is the lead science expanding exponentially.

Biotechnology demands a trained, skilled human resource to establish the Industry and Research sectors. The field is novel and still expanding which demands inputs in Infrastructure and Technology. The global and local focus is on developing new technological applications isfast growing. Biotechnology sector in Research and Industry is expanding which is set to augur the next major revolution in the world.

The demand for trained workforce in Biotechnology is ever growing in Fundamental Research and Industry Sector. Academic and Research Sectors also require interdisciplinary trained manpower to further the Biotechnology Revolution.

The need of the hour is to design appropriate syllabi which keeps pace with changing times and technology with emphasizes on applications while elucidating technology in depth. The present Syllabi is Restructured anticipating the future needs of Biotechnology Sector with more emphasis on imparting *hands-on* skills. The main thrust is laid on making syllabus compatible with developments in Education, Research and Industrial sectors. The Theory and Practical course in new restructured course will lead to impart *skill-set* essentials to further Biotechnology Sector.

The restructured syllabus combines basic principals of Physical, Chemical and Biological sciences in light of advancements in technology. The curriculum aims to impart basic knowledge with emphasis on its applications to make the students industry ready.

Semester – I				
Course Code	**Course Type**	**Course Title**	**Credits**	**Lectures/Week**
USBT101	Core Subject	**Basic Chemistry-I**	2	3
USBT102	Core Subject	**Basic Chemistry-II**	2	3
USBT103	Core Subject	**Basic Life Sciences-I : Biodiversity and Cell Biology**	2	3
USBT104	Core Subject	**Basic Life Sciences-II : Microbial Techniques**	2	3
USBT105	Core Subject	**Basic Biotechnology-I : Introduction to Biotechnology**	2	3
USBT106	Core Subject	**Basic Biotechnology-II : Molecular Biology**	2	3
USBT107	Ability Enhancement Course 1 (FC I)	**Societal Awareness**	2	3
USBTP101, USBTP102, USBTP103	Core Subject Practicals	Practicals of USBT101, USBT102, USBT103, USBT104, USBT105 and USBT106	6	18
Semester – II				
Course Code	**Course Type**	**Course Title**	**Credits**	**Lectures/Week**
USBT201	Core Subject	**Chemistry-I : Bioorganic Chemistry**	2	3
USBT202	Core Subject	**Chemistry-II : Physical Chemistry**	2	3
USBT203	Core Subject	**Life Sciences-I : Physiology and Ecology**	2	3
USBT204	Core Subject	**Life Sciences-II : Genetics**	2	3
USBT205	Core Subject	**Biotechnology-I : Tissue Culture & Scientific Writing and Communication Skills**	2	3
USBT206	Core Subject	**Biotechnology-II : Enzymology, Immunology and Biostatistics**	2	3
USBT207	Ability Enhancement Course 2 (FC II)	**Globalization, Ecology and Sustainable Development**	2	3
USBTP201, USBTP202, USBTP203	Core Subject Practicals	Practicals of USBT201, USBT202, USBT203, USBT204, USBT205 and USBT206	6	18

SEMESTER – I

THEORY

SEMESTER I

Basic Chemistry-I

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 101	**Basic Chemistry I**	**2**	
Course Objective : To aquaint the students with basic concepts of Chemistylike Classification and Nomenclature of Chemical compounds **Learning Outcome** : To impart hands-on skills in preparation of Bufferes and Solutions			
Unit I **Nomenclature and Classification**	**Nomenclature and Classification of Inorganic Compounds:** Oxides, Salts, Acids, Bases, Ionic, Molecular and Coordination Compounds **Nomenclature andClassification of Organic Compounds:** Alkanes,Alkenes, Alkynes, Cyclic Hydrocarbons, Aromatic Compounds, Alcohols and Ethers, Aldehydes and Ketones, Carboxylic Acids and its derivatives, Amines, Amides, Alkyl Halides and Heterocylic Compounds	15 Lectures	30 hrs
Unit II **Chemical Bonds**	**Chemical Bonds:** **Ionic Bond:** Nature of Ionic Bond, Structur eof NaCl, KCl and CsCl, factors influencing the formation of Ionic Bond. **Covalent Bond:** Nature of Covalent Bond, Structure of CH4, NH3, H2O, Shapes of $BeCl_2$, BF3 **Coordinate Bond:** Nature of Coordinate Bond **Non Covalent Bonds:** Van Der Waal's forces: dipole - dipole, dipole – induced dipole. **Hydrogen Bond**: Theory of Hydrogen Bonding and Types of Hydrogen Bonding (with examples of RCOOH, ROH, Salicylaldehyde, Amides and Polyamides).	15 Lectures	30 hrs
Unit III **Water and Buffers**	**Chemistry of Water:** Properties of Water, Interaction of Water with Solutes (Polar, Non-Polar, Charged), Non-Polar Compounds in Water – Change in its Structure and the Hydrophobic Effect, Role of Water in Biomolecular Structure and Function and Water as a Medium for Life	15 lectures	30 hrs

	Solutions: Normality, Molarity, Molality, Mole fraction, Mole concept, Solubility, Weight ratio, Volume ratio, Weight to Volume ratio, ppb, ppm, millimoles, milliequivalents (Numericals expected). **Primary and Secondary Standards**: Preparation of Standard Solutions, Principle of Volumetric Analysis. **Acids and Bases:** Lowry-Bronsted and Lewis Concepts. Strong and Weak Acids and Bases - Ionic Product of Water - *pH,pKa, pKb*. Hydrolysis of Salts. **Buffer solutions** –Concept of Buffers,Types of Buffers, Derivation of Henderson equation for Acidic and Basic buffers,Buffer action,Buffercapacity(Numericalsexpected.) pH of Buffer Solution.		

SEMESTER I

Basic Chemistry-II

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 102	**Basic Chemistry II**	**2**	
Course Objective : To aquaint students with Concepts of Steriochemisty **Learning Outcome** : To impart knowledge of Titrimetic and Volumetric Estimations and handling of basic Analytical Techniques like Chromatography and Colorimetry			
Unit I **Stereochemistry**	**Isomerism** – Types of Isomerism: Constitutional Isomerism (Chain, Position and Functional) and Stereoisomerism, Chirality. **Geometric Isomerism and Optical Isomerism:**Enantiomers, Diastereomers, and Racemic mixtures Cis-Trans, Threo, Erythro and Meso isomers.Diastereomerism (Cis-Trans Isomerism) in Alkenes and Cycloalkanes (3 and 4 membered ring) **Conformation**: Conformations of Ethane. Difference between Configuration and Conformation. **Configuration**, Asymmetric Carbon Atom, Stereogenic/ Chiral Centers, Chirality,	15 Lectures	30 hrs

	Representation of Configuration by "Flying Wedge Formula" **Projection formulae** – Fischer, Newman and Sawhorse. The Interconversion of the Formulae.		
Unit II **Titrimetry and Gravimetry**	**Titrimetric Analysis**: Titration, Titrant, Titrand, End Point, Equivalence Point, Titration Error, Indicator, Primary and Secondary Standards, Characteristics and examples Types of Titration –Acid –Base, Redox. Precipitation, Complexometric Titration. Acid – Base Titration.-Strong Acid *Vs* Strong Base -Theoretical aspects of Titration Curve and End Point Evaluation. Theory of Acid –Base Indicators, Choice and Suitability of Indicators. **Gravimetric Analysis:** Solubility and Precipitation, Factors affecting Solubility, Nucleation, Particle Size, Crystal Growth, Colloidal State, Ageing/Digestion of Precipitate. Co-Precipitation and Post-Precipitation. Washing, Drying and Ignition of Precipitate. (Numericals Expected).	15 Lectures	30 hrs
Unit III **Analytical Techniques**	**Methods of Seperation** Precipitation, Filtration, Distillation and Solvent Extraction. **Analytical Techniques** **Chromatography:** Definition, Principles, Types Introduction to Paper Chromatography, Thin Layer Chromatography, Column Chromatography and its Applications.**Colorimetry:** Principle, Beer-Lambert's Law, Measurement of Extinction, Derivation of E = kcl, Limitations of Beer-Lambart's Law, Filter Selection	15 Lectures	30 hrs

SEMESTER I

Basic Life Sciences-I : Biodiversity and Cell Biology

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 103	**Biodiversity and Cell Biology**	**2**	
Course Objectives : To aquint students with concept of Biodiversity and Cell Biology **Learning Outcome :** To impart skill in handling and culture of Microorganisms			
Unit I Origin of Life and Biodiversity (Animal,Plant, Microorganisms)	Origin of Life, Chemical and Biological Evolution, Origin of Eukaryotic Cell. Concept of Biodiversity, Taxonomical, Ecological and Genetic Diversity & its Significance **Introduction to Plant Diversity:** Algae, Fungi, Bryophyta, Pteridophyta, Gymnosperms and Angiosperms (with one example each) **Introduction to Animal Diversity:**Non-Chordates and Chordates {with at least one representative example.) **Introduction to Microbial Diversity** Archaebacteria, Eubacteria, Blue-green Algae, Actinomycetes, Eumycota-Habitats, Examples and Applications.	15Lectures	30 hrs
Unit II Ultra Structure of Prokaryotic and Eukaryotic Cell.	**Ultrastructure of Prokaryotic Cell:** Concept of Cell Shape and Size.Detail Structure of Slime Layer, Capsule, Flagella, Pilli, Cell Wall(Gram Positive and Negative), Cell Membrane, Cytoplasm and Genetic Material Storage Bodies and Spores **Ultrastructure of Eukaryotic Cell:** Plasma membrane, Cytoplasmic Matrix, Microfilaments, Intermediate Filaments, and Microtubules Organelles of the Biosynthetic-Endoplasmic Reticulum & Golgi Apparatus. Lysosome, Endocytosis, Phagocytosis, Autophagy, Proteasome Eucaryotic Ribosomes, Mitochondria and Chloroplasts	15Lectures	30 hrs

	Nucleus –Nuclear Structure, Nucleolus External Cell Coverings: Cilia And Flagella Comparison of Prokaryotic And Eukaryotic Cells		
Unit III **Bacteria and Viruses**	**Bacteria** : Classification, Types, Morphology (Size, Shape and Arrangement) Cultivation of Bacteria. Reproduction and Growth (Binary Fission, Conjugation and Endospore formation) Growth Kinetics, Isolation and Preservation. Significance of Bacteria **Viruses** :General Characters, Classification (Plant, Animal and Bacterial Viruses) Structure and Characterization of Viruses and Significance	15Lectures	30 hrs

SEMESTER - I

Basic Life Sciences-II : Microbial Techniques

COURSE CODE	**TITLE**	**CREDITS**	**Notional Hours**
USBT 104	**Microbial Techniques**	**2**	
Course Objectives : To aquaint students with basic techniques in Staining and Sterilization **Learning Outcome :**To impart the knowledge of growth of microorganisms			
Unit I **Microscopy and Stains**	**Microscopy and Stains** Microscope- Simple and Compound: Principle. Parts, Functions and Applications. Dark Field and Phase Contrast Microscope Stains and Staining Solutions- Definition of Dye and Chromogen. Structure of Dye and Chromophore. Functions of Mordant and Fixative. Natural and Synthetic Dyes. Simple Staining, Differential Staining and Acid Fast Staining with specific examples	15 lectures	30 hrs
Unit II **Sterilization Techniques**	Definition : Sterilization and Disinfection. Types and Applications Dry Heat, Steam under pressure,	15 lectures	30 hrs

	Gases, Radiation and Filteration Chemical Agents and their Mode of Action - Aldehydes, Halogens, Quaternary Ammonium Compounds, Phenol and Phenolic Compounds, Heavy Metals, Alcohol, Dyes, and Detergents Ideal Disinfectant. Examples of Disinfectants and Evaluation of Disinfectant		
Unit III **Nutrition, Cultivation and Enumeration of Microorganisms**	**Nutrition and Cultivation of Microorganisms** Nutritional Requirements : Carbon, Oxygen, Hydrogen, Nitrogen, Phosphorus, Sulphur and Growth Factors. Classification of Different Nutritional Trypes of Organisms. Design and Types of Culture Media. Simple Medium, Differential, Selective and Enrichem Media Concept of Isolation and Methods of Isolation. Pure Culture Techniques **Growth and Enumeration** Growth Phases, Growth Curve. Arithmatic Growth and Growth Yield. Measurement of Growth. Chemostat and Turbidostat Enumeration of Microorganisms- Direct and Indirect Methods Preservation of Cultures- Principle and Methods. Cryogenic Preservation Advantages and Limitations	15 lectures	30 hrs

SEMESTER I

Basic Biotechnology-I : Introduction to Biotechnology

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 105	**Introduction to Biotechnology**	**2**	
Corse Objectives : To auaint students with various fields of Biotechnology and their applications **Learining Outcome :** To impart the knowledge of Food Technology and Fermetation Techniques			
Unit I **Scope and Introduction to Biotechnology**	History & Introduction toBiotechnology What is Biotechnology? Definition of Biotechnology, Traditional and Modern Biotechnology, Branches of Biotechnology-	15 lectures	30 hrs

	Plant, Animal Biotechnology, Marine Biotechnology, Agriculture, Healthcare, Industrial Biotechnology, Pharmaceuti cal Biotechnology, Environmental Biotechnology. Biotechnology Research in India. Biotechnology Institutions in India (Pub lic and Private Sector) Biotech Suceess Stories Biotech Policy Initiatives Biotechnology in context of Developing World Public Perception of Biotechnology		
Unit II **Applications Biotechnology**	Applications of Biotechnology in Agriculture : GM Food, GM Papaya, GM Tomato, Fungal and Insect Resistant Plants BT Crops, BT Cotton and BT Brinjal Pros and Cons Biotechnological applications in Crop and Livestock Improvements Modifications in Plant Quality Golden Rice, Molecular Pharming, Plant Based Vaccines Ethics in Biotechnology and IPR	15 lectures	30 hrs
Unit III **Food and Fermentation Biotechnology**	**Food Biotechnology** Biotechnological applicationsin enhancement of Food Quality Unit Operation in Food Processing Quality Factors in Preprocessed Food Food Deterioration and its Control Rheology of Food Products Microbial role in food products Yeast, Bacterial and other Microorganisms based process and products Modern Biotechnological Regulatory Aspects in Food Industries Biotechnology and Food - Social Appraisal **Fermentation Technology** Defination, Applications of Fermetation Technology Microbial Fermentations Overview of Industrial Production of Chemicals (Acetic Acid, Citric Acid and Ethanol), Antibiotics, Enzymes and Beverages	15 lectures	30 hrs

SEMESTER - I

Basic Biotechnology-II : Molecular Biology

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 106	**Molecular Biology**	**2**	
Corse Objectives : To aquint students with DNA Replication, Repair and Genetic Engineering **Learning Outcome :**Impart the knowledge of molecular Biology Techniques			
Unit I **Replication**	DNA Replication in Prokaryotes and Eukaryotes- Semi-conservative DNA replication, DNA Polymerases and its role, E.coli Chromosome Replication, BidirectionalReplication of Circular DNA molecules. Rolling Circle Replication, DNA Replication in Eukaryotes DNA Recombination – Holliday Model for Recombination Transformation	15 lectures	30 hrs
Unit II **Mutation and DNA Repair**	Definition and Types of Mutations. Mutagenesis and Mutagens.(Examples of Physical, Chemical and Biological Mutagens) Types of Point Mutations, DNA REPAIR Photoreversal, Base Excision Repair, Nucleotide Excision Repair, Mismatch Repair, SOS Repair and Recombination Repair.	15 lectures	30 hrs
Unit III **Genetic Engineering**	Experimental evidences forDNA and RNA as Genetic Material. Genetic Engineering in Ecoli and other Prokaryotes, Yeast, Fungi and Mammalian Cells Cloning Vectors-Plasmids (pBR 322, pUC) Vectors for Plant and Animal Cells, Shuttle Vectors, YAC Vectors, Expression Vectors Enzymes- DNA Polymerases, Restriction Endonucleases, Ligases, Reverse Transcriptases, Nucleases, Terminal Transferases, Phosphatases Isolation and Purification of DNA (Genomic, Plasmid) and RNA,, Identification of Recombinant Clones	15 lectures	30 hrs

Semester – I

Practicals

SEMESTER – I
Practicals
Basic Chemistry

COURSE CODE	TITLE	CREDITS	Notional Hours
USBTP 101	**Basic Chemistry**	**2**	**30 hrs**

1. Safety Measures and Practices in Chemistry Laboratory, Working and use of a Digital Balance, Functioning and Standardization of *pH* Meter, Optical Activity of a Chemical Compounds by Polarimeter
2. Preparation of Standard (Molar, Molal and Normal solutions) and Buffer Solutions Determination of strength of HCl in commercial sample
3. Qualitative Analysis of Inorganic Compounds - Three experiments
4. Characterization of Organic Compounds containing only C, H, O elements (no element test) - Compounds belonging to the following classes: Carboxylic Acid, Phenol, Aldehyde/Ketone, Ester, Alcohol, Hydrocarbon and Characterization of Organic Compounds containing C, H, O, N, S, Halogen Elements (element tests to be done) Compounds belonging to the following classes: Amine, Amide, Nitro Compounds, Thiamide, Haloalkane, Haloarene
5. To Standardize commercial sample of NaOH using KHP (Potassium hydrogen pthalate) and sample of HCl using borax.
6. Dissociation Constant of Weak Acids by Incomplete Titration Method using *pH* Meterand determination of Acetic acid in Vinegar by Titrimetric Method
7. Determination of the amount of Fe (II) present in the given solution Titrimetrically
8. Determination of amount of $NaHCO_3 + Na_2CO_3$ in the given solid mixture Titrimetrcially
9. Determination of the amount of Mg (II) present in the given solution complexometrically
10. Determination of percent composition of $BaSO_4$ and NH_4Cl in the given mixture Gravimetrically
11. Separation of Cu, Ni and Fe using Paper Chromatographyand amino acids - paper chromatography
12. Determination of fluoride ion using Colorimetry and Fe (III) by using Salicylic Acid by Colorimetric Titration

SEMESTER – I
Practicals
Basic Life Sciences

COURSE CODE	TITLE	CREDITS	Notional Hours
USBTP 102	**Basic Life Science**	**2**	**30 hrs**

1. Components and workingof Simple, Compound, Dark Field, Fluorescent and Phase Contrast Microscope
2. Staining of Plant and Animal Tissues using Single and Double Staining Techniques
3. Special Staining Technique for Cell Wall, Capsule and Endospores and Fungal Staining
4. Monochrome Staining, Differential Staining, Gram Staining, and Acid Fast Staining and Romonowsky Staining
5. Study of Plant, Animal and Microbial Groups with at least one examples from each x 3
6. Study of Photomicrographs of Cell Organelles
7. Sterilization of Laboratory Glassware and Media using Autoclave
8. Preparation of Media- Nutrient broth and Agar, MacConkey Agar, Sabourauds Agar
9. Isolation of Organisms : T-streak, Polygon method
10. Enumeration of microorganisms by Serial Dilution, Pour Plate, Spread Plate Method
11. Colony Characteristics of Microorganisms, Enumeration by Breed's count
12. Growth Curve of E.Coli

SEMESTER – I
Practicals
Basic Biotechnology

COURSE CODE	TITLE	CREDITS	Notional Hours
USBTP 103	**Basic Biotechnology**	**2**	**30 hrs**

1. Assignment- Study of any branch of biotechnology and its applications
2. Microbial examination of food and detection of Pathogenic Bacteria from Food Samples
3. Isolation of organisms causing Food Spoilage
4. Microscopic determination of Microbial flora from Yoghurt and Lactic Acid Determination
5. Analysis of Milk- Methylene Blue, Resazurin Test, Phosphatase Test
6. Extraction of Caesin from Milk
7. Meat Tenderization using Papain
8. Fermentative production of Alcohol
9. Determination of Alcohol content
10. Isolation and purification of DNA (genomic, plasmid)
11. Restriction Digestion
12. Agarose Gel Electrophoresis of the genomic and plasmid DNA

SEMESTER – II

THEORY

SEMESTER II

Chemistry-I : Bioorganic Chemistry

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 201	**Bioorganic Chemistry**	**2**	
Course Objectives : To aquint students with Bioorganic Molecules **Learning Outcome :** To impart the knowledge of Classification, Strucure and Characterization of Biomolecules			
Unit I **Biomolecules:** **Carbohydrates and Lipids**	**Carbohydrates**: Structure, Function, Classification, Characteristic Reactions, Physical and Chemical Properties, D & L Glyceraldehydes, structure of Monosaccharide, Disaccharides, and Polysaccharides. Isomers of Monosaccharides, Chemical/Physical Properties of Carbohydrate, Chemical Reactions for Detection of Mono., Di and Polysaccharides, **Lipids:**Classification of Lipids, Properties of Saturated, Unsaturated Fatty Acids, Rancidity, and Hydrogenation of Oils Phospholipids: Lecithin Cephalin, Plasmalogen Triacylglycerol-Structure and Functio n Sterols: Cholesterol: Structure and Fu nction , Lipoproteins: Structure and Fu nction, Storage Lipids, Structural Lipi ds, Action of Phospholipases, Steroids	15 lectures	30 hrs
Unit II **Biomolecules:** **Proteins and Amino Acids**	**Proteins and Amino Acids**: Classification, Preparation and Propert ies, Isoelectric Point, Peptide Synthesi s Proteins: Classification based on Struc ture and Functions, Primary Structure, N-terminal (Sanger and Edmans Meth od) and C-terminal Analysis (Enzyme) Reactions of Amino Acids, Sorenson' s Titration, Ninhydrin Test. Denaturation of protein Structure of Peptides. Titration Curve of Amino Acids. Concept of Isoelectric pH, Zwitter ion. Glycoproteins	15 lectures	30 hrs
Unit III	**Nucleic Acids:** Structure, Function of Nucleic Acids, Properties and Typesof	15 lectures	30 hrs

Biomolecules: Nucleic Acids	DNA, RNA. Structure of Purine and Pyrimidine Bases Hydrogen Bonding between Nitrogeneous Bases in DNA Differences between DNA and RNA, Structure of Nucleosides, Nucleotides and Polynucleotides.		

SEMESTER II

Chemistry-II : Physical Chemistry

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 202	**Physical Chemistry**	**2**	
Course Objectives : To aquaint students with concepts in Thermodynamics, Kinetics and Redox Reactions **Learning Outcome :** To impart skills in Kinetics and Chemical Reactions			
Unit I **Thermodynamics**	**Thermodynamics**: System, Surrounding, Boundaries Sign Conventions, State Functions, Internal Energy and Enthalpy: Significance, examples, (Numericals expected.) Laws of Thermodynamics and its Limitations, Mathematical expression. Qualitative discussion of Carnot Cycle for ideal Gas and Mechanical Efficiency. Laws of Thermodynamics as applied to Biochemical Systems. Concept of Entropy, Entropy for Isobaric, Isochoric and Isothermal Processes.	15 lectures	30 hrs
Unit II **Chemical Kinetics**	**Reaction Kinetics:** Rate of Reaction, Rate Constant, Measurement of Reaction Rates Order & Molecularity of Reaction, Integrated Rate Equation of First and Second order reactions (with equal initial concentration of reactants). (Numericals expected) Determination of Order of Reaction by a) Integration Method b) Graphical Method c) Ostwald's Isolation Method d) Half Time Method. (Numericals expected).	15 lectures	30 hrs
Unit III **Oxidation Reduction reactions**	**Principals of Oxidation & Reduction Reactions**– Oxidising and Reducing Agents, Oxidation Number, Rules to assign Oxidation Numbers with examples Ions like	15 lectures	30 hrs

	Oxalate, Permanganate and Dichromat e. Balancing Redox Reactions by Ion Electron Method Oxidation, Reduction, Addition and Substitution & Elimination Reactions.		

SEMESTER II

Life Sciences-I : Physiology and Ecology

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 203	**Physiology and Ecology**	**2**	
Course Objectives: To aquaint studetns with Physiological Processes in Plants and Animals **Learning Objectives :** To impart the knowledge of Physiology and Ecology			
Unit I **Plant Physiology**	Photosynthesis, Intracellular Organization of Photosynthetic System. Fundamental Reactions of Photosynthesis, Photosynthetic Pigments, Role of Light. Hill Reaction and its Significance, Light Reactions, Cyclic and Non-Cyclic Photo induced Electron Flow, Energetics of Photosynthesis, Photorespiration, Dark Phase of Photosynthesis, Calvin Cycle, C-3, C-4 pathways Plant hormones - Auxin ,Gibbrellins, Cytokinins, Ethylene, Abscissic acid Introduction to Secondary Metabolites	15 lectures	30 hrs
Unit II **Animal Physiology**	Physiology of Digestion Movement of Food and Absorption, Secretary functions of Alimentary Canal, Digestion and Absorption,assimilation in Gut of Mammals Anatomy of Mammalian Kidney, Structure of Nephron, Physiology of Urine Formation and Role of Kidney in Excretion and Osmoregulation Physiology of Respiration, Mechanism of Respiration Principles of Gaseous Exchange in the Blood and Body Fluids Blood and Circulation : Blood Composition, Structure and Function of its Constituents	15 lectures	30 hrs

	Blood Coagulation and Anti-Coagulants Hemoglobin and its Polymorphism Regulation of the Circulation Mechanism and working of Heart in Human.		
Unit III **Ecosystem and Interactions**	Ecology and Biogeography. Ecosystems, Definition and Components, Structure and Function of Ecosystems. Aquatic and Terrestrial Ecosystems, Biotic and Abiotic Factors, Trophic Levels, Food Chain and Food Web, Ecological Pyramids (Energy,Biomass and Number) Nutrient Cycle and Biogeochemical Cycles: Water, Carbon, Oxygen, Nitrogen and Sulphur. Interactions, Commensalism, Mutualism, Predation and Antibiosis, Parasitism.	15 lectures	30 hrs

SEMESTER – II

Life Sciences-II : Genetics

COURSE CODE	**TITLE**	**CREDITS**	**Notional Hours**
USBT 204	**Genetics**	**2**	
Course Objectives : To aquaint students with concepts in Genetics **Learning Objectives :** To impart skills in Techniques in Genetic Analysis and Population Genetics			
Unit I **Genetics Fundamentals**	Mendel's Laws of Heredity Monohybrid Cross: Principle of Dominance and Segregation. Dihybrid Cross: Principle of Independent Assortment. Application of Mendel's Principles Punnett Square. Mendel's Principle in Human Genetics. Incomplete Dominance and Co-dominance. Multiple Alleles.Allelic series. Variations among the effect of the Mutation. Genotype andPhenotype. Environmental effect on the expression of the Human Genes. Gene Interaction. Epistasis.	15 lectures	30 hrs

Unit II **Microbial Genetics**	Genetic analysis in Bacteria- Prototrophs, Auxotrophs. Bacteriophages: Lytic and Lysogenic Development of Phage. Mechanism of Genetic Exchange in Bacteria: Conjugation; Transformation; Transduction; (Generalized Transduction, Specialized Transduction) Bacterial Transposable Elements.	15 lectures	30 hrs
Unit III **Population Genetics**	Genetic Structure of Populations – Genotypic Frequencies and Allelic Frequencies, Hardy- Weinberg Law and its assumptions Genetic Variations in Populations- Measuring Genetic Variation at Protein Level and measuring Genetic Variations at DNA level Natural Selection. Genetic Drift Speciation Role of Population Genetics in Consevation Biology	15 lectures	30 hrs

SEMESTER II

Biotechnology-I : Tissue Culture &Scientific Writing and Communication Skills

COURSE CODE	**TITLE**	**CREDITS**	**Notional Hours**
USBT 205	**Tissue Culture & Scientific Writing and Communication Skills**	**2**	
Course Objectives : To aquaint students with Techniques of Plant and Animal Tissue Culture **Learning Outcome :**To impart the skills of PTC, ATC and Science Communication			
Unit I **Plant Tissue Culture**	Cell Theory, Concept of Cell Culture, Cellular Totipotency, Organization of Plant Tissue Culture Laboratory : Equipments and Instruments Aseptic Techniques: Washing of Glassware, Media Sterilization, Aseptic Workstation, Precautions to maintain Aseptic Conditions. Culture Medium: Nutritional requirements of the explants, PGR's and their *in-vitro* roles, Media Preparation Callus Culture Technique: Introduction, Principle and Protocols	15 lectures	30 hrs

Unit II **Animal Tissue Culture**	**Basics of Animal Tissue Culture** Introduction Cell Culture Techniques, Equipment and Sterilization Methodology. Introduction to Animal Cell Cultures:Nutritional and Physiological: Growth Factors and Growth Parameters. General Metabolism and Growth Kinetics Primary Cell Cultures : Establishment and Maintenance of Primary Cell Cultures of Adherent and Non-Adherent Cell Lines with examples. Application of Cell Cultures	15 lectures	30 hrs
Unit III **Scientific Writing and Communication Skills**	**Communication Skills** Introduction to Communication -- Elements, Definitions, Scope of Communication and Communication as part of Science Communication Elements --Verbal and Non-Verbal Communications. Principles of Effective Communication, Oral Presentations Scientific Reading, Writing & Presentation **Scientific Writing** Process of Scientific Writing: Thinking, Planning, Rough Drafts and Revising Contents. Introduction to Scientific Reports and Writings Compilation of Experimental Data, Communication Methods in Science, Examples of Scientific and Unscientific Writing. Writing Papers, Reviews, Bibliography Plagiarism--Introduction to Plagiarism , Examples of Plagiarism.	15 lectures	30 hrs

SEMESTER - II

Biotechnology-II : Enzymology, Immunology and Biostatistics

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 206	**Enzymology, Immunology and Biostatics**	**2**	
Course Objectives : To aquaint students with concepts in Enzymology, Immunology and Biostatistics **Learning Outcome :** To impart the skills in Enzyme Kinetics, Immunological Techniques and Biostatistics			

Unit I **Enzymes**	Definition, Classification, Nomenclature, Chemical Nature, Properties of Enzymes, Mechanism of Enzyme Action, Active Sites, Enzyme Specificity, Effect of pH, Temperature, Substrate Concentration on Enzyme Activity, Enzyme Kinetics, Michelis-Menten Equation, Types of Enzyme Inhibitions-Competitive, Uncompetitive, Non-Competitive Allosteric Modulators Co-Factors,Zymogens,	15 lectures	30 hrs
Unit II **Immunology**	Overview of Immune Systems, Cell and Organs involved, T and B cells. Innate Immunity, Acquired Immunity, Local and Herd Immunity, Humoral and Cellular Immunity - Factors Influencing and Mechanisms of each. Antigens and Antibodies: Types of Antigens, General Properties of Antigens, Haptens and Superantigens Discovery and Structure of Antibodies (Framework region) Classes of Immunoglobulins, Antigenic Determinants. Antigen-Antibody Interactions Monoclonal Antibodies, Vaccines (Live, Killed) and Toxoid. Problems with Traditional Vaccines, Impact of Biotechnology on Vaccine Development.	15 lectures	30 hrs
Unit III **Biostatistics**	Defination &Importance of Statistics in Biology Types of Data, Normal and Frequency Distribution Representation of Data and Graphs (Bar Diagrams, Pie Charts and Histogram, Polygon and Curve) Types of Population Sampling Measures of Central Tendency (For Raw,Ungroup & Group Data) Mean Median Mode Measures of Dispersion Range, Variance, Coefficient of Variance. Standard Derivation. Standard Error.	15 lectures	30 hrs

Semester – II

PRACTICALS

SEMESTER – II
Practicals
Chemistry

COURSE CODE	TITLE	CREDITS	Notional Hours
USBTP 201	**Chemistry**	**2**	**30 hrs**

1. Spot test for Carbohydrates, Fats and Proteins and Amino Acids and Nucleic Acids
2. Standardization of Colorimeter and Estimation of Reducing sugar by DNSA method
3. Estimation of Protein by Biuret method and Lowry method
4. Saponification of Fats, Saponification Value of Oil or Fat, Iodine value of Oiland determine the rate constant for the saponification reaction between ethyl acetate and NaOH by back titration method
5. To determine enthalpy of dissolution of salt like KNO3
6. Determine the rate constant for hydrolysis of ester using HCl as a catalyst
7. Study the kinetics of reaction between Thiosulphate ion and HCl
8. Study reaction between potassium Persulphate and Potassium Iodide kinetically and hence to determine order of reaction
9. Study the reaction between NaHSO3 and KMnO4 and balancing the reaction in acidic, alkaline and neutral medium
10. Study transfer of electrons (Titration of sodium thiosulphate with potassium dichromate)
11. Determination of the volume strength of hydrogen peroxide solution by titration with standardised potassium permagnate solution
12. Determination of amount of K oxalate and oxalic acid in the given solution Titrimetrcially

SEMESTER – II
Practicals
Life Sciences

COURSE CODE	TITLE	CREDITS	Notional Hours
USBTP 202	**Life Sciences**	**2**	**30 hrs**

1. Study of Hill's reaction
2. Colorimetric study of Absorption Spectrum of Photosynthetic Pigments
3. Movemnt of Food in Paramoecium
4. Activity of Salivary Amylase on Starch
5. Analysis of Urine
6. Study of Mammalian Blood, Blood count using Haemocytometer and estimation of Haemoglobin in Mammalian Blood
7. Study of Human Blood Groups
8. Study of Mammalian Kidney and Heart
9. Problems in Mandelian Genetics
10. Study of Mitosis and Meiosis
11. Study of Karyotypes – Normal Male and Normal Female
12. Study of Interactions Commensalism, Mutualism, Predation and Antibiosis, Parasitism.

SEMESTER – II
Practicals
Biotechnology

COURSE CODE	TITLE	CREDITS	Notional Hours
USBTP 203	**Biotechnology**	**2**	**30 hrs**

1. Working and use of various Instruments used in Biotechnology Laboratory (Autoclave, Hot air Oven, Centrifuge, Incubator, Rotary Shaker, Filter Assembly, LAF, *pH* meter and Colorimeter)

2. Laboratory Organization and Layout for Plant and Animal Tissue Culture Laboratory
3. Preparation of Stock Solutions and Preparation of Media for PTC
4. Aseptic Transfer Technique, Surface Sterilization and Innoculation for Callus Culture
5. Media Preparation and Sterilization (ATC)
6. Trypsinization of Tissue and Viability Count
7. Qualitative Assay of Enzyme Amylase. Lipase, Protease, Urease, Catalase and Dehydrogenease
8. Enzyme Kinetics : Study of the effect of *pH*, Temperature on activity of Enzyme
9. Study of Effect of Substrate Concentration on enzyme activity and determination of Vmax and Km
10. Study of antigen antibody interaction by Ouchterlony method
11. Biometric Analysis for Mean, Median, Mode and Standard Deviation and Data representation using frequency Polygon, Histogram and Pie Diagram
12. Preparation of review reports of 5 Scientific Papers and Presentation (last 5 years)

Semester – I and II

Ability Enhancement Course 1 (FC I)
Ability Enhancement Course 2 (FC II)

SEMESTER I

Ability Enhancement Course 1 (FC I)
Societal Awareness

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 107	**Societal Awareness**	**2**	
Course Objective : To aquaint the students with concepts of Societal Awarness **Learning Outcome** : To impart knowledge of Society and make students aware about the Problems in Society			
Unit I **Overview of Indian Society**	Understand the multi-cultural diversity of Indian society through its demographic composition: population distribution according to religion, caste, and gender; Appreciate the concept of linguistic diversity in relation to the Indian situation; Understand regional variations according to rural, urban and tribal characteristics; Understanding the concept of diversity as difference	15 Lectures	30 hrs
Unit II **Concept of Disparity**	**Concept of Disparity- I** Understand the concept of disparity as arising out of stratification and inequality; Explore the disparities arising out of gender with special reference to violence against women, female foeticide (declining sex ratio), and portrayal of women in media;Appreciate the inequalities faced by people with disabilities and understand the issues of people with physical and mental disabilities **Concept of Disparity-II** Examine inequalities manifested due to the caste system and inter-group conflicts arising thereof; Understand inter-group conflicts arising out of communalism; Examine the causes and effects of conflicts arising out of regionalism and linguistic differences	15 Lectures	30 hrs
Unit III **The Indian Constitution and Significant Aspects of Political Processes**	**The Indian Constitution** Philosophy of the Constitution as set out in the Preamble; The structure of the Constitution-the Preamble, Main Body and Schedules; Fundamental Duties of the Indian Citizen; tolerance, peace and communal harmony as crucial values in strengthening the social fabric of Indian society; Basic features of the Constitution **Significant Aspects of Political Processes** The party system in Indian politics; Local self-government in urban and rural areas; the 73rd and 74th Amendments and their implications for inclusive politics; Role and significance of women in politics	15 lectures	30 hrs

Topics for Project Guidance: Growing Social Problems in India:

- *Substance abuse- impact on youth & challenges for the future*
- *HIV/AIDS- awareness, prevention, treatment and services*
- *Problems of the elderly- causes, implications and response*
- *Issue of child labour- magnitude, causes, effects and response*
- *Child abuse- effects and ways to prevent*
- *Trafficking of women- causes, effects and response*

SEMESTER II

Ability Enhancement Course 2 (FC II)
Globalization, Ecology and Sustainable Development

COURSE CODE	TITLE	CREDITS	Notional Hours
USBT 207	**Globalization, Ecology and Sustainable Development**	**2**	
Course Objective : To aquaint the students with concepts of Globalization, Ecology and Environment **Learning Outcome** : To impart knowledge of Globalization make students aware about the Problems in Society			
Unit I **Globalisation and Indian Society and Human Rights**	**Globalisation and Indian Society** Understanding the concepts of liberalization, privatization and globalization;Growth of information technology and communication and its impact manifested in everyday life; Impact of globalization on industry: changes in employment and increasing migration; Changes in agrarian sector due to globalization; rise in corporate farming and increase in farmers' suicides. **Human Rights** Concept of Human Rights; origin and evolution of the concept; The Universal Declaration of Human Rights;Human Rights constituents with special reference to Fundamental Rights stated in the Constitution	15 Lectures	30 hrs
Unit II **Ecology and Sustainbale Development**	**Ecologyand Sustainbale Development** Importance of Environment Studies in the current developmental context; Understanding concepts of Environment, Ecology and their interconnectedness; Environment as natural capital and connection to quality of human life; Environmental Degradation causes and impact on human life; Sustainable development, concept and components; poverty and environment	15 Lectures	30 hrs
Unit III **Understanding and Managing Stress and Conflict in Contemporary Society**	**Understanding Stress and Conflict** Causes of stress and conflict in individuals and society; Agents of socialization and the role played by them in developing the individual; Significance of values, ethics and prejudices in developing the individual; Stereotyping and prejudice as significant factors in causing conflicts in society. Aggression and violence as the public expression of conflict **Managing Stress and Conflict in Society** Types of conflicts and use of coping mechanisms for managing individual stress; Maslow's theory of self-actualisation;Different methods of responding to conflicts in society; Conflict-resolution and efforts towards building peace and harmony in society	15 lectures	30 hrs

Topics for Project Guidance: Growing Social Problems in India:

- *Increasing urbanization, problems of housing, health and sanitation;*
- *Changing lifestyles and impact on culture.*
- *Farmers' suicides and agrarian distress.*
- *Debate regarding Genetically Modified Crops.*
- *Development projects and Human Rights violations.*
- *Increasing crime/suicides among youth.*

Evaluation Scheme

The performance of the learners shall be evaluated into TWO Parts.
The learner's performance shall be assessed by Internal Assessment with 25 marks & by conducting the Semester End Examinations with 75 marks .
Practical Training will have Practical Examination for 50 marks at the end of Semester.
The allocation of marks for the Internal Assessment and Semester End Examinations are as follows:-

I. Internal Exam-25 Marks

(i) *Test– 20 Marks*

(ii) *Activities - 5 Marks*

II. External Examination- 75 Marks

(i) Theory Question Paper Pattern:-

All questions areCompulsory.		
Question	Based on	Marks
Q.1	Unit I	20
Q.2	Unit II	20
Q.3	Unit III	20
Q.4	Unit I,II and III	15

- All questions shall be compulsory with internal choice within the questions.
- Each Question may be sub-divided into sub questions as a, b, c, d &e, etc & the allocation of Marks depends on the weightage of the topic.

III. Practical Examination – 300 marks (50 marks x 6 core papers)

Each Core Subject Carries 50 Marks

Chemistry : 30 marks + 10 marks (Journal)+ 10 marks(Viva-voce)

Life Sciences and Biotechnology : Major (20 marks), Minor (10 marks), Identification /Spots (10 marks), Viva-voce (5 marks), Journal (5 marks)

IV. Ability Enhancement Course

V. Internal Exam-25 Marks

(iii)*Project– 20 Marks*

(iv)*Activities - 5 Marks*

VI. External Examination- 75 Marks

Question Paper Pattern

Maximum Marks: 75, Questions to be set:04, Duration: 02 and 1/2 Hrs.
All Questions are Compulsory

Q-1 Objective Questions - 20Marks

A) Sub Questions to be asked 12 and to be answered any 10

B) Sub Questions to be asked 12 and to be answered any 10

(*Multiple choice / True or False / Match the columns/Fill in the blanks)

Q-2 Full Length Question – 20 Marks

OR

Full Length Question

Q-3 Full Length Question – 20 Marks

OR

Full Length Question

Q-4 Short Notes – 15 Marks (To be asked 06 To be answered 03)

Note: Theory question of 15 marks may be divided into two sub questions of 7/8 and 10/5Marks.

University of Mumbai

No. UG/ 47 of 2019-20

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges, the Head of the University Departments and Directors of the recognized Institutions in Science & Technology Faculty is invited to this office Circular No. UG/87 of 2017-18, dated 21st July, 2017 relating to the revised syllabus as per (CBCS) for Sem. I & II of M.Sc. programmme in the course of Bio-Technology.

They are hereby informed that the recommendations made by the Board of Studies in Bio-Technology at its meeting held on 11th April, 2019 have been accepted by the Academic Council at its meeting held on 15th April, 2019 **vide** item No. 4.40 and that in accordance therewith, the revised syllabus as per the (CBCS) for the M.Sc. First Year (Sem. I & II) in Bio-Technology has been brought into force with effect from the academic year 2019-20, accordingly. (The same is available on the University's website www.mu.ac.in).

(Dr. Ajay Deshmukh)

Revised Syllabus for

Program- M.Sc.

Course- Biotechnology (PSBT)

(First Year – Sem. I & II)

(Choice Based Credit Grading System with effect

from the academic year 2019-2020)

Preamble

The biotechnology sector, now recognized as one of the key priority sectors under the various government initiatives like 'Make in India', 'Skill India' and 'Startup India', is expected to contribute towards invention, innovation and economic growth of the country. It has also highlighted importance of human resource development and the need for nurturing tailor-made human capital for advanced scientific research and entrepreneurship.

The post-graduate course in biotechnology started by the University of Mumbai in the late 1990's has gone through various phases of restructuring. The present *adhoc* Board of Studies in Biotechnology during its meeting on the 28th of Jan 2019, discussed and reviewed the existing syllabi of the Master's degree program in biotechnology of University of Mumbai with that of various National Universities as well as that of the revised curriculum of DBT-India. Also, keeping in view the National Biotechnology Development Strategy (2015 – 2020) released by DBT-India, that identifies a strategic roadmap for India's emergence as a global biotechnology innovation and manufacturing hub, it was deemed essential to revamp the existing syllabus in a manner that would not only interest students but also equip them for their future be it in research or in other areas.

It was decided during the board meeting that faculty, students, alumni, and experts from industry would be consulted whilst framing the syllabus for the Master's program in biotechnology. Subject-wise experts were identified, and the drafts communicated to them for their opinion and revision. Along with 3 members in the Board of Studies, 17 others actively participated in drafting the course contents. It was decided that the practical assessment pattern also needed to be revised to better assess the knowledge of the learner.

The draft was revised multiple times and finalized after collating inputs from students, alumni, staff of affiliated and autonomous colleges as well as experts from industry. The Board of Studies is now confident that the newly designed syllabus would equip students with basic as well as applied knowledge in the subject enabling them to compete at National as well as International level.

List of members who have contributed to the drafting and revising of the syllabus

Sr No	Name of the faculty	Affiliation
1	Dr. Kelkar Mane Varsha	Chairperson, Adhoc BOS in Biotechnology
2	Dr. Shembekar Vishwas	Member Adhoc BOS in Biotechnology
3	Dr. D'Souza Jacinta	Member Adhoc BOS in Biotechnology
4.	Dr. Rao G.K.	Retd Senior technical officer, Central Institute of Fisheries Education, Mumbai. Specialization: Biostatistics
5.	Dr. Karkhanis Deepali	Faculty and Head, Dept of Biotechnology, KET'z Vaze college, Mumbai
6	Dr. Tara Menon	Faculty and Head, Dept of Biotechnology, SIES college, Mumbai
7	Dr. Rao Chunduri Jayaprada	Faculty and Head, Dept of Biotechnology, Mithibai college, Mumbai, (Autonomous)
8	Dr. Sadani Geeta	Faculty, Dept of Biotechnology, Khalsa College
9	Dr. Kokitkar Seema	Head, Dept of Biotechnology, C K Thakur college, Panvel
10	Ms. Vaishampayan Madhuri	Faculty, Dept of Biotechnology, C K Thakur college, Panvel
11	Mr. Ghatge Sushil	Faculty, Dept of Biotechnology, C K Thakur college, Panvel
12	Ms. Raut Maithilee	Faculty, Dept of Biotechnology, Viva college
13	Ms. Fernandes Norine	Faculty, Dept of Biotechnology, St Xaviers college, Mumbai (Autonomous)
14	Ms. Bhave Rashmi	Faculty and Head Dept of Biotechnology, Gogate Joglekar College
15	Dr. Khadke Prashant	Commercial Head, Premas Life Sciences
16	Dr. Singh B B	Scientific Adviser-IPR and Advocate, High court
17	Dr. Toprani Sneh	Post Doc Harvard University, Chief learning officer, Startup India, USA and Alumni, Dept of Biotechnology University of Mumbai
18	Mr. Mirgal Swapnil	Team Manager, Biosimilar Business, Reliance Bio product Trials and Alumni, Dept of Biotechnology University of Mumbai
19	Mr. Kamble Dhiraj	Senior Officer, R&D Microbiology, Lupin and Alumni, Dept of Biotechnology University of Mumbai
20	Mr. Vartak Kaushal	Jr Research Associate, Advance biotech lab, IPCA, Mumbai and Alumni, Dept of Biotechnology University of Mumbai

Further to the suggestions and contribution from the faculty as listed above from various colleges, industry and alumni, major portion of the syllabus has been drawn from DBT's remodeled MSc Biotechnology Curriculum, May 2017, Dept of Biotechnology, Ministry of Science and Technology, Government of India.

MSc Biotechnology Course Structure

Semester I

Course code	Title	Theory /Practical	Marks	Credits	Nos of Lectures /week
PSBT 101	Biochemistry	Theory	100	4	1
PSBT 102	Immunology	Theory	100	4	1
PSBT 103	Cell Biology	Theory	100	4	1
PSBT 104	Emerging technologies and molecular diagnostics	Theory	100	4	1
PSBTP101	Practical I	Practical	50	2	4
PSBTP102	Practical II	Practical	50	2	4
PSBTP103	Practical III	Practical	50	2	4
PSBTP104	Practical IV	Practical	50	2	4
	TOTAL		**600**	**24**	

MSc Biotechnology Course Structure

Semester II

Course code	Title	Theory /Practical	Marks	Credits	Nos of Lectures/ week
PSBT 201	Bioinformatics and Biostatistics	Theory	100	4	1
PSBT 202	Plant and Animal Biotechnology	Theory	100	4	1
PSBT 203	Bioprocess Engineering and technology	Theory	100	4	1
PSBT 204	Intellectual property rights and Bioethics	Theory	100	4	1
PSBTP201	Practical I	Practical	50	2	4
PSBTP202	Practical II	Practical	50	2	4
PSBTP203	Practical III	Practical	50	2	4
PSBTP204	Practical IV	Practical	50	2	4
	TOTAL		**600**	**24**	

Teaching pattern:

One (01) Credit would be of thirty- forty (30-40) learning hours; of this more than fifty percent of the time will be spent on class room instructions including practical as prescribed by the University. Rest of the time spent invested for assignments, projects, journal writing, case studies, library work, industrial visits, attending seminars / workshops, preparations for examinations etc. would be considered as notional hours. The present syllabus considers (60L as class room teaching and 15 lectures as Notional hours/ paper). Each lecture duration would be for 60 min. The names of the reference books provided in the syllabus are for guidance purpose only. Students and faculty are encouraged to explore additional reference books, online lectures, videos, science journals for latest/ additional information.

Scheme of Examinations:

(a) Internal assessment of 40 marks per course per semester should be conducted.

(b) External assessment of 60 marks per course per semester at the end of every semester

(c) Practical examination of 200 marks should be conducted at the end of every semester.

A. Theory -Internal assessment (40%) -40 marks

Sr No	Evaluation type	Marks
1.	Assignments that can include article writing, report writing, preparation of a review, on any topic selected from each paper OR PowerPoint presentation on a topic from the syllabus or related to the syllabus Note: The student can submit only 2 assignments and give 2 PowerPoint presentations per semester. Respective college/department can decide the allocation.	30
2.	**a.** Active participation in routine class instructional deliveries	05
	b Overall conduct as a responsible student, w.r.t manners, skill in articulation, leadership qualities demonstrated through organizing co-curricular activities, etc.	05
	Total Marks	40

B. Theory -External examination -60%

Semester End Theory Assessment- 60 marks

- The duration of these exam will be of 2.5 hours
- The theory question paper will have 5 questions each of 12 marks.
- For each unit there will be one question and the fifth will be based on all the four units.
- The fifth question will have 6 subquestions out of which the student has to attempt any 3.
- All questions shall be compulsory with internal choice within the questions such that each question will be set of 24 marks with options.

Practical Examination Evaluation scheme (50 marks per paper)

A Certified copy journal is essential to appear for the practical examination.

1.	Practical Question 1	25
2.	Practical Question 2	15
3.	Journal	5
4.	Viva Voce	5
OR		
1.	Practical Question	40
2.	Journal	5
3.	Viva Voce	5

Note:

- In case of any changes in the above-mentioned evaluation scheme, the chairperson of examinations would provide the necessary details and the format.
- The practical examinations at a center would be evaluated by one external assigned by the University and one internal examiner assigned by the college/department.

M.Sc. Biotechnology
Semester –I

Paper-I Biochemistry (PSBT 101)

Units	Topics	Credit	No of lectures
Unit-I Glycobiology & Membrane Biochemistry	Glycosylation of Biomolecules - Synthesis N-linked, O-linked, and GPI linked glycoproteins and role of glycosylation. Lipid aggregates: micelles, bilayers and liposomes- structure, types, preparation, characterization, and therapeutic applications of liposomes. Composition and Architecture of membrane: structural lipids in membranes, membrane bo und proteins - structure, properties, and function. Membrane Dynamics: lipid movements, flippase, FRAP, Lipid raft, Membrane fusion. Solubilization of the membrane by using different detergents.	1	15
Unit- II Protein Folding	Denaturation and Renaturation of proteins; Denaturants and their mode of action; Anfinsen's classical experiment; Folding curves and transitions; Types of protein folding and intermediates; Models of protein folding; Assisted protein folding (Chaperones); Misfolding and diseases. Protein degradation: Ubiquitin-proteasome pathway and lysosomal proteolysis.	1	15
Unit- III Biochemistry of Nucleic acids	Forces stabilizing nucleic acid structures, triple helix. Superhelix topology- linking number, Twist and writhing number, measurement of supercoiling and Topoisomerases. Nucleic acid binding protein – Leucine Zipper, Zinc fingers, OB fold, Beta Barrel, Helix-turn-helix, Helix-loop-helix. Biosynthesis of nucleic acids and inborn errors of nucleic acid Metabolism. Methodologies for detection: Protein –Protein and DNA – Protein interactions: Gel retardation assay, DNA foot printing, Yeast 2 Hybrid Method advantages and limitations, yeast split-hybrid and reverse two-hybrid systems, Co-Immunoprecipitation (Co-IP) and Far-Western Blot Analysis.	1	15

Unit- IV Bioenergetics and regulation of metabolism	Biosynthesis of Amino acids; phenylalanine, tyrosine, threonine and methionine. Bioenergetics- coupled interconnecting reactions in metabolism; oxidation of carbon fuels; recurring motifs in metabolism. Elucidation of metabolic pathways: Experimental approaches to the study of Metabolism. Integration of central metabolism; entry/ exit of various biomolecules from central pathways, principles of metabolic regulation. Strategies of energy Metabolism: organ specialization- Brain, Muscle, Adipose Tissue, Liver, Kidney. Metabolic Homeostasis: Regulation of Appetite, Energy Expenditure, and Body Weight; Metabolic Adaptation: Starve–Feed Cycles, insulin signaling and Diabetes Mellitus, target of rapamycin (TOR).	1	15

Paper II – Immunology (PSBT102)

Unit	Topics	Credit	No of Lectures
I Vaccinology	Active and passive immunization; live, killed, attenuated, subunit vaccines; vaccine technology: role and properties of adjuvants, recombinant DNA and protein based vaccines, plant-based vaccines, reverse vaccinology; peptide vaccines, conjugate vaccines; antibody genes and antibody engineering: chimeric, generation of monoclonal antibodies, hybrid monoclonal antibodies; catalytic antibodies and generation of immunoglobulin gene libraries, idiotypic vaccines and marker vaccines, viral-like particles (VLPs), dendritic cell based vaccines, vaccine against cancer, T cell based vaccine, edible vaccine and therapeutic vaccine.	1	15
II Clinical Immunology	Immunity to infection : bacteria, viral, fungal and parasitic infections (with examples from each group); hypersensitivity: Type I-IV; transplantation: immunological basis of graft rejection; clinical transplantation and immunosuppressive therapy; tumor immunology: tumor antigens; immune response to tumors and tumor evasion of the immune system, cancer immunotherapy; immunodeficiency: primary immunodeficiencies, acquired or secondary immunodeficiencies, autoimmune disorder, anaphylactic shock, immunosenescence, immune exhaustion in chronic viral infection, immune tolerance, NK cells in chronic viral infection and malignancy	1	15
III- Immunogenetics	Major histocompatibility complex genes and their role in autoimmune and infectious diseases, HLA typing, human major histocompatibility complex (MHC), Complement genes of the human major histocompatibility complex: implication for linkage disequilibrium and disease associations, genetic studies of autoimmunity; types of autoimmune diseases; mechanism and role of CD4+ T cells; MHC and TCR in autoimmunity; treatment of autoimmune diseases; rheumatoid arthritis, systemic lupus erythematosus and multiple sclerosis, genetics of human immunoglobulin, immunogenetics of spontaneous control of HIV, KIR complex.	1	15

IV: Antigen-antibody interactions	Precipitation, agglutination and complement mediated immune reactions; advanced immunological techniques: RIA, ELISA, Western blotting, ELISPOT assay, immunofluorescence microscopy, flow cytometry and immunoelectron microscopy; biosensor assays for assessing ligand –receptor interaction; CMI techniques: lymphoproliferation assay, mixed lymphocyte reaction, cell cytotoxicity assays, apoptosis, transgenic mice, gene knock outs.	1	15

Paper III- Cell Biology (PSBT 103)

Unit	Topics	Credit	Number of lectures
I- Dynamics and organization of cell	Universal features of cells; cell chemistry and biosynthesis: chemical organization of cells; internal organization of the cell - cell membranes and cell organelle; dynamics of DNA and mechanisms based on central dogma; chromatin control: gene transcription and silencing by chromatin Writers,-Readers and –Erasers; replication, transcription and translation machineries mitochondrial genetic code translation product cleavage, modification and activation.	1	15
II- Cellular signaling, transport and trafficking	Cellular signaling Molecular mechanisms of membrane transport, nuclear transport, transport across mitochondria and chloroplasts; intracellular vesicular trafficking from endoplasmic reticulum through Golgi apparatus to lysosomes/cell exterior. Cell signaling- intercellular communications- nerve impulses, neurotransmitters; agonist and antagonist reactions	1	15
III- Cellular processes – manipulations	Cell cycle and its regulation; cell divisions and related machineries; cell differentiation: stem cells, their differentiation into different cell types and organization into specialized tissues; cell-ECM and cell-cell interactions; cell receptors and transmembrane signaling; cell motility and migration; cell death: different modes of cell death and their regulation. Isolation of cells and basics of cell culture; observing cells under a microscope, analyzing and manipulating DNA, RNA and proteins.	1	15
IV- Genome instability and cell transformation	Mutations, proto-oncogenes, oncogenes and tumor suppressor genes, physical, chemical and biological mutagens; types of mutations; Epigenetic mutations intra-genic and inter-genic suppression; transpositions-transposable genetic elements in prokaryotes and eukaryotes, role of transposons in genome; viral and cellular oncogenes; tumor suppressor genes; structure, function and mechanism of action; activation and suppression of tumor suppressor genes; oncogenes as transcriptional activators.	1	15

Paper IV Emerging technologies and molecular diagnostics (PSBT 104)

Unit	Topics	Credit	Lectures
Unit I- Functional genomics and proteomics	**Genomics** Gene expression by SAGE and Microarrays- Construction of microarrays – genomic arrays, cDNA arrays and oligo arrays and its applications, NGS platforms, high and low read sequences **Proteomics;** ***Separation and Identification of Proteins*** 2D-PAGE, isoelectric focusing, Edman reaction Protein tryptic digestion and peptide mass fingerprinting mass spectrometry, MALDI-TOF ***Protein Expression Profiling***; Protein Microarrays/ Protein chips: Types and applications **Gel-based quantitative proteomics:** DIGE (Difference in Gel Electrophoresis);**Gel-free based quantitative proteomic:** Surface plasmon resonance, MS based used with stable-isotope tagging, ***In vivo labelling***- SILAC, ***Invitro labelling***- ICAT: Clinical and biomedical applications of proteomics, Introduction to metabolomics, lipidomics, metagenomics and systems biology.	**1**	**15**
Unit II Basic and Advanced Microscopy:	Light Microscopy: lenses and microscopes, resolution: Rayleigh's Approach, Darkfield; Phase Contrast; Differential Interference Contrast; fluorescence and fluorescence microscopy: what is fluorescence, what makes a molecule fluorescent, fluorescence microscope; optical arrangement, light source; filter sets: excitation filter, dichroic mirror, and barrier, optical layout for image capture; CCD cameras; back illumination, binning; recording color; three CCD elements with dichroic beamsplitters, boosting the signal. Confocal microscopy. Advanced fluorescence techniques: FLIM, FRET, and FCS, Fluorescence Lifetime, Fluorescence Resonant Energy Transfer (FRET), Fluorescence Correlation Spectroscopy (FCS), Evanescent Wave Microscopy; Near-Field and Evanescent Waves, Total Internal Reflection Microscopy; Near-Field Microscopy; Beyond the Diffraction Limit: Stimulated Emission Depletion (STED), Super-Resolution Summary, Super-Resolution Imaging with Stochastic Optical Reconstruction Microscopy (STORM) and Photoactivated Localization Microscopy (PALM).	1	**15**

Unit III CRISPER CAS and Molecular cytogenetics	**CRISPER CAS**: History of its discovery, elucidation of the mechanism including introduction to all the molecular players development of applications for *in vivo* genome engineering for genetic studies, promise of the technology as a next generation therapeutic method Introduction to chromosomal abnormalities. **Advanced Cytogenetic techniques and applications** - FISH , M-FISH ,SKY, CGH, Microarrays principle, methodology. Molecular Approaches for Delineating, Marker Chromosomes, Prenatal Diagnosis of Common Aneuploidies, Preimplantation FISH Diagnosis of Aneuploidies, Molecular Cytogenetics in Reproductive Pathology Interphase FISH Studies of Chronic Myeloid Leukemia, FISH Detection of HER2 Amplification in Breast Cancer, Chromogenic In Situ Hybridization and FISH in Pathology,	1	**15**
Unit IV Diagnostic Microbiology	Techniques: Molecular amplification techniques • Target amplification systems • Probe amplification systems • Signal amplification PCR in molecular diagnostics; viral and bacterial detection Quantitation of organisms – internal controls, external standards, calibrators, absolute and relative quantification Identification and classification of organisms using molecular markers- 16S rRNA typing/sequencing Detection and identity of microbial diseases Direct detection and identification of pathogenic-organisms/ viruses E.g. TB and HIV Clinical utility of molecular diagnostics tests (NAAT) for Hepatitis and AIDS. Molecular identification of fungal pathogens Pharmacogenetics	1	**15**

17. Microarray bioinformatics by Dov Sketel , Cambridge university press 2003

Practical I PSBTP101+ PSBTP104 **4 Credits**

1. To prepare an Acetate and Phosphate buffers using the Henderson-Hassel Bach equation.
2. To determine an unknown protein concentration by plotting a standard graph of BSA using UV-Vis Spectrophotometer and validating the Beer- Lambert's Law.
3. Protein gel staining techniques: silver staining, Activity staining: LDH, glycoprotein staining
4. Viscosity studies of proteins
5. Identification of sugars in fruit juices using thin layer chromatography.
6. Isolation of starch from potato and its estimation by anthrone method.
7. The isolation and assay of glycogen from liver and skeletal muscles of bird/mammal.
8. Antimicrobial sensitivity test and demonstration of drug resistance.
9. Operation and maintenance of light microscope – Write up
10. Microscopy types Confocal, Fluorescence, STORM – demonstrations/videos and pictures – Write up
11. Photo album of chromosomal abnormalities in normal and disease condition
    numerical detected by using different probes – centromeric, locus specific, telomeric Structural - Translocations and fusion genes
    Detection of inversions and interstitial deletions by SKY
    CGH for a disease or cancer
12. Demonstration/ video of 2D PAGE
13. Demonstration of Affinity chromatography

Practical II PSBTP102+PSBTP103 **4 credits**

1. Preparation of TAB and sterility testing
2. Demonstration of Western blotting
3. Perform serum electrophoresis (horizontal)
4. To perform the Dot blot assays
5. In-vitro demonstration of phagocytosis and calculating phagocytic index.
6. Latex bead agglutination / precipitation test for detection of rheumatoid factor (RF)
7. Separation of lymphocytes on Ficol Histopaque and viability count
8. Visit to a blood bank and preparation of report
9. Cell permeability testing- osmotic fragility
10. Isolation of cell organelle by differential centrifugation techniques from plant / animal sources
11. Isolation of mitochondrial DNA
12. Isolation of chloroplast DNA
13. Cell motility studies (bacteria, algae, cyanobacteria, protozoans,)
14. Cell death /apoptosis studies using flow-cytometry demonstration
15. Isolation and identification of mutagens of plant origin (demonstration/ video)

MSc Biotechnology

Semester II

Paper I -Biostatistics and Bioinformatics (PSBT 201)

Unit	Topic	Credit	lectures
I Basics of Bioinformatics and DNA sequence analysis	Bioinformatics basics: Computers in biology and medicine; Introduction to Unix and Linux systems and basic commands; Database concepts; Protein and nucleic acid databases; Structural databases; Biological XML DTD's; pattern matching algorithm basics; databases and search tools: biological background for sequence analysis; Identification of protein sequence from DNA sequence; searching of databases similar sequence; NCBI; publicly available tools; resources at EBI; resources on web; database mining tools. DNA sequence analysis: gene bank sequence database; submitting DNA sequences to databases and database searching; sequence alignment; pairwise alignment techniques; motif discovery and gene prediction; local structural variants of DNA, their relevance in molecular level processes, and their identification; assembly of data from genome sequencing.	1	**15**
II Multiple sequence alignments and protein modelling	Multiple sequence analysis; multiple sequence alignment; flexible sequence similarity searching with the FASTA3 program package; use of CLUSTALW and CLUSTALX for multiple sequence alignment; submitting DNA protein sequence to databases: where and how to submit, SEQUIN, genome centres; submitting aligned sets of sequences, updating submitted sequences, methods of phylogenetic analysis. Protein modelling: introduction; force field methods; energy, buried and exposed residues; side chains and neighbours; fixed regions; hydrogen bonds; mapping properties onto surfaces; fitting monomers; RMS fit of conformers; assigning secondary structures; sequence alignment- methods, evaluation, scoring; protein completion: backbone construction and side chain addition; small peptide methodology; software accessibility; building peptides; protein displays; substructure manipulations, annealing.	**1**	**15**
III-Biostatistics	Introduction and scope of statistics in biological studies and basic concepts. Collection of data, by different sampling methods: Simple random sampling, stratifies random sampling and systemic sampling. Measures of central tendency; Mean, Median and Mode. Measures of	1	**15**

	Dispersion: Variance/ standard deviation, coefficient of variation and standard error. Confidence limits for mean and proportion. Probability and Basic concepts: Normal and binomial distribution. Correlation and regression analysis for a bivariate data: Scatter diagram		
IV- Biostatistics	Test of Hypothesis: Null hypothesis, alternate hypothesis, test statistics, Type I and Type II errors, level of significance and critical region. Z test: for a single sample, two samples and two sample proportion. t-test a single sample, two samples and testing the significance of the correlation. Coefficient: t paired test, x^2 test: As a goodness of fit and in 2x2 contingency test	1	15

Paper II-Plant and Animal Biotechnology (PSBT 202)

Unit	Topic	Credit	lectures
I Plant tissue culture and Animal cell culture	Plant tissue culture: historical perspective; totipotency; organogenesis; Somatic embryogenesis; establishment of cultures – callus culture, cell suspension culture, media preparation – nutrients and plant hormones; sterilization techniques; applications of tissue culture - micropropagation; somaclonal variation; androgenesis and its applications in genetics and plant breeding; germplasm conservation and cryopreservation; synthetic seed production; protoplast culture and somatic hybridization - protoplast isolation; culture and usage; somatic hybridization - methods and applications; cybrids and somatic cell genetics; plant cell cultures for secondary metabolite production. Animal cell culture: brief history of animal cell culture; cell culture media and reagents; culture of mammalian cells, tissues and organs; primary culture, secondary culture, continuous cell lines, suspension cultures; application of animal cell culture for virus isolation and *in vitro* testing of drugs, testing of toxicity of environmental pollutants in cell culture, application of cell culture technology in production of human and animal viral vaccines and pharmaceutical proteins.	1	15
II Plant Genetic manipulations	Genetic engineering: *Agrobacterium*-plant interaction; virulence; Ti and Ri plasmids; opines and their significance; T-DNA transfer; disarmed Ti plasmid; Genetic transformation - *Agrobacterium*-mediated gene delivery; cointegrate and binary vectors and their utility; direct gene transfer - PEG-mediated, electroporation, particle bombardment and alternative methods; screenable and selectable markers; characterization of transgenics; chloroplast transformation; marker-free methodologies; advanced methodologies - cisgenesis, intragenesis and genome editing; molecular pharming - concept of plants as biofactories, production of industrial enzymes and pharmaceutically important compounds.	1	15
III Animal reproductive biotechnology and Vaccinology	Animal reproductive biotechnology: structure of sperms and ovum; cryopreservation of sperms and ova of livestock; artificial insemination; super ovulation, embryo recovery and *in vitro* fertilization; culture of embryos; cryopreservation of embryos; embryo transfer technology; transgenic manipulation of animal embryos; applications of transgenic animal technology; animal cloning - basic concept, cloning for conservation for conservation endangered species; Vaccinology: history of development of vaccines, introduction to the concept of vaccines, conventional methods of animal vaccine	1	15

	production, recombinant approaches to vaccine production, modern vaccines.		
IV Molecular mapping and marker assisted selection	Molecular markers - hybridization and PCR based markers RFLP, RAPD, STS, SSR, AFLP, SNP markers; DNA fingerprinting-principles and applications; introduction to mapping of genes/QTLs; marker-assisted selection - strategies for Introducing genes of biotic and abiotic stress resistance in plants: genetic basis for disease resistance in animals; molecular diagnostics of pathogens in plants and animals; detection of meat adulteration using DNA based methods.	1	**15**

Paper III -Bioprocess engineering and technology (PSBT 203)

Unit	Topics	Credit	Lectures
I Basic principles of biochemical engineering	**Sources of Microorganisms Used in Biotechnology**- Literature search and culture collection supply, Isolation de novo of organisms producing metabolites of economic importance. **Strain Improvement**- Selection from naturally occurring variants, Manipulation of the genome of industrial organisms in strain improvement **Bioreactor design and analysis** Media formulation and optimization methods; sterilization of bioreactors aeration and agitation in bioreactors KLa value (factors affecting and methods of determination), heat transfer in bioprocess measurement and control of bioprocess parameters. **Bioprocess economics**	1	15
Unit II Production of proteins from recombinant microorganisms	**Principles of Microbial Growth** Batch Fermentation, Fed-Batch Fermentation Continuous Fermentation **Maximizing the Efficiency of the Fermentation Process** High-Density Cell Cultures, Increasing Plasmid Stability, Quiescent *E. coli* Cells, Protein Secretion and Reducing Acetate **Bioreactors** **Typical Large-Scale Fermentation Systems** Two-Stage Fermentation in Tandem Airlift Reactors, Two-Stage Fermentation in a Single Stirred-Tank Reactor, Batch versus Fed-Batch Fermentation **Harvesting Microbial Cells** **Disrupting Microbial Cells** **Downstream Processing** Protein Solubilization **Large-Scale Production of plasmid DNA** .	1	15
Unit III Applications of enzyme technology in food processing	**Introduction and scope** 1. Enzymes sourced from animals and plants used in food manufacturing technology 2. Enzyme usage in food applications. **Mechanism of enzyme function and reactions in food processes** 1 Starch-processing and related carbohydrates. 2. Lipases for the production of food components: interesterified fat Enzymes in protein modification: hydrolyzed protein 4., Enzymes in bread making - flavour, texture and keeping quality	1	15

	5. Enzymes in dairy product manufacture 6. Enzymes in fruit and vegetable processing and juice extraction 7.Enzymes in fish and meat processing 8. Beer Production using Immobilized Cell Technology.		
Unit IV Applications of microbial technology in food process operations and production, biofuels and biorefinery	1.Microbial biomass production: mushrooms, SCP 2.Fermented foods from: meat and fish, bread, Vegetables (sauerkraut, cucumber), Legumes and Oil Seeds soya bean fermentations 3. Beverages a) Stimulant Beverages -coffee, cocoa and tea fermentations b) Alcoholic beverages - Cider production 4.Food additives and supplements a) Lipids, Nucleosides, nucleotides and related compounds- Vitamins b) Natural food preservatives- bacteriocins from lactic acid bacteria – production and applications e.g. Nisin c) Microbial production of colours and flavours. d) Polyhydric alcohols: low-calorie sweetener particularly useful for sweetening food products for diabetics e) Microbial exopolysaccharides - Xanthan gum 5. Process Food wastes- for bioconversion to useful products (Compost, biofuels, biomass cheap source of raw material in fermentation etc).	1	15

Paper IV Intellectual property rights and Bioethics (PSBT 204)

Title	Details	Credits	Number of lectures
Unit 1 Introduction to IPR	Introduction to intellectual property; types of IP: patents, trademarks, trade secrets, copyright & related rights, industrial design, geographical indications, Biodiversity importance and legislation, International convention and treaties; plant variety protection and farmers rights act. , traditional knowledge.	1	**15**
Unit 2 Patents	Basics of patents: eligibility criteria, classification of patents, categories, special patents and patenting biological products. Patentable and Non-patentable inventions in India and abroad. Process of Patenting, Patent Search and Inventor's homework, drafting patent applications, patenting systems. Rights of the patent holder, assignment and licensing of patents and patent Infringement, case studies. Patent Agent.	1	**15**
Unit 3 Patentability of Biotechnology Inventions	Patentability of Biotechnology Inventions in India, Statutory Provisions Regarding Biotechnological Inventions Under the Current Patent Act 1970 (as Amended 2005). Biotechnological Inventions as Patentable Subject Matter, Territorial Nature of Patents,: From Territorial to Global Patent Regime, Interpreting TRIPS in the Light of Biotechnology Inventions, Feasibility of a Uniform Global Patent System, Merits and Demerits of Uniform Patent Law, Relevance of the Existing International Patent, Tentative Harmonisation Efforts, Implications of Setting up a Uniform World Patent System.	1	**15**
Unit 4 Bioethics	Introduction, bioethics in health care- euthanasia, artificial reproductive technologies, prenatal diagnosis, genetic screening, gene therapy, organ transplantation. Ethics of clinical research, Bioethics in research – cloning and stem cell research, Human and animal experimentation, Agricultural biotechnology - Genetically engineered food, environmental risk, labelling and public opinion. Bioterrorism.	1	**15**

Practical III-PSBTP201+ PSBTP203 4 credits

1. Using NCBI and Uniprot web resources
2. Introduction and use of various genome databases.
3. Sequence information resource: Using NCBI, EMBL, Genbank, Entrez, Swissprot/ TrEMBL, UniProt.
4. Similarity searches using tools like BLAST and interpretation of results.
5. Multiple sequence alignment using ClustalW.
6. Phylogenetic analysis of protein and nucleotide sequences.
7. Use of gene prediction methods (GRAIL, Genscan, Glimmer).
8. Using RNA structure prediction tools.
9. Use of various primer designing and restriction site prediction tools.
10. Use of different protein structure prediction databases (PDB, SCOP, CATH).
    (Practicals in biostatistics could be clubbed into a test paper for 25M for the practical examinations/ problems could be asked for 5 / 10M)
11. Measures of central tendency: Mean, median and mode for grouped and ungrouped data
12. Measures of dispersion: Standard deviation for grouped and ungrouped data: standard value for the mean and proportion
    Confidence limits for the mean and proportion
13. Probability: Normal distribution and Binomial distribution use of normal tables
14. Correlation and Regression: Estimation of correlation coefficient, to fit regression equations from bivariate data
15. Test of hypothesis: a) Z-test, b) t-test c) x^2 test d) f-test
16. Use of microorganism to produce a product. Detect utilization of substrate and formation of product at time intervals. Attempt purification of product e.g. enzyme.
1. Immobilize an organism / enzyme and detect the conversion of substrate to product.
2. Microbial pigment:
    a. production – factors affecting – pH, temp, nutrients, static/ shaker conditions, submerged/ surface.
    b. extraction – soluble and insoluble pigments- organic solvent extraction and purification.
3. Demonstration of media optimization by Placket Burman test- demonstration
4. Methods for measurement of cell mass:
    a. Direct physical measurement of dry weight, wet weight, or volume of cells after centrifugation.
    b. Indirect measurement of chemical activity such as nutrient utilization and product synthesized.
    c. Turbidity measurements employ a variety of instruments to determine the amount of light scattered by a suspension of cells.
5. Analytical techniques like HPLC, FPLC, GC, GC-MS *etc.* for measurement of amounts of products/substrates. Demonstration
6. Quality Assurance in a food industry – Field visit and report
7. Method validation for any biochemical test (Accuracy, Limit of Detection, Limit of Quantitation, Specificity, Linearity and range, Ruggedness and Robustness) – Report writing

Practical IV PSBTP202 +PSBTP204 4 credits

Plant tissue culture

1. Prepare culture media with various supplements for plant tissue culture.
2. Prepare explants of *Valleriana wallichii* for inoculation under aseptic conditions.
3. Isolate plant protoplast by enzymatic and mechanical methods and attempt fusion by PEG (available material).
4. Culture *Agrobacterium tumefaciens* and attempt transformation of any dicot species.
5. Generate a RAPD and ISSR profile of *Eremurus persicus* and *Valleriana wallichii*.
6. Prepare karyotypes and study the morphology of somatic chromosomes of *Allium cepa, A. sativum, A. tuberosum* and compare them on the basis of karyotypes.
7. Undertake plant genomic DNA isolation by CTAB method and its quantitation by visual as well as spectrophotometric methods.
8. Study genetic fingerprinting profiles of plants and calculate polymorphic information content. Demonstration

Animal cell culture:

9. Count cells of an animal tissue and check their viability.
10. Prepare culture media with various supplements for plant and animal tissue culture.
11. Prepare single cell suspension from spleen and thymus.
12. Monitor and measure doubling time of animal cells.
13. Chromosome preparations from cultured animal cells
14. Isolate DNA from animal tissue by SDS method.
15. Attempt animal cell fusion using PEG.
16. To study a patent and to develop a patent application for a product or process.
17. To write SOPs of 4 laboratory equipment or instruments.
18. Journal club- a minimum 2 weeks activity of reading and discussing research papers preferably with a mentor and making a poster in a group of 3/2 for presentation in form of Microsoft PowerPoint /coral draw. Poster prepared to be appended in the journal. Teachers are requested to encourage students to participate/ attend conferences/ seminars/ avishkar. The group of students to be evaluated for the same for 5M each in the practical examinations
19. Compilation of information on recommended biosafety practices in a Biotechnology/ Biology laboratory. (demonstration by field visit or video)

University of Mumbai

No. UG/ 03 of 2020-21

CIRCULAR:-

Attention of the Principals of the Affiliated Colleges, the Head of the University Departments and Directors of the recognized Institutions in Science & Technology Faculty is invited to the syllabus uploaded Academic Authority Unit which was accepted by the Academic Council at its meeting held on 27th February, 2013 **vide** item No.4.67 relating to the revised syllabus as per the (CBSGS) for the M.Sc.(Part-II) (Sem. III & IV) in Bio-Technology.

They are hereby informed that the recommendations made by the Ad-hoc Board of Studies in Bio-Technology at its meeting held on 6th May, 2020 and subsequently made by the Board of Deans at its meeting held on 20th July, 2020 have been accepted by the Academic Council at its meeting held on 23rd July, 2020 **vide** item No.4.104 and that in accordance therewith, the revised syllabus as per the (CBCS) of M.Sc. (Part II) (Sem. III & IV) in Bio-Technology has been brought into force with effect from the academic year 2020-21, accordingly. (The same is available on the University's website www.mu.ac.in).

(Dr. Vinod Patil)

PREAMBLE

In recent years, there has been a paradigm shift in education in terms of course content and learning outcomes. In keeping with it, the Faculty of Science & Technology, University of Mumbai, has taken a progressive step to align various programs under its purview with the current Higher Education Policy of the Government of India. The present M.Sc. Biotechnology Second Year (Semester III and IV) syllabus has been designed with the idea of incorporating outcome-based-learning for fruitful engagement of learners. The syllabus has undergone several curriculum revision exercise based on the remodeled M.Sc. Biotechnology Curriculum, May 2017, Department of Biotechnology, Ministry of Science and Technology, Government of India. The revised syllabus is an outcome of several rounds of deliberations, discussions, feedback and multiple brainstorming sessions involving various contributors & stakeholders- academicians, researchers, industry experts and students. Course Objectives and Course Outcomes have been clearly defined for each paper in the syllabus to guide teachers in order to make learning process more effective. A lot of focus has been given in the syllabus to cover latest developments in the area of biotechnology and to equip students with necessary knowledge and skills. Relevant papers to make students industry ready have also been included. Attempts have been made to draft a robust, well defined syllabus keeping in view the best learning outcome which shall enable students to pursue high quality research or increase employability of the students. Online course component has been introduced in the curriculum in keeping with the digital initiatives of MHRD to provide good quality self-learning content through MOOCs under SWAYAM and allied platforms.

It is hoped that the revised syllabus shall serve its objective of promoting outcome-based learning to meet the changing needs of the biotechnology sector.

Dr. Anuradha Majumdar (Dean, Science and Technology)
Prof. Shivram Garje (Associate Dean, Science)

	TOTAL		**600**	**24**	

Teaching pattern:

One (01) Credit would be of thirty-forty (30-40) learning hours; of this, more than fifty per cent of the time will be spent on classroom instructions including practical as prescribed by the University. Rest of the time would be invested for assignments, projects, journal writing, case studies, library work, industrial visits, attending seminars/workshops, preparations for examinations etc. would be considered as notional hours. The present syllabus considers (60L as classroom teaching and 15 lectures as Notional hours/ paper). Each lecture duration would be for 60 min. The names of the reference books provided in the syllabus are for guidance purpose only. Students and faculty are encouraged to explore additional reference books, online lectures, videos, science journals for latest/ additional information.

Scheme of Examinations:

(a) Internal assessment of 40 marks per course per semester should be conducted.

(b) External assessment of 60 marks per course per semester at the end of every semester

(c) Practical examination of 200 marks should be conducted at the end of every semester.

A. Semester III- Theory -Internal assessment (40%) -40 marks

Sr No	Evaluation type	Marks
1.	Assignments that can include article writing, report writing, preparation of a review, on any topic selected from each paper OR PowerPoint presentation on a topic from the syllabus or related to the syllabus *Note: The student can submit only 2 assignments and give 2 PowerPoint presentations per semester. Respective college/department can decide the allocation.*	30
2.	**a.** Active participation in routine class instructional deliveries	05
	b Overall conduct as a responsible student, w.r.t manners, skill in articulation, leadership qualities demonstrated through organizing co-curricular activities, etc.	05
	Total Marks	40

Semester IV- Theory -Internal assessment (40%) -40 marks

Sr. No	Evaluation type	Marks
1.	**For PAPER 1 & 2** Assignments that can include article writing, report writing, preparation of a review, on any topic selected from each paper OR PowerPoint presentation on a topic from the syllabus or related to the syllabus *Note: The student can submit only 1 assignment and give 1 PowerPoint presentations per semester. Respective college/department can decide the allocation* **FOR PAPER 3:** The students have to present a clinical case/trial study report.	30
2.	**a.** Active participation in routine class instructional deliveries	05
	b Overall conduct as a responsible student, w.r.t manners, skill in articulation, leadership qualities demonstrated through organizing co-curricular activities, etc.	05
	Total Marks	40

Sr. No	Evaluation type	Marks
3.	**FOR PAPER 4:** The internal assessment will comprise of the following: a. Online course: The student is expected to complete at least one online course relevant for the subject from any of the appropriate reputed online platforms. A proof of successful completion of the online course must be provided for the award of marks.	20
	b. Research Proposal: The student is expected to submit a research proposal relevant to the subject.	20
	Total Marks	40

B. Theory -External examination -60%

Semester End Theory Assessment- 60 marks

- The duration of this exam will be of 2.5 hours (150 minutes)
- The theory question paper will have 5 questions each of 12 marks.
- For each unit, there will be one question and the fifth will be based on all the four units.
- The fifth question will have 6 sub-questions out of which the student has to attempt any 3.
- All questions shall be compulsory with internal choice within the questions such that each question will be set of 24 marks with options.

Practical Examination Evaluation scheme (50 marks per paper)

1.	Practical Question 1	25
2.	Practical Question 2	15
3.	Journal	5
4.	Viva Voce	5
OR		
1.	Practical Question	40
2.	Journal	5
3.	Viva Voce	5
	Semester IV- Project Dissertation	100 Marks
	For semester IV it is mandatory for students to undergo Hands-on Project training in an established research laboratory or college laboratory for 4-6 months; This should involve one or more relevant instrumentation technique. Thesis on the same to be evaluated by the guide alternatively by an internal examiner for 50M based on the student's performance, written matter and experimentation. A certificate must be appended with the thesis. The external examiner will assess for 50M as a Presentation during practical exams. Marks allotted by Internal examiner would be scaled down if required as per university guidelines.	

A certified copy of the journal is essential to appear for the practical examination.

Note:

- In case of any changes in the above-mentioned evaluation scheme, the chairperson of examinations would provide the necessary details and the format.
- The practical examinations at a center would be evaluated by one external examiner assigned by the University and one internal examiner assigned by the college/department.

M.Sc. BIOTECHNOLOGY

SEMESTER- III

PSBT301- Applied Virology & Microbiology				
Course Objectives	Students will be exposed to pandemic diseases, significance of epidemiology in studying various diseases and societal & economic issues related to such diseases**.** Students will also learn details about emerging viral, bacterial, parasitic pathogens. Students will learn advanced, automated methods for determining antimicrobial susceptibility, drug resistance and various aspects of biofilms.			
Course Outcomes	Students will understand epidemiological principles in prevention, control and management of pandemic disease. They will acquire understanding of antimicrobial resistance for management of drug resistance in population. Students will understand the different aspects of biofilm and their management. They will also get insights into latest development of diagnostics & therapeutics for such diseases.			
Course Code	**Unit**	**Unit Details**	**Credits**	**Lectures**
PSBT302	I Pandemic diseases, pathogenesis, diagnosis and treatment	Introduction to Pandemic diseases and causative agent like H1N1, MERS, SARS, Swine flu, COVID-19, Nipah virus, Ebola virus. Structure of these viruse-coat and envelope protein, genome composition Pathogenesis (Mechanism of infection) and Acute Clinical manifestations (Signs and symptoms) of H1N1, MERS, SARS, Swine flu, COVID-19, Nipah virus, Ebola virus Diagnosis, and Treatment for H1N1, MERS, SARS, Swine flu, COVID-19, Nipah virus, Ebola virus Economic and Social loss due to t Viruses	1	15
	II Epidemiology of infectious diseases	Concept of Host, Reservoir, Source of infection, Carrier , Epidemic, Endemic, Pandemic, Outbreak History , Definition scope, importance of epidemiology Epidemiology, Health & Public Health Epidemiological principles in prevention & control of disease Measures of disease frequency – Concept of incidence, prevalence, Incidence rate, cumulative incidence, case fatality Epidemiological studies Organizations in disease control & Research – WHO, CDC, UNICEF, NACO, ICMR, NARI, NIV & NGOs	1	15

	III Medical Microbiology	Emerging Pathogens / Infections : Diseases caused by Bacteria / parasites/ viruses Name of causative agent, Name of disease caused, History, Antigenic structure, virulence factors, source of infection, Transmission, Pathogenesis, Clinical manifestations, Laboratory diagnosis, Treatment, Prophylaxis, vaccines , Current research and developments Bacteria as emerging pathogens / Diseases caused by bacteria : MOTT, Legionella, Conditions caused by *Helicobacter pylori* Viruses as emerging pathogens / Diseases caused by viruses : HIV (AIDS), Chikungunya, Dengue, Parasites as emerging pathogens / Diseases caused by parasites : Malaria , *Entamoeba histolytica* (Amoebic dysentery)	1	15
	IV Biofilms & Antimicrobial Activity	Structure of Biofilm – Extracellular polymeric substances, Biofilm architecture. Stages in formation of Biofilm. Microbial interactions in Biofilms (Quorum sensing) Need for formation of Biofilms by microorganisms Microorganisms commonly associated with biofilms on indwelling medical devices Response of biofilms to host defense mechanisms & antimicrobial agents Recent advances in biofilm management. Conventional methods of drug susceptibility testing (Kirby-Bauer disc diffusion, Stoke's method, E test) Advanced methods- Macro & Micro broth dilution methods, Time kill curves, serum killing curves, checker-board assays. Detection of drug resistance in Staphylococci, Streptococci, Enterococci. Automated methods of sensitivity testing. Concept of CLSI standards	1	15

PSBTP-301 Practicals

1. Viral Titering – Plaque Assay, Tissue Culture Infectious Dose (TCID), Chicken Embryo Infectious Dose (CEID)
2. Immunoassays: For detection of the virus antigens by ELISA / RIA
3. Detection techniques for COVID like RT- PCR and various RAPID tests
4. Diagnosis of dengue (kit method)
5. Diagnosis of Chikungunya (kit method)
6. Antibiotics susceptibility testing by broth Macro dilution method & Micro broth dilution method
7. Study of microbial biofilm formation on various surfaces & Biofilm visualization by staining
8. Demonstration of minimum biofilm inhibition concentration of antibiotics/disinfectants.

PSBT302-Environmental Biotechnology				
Course Objectives:		This course aims to introduce learners to latest concepts in environmental biotechnology, various types of pollutions, monitoring, latest mitigation strategies and management of the same. Health hazards of pollution and waste, solid waste management, biodiversity concepts and data management and environmental monitoring.		
Course Outcomes:		At the end of the course, students will be able to understand various concepts of environmental biotechnology, latest development in the area and use of microbiological, molecular and analytical methods in environmental biotechnology.		
Course Code	**Unit**	**Unit Details**	**Credits**	**Lectures**
PSBT 302	I Air	Air pollution & air Quality Monitoring, Sampling, Source Apportionment. Air Pollution Management in Urban Settlement & Rural Areas, Integrated Air Pollution Management, Green Belt. Biofilters/ Bioscrubber. Catalytic Systems. Green Technology. Ozone Layer Depletion Atmospheric Brown Cloud Impact on Flora and Fauna Impact on Crop Yield, concept of carbon credit, footprint.	1	**15**
	II Soil	Causes of soil salinity; Chemical and metallic pollution of agricultural soil; Mining and soil pollution; Soil pollution and air quality; Bioleaching of metals, bioaugmentation & biomagnifcation for soil remediation. Phytostabilization - Contaminant removal, Soil cover, Rhizosphere modification, Geotextile capping solid waste; Industrial solid waste; Domestic solid waste; Agricultural solid waste; Municipal solid waste; Major sources of solid wastes; Effects of solid waste generation on quality of air, water and public health; solid waste management, Disposal of organic and medical waste; Recovery and recycling of metallic waste; Disposal of plastic waste and hazardous wastes.	1	15
	III Water	Biofilms in treatment of waste water; Biofilm development and biofilm Kinetics; Aerobic Biofilms. Marine pollution-major pollutants (heavy metal, pesticide, oil, thermal, radioactive, plastics, litter and microbial, microplastics); Biological indicators (Marine microbes, algae and crustaceans) and accumulators: Biotechnological application of hazardous waste management of water; Use of microbial systems, Phytoremediation strategies in constructed wetlands, Designing constructed wetlands, Substrate, Hydraulic loading rate, Hydraulic retention time, The selection of plant species, Surface area of	1	15

		wetland, Mechanisms to remove pollutants from constructed wetlands		
	IV Biodiversity & Environment Monitoring	Introducing biodiversity informatics, Global patterns of distribution of biodiversity, biomes, Composition and distribution of biodiversity in India, Taxonomic Database Working Group (TDWG) standards, compatibility and interoperatability, taxonomically intelligent systems, Global biodiversity information system-Overview of the UNEP/GEF biodiversity data management project (BDM), Biosensors in Environmental Monitoring – Working & its application for monitoring environment pollutants, Application of protein biomarkers ; Biosensors and biochips. IOT for water quality monitoring – General working, Application, water Parameters	1	15

PSBTP 302-PRACTICALS

1. Soil and water quality assessment (temp, pH, salinity, water holding capacity of soil etc.)
2. Study of metal tolerance of microorganisms isolated from soil/water
3. Soil ecosystem analysis/ analysis of microorganisms of soil
4. Analysis of compost

5. Detection of heavy metals concentration in soil/ water
6. Study and comparison of different air samplers
7. Growth curve of metal tolerant organism isolated from soil/ water.

Introduction to Biologics and Biosimilars</td><td>Definition: Drugs, Small molecules, Large molecules/Biologics Categories of Biologics: protein-based hormones, enzymes, monoclonal antibodies, vaccines, blood products, and gene/ cellular therapies.
Similarities and Differences: Small molecules versus generics, Biologics versus Biosimilars.
USFDA Approved Small Molecules and USFDA Approved Generics
USFDA Approved Biologics and USFDA Approved Biosimilars
Indian Regulatory Scenario in relation to Small Molecules and Biologics
Therapeutic uses of some of the Biologics/Biosimilars
Acceptable quality differences between approved Biosimilar and innovator’s product</td><td>1</td><td>15</td></tr>
</table>

	Unit 2 **Production of Biologics and Biosimilars**	Reference Biologic and its significance, Choice of expression system/s and stability of cell lines Development of upstream and downstream processes and scale up to manufacturing Major factors contributing to the maintenance of product quality: raw materials and manufacturing conditions, virus filtration, mycoplasma removal, ultrafiltration Example: Production of Monoclonal antibody, downstream processing of Mab Introduction to the concept of Biobetters vs Biosimilars	1	15
	Unit 3 Characterization of Biologics and Biosimilars	Appearance, particulates, pH, osmolality, particle size Molecular Weight, Protein Sequence and/or amino acid composition Glycosylation, Sialylation, Phosphorylation, Acetylation, and Myristoylation, if any Sulfhydryl groups(s) and di-sulphide bridges. Size and Purity on HPLC/ MALDI Isoform pattern. Gel electrophoresis (IEF, SDS PAGE and Native PAGE), Western blot Fluorescence spectrum FTIR spectrum and NMR spectrum Bioassays, characterization using Monoclonal Antibody as an example	1	15
	Unit 4 Quality assurance & regulatory affairs of Biologics and Biosimilars	Introduction to Regulatory Affairs and approvals of Biosimilars, Products approved under the FD&C .PHS/BCPI Act 2009: Innovator Biologics Approval, Biosimilar Pathway, Totality of Evidence, Information required to demonstrate biosimilarity, Interchangeability, Product Switching, Product Naming Global regulatory framework	1	15

PSBT303- Practicals:

1) Electrophoresis {PAGE (native, SDS, reducing, non- reducing)} to characterize the protein with regard to its molecular weight, structure/subunits/SS bonds etc., or for detection of impurities in the product
2) Concentration of protein with Folin Lowry
3) Western blot/dot blot for purity of product demonstration/ dummy sandwich preparation of semi-dry or wet western blot sandwich.
4) HPLC /FTIR/NMR spectrum based theory questions may be asked for interpretation
5) Visit to a facility manufacturing Biosimilar

.

PSBT304- Molecular Enzymology and Enzyme Technology	
Course Objectives	To get familiarity with the basic concepts of enzymes like enzyme kinetics, catalytic power of enzymes, active site and transition sate, regulatory and allosteric enzymes, on protein enzymes.

	Techniques of enzyme purification and its importance. Need for enzyme engineering and its benefits and applications. Role of enzymes as a diagnostic tool and for industrial applications. Use of enzymes as Biosensors.
Course Outcomes	Enzyme deficiencies and use of enzymes as therapeutics. At the end of the course the student will be aware of the enzyme kinetics, the catalytic power of an enzyme, changes in the active site, and the importance of the transition state. The importance of obtaining enzymes in their pure form and the ways it can be achieved. The need for and methods for enzyme engineering to enhance its activity or half life. The significance of enzymes as diagnostic tools, in therapy, industrial application and as biosensors; and the outcome of enzyme deficiencies.

Course code	**Unit**	**Molecular Enzymology and Enzyme Technology**	**Credits**	**Lectures**
PSBT304	I **Basic concepts -**	Brief history and introduction; chemical nature and properties of enzymes; **how enzymes work**-mechanism of action; **catalytic power** and specificity of enzymes; types of catalysis; **active site**; **transition state** and evidence for enzyme transition state complementarity; enzyme kinetics – **factors affecting enzyme activity**; enzyme inhibition; enzyme specificity; **regulatory enzymes**, regulation of enzyme activity; **allosteric enzymes** and their kinetic properties; units of enzymes; non protein enzymes; coenzymes and cofactors; isoenzymes; enzyme pattern in diseases.	4	15
	II **Techniques of Enzyme purification and studies/enzyme engineering**	Based on molecular size (Dialysis/ ultrafiltration, density gradient centrifugation, size exclusion chromatography); based on solubility of proteins (Isoelectric precipitation, salting out); based on electric charge (Ion exchange chromatography, Electrophoresis-capillary electrophoresis, 2D electrophoresis); based on adsorption properties (Adsorption and Affinity chromatography). Other techniques: Immobilized metal ion affinity chromatography, Hydrophobic interaction chromatography, Reversed phase chromatography and		15

		Chromatofocusing. Enzyme engineering – Introduction, Objectives, Principles, Examples and Steps involved in enzymes engineering. Random mutagenesis and molecular breeding of DNA. Recent advances in Rational approaches for Enzyme engineering. Applications of enzyme engineering.		
	III **Industrial & medical application of enzymes**	Textile Industry, Detergent Industry , Pulp and Paper Industry , Animal Feed Industry: Enzyme Technology for Detoxification of Mycotoxins in Animal Feed , Phytases for Feed Applications and Leather Industry. Enzyme Applications for Human and Animal Nutrition. Biosensors – Introduction, instrumentation, Types and examples. Enzymes based sensors as diagnostic tools- Biosensors for Blood Glucose, Biosensors for Urea in Blood and Urine, Biosensors for Uric Acid, Biosensors for Arginine, Biosensors for Asparagine, Biosensors for Creatinine, Biosensors for Cholesterol, Allosteric enzyme-based biosensors.		15
	IV **Enzyme deficiencies/diagnostic enzymes/ therapeutics**	Disorders of amino acid metabolism- Phenylketonuria, Alkaptonuria, Homocystinuria. Disorders of carbohydrate metabolism – Galactosemia, Hereditary fructose intolerance, Hereditary lactose intolerance. Disorder of lipid metabolism - Gaucher disease, Fabry disease. Disorders of purine and pyrimidine metabolism- HGPRT deficiency, Adenosine deaminase deficiency, Orotic aciduria. Enzymes in diagnosis of diseases- Liver disorders, Cancer, Cardiac disorders. Role of Other enzymes- Lysozyme, Butyrylcholinesterase and Lipases. Therapeutic uses of enzymes - enzymes in replacement therapy,		15

		enzymes in cancer treatment, enzymes for fibrinolysis, enzymes used for various treatments and enzyme gene therapy.		

PSBTP 304-PRACTICALS

1. Microbial Enzyme production:
   a. Partial purification using ammonium sulphate precipitation.
   b. Dialysis of the salt-precipitated protein.
   c. Assessing the enzyme activity and the protein content.
2. Effect of inhibitors/ chemicals on enzyme activity.
3. Extraction of enzymes from plant sources.
4. Measurement of Enzymatic Activity by Using a Colorimetric Assay.
5. Purification of Acid Phosphatase from Wheat Germ.
6. Enzyme Immunoassays.
   a. Methods for Enzyme Immunoassays.
   b. Non-competitive Solid-phase Enzyme Immunoassay.
   c. Competitive, Solid-phase Enzyme Immunoassay.
7. Determining of Alkaline Phosphatase (ALP) Concentration in Blood Plasma.
8. Measuring Lactase Enzymatic Activity.
9. Screening of new microbial strains for production of enzymes and perform its activity staining (zymogram).
10. To determine Specific activity of α Amylase from different sources.

M.Sc. BIOTECHNOLOGY

SEMESTER- IV

PSBT401- Nanobiotechnology				
Course Objectives	The course aims at providing a general and broad introduction to multi-disciplinary field of nanotechnology. It will familiarize students with the synthesis and applications of nanomaterials in the field of medicine. The course will also give an insight into complete systems where nanotechnology can be used to improve our everyday life.			
Course Outcomes	Students should be able to understand the basic science behind the properties of nanomaterials and the principles behind advanced experimental techniques for studying nanomaterials. Also understand the different aspects and applications of nanomaterials.			
Course Code	**UNIT**	**Unit Details**	**Credits**	**Lectures**
PSBT401	I Introduction to nanotechnology and nanomaterials	Introduction: Nanotechnology, Nature's biological pathway, Examples of nanomaterials and nanostructures found in nature. Nanometer-scale materials: Nanometer-Scale Metals Nano Metal Oxides, Nanopolymers, Quantum Dots, Carbon nanostructures. Nanorobotiocs devices of nature ATP synthase, the kinesin, myosin, dynein, flagella modulated motion.	1	15
	II Synthesis of Nanomaterials	Synthesis of nanometer-scale materials- Top down and Bottom up approaches. Self-Assembly of nanoparticles and its mechanism. Bio-directed synthesis and assembly of nanomaterials Synthesis and Assembly of Nanoparticles and Nanostructures Using Bio-Derived Templates	1	15
	III Nanotechnology in drug delivery	Biological Barriers to Nanocarrier-Mediated Delivery of Therapeutic and Imaging Agents, Nano-Sized Carriers for Drug Delivery, nano enabled drug delivery system, nanorobotics in medicine, Nanomedicine: biopharmaceutics, implantable materials, implantable chemicals, surgical aids	1	15
	IV	Applications of Nanomaterials.	1	15

	Applications of nanotechnology and Nanotoxicology	Nanotoxicology: Unique Properties, Toxicity of Nanomaterials, Factors Responsible for the Nanomaterial Toxicity, Routes of Exposure, Mechanisms of Nanoparticle Toxicity, In Vitro Testing Methods for Nanomaterials, Ecotoxicity Analyses of Nanomaterials		

PSBTP 401-Practicals:

1. Biosynthesis and characterization of eco-friendly silver nanoparticles by using plant/leaf extracts/green tea
2. Synthesis and characterization of zinc sulfide nanoparticles by A reverse micelle method
3. Synthesis and characterization of Fluorescent Carbon Nanoparticles from Candle Soot and its separation of using the Thin-Layer Chromatographic Method
4. Synthesis of alginate beads and investigation of citric acid release from a nanoshell coating of polymer
5. Antimicrobial activity testing of Nanoparticles/nanocomposites

PSBT 402-OMICS AND SYSTEMS BIOLOGY	
Course objective:	Bring awareness of the emerging fields of OMICS and Systems Biology, biological systems as a whole and how parts of a systems interact with each other To introduce the techniques involved in Genomics, Proteomics, transcriptomics, Lipidomics and Metabolomics. To describe the key features of human genome project To understand the applications of the different OMICS technology to screening, testing and treatment of human diseases . Perturbation of biological systems to study various responses in the biological systems using high throughput techniques. Introduction to the modellling systems , databases ,computational tools used in systems biology Data mining: The unit aims at introducing the concept of knowledge discovery process, data mining methods and various scientific application of data mining. The unit also explores application of systems biology in different field of health care.
Course outcome:	**At the end of the course learners will be able to** Understand how the data is generated by OMICS technologies to contribute to different databases. Understand , compare and contrast the techniques involved in Genomics, Proteomics, transcriptomics, Lipidomics and Metabolomics. Will be able to apply the different technologies of OMICS to the screening, testing and treatment of human diseases . Understand the structure and dynamics of a systems as a whole . Apply the different approaches to study systems biology by top down and bottom up approach. Introduction to concepts of knowledge discovery process and data mining methods. Understand the application of data mining in genomics , proteomics and development of tools in bioinformatics. Have the knowledge of applications of systems biology in development of personalized medicine, drug development.

Course Code	**UNIT**	**OMICS AND SYSTEMS BIOLOGY**	**credits**	**lectures (hours)**
PSBT 402	I OMICS- the OMICS technology , a broad outlook	Tools of Omics. Introduction to Epigenomics Human genome project- goals, conclusions and application. Structural and functional proteomics- protein- protein interaction and identification of interactions by various methods. Application of Proteomics and Genomics in human diseases –screening, testing and treatment of diseases. Metagenomics: concept, strategies, and applications in environmental biotechnology, agriculture and health	1	15
	II Transcriptomics, Lipidomics And Metabolomics	Introduction to Transcriptomics, Lipidomics And Metabolomics, Glycomics, Pharmacogenomics Techniques used in Lipidomics- Mass Spectroscopy, TLC, HPLC, GC and Capillary electrophoresis, MALDI. Technique used in Metabolomics- Mass Spectroscopy, Electrophoresis, chromatography- GC, LC & NMR. Technique used in Transcriptomics- next generation sequencing, northern blotting, DDRT-PCR, microarrays, gel free assays like biolayer interference, SPR. Applications of transcriptomics metabolomics and lipidomics in human diseases –screening, testing and treatment of diseases.(in clinical applications, personalised medicine, infectious diseases)	1	15
	III Introduction to systems biology	Systems biology towards systems level understanding of biological systemsSystems structure, systems dynamics,systems design and control, systems project Models and Modelling systems in systems biology What is a model? Key properties of models,Basic of computational models, networks, data integration, standards, and model organism Perturbation of biological systemsand 'Omics' as Quantitative high throughput experimental tools for systems biology Standards and formats for systems biologyComputational Databases and software	1	15

		tools in systems biology. Biological networks: metabolic networks, gene regulatory networks, PPI networks, genetic interaction (GI) networks, and signaling networks	1	
	IV Data mining and application of systems biology	Introduction to Knowledge of discovery in databases (KDD) What is knowledge, need for KDD,KDD process outline, concept and goals. Data Mining methods: Statistics – classification, correlation, association analysis, regression, and clustering Machine learning –Symbolic and statistical approaches. Text mining, and Pattern evaluation. Data mining in scientific applicationsApplication of systems biology : 1. Systems biology to systems medicine. 2. Application of systems biology in drug discovery and development 3. Systems biology and synthetic biology		15

PSBTP 402-PRACTICALS :

1. Gel electrophoresis of lipids (lipoproteins exrtacted from various sources) to separate and identify the lipid fraction
2. Preparation of report based on -Databases and data repositories used in systems Biology
3. Detection assay for gene expression using micro array and qRT –PCR (demonstration)
4. Identification of protein using analytical technique Mass spectroscopy (demonstration)

PSBT 403- Drug Discovery and Clinical Studies				
Course Objectives:	The objective of this course is to have a firm foundation in Drug Discovery and Clinical Studies. To provide students knowledge about Clinical Trial Design and Indian Regulations, Pharmacovigilance and Clinical Data Science.			
Course Outcomes:	By the end of the course the student will: Able to learn about drug discovery-design pathway using some in-silico tools. Able to understand the clinical trial design set up as well as they will gain information on rules-regulation and responsibilities in clinical studies.			
Course Code	**Unit**	**Drug Discovery and Clinical Studies**	**Credit**	**Lectures**
PSBT403	**I** **Clinical Research Informatics in Drug Discovery**	Introduction to the drug discovery & development • Source of drugs • Structural effects on drug action • Drugs derived from natural products • General principles of pharmacology • Drug development and testing process **Approaches to new drug discovery** • Computer-aided drug design • Identification of novel drug candidates and drug targets • Construction the signaling network of a drug using integer linear programming • Identification for druggable targets of a disease	1	15
	II **Clinical Trial Design And Indian Regulations**	**Clinical Trial Design** • Basic framework of clinical trial • Randomized clinical trials and different phases • Adaptive randomization methods • Seamless design • Internal pilot design • Design selection factors **Regulations** • The national regulatory body • Key documents in clinical research • Regulatory requirements for the conduct of clinical trials in India **The Roles and Responsibilities of Stakeholders in the Sharing of Clinical Trial Data** • Participants in clinical trials,	1	15

		• Investigators, • Research institutions and universities • Journals and Professional societies		
	III **Pharmacovigilance**	• Scope and purposes of pharmacovigilance • Adverse Drug Reactions (ADR) • ADR classification • Nature and mechanism of ADR • Concept of safety • Phases and types of DATA **The process of Pharmacovigilance** • Signal detection, evaluation and investigation, • Communication **Methods of evaluating effectiveness of action** **International regulatory collaboration** • WHO, CIOMS, ICH, ISoP, ISPE	1	15
	IV **Clinical Data Science**	• Data management in clinical research: An overview • Data Sources and Data Types • Standards in Healthcare Data • Research Data Stewardship for Healthcare Professionals • Preparing Data for Prediction Model Development • Prediction Modeling Methodology • Clinical Decision Support System	1	15

PSBTP 403-PRACTICALS:

1. A finding of a drug-gene interaction or potentially druggable category using The Drug Gene Interaction Database (DGIdb)
2. Recognition of binding patterns common to set of protein structures using ProBiS
3. Recognition of common spatial chemical binding patterns to a Set of Protein Structures using **Multi**ple Alignment of Protein **Bind**ing Sites (MultiBind) tool and analysis using RasMol/Jmol
4. Computational protein-ligand docking using AutoDock (DEMO)

PSBT 404-Scientific Writing and Food Biotechnology	
Course Objectives:	The objective of this course is: • To develop skills for the processing and analysis of scientific data. • To enable students to present their research results in the format of oral or poster presentations at conferences, to write scientific publications (theses, articles) and to prepare applications for scientific grants (research proposals). • To inculcate good scientific writing practices.
Course Outcomes:	On completion of the course students will be able to: • Think critically, organize and analyze scientific data. • Develop advanced scientific writing skills to write research articles, reviews, thesis, and proposals and to make oral, poster or powerpoint presentations. Understand the best practices of scientific writing by adhering to research ethics and by avoiding plagiarism.

course code		Scientific Writing and Food Biotechnology	credits	lectures
PSBT 404	**Unit I: Basic Scientific Writing and Plagiarism**	Introduction to scientific writing. Basic scientific writing skills: style and language, spelling, grammar, syntax, jargon and sentence structure. Elements of a scientific paper: abstract, introduction, materials & methods, results, discussion, references and drafting titles. Scientific writing process: thinking, planning, rough draft, revision of content. Processing data & application of statistics Displaying data: text, table, graph and defining terms and abbreviations. Statistical analysis and tools for experimental data. Referencing software: Mendeley, Endnote. Plagiarism: Definition, Common types of plagiarism, Intentional and Unintentional plagiarism, Detection of plagiarism by anti-plagiarism tools (Turnitin, Duplichecker, Viper, Copyleaks), Penalties for plagiarism, Avoiding plagiarism.	**1**	**15**
	Unit II: Advanced Scientific Writing	Guidelines for Medical writing. Scientific writing skills: Writing a research paper for biomedical journal, Writing science research papers and articles, Writing a research proposal, Writing a research report, Writing popular reports, Writing thesis and dissertation, Writing clinical study reports. Presentation skills: Oral presentation, Poster Preparation & presentation, Powerpoint presentations. Research ethics, Scientific misconduct.	**1**	**15**
	Unit III: Food Biotechnology- Nutraceuticals	Nutraceuticals and functional foods Definition, characteristic features, and classification, phytonutraceuticals, Prebiotics and Probiotics, Sources (with examples e.g. microbes, plants, algae, animals), blue biotechnology , food security, food preservation, Chemopreservation Food	**1**	**15**

		processing (animal and sea food), food packaging		
	Unit IV: Food biotechnology in management of health and disease	Applications of nutraceuticals in human health and nutrition- health effects of commonly used nutraceuticals and functional foods (case studies), Safety and Regulatory guidelines Nutraceuitcals in management of health and disease Development of designer foods for specific chronic diseases Nutraceutical adjuvants	**1**	**15**

PSBT 404-Practicals

A) Practical: Scientific writing

1. Exploration of various learning platforms in online courses listed below：

a. Online courses in fundamentals of Neuroscience from Harvard University https://online-learning.harvard.edu/course/fundamentals-neuroscience-part-1-electrical-properties-neuron?delta=0

b. Molecular Biology from MIT https://ocw.mit.edu/courses/biology/7-28-molecular-biology-spring-2005/

c. Introduction to Bioethics from Georgetown https://bioethicsarchive.georgetown.edu/phlx101-02/course.html#units/introduction

2. Write a research proposal on any topic of your interest from the MSc syllabus. For research proposal contents and format refer to NSF guidelines.
https://www.nsf.gov/pubs/policydocs/pappg19_1/nsf19_1.pdf
For reference work use Mendeley Desktop.
https://www.mendeley.com/guides/desktop

3. Complete an online course (Minimum 1 week) on the topic related to the biotechnology. Write a comprehensive report on the studied course contents.
a. Swayam https://swayam.gov.in/
b. NPTEL https://nptel.ac.in/noc/
c. MOOC https://www.it.iitb.ac.in/frg/wiki/images/7/7b/Demo-PPT.pdf
d. E-learning https://www.bellevuecollege.edu/elearning/start/intro/

B) Practical: (Food Technology - Nutraceuticals)

1. Estimation of total sugars from food products (dairy, fruit juices, bakery)
2. Determination of acid value of natural fats and oils.
3. Determination of iodine number of fats and oils.

4. Estimation of vitamin B by HPLC (demonstration)
5. Study of nutraceuticals important plants like Zinziber, Curcuma, Alovera, Asparagus, Ocimum etc.
6. Estimation of antioxidant property of phytochemical by DPPH.
7. Qualitative test for tannins, phenols, isoflavones, alkaloids using TLC.
8. Estimation of food preservatives/additives (Parabens) from food sample by HPLC (demonstration).
9. Estimate Cholesterol contents in given sample by Zak's methods.
10. Estimation of bio-burden by viable counts.
11. Estimation of gluten from food sample.
12. To study nutritional components (protein, carbohydrate, secondary metabolites, lipids, vitamin C) of following: Bee honey, Mushrooms, Lentils, Soya, Dairy product, Amla, Papaya, Spinach

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester III with Effect from the Academic Year 2017-2018

Elective Courses (EC)

Group A. Finance Electives

1. Basics of Financial Services

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Financial System	14
2	Commercial Banks, RBI And Development Banks	16
3	Insurance	15
4	Mutual Funds	15
	Total	**60**

Objectives

SN	Objectives
1	The course aims at explaining the core concepts of business finance and its importance in managing a business
2	The objectives of develop a conceptual frame work of finance function and to acquaint the participants with the tools, types, instruments of financial system in the realm of Indian Financial Market.

Sr. No.	Modules / Units
1	**Financial System:**
	• An overview of Financial System, Financial Markets, Structure of Financial Market (Organised and Unorganized Market), Components of Financial System, Major Financial Intermediaries, Financial Products, Function of Financial System, Regulatory Framework of Indian Financial System(Overview of SEBI and RBI-Role and Importance as regulators).
2	**Commercial Banks, RBI And Development Banks**
	• **Concept of Commercial Banks-** Functions, Investment Policy of Commercial Banks, Liquidity in Banks, Asset Structure of Commercial Banks, Non-Performing Assets, Interest Rate reforms, Capital Adequacy Norms. • **Reserve Bank of India-**Organisation &Management, Role And Functions • **Development Banks-**Characteristics of Development Banks, Need And Emergence of Development Financial Institutions In India, Function of Development Banks.
3	**Insurance:**
	• Concept, Basic Characteristics of Insurance, Insurance Company Operations, Principles of Insurance, Reinsurance, Purpose And Need Of Insurance, Different Kinds of Life Insurance Products, Basic Idea About Fire And Marine Insurance and Bancassurance
4	**Mutual Funds:**
	• Concept of Mutual Funds, Growth of Mutual Funds in India, Features and Importance of Mutual Fund. Mutual Fund Schemes, Money Market Mutual Funds, Private Sector Mutual Funds, Evaluation of the Performance Of Mutual Funds, Functioning of Mutual Funds In India.

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester III with Effect from the Academic Year 2017-2018

Elective Courses (EC)

Group A. Finance Electives

2. Introduction to Cost Accounting

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction	15
2	Elements of Cost	20
3	Cost Projection	15
4	Emerging Cost Concepts	10
	Total	**60**

Objectives

SN	Objectives
1	This course exposes the students to the basic concepts and the tools used in Cost Accounting
2	To enable the students to understand the principles and procedure of cost accounting and to apply them to different practical situations

Sr. No.	Modules / Units
1	**Introduction**
	• Meaning, Nature and scope-Objective of Cost Accounting-Financial Accounting v/s Cost Accounting- Advantages and disadvantages of Cost Accounting-Elements of Costs-Cost classification (concept only)- - Installation of Cost Accounting System, Process (Simple and Inter process) and Job Costing (Practical Problems)
2	**Elements of Cost**
	• **Material Costing**- Stock valuation (FIFO & weighted average method), EOQ, EOQ with discounts, Calculation of Stock levels (Practical Problems) • **Labour Costing** – (Bonus and Incentive Plans) (Practical Problems) • **Overhead Costing** (Primary and Secondary Distribution)
3	**Cost Projection**
	• Cost Sheet (Current and Estimated)) (Practical Problems) • Reconciliation of financial accounts and cost accounting (Practical Problems)
4	**Emerging Cost Concepts**
	Uniform Costing and Interfirm Comparison, Emerging Concepts – Target Costing, Benchmarking, JIT, The Balanced Scorecard; Strategic Based Control; concept, process, implementation of Balanced Scorecard, Challenges in implementation of Balanced Scorecard

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester III with Effect from the Academic Year 2017-2018

Elective Courses (EC)

Group A. Finance Electives

3. Equity and Debt Market

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Financial Market	15
2	Dynamics of Equity Market	15
3	Players in Debt Markets	15
4	Valuation of Equity & Bonds	15
	Total	**60**

Objectives

SN	Objectives
1	This paper will enable the students to understand the evolution of various aspects of financial markets which in turn will help them in framing the financial policies, development of financial instruments and processes and evolving the strategies during crisis. The teaching will be done mainly through materials available on internet and published research papers

Sr. No.	Modules / Units
1	**Introduction to Financial Market**
	• **Equity market** – meaning & definitions of equity share; Growth of Corporate sector & simultaneous growth of equity shareholders; divorce between ownership and management in companies; development of Equity culture in India & current position. • **Debt market** – Evolution of Debt markets in India; Money market & Debt markets in India; Regulatory framework in the Indian Debt market.
2	**Dynamics of Equity Market**
	• **Primary:** 1)IPO – methods followed (simple numerical) 2) Book building 3)Role of merchant bankers in fixing the price 4)Red herring prospectus – unique features 5)Numerical on sweat equity, ESOP & Rights issue of shares • **Secondary:** 1)Definition & functions of stock exchanges 2)Evolution & growth of stock exchanges 3)Stock exchanges in India 4)NSE, BSE OTCEI & overseas stock exchanges 5)Recent developments in stock exchanges 6)Stock market Indices
3	**Players in debt markets:**
	• **Players in debt markets:** 1)Govt. securities 2)Public sector bonds & corporate bonds 3)open market operations 4)Security trading corp. of India 5)Primary dealers in Govt. securities • **Bonds:** 1)Features of bonds 2)Types of bonds
4	**Valuation of Equity & Bonds**
	• **Valuation of equity**: 1. Balance sheet valuation 2. Dividend discount model(zero growth, constant growth & multiple growth) 3. Price earning model • **Valuation of bonds** 1. Determinants of the value of bonds 2. Yield to Maturity 3. Interest rate risk 4. Determinants of Interest Rate Risk

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester III with Effect from the Academic Year 2017-2018

Elective Courses (EC)

Group A. Finance Electives

4. Corporate Finance

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction	15
2	Capital Structure and Leverage	15
3	Time Value of Money	15
4	Mobilisation of Funds	15
	Total	**60**

Objectives

SN	Objectives
1	The objectives of develop a conceptual frame work of finance function and to acquaint the participants with the tools techniques and process of financial management in the realm of financial decision making
2	The course aims at explaining the core concepts of corporate finance and its importance in managing a business
3	To providing understanding of nature, importance, structure of corporate finance related areas and to impart knowledge regarding source of finance for a business

Sr. No.	Modules / Units
1	**Introduction**
	• **Introduction To Corporate Finance:** Meaning, Principles of Corporate Finance, Significance of Corporate Finance, Amount of Capitalisation, Over Capitalisation and Under Capitalisation, Fixed capital and Working Capital funds. • **Introduction to ownership securities**– Ordinary Shares, Reference Shares, Creditor Ship Securities, Debtors and Bonds, Convertible Debentures, Concept of Private Placement of Securities.
2	**Capital Structure and Leverage**
	• Introduction to Capital Structure theories, EBIT – EPS analysis for Capital Structure decision. • Cost of Capital – Cost of Debt, Cost of Preference Shares, Cost of Equity Shares and Cost of Retained Earnings, Calculation of Weighted Cost of Capital. • Introduction to concept of Leverage - Operating Leverage, Financial Leverage and Combined Leverage.
3	**Time Value of Money**
	• Introduction to Time Value of Money – compounding and discounting • Introduction to basics of Capital Budgeting (time value of money based methods) – NPV and IRR (Net Present Value and Internal Rate of Return) • Importance of Risk and Return analysis in Corporate Finance
4	**Mobilisation of Funds**
	Public deposits and RBI regulations, Company deposits and SEBI regulations, Protection of depositors, RBI and public deposits with NBFC's. Foreign capital and collaborations, Foreign direct Investment (FDI) Emerging trends in FDI Global Depositary Receipts, Policy development, Capital flows and Equity Debt. Brief introduction & sources of short term Finance Bank Overdraft, Cash Credit, Factoring

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester III with Effect from the Academic Year 2017-2018

Elective Courses (EC)

Group B. Marketing Electives

1. Consumer Behaviour

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction To Consumer Behaviour:	14
2	Individual- Determinants of Consumer Behaviour	16
3	Environmental Determinants of Consumer Behaviour	15
4	Consumer decision making models and New Trends	15
	Total	**60**

Objectives

SN	Objectives
1	The basic objective of this course is to develop an understanding about the consumer decision making process and its applications in marketing function of firms
2	This course is meant to equip undergraduate students with basic knowledge about issues and dimensions of Consumer Behaviour. Students are expected to develop the skill of understanding and analysing consumer information and using it to create consumer- oriented marketing strategies.

Sr. No.	Modules / Units
1	**Introduction To Consumer Behaviour:**
	• Meaning of Consumer Behaviour, Features and Importance • Types of Consumer (Institutional & Retail), Diversity of consumers and their behaviour- Types Of Consumer Behaviour • Profiling the consumer and understanding their needs • Consumer Involvement • Application of Consumer Behaviour knowledge in Marketing • Consumer Decision Making Process and Determinants of Buyer • Behaviour, factors affecting each stage, and Need recognition.
2	**Individual- Determinants of Consumer Behaviour**
	• Consumer Needs &Motivation (Theories - Maslow, Mc Cleland). • Personality – Concept, Nature of personality, Freudian, non - Freudian and Trait theories, Personality Traits and it's Marketing significance, Product personality and brand personification. • Self Concept – Concept • Consumer Perception • Learning - Theory, Nature of Consumer Attitudes, Consumer Attitude • Formation &Change. • Attitude - Concept of attitude
3	**Environmental Determinants of Consumer Behaviour**
	• Family Influences on Buyer Behaviour, • Roles of different members, needs perceived and evaluation rules. • Factors affecting the need of the family, family life cycle stage and size. • Social Class and Influences. • Group Dynamics & Consumer Reference Groups, Social Class & Consumer Behaviour - Reference Groups, Opinion Leaders and Social Influences In-group versus out-group influences, role of opinion leaders in diffusion of innovation and in purchase process. • Cultural Influences on Consumer Behaviour Understanding cultural and sub-cultural influences on individual, norms and their role, customs, traditions and value system.
4	**Consumer decision making models and NewTrends**
	• Consumer Decision making models: Howard Sheth Model, Engel Blackwell, Miniard Model, Nicosia Models of Consumer Decision Making • Diffusion of innovations Process of Diffusion and Adoption, Innovation, Decision process, Innovator profiles • E-Buying behaviour The E-buyer vis-a vis the Brick and Mortar buyer, Influences on E-buying

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester III with Effect from the Academic Year 2017-2018

Elective Courses (EC)

Group B. Marketing Electives

2. Product Innovations Management

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Innovations Management	15
2	Managerial Aspects of Innovations functions	15
3	Product innovations, Process Innovations and Innovations Diffusion	15
4	New Product Development Strategy	15
	Total	**60**

Objectives

SN	Objectives
1	To understand the concept of innovations and relevance of innovations in the present day scenario.
2	To understand the importance of protecting innovations and legal aspects related to innovations
3	To study product innovations, process innovations and innovations diffusion
4	To acquaint the students with stages in new product development

Sr. No.	Modules / Units
1	**Innovations Management**
	• **Introduction -Innovations Management** Innovations: Concept; Features; Types of Innovations; Innovations management; Features of Innovations Management; Significance of innovations; Principles of innovations. • **Thinking Tools for Innovations** Left and right brain thinking; Creative thinking; Traditional V/S Creative thinking; Intuition; Introduction to creativity; Process of creativity; Creativity methods • **Legal Aspects of innovations** Safeguarding innovations; Concept of Intellectual Property Rights; Patents; Patenting trends; trademarks; Industrial designs; Copyrights ;Trade secrets
2	**Managerial Aspects of Innovations functions**
	• **Organizing for Innovations** Introduction; Concepts; Organizational theories and structures; Traits of innovative organization; Factors influencing organizational design and Size decision. • **Strategizing Innovations** Introduction; Innovations as a strategy component; Developing innovation strategy; Innovation strategies; Market standing based strategies. • **Managing Innovations Functions** Introduction; Style at the top; Planning; Organizing; Staffing; Controlling; Characteristics of good management • **Climate and culture for innovations** Introduction; Need for creative organizations; Characteristics of creative organizations; Creating creative organizations – 7s framework; Fostering innovations climate and culture.
3	**Product innovations, Process Innovations and Innovations Diffusion**
	• **Introduction to product innovations** Types of new products; Technology strategy for product innovation; New product development process; Packaging innovations; Positioning innovations; New product failures; Cases of Innovating companies. • **Process Innovations** Introduction; Concept of Process; Features of process; Types of process innovations; Process Management; Process improvement methods; Business process reengineering; Benchmarking. • **Innovations Diffusion** Introduction; Concept of diffusion and adoption; Impact of innovations; Diffusion as an integral part of innovation strategy; Innovations diffusion theories; Factors influencing diffusion strategy; Internalization of innovations.
4	**New Product Development Strategy**
	• **New Product Development and Product specifications** Concept of new product development, specifications: Establishment of specifications, Establishing Target specifications; Setting the final specifications. • **Concept Generation, Selection and Testing** 5 step methods of concept generation, Methods for selecting a concept; Benefits of choosing a structured method; Concept screening; Concept scoring, 7- Test method of concept testing. • **Product testing** Introduction, Purpose of product testing; Overriding concerns of product testing; Major decision in constructing a product test.

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester III with Effect from the Academic Year 2017-2018

Elective Courses (EC)

Group B. Marketing Electives

3. Advertising

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Advertising	15
2	Strategy and Planning Process in Advertising	15
3	Creativity in Advertising	15
4	Budget, Evaluation, Current trends and careers in Advertising	15
	Total	**60**

Objectives

SN	Objectives
1	To understand and examine the growing importance of advertising
2	To understand the construction of an effective advertisement
3	To understand the role of advertising in contemporary scenario
4	To understand the future and career in advertising

Sr. No.	Modules / Units
1	**Introduction to Advertising**
	• Definition, Evolution of Advertising, Importance, Scope, Features, Benefits, Five M's of Advertising • Types of Advertising –consumer advertising, industrial advertising, institutional advertising, classified advertising, national advertising, generic advertising • Theories of Advertising : Stimulus Theory, AIDA, Hierarchy Effects Model, Means – End Theory, Visual Verbal Imaging, Cognitive Dissonance • Ethics and Laws in Advertising : Puffery, Shock Ads, Subliminal Advertising, Weasel Claim, Surrogate Advertising, Comparative Advertising Code of Ethics, Regulatory Bodies, Laws and Regulation – CSR, Public Service Advertising, Corporate Advertising, Advocacy Advertising • Social, cultural and Economic Impact of Advertising, the impact of ads on Kids, Women and Advertising
2	**Strategy and Planning Process in Advertising**
	• Advertising Planning process & Strategy : Introduction to Marketing Plan, Advertising Plan- Background, situational analysis related to Advertising issues, Marketing Objectives, Advertising Objectives, Target Audience, Brand Positioning (equity, image personality), creative Strategy, message strategy, media strategy, Integration of advertising with other communication tools • Role of Advertising in Marketing Mix : Product planning, product brand policy, price, packaging, distribution, Elements of Promotion, Role of Advertising in PLC • Advertising Agencies – Functions – structure – types - Selection criteria for Advertising agency – Maintaining Agency–client relationship, Agency Compensation.
3	**Creativity in Advertising**
	• Introduction to Creativity – definition, importance, creative process , Creative strategy development – Advertising Campaign – determining the message theme/major selling ideas – introduction to USP – positioning strategies – persuasion and types of advertising appeals – role of source in ads and celebrities as source in Indian ads – execution styles of presenting ads. • Role of different elements of ads – logo, company signature, slogan, tagline, jingle, illustrations, etc – • Creating the TV commercial – Visual Techniques, Writing script, developing storyboard, other elements (Optical, Soundtrack, Music) • Creating Radio Commercial – words, sound, music – scriptwriting the commercial – clarity, coherence, pleasantness, believability, interest, distinctiveness • Copywriting: Elements of Advertisement copy – Headline, sub-headline, Layout, Body copy, slogans. Signature, closing idea, Principles of Copywriting for print, OOH, essentials of good copy, Types of Copy, Copy Research

Sr. No.	Modules / Units
4	**Budget, Evaluation, Current trends and careers in Advertising**
	• Advertising Budget – Definition of Advertising Budget, Features, Methods of Budgeting • Evaluation of Advertising Effectiveness – Pre-testing and Post testing Objectives, Testing process for Advertising effectiveness, Methods of Pre-testing and Post-testing, Concept testing v/s Copy testing • Current Trends in Advertising : Rural and Urban Advertising, Digital Advertising, Content Marketing (Advertorials), retail advertising, lifestyle advertising, Ambush Advertising, Global Advertising – scope and challenges – current global trends • Careers in Advertising : careers in Media and supporting firms, freelancing options for career in advertising, role of Advertising Account Executives, campaign Agency family tree – topmost advertising agencies and the famous advertisements designed by them

Revised Syllabus of Courses of Bachelor of Management Studies (BMS) Programme at Semester III with Effect from the Academic Year 2017-2018

Elective Courses (EC)

Group B. Marketing Electives

4. Social Marketing

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Social Marketing & Its Environment	15
2	Social Marketing Plan, STP and Marketing Mix	15
3	Managing Behaviour for Social Change & NPO & CSR	15
4	Social marketing – A Sectoral Overview & Careers	15
	Total	**60**

Objectives

SN	Objectives
1	Understand the concept of social marketing, compare and contrast marketing in a profit-oriented corporate and a nonprofit social environment.
2	Analyze the impact of environment on social marketing & study the various behavior models/frameworks/theories for social change.
3	To study the basis of Segmentation, Targeting and Positioning and identify marketing mix of social marketing.
4	To provide an overview of the Not for Profit Sector (NPO) and comment on the CSR provision in the companies act of 2013.
5	To study overview of social marketing in various key sectors and Identify basic ethical issues in Social marketing and appreciate the careers in Social Marketing

Sr. No.	Modules / Units
1	**Introduction to Social Marketing & Its Environment**
	Definition of Social Marketing, Features, Need for Social Marketing, Evolution of Social Marketing, Social Marketing v/s Commercial Marketing, Challenges of Social Marketing. Social Marketing Unique Value Preposition, Relevance of Social marketing. Environment in Social Marketing, Components, Impact of Environment on Social Marketing.
2	**Social Marketing Plan, STP and Marketing Mix**
	• **Social Marketing Plan, Segmentation, Targeting & Positioning** Social Marketing Plan, Steps in developing social marketing plan, importance of planning. Segmentation, Basis of Segmentation, Criteria for evaluating segments, Targeting, Selecting Target Audience for Social Marketing, Positioning and Types of positioning. • **Social Marketing Mix** 1. Product: Social Product, Level of Product, Social Product Branding Decision. 2. Price: Monetary and non-monetary incentives for desired behavior, Pricing Objectives, Pricing Strategies. 3. Place: 5 A's of Distribution of Product in social marketing, Types of distribution channel 4. Promotion: Developing a Promotion Mix for social product, Message Strategy, Messenger Strategy, Creativity Strategy, selecting communication channel.
3	**Managing Behaviour for Social Change & NPO & CSR**
	• **Managing Behaviour for Social Change** Types of Behaviour Objectives, Knowledge objectives and belief objectives, Behaviour Change Models, Theories and Frameworks: Social Norm Theory, The diffusion of innovation model, The health belief model, The ecological model, Theory of reasoned action and theory of planned behaviour. Social Cognitive theory/social learning, The behavioural economics framework and the nudge factor, the science of habit framing, • **Not for Profit Organization (NPO) & CSR** Meaning, NGO, Voluntary Organization, Third Sector, NPO Sector. Status of Voluntary sector in India. Starting a Voluntary Organization in India: Trust, Society, Section 8 Company under the Companies Act of 2013. CSR, Meaning, Overview of CSR in India, Overview of CSR rules for corporation under Companies Act of 2013, CSR Impact Evaluation. Need for Governance in Not for Profit Sector, Ethics in Social Marketing
4	**Social Marketing – A Sectoral Overview & Careers**
	• Marketing Health • Marketing Education • Marketing Medicare • Marketing Sanitation • Marketing Financial Literacy & Savings • Marketing Digital Literacy • Marketing of Social Issues of Youth. • Social Work as a profession and Social Entrepreneurship,Careers in Social Marketing.

4. Organisation Behaviour & HRM

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Organisational Behaviour I	12
2	Organisational Behaviour II	13
3	Human Resource Management-I	17
4	Human Resource Management-II	18
	Total	**60**

Objectives

SN	Objectives
1	The objective of this course is to familiarize the student with the fundamental aspects of Various issues associated with Human Resource Management as a whole.
2	The course aims to give a comprehensive overview of Organization Behaviour as a separate area of management.
3	To introduce the basic concepts, functions and processes & create an awareness of the role, functions and functioning of Human Resource Management & OB.

Sr. No.	Modules / Units
1	**Organisational Behaviour-I**
	• Introduction to Organizational Behaviour-Concept, definitions, Evolution of OB • Importance of Organizational Behaviour-Cross Cultural Dynamics, Creating Ethical Organizational Culture& Climate • Individual and Group Behaviour-OB models–Autocratic, Custodial, Supportive, Collegial & SOBC in context with Indian OB • Human Relations and Organizational Behaviour
2	**Organisational Behaviour-II**
	• Managing Communication: Conflict management techniques. • Time management strategies. • Learning Organization and Organizational Design • Rewards and Punishments-Termination, layoffs, Attrition, Retrenchment, Separations, Downsizing
3	**Human Resource Management-I**
	• HRM-Meaning, objectives, scope and functions • HRP-Definition, objectives, importance, factors affecting HRP, Process of HRP, Strategies of HRM , Global HR Strategies • HRD-Concept ,meaning, objectives, HRD functions
4	**Human Resource Management-II**
	• Performance Appraisal: concept, process, methods and problems, KRA'S • Compensation-concept, components of Pay Structure, Wage and salary administration, Incentives and Employee benefits. • Career planning-concept of career Planning, Career stages and carrier planning

Revised Syllabus of Courses of Bachelor of Management Studies (BMS)Programme at Semester III with Effect from the Academic Year 2017-2018

2. Ability Enhancement Courses (AEC)
2A.Ability Enhancement Compulsory Course

3. Information Technology in Business Management-I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to IT Support in Management	15
2	Office Automation using MS-Office	15
3	Email, Internet and its Applications	15
4	E-Security	15
	Total	**60**

Objectives

SN	Objectives
1	To learn basic concepts of Information Technology, its support and role in Management, for managers
2	Module II comprises of practical hands on training required for office automation. It is expected to have practical sessions of latest MS-Office software
3	To understand basic concepts of Email, Internet and websites, domains and security therein
4	To recognize security aspects of IT in business, highlighting electronic transactions, advanced security features

Sr. No.	Modules / Units
1	**Introduction to IT Support in Management**
	• **Information Technology concepts** Concept of Data, Information and Knowledge Concept of Database • **Introduction to Information Systems and its major components**. Types and Levels of Information systems. Main types of IT Support systems Computer based Information Systems (CBIS) ▪ Types of CBIS - brief descriptions and their interrelationships/hierarchies ▪ Office Automation System(OAS) ▪ Transaction Processing System(TPS) ▪ Management Information System(MIS) ▪ Decision Support Systems (DSS) ▪ Executive Information System(EIS) ▪ Knowledge based system, Expert system • **Success and Failure of Information Technology.** Failures of Nike and AT&T • **IT Development Trends**. Major areas of IT Applications in Management • **Concept of Digital Economy and Digital Organization**. • **IT Resources** Open Source Software - Concept and Applications. Study of Different Operating Systems. (Windows / Linux/ DOS)
2	**Office Automation using MS Office**
	• **Learn Word:** Creating/Saving of Document Editing and Formatting Features Designing a title page, Preparing Index, Use of SmartArt Cross Reference, Bookmark and Hyperlink. Mail Merge Feature. • **Spreadsheet application (e.g. MS-Excel/openoffice.org)** Creating/Saving and editing spreadsheets Drawing charts. Using Basic Functions: text, math & trig, statistical, date & time, database, financial, logical Using Advanced Functions : Use of VLookup/HLookup Data analysis – sorting data, filtering data (AutoFilter , Advanced Filter), data validation, what-if analysis (using data tables/scenarios), creating sub-totals and grand totals, pivot table/chart, goal seek/solver, • **Presentation Software** Creating a presentation with minimum 20 slides with a script. Presenting in different views, Inserting Pictures, Videos, Creating animation effects on them Slide Transitions, Timed Presentations Rehearsal of presentation

Sr. No.	Modules / Units
3	**Email, Internet and its Applications**
	• **Introduction to Email** Writing professional emails Creating digitally signed documents. • **Use of Outlook** : Configuring Outlook, Creating and Managing profile in outlook, Sending and Receiving Emails through outlook Emailing the merged documents. Introduction to Bulk Email software • **Internet** Understanding Internet Technology Concepts of Internet, Intranet, Extranet Networking Basics, Different types of networks. Concepts (Hubs, Bridges, Routers, IP addresses) Study of LAN, MAN, WAN • **DNS Basics**. Domain Name Registration, Hosting Basics. • **Emergence of E-commerce and M-Commerce** Concept of E-commerce and M-Commerce Definition of E-commerce and M-Commerce Business models of e-commerce: models based on transaction party (B2B, B2C,B2G, C2B, C2C, E-Governance) Models based on revenue models, Electronics Funds Transfer, Electronic Data Interchange.
4	**E-Security Systems**
	• **Threats to Computer systems and control measures**. Types of threats- Virus, hacking, phishing, spyware, spam, physical threats (fire, flood, earthquake, vandalism) Threat Management • **IT Risk** Definition, Measuring IT Risk, Risk Mitigation and Management • **Information Systems Security** • **Security on the internet** Network and website security risks Website Hacking and Issues therein. Security and Email • **E-Business Risk Management Issues** Firewall concept and component, Benefits of Firewall • **Understanding and defining Enterprise wide security framework** • **Information Security Environment in India with respect to real Time Application in Business** Types of Real Time Systems, Distinction between Real Time, On – line and Batch Processing System. Real Time Applications viz. Railway / Airway / Hotel Reservation System, ATMs, EDI Transactions - definition, advantages, examples;E-Cash, Security requirements for Safe E-Payments Security measures in International and Cross Border financial transactions • **Threat Hunting Software**

Projects / Assignments (for Internal Assessment)

i. Projects/Assignments should be drawn for the component on Internal Assessment from the topics in **Module 1 to Module 4**.

ii. Students should be given a list of possible topics - at least 3 from each Module at the beginning of the semester.

iii. The Project/Assignment can take the form of Street-Plays / Power-Point Presentations / Poster Exhibitions and similar other modes of presentation appropriate to the topic.

iv. Students can work in groups of not more than 8 per topic.

v. Students must submit a hard / soft copy of the Project / Assignment before appearing for the semester end examination.

QUESTION PAPER PATTERN (Semester III)

The Question Paper Pattern for Semester End Examination shall be as follows:

TOTAL MARKS: 75 **DURATION: 150 MINUTES**

QUESTION NUMBER	DESCRIPTION	MARKS ASSIGNED
1	**i.** Question 1 A will be asked on the meaning / definition of concepts / terms from all Modules. **ii.** Question 1 B will be asked on the topic of the Project / Assignment done by the student during the Semester **iii.** In all 8 Questions will be asked out of which 5 have to be attempted.	**a)** Total marks: 15 **b)** For 1 A, there will be 3 marks for each sub-question. **c)** For 1 B there will be 15 marks without any break-up.
2	Descriptive Question with internal option (A or B) on Module 1	15
3	Descriptive Question with internal option (A or B) on Module 2	15
4	Descriptive Question with internal option (A or B) on Module 3	15
5	Descriptive Question with internal option (A or B) on Module 4	15

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	National Integration & Awareness	10
2	Drill: Foot Drill	10
3	Adventure Training and Environment Awareness and Conservation	05
4	Personality Development and Leadership	10
5	Specialized subject (ARMY)	10
	Total	**45**

Sr. No.	Modules / Units
1	**National Integration & Awareness**
	Desired outcome: The students will display sense of patriotism, secular values and shall be transformed into motivated youth who will contribute towards nation building through national unity and social cohesion. The students shall enrich themselves about the history of our beloved country and will look forward for the solutions based on strengths to the challenges to the country for its development. • Freedom Struggle and nationalist movement in India. • National interests, Objectives, Threats and Opportunities. • Problems/ Challenges of National Integration. • Unity in Diversity
2	**Drill: Foot Drill**
	Desired outcome: The students will demonstrate the sense of discipline, improve bearing, smartness, turnout, develop the quality of immediate and implicit obedience of orders, with good reflexes. • Side pace, pace forward and to the rear • Turning on the march and whiling • Saluting on the march • Marking time, forward march and halt in quick time • Changing step • Formation of squad and squad drill
3	**Adventure Training, Environment Awareness and Conservation**
3A	**Adventure Training**
	Desired outcome: The students will overcome fear & inculcate within them the sense of adventure, sportsmanship, espirit-d-corp and develop confidence, courage, determination, diligence and quest for excellence. • Any Two such as – Obstacle course, Slithering, Trekking, Cycling, Rock Climbing, Para Sailing, Sailing, Scuba Diving etc.
3B	**Environment Awareness and Conservation**
	Desired outcome: The student will be made aware of the modern techniques of waste management and pollution control. • Waste management • Pollution control, water, Air, Noise and Soil
4	**Personality Development and Leadership**
	Desired outcome: The student will inculcate officer like qualities with desired ability to take right decisions. • Time management • Effect of Leadership with historical examples • Interview Skills • Conflict Motives- Resolution

Sr. No.	Modules / Units
5	**Specialized Subject: Army Or Navy Or Air**
	<u>Army</u> **Desired outcome:** It will acquaint, expose & provide knowledge about Army/ Navy/ Air force and to acquire information about expanse of Armed Forces ,service subjects and important battles **A. Armed Force** • Task and Role of Fighting Arms • Modes of Entry to Army • Honors and Awards **B. Introduction to Infantry and weapons and equipments** • Characteristics of 5.56mm INSAS Rifle, Ammunition, Fire power, Stripping, Assembling and Cleaning • Organization of Infantry Battalion. **C. Military history** • Study of battles of Indo-Pak War 1965,1971 and Kargil • War Movies **D. Communication** • Characteristics of Walkie-Talkies • Basic RT Procedure • Latest trends and Development (Multi Media, Video Conferencing, IT) ***OR*** **<u>Navy</u>** **A. Naval orientation and service subjects** • Organization of Ship- Introduction on Onboard Organization • Naval Customs and Traditions • Mode of Entry into Indian Navy • Branches of the Navy and their functions • Naval Campaign (Battle of Atlantic, Pearl Harbour, Falkland War/Fleet Review/ PFR/ IFR)s **B. Ship and Boat Modelling** • Types of Models • Introduction of Ship Model- Competition Types of Model Prepare in NSC and RDC • Care and handling of power-tools used- maintenance and purpose of tools

Sr. No.	Modules / Units
	C. Search and Rescue • Role of Indian Coast Guard related to SAR **D. Swimming** • Floating and Breathing Techniques- Precautions while Swimming ***OR*** **AIR** **A. General Service Knowledge** • Organization Of Air Force • Branches of the IAF. **B. Principles of Flight** • Venturi Effect • Aerofoil • Forces on an Aircraft • Lift and Drag **C. Airmanship** • ATC/RT Procedures • Aviation Medicine **D. Aero- Engines** • Types of Engines • Piston Engines • Jet Engines • Turboprop Engines

5. Logistics and Supply Chain Management

Modules at a Glance

SN	Modules	No. of Lectures
1	Overview of Logistics and Supply Chain Management	15
2	Elements of Logistics Mix	15
3	Inventory Management, Logistics Costing, Performance Management and Logistical Network Analysis	15
4	Recent Trends in Logistics and Supply Chain Management	15
	Total	**60**

Objectives

SN	Objectives
1	To provide students with basic understanding of concepts of logistics and supply chain management
2	To introduce students to the key activities performed by the logistics function
3	To provide an insight in to the nature of supply chain, its functions and supply chain systems
4	To understand global trends in logistics and supply chain management

SN	Modules/ Units
1	**Overview of Logistics and Supply Chain Management**
	a) Introduction to Logistics Management • Meaning, Basic Concepts of Logistics- Logistical Performance Cycle, Inbound Logistics, Inprocess Logistics, Outbound Logistics, Logistical Competency, Integrated Logistics , Reverse Logistics and Green Logistics • Objectives of Logistics, Importance of Logistics, Scope of Logistics, Logistical Functions/Logistic Mix, Changing Logistics Environment **b) Introduction to Supply Chain Management** • Meaning, Objectives, Functions, Participants of Supply Chain, Role of Logistics in Supply Chain, Comparison between Logistics and Supply Chain Management, Channel Management and Channel Integration **c) Customer Service: Key Element of Logistics** • Meaning of Customer Service, Objectives, Elements, Levels of customer service, Rights of Customers **d) Demand Forecasting** • Meaning, Objectives ,Approaches to Forecasting, Forecasting Methods, Forecasting Techniques, (Numerical on Simple Moving Average, Weighted Moving Average)
2	**Elements of Logistics Mix**
	a) Transportation • Introduction, Principles and Participants in Transportation, Transport Functionality, Factors Influencing Transportation Decisions, Modes of Transportation- Railways, Roadways, Airways, Waterways, Ropeways, Pipeline, Transportation Infrastructure, Intermodal Transportation **b) Warehousing** • Introduction, Warehouse Functionality, Benefits of Warehousing, Warehouse Operating Principles, Types of Warehouses, Warehousing Strategies, Factors affecting Warehousing **c) Materials Handling** • Meaning, Objectives, Principles of Materials Handling, Systems of Materials Handling, Equipments used for Materials Handling, Factors affecting Materials Handling Equipments **d) Packaging** • Introduction, Objectives of Packaging, Functions/Benefits of Packaging, Design Considerations in Packaging, Types of Packaging Material, Packaging Costs

SN	Modules/ Units
3	**Inventory Management, Logistics Costing, Performance Management and Logistical Network Analysis**
	a) Inventory Management • Meaning, Objectives, Functions, Importance, Techniques of Inventory Management (Numericals - EOQ and Reorder levels) **b) Logistics Costing** • Meaning, Total Cost Approach, Activity Based Costing, Mission Based Costing **c) Performance Measurement in Supply Chain** • Meaning, Objectives of Performance Measurement, Types of Performance Measurement, Dimensions of Performance Measurement, Characteristics of Ideal Measurement System **d) Logistical Network Analysis** • Meaning, Objectives, Importance, Scope, RORO/LASH
4	**Recent Trends in Logistics and Supply Chain Management**
	a) Information Technology in Logistics • Introduction, Objectives, Role of Information Technology in Logistics and Supply Chain Management, Logistical Information System, Principles of Logistical Information System, Types of Logistical Information System, Logistical Information Functionality, Information Technology Infrastructure **b) Modern Logistics Infrastructure** • Golden Quadrilateral, Logistics Parks, Deep Water Ports, Dedicated Freight Corridor, Inland Container Depots/Container Freight Stations, Maritime Logistics, Double Stack Containers/Unit Trains **c) Logistics Outsourcing** • Meaning, Objectives, Benefits/Advantages of Outsourcing, Third Party Logistics Provider, Fourth Party Logistics Provider, Drawbacks of Outsourcing, Selection of Logistics Service Provider, Outsourcing-Value Proposition **d) Logistics in the Global Environment** • Managing the Global Supply Chain, Impact of Globalization on Logistics and Supply Chain Management, Global Logistics Trends, Global Issues and Challenges in Logistics and Supply Chain Management

	a) Organisational Development – An Overview: • Organisational Development – Meaning, Features, Evolution, Components, Objectives, Principles, Process, Importance • Relevance of Organisational Development for Managers, OD- HRD Interface, Participation of Top Management in OD • OD Practitioner – Meaning, Role of OD Practitioner, Competencies of an OD Practitioner • Emerging Trends in OD • OD in Global Setting
2	**Organisational Diagnosis, Renewal and Change**
	a) Organisational Diagnosis, Renewal and Change: • Organisational Diagnosis - Meaning, Need, Phases, Levels of Organisational Diagnosis, Techniques of Organisational Diagnosis, Tools used in Organisational Diagnosis • Organizational Renewal, Re-energising, OD and Business Process Re-Engineering (BPR), OD and Leadership Development • Organisational Change- Meaning, Organisational Life Cycle, Planned Change, Organizational Growth and its Implication for Change • Change Agents- Meaning, Features, Types, Role, Skills required
3	**OD Interventions**
	a) Managing Expatriation and Repatriation • OD Interventions- Meaning, Features, Factors Affecting Success of Interventions, Steps in OD Interventions • Types of Interventions- Human Resource Intervention, Structural Intervention, Strategic Interventions, Third Party Peace Making Intervention • Techniques of OD Intervention : ▪ Traditional: Sensitive Training, Grid Training, Survey Feedback. ▪ Modern : Process Consultation, Third Party, Team Building, Transactional Analysis • Evaluation of OD Interventions : Process, Types, Methods, Importance

SN	Modules/ Units
4	**OD Effectiveness**
	a) OD Effectiveness: • Issues Faced in OD- Issues Related to Client Relationship, Power-Individual skills and Attributes as a Source of Power, Power and Influence Tactics, Politics and OD • Values in OD – Meaning, Professional Values, Value Conflict and Dilemma • Ethics in OD – Meaning, Factors Influencing Ethical Judgement, Ethical Guidelines for OD Professionals • Organisational Effectiveness- Meaning , Effectiveness v/s Efficiency, Approaches of Organisational Effectiveness : Goal Approach, System Resource Approach, Strategic Constituency Approach, Internal Process Approach; Parameters for Judging Organisational Effectiveness, Ways to Enhance Organisational Effectiveness

Revised Syllabus of Courses ofBachelor of Management Studies (BMS) Programme at Semester VI with effect from the Academic Year 2018-2019

Elective Courses (EC)

Group C: Human Resource Electives

3. HRM in Service Sector Management

Modules at a Glance

SN	Modules	No. of Lectures
1	Service Sector Management- An Overview	15
2	Managing Human Element in Service Sector	15
3	Issues and Challenges of HR in Service Sector	15
4	HRP Evaluation, Attrition, Retention & Globalization	15
	Total	**60**

Objectives

SN	Objectives
1	To understand the concept and growing importance of HRM in service sector
2	To understand how to manage human resources in service sector
3	To understand the significance of human element in creating customer satisfaction through service quality
4	To understand the Issues and Challenges of HR in various service sectors

SN	Modules/ Units
1	**Service Sector Management- An Overview**
	a) Service Sector Management- An Overview: • **Services -** Meaning, Features, Classification of Services: End User, Degree of Tangibility, People Based Services, Expertise Required, Orientation Towards Profit, By Location • **Service Sector Management –** Meaning, Significance of Service Sector, Reasons for Growth in Service Sector • **Service Organization** - Importance of Layout and Design of Service Organization, Servicescape • **Service Culture in Organization –** Meaning, Developing Service Culture in Organization • **Relationship Marketing –** Meaning, Need and Importance in Service Sector Organizations, Six Market Model • Role of Service Employee • **Role of Customers in Service Process–** Customers as Productive Resources, Customers as Contributors to Service Quality, Customers as Competitors • **Service Encounter and Moment of Truth –**Meaning, Nature, Elements of Service Encounter
2	**Managing Human Element in Service Sector**
	a) Managing Human Element in Service Sector: • **Human Element in Service Sector –** Introduction, Role and Significance • The Services Triangle • **Front Line Employees /Boundary Spanners–** Meaning, Issues Faced by Front Line Employees: Person/ Role Conflicts, Organization/ Client Conflict, Interclient Conflict • **Emotional Labour –** Meaning, Strategies for Managing Emotional Labour • **Recruitment in Service Sector–** Recruiting Right People, Recruitment Procedures and Criteria, Challenges in Recruitment in Service Sector • **Selection of Employees in Service Sector –** Interviewing Techniques: Abstract Questioning, Situational Vignette, Role Playing • Develop People to Deliver Service Quality • Compensating Employees in Service Sector • Motivating Employees for Services • **Empowerment of Service Workers –** Meaning, Advantages and Limitations

SN	Modules/ Units
3	**Issues and Challenges of HR in Service Sector**
	a) Issues and Challenges of HR in Service Sector: • **Quality Issues in Services**: Meaning and Dimensions of Service Quality, The Service – Gap Model, Reasons and Strategies to fill the Gaps • **Delivering Services through Agents and Brokers** - Meaning, Advantages, Challenges, Strategies for Effective Service Delivery through Agents and Brokers • **HRM in Public Sector Organizations and Non –** Profit Sector in India • **Issues and Challenges of HR in Specific Services:** ▪ Business and Professional Services: Banking and Insurance, Legal, Accountancy ▪ Infrastructure: Roads, Railways, Power ▪ Public Services: Police, Defense, Disaster Management ▪ Trade Services: Wholesale and Retail, Advertising, Maintenance and Repairs ▪ Personnel Services: Education, Health Care, Hotels • Social and Charitable Services
4	**HRP Evaluation, Attrition, Retention & Globalization**
	a) HRP Evaluation, Attrition, Retention & Globalization: • **Human Resource Planning Evaluation in Service Sector –** Meaning, HRP Evaluation Process, Purpose of HRP Evaluation in Service Sector, Issues Influencing HRP Evaluation in Service Sector • **Service Leadership –** Meaning, Integrating Marketing Operation and Human Resources, Creating a Leading Service Organization, The Service – Profit Chain Model • **Attrition in Service Sector –**Meaning, Reasons for Attrition in Service Sector, Cycle of Failure, Cycle of Mediocrity and Cycle of Success • **Retaining the Best People in Service Sector –** Including Employees in Company's Vision, Treat Employees as Customers, Measure and Reward String Service Performers • **Globalization of Services-** Meaning, Reasons for Globalization of Services, Impact of Globalization on Indian Service Sector. Organisational Effectiveness, Ways to Enhance Organisational Effectiveness

Revised Syllabus of Courses ofBachelor of Management Studies (BMS) Programme at Semester VI with effect from the Academic Year 2018-2019

Elective Courses (EC)

Group C:Human Resource Electives

4. Workforce Diversity

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Workforce Diversity - An Overview	15
2	Workforce Diversity and HRM Functions	15
3	Strategies to Manage Diversity	15
4	Issues in Managing Diversity and Recent Trends	15
Total		**60**

Objectives

SN	Objectives
01	To understand the nature of workforce diversity
02	To familiarize the learners with the strategies to deal with work force diversity
03	To understand the impact of technology in managing workforce diversity
04	To be able to interlink between workforce diversity and HRM functions

Sr. No.	Modules / Units
1	**Workforce Diversity - An Overview**
	• Meaning of Workforce • Workforce Diversity - Meaning, Features and Significance • Dimensions of Workforce Diversity • Advantages and Limitations of having a diverse workforce • Positive and Negative effects of workforce diversity in workplace
2	**Workforce Diversity and HRM Functions**
	• Steps to Recruiting and Retaining a Diverse Workforce • Workforce Diversity and HRM Functions – Diversity and Recruitment, Diversity and Supervision, Diversity and Training, Diversity and Compensation, Diversity and Performance Management, Diversity and Work life Balance • Role of Recruiter in Hiring Diversified Workforce • Workforce Diversity – Key to Organizational Performance • Workforce Diversity as a Determinant of Sustainable Competitive Advantage
3	**Strategies to Manage Diversity**
	• Organizational Strategies for Managing Workforce Diversity –Workplace Inclusion Strategies through Corporate Leadership, Diversity Training and Mentoring • Diversity Management Programmes - Concept • Corporate Culture and Diversity at workplace • Techniques of Managing Work Force Diversity • Approaches to Diversity Management System
4	**Issues in Managing Diversity and Recent Trends**
	• Best Practices in Achieving Workforce Diversity • Diversity and Multi-culturism • Global workforce diversity management • Recent Trends of Diversity • Role of Technology in Handling Workforce Diversity • Workforce Diversity Management for Creativity and Innovation • Ethical and Legal Issues in Managing Diversity

Revised Syllabus of Courses ofBachelor of Management Studies (BMS) Programme at Semester VI with effect from the Academic Year 2018-2019

Elective Courses (EC)

Group C: Human Resource Electives

5. Human Resource Accounting & Auditing

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Human Resource Accounting: An Overview	15
2	Methods and Human Resource Accounting Practices in India	15
3	Human Resource Audit: An Overview	15
4	HR Audit for Legal Compliance and Safe Business Practices	15
Total		**60**

Objectives

SN	Objectives
01	To understand the value of human resource in organizations
02	To understand the importance of Human Resource Accounting at National and International level
03	To familiarize with the Human Resource Accounting Practices in India
04	To familiarize the learners with the process and approaches of Human Resources Accounting and Audit
05	To understand the significance of Human Resource Auditing as a Tool of Human Resource Valuation

Sr. No.	Modules / Units
1	**Human Resource Accounting: An Overview**
	• Human Resource Accounting – Meaning, Need and Objectives of HR Accounting • Historical Development of Human Resource Accounting, • Cost of Human Resource - Acquisition Cost, Training and Development Cost and additional Cost • Benefits and Limitations of Human Resource Accounting • Reporting of Human Resource Accounting at National Levels • Disclosures at International Level
2	**Methods and Human Resource Accounting Practices in India**
	• **Methods of Human Resource Accounting**: **1. Cost of Production Approach - Concept** i. Historical Cost Model – Meaning, Advantages and Limitations ii. Replacement Cost Model – Meaning, Advantages and Limitations iii. Opportunity Cost - – Meaning, Advantages and Limitations **2. Capitalized Earnings Approach - Concept** i. Economic Value Model - Meaning, Advantages and Limitations ii. Capitalization of Salary - Meaning, Advantages and Limitations • **Statutory Provisions governing HR accounts** • **Human Resource Accounting Practices in India**
3	**Human Resource Audit: An Overview**
	• Human Resource Audit - Meaning, Features, Objectives of HR Audit • Benefits and limitations of HR Audit • Need and Significance of HR Audit • Process of HR Audit • Approaches of HR Audit • Principles of Effective HR Auditing • Role of HR Auditor • Methods of conducting HR Audit – Interview, Workshop, Observation, Questionnaire. • Components of HR Audit • HR Audit and Workforce Issues : Workforce Communication and Employee Relations, Performance Management, Compensation System, Teambuilding System
4	**HR Audit for Legal Compliance and Safe Business Practices**
	• Areas covered by HR Audit - Pre-employment Requirements, Hiring Process, New-hire Orientation Process, Workplace Policies and Practices • HR Audit as Intervention - Introduction, Effectiveness of Human Resource Development Audit as an Intervention • Human Resource Audit and Business Linkages • Human Resource Auditing as a Tool of Human Resource Valuation: Introduction, Rationale of Human Resource Valuation and Auditing, Valuation of Human Resources, Issues in Human Capital Measurement and Reporting.

Elective Courses (EC)

Group C: Human Resource Electives

6. Indian Ethos in Management

Modules at a Glance

SN	Modules	No. of Lectures
1	Indian Ethos – An Overview	15
2	Work Ethos and Values	15
3	Stress Management	15
4	Indian Systems of Learning	15
	Total	**60**

Objectives

SN	Objectives
1	To understand the concept of Indian Ethos in Management
2	To link the Traditional Management System to Modern Management System
3	To understand the Techniques of Stress Management
4	To understand the Evolution of Learning Systems in India

SN	Modules/ Units
1	**Indian Ethos – An Overview**
	a) Indian Ethos • Meaning, Features, Need, History, Relevance, Principles Practised by Indian Companies, Requisites, Elements, Role of Indian Ethos in Managerial Practices **b) Management Lessons from Scriptures:** • Management Lessons from Vedas, Management Lessons from Mahabharata, Management Lessons from Bible, Management Lessons from Quran, Management Lessons from Kautilya's Arthashastra Indian Heritage in Business, Management, Production and Consumption. Ethics v/s Ethos Indian Management v/s Western Management
2	**Work Ethos and Values**
	a) Work Ethos: • Meaning, Levels, Dimensions, Steps, Factors Responsible for Poor Work Ethos **b) Values:** • Meaning, Features, Values for Indian Managers, Relevance of Value Based Management in Global Change, Impact of Values on Stakeholders: Employees, Customers, Government, Competitors and Society. • Values for Managers, Trans-Cultural Human Values in Management and Management Education, Secular v/s Spiritual Values in Management, Importance of Value System in Work Culture
3	**Stress Management**
	a) Stress Management: • Meaning, Types of Stress at Work, Causes of Stress, Consequences of Stress b) **Stress Management Techniques:** • Meditation : Meaning, Techniques, Advantages, Mental Health and its Importance in Management, Brain Storming, Brain Stilling, Yoga: Meaning, Significance **c) Leadership:** • Meaning, Contemporary Approaches to Leadership, Joint Hindu Family Business – Leadership Qualities of Karta **d) Motivation:** • Meaning, Indian Approach to Motivation, Techniques

SN	Modules/ Units
4	**Indian Systems of Learning**
	a) Learning: Meaning, Mechanisms • Gurukul System of Learning : Meaning, Features, Advantages, Disadvantages • Modern System of Learning: Meanings, Features, Advantages, Disadvantages • Karma: Meaning, Importance of Karma to Managers, Nishkama Karma • Laws of Karma: The Great Law, Law of Creation, Law of Humility, Law of Growth, Law of Responsibility, Law of Connection • Corporate Karma: Meaning, Methodology, Guidelines for good Corporate Karma • Self-Management: Personal growth and Lessons from Ancient Indian Education System • Personality Development: Meaning, Determinants, Indian Ethos and Personality Development

Revised Syllabus of Courses ofBachelor of Management Studies (BMS) Programme at Semester VI with effect from the Academic Year 2018-2019

Core Course (CC)

5. Operations Research

Modules at a Glance

SN	Modules	No. of Lectures
1	Introduction to Operations Research and Linear Programming	15
2	Assignment and Transportation Models	15
3	Network Analysis	15
4	Job Sequencing and Theory of Games	15
	Total	**60**

Objectives

SN	Objectives
1	To help students to understand operations research methodologies
2	To help students to solve various problems practically
3	To make students proficient in case analysis and interpretation

SN	Modules/ Units
1	**Introduction to Operations Research and Linear Programming**
	a) Introduction To Operations Research • Operations Research - Definition, Characteristics of OR, OR Techniques, Areas of Application, Limitations of OR. **b) Linear Programming Problems: Introduction and Formulation** • Introduction to Linear Programming • Applications of LP • Components of LP • Requirements for Formulation of LP Problem • Assumptions Underlying Linear Programming • Steps in Solving LP Problems • LPP Formulation (Decision Variables, Objective Function, Constraints, Non Negativity Constraints) **c) Linear Programming Problems: Graphical Method** • Maximization & Minimization Type Problems. (Max. Z & Min. Z) • Two Decision Variables and Maximum Three Constraints Problem • Constraints can be "less than or equal to", "greater than or equal to" or a combination of both the types i.e. mixed constraints. • Concepts: Feasible Region of Solution, Unbounded Solution, Redundant Constraint, Infeasible Solution, Alternative Optima. **d) Linear Programming Problems: Simplex Method** • Only Maximization Type Problems. (Only Max. Z). No Minimization problems. (No Min. Z) Numericals on Degeneracy in Maximization Simplex Problems. • Two or Three Decision Variables and Maximum Three Constraints Problem. (Up to Maximum Two Iterations) • All Constraints to be "less than or equal to" Constraints. ("Greater than or Equal to" Constraints not included.) • Concepts : Slack Variables, Surplus Variables, Artificial Variables, Duality, Product Mix and Profit, Feasible and Infeasible Solution, Unique or Alternate Optimal Solution, Degeneracy, Non Degenerate, Shadow Prices of Resources, Scarce and Abundant Resources, Utilized and Unutilized Capacity of Resources, Percentage Utilization of Resources, Decision for Introduction of a New Product. **Note:** 1. Surplus Variable, Artificial Variable and Duality to be covered only at Conceptual level for Theory Questions only and not included in Numerical. 2. Sensitivity Analysis including Profit Range and Capacity Range is not included.

SN	Modules/ Units
2	**Assignment and Transportation Models**
	a) Assignment Problem – Hungarian Method • Maximization & Minimization Type Problems. • Balanced and Unbalanced Problems. • Prohibited Assignment Problems, Unique or Multiple Optimal Solutions. • Simple Formulation of Assignment Problems. • Maximum 5 x 5 Matrix. Up to Maximum Two Iterations after Row and Column Minimization. **Note:** 1. Travelling Salesman Assignment Problem is not included. **b) Transportation Problems** • Maximization & Minimization Type Problems. • Balanced and Unbalanced problems. • Prohibited Transportation Problems, Unique or Multiple Optimal Solutions. • Simple Formulation of Transportation Problems. • Initial Feasible Solution (IFS) by: a. North West Corner Rule (NWCR) b. Least Cost Method (LCM) c. Vogel's Approximation Method (VAM) • Maximum 5 x 5 Transportation Matrix. • Finding Optimal Solution by Modified Distribution (MODI) Method. (u, v and Δ) • Maximum Two Iterations (i.e. Maximum Two Loops) after IFS. **Note:** 1. Production Scheduling Problem is not included. 2. Time Minimization Problem is not included. 3. Degeneracy Concept to be covered only at Conceptual Level. Not to be included in Numerical.

SN	Modules/ Units
3	**Network Analysis**
	a) Critical Path Method (CPM) • Concepts: Activity, Event, Network Diagram, Merge Event, Burst Event, Concurrent and Burst Activity, • Construction of a Network Diagram. Node Relationship and Precedence Relationship. • Principles of Constructing Network Diagram. • Use of Dummy Activity • Numerical Consisting of Maximum Ten (10) Activities. • Critical Path, Sub-critical Path, Critical and Non-critical Activities, Project Completion Time. • Forward Pass and Backward Pass Methods. • Calculation of EST, EFT, LST, LFT, Head Event Slack, Tail Event Slack, Total Float, Free Float, Independent Float and Interfering Float **b) Project Crashing** • Meaning of Project Crashing. • Concepts: Normal Time, Normal Cost, Crash Time, Crash Cost of Activities. Cost Slope of an Activity. • Costs involved in Project Crashing: Numericals with Direct, Indirect, Penalty, crash cost and Total Costs. • Time – Cost Trade off in Project Crashing. • Optimal (Minimum) Project Cost and Optimal Project Completion Time. • Process of Project Crashing. • Numerical Consisting of Maximum Ten (10) Activities. • Numerical based on Maximum Four (04) Iterations of Crashing **c) Program Evaluation and Review Technique (PERT)** • Three Time Estimates of PERT: Optimistic Time (a), Most Likely Time (m) and Pessimistic Time (b). • Expected Time (te) of an Activity Using Three Time Estimates. • Difference between CPM and PERT. • Numerical Consisting of Maximum Ten (10) Activities. • Construction of PERT Network using tevalues of all Activities. • Mean (Expected) Project Completion Time. • Standard Deviation and Variance of Activities. • Project Variance and Project Standard Deviation. • 'Prob. Z' Formula. • Standard Normal Probability Table. Calculation of Probability from the Probability Table using 'Z' Value and Simple Questions related to PERT Technique. • Meaning, Objectives, Importance, Scope, RORO/LASH

SN	Modules/ Units
4	**Job Sequencing and Theory of Games**
	a) Job Sequencing Problem • Processing Maximum 9 Jobs through Two Machines only. • Processing Maximum 6 Jobs through Three Machines only. • Calculations of Idle Time, Elapsed Time etc. **b) Theory of Games** • Introduction • Terminology of Game Theory: Players, Strategies, Play, Payoff, Payoff matrix, Maximin, Maximax, Saddle Point. • Types of Games. • Numericals based on: ▪ Two Person Zero Sum Games including strictly determinable and Fair Game - Pure Strategy Games (Saddle Point available). Principles of Dominance method.

Revised Syllabus of Courses ofBachelor of Management Studies (BMS) Programme at Semester I with Effect from the Academic Year 2016-2017

Elective Courses (EC)

1. Introduction to Financial Accounts

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction	15
2	Accounting Transactions	15
3	Depreciation Accounting & Trial Balance	15
4	Final Accounts	15
	Total	**60**

Sr. No.	Modules / Units
1	**Introduction**
	• **Meaning and Scope of Accounting:** Need and development, definition: Book-Keeping and accounting, Persons interested in accounting, Branches of accounting, Objectives of accounting • **Accounting principles**: Introductions to Concepts and conventions. • **Introduction to Accounting Standards:** Meaning and Scope) ▪ **AS 1** : Disclosure to Accounting Policies ▪ **AS 6:** Depreciation Accounting. ▪ **AS 9:** Revenue Recognition. ▪ **AS 10:** Accounting For Fixed Assets. • **International Financial Reporting Standards (IFRS):** Introduction to IFRS ▪ **IAS-1:**Presenttion of Financial Statements (Introductory Knowledge) ▪ **IAS-2:**Inventories (Introductory Knowledge) • **Accounting in Computerized Environment:** Introduction, Features and application in various areas of Accounting
2	**Accounting Transactions**
	• **Accounting transactions**: Accounting cycle, Journal, Journal proper, Opening and closing entries, Relationship between journal & ledger: Rules regarding posting: Trial balance: Subsidiary books (Purchase, Purchase Returns, Sales, Sales Returns & cash book –Triple Column), Bank Reconciliation Statement. • **Expenditure**:Classification of Expenditure- Capital, revenue and Deferred Revenue expenditureUnusual expenses: Effects of error: Criteria test. • **Receipts:** Capital receipt, Revenue receipt, distinction between capital receipts and revenue receipts. • **Profit or Loss:** Revenue profit or loss, capital profit or loss
3	**Depreciation Accounting & Trial Balance**
	• **Depreciation accounting:** Practical problem based on depreciation using SLM and RBM methods. (Where Provision for depreciation Account not maintained). • **Preparation of Trial Balance:**Introduction and Preparation of Trial Balance
4	**Final Accounts**
	• Introduction to Final Accounts of a Sole proprietor. • Rectification of errors. • Manufacturing Account, Trading Account, Profit and Loss Account and Balance Sheet. • Preparation and presentation of Final Accounts in horizontal format • Introduction to Schedule 6 of Companies Act ,1956

Revised Syllabus of Courses ofBachelor of Management Studies (BMS) Programme at Semester I with Effect from the Academic Year 2016-2017

Elective Courses (EC)

2. Business Law

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Contract Act, 1872 & Sale of Goods Act, 1930	15
2	Negotiable Instrument Act, 1981 & Consumer Protection Act, 1986	15
3	Company Law	15
4	Intellectual Property Rights(IPR)	15
	Total	60

Sr. No.	Modules / Units
1	**Contract Act, 1872 & Sale of Goods Act, 1930**
	• **Contract Act,1872:** Essential elements of Contract; Agreement and Contract – Capacity to Contract, free consent, consideration, lawful objects/ consideration, Breach of contract. Remedies for breach of Contract. • **Sale of Goods Act,1930:** Scope of Act, Sale and Agreement to sell, essential of a valid Sale Contract – Conditions and warranties – Implied Condition and warranties, Rights of an unpaid seller.
2	**Negotiable Instrument Act, 1981 & Consumer Protection Act, 1986**
	• **Negotiable Instrument Act,1981:** Introduction of Negotiable Instruments – Characteristics of negotiable instruments, Promissory note, Bills of exchange, Cheque, Dishonour of Cheque. • **Consumer Protection Act, 1986:** Objects of Consumer Protection- Introduction of Consumers, who is consumer? Meaning of the words "Goods and services" – Meaning of thewords "Defects and Deficiencies of goods and services" Consumer disputes and Complaints.
3	**Company Law**
	• **Company Law:** What is company? – Incorporation of company – MOA, AOA, Prospectus, Meetings, Meaning of transfer and transmission of shares.
4	**Intellectual Property Rights(IPR)**
	• **Intellectual Property Rights (IPR)** ▪ IPR definition/ objectives ▪ Patent definition. What is patentable? What is not patentable? Invention And its Attributes, Inventors and Applications ▪ Trademarks, definition, types of trademarks, infringement and passing off. ▪ Copy right definition and subject in which copy right exists, Originality, Meaning and Content, Authors and Owners, Rights and Restrictions. ▪ Geographical indications (only short notes)

Revised Syllabus of Courses ofBachelor of Management Studies (BMS) Programme at Semester I with Effect from the Academic Year 2016-2017

Elective Courses (EC)

3. Business Statistics

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to Statistics	15
2	Measures of Dispersion, Co-Relation and Linear Regression	15
3	Time Series and Index Number	15
4	Probability andDecision Theory	15
	Total	60

Sr. No.	Modules / Units
1	**Introduction to Statistics**
	• **Introduction:** Functions/Scope, Importance, Limitations • **Data:** Relevance of Data(Current Scenario), Type of data(Primary & Secondary), Primary(Census vs Samples, Method of Collection (In Brief), Secondary(Merits, Limitations, Sources) (In Brief) • **Presentation Of Data:**Classification – Frequency Distribution – Discrete & Continuous, Tabulation, Graph(Frequency, Bar Diagram, Pie Chart, Histogram, Ogives) • **Measures Of Central Tendency:**Mean(A.M, Weighted, Combined), Median(Calculation and graphical using Ogives), Mode(Calculation and Graphical using Histogram), Comparative analysis of all measures of Central Tendency
2	**Measures of Dispersion, Co-Relation and Linear Regression**
	• **Measures Of Dispersion:** Range with C.R(Co-Efficient Of Range), Quartiles & Quartile deviation with CQ (Co-Efficient Of Quartile), Mean Deviation from mean with CMD (Co-Efficient Of Mean Deviation), Standard deviation with CV(Co-Efficient Of Variance), Skewness& Kurtosis (Only concept) • **Co-Relation:** Karl Pearson, Rank Co-Relation • **Linear Regression:** Least Square Method
3	**Time Series and Index Number**
	• **Time Series:** Least Square Method, Moving Average Method, Determination of Season • **Index Number:** Simple(unweighted) Aggregate Method, Weighted Aggregate Method, Simple Average of Price Relatives, Weighted Average of Price Relatives, Chain Base Index Numbers, Base Shifting, Splicing and Deflating, Cost of Living Index Number
4	**Probability and Decision Theory**
	• **Probability:** Concept of Sample space, Concept of Event, Definition of Probability, Addition & Multiplication laws of Probability, Conditional Probability, Bayes' Theorem(Concept only), Expectation & Variance, Concept of Probability Distribution(Only Concept) • **Decision Theory:** Acts, State of Nature Events, Pay offs, Opportunity loss, Decision Making under Certainty, Decision Making under Uncertainty, • Non-Probability: Maximax, Maximin, Minimax, Regret, Laplace &Hurwicz) • **Probabilitistics (Decision Making under risk):**EMV, EOL, EVPI • Decision Tree

Ability Enhancement Courses (AEC)

4. Business Communication- I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Theory of Communication	15
2	Obstacles to Communication in Business World	15
3	Business Correspondence	15
4	Language and Writing Skills	15
	Total	**60**

Sr. No.	Modules / Units
1	**Theory of Communication**
	Concept of Communication: Meaning, Definition, Process, Need, FeedbackEmergence of Communication as a key concept in the Corporate and Global worldImpact of technological advancements on Communication **Channels and Objectives of Communication**: **Channels-** Formal and Informal- Vertical, Horizontal, Diagonal, Grapevine **Objectives of Communication**: Information, Advice, Order and Instruction, Persuasion, Motivation, Education,Warning, and Boosting the Morale of Employees(A brief introduction to these objectives to be given) **Methods and Modes of Communication:** Methods: Verbal and Nonverbal, Characteristics of Verbal Communication Characteristics of Non-verbal Communication, Business Etiquette Modes: Telephone and SMS Communication 3 (General introduction to Telegram to be given) Facsimile Communication [Fax] Computers and E- communication Video and Satellite Conferencing
2	**Obstacles to Communication in Business World**
	Problems in Communication /Barriers to Communication: Physical/ Semantic/Language / Socio-Cultural / Psychological / Barriers, Ways to Overcome these Barriers **Listening:** Importance of Listening Skills, Cultivating good Listening Skills – 4 **Introduction to Business Ethics:** Concept and Interpretation, Importance of Business Ethics, Personal Integrity at the workplace, Business Ethics and media, Computer Ethics, Corporate Social Responsibility Teachers can adopt a case study approach and address issues such as the following so as to orient and sensitize the student community to actual business practices: Surrogate Advertising, Patents and Intellectual Property Rights, Dumping of Medical/E-waste, Human Rights Violations and Discrimination on the basis of gender, race, caste, religion, appearance and sexual orientation at the workplace Piracy, Insurance, Child Labour
3	**Business Correspondence**
	Theory of Business Letter Writing: Parts, Structure, Layouts—Full Block, Modified Block, Semi - Block Principles of Effective Letter Writing, Principles of effective Email Writing, **Personnel Correspondence:** Statement of Purpose, Job Application Letter and Resume, Letter of Acceptance of Job Offer, Letter of Resignation [Letter of Appointment, Promotion and Termination, Letter of Recommendation (to be taught but not to be tested in the examination)]

Sr. No.	Modules / Units
4	**Language and Writing Skills**
	Commercial Terms used in Business Communication **Paragraph Writing:** Developing an idea, using appropriate linking devices, etc Cohesion and Coherence, self-editing, etc [Interpretation of technical data, Composition on a given situation, a short informal report etc.] **Activities** ▪ Listening Comprehension ▪ Remedial Teaching ▪ Speaking Skills: Presenting a News Item, Dialogue and Speeches ▪ Paragraph Writing: Preparation of the first draft, Revision and Self – Editing, Rules of spelling. ▪ Reading Comprehension: Analysis of texts from the fields of Commerce and Management

Revised Syllabus of Courses ofBachelor of Management Studies (BMS)Programme at Semester I with Effect from the Academic Year 2016-2017

Skill Enhancement Courses (SEC)

5. Foundation Course -I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Overview of Indian Society	05
2	Concept of Disparity- 1	10
3	Concept of Disparity-2	10
4	The Indian Constitution	10
5	Significant Aspects of Political Processes	10
	Total	**45**

Sr. No.	Modules / Units
1	**Overview of Indian Society**
	Understand the multi-cultural diversity of Indian society through its demographic composition: population distribution according to religion, caste, and gender; Appreciate the concept of linguistic diversity in relation to the Indian situation; Understand regional variations according to rural, urban and tribal characteristics; Understanding the concept of diversity as difference
2	**Concept of Disparity- 1**
	Understand the concept of disparity as arising out of stratification and inequality; Explore the disparities arising out of gender with special reference to violence against women, female foeticide (declining sex ratio), and portrayal of women in media;Appreciate the inequalities faced by people with disabilities and understand the issues of people with physical and mental disabilities
3	**Concept of Disparity-2**
	Examine inequalities manifested due to the caste system and inter-group conflicts arising thereof; Understand inter-group conflicts arising out of communalism; Examine the causes and effects of conflicts arising out of regionalism and linguistic differences
4	**The Indian Constitution**
	Philosophy of the Constitution as set out in the Preamble; The structure of the Constitution-the Preamble, Main Body and Schedules; Fundamental Duties of the Indian Citizen; tolerance, peace and communal harmony as crucial values in strengthening the social fabric of Indian society; Basic features of the Constitution
5	**Significant Aspects of Political Processes**
	The party system in Indian politics; Local self-government in urban and rural areas; the 73rd and 74th Amendments and their implications for inclusive politics; Role and significance of women in politics

Revised Syllabus of Courses ofBachelor of Management Studies (BMS)Programme at Semester I with Effect from the Academic Year 2016-2017

Skill Enhancement Courses (SEC)

5.Foundation Course in NSS - I

Modules at a Glance

Sr. No.	Modules	No. of Lectures
1	Introduction to NSS	10
2	Concept of Society and Social Issues in India	15
3	Indian Constitution and Social Justice	10
4	Human Personality and National Integration	10
	Total	45

Sr. No.	Modules / Units
1	**Introduction to NSS**
	Introduction to National Service Scheme(NSS) Orientation and structure of National Service Scheme(NSS) National Service Scheme(NSS)- its objectives The historical perspective of National Service Scheme(NSS) National Service Scheme(NSS)- Symbol and its meaning National Service Scheme(NSS)- its hierarchy from national to college level **National Service Scheme(NSS) Regular activities** Distribution of working hours- Association between issues and programs- community project- urban rural activities, Association- modes of activity evaluation
2	**Concept of Society and Social Issues in India**
	History and philosophy of social sciences in India Concept of society- Development of Indian society - Features of Indian Society- Division of labour and cast system in India **Basic social issues in India** Degeneration of value system, Family system, Gender issues, Regional imbalance
3	**Indian Constitution and Social Justice**
	Indian Constitution Features of Indian Constitution - Provisions related to social integrity and development **Social Justice** Social Justice- the concept and its features Inclusive growth- the concept and its features
4	**Human Personality and National Integration**
	Dimensions of human personality Social Dimension of Human personality- Understanding of the socity Physical Dimension of Human personality- Physical Exercise, Yoga, etc. **National integration & Communal Harmony** National Integration- its meaning, importance and practice Communal Harmony- its meaning, importance and practice
